THE WITNESS: There are so many Mitten companies, it is a crystal maze, they are all interlocking, it is a terrific thing to even try to delve into them, it is impossible. Now, under the agreement the company has to file in the controller's office an annual statement of income and expenditures, and

for a number of years before the increase of the fare in 1920, the company's income was so small comparatively that they were satisfied, or the controller in office was satisfied with the returns as made, but when they got the increase of fare there was such an evident change in the company's financial condition that the controller wrote city council, and it appears in the controller's annual report of that date, stating that because of the change in the condition of the company, the matter should be taken up with the company, and that they should file a full statement annually, including—

BY MR. COOKE:

Q. What year was that?

A. 1924.

Q. They have had the legal right for years before that to have such an income statement, had they not?

A. We had a legal right, and the account was made up by an outside auditing firm, and it was very perfunctory, and the company was in bad shape, there was no question about it, there was nothing worth going into at that time—

Q. Does it not go as far back as 1914 that the city officials were making an effort to get an accounting?

A. Yes. Then this communication from council states that the company has agreed to file in the office of the controller this statement, and the city solicitor then came down, and there was a conference between the controller and Mr. Joyce and the city solicitor, and the controller finally got them to agree to make their returns thereafter on a form prescribed by the controller, and they went back over the 1924 books and made a report on that form, and they were to make the return for subsequent years, but they never did; they have not done it today. So we were struggling for several years, trying to get results, trying to get others to help us get the books, and we could not get them, and finally we brought suit in Judge McDevitt's Court. Judge McDevitt decided in our favor, granting a mandamus enabling us to open the books, and thereupon they took an appeal, they got it; it is still pending. It has not been settled. I got the books, but the way I got the books, Mr. Atterbury called me over one day, and he said he would like to know why I as acting controller would not attest that the underliers are earning enough to pay the carrying charges. I said, "how can you expect me to make any such attestation without seeing the books of the company?" Well, he said "if you should see the books of the company and find that they are accurate would you attest?" and I said, "most assuredly." Then he pushed a button and sent for Mr. Ballard.

Q. Who is Mr. Ballard?

A. Mr. Ballard is attorney for P. R. T. He said to Mr. Ballard, "you go and tell Tom Mitten to open those books," and we got the books four days later.

BY MR. COOKE:

Q. How did Mr. Atterbury, of the Pennsylvania Railroad Company, get into this?

A. I don't know. I am just giving you the facts.

BY MR. EVANS:

Q. Was this before or after the famous meeting in General Atterbury's office on Sunday morning?

A. Right afterwards. I think one subject that was discussed there as to how they were going to get the Controller to attest the acquisition or condemnation. Following that the city solicitor filed a suit compelling the controller to attest, but as stated we refused to do it.

BY MR. COOKE:

Q. Have you any theory why the President of the Pennsylvania Railroad Company should play this part?

A. I do not. He was interested in seeing that the underliers were sold to the city.

Q. What interest could he have in the underliers?

A. I don't know, but the relations between Mr. Atterbury and the P. R. T. were very close. Would you like me to tell you how I know it?

Q. Apparently they were close, because Mr. Mitten did do what Mr. Atterbury told him to do?

A. Yes; but for another reason. The P. R. T. sold seven per cent. bonds of the P. R. T. company and handed to Mr. Queeney who was no longer connected with the P. R. T. company, \$837,000 for the purchase of bus lines and taxicabs. He

has testified under cross examination by me, that he didn't keep any books; that he just used this account for the acquisition of bus lines, and that he bought and established bus lines and carried them through the experimental stages and then sold them to Mr. Atterbury at cost.

Q. Who was he working for at that time?

A. Mr. Queeney?

Q. From the time he was given the \$837,000?

A. He was working for Mitten Management.

Q. Oh, you said he didn't have anything to do with the P. R. T.?

A. With the P. R. T. He had no right to have any funds of the P. R. T. He was president of the Philadelphia Rural Transit Company, Incorporated.

BY MR. EVANS:

Q. That is a subsidiary of the P. R. T., operating buses in Philadelphia; that is correct is it not?

A. Yes.

BY MR. RHODES:

Q. Was this \$837,000 expended without any accounting?

A. Absolutely. When our office asked the officials of the P. R. T. what these advances to Queeney were they said it was none of our business; the money had been returned. Mr. Queeney on the stand said that he never paid any interest for the money, and the books showed that he had paid seven per cent., and when I asked Mr. Queeney who was right, he or the books, he said he was right and the books were right, and that is all I could get out of him.

Then, they went down to Atlantic City. Well, they established the bus line to Washington. They spend \$250,000 to establish a flying line between the Sesquicentennial to Washington, D. C. without any authority of councils. They had two or three planes, and underneath each one they had painted "William S. Vare under Mitten Management," and I think "Freeland Kendrick under Mitten Management." There was a confession, if you will read the thing literally, but anyway they flew back and forth and they took a loss of \$250,000 on the transaction.

BY MR. COOKE:

Q. That was a part of the \$837,000?

A. No; this was another item in addition to it.

Q. How long after you had this conversation with Mr. Atterbury, did you actually get access to the books?

A. In just a few days. Councils immediately acted. We had never been able to get councils to act.

Q. Who told councils to act?

A. I don't know. Mr. Cox and the Mayor came down to see me and they put in an ordinance appropriating money for Haskins and Solls, an auditing firm, and I said, "that won't do, the money must be appropriated to the controller, because he is the only one authorized to make the order. We are willing to have Haskins and Sells assist in the matter if that is the wish of the councils and the Mayor," but I inserted the words "and such other experts as the controller may require," and after some fight on that I got it passed in that form, and I brought Mr. Maltbie over from New York.

BY MR. RHODES:

Q. Who was mayor at that time?

A. Mackey, our present mayor.

BY FATHER COX:

Q. I heard this side of the story about a year ago and I heard the other side, which makes me believe there is one man in the United States who is responsible for the whole utility situation. Last year in our Pittsburgh taxicab trouble, the Mitten Management was there represented by Parmalee officials, and they brought on a man to take care of the situation, who said he would remain as general manager, who had been for years with the Mitten management in Philadelphia. When we had our trouble in Pittsburgh we learned that these companies were owned and controlled by one gentleman. Now, I am not going to mention the name because we don't have the facts, but it seems to be leading up to one. They not only control the utilities, but they control the United States government, and I think when the bomb bursts, it will show one dominating figure in political life.

A. We are doing our best to burst it. Father.

BY MR. EVANS:

Q. Who attended the meeting in General Atterbury's office, that was held just prior to this conversation that you have testified to? Do you know that?

A. Well, only from having heard the testimony before the Senate Committee. There was Benn, Mackey and Charley Hall; am I correct in that? The President of Councils.

MR. RHODES: You are speaking about the time when they decided to sell the underliers for \$129,000,000.

MR. EVANS: Yes; at the meeting in General Atterbury's Office on Sunday morning.

BY MR. RHODES:

Q. I think you told us that the city was indebted to the extent of \$800,000,000?

A. \$676,185,100.

Q. That is in the form of funded debt?

A. That is outstanding bonds.

Q. How much of your tax is required to pay your interest and sinking fund under your funded indebtedness in the city of Philadelphia?

A. Forty per cent.

Q. It takes forty per cent. of your tax to take care of that overhead; is that right?

A. Yes sir.

BY MR. EVANS:

Q. It amounts to about \$1.12.

A. \$1.12 of the tax rate of \$2.77?

BY MR. COOKE:

Q. How does that compare with other representative cities?

A. You can't make a comparison, Mr. Cooke, because there is a difference in the practice of assessments. Now, in Philadelphia, the utilities are exempt from paying any real estate tax on \$23,000,000 worth of real estate. I think that ought to be corrected. I think they should be required to pay taxes on their real estate. Furthermore through that political control—

Q. Is that customary in other cities do you know?

A. I am not familiar with that. I am not sure about that. We have a board of revision, three members are appointed by the Board of Judges. They fix the final assessments unless an appeal is taken to the court. They are all politicians, and they give special consideration to utilities, in the matter of assessments; that is property that they have to pay taxes on are favorably assessed. And now, the distribution of the burden of taxation in Philadelphia is absolutely inequitable. The law says that property shall be assessed at its full value. If all property in Philadelphia were assessed at its full value, the taxes would be almost one-half of what they are now, and we would still be receiving as much money by taxation as we are now raising.

But of course, because of the inequitable assessment—I had issued an appraisal made in conjunction with one or two business organizations of six central city blocks near city hall, and they are \$100,000,000 under assessed, or were last year.

Q. How about the small property owner?

A. They are carrying the burden of taxation.

Q. Inequality falls upon them?

A. Absolutely. Some of them are assessed above what they are worth, the small homes, but they don't dare to complain because if they did, the trust company holding the mortgage would come down on them, and that is a greater hardship in paying the additional tax. That is why we are losing twelve to fourteen hundred homes monthly by sheriff's sale.

Q. Are your banks under this same sinister influence?

A. Oh yes, they are part of the system.

Q. Part of a vicious circle down there, isn't it?

A. Oh yes, it is. I don't know that it is any worse than some of the other great municipalities, but it is certainly bad enough. The people have lost control of their government. Representative government is broken down in Philadelphia, and we have to look to our State, because after all we are residents of the State of Pennsylvania, the county of Philadelphia, for a remedy.

Q. To summarize, where does the power lie in this vicious circle that you speak of?

A. It is a community of interest.

Q. Well, now, just what is the group that is the pre-dominant factor there in Philadelphia?

A. I would say that Atterbury was the outstanding leader, of course, some of the great utilities give contracts to members of council. There is one member of council who had 500,000 a year contract for years with the Philadelphia Electric Company on,—

Q. What is it? A 30%? What was that Philadelphia Electric contract, \$500,000 a year,——— It was on a 15% basis, wasn't it? The man who just died in councils. 15% plus cost?

Q. Then as I understand you, in your opinion General Atterbury is the dominant factor in the political and economic life of Philadelphia?

A. No question about it. There are others who are joined with him at times, in various enterprises, but we have tremendous taxes levied upon us without representation; that is, in the form of gas rates, and electric rates, car fares. Millions of dollars have been taken away from the public above what was really a fair return to those companies on their investments, and they could only accomplish it by a conspiracy, a community of interest working together for their mutual advantage.

Q. Don't the people of Philadelphia realize the situation?

A. I think they do now more than ever. But we need a new election law, as I said before, to help us down there.

Q. Aren't there enough public spirited Philadelphians to rectify these conditions locally without having legislation?

A. I think the thing has gone on for so many years that the average man has become disgusted and discouraged. You see, take some years ago, we had a political leadership, Senator Penrose and the Vares, at that time the Vares were ash men, Penrose represented the utilities, and then Mr. Penrose always controlled the independent movement, and we had two councils, a select and a common council of over a hundred members, the utilities found it rather expensive to handle and the public became thoroughly aroused, and threatened a political revolution. So Mr. Penrose told his independent friends to give their people a charter, so they gave us a city charter which is a very good in theory, but it is not lived up to. That city charter cut the number of councilmen down to twenty-two and made it much easier for the utilities to control twelve councilmen than a hundred. Now they have another plan for a city manager. They want to take the right away from the people to elect their Mayor and let the majority of council elect the city manager.

Q. You don't favor that plan?

A. I absolutely do not. It is good in principle, it is all right in a small community, but not in Philadelphia. The tendency of the utility movement today is to deprive the public, the people, of as much power as possible, and to delegate it to commissions and committees and individuals. They are trying to combine the county government with the city government. The county government pays for itself, the fees that they take in. They talk about extravagance in the county government. The Legislature creates the jobs and increases the salaries. The Legislature has never created a job in the controller's office and has never been asked to. My salary was fixed by the Legislature forty years ago at \$3,500 a year. It has never been increased, and they cannot charge the Legislature with extravagance in that matter. The same is true of the controller's salary of \$12,000, that is eight and four, because he is controller of the Board of Education. We have never issued a mandamus in our office. Council have always appropriated what has been asked for to cover our personal service costs. But we have never used it up. We have always turned back at the end of a year a saving or surplus from one service item. So that the whole scheme to combine the county and city government—

BY MR. COOKE:

Q. As a matter of fact, the controller's office has been for years traditionally on a very much higher plane than any of the other county offices?

A. Yes, but any other county office can do the same, and you won't remedy it by changing the law. You have to elect honest men to office, and there are plenty of honest men in Philadelphia.

BY MR. RHODES:

Q. Your controller is elected by the people, is he?

A. Yes.

Q. Well, if you use good judgment in the election of your controller, why can't they use the same kind of judgment in the election of the others?

A. You see, the controller was never a politician. He came in to put in a new set of books, as an expert, and the old controller died before his term expired, and the leaders couldn't agree upon a man. And so he was permitted to go in, and the last time he came up for election, there was a split in the Republican Party, and they were afraid that I was going to tie up with one party or the other, but I didn't and both sides endorsed me,—not because they wanted me, I can assure you of that.

MR. RHODES: I think we are getting a little afield. I want to ask you one other question in conclusion, as far as I am concerned. Of course, as I view it, a lot of your troubles cannot be attributed to the utilities. In other words, you have troubles in Philadelphia that have no connection with the utility situation.

THE WITNESS: Well, I think these utilities have contributed substantially to all of our troubles.

MR. RHODES: What I am getting at is that your trouble is only utility problem, which we are investigating. Now, what recommendations do you have to make to this committee as far as correcting the conditions as they may exist, and which we are investigating are concerned?

THE WITNESS: I understand that you not only with your committee cover the Public Service Commission but utility companies. Am I right about that?

MR. RHODES: Yes, that is correct. Just what are your recommendations to this committee?

THE WITNESS: First of all, that the Public Service Commission be given greater power than it has.

BY MR. RHODES:

Q. In what respects?

A. To take the initiative in any matter connected with operation or the purchase or leasing of a public utility. That you establish a bureau to represent the public.

Q. You mean a people's council?

A. People's counsel, but not limit it to complaints made by municipalities. If, say, one per cent of the citizens file a petition with such a bureau, the service should be given to the citizens. If you limit it to the municipalities and the officials, of that municipality, are friendly to the utilities you would not be apt to get very good service. That should, I think, be added, if that feature is to be incorporated in the people's council.

FATHER COX: That is very good, because there are governments that have mayors and public officials who are elected by a minority, because there were two or three candidates in the field, and they do not always represent public opinion when they speak on a subject.

THE WITNESS: So that if 1% or some percentage to be determined by the Legislature had a petition filed to get service of such an organization, I think it would be very helpful.

Q. What other suggestions do you have?

A. I think that the Public Service Commission should not be permitted to give blanket approval to improvements. They gave blanket approval to the \$80,000,000 city improvement in connection with the Pennsylvania Railroad, they simply approved the general proposition, then they entered into all sorts of contracts involving the city in expenditures of money and the Commission doesn't go into it any further. I think that every contract for the management of a utility by another company should be passed upon and approved by the Commission. The managing company should show its qualifications and the company should show it is necessary to have such a management.

In other words, we have an example of a fee of \$700,000 of which \$33,000 is paid to the president, and then we pay \$2,200,000 for such management. That should never be permitted and the law should be so drawn as to preclude the recognition of such a policy as that. A management, when it takes over the management of a public utility, should pay the salaries of officers of the management, of the president, of the secretary and the treasurer, because if they are competent they don't need a managing company, and if they need a managing company, then the managing company should pay all the salaries for service and all research work should be paid by the managing company, and the necessary experts should be paid for by the managing company. The managing

company should be looked into and be required to be approved just as a bank or any other corporation handling the people's money, before they are permitted to engage in the management of public utilities. If such was the law now, Mitten Management would never have been in the position they are today in the managing of the Philadelphia Rapid Transit. I think I would go a step further and say if the Legislature or this committee would come to Philadelphia and sit for a month and study the contracts between the utility companies and the councilmen, utility companies and public officials, and look into the whole situation, making a comprehensive study of it, if it would take a month to do it, that the whole situation there would be cleared up and you could prepare legislation that would be comprehensive and would cover the whole situation. It is a long way from Philadelphia to Harrisburg, and it would be much better if you were there on the job.

BY MR. RHODES:

Q. Do you have personal knowledge that there are such contracts?

A. Absolutely. I can give you a list of them and tell you where to subpoena them. It ought to be corrected. Public Officials should be barred from having contact with utility companies while they are in public office and for one year thereafter. Attorneys should not be permitted to represent utility companies as the city solicitors do today and are on the payroll of the Philadelphia Rapid Transit Company, and that is public, right on their books, and they don't deny it, and yet they are supposed to be representing the city of Philadelphia while they are on the payroll of the Philadelphia Rapid Transit Company.

BY MR. RHODES:

Q. Are there any city solicitors that are in that position?

A. Yes sir, assistant city solicitors and assistant district attorneys.

Q. I would suggest that you give us a list of the councilmen contracting with utility companies and attorneys that are on the payroll of both parties?

A. Yes sir, I will do that. That ought to be prohibited. An attorney either elected or appointed as a public official should not be permitted to represent a utility company during his term of office nor during two years thereafter, nor receive directly or indirectly any money or other valuable thing either directly or indirectly through a partner or otherwise. If your committee or a sub-committee would come to Philadelphia, we could develop the whole situation and show you what is going on, and then I think you would be in a position to prepare comprehensive legislation. I am not a pessimist and never have been, and I am not a politician, but I am in a position to know what is going on. I am not in politics and never have been, but I have the benefits of contacts and know what is going on.

FATHER COX. Maybe if the committee would accept the suggestion to hold the hearings in this case in Atlantic City it would get somewhere. During the summer it is hard to sit in Philadelphia.

BY MR. MEMOLO:

Q. You represent a cab company, you testified?

A. Yes sir.

Q. That was being attacked by whom?

A. The Philadelphia Rapid Transit Company filed a complaint that this man was operating five taxicabs and thirty limousines, and that the limousines were not licensed and that when people called for taxicabs, limousines were being sent to them.

Q. What was the name of this Company?

A. The Steffens Company.

Q. Now Mr. Wilson, you know something about this Menke company?

A. Yes sir. He came to me the other day.

Q. You say that in the Steffens case the Public Service Commission refused to revoke the certificate of public convenience for the Steffens Company?

A. Yes sir.

Q. They did, however, revoke the certificate of Mr. Menke, according to the way he testified here yesterday. I should like to know, if you know, if you are able to tell us, in what

way did these two cases differ; what was the difference between the two; were they not pretty near alike?

A. Yes sir, very much alike. It was possibly because the newspapers at the time I tried the Steffens case were very much interested in this Philadelphia Rapid Transit situation, and gave us a great deal of publicity, and I had been trying the Philadelphia Rapid Transit case and had got lots of publicity.

Q. The Public Service Commission surely does not desire cases of publicity?

A. No sir, but I broke down their witnesses. All their witnesses were detectives or employees instructed to ride in their cabs.

Q. This man yesterday testified he was put out of business and lost his home and everything he had?

A. It is absolutely true.

Q. I think the members of the committee would like to know, if you know, just what was the difference in the two cases; were they not very much alike?

A. Yes, but I think the Mitten crowd were in full power at that time. You see that happened two or three years ago.

BY FATHER COX:

Q. Mr. Joyce didn't make them write up their agreement the same way?

A. No, my man had no agreement. Further, I won this case on its merits. They could not decide it any other way on the evidence. I represent about 157 independent cab men in Philadelphia. Each man owns his own cab, about 150 cabs. One man has owned his cab for fifty years and the average time these cab-men have owned their cabs is 22 years. They filed complaints against every one of them charging they haul passengers by the head instead of by the meter. I represented them and I agreed that they would desist and cease, and the Commission agreed to issue such an order. Then I reduced the cab fare and I asked them if they wouldn't reduce their fare to 15 and 5, and all of the people that I represent have reduced their rates to 15 and 5, the first reduction ever made in cab rates in the city of Philadelphia.

BY MR. COX:

Q. Did you ever hear of the Parmalee Company in Cleveland in a similar situation?

A. No sir.

Q. They sent one of their men to start a strike among these privately owned cabmen.

BY MR. COOKE:

Q. You say you think we ought to pass legislation prohibiting public officials from taking a retainer from utility companies?

A. Yes.

Q. Now, you are a public official, and you represented private interests, in other words, you are on the other side of the fence from the utility; just how do you reconcile that?

A. Because I took those cases to help the general P. R. T. situation; because the P. R. T. Company was trying, they were fighting me, and they were fighting these men, and I felt that these men were individual citizens, each having a family to support, and that they were entitled to do business as free American citizens in the community, and that a monopoly should not be permitted to be established in the taxi business.

Q. In other words, you sought—

A. I did not take it for the fee, because I turned away hundreds of cases; I turned down a \$10,000 fee only yesterday.

Q. Under normal conditions, it would be from a social standpoint as bad for the city official to take a case against these companies?

A. Absolutely.

Q. And you simply handled these particular cases in order to help the situation?

A. I did. I have consistently refused, although I have a perfect legal right to do it, and my partner and associate has refused to take any case that is directly or indirectly connected with any government agency, or with any concern or individual doing business directly or indirectly doing business with the government, city or council. The only clients we have are people entirely outside, no possible connection. They have tried to frame us two or three times by sending clients to

us, but we look our clients up pretty carefully before we accept a retainer. We have to do that to protect ourselves.

Q. Under normal conditions you think it would be just as bad for public officials to be against utilities as to be for them?

A. Absolutely. In regard to this peculiar situation here, I felt justified in doing that. If we have a utility there operating properly, and there was no complaint against it, I would not be a party to interfering in any way with any other company with whom they might have a contest. I think I have taken a lot of your time, and I hope what I have said will be helpful. I don't suppose you are interested in the taxicabs. They bought a lot of taxicabs, this Yellow Cab Company bought it for \$3,000,000, \$1,100,000 was paid for intangible assets, and many of the cabs were three years old, and the life of a cab is three and a half years, but we paid 90% of the cost.

Q. Do you happen to know anything about the purchase of bus lines in Delaware County by the P. R. T.?

A. I know that they did purchase them, yes.

Q. Do you remember the names of them?

A. Hartell Cab Company.

Q. The Red Star?

A. I have not heard of that yet, but they fatten up a company, take a small company, fatten it up, and then buy it. Take the Cunningham Company, their stock was worth \$75,000 par value, and they paid \$150,000 for it.

Q. Who owns these companies before the fattening process?

A. Queeney or Swoyer, or some individual that they pick up to feed them and fatten them up, and then they buy them.

BY MR. COX:

Q. Do you believe in taxicab monopoly?

A. No, I don't.

Q. We are fighting them in Pittsburgh right now, and they won't give us a certificate of public convenience.

A. I think there should be competition in the taxi business, or in any other business. Are your rates as high there as they are in Philadelphia; they are 15 cents for the first quarter?

MR. COX: Ours are much higher.

BY MR. COOKE:

Q. Who owns the Cunningham Taxicab Company?

A. Thomas Cunningham.

Q. He owned it during the fattening process?

A. I guess that was already fattened. I guess Tom fattened that himself, but the P. R. T. records show that the first check was drawn to Thomas Cunningham in the sum of \$750,000, and that one check was cancelled, and the next check was drawn to a man who is a clerk in the Greenfield offices for a like amount. I don't know whether that is the mysterious \$50,000 that was referred to down in Washington.

Q. Were those checks drawn to the companies?

A. No sir, they were drawn to individuals, and there are a great many checks and a great many vouchers that are missing out of the files.

BY MR. RHODES:

Q. You spoke in part of your testimony of the fact that there were a lot of real estate transactions between the utilities and the city?

A. Yes.

Q. Now, we didn't get any of those specific instances on the record, could you send to this Committee, or to counsel for the Committee, a list of the transactions in the real estate line between the utilities and the city?

A. Yes.

Q. Both to and from?

A. Yes, just as a point, to show you how this thing was done. There was an old worn out pier, Greenwich Pier, that the Pennsylvania Company wanted to get rid of, they wanted to put up a new plant, that was sold originally for \$2,000,000—

BY MR. EVANS:

Q. You say Pennsylvania Company, you mean Pennsylvania Railroad?

A. Yes, Pennsylvania Railroad Company, not Pennsylvania Company. I happen to bank there, it is a very good bank, I don't have very much money there.

BY MR. COOKE:

Q. Where is Greenwich Pier?

A. It is down on the waterfront, it is downtown along the river. We paid \$5,000,000 for it—

Q. When you speak of we, you mean the city?

A. Yes, I always speak of the city as we.

Q. Was that part of the South Philadelphia grade crossing elimination?

A. Yes. \$5,000,000, and we borrowed the money for 50 years, and pay a sinking fund charge on it, and our children and grandchildren turn the money over.

BY MR. RHODES:

Q. Who is the financial genius of your city that countenances all of these transactions?

A. We have quite a number of experts, each particular one in his own particular field, he will go and gather the others in, and when it is necessary to put something over they are all together, because each man expects support at the proper time for his pet project, the same community of interest.

BY MR. COOKE:

Q. Do you know when the value of the Greenwich Pier was established?

A. It was during Kendrick's administration, I think the last year. I paid the last million dollars on it a short time ago.

Q. Then that valuation was not part of the South Philadelphia grade crossing?

A. I am not clear on that, Mr. Cooke, but I think it was in connection with—

Q. Be very careful, because I was one of the negotiators.

A. Your name does not appear in the transaction in making the valuation originally. I know that, because I examined the records before I came up here, and your name is not on it. If it were, I would not criticize it, because I know it would be right, and I mean that too, I am very sincere about that.

BY MR. RHODES:

Q. These other lists, Mr. Wilson, you can submit those?

A. I have quite a number of them, and I think that I might as well submit them in writing and save your time.

Q. We would be very glad to have them.

A. There are a number of important things I have not touched on. Principally legal fees, turning over legal fees in the amount of \$1,000,000 in four years, and the hypocritical conduct in management in the handling of their men. I am speaking now with reference to the P. R. T., giving them money and then taking it away from them, requiring them to take a box and pay rent for the box in the bank; they have 10,000 boxes there, and these fellows came to me and said, "I don't need the box, but they want me to take it," then they had them make their wills, and they make the Mitten crowd executors of their wills, get their insurance through them, and one year they charged them 75 cents to give to Einar Barford, to advise them on their investment, 75 cents from each employe for advise on their investment and they didn't have much to invest after they paid all these contributions—

BY MR. COOKE:

Q. Are you referring to the incident in which Mr. Barford gave some legal advice on investment in the security of a company that came under the Blue Sky Law?

A. I am familiar with that.

Q. I think they got quite a considerable recovery in that?

A. Yes.

Q. As I recall it, a couple hundred thousand dollars recovery, so that the employes might easily have paid 75 cents and still be away ahead of the game.

The seventy-five cents was subsequent to that. They paid a fee, and Mitten paid a fee. I think I prepaid him \$10,000 and now, I am not criticizing Barford, because he is a good, clean, straight fellow; I am not saying a word against him, but I am criticizing them for requiring their men to pay seventy-five cents a year. I am not criticizing Barford, because he is perfectly alright and I have not doubt that he gave them good advice.

MR. RHODES: Mr. Wilson, any relevant suggestion you may have, along with those that we have requested, I would sug-

gest that you submit to the Committee in writing, unless there is something that Mr. Evans has to ask?

THE WITNESS: Have you something else in mind, Mr. Evans?

MR. EVANS: No. I think not, Mr. Wilson. I was wondering whether in connection with the Pennsylvania Railroad improvements, which you mentioned, in West Philadelphia and the commitments of the city in that connection, it has been frequently stated that the Pennsylvania Railroad was investing \$75,000,000 in those improvements for the benefit of the city. Is that, in your opinion, an accurate statement?

THE WITNESS: Absolutely, no. They built a station in New York and the City of New York did not contribute a dollar. On the contrary they paid—the railroad company was required to pay for the street improvements and various surrounding improvements there.

BY MR. EVANS:

Q. As a result of those improvements, the Pennsylvania Railroad will have large quantities of central real estate that they can later dispose of, will they not?

A. Yes sir. They are putting up a great office building and other structures, that are going to be highly profitable. The city should not have paid anything.

There was an elevated structure with an estimated life of seventy-five years; it was in perfectly good condition; but to please them councils passed an ordinance to take that structure down and place it under the river. They are going to spend \$28,000,000 to put that down under the river and make the extension. Under a decision of the United States Supreme Court that becomes an improvement to the underlyer owning that elevated structure, and if we should take it over we have not only to pay \$28,000,000 and interest and sinking fund, but we have to pay the \$28,000,000 in 1957, if we acquire it. We have to pay twice. I pointed that out when the agreement was made, but it didn't seem to have any effect.

BY THE CHAIRMAN:

Q. The city does not seem hesitant to go ahead with these important improvements?

A. Oh, they are perfectly willing to spend other people's money.

Q. Don't some of the people down there anticipate that there will be a reckoning some time?

A. Yes we have reached the point now that if we don't get this \$3,000,000 through, they will not have any payrolls in July and August.

Q. The \$3,000,000 seems to be a picyune amount for the city of Philadelphia to ask the Legislature to let them borrow that amount. It would seem that you are on your last legs now.

A. I don't want to attack the bond issues of the city, but the city can never become bankrupt under our law, because the bonds issued are a first lien against all real estate in Philadelphia. You can always get your taxes out. Our bonds are good. They are gilt edge securities. There is a demand for them. One high official had an argument with me the other day about it; and I said, "Do you know a tramp can go into a pawn shop and hock a diamond?" and I said: "Just as long as we have a borrowing capacity, the banks are only too glad to buy our bonds," but our operating situation is in a terrible condition. Now, the Legislature required a tax rate at the first of the year to meet all current expenses and borrowing expenses and interest in our sinking fund, and for political reasons the Legislature held the tax rate down. As a result of that we had to rob the police and fire fund of \$3,800,000.

MR. RHODES: I think your city needs more than the Legislature can supply.

THE WITNESS: Well, in the old days, when they put through the old gas lease the people used horse whips on them, and I think one of those old fashioned western bees might be very helpful. I believe in law and order, but sometimes, I honestly believe that more strenuous methods are necessary.

A recess was here taken until 7.30 o'clock.

April 9, 1931. 7.30 P. M.

COLLEDGE (recalled).

BY MR. EVANS:

Q. Have you made a study of the financial set-up of the Hanover and McSherrystown Water Company

A. Yes sir.

Q. Have the first assets of this company been written upon the books.

A. Yes sir.

Q. When was the first write-up?

A. The report filed by the company with the Public Service Commission as of the 31st day of December, 1927, shows a write-up in the company's fixed assets of \$241,755.68.

BY MR. COOKE:

Q. What was the book value at the time that write-up was put in.

A. The book value before the write-up was \$1,063,610.20, showing a write-up of 22.7%.

BY MR. EVANS:

Q. How was the figure of \$1,063,610.20 made up?

A. On December 31, 1921, which was the first yearly report filed by the company, showed a book value of fixed assets of \$914,344.51. From January 1, 1922, to December 31, 1927, the report showed net additions of \$149,265.69 totaling \$1,063,610.20.

Q. Have you any way of ascertaining whether or not there is any write-up in the figure of \$914,344.51.

A. No sir.

MR. COOKE: Mr. Evans, before we leave this subject, is there any way of getting this figure of \$900,000 or \$1,050,000 in relation to the \$500,000 that the witness said today that he thought represented the real investment in the property?

THE WITNESS: I don't think so, Mr. Cooke, because as I say, the first report filed by the company under the regulation of the Public Service Commission was for the year 1922, and that report showed the balance as of the year 1921 and the balance sheet as of the end of 1922. So that the figure of \$914,344.51 was the only figure available. Now then, the only way that you could get that would be an examination of their books to determine the make up of that.

BY MR. COOKE:

Q. Was that company as of 1921 the result of consolidating other companies.

A. Apparently, yes.

Q. That is probably where some of that took place.

A. Yes sir.

MR. EVANS: As I understood Mr. Sheppard, this morning he testified that this same company in 1917 was offered to him and his partner for approximately \$450,000, and that perhaps in 1919,—I am not sure of the exact date,—it was again offered to his partner, according to a memorandum that had been found for something over \$600,000, if I remember rightly. I think that is correct.

THE WITNESS: I think it was about \$600,000, I think he said.

BY MR. EVANS:

Q. Now what was the amount of depreciation charged between January 1, 1922, and December 31, 1927.

A. \$168,363.09 was the accumulated depreciation reserve as shown by the report as of December 31, 1927.

Q. What then was the depreciated value of the fixed assets as of December 31, 1927, excluding the write-ups to which you refer.

A. \$895,247.11

Q. What would this figure be including the write-up.

A. \$1,137,002.79.

Q. Have you been able to ascertain by whom the appraisal was made upon which this write-up was based.

A. No sir. I attempted this morning,—well not only this morning, but before—to ascertain this, but the certificate of notification, as I will mention later, made no mention of it, and I thought maybe there might be in the application docket a record of an application, but it appears that when a company purchases the capital stock of another utility company, no application is required, no application for a certificate of public convenience is required, so therefore there was no testimony as to the appraisal.

Q. That is if the purchasing company is not an operating utility?

A. Yes.

Q. By whom was the stock of this company purchased? As of December 31, 1927?

A. I will have to go back to the year 1926, Mr. Evans, the common stock of the Hanover and McSherrystown Water

Company was purchased in 1926 by the North American Water Works Corporation, which company in 1927 turned this stock over to the Keystone Water Works Corporation, now the Keystone Water Works and Electric Corporation, a subsidiary of North American Water Works Corporation.

Q. What securities did the Hanover and McSherrystown Water Company have outstanding at the time of this acquisition?

A. The company as shown by previous reports at the time that the stock was sold, had issued and outstanding an issue of \$550,000 of first refunding six per cent. bonds, and on September 1, 1926, it put out an issue of \$70,000 of ten year six per cent. gold notes, the proceeds from which, according to certificate of notification No. 4431, filed in regards thereto, were stated to be for the purpose of constructing a filter plant and other corporate purposes. These latter notes were apparently sold for par.

Q. What was the next issue of securities?

A. On March 1, 1927, after the company was purchased by the North America Water Works Corporation and the Keystone, the company issued another series of ten year six per cent. gold notes, par value \$350,000, the purpose as stated in certificate of notification No. 4433, filed in regards thereto, being as follows: "Proceeds of this issue of notes to be used in part in retiring outstanding \$70,000 in filtration and improvements 6% gold notes; to reimburse the company for fixed capital expenditures, and for other proper corporate purposes." The proceeds were actually used as follows: Retiring 6% filtration gold notes, \$70,000; reacquiring 3,459 shares of common stock of the company par value \$172,950.00 at \$65.00, \$224,835.00; total \$294,835.00.

The premium of \$15.00 per share or \$51,885.00 was charged to earned surplus, thereby assisting in the creation of a deficit of \$60,146.37 as of December 31, 1927.

BY MR. EVANS:

Q. How much common stock did the company have outstanding at that time?

A. \$250,000—5000 shares at \$50 par value.

Q. And it reacquired with the proceeds of this note issue, 3,459 of those shares at \$15 above their par value?

A. Yes sir.

BY MR. COOKE:

Q. Is there anything in the notification there that would suggest that type of use of money?

A. Nothing without the wide interpretation to be made to mean that, unless they would class that as "other proper corporate purposes." I may have something more to say on that later.

Q. Who purchased this issue of \$350,000 worth of 6% notes?

A. From a copy of a contract attached to the certificate of notification No. 4433, the \$350,000 of 6% gold notes were apparently sold to Vought and Company, of New York City, at 90%.

BY MR. EVANS:

Q. Now, did you find in connection with this certificate of notification any correspondence or other information between the bureau of accounts of the Public Service Commission and the company?

A. Yes sir. An outstanding feature in regard to this issue of notes is the apparent evasion by the officers of the company of the question as to the exact purpose of the issue, as evidenced by letters attached to the certificates of notification, extracts of which I shall be glad to read and which I think will be interesting. A letter from the Bureau of Accounts dated August 6, 1927, File 038 to J. H. Freeland, that letter was written by the Chief of the Bureau of Accounts, to Mr. J. H. Freeland who apparently was an officer of the Hanover-McSherrystown Water Company as now constituted and stated in part:

"A further examination of the certificate indicates that the following journal entry is to be made on the books of the company with respect to this issue:

Debit, Other Accounts Receivable .....	\$315,000.00
Debit, Unamortized Debt, Discount and expenses .....	35,000.00
<b>Credit Other Funded Debt .....</b>	<b>\$350,000.00</b>

"Proceeds of this issue of notes to be used in part in retiring outstanding \$70,000 in Filtration and Improvement 6% Gold Notes; to reimburse the Company for Fixed Capital expenditures and for other corporate purposes."

"It is noted from the explanation to this entry that the balance of the proceeds after the retirement of the \$70,000 of Filtration Notes are to be used to reimburse the treasury of the Company for fixed capital expenditure and for other corporate purposes. Inasmuch as the balance sheet as of December 31, 1926, does not show any immediate need for any additional amount of working capital, it is requested that the Company advise the Commission further with regard to the disposition from the treasury of the proceeds of this issue. Journal entries should likewise be submitted showing the journal entry that will be made with respect to the disposition of the entire proceeds of this issue. If all or any part of the proceeds of this issue of notes after the retirement of the \$70,000 of Filtration Notes are to be disbursed in the form of a cash dividend to the stockholders it is also requested that you inform the Commission with regard to the surplus against which this dividend was issued; and if all or any part of such surplus was created by recording a revaluation of the company's property a summary of such appraisal should be submitted as well as the journal entry through which it is recorded. In this connection it is also requested that the Commission be advised with regard to the aggregate amount which the North American Water Works Corporation recently paid for the stock of this company."

A letter of the Bureau of Accounts dated August 15, 1927, requests a reply to this letter. This first letter is dated August 6th, and August 15th, 1927, it had not been answered yet.

A letter from Mr. J. H. Freeland on August 23, 1927, transmits journal entry as follows:

"121 Other Accounts Receivable .....	\$ 14,000.00
110 Reacquired Capital Stock .....	172,950.00
711 Other Deductions from Surplus .....	51,885.00
159 Other Funded Debt .....	70,000.00
116 Other Special Deposits .....	6,165.00
131 Unamortized Debt for Discount and Expense .....	35,000.00

Credit, To 159 Other Funded Debt .. \$350,000.00"

That is all the correspondence that appears in the case.

BY MR. EVANS:

Q. If I understand that clearly, then the debits that go to make up the \$224,835 which you have testified were spent for reacquiring the stock, goes on account No. 110, Reacquired Capital Stock \$172,950, and on Account No. 711, Other Deductions from Surplus \$51,885?

A. That is right.

BY MR. COOKE:

Q. There is no follow up from the Commission on that? They made these inquiries and they got that rather terse answer but there was no action taken?

A. I asked Mr. Dunlap, who has charge of the section of the Bureau in which these certificates of notification are filed, yesterday morning how the Commission evidenced its approval of these certificates, and he said that it doesn't evidence its approval, and I asked him why, and he said, "Well, you are getting on a question, some of you fellows say that the Commission has authority over the issuance of securities of companies, but the Commission says that it has not." I said, "I am not going to controvert that opinion with anybody." I said, "I am just asking a question." I said, "You mean they just file it," and he said when we apparently obtain all the information we can obtain, then we file it.

Q. What other securities were issued during the year 1928? A. There were no other securities issued, but the report filed for the year 1928 showed that apparently that during the year 1928, the issue of \$350,000 of 10 year 6% gold notes, and the \$550,000 of the first refunding 6% bonds previously issued were retired by borrowing money on current notes payable. Their balance sheet as of December 31, 1928 showed notes payable of \$910,000; the year previously it showed a liability for notes payable of \$900,000, and a sinking fund as an asset of \$920,750. There was no explanation as to what the sinking fund was intended for, but it is apparent to me, inasmuch as

the balance sheet as of December 31, 1928, shows no funded debt, that it was the intention to immediately retire all of the funded debt and throw it into the current liabilities.

BY MR. COOKE:

Q. Now, what is the difference in the rate of return between the bonds and these notes?

A. Apparently the notes are 6%.

Q. What were the bonds?

A. Well, the bonds were both 6% too, both bonds issues were 6%. The 6% notes and the 6% bonds. I do not get the idea of throwing it out of the funded debt column into the current liabilities, unless the idea was to obtain a mortgage on the property of the company in order for the holding company—

Q. To be able to say they had no funded debt?

A. To get a mortgage possibly, get a mortgage and put it up to take some of its securities.

Q. Isn't that a very unusual situation for a company like that to have no funded debt and such a tremendous volume outstanding securities?

A. I would say so, Mr. Cooke. In the year 1927 it had an issue of 10 year notes in addition to the \$550,000 it already had due, and then turned around in the very next year and retired those notes—this funded debt by current liability—

BY MR. RHODES:

Q. The selling of those notes cost them \$35,000?

A. Beg pardon?

Q. I say the selling of those notes cost them \$35,000?

A. Yes, that was the discount on them, \$35,000.

Q. And then turned round and redeemed them the next year?

A. Yes, the very next year. Right here, at the end of 1930, the balance showed unpaid matured interest on unfunded debt of \$27,319.54. Now, if that interest were not overdue, it would be accrued interest, so apparently they had not even met the interest on their current notes payable.

BY MR. EVANS:

Q. You don't know whether this \$350,000 issue of notes was held by the public or not, do you?

A. No, except that the contract of sale as attached—the contract of sale which I have here is not attached to the certificate of notification showing that they were sold through Vought and Company.

Q. Have you any information as to the price at which the \$550,000 of bonds were sold; you testified that they were outstanding on September 1st, 1926?

A. No, they were outstanding, Mr. Evans, from the first report that was filed, they were shown by the report for the year 1922 as being outstanding.

Q. As I remember it, Mr. Sheppard testified that these bonds were offered to him at 80.

BY MR. RHODES:

Q. When did they mature, do you know?

A. I cannot tell you that, Mr. Rhodes.

Q. I thought maybe these notes were utilized to take care of that bond issue which might have matured.

MR. EVANS: I don't know; it is too many for me.

BY MR. EVANS:

Q. Now, what have you found in regard to the assets of the company as shown by its reports to the Commission?

A. Since the year 1922 the company shows by its reports annual return, annual overall returns, as follows: for the year 1922 they showed gross operating income of \$40,999.45—and remember that the write-up in the books did not occur till 1927, so that the per cent. of overall return based on all the depreciated fixed assets, excluded write-up, which would be before the write-up, was 4.94%. For the year 1923 it was \$40,893.57, the overall return, of 4.86. 1924, \$51,184.58 overall return of 5.96. 1925, \$40,008.54, overall return of 5.70%. 1926, \$53,667.35, overall return of 6.60%. 1927, the year of the write-up, gross operating income of \$66,843.12, overall return, including write-up, was 5.33%, and excluding write-up was 7.46%. 1928, \$72,923.63, overall return including write-up was 6.44%, and excluding write-up was 8.17%. 1929, \$72,576.64, overall return, including write-up 6.14%, and excluding write-up was 8.14%. 1930, the gross operating income was \$43,696.18, including

write-up the overall return was 4.27%, and excluding write-up was 5.43%. The drop in the revenue, or the drop in the gross revenue for the year 1929, the gross revenue was \$116,229.48, and in 1930 it dropped to \$103,624.51. That might have been due to the rebates that Mr. Sheppard stated they got during the year 1930.

BY MR. EVANS:

Q. I guess they didn't have enough water to sell.

A. Apparently; may be not.

Q. What dividends has the company paid?

A. The company paid no dividends from 1922 to 1925, inclusive. In 1926 it paid a cash dividend of six per cent. on \$15,000, on its outstanding capital of \$250,000, from income. In 1927 it paid a cash dividend of four and one-half per cent., or \$11,250 from surplus. No dividends have been paid since 1927.

Q. Now, when you speak of gross operating income of this company, is that the gross operating income after the deduction of all taxes and fixed charges?

A. That is the deduction of the operating—or let me just give you the set up of it.

For the year 1930, the operating revenue was \$103,624.51; merchandise sales and job work revenue was \$892.60; rent revenues \$125; total revenue, \$104,642.11.

Operating expenses, exclusive of loans, taxes and depreciation \$56,123.67. It happened that there was no loan in 1930. Apparently these current notes were discounted at the bank, and would not be taxable. The depreciation was \$4,681.86; merchandise sales, expenses \$132.05; rent expense \$8.35; total, \$60,945.93.

Gross operating income, \$43,698.18, as stated in the exhibit there.

Q. The Keystone Water Works and Electric Corporation is in the hands of a receiver, is it not?

A. The Keystone Water Works and Electric Corporation was placed in the hands of a receiver on August 31, 1930 at Wilmington, Delaware.

Q. This morning Mr. Sheppard, and Mr. Cremer also, in regard to a conference had with Chairman Ainey of the Public Service Commission in his office in August, 1930 at which time according to their testimony, Chairman Ainey said that he would not permit the borough to erect its own water works, but would order the company to construct an impounding dam, which would increase the fixed capital of the company and the rates charged to consumers. As I understand it, this was subsequent to this right, to which you have referred, and to all these financial transactions?

A. That is correct. The write-up in the books of the company as to fixed capital occurred during the year 1927, so that if there were any additions made to the fixed capital account, as it stood on the books of the company, as of December 31, 1927, or in any of the years subsequent to, that would be an apparent approval of the write-up, which had been shown in the reports of the company since 1927.

Q. Mr. Sheppard also testified this morning that the stock of the company was offered to him and his associates in 1917 at a nominal value, and that the common stock represented little or no investment. Is that as you understand, the same stock which was in 1927, reacquired by the company at \$65 a share.

A. Apparently, yes. That same amount of capital stock has been outstanding in all of the reports on file in the bureau of accounts and statistics of the Public Service Commission.

I might say, Mr. Evans, that a letter from Mr. Freeland, attached to the certification in regard to the issue of \$350,000 6% notes, stated that the purchase price paid by the holding company for the Hanover McSherrystown Water Company stock was \$65 per share. And now, if they paid \$65 per share for the 5000 or for the five thousand shares outstanding, they paid \$325,000 for the stock, but in retiring the 3459 shares for \$224,835, it would leave them an apparent investment in the plant of \$100,165, exclusive of the bonds, notes that they might hold. But inasmuch as these were all retired during the year 1923, apparently that would be the only investment they had.

Q. Do you know what bankers are the ultimate controllers of this chain of companies?

A. I don't believe I do, Mr. Evans. Mr. Sheppard said the Fitchin Corporation was the last owner and the Guaranty Trust Company of New York was the trustee of the bonds.

## IN RE GETTYSBURG WATER COMPANY:

BY MR. EVANS:

Q. Have you made a similar study of the financing of the Gettysburg Water Company?

A. Yes sir.

Q. Is that owned by the same interests?

A. Yes sir.

Q. Have there been any write-ups in its fixed assets on its books?

A. The report of the Gettysburg Water Company filed with the Commission for the year 1927, showed a write-up of the company's fixed assets amounting to \$193,117.16. The fixed assets before the write-up as of December 31, 1926, was \$147,814.18, or a write-up of 130.64%—\$193,117.16 against \$147,814.18.

BY MR. COOKE:

Q. What year was that?

A. That was in the year 1927, they wrote them up.

BY MR. EVANS:

Q. On what was this write up based, as far as you have been able to discover?

A. Apparently on an appraisal made by Ford, Bacon and Davis as of February 15, 1927, on the basis of reproduction cost new, less deterioration of \$347,000.

Q. Did they speak of deterioration rather than depreciation?

A. That is what they said, deterioration.

BY MR. COOKE:

Q. What is your interpretation of the difference between depreciation and deterioration?

A. I don't know any.

Q. It is probably observed depreciation, isn't it?

A. Yes sir. It is something like the firm of engineers that was making an appraisal of a street car line and its equipment and this is one of the things they did to determine observed depreciation. They went out and measured the brake shoes on the street cars and then measured the flange on the wheel and determined the difference between the ordinary size of the brake shoe and the size of the flange and then took that as the depreciation against the original cost of the brake shoes and the rail. That is just the two items that they used.

BY MR. EVANS:

Q. Well, now getting back to Gettysburg, what value did the company use on its books? You have spoken of the appraisal being \$347,000?

A. Taking the \$347,000 as shown by the appraisal of Ford, Bacon and Davis, the company made a deduction of \$34,000, for going value and \$5,000 for working capital, which I presume was a part of the appraisal, bringing the value down to \$308,000.

Q. For its fixed assets?

A. For its fixed assets. It then deducted the book value as at December 31, 1926, as stated above of \$147,814.18, leaving an indicated write-up of \$160,185.82. To this it added the reserve for depreciation as shown by the company's books as of December 31, 1926 of \$14,155.63, showing a necessary write-up of \$174,341.45. But instead of writing up its fixed assets \$160,185.82, and cancelling the reserve for depreciation of \$14,155.63, the company wrote up its fixed capital \$193,117.16 and also cancelled the reserve for depreciation.

Q. Are you able to explain why they did that.

A. No sir, I haven't been able to get their logic in it yet. I tried to obtain the figures to find out just exactly why they did use the figures of \$193,117.16, but I was not able to do it.

Q. These were the figures on its books, as I understand it.

A. Yes.

Q. What figures did it submit to the Commission in its annual report.

A. In its certificate of notification, as the journal entry to write-up its books, it submitted the journal entry debiting fixed capital installed \$160,185.82, and debited depreciation, by which I presume they mean depreciation reserve, \$14,155.63, and credited capital surplus \$174,341.45, which shows that a further entry debiting fixed assets and crediting capital surplus for \$32,931.18 was made, but was not submitted to the Commission.

Q. Now, that \$32,931.18, as I understand it, is the difference between the \$160,185.82, and \$193,117.16.

A. That is correct.

Q. What did the company then do.

A. The company then proceeded to declare a dividend of 170%, that is 170% on \$105,000 capital stock outstanding, or \$178,500, making the following entry in its books: Debit capital surplus \$174,341.45, debit unappropriated surplus \$4,158.55, credit dividend procurable payable \$178,500.

Q. How many shares of stock did the company have outstanding at this time.

A. 7,000 shares, \$15.00 par value each.

Q. Approximately what did this dividend amount to per share, Mr. Colledge.

A. \$25.50 a share.

Q. What holding company acquired the Gettysburg Water Works, at this time.

A. The entire capital stock of the Gettysburg Water Company was purchased by the Keystone Water Works, Incorporated, which is now the Keystone Water Works and Electric Corporation, a subsidiary of North American Water Works Corporation.

Q. And who got this dividend of \$178,500 that you have spoken of.

A. Apparently the holding company received the entire dividend.

Q. Up to the year 1927 had the Gettysburg Water Company been an independent water company.

A. Yes. The Gettysburg Water Company up to the purchase of its common stock by the North American Water Works Corporation, and the Keystone was an independent company, serving the borough of Gettysburg, and the townships of Cumberland and Straband, with a population approximating 6,000.

Q. What securities did the company issue after acquisition by the Keystone Water Works Corporation.

A. On April 1, 1927, after the purchase of its stock by the holding company, the company issued \$200,000 first mortgage 5½% gold bonds, selling them to H. M. Jacoby and Company of New York at 89½. This was as shown by a letter to Glenn R. Snyder dated July 14, 1927, which was attached to the certificate of notification No. 4547 in regards to this issue of bonds.

Q. What was the purpose stated in the certificate of notification of this issue?

A. The purpose as stated in the certificate was "for the purpose of making additions, extensions and improvements to its properties, and of extending and improving its service; and reimbursing the company for capital expenditures made, and for other proper corporate purposes."

The entry on the company's books as shown by the certificates was:

Other Accounts Receivable .....	\$179,000.00
Unmortized Debt, Discount and Interest,	
Debit .....	21,000.00
Funded Debt, Credit .....	200,000.00"

Q. Did the Bureau of Accounts of the Public Service Commission have any correspondence in regard to this certificate?

A. Yes, here again the Commission appears to have had trouble in determining the proceeds, or rather what the exact purpose of the proceeds was. This is evidenced by correspondence which was attached to the certificate. I will read these letters in the record.

Harrisburg, May 25, 1927,

File 038.

"Mr. J. H. Freeland,

"P. O. Box 921,

"Harrisburg, Pa.

"Dear Sir:

"Receipt is acknowledged of Certificate of Notification of the Gettysburg Water Company covering the issuance and sale of 200,000 of First Mortgage 5½ per cent. Gold Bonds; \* \* \*

"Kindly furnish this office with a statement showing in detail the capital expenditures made to December 31, 1926, amounting to \$147,814.18.

"This certificate has been filed as of May 19, 1927, serial number 4547.

"Very truly yours,

"CRF"

CHIEF."

Harrisburg, July 1, 1927.  
File 038.

"Mr. J. H. Freeland,  
"P. O. Box 921,  
"Harrisburg, Pa.

"Dear Sir:

"A further examination of Certificate of Notification filed by the Gettysburg Water Company \* \* \*, discloses that the following additional information will be required:

"1. In answer to the question regarding purpose of issue on page 12, the following is inserted:

"For the purpose of making additions, extensions and improvements to its properties, and of extending and improving its services; to reimburse the company for capital expenditures made, and for other proper corporate purposes.

"(a) Capital expenditures to Dec. 31, 1926.. \$147,814.18

"(b) Working Capital ..... 32,185.82

Total ..... \$180,000.00

"With regard to item (a) above, an examination of the balance sheet on pages 14 and 15 of the Certificate indicates that as of December 31, 1926 the company had Fixed Capital aggregating \$147,814.18 against which it had issued an (d) outstanding \$105,000.00 of capital stock. It would therefore appear from the balance sheet submitted that if the \$105,000.00 of capital stock was represented by a cash investment, the treasury of the company has already been reimbursed for a large part of the \$147,814.18 of Fixed Capital. In other words, a statement should be submitted which will establish the fact that the treasury has not been reimbursed for the capital expenditures against which the company now seeks to issue bonds.

"Furthermore, since there does not seem to be an immediate use for additional cash other than that which will be provided by item (b) above, the Commission desires to be informed in detail as to what disposition the company proposes to make of the cash which will come to its treasury as a result of transaction (a) above.

"2. With regard to item (b) above, it is stated in Certificate that the \$32,185.82 will be used for laying mains, for extension of distribution system, purchase of meters and labor incident thereto in installing same, and for other general working capital.

"Since the balance sheet at December 31, 1926 shows current assets of over \$16,000.00 and no current liabilities, the company does not appear to have an immediate use of any large amount of additional working capital, particularly in view of the fact that the major portion of its operating revenue are collected semi-annually in advance. It is therefore requested that a disposition of the amounts \$32,185.82 be given in more detail, setting forth separately the amounts which it is proposed to expend for (1) mains, (2) distribution system, (3) meters, etc.

"On page 13, it is stated that the bonds are to be sold at 90. The Commission desires to be informed with regard to the name of the party through whom these bonds are to be marketed, the selling commission, if any, and if the contract is in writing, a copy of the contract should be submitted.

"Very truly yours,

"BFM:REZ

CHIEF."

Harrisburg, August 6, 1927,  
File 038.

Answer dated July 5, 1927. Letter forwarded to New York accountants for reply.

"Mr. J. H. Freeland,  
"P. O. Box 921,  
"Harrisburg, Pa.

"Dear Sir:

"Referring further to our letter of July first \* \* \* Certificate of Notification of the Gettysburg Water Company \* \* \* \$200,000 of First Mortgage 5½ per cent Gold Bonds.

"Receipt is acknowledged of the entries that will be recorded on the books of the Company with regard to this issue of

bonds. It is noted from these entries that all the proceeds of this issue with the exception of \$500 are to be issued as a cash dividend to the stockholders, said dividend to be issued for the most part against a surplus created as a result of a revaluation of the company's property. In this connection it is requested that the Gettysburg Water Company advise the Commission of the aggregate price at which its stock was recently sold to the present management, the North American Water Works Corporation. \* \* \*.

"Very truly yours,

"CHIEF."

I was unable to find an answer to this letter.

BY MR. COOKE:

Q. Who is it in the Bureau that writes these letters?

A. Mr. Morgal.

Q. I imagine he got a great kick out of writing these letters, but what have the consumers gotten out of any of that work?

A. Not a thing.

Q. He might as well have taken a walk around the block?

A. Yes, or put his head out of the window and hollered..

BY MR. EVANS:

Q. As an accountant, was this in your opinion a proper method of financing?

A. I just don't know whether I get the—

Q. I mean, to issue \$200,000 worth of bonds in this way in order to pay the dividend to stockholders?

A. I never fancied the plan of borrowing money to pay a dividend. I have been asked by clients who have had very nice earnings in certain years whether it would be advisable to pay an extra dividend and if so whether it would be a good idea to borrow money to do so, and I told them emphatically no. If your surplus earnings are not liquidated, then I don't like to see you place a liability on your books to pay the dividends out of, and I think that this is going far beyond any good financing that I could conceive of.

BY MR. RHODES:

Q. It is taking your capital out of your company?

A. Yes sir.

Q. And certainly it is not sound financial practice?

A. No. And further on I am going to show you what they did with the biggest part of this \$178,000.

BY MR. COOKE:

Q. The point of my question sounded like a joke, but we are constantly told the Public Service Commission cannot do this, that or the other thing because they have not help enough, and we are constantly seeing that the help they have are engaged in things that might as well not be done because the company doesn't come across and pay any attention to them. With me it is not a question of good or bad financing, but the fact that the company does not pay any attention to them but goes right ahead and acts as though they were not there, and I think our committee is bound to find that they could take the appropriation the State gives them now and accomplish infinitely more if they had the energy and the desire to do it.

MR. RHODES: Does it not seem that they got on record these financial manipulations, but they took the position that they are powerless to do anything, even after they have acquired the information which indicates how these things have been done?

MR. EVANS: I think that is the situation, Mr. Rhodes. The Bureau of Accounts frequently gets information which might have considerable value if put into action.

MR. COOKE: But it never gets into action.

FATHER COX: Nobody cares.

MR. EVANS: All I meant to indicate, Mr. Cooke, was that I think it is perhaps unfair to the Bureau of Accounts to criticize them for spending their time in getting this information, because in my own opinion this information when gotten could be made good use of.

MR. RHODES: But it is not made good use of in this particular instance, because the Commission takes the position that it is powerless to act, is that not correct?

MR. EVANS: That is true.

MR. RHODES: Whether they are wrong or right, that remains to be determined.

FATHER COX: Are they powerless to act?

MR. RHODES: I cannot answer that.

MR. EVANS: I think Commissioner Young and other Commissioners testified that they never tried to act on these matters.

FATHER COX: They don't, apparently, from all we have heard, they don't want to act.

MR. RHODES: Well, they don't act, but the question whether they could act or not, there is a difference of opinion on that perhaps.

MR. COOKE: That is only as to whether they can act legally in setting aside these issues of securities. There is no doubt in your mind there, that they could bring relief to practices of that kind—they could bring relief to the rate payers?

MR. RHODES: Now, of course, if there is anything wrong about that, they could refer it to the attorney general's department for investigation.

MR. COOKE: But such financing as that indicates that the rate must be inflated as well as the securities, isn't that true?

MR. RHODES: It would seem that way.

FATHER COX: If they were interested on the side of the people they would at least try to act, and if they had any doubt it, the best way to find out whether they have power or not was to institute some kind of proceedings, and find out what would happen to it, but they just sat back and let the rest of the world go by.

THE WITNESS: Let George do it.

FATHER COX: Yes, the office boy might have done much better.

BY MR. RHODES:

Q. Mr. Colledge, the financial manipulations of the Gettysburg Company are just about the same as in the Hanover-McSherrystown Company?

A. With the exception, Mr. Rhodes, in the case of the Hanover-McSherrystown Water Company they covered the thing up by retiring 3,459 shares of the common stock at \$65, a premium of \$15, but in this case they came straight out and paid a dividend of 170%.

Q. Well, in the end it was the same?

A. It amounted to the same thing, they just put it back, or paid it back to the holding company.

Q. And the same holding company was interested in both of these local companies?

A. Yes.

FATHER COX: Only instead of getting justice, they received just ice, frozen out everywhere.

BY MR. EVANS:

Q. Mr. Colledge, in this case in all events the Commission through its Bureau of Accounts did succeed in getting this information as to the use to which this \$178,000 was to be put, did they not?

A. Apparently, yes.

Q. Now then, what happened during the year 1928?

A. During the year 1928 the entire issue of \$200,000 of bonds was retired by borrowing money on current notes payable.

BY MR. RHODES:

Q. Did they sell those bonds below par?

A. Yes, they sold them at 89½, I believe that is the figure.

Q. There was a \$22,000 loss there for brokerage just in one year's time, is that correct?

A. \$21,000. During the year 1928, \$162,116.99 of the charged capital surplus on account of the dividend of \$178,500 mentioned above was charged to earned surplus and credited to capital surplus, with the explanation that the charged capital surplus in 1927 was in error. This acted to restore capital surplus to \$193,117.16, which is the exact amount of the write-up to the fixed capital account. This transfer of the charge, partial charge, of the dividend by transfer from capital surplus to earned surplus created a deficiency in the earned surplus account of \$134,604.05, and ever since that time, the company since it has been showing a net income, the amount has only acted to reduce the deficiency, so that on December 31, 1930, the deficiency stood at \$104,720.70.

BY MR. EVANS:

Q. What had been the earnings of this company?

A. Since the year 1922, the company has shown by its annual reports filed with the Public Service Commission over all returns as follows; bearing in mind that in this connection the write-up to fixed capital was made in the year 1927:

Year	Gross Operating Income	Per Cent. of over all Returns	
		Based on Fixed Assets Depreciated Including Write-Up	Based on Fixed Assets Depreciated Excluding Write-Up
1922	10,079.05		8.28
1923	9,125.79		7.47
1924	14,496.18		11.83
1925	13,565.30		10.74
1926	21,990.85		16.45
(The year of the write up):			
1927	20,295.51	5.95	15.18
1928	25,107.31	7.39	18.94
1929	25,750.66	7.62	19.70
1930	22,245.17	6.51	16.52

Their income or their over all return was climbing right along.

Q. Until 1930?

A. Until 1930.

BY MR. RHODES:

Q. That gross operating income is after interest, is it not?

A. No; that is before interest.

Q. Before interest?

A. Yes.

BY MR. EVANS:

Q. After depreciation and taxes?

A. After depreciation and taxes.

BY MR. COOKE:

Q. Are these both operating companies, Hanover and Gettysburg?

A. Yes; they are both operating companies.

Q. But the company that owned them is now in the hands of a receiver?

A. Yes sir.

MR. COOKE: What effect has that got, Mr. Evans, on the credit of these companies? Are they holding off and doing nothing on the ground that their credit is impaired?

MR. EVANS: I can't answer that.

FATHER COX: What happened, somebody run away with their money?

BY MR. EVANS:

Q. What dividends has the company paid?

A. For the period 1922 to 1930 the company paid dividends as follows:

Year	Per Cent.	Amount
1922	7.66.	\$8,050.00
1923	7.67	8,050.00
1924	8.	8,400.00
1925	9.	9,450.00
1926	8.	8,400.00

In 1927—Now, I am going to give three amounts here; \$6,210 is one amount; 1927, also \$19,908.55, a part of which was charged to earned surplus and a part to—no; this was all charged to earned surplus;

In 1927, also \$174,341.45, which was charged to capital surplus which is part of the \$178,500 dividends.

Now, the dividends for the year 1927 amounted to 185% or a total dividend for the period of from 1922 to 1927, inclusive, of \$242,810.

Q. On an outstanding capital of \$105.?

A. Yes sir.

Q. When you say that this dividend of \$154,000 odd dollars was charged to capital surplus, that was not originally so charged?

A. That was originally so charged, but then in 1928 it was changed.

Q. I thought it was originally charged to capital surplus. After all that is what you said?

A. Yes it was originally charged to capital surplus, then in the year 1927 a part of it not all of it, but \$62,116.99, being a part of the \$174,341.45 was transferred from capital surplus to earned surplus, thereby creating a deficit in the earned surplus account.

Q. Have you anything further to add to that?

A. I don't think so, except that to say that the balance sheet as of December 31, 1930, showed current notes payable outstanding of \$202,493.15.

BY MR. RHODES:

Q. And no funded debt?

A. No funded debt.

BY MR. EVANS:

Q. Mr. Sheppard has just handed me a sheet headed "Keystone Water Works and Electric Corporation and Subsidiaries, statement of the funded debt in the hands of the public and collateral pledged thereon as of July 31, 1930," from which it appears that the \$202,493.15 of notes receivable have been pledged. Would this indicate that the notes, to which you have referred, of the Gettysburg Water Company were held by the Keystone Water Works and Electric Corporation?

A. That might be true.

Q. Now then, the same sheet shows under the heading, mortgage and bonds dated December 1, 1927 to Guarantee Trust Company, \$200,000 bonds and mortgage of the Gettysburg Water Company, and this column bears the notation, "These items haven't been recorded on the books of the individual companies." What does that indicate to you, if anything?

A. That would indicate to me a possible transaction of this nature, that the Keystone Water Works and Electric Corporation gave its notes to the Gettysburg Water Company, which company in turn discounted the notes at the bank and retired the bonds and allowed the mortgage to stand, in order that it could be used by the holding company to back up its own securities which were outstanding.

BY MR. RHODES:

Q. But doesn't that statement of the Keystone Company very clearly indicate that these notes payable of the Gettysburg Company are notes receivable of the Keystone Company; is that correct, of the same amount?

A. Yes.

Q. And doesn't that also indicate very plainly that that \$200,000 mortgage that we assumed had been refunded by this issue of notes in the amount of \$202,000, is still a liability of that company and not carried upon the books of the Gettysburg Company and not reported to the Public Service Commission in its report?

A. That is another theory, and I would say possibly a logical theory—or a logical construction—I will not say a theory.

MR. RHODES: Either that is true, that is, the Keystone's report or statement is true, indicating that that \$200,000 mortgage is still a liability, or the statement of the Gettysburg Company that has no funded debt is true. They cannot both be true.

BY MR. COOKE:

Q. Who signed these reports?

A. I don't remember just who signed this one. It is an officer of the operating company.

BY MR. EVANS:

Q. Mr. Sheppard, from whom did you obtain this report of the Keystone Water Works and Electric Corporation?

A. The Bondholders' Protective Committee that are getting the bonds of the defunct Keystone.

MR. EVANS: Mr. Rhodes, in order to complete our records, I think I will offer in evidence, this report of the Keystone Water Works and Electric Corporation, consisting of six sheets, as Exhibit No. 127.

MR. RHODES: I understood Mr. Sheppard to say that he got that from the Protective—

THE WITNESS: Bondholders' Protective Committee. They were trying to collect the bonds into this Committee's hands, and they wanted to know more about it, and that is the first statement—

BY MR. RHODES:

Q. Do you know the attorneys for the Committee?

A. No, I do not.

BY MR. EVANS:

Q. Have you anything further to say about this report of the Keystone Water Works?

A. I have known of one or two cases where a corporation did not desire to have its books show a liability on its property, and it obtained money on current notes payable and then executed a mortgage against its property as collateral to those notes, and showed on its books that its liabilities consisted only of current notes payable, and in that way it was able to show its own property unencumbered.

BY MR. RHODES:

Q. But it would actually have a collateral mortgage against the property?

A. Yes, but the books would not show it.

Q. But the property actually and legally would be encumbered by a mortgage which was being held as collateral for the notes?

A. Yes.

Q. But when they would make a report to the effect that their property was not encumbered, that would not be a correct statement of the facts?

A. No. Were I auditing a concern that had a condition of that kind, and I have, I have always covered myself by commenting on the fact under the notes payable, that a collateral mortgage against the property of the company was outstanding.

Q. But there is nothing in the records that we have to indicate that the \$200,000 mortgage is being held as collateral for the \$202,000 notes?

A. No sir, there is nothing in those reports either.

BY MR. COOKE:

Q. Should not the annual report to the Public Service Commission in all fairness state that?

A. Absolutely.

BY MR. RHODES:

Q. It would be a very easy matter to determine whether this mortgage was unsatisfied upon the record by looking in the recorder's office in York county.

A. Yes sir.

BY MR. COOKE:

Q. This is a sworn statement, isn't it, these reports.

A. I believe so, Mr. Cooke. I know they are very carefully signed on the back, and I believe that they are sworn to. Now I wouldn't be sure about that. That is funny, you can look at those things all day long, day after day and you never notice those things.

MR. COOKE. It seems to me we ought to look into that, Mr. Chairman.

MR. RHODES: Could you find out tomorrow from the recorder's office in York county, whether or not this \$200,000 mortgage to the Guaranty Trust Company is open on the records, Mr. Walker?

MR. WALKER: Whether it is recorded?

MR. RHODES: Whether it is recorded, and if so unsatisfied?

MR. BUCHER: I think that would come under Adams county.

MR. RHODES: That's right, Gettysburg is in Adams county.

THE WITNESS: Mr. Cooke, I just learned that these reports are sworn to. There is an affidavit on the last page of every report.

HARPER D. SHEPPARD recalled.

BY MR. EVANS:

Q. According to the information that you have received from the Bondholders Protective Committee of the Keystone Water Works and Electric Corporation, what securities, or what amount of securities, has that company issued?

A. According to this statement, and you have also the sales sheet on it, they have issued four million dollars worth of Series A bonds due December 1st, 1915, and have also issued first lien bonds due November 1st, 1949.

Q. A portion of this last issue was held in the treasury?

A. Yes and no. Left in the treasury and pledged with the Guaranty Trust Company of New York to secure 6½% judgment note due May 31st, 1930, for \$350,000, \$766,500. That is in the hands of a third party as collateral, and with the Chase National Bank to secure 6% judgment note dated December 2nd, 1929, for \$500,000, \$900,000 worth of the Series B. bonds, and with the Guaranty Trust Company of New York in escrow June 5th, 1929, on agreement between the company and the Guaranty Trust Company, \$445,000 of the Series B bonds. They might as well be in your hands or mine as to be up for collateral.

Q. Series B bonds to the total of \$2,112,500 are placed with the banks as collateral?

A. Yes.

Q. And that makes a total outstanding bonded indebtedness as shown by this report of the Keystone Water Works and Electrical Corporation approximately \$10,000,000?

A. About \$10,500,000.

Q. What is the collateral which is pledged to secure these bonds insofar as the Hanover-McSherrystown Water Company is concerned?

A. Collateral pledges, notes receivable from the Hanover-McSherrystown Water Company to the Keystone Water Works and Electrical Corporation, \$914,747.42, and notes, mortgages and bonds dated December 1st, 1927, to the Guaranty Trust Company, \$900,000.

Q. And in the case of the Gettysburg Water Company?

A. In notes, \$202,493.15, and mortgages and bonds, \$200,000. There is a notation there referring to the bottom of the sheet which says these items have not been recorded on the books of the individual companies.

Q. With reference to the mortgages of these companies?

A. Yes sir.

Q. And apparently the Keystone Water Works and Electric Corporation has pledged both the notes and the mortgages of the Hanover-McSherrystown Water Company and the Gettysburg Water Company as collateral security for securities which the Keystone Company has issued.

A. Yes sir, according to the statement.

BY MR. RHODES:

Q. That makes the total amount of the outstanding securities of the Hanover-McSherrystown Water Company how much?

A. \$814,744.42.

Q. And the outstanding liabilities of the Gettysburg Water Company?

A. Would be \$402,493.15.

Q. According to the statement of the Keystone Company?

A. Yes.

BY MR. EVANS:

Q. Have you any information, Mr. Sheppard, as to what portion of the Keystone Water Works and Electrical Corporation went into the receivership last summer?

A. I was told, but I am not in a position to take oath to it. When some of our attorneys visited Mr. Ritchey, the Vice President of the United States Engineering Company, which operates all these companies for these various holding companies—there are so many wheels within wheels that it is very hard to get at it—he was told that at the first of last year the North American, which is the holding company of the Keystone Company, I guess they needed about a million dollars and could not get their notes discounted, and that the banks might discount the Keystone Company's notes so they exchanged their notes for the Keystone Company notes and didn't succeed in getting the Keystone notes discounted in the North American Bank.

BY MR. RHODES:

Q. In other words they kited the paper.

A. Yes, that is what they did. But they were unable to discount the North American Company notes so that they had this million dollars coming due. That is not what broke them. It is the high-handed rake-off which the holding companies take from these properties. On their operating expense

account of 1929, I do not have the figures for 1930, they paid to the Keystone Water Works and Electric Corporation \$54,000 of interest on this \$914,000 worth of notes. But there is no notation there of where they paid any mortgage interest, so they probably passed this over to the mortgage interests.

BY MR. RHODES:

Q. Mr. Sheppard, this \$1,800,000, that only indicated what?

A. That indicated \$914,000 worth of notes, but there was no charge for any mortgage interest recorded in York County.

Q. \$900,000, and not recorded in York County?

A. No record, it is not even recorded on the books of the company, it states here. I had it looked up within the last month, and the old mortgage of \$550,000 was satisfied as a matter of record on September 11, 1928, and there has no mortgage been entered since that time.

Q. What does that statement say about the mortgage being an outstanding liability; it would not be a lien unless it were recorded?

[Discussion of tabulation off the record.]

BY MR. EVANS:

Q. Do you happen to know whether the Keystone Water Works and Electric Corporation, if that is the correct title, is a Pennsylvania corporation?

A. No, it is Delaware.

MR. EVANS: That is all we have, I think, tonight.

MR. RHODES: We will adjourn until 10 o'clock tomorrow morning.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10.

Pursuant to adjournment the Committee reconvened in the House Caucus Room, on Friday, April 10, 1931, at 10.00 o'clock A. M.

There were present:

Messrs. D. Glenn Moore, Chairman,  
Martin Memolo,  
Louis J. Hagmaier,  
Chester H. Rhodes,  
Ellwood J. Turner,  
Rev. James R. Cox,  
Morris L. Cooke,  
H. J. Crawford,  
Harold Evans, Esq.,  
John M. Walker, Esq.

C. H. BISHOP sworn.

BY THE CHAIRMAN:

Q. Where do you live, Mr. Bishop?

A. Lemoyne.

Q. What is your occupation?

A. I am divisional manager of Water Works.

Q. Water Works?

A. Keystone Water Works.

Q. That is the company that operates the Hanover-McSherrystown Water Company, is it not?

A. Yes.

Q. How long have you been superintendent?

A. 1928.

Q. What time in 1928?

A. It was early in 1928.

Q. That was approximately the time that the Keystone took over the property?

A. I think the North American took it over prior to that, and then the Keystone was organized later.

Q. The North American is a holding company in the same system, is it not?

A. A holding company in the same system, owns the Keystone.

Q. What was your occupation before 1928?

A. Street railways, light and power companies.

Q. You had no experience in the water business?

A. A short time only, a small company.

Q. Where was that?

A. Lemoyne.

Q. That has been your only experience?

A. One water company since 1918.

Q. What water companies are you in charge of for the Keystone?

A. At the present time?

Q. In 1928 and at the present time.  
A. There have been some companies added at different times, but at the present time I can tell you the companies.

Q. What companies?  
A. The Latrobe Water Company of Latrobe; the Ellwood City Water Company of Ellwood; the West Penn Water Company of McDonald, Pa.; the Consumers Water Company of Girardville; the Consumers Water Company of Montrose, Montrose, Pa.; the Mohnville Water Company of Shillington; the Northampton Consolidated Water Company of Easton; the Riverton Consolidated Water Company of Lemoyne; the Parkesburg Water Company of Parkesburg, Pa.; the Hanover-McSherrystown Water Company of Hanover, Pa.; the Gettysburg Water Company and the Biglerville Water Company.

Q. Those companies are all within the territory of which you are superintendent?

A. Yes.  
Q. What is the territorial extent of your division; does it include all of the State of Pennsylvania?

A. That is all the companies they have in Pennsylvania.  
Q. And do you have charge of any companies outside of Pennsylvania?

A. Two in Maryland.  
Q. What are your duties as divisional superintendent?  
A. Looking after the physical operation of the properties.

Q. To whom do you report?  
A. The New York Office.

Q. To whom?  
A. H. L. Clark.  
Q. What is his address?  
A. 39 Broadway, New York.

Q. Who is immediately under you, insofar as the Hanover and McSherrystown Water Company is concerned?

A. Mr. Krugh.  
Q. He reports direct to you?

A. Yes.  
Q. You are familiar with the operation of that system?

A. I think so.  
Q. Do you consider that your company furnishes an adequate water supply in the borough of Hanover?

A. At the present time, yes.  
Q. Do you think it did in prior years?

A. No, I would not think it did.  
Q. You don't think it has?

A. No.  
Q. Five or six times in the last ten years there has been a shortage of water that has necessitated notice to the consumers to curtail the consumption, has there not?

A. I think they have, of course, last year was the most serious.

Q. There was also one in 1927?

A. For a short time.

Q. What control do you exercise on the quality of the water in Hanover?

A. On the quality of the water?

Q. The quality?

A. The quality is treated, of course, they have a filter plant for the greater part of the water, that is treated by chlorinating treatment.

Q. How frequently do you test the water?

A. The samples are sent to the chemist once a week for analysis.

Q. That is the raw or filtered water that is sent to the chemist?

A. Both.

Q. But you make only weekly tests?

A. The chemist makes only weekly tests; the employees at the plant make daily tests.

Q. Of what nature are the daily tests made by the employees?

A. They check the alkalinity of the water.

Q. They are not bacterial analyses?

A. No.

BY MR. WALKER:

Q. You make P. H. tests?

A. Yes.

Q. Make tests for soap hardness?

A. No their test is mainly to determine the amount of chlorine that they can find in the water, that is all.

Q. The only analysis you make is once a week for P. H. and soap hardness?

A. Yes, that is right.

Q. You only test your raw water once a week?

A. For the chemical treatment, yes.

Q. I mean your chemical analysis?

A. Yes.

Q. In your opinion as a water works manager, do you figure that is sufficient?

A. I do.

BY MR. EVANS:

Q. And you base that on your long experience as a water works manager?

A. I would not call it a long experience as a manager of water works. I don't have very much to do with any amount of treatment that the water gets, that is generally governed by the chemist.

MR. TURNER: How long an experience has he had?

MR. EVANS: Two or three years. He testified that before this taking over of the Hanover-McSherrystown Water Company in 1928 he administered for a time the Lemoyne Water Company.

THE WITNESS: That is the Riverton Consolidated Water Company.

BY MR. TURNER:

Q. How long has that been?

A. Since 1917.

Q. Your experience with water companies started in 1917?

A. With the one company.

Q. How much experience then have you had with water companies?

A. Since 1917.

BY MR. COOKE:

Q. Were you exclusively engaged with that water company since 1917?

A. No I had that in conjunction with other duties.

Q. What were those other duties?

A. I was connected with the street railway and the light and power company.

Q. How much of your time would you say had been allocated to the Lemoyne Water Company in those years?

A. I would say 10% of it.

BY FATHER COX:

Q. When you receive reports that the water is in bad shape, what is your procedure?

A. We don't get the reports direct to us of the water itself, of course, I mean daily, as we get rain, of course, the water changes.

Q. Yesterday we had one of your managers here to testify, Mr. Krug, and he did not seem to know anything about what has been done or anything about it, that is, with reference to the tests or the reports that come from your chemist is that what you check?

A. Well, the operator of the plant is really the one who makes the tests of the water, the local tests that we make.

BY MR. TURNER:

Q. Do you maintain a laboratory?

A. No.

Q. That is done by an outside chemist?

A. Yes.

Q. When?

A. Once a week.

BY MR. WALKER:

Q. You say that your water is tested daily by the local operator, on what do they base that treatment?

A. I am not familiar enough with that to tell you, but they are instructed by the chemist as to how to make the tests, and they have a table to follow.

Q. Each operator is instructed by the chemist what to do?

A. Each one of them is.

Q. The twelve or thirteen plants under your control?

A. Yes. They don't send their reports, all of them, to Mr. Litch, they send them to the chemist, and they are controlled by his reports.

Q. I am not talking about the chemist, but what does the man at the plant do?

A. That is the amount of treatment that the water requires.

Q. Do you have your work sheets here?

A. No, I am sorry, Hanover sent them to Mr. Litch, and he sends them to the Department here.

Q. As a matter of fact do you know whether or not this operator at the filtration plant makes P. H. test every day?

A. I am not there to see if he does it.

Q. Have you directed him to do it?

A. Yes.

Q. They do that in all of your other companies?

A. No, all the other companies do not make tests daily.

BY MR. WALKER:

Q. How many employes do you have there at the filtration plant?

A. One on each shift to operate the pumps.

Q. Fire the boilers?

A. No boilers, electric driven.

Q. Oils the engines?

A. No engines.

Q. Only one man around there?

A. He is the only fellow around there.

Q. That fellow makes these tests?

A. Yes; he has a table there on which he goes on.

Q. How much does he get for all of that, do you know?

A. I cannot tell you off hand.

Q. What is he listed at in your employes' record?

A. I think he is listed as a pump-station operator.

BY FATHER COX:

Q. Mr. Krugh testified when we asked him about these reports he didn't know anything about them, and when we asked him about these reports he didn't know, and I think there ought to be somebody in this company that knows what is being done. That is what we are trying to find out, Mr. Bishop. Do you know what is done there, somebody ought to know. Mr. Krugh knows nothing, and Mr. Bishop does not know whether the orders are carried out.

THE WITNESS: They are carried out by the pumper.

Q. Who could tell us about this?

A. I think the chemist would be the one that could explain it to you better than any of the operators.

Q. Where are the reports of the chemist?

A. We don't have them in our office, they are sent to the chemist and he sends them to the Health Department.

Q. They are all on file?

A. In the Health Department, all of them.

MR. TURNER: Let us send to the Health Department for them.

MR. WALKER: We are going to send for them.

BY MR. WALKER:

Q. How much does this pumper or helper get, who makes the tests of the water?

A. I think he gets something like fifty-five cents an hour.

Q. He is paid for the hours that he works?

A. Yes.

Q. Who makes these chemical analyses?

A. The chemist, and he sends them to the Health Department, and he instructs the operators of the plant how to handle the treatment.

BY MR. COOKE:

Q. Mr. Bishop, how would you describe your duties in connection with your present assignment as divisional head?

A. To look after the operation of the properties as far as I can, and check up on the superintendents of the property from time to time.

Q. How often do you visit this Hanover plant?

A. Well, during the last summer it was generally every week, a day at a time, and this winter I have been down there not less than every two or three weeks.

BY MR. WALKER:

Q. A day at a time every week?

A. During the drought.

BY MR. COOKE:

Q. What steps did you take during that time?

A. During the summer?

Q. What steps did you take in regard to that plant?

A. In what way, during the water shortage?

Q. During that critical situation that required you to be there so frequently, one day every week, what happened as a result of your visit there?

A. Well, we purchased pumping equipment, and connected up industrial wells in Hanover—we purchased pumping equipment and located about two or two and a half miles below the pumping station along the same creek, a pumping station, and extended an eight-inch line to pump water back to the filtration plant to tide us over during the drought period. The connecting of these outside wells was obviously an emergency measure, also the pump that was located down there on the Conewago creek was an emergency measure.

Q. What did you do as divisional manager of the State of Pennsylvania in regard to that water supply?

A. I am sorry to say up to this time there has nothing been done, more than calling the attention of the holding company to this situation.

Q. How did you call it to their attention?

A. Through letters, and through frequent trips to Mr. Clark, who was in Hanover frequently during the drought.

Q. You very strenuously called it to the attention of the holding company?

A. Very strenuously.

Q. In other words, you consider the present supply there only a temporary supply?

A. There is no question about the additional supply being only temporary, and something of a more permanent nature should be done.

Q. What steps have the holding company taken to carry out your recommendation?

A. As I understand it, the borough of Hanover insists that they are going to purchase the company, and I imagine that the holding company is waiting until these negotiations are settled one way or the other before they take any definite steps.

BY MR. EVANS:

Q. Why should they wait for the borough of Hanover?

A. I don't know. That may be one reason. Another reason is that the holding company is in the hands of a receiver, and that may last for probably another month or two, and they would not be able to raise the money to install an adequate supply.

BY MR. COOKE:

Q. Your inability to raise money has nothing to do with carrying out your franchise obligation there, has it?

A. I think that is a very important point.

Q. Your company has been very badly managed financially apparently, and it has obviously gotten into the position where it may be very difficult to finance itself, but what has very little to do with their obligation to go ahead and provide an adequate and proper water supply.

MR. TURNER: There is no doubt about the fact that because of the way the finances of your company have been handled, that it would be difficult for you to raise the money.

MR. COOKE: The situation may be similar to that at Center Bridge, Pa., where one section of the bridge had burned down and the company wanted the State to buy them out at what the State thought was rather an exorbitant price, and they were simply told to go ahead and function, and rather than rebuild the section of the bridge that was burned down, and put themselves in a position to function, the bridge company decided to sell to the State at a proper price, and the same thing may be true of this situation, this company has an obligation to the citizens of Hanover, and the manipulation of its securities has nothing to do with its duties, as I see it.

MR. TURNER: Listening to the testimony of the financial arrangements of this company, anyone would think it would be in the hands of a receiver, and be in financial difficulties.

BY MR. COOKE:

Q. What do you consider—where are you specialized in the operation of water works?

A. Well, in the business management, nothing else.

Q. What do you do there?

A. Look after the employees, see that they look after their duties, things of that kind.

Q. What mechanisms have you got in your divisional headquarters for seeing, for instance, that the superintendent at

Hanover carries out the instructions which you have given him?

A. Only my frequent visits there, visits to the plant.

Q. You testified that you go there rather infrequently, except in such emergency periods as we had last year?

A. I get there at least every two or three weeks, even when there is no emergency there.

Q. You do not depend on routine reports, do you? It is when you visit there?

A. That's all.

Q. When you go there, give me an idea of what you do on these visits?

A. As a rule, I go to the office first, and then I visit the pumping station and then I go to the reservoir and go out over the territory with regard to extensions in the service and things of that kind.

Q. That is, more or less an optional observation?

A. That is about all you can do.

(No answer)

MR. TURNER: Mr. Walker, maybe you can tell me about these increases; the \$6,000 that was paid at one time; and then that \$1,800,000 item. When were those jumps made in the capital of this company?

MR. WALKER: That is all in the evidence. The big write up was in 1927.

MR. TURNER: Before that, what was the last figure we had; do you remember?

MR. WALKER: I don't remember, Mr. Turner.

Mr. Crowl testified to that last week. I think it was 1925 or 1929.

BY MR. TURNER:

Q. Between 1924 and 1927, did you know anything about this plant?

A. No; I didn't.

Q. You don't know whether any improvements or extensions were made to warrant any increase?

A. The only large improvement I know of is that the Filter Plant was completed in 1926.

Q. And what was the cost of that?

A. Well, I could only say in round figures, it would probably run fifty or sixty thousand dollars.

Q. That would not warrant an increase of \$900,000 in your capitalization?

A. I don't see how a fifty or sixty thousand would, of course.

BY MR. COOKE:

Q. What is the recommendation now on file with the officers of the holding company, that has been made in the improvement of the plant?

A. You know the question of the water supply at Hanover is a serious problem. There is not a water supply within a reasonable distance of Hanover. In the last two years, we have recommended the building of an impounding dam.

Q. That would not increase the water supply.

A. It would help out that much.

Q. You would have to raise your rates, in order to do it?

A. Not that; I don't think we would have to do that. I am glad now we didn't do it, because it would only be just a drop in the bucket. I wouldn't know how to answer that question.

Q. What can you do?

A. You see, we have made recommendations to the holding company.

Q. As to what they should do?

A. Not as to what they should do, but that they should do something. We don't pretend to tell them what to do because I think that is an engineering question.

Q. You don't think this additional impoundage would do it?

A. Personally, I doubt it.

Q. You don't think, then, it would have demanded raising the rates?

A. Not in the original plans. Now, it has been suggested since then that we built a larger plant.

Q. Would that raise the rates?

A. I am afraid it might. There is a large amount of land that would have to be bought up there, and the question of building a dam would enter into it.

Q. You have customers out there, a family of three; one of them has testified here. He said he paid \$173. And now, what would you expect that a family of three should pay?

A. I couldn't answer, unless I knew what that family of three did.

Q. But you do not permit them to put in meters; therefore the quality of water has nothing to do with it?

A. The only meters that they have in Hanover are industrials. Everything else is on a flat rate.

Q. We asked you Mr. Krugh yesterday, how he justified the \$173 rate for a family of three, and he said that he couldn't justify it; that he was carrying out orders. Do you issue these orders?

A. The rate is on file with the Commission, and has been on file since 1921, I think.

Q. The rates are never changed?

A. We go over the rates occasionally, and if any question is raised about rates.

Q. And don't you check them over unless a complaint is made?

A. No; unless we find we aren't getting enough revenue.

Q. So, you can't justify that \$173?

A. That rate is based on a flat rate and it depends on the number of fixtures. I would say that any family which has a rate like that must have an enormous house.

BY MR. EVANS:

Q. Would you put in meters for any customers that want them?

A. No, not in Hanover.

Q. Will you put in meters in Hanover?

A. We have commercial down there.

Q. Do you know a customer there by the name of Boucher?

A. No; I don't know him that way. He has a place of business.

Q. You are familiar with the fact that he was being charged \$200 a year, and asked you to put in meters, and you refused to do so, and then he complained to the Commission, and before any action was taken, you put a meter in, and his rate has been approximately \$120 since that time?

A. What does that cover?

Q. It covers his properties in Hanover.

A. How many properties?

Q. I couldn't tell you.

MR. SHEPPARD: From the First National Bank around to Guard's Cigar Store; those several little stores.

THE WITNESS: No apartments connected with it?

MR. SHEPPARD: No.

BY MR. COOKE:

Q. What official of your company has charge of fixing the rates?

A. There has not been any rates changed during my experience with the company. All the rates have been left the way they were.

Q. Is there anybody who has the responsibility to visa the rates and constantly go over them?

A. No.

BY MR. EVANS:

Q. What would be the course of this impounding reservoir that you spoke of, which would necessitate an increase in rates?

A. I am not familiar enough with it to give you an estimate. Anything I would say would be simply a guess.

Q. And based on that guess, you would have to increase the rates?

A. My guess is that that wouldn't solve the troubles.

Q. I didn't ask you that. I am speaking about the impounding dam?

A. I think it has been stated it would probably necessitate an increase in rates.

Q. What would the cost of it be?

A. I suppose 75 or 100 thousand dollars.

Q. Don't you know that this company has declared dividends as of the capital, amounting to more than that amount?

A. No, I don't know that.

Q. You don't know that?

A. No.

Q. You are familiar with the financial setup?

A. I am not familiar with the financial setup.

Q. Can you give me an estimate of the cost of the impounding reservoir, based on—

A. No; I am not an engineer.

Q. I say, if you have to spend that much money, I suppose there would be an increase in rates anyhow? If you had to spend that much money, you suppose there ought to be an increase in the rates?

A. Yes.

Q. What is the average daily consumption of water in Hanover?

A. Approximately a million and a half gallons.

Q. Do you know how much excess passes down the creek and which is not used?

A. At this time?

Q. Yes.

A. Oh, no; but I suppose there are several times that amount right now.

Q. Do you know the amount that passed through from, say, early in February to the middle of March?

A. This year?

Q. Yes.

A. Well, I imagine that flow, which started down there some time in February, showed an excess.

Q. Was that an abnormally high flow?

A. No; not for the spring of the year.

Q. Was it an abnormally high flow in that winter season or spring season of the year?

A. No; I wouldn't think so.

Q. As a matter of fact, it was lower than usual, was it not?

A. They have had some heavy rains down there, but no snow, as far as I know this spring.

Q. Prior to March 19th?

A. They had enough occasionally since last December to maintain the supply without running the auxiliaries we put in last summer.

Q. Is it not true that exceptionally drought conditions existed up until the end of the year?

A. The drought conditions in Hanover continued from some time in July until December.

Q. And do you mean to say that from the middle of December to the first of February these drought conditions were remedied, and the flow of the stream was up to normal?

A. Oh—

Q. Just answer the question.

A. By nature; yes, but the company didn't do anything.

Q. You mean to say that the flow of the stream by the first of February was up to normal?

A. Yes.

BY MR. COOKE:

Q. What officers of the company who rank you have visited this property since the first of January of this year?

A. None.

Q. Who visited it, who ranked you, during last year?

A. Mr. Clark, the engineer, as I said before was there frequently from some time in July until the late fall. Mr. Richie a Vice President of the company was down there some time in the late fall. I am not sure of the date.

Q. What promises did they give you as to affording the people permanent relief?

A. There haven't been any promises made there, and as I said before, I think the matter has been help up to some extent on account of negotiations with Hanover.

BY MR. EVANS:

Q. Your chief source of supply is the Little Conemaugh creek?

A. Yes.

Q. You have no impounding basin on the Little Conemaugh creek, have you?

A. No.

Q. You do have a so-called diversion dam upon it, don't you?

A. On the Conemaugh?

Q. Yes.

A. No; the only dam we have on the Conemaugh is a little dam right at the end of the intake pipe.

Q. I show you a photograph, purporting to be a cell station, and ask you whether that is the dam you have reference to?

A. Yes.

Q. Mr. Krugh referred to that yesterday as a diversion dam. Is that not correct?

A. We don't give it any name. This leads to the sedimentation basin.

Q. I show you another photograph entitled "Supply basin and cell station and plant" and ask you whether that is the sedimentation basin?

A. That is both the sedimentation and the clear water basin.

Q. You are familiar with the fact, are you not, that there is a crack in the wall between those two, so that the water in the filtration basin mixes with the unfiltered water; it goes into the filtered water basin?

A. Yes.

Q. How long has that condition existed?

A. As far as I know, perhaps for some time. I don't know for how long. This is a condition that doesn't exist. The water will go down in your raw water basin; it won't go down into the clear water basin. So, the tendency is opposite to what you have said.

Q. Do you think that it is proper to have a crack in the wall?

A. No.

Q. And that has existed for a long time?

A. I think it has.

Q. What steps have you taken to have that condition remedied?

A. It is going to be taken care of.

Q. I asked you, what steps you have taken to have condition remedied, by your superintendent there?

A. We have nobody but the divisional office to do it. We might shut the water off.

Q. How long has that crack been there?

A. I never heard of it until last summer; when the water was down far enough; when it was noticeable.

Q. From this filtration plant the water is pumped to the power hill reservoir, is it not?

A. Yes sir.

Q. Is that a picture of that reservoir last summer? Does it correctly represent it?

A. I would say that it did.

Q. What is the capacity of that reservoir?

A. Five million two hundred thousand gallons, I think, is the correct capacity.

Q. From there the water runs down through the system?

A. Through the distributing system to the town.

Q. There is also another source of supply on Pigeon Hills isn't there?

A. Yes sir.

Q. That is unfiltered entirely?

A. That unfiltered.

Q. That goes into the stream system and is mixed with this filtered water?

A. Yes sir.

Q. This filtered water is chlorinated?

A. Yes.

Q. What was the maximum amount of chlorination last summer?

A. Last summer it wasn't used.

Q. What is the maximum amount of chlorination you have ever used in it?

A. That water was never treated until last year when the treatment house was constructed, but since that time it wasn't used.

Q. In other words, you never chlorinated that water?

A. It never used to be chlorinated.

Q. I say, you never chlorinated that water.

A. If it has been, it has been only in the last few months.

Q. Will you answer my question? Have you ever chlorinated that water there?

A. At Pigeon Hills?

Q. No; in Hanover.

A. It is all chlorinated, except this supply at Pigeon Hills.

Q. What is the maximum chlorination of the water that comes from the Little Conemaugh creek?

A. I couldn't tell you that today. I don't know how much they use.

Q. How much have they ever used? You are the division superintendent?

A. When they were treating water, they were treating it under the supervision of the health department, and really I wasn't paying any attention to the treatment of the water.

Q. You didn't pay any attention to it?

A. No not at that time.

Q. Is it not true that all the time this water had been chlorinated, you have not been paying any attention to it?

A. The amount, I haven't paid any attention to it.

Q. You don't have any idea of how much chlorination has been used?

A. I couldn't tell you that. I don't know.

BY MR. TURNER:

Q. Does that same kind of management prevail in the rest of the companies as it does in Hanover?

A. Why, I think so; yes. We can get you all that information filed with this Committee, if it is permissible; the amount of chlorine that has been used during any period of time.

MR. EVANS: Mr. Krugh has been instructed to do that.

BY MR. WALKER:

Q. You say that the water is being treated under the direction of the health department?

A. Yes.

Q. What makes you say that?

A. I don't know just what you mean. I say, the Department of Health has been there so frequently this summer, and they have been watching the treatment of that water.

Q. To your knowledge have they ever issued any orders for the treatment of the water?

A. Yes; the amount of the treatment.

Q. How frequently?

A. Quite frequently. During the summer they changed the treatment and started to use some ammonia.

FATHER COX: I think that the testimony of Mr. Krugh and of Mr. Bishop proves again something, that they are only interested in the collection of the charges and the payment of dividends. There has not been one illuminating, one thing they could tell us about their plant. All they seem to know is how to make reports, and the reports received last night were certainly illuminating.

J. H. FREELAND sworn.

BY MR. EVANS:

Q. Where do you live?

A. West Fairview, Cumberland County, Pa.

Q. What is your occupation?

A. I own two roadhouses; make barbecue sandwiches and sell them. That is one part of my business, and the other part of my business is bookkeeper for the Middletown-Royalton Water Company. I am secretary of the company.

Q. Have you any connection with the Hanover-McSherrystown Water Company, or did you ever have?

A. I have had in past years; yes sir.

Q. Did you have during the years 1926 and 1928?

A. Yes sir.

Q. You filed for the Hanover-McSherrystown Water Company and for the Gettysburg Water Company certificates of notification with the Public Service Commission covering issue of securities during that period, did you not?

A. I did; yes sir.

Q. Where did you get the information that you furnished to the Public Service Commission for those certificates?

A. I got the information for those certificates from the purchasers of the property; a New York concern. I kept the books for those companies. They came to Harrisburg, and gave me the information that was incorporated in these certificates, and I filed that with the Public Service Commission. The information came from the owners of the company at that time; a New York concern.

BY MR. TURNER:

Q. Who were they?

A. The North American Water Works Corporation.

BY MR. EVANS:

Q. And you merely followed their directions?

A. Absolutely.

Q. And it was under their directions that you made bookkeeping entries for the Gettysburg Water Company, which showed the use of \$200,000 bond issue for a large part of it, in paying dividends on the stock of that company?

A. It certainly was. I wouldn't have known how to do it.

Q. So you were merely a tool?

A. I was a bookkeeper for the company, and I filed it; filed my certificates with the Public Service Commission for their approval.

Q. And you did not hold any office with either the Gettysburg Water Company or the Hanover-McSherrystown Water Company?

A. Yes, I was the secretary of the Hanover Water Company, and I was the secretary, and I think, the assistant treasurer of the Gettysburg Water Company for that period of time. The Hanover Water Company, I was the secretary of the company for a long period of years, from 1917 up until I decided to retire from it.

Q. When did you decide to retire?

A. Shortly after the filing of this certificate in this Gettysburg case.

Q. Why did you decide to retire?

A. The duties were pretty arduous. They moved the office to Riverton, and they had 15 or 16 companies.

BY FATHER COX:

Q. Didn't you have any fear of the report too?

A. I didn't have any fear of the report. I didn't know where I stood, and I didn't know who my boss was, and what would happen as far as my position was concerned, and I physically felt that I couldn't become chief bookkeeper for 18 water companies.

Q. Were you ever directed by the holding company to make any bookkeeping entries that you did not approve of?

A. Not especially that I didn't approve of. Any entries that were made, if I had any doubt about them I got advice about them.

BY MR. COOKE:

Q. Did you check the making of that report?

A. No; I didn't check the making of it, because it was to be filed with the Public Service Commission. If it wasn't right, I felt it was their business to let me know.

Q. Did you feel it was right?

A. I don't recall how I felt about it at the time. I don't know. It wasn't my business finding out whether it was right, as I see it just at the moment.

BY MR. EVANS:

Q. Do you remember a certificate of notification, which you filed with the Commission for the Gettysburg Water Company in 1927, covering the issuance and sale of \$200,000 first mortgage 5½% gold bonds?

A. Yes, there was a certificate filed in that matter.

Q. And you filed it?

A. Very likely. I could tell if I saw the certificate. If I signed it, I filed it.

Q. And you had some correspondence with the Accounting Bureau of the Commission after that, in regard to it?

A. I don't know. If my signature is there, I did, I don't recall it. I don't have a paper, I turned every book and paper in to the company that I ever had when I retired, and simply forgot the matter; dismissed it from my mind rather.

Q. The net effect of that transaction as shown on your books was to use the entire proceeds of that bond issue, with the exception of \$500, to pay a dividend of \$178,500 to the stockholders of the company, was it not?

A. I don't recall whether it was or not. That was the effect? Is that what it shows? It is out of my mind at the present time. The statement would show what it was.

Q. And you have no remembrance in regard to it?

A. I felt that—

Q. I asked you, have you any remembrance in regard to it?

A. No, I don't recall it. I feel the certificate would be more than that.

Q. The certificate does not show anything but that necessitated the correspondence to the Accounting Bureau?

A. Yes.

BY MR. TURNER:

Q. If you have the correspondence, Mr. Evans, why don't you offer it to him, and ask him if he remembers it. It is costing us money on these stenographic notes.

MR. EVANS: Mr. Colledge put in the only copies, and I have not the originals.

FATHER COX: Never mind the notes. It is worth finding out.

MR. TURNER: Sure, but you can't make a bad egg worse.

BY MR. TURNER:

Q. Do you know who held the stock of the Gettysburg Water Company in 1927 and 1928?

A. Was that before or after the purchase by the New York people?

Q. It was after the purchase?

A. After the North American Water Works Corporation should have held it. They bought the company.

Q. Do you know what price they paid for the stock of the water company?

A. Not absolutely from memory, but I think they paid \$42.50. I wouldn't say that is the positive price.

Q. And the par value of that stock was \$15, was it not?

A. Yes.

Q. Do you know what price they paid for the stock of the Hanover-McSherrystown Water Company?

A. Sixty-five dollars a share.

Q. These sales from one corporation to another, or were they sales by individuals?

A. The North American Water Works Corporation purchased the Hanover Company, and purchased the Gettysburg Company's stock.

BY MR. EVANS:

Q. And the stock previous to that time had been held by individuals?

A. Individuals.

Q. Did they acquire the capital stock of these companies?

A. 100%.

F. HERBERT SNOW (recalled).

BY MR. EVANS:

Q. You testified before the Senate Investigating Committee on March 16, in regard to the water situation in Gettysburg and Hanover, did you not?

A. I think so.

Q. On page 1551 of the record you were asked: "Have you ever criticized these water companies to the Commission?" and your answer was "no; there was no occasion, because we had an abundant supply until last summer, and were similarly in the Hanover-McSherrystown case." Do you want to make any corrections of that testimony?

A. As far as I know, no.

Q. You think that they have had an abundant water supply and a satisfactory water supply at Gettysburg and Hanover, since you have been connected with the Commission, until last summer.

A. No; I didn't testify to that.

Q. What do you mean by an abundant water supply?

A. So far as I was informed, they had plenty of water.

Q. Is it not part of your duty to keep yourself informed in regard to these matters?

A. No.

Q. Have you had any complaints in regard to the water situation in either of these places?

A. Yes; I submitted a report to the Senate Committee, in which I enumerated over all the years of the life of the Commission, the complaints so far as I knew that came to my Bureau. I have no duties except those imposed upon me by the Commission. There may be a lot of complaints that come in, that don't come to my Bureau.

Q. It has been testified here that on six occasions, from 1920 to 1930 the Hanover McSherrystown Water Company advertised in the papers of Hanover that there was an inadequate water supply and the use of the water would have to be curtailed. In view of that situation, do you think there was an adequate water supply in Hanover?

A. I should think not.

BY MR. TUURNER:

Q. Does your Bureau go out and make periodical inspections of these plants?

A. No sir.

Q. Does the health department?

A. I am unable to state.

Q. You were connected with the health department?

A. When I was chief engineer of the health department we made or attempted to make periodical examinations of water supplies.

Q. You don't know whether they still do that or not?

A. I do not.

BY FATHER COX:

Q. There have been a lot of complaints about this particular plant. And now, doesn't the Commission under such circumstances, ask you to go out and see whether the complaints are justified or not?

A. Whenever they ask us to do it, we do it.

Q. Do they do that very often; when they have a lot of complaints?

A. I would say that we don't make periodical inspections of water works; only when complaints are made.

Q. But when you have complaints, the Commission orders it?

A. Yes.

Q. How does it happen that you didn't make a more thorough investigation with all the complaints against it?

A. I don't know whether there were complaints made to the Commission. I understand they were newspaper advertisements. I wouldn't have any means of knowing about complaints of that kind. My Bureau—if we find out something by accident, then I would consider it my duty to report it to the Commission.

Q. But you were not sent there?

A. I enumerated in my report to the Senate Committee several complaints that had come before the Commission, and those I have commented upon in that report.

BY MR. EVANS:

Q. Who is the Water Works Engineer of the Commission?

A. Mr. Curry.

Q. What is his full name?

A. Lynn.

Q. And he has general charge of water cases?

A. No I am the chief of the Bureau and direct its affairs, and he does the work assigned to him, either directly by me or through the Chairman of the Commission or some member.

Q. That is in the ordinary water case, such as we have been discussing, he is the man who would naturally make the investigation for you?

A. Yes; he did. Last summer I was sick and was away from the middle of July until the first of October. I was not in Pennsylvania during the extreme portion of the drought, and Mr. Curry was working directly with Chairman Ainey, and I assume with some of the other Commissioners.

Q. Do you have on your staff any other water works engineers?

A. No.

Q. So, he is the man in the Bureau under you who would be the expert in these water matters?

A. Yes.

BY MR. TURNER:

Q. Does the water power resources board in any way exercise control of water companies?

A. As to the distribution of the waters, the sources, and dams or obstructions in or under streams; so far as I am informed.

BY MR. COOKE:

Q. What was the word you used in your testimony: abundant?

MR. EVANS: Abundant.

BY MR. COOKE:

Q. Will you tell us what basis you had for the use of that word?

A. The supply of water to Hanover and McSherrystown was primarily in an uninhabited water shed in the hills. As that territory grew, the two companies, McSherrystown and Hanover, were combined. They needed more water and they sought it at Little Conemaugh creek, and then, in 1926, I think, there was a proceeding started before the Commission and an order I believe, was issued that a filtration plant must be built, and was to be built in conformity with the law, that the detailed plans were to be approved by the State Health Department, and that augmented the supply. Now, to my knowledge, there was no serious shortage of water until last year; there may have been, but I didn't know of it.

Q. Do you know of any shortage of water prior to last September?

A. No; I don't.

Q. You made the positive statement that this supply was abundant. And now, I am interested in knowing what lead you to make that statement?

A. As far as I know, it was my candid belief. If there had been any serious shortage, I would suppose that the complaints would be referred to the Commission.

Q. Take the town of Smithtown, and you never had any complaints, you would not be warranted in saying that the water supply at this town was abundant?

A. I don't know about Smithtown. I do know something about McSherrystown.

Q. What do you know?

A. We ordered a filtration building to be built on Little Conemaugh creek. That stream has quite a water supply and quite a flow, augmented with the gravity supply at Pigeon Hill, which ought to be sufficient, and if we hadn't heard anything to the contrary, I would say there was an abundance of water.

Q. A filtration basin does not add to the supply?

A. No, but the Little Conemaugh has an abundant supply.

Q. And did you testify to your visit to Hanover?

A. No; I did not testify to that.

BY MR. TURNER:

Q. Dr. Snow, we have here three different departments, I understand, the Water Power Resources Board, the Health Department and the Public Service Commission, which have something to do with water supplies. Is there any co-ordination of co-operation between those departments in working out these questions, in Pennsylvania?

A. Yes sir; by hearty co-operation, I can say between the chief engineers of these three departments; Mr. Stevenson, Mr. Ryder and myself, and we have a practice, whenever questions of difficulty of water come up to remand them over for some amendment to the law to the Health Department. They maintain laboratories clinical and bacteriological, we have nothing of that kind.

Q. It seems to me that on account of the complaints that have been made as to polluted streams and inadequacy of the water supply, in reference to these water companies in Pennsylvania, there ought to be some direct instruction and check up by some group, either by these engineers or by some kind of a board created by the representatives of the two departments.

A. I think so. During my time with Dr. Dickinson, we had men in squads all over the State making inspections. Since that time it was taken away from the Health Department.

Q. There is no such departmental operation now.

A. Those thirty inspectors were removed during the Brumbaugh administration.

Q. Do you have any idea of what the costs were?

A. I would say \$200,000.

Q. Don't you think it would be worth while to have that sort of an organization today?

A. Well, I doubt, your honors, if as large an organization—those were the days when typhoid fever was epidemic and also the suppression, we only had sporadic cases, and I think so large a force would be necessary.

Q. I was not thinking of the force, but some organization checking this water situation.

A. I think it would be very well, if there were closer co-operation; a system set up and impose a high standard of inspection.

(Discussion off the record.)

BY MR. EVANS:

Q. Am I correct in understanding that with the limited financial resources of the Commission there is only in the bureau of engineering one water works engineer?

A. That is right.

Q. And none of the other engineers would qualify as a water works engineer.

A. Not as a specialty. Professor Parmley, whom we get from Cornell University, is our mechanical engineer. He pays special attention to our steam heat cases, and he works to quite considerable extent with Mr. Curry or with myself, water cases, but I wouldn't qualify him as a water works expert.

Q. Nor any of these others?

Nor any of these others. I asked different engineers to help out on things.

Q. Do you feel that the bureau needs additional engineering service.

A. Most assuredly.

Q. Just while you are on the stand, the Commission has been requested by this Committee and has submitted a list of the employees of the bureau engineering, giving them by title, and not by names. Would you be good enough to run over this list with me; and give me the names of the various persons? The chief of the bureau is yourself?

A. Yes.

Q. Who is the assistant chief.

A. Mr. Lewis G. Krause.

Q. The executive secretary of the bureau?

A. Moses K. Ely.

Q. The bureau secretary?

A. He is the executive secretary and the bureau secretary.

Q. The stenographer-secretary?

A. Miss M. Irene Cuenot.

Q. Two electrical engineers are now receiving \$5000 a year?

A. There is but one; William H. Black.

Q. Who was the other engineer as of December 31, 1930, classified as an electrical engineer?

A. Mr. Bearman, I forget his initials, I can supply them.

Q. He is no longer connected with you?

A. Oh, yes; he is with us.

Q. He is an electrical engineer?

A. Yes. He is assistant to Mr. Black.

Q. Assistant to Mr. Black, and he receives the same salary?

A. No; that salary is wrong. He does not receive \$5,000. That is absolutely wrong. That is a mistake.

Q. Do you know what salary he does receive?

A. I think he receives \$3,480; something like that.

Q. A railroad engineer?

A. Mr. Tripp is in charge of that section.

Q. Do you know what salary he does receive?

A. I think he receives \$3,480; something like that.

Q. A railroad engineer?

A. Mr. Tripp is in charge of inspection.

Q. Is he the person who is here referred to as an engineer receiving a salary of \$4,500?

A. Yes; he is in charge of that group; the railroad group.

Q. Here is a second railroad engineer receiving \$4,000?

A. Yes.

Q. Who is he?

A. I think that is Mr. Ralph Bechtel.

Q. What are his particular duties?

A. Well, he is a designing engineer and construction engineer on bridges and railroad work. He has had 25 or 30 years experience in railroad work. He is wholly on our grade crossing work.

Q. Gas engineer?

A. Mr. Walter Allison.

Q. What has been Mr. Allison's training and experience?

A. He has spent his whole life in the specialty of natural and artificial gas.

Q. He is exclusively a gas engineer?

A. Yes. He was a \$15,000 a year man retired, and I was fortunate enough to get him; a man of national reputation.

Q. As a gas engineer?

A. Yes.

Q. Had he any affiliation with the gas companies that you know of?

A. No; not that I know of; I would say positively, no. He has always been in professional work.

Q. Where was he April 1st? Did you speak of him as a professor?

A. No.

Q. Where was he employed before he came to the Commission?

A. He was in private practice.

Q. As a consulting engineer?

A. As a consulting engineer, yes.

BY MR. COOKE:

Q. He was in the employ of the gas companies, was he not?

A. Yes.

Q. If he accepted compensation, he was purely a professional engineer?

Q. But his practice was large, if not exclusively, with gas companies?

A. I think so. I wouldn't say exclusively, I think he would probably deal very largely with gas companies because his work had been to do with matters of that kind.

BY MR. EVANS:

Q. Where was he located before he came to the Commission?

A. He lived in Philadelphia.

Q. What was his business in Philadelphia before he came with the Commission?

A. As far as I know, he always had his office in Philadelphia.

Q. The water works engineer is Mr. Curry?

A. That is right; L. B. Curry.

Q. And telephone engineer?

A. Huether, I will supply his initials.

Q. Mechanical engineer?

A. That is Parmalee.

Q. And street railway engineer?

A. His name is Chas. E. Parry.

Q. A transportation and street railway engineer?

A. P. C. Russell.

Q. Where is he located?

A. Philadelphia.

Q. He is not located here?

A. He is in charge of the Philadelphia office.

Q. A stationary engineer and electrical engineer, is that it, "Stat."?

A. I don't think we have any stationary engineers in my bureau. I don't know—that is "Statistical;" that is H. R. Parmley.

Q. A bridge engineer?

A. Mr. Paul Didier.

Q. A designing engineer?

A. I think Beckel and Didier are mixed, but I think Haig should be there; and Paul Didier down there. (Indicating)

Q. Haig is the great bridge engineer?

A. Haig is a general bridge and construction engineer, and Didier would be put down as a bridge engineer.

Q. Who gets the highest salary?

A. Didier gets the highest salary.

Q. And there is one assistant engineer receiving \$4,000 at the end of last year?

A. I think that is Didier, I got that mixed up.

Q. A junior engineer; he does not seem to be listed? A senior draftsman?

A. That is Harry Braynan.

Q. Perhaps we had better cover two more draftsman. Another draftsman receiving \$1,800?

A. Yes; he has been transferred over into the railroad section now. His name is George Krick.

Q. And the rest of your employees are either clerks or stenographers, except those in the laboratory section?

A. That is right.

Q. Who is the chief of the laboratory section?

A. Bennethum.

Q. A meter prover tester.

A. He is in the field all the time—Keller, I can supply the initials.

Q. A water standard tester.

A. Mr. Patrick Regan.

Q. The laboratory assistant.

A. Harry Hocker.

Q. Are there any other employes that you think of.

A. No; that covers them all.

Q. In order to enable you to function adequately and have the Commission in a position to undertake investigations more frequently on its own initiative, will you submit to the Committee, Dr. Snow, what additional assistants you feel you should have?

A. I have already made a statement to the Senate Committee. I can make the same thing, but a very grave misunderstanding would occur in making up those estimates, as to what it was; if I was told what we wanted?

Q. Will you prepare a statement for submission next week to the Committee as to what you consider adequate personnel in the bureau and the amount of money to cover it.

A. All right, sir.

PAUL W. LEITCH sworn.

BY MR. EVANS:

Q. Mr. Leitch, you are the Chairman of the Department Board and Commission of Pennsylvania Securities Commission?

A. Yes sir.

Q. You have been subpoenaed to produce the papers filed and issued by the Commission in connection with the issue of the first mortgage issue of the Pennsylvania Water Company corporation. Have you those papers?

A. I have.

Q. What do they consist of?

A. They consist of the statement of the Pennsylvania Water Service Company before the financing which consisted of a first mortgage and funding issue as of June 30th 1927, statement after financing and giving effect to the acquisition of certain securities of water service companies as of June 30, 1927, statement of earnings of the Pennsylvania Water Service Company for the year ending December 31, 1925; a statement of earnings of the Pennsylvania Water Service Company for the year ending December 31, 1926; and a statement of earnings as of the 31st of December, 1927.

BY MR. TURNER:

Q. What is this?

BY MR. EVANS:

A. This is the holding company of a number of water companies throughout the State.

THE WITNESS: A statement of the earnings of the companies making up the Pennsylvania Water Service Company for six months ending June 30, 1927. A certified copy of the minutes of the Pennsylvania Water Service Company, relative to the acquisition of certain companies held by the Board of Directors. A memorandum of the Central Water Service Corporation giving a list of securities to be acquired by the Pennsylvania Water Service Company.

MR. EVANS: We offer these papers in evidence as Exhibit No. 128, consisting of the eleven papers submitted by Mr. Leitch.

JAMES S. BENN (recalled).

BY MR. EVANS:

Q. The day before yesterday Mr. W. F. Menke testified in regard to certificates of public convenience granted to him for the operation of certain bus routes in the city of Philadelphia. In these certificates of service or certain of them, were certain stipulations to the effect that: "The rights, privileges and powers hereby granted shall cease and terminate on June 1st, 1924 (or other date according to the time the certificate was granted) provided however, that if the Philadelphia Rapid Transit Company prior to this date shall extend its service into or over the route hereby designated, then the powers, rights and privileges hereby granted shall terminate and cease \* \* \* at the time such service is furnished by the Philadelphia Rapid Transit Company." You are familiar, are you not, with the granting of these certificates, Mr. Commissioner?

A. Yes, sir.

Q. Can you state approximately when the first of these conditions was inserted in the Menke certificates?

A. I think so. I have not had an opportunity to examine the records. I was in hearings yesterday in the City of Chester and did not arrive in Harrisburg until late last night. I can give you this information, but I would like to have the privilege of giving the Committee the full facts relative to all of the Menke certificates. This memoranda shows or indicates that the certificate to which you refer was approved by the Commission on November 20, 1922.

BY MR. TURNER:

Q. Had you the number of that on the record?

A. It is A-7443-22.

BY MR. EVANS:

Q. You heard the testimony in that case?

A. Yes sir, this memoranda is that I took the testimony on that case on November 16, 1922.

Q. This was the application by Mr. Menke for a certificate to operate busses from Cottman Street south on Oxford Pike to Cheltenham Road, north to Rising Sun Avenue and return

on Cheltenham Road to Busselton Pike, north on Busselton Pike and return?

A. That is correct.

Q. This is a route connecting to Fox Chase?

A. I don't think it went all the way at that time to Fox Chase.

Q. At that time there was no other bus service over this route?

A. There was not.

Q. At the close of the hearing as shown on pages 11 and 12 of the testimony, you stated: "It is noted and stipulated on the record if and when the Philadelphia Rapid Transit Company, upon its own initiative or in conjunction with the City of Philadelphia shall inaugurate auto or bus service that will cover the same territory or supply the same public needs as are set forth in this application, that the certificate granted by the Public Service Commission covered in this application will automatically become null and void." Is that correct?

A. That is correct.

Q. According to the records, upon whose suggestion was that statement made by you, or was it made on your own initiative?

A. Yes sir.

Q. Is that the first case you know of that such a statement was inserted in a certificate of public convenience?

A. I don't believe it was.

Q. What other prior case can you refer to, if any?

A. Without a search of the records I cannot refer to any specific case, but my recollection is that this particular stipulation was preceded by others of the same kind. I will be glad to look that up.

Q. The Committee has asked for this?

A. We have been burdened over there. And we are working nights to get this information. The task has been rather onerous.

BY FATHER COX

Q. Why was such a stipulation made?

A. I will be very glad to give the Committee as to the stipulation.

MR. RHODES: I think that Mr. Evans had better go and secure the testimony.

BY MR. EVANS:

Q. There were certificates granted to Mr. Menke from time to time?

A. Yes sir.

Q. And these certificates contained this stipulation or a similar one?

A. Yes sir.

Q. During the years following 1922, Mr. Menke built up a considerable clientele for his bus line, did he not?

A. Yes, I think there were as many as ten or twelve busses operated on the route granted to him, yes sir.

Q. Do you happen to remember what routes he had?

A. If this is the time, I will be glad to place on the record, his original certificate was extended on two or three occasions. In other words, the route was extended and subsequent to these extensions, and I think the consolidation of these extended routes were included in one certificate running from the terminus of the "L" to Fox Chase. The Commission subsequently granted Mr. Menke additional certificate running from Fox Chase to Jenkintown.

Q. So that he was granted certificates for these three routes in the northeast section of the city of Philadelphia and the adjacent territory?

A. He was granted more than three certificates by the Commission, as the record will show.

Q. So far as the Commission was concerned, was this stipulation inserted in those certificates on your recommendation?

A. No sir.

Q. Who did recommend it to the Commission?

A. The stipulation was entered in the Menke case and others in which it was entered, at the suggestion of the City of Philadelphia speaking through its law officers.

Q. Was that recommendation made in writing?

A. Yes sir.

Q. Have you got—can you refer to the writing?

A. Yes sir, and in addition to the writing, I would like to give to the committee the full facts. The principle upon which that stipulation was based dates years before, or a long time

before, Mr. Menke and the Philadelphia Rapid Transit Company received these certificates from this Commission, indeed I believe it based itself on a time prior to my appointment to the Commission. I remember as far back as the fall of 1919 when for the first time I conferred with another member of the Commission, Mr. Samuel L. Clement, Jr., and there is a record of that conference, it was called for a conference with Mr. William B. Wilson and Mr. John B. Confer, in connection with the problem or proposition of motor vehicles for the city of Philadelphia, and from that time to this, the city of Philadelphia through its law officers have consistently maintained the position that they would assert the legal rights of the city of Philadelphia. It was maintained that they have the right to prescribe franchises and ordinances the routes that must be followed and used by common carriers, and the municipality under decisions of the courts has the right and the function to determine the public interest and convenience and in municipalities of the first, second and third class, they have the legal right to control their highways and prescribe their routes. The city of Philadelphia has done so in every instance in which the Commission has issued a certificate based on a franchise ordinance. In these instances in which franchises have not been granted to a bus operator, the city has reserved the right and that is the basis of this stipulation, so that when it chooses to exercise the right specified by franchise ordinance, the highways and streets over which the holder of the certificate may operate, it may do so. Therefore, this stipulation is a reservation of the city's rights.

Q. Was this stipulation placed on the Philadelphia Rural Transit Company?

A. No sir. Under the 1907 contract, under what is called the "recapture clause," is the right to take over all of the bus routes of the Philadelphia Rural Company as the subsidiary to the Philadelphia Rapid Transit Company, and thereby recapture these bus routes. I might say in numerous conversations while I have been on this Commission, the city solicitors of Philadelphia have uniformly and consistently insisted on that. It has only been a matter of a few weeks that the city law office was represented before the Commission by a deputy who insisted on that provision. Therefore, before Mr. Menke made his application, this principle was laid down by the city and agreed to by the Commission.

BY MR. TURNER:

Q. Is that in writing?

A. It was agreed to by the Commission and a stipulation was made by the chief of the bureau, Major E. M. Vale, and as I recall this record, which by the way was submitted to Mr. Menke's attorney and agreed to by him, was read from the stipulation as originally framed by Major Vale. Two or three years went along and a number of these certificates as I recall—certainly as they came up for renewal and during the entire time in which Mr. Evans was my colleague and Mr. Scattergood was on the Commission—the matter certainly came up to the Commission at that time on a number of occasions. While I was absent on enforced leave, whether or not the Commission desired to have as a matter of record the position of the city of Philadelphia I don't know, but when I had the pleasure of returning to the bosom of the family with Mr. Evans and Mr. Scattergood and the rest of the Commission, this communication was received from the law officers of the city of Philadelphia, and I would like to read it into the record:

#### OFFICE OF THE CITY SOLICITOR

Philadelphia, December 14, 1925.

Frank M. Hunter, Esq.,  
Counsel, Public Service Commission,  
Harrisburg, Pennsylvania.

Dear Mr. Hunter:

On Wednesday last, over the telephone from Harrisburg, you asked me to reduce to writing, so that you might submit them to the Public Service Commission, the statements made by me during a conversation with you in my office in the Morris Building on Thursday, November 19, 1925, in support of a request that no Certificate of Public Convenience be issued for motor bus operation in Philadelphia unless there be enacted ordinances granting municipal consent for such operation.

I shall endeavor to set down here, to the best of my recollection, the reasons advanced by me at that time to support the aforesaid request. I first called your attention to the provisions of Section 9, Article XVII of the Constitution, that no street passenger railway shall be constructed within the limits of any city, borough, or township, without the consent of its local authorities, and then added, had the framers of that provision visualized the bus lines as a future important, if not essential means of urban transportation, they would likewise have required municipal consent for their operation.

I next pointed out that due to the agreement of 1907 entered into between the City and the P. R. T., in pursuance of and by the authority of the Act of April 15, 1907, (P. L. 80), the transportation problem in Philadelphia is unique and different from any other city in the United States, so far as I am aware, except possibly Kansas City. By that contract (Section 11) the City reserves the right to purchase all the property, leaseholds and franchises of the company, subject to all indebtedness then existing, or thereafter created (with consent of city), upon July 1, 1957, or upon the first day of May and July thereafter, upon six months' notice, and upon the payment of an amount equal to par for its capital stock then outstanding, to-wit, \$30,000,000 then authorized plus any additional capital stock issued with the consent of the city. All moneys paid annually into the sinking fund by the P. R. T. as set up and described in Section 9, are to be available to the city for the purpose of making, or assisting in making the said payment for the property of the company, unless when the said fund reaches \$5,000,000, the city by ordinance directs that that sum together with all future payments shall be paid over to the city Treasurer for general city purposes. Upon the city exercising its aforesaid right by purchase, it then succeeds to and becomes the owner, subject as aforesaid, to all the franchises, leaseholds, rights, property and privileges theretofore vested in the company; and the City may either operate the same, lease the right to operate for such terms and upon such conditions as it may deem fit, or put them up at public auction and assign them to the highest bidder.

Already the owner, at the time of the execution of the 1907 agreement, of its own gas and water works, the provisions just referred to pointed the way for the ownership in 1957 by the City of a third utility, to-wit, the entire street railway system; those provisions drafted the agreement may well have contemplated that Philadelphia, unlike any other city in the country, would in 1957 be the owner of a trinity of essential utilities, to-wit, water, gas and transportation. Following upon the heels of the 1907 agreement, came the vision, the study and then the necessary legislation which embarked the city upon its present high speed program. The Frankford Elevated was its first completed step, and before the administration of Mayor Hendrick has closed, the Broad Street Subway from City Hall to Olney Avenue will be a reality, to be likewise operated as a part of the unified system. Upon the completion of the Frankford Elevated, a City-P. R. T. contract was executed operating it as part of the unified system, with exchanges and free transfers to the surface lines. Buses of individuals, running rather spasmodically and for short distances, began to appear in some of the suburban sections. They afforded the only means of public transportation to the people living in these more or less remote districts. The Philadelphia Rural Transit Company, a subsidiary of the P. R. T., incorporated with power to operate buses, all the stock of which is owned by the P. R. T. asked authority of City Council to operate buses upon some of the principal thoroughfares of the city as well as in the suburban sections, agreeing to provide for an interchange of passengers between these bus lines and the street railways of the P. R. T.

In the ordinances giving consent to the Rural Transit Company to operate buses, the City reserves the right to purchase all the property of the company at the expiration of ten years, or upon the first of any July thereafter upon six months' notice, and upon paying to the company the value of its physical property. Also in these ordinances the Rural Transit Company is acknowledged to be and is identified as a subsidiary of the P. R. T. within the meaning of the aforesaid agreement of 1907, and its earnings accruing directly or indirectly to the P. R. T. are therein made available for, and applicable to the payments to be made to the city under the provisions for recapture of profits contained in paragraph 6 of said agreement.

Back of these municipal ordinance contracts and this municipal construction and equipment has been the fundamental municipal consideration that in 1957 the city may desire to supply all the local common carriage transportation service that the traveling public may require. Accordingly, the city has a direct interest in the creation of additional, common carriage transportation facilities within the city. First, because companies unnecessarily created would require possibly an unnecessary expenditure of city funds in municipal acquisition in 1957 should the city then determine to operate directly as aforesaid. Second; that before any additional companies are created, the city, through ordinance contract, should weave them into the municipal policy of city operation at the time and in the contingency above stated.

Furthermore, without regard to its interest from a monetary standpoint, the city is interested in having the transportation agencies of the city in such hands that proper extensions and improvements may be made when demanded, even though they may not be profitable; and a high standard of service rendered, although in some locations the revenue might not warrant the service. This can best be accomplished through a strong, single, transportation agency that can take advantage of the profitable areas to support areas that are not so profitable.

In connection with this thought and reverting to the 1907 agreement, I called your attention to the language of section 3, which in order to be exact I here quote verbatim and in toto:

"Thrd. In case at any time in the future councils shall, either of its own initiative or upon petition of any of the citizens, determine that new lines of surface, elevated or underground railway should be constructed within the city, it shall, by ordinance determine the route of such line, and the terms and conditions under which it shall be built, financed, and operated and the company shall have ninety (90) days after the passage of such ordinance to take such corporate action as may be necessary to accept the same, certified copies of which action shall be duly filed with the Mayor within said period of ninety (90) days; but if the company shall fail to accept said plan within said period of ninety (90) days, or shall reject the same within said time or, after accepting the same, shall fail to enter upon the work in good faith and prosecute the same as required in such ordinance, then the city may offer the right to construct and operate said road under said terms and conditions to such other persons, company or corporation as may be willing to undertake the same; PROVIDED HOWEVER, That any rights acquired by the company under this section, and the section immediately preceding, shall be subject to all the terms and conditions of this contract with respect to voice in the management, supervision of accounts, division of profits after the return of six (6) per cent upon the capital invested, and the right to ultimately acquire all the interest of the company at the expiration of fifty (50) years from the date of this contract; AND PROVIDED FURTHER, That in the case of the construction of new lines the capital necessary therefor shall, as far as practicable, be raised upon bond issues bearing the guarantee of the company as to principal and interest, which bonds shall be issued in denominations of one hundred (100) dollars, five hundred (500) dollars, and one thousand (1,000) dollars, and be offered to public subscription, but in no case shall they be sold for less than par; and to such extent as it may be impracticable to finance new enterprises upon bonds, or in case additional capital is needed for the purpose of extensions, additions and betterments to existing lines, power of equipment, the same may be raised by an increase in the capital stock of the company, but only with the express consent of the city, and all such increases shall be full paid at par in cash, and to be subject to all the provisions herein contained with respect to the original thirty million (30,000,000) dollars of capital stock of the company."

While no mention of bus lines is made in this section, because none then were either in operation or in contemplation, both the spirit of fairness and the sound theory of unified city transportation warrants the conclusion that had those who drafted this section foreseen bus lines as a likely form of transportation in the future, they would have requested the P. R. T. or a subsidiary, to supply and operate when and as they became necessary, bus lines, if it refused, then offer the right to such others who would be willing to perform that service, in order that the people of Philadelphia might at all times have adequate, improved, and up-to-date transportation facilities.

As I carefully explained to you in our conversation, all of the foregoing statements are not made either with the intent or for the purpose of attempting to over throw the Collins case, or of denying the applicability of its legal principles to Philadelphia. The city's request that the Public Service Commission should not grant motor bus certificates for operation wholly or partly within Philadelphia without the consent of city council having first been obtained to such operation, evidenced by ordinance, is based upon consideration of municipal policy and the correlative activities of the city and the Commission, as herein rather fully set out. This would seem to be recognized in the Collins case, for Judge Porter, in his opinion, uses this language (pp. 63 and 64):

"No individual or company has a right to operate such motor vehicle as a common carrier for transportation of passengers, without first obtaining from the Public Service Commission a certificate of public convenience. What service of this character is necessary or desirable for the convenience, comfort and safety of the public is a matter which the law requires to be determined by the Public Service Commission. That is an administrative question rather than one of law. It is a question which must be left in a large degree to the sound judgment of the Commission and when that judgment has been exercised the conclusion ought not to be disturbed by judicial interference unless it is made clearly to appear that it is unreasonable and not in conformity with law."

What I endeavored to do in our conversation was to present, as I have in this communication, facts which would appeal to the sound judgment of the Commission and enable it to arrive at a just conclusion that the request of the city is made in the interest of and for the convenience, comfort, and safety of the city's riding public.

In answer to your inquiry as to whether the request to the Commission contemplated a desire that the Commission should grant no certificate for taxicab service within the City of Philadelphia unless such ordinance consent be by the applicant first obtained, I replied that my present request did not comprehend taxicabs, although some future date might dictate it municipally expedient to extend the request to that extent, should it develop that that was necessary in order to protect the full and free development of city transportation policy which had its beginning in the said ordinance of 1907.

Very truly yours,

(Signed) Joseph P. Gaffney,  
City Solicitor.

THE WITNESS: That has been the consistent policy of the law officers of the city of Philadelphia. I met Mr. J. P. Connelly last night and I was assured by him and he stated that during his term as city solicitor, that policy was then the policy of the law bureau as it has been consistently since.

BY MR. COOKE:

Q. Is Mr. Connelly now counsel for the Philadelphia Rapid Transit Company?

A. I don't know, sir.

BY MR. EVANS:

Q. This is the only written communication of the authorities of the city of Philadelphia bearing on this situation?

A. I believe it is.

Q. Are you familiar with the circumstances that led up to this letter?

A. I don't know.

Q. You do know as a matter of fact that it had nothing to do with the issuance of the certificates which we have been discussing?

A. I don't know.

Q. You are not familiar with the circumstances under which this letter was written? That it was that the city of Philadelphia had adopted an ordinance providing for taking up of street railways tracks on Race Street?

A. No, Mr. Evans, the only recollection I have, and I attempted to refresh my memory last evening in a telephone conversation with Commissioner Scattergood who was at Washington. Commissioner Scattergood gave me his recollection of this matter and it was the same as mine.

Q. Did it not appear that the writing of this letter was an entirely different matter that would change the entire interpretation you had placed on this letter?

A. It would not, for the reason that every law officer of the city of Philadelphia, Mr. Connelly, Mr. Smythe, Mr. Ashton, and Mr. Gaffney, all maintained the same position on this matter.

Q. Will you refer to anything in that letter which refers to the insertion of a stipulation that when the Philadelphia Rural Transit Company gets ready to take over the operating bus lines, the certificate of existing operators shall cease?

A. There is no stipulation of that kind.

Q. When they are ready to take over all of these lines and operate them, where is the reference to that in that letter?

A. There is no reference in the wording, and the only reference in that letter is as to the request of the city authorities that the Commission do not grant certificates for highways over which the city has a reserve right, and each succeeding city solicitor has consistently requested the Commission that the city's legal right be reserved in a stipulation of this kind.

Q. If that was the purpose of that stipulation, it should appear in the certificate of all the bus operators in the city of Philadelphia, should it not?

A. It should appear in the certificate of all bus operators, yes sir.

Q. Are you prepared to say that every bus certificate holder operating in the limits of the city of Philadelphia on the same basis that Mr. Menke operated, has had this stipulation inserted in their certificates? You have handled them all?

A. No I have not.

Q. Is there any certificate that has not been heard by you or by Examiner Wolfe who reported to you?

A. As a matter of fact, I believe you heard more of these during your time on the Commission, certainly in the Philadelphia Rapid Transit Cases, than I have held in all my years on the Commission.

Q. I am talking about existing certificates today?

A. Personally I don't believe I have heard many of them.

Q. Are there today any other bus companies operating in Philadelphia other than the Philadelphia Rural Transit Company?

A. If there are, I do not recall them; there may be.

Q. Now, while you were temporarily relieved of your duties on the Commission, as I think you expressed it, a certificate was granted in a case heard by Commissioner Scattergood to Mr. Menke for a route in the northern part of the city of Philadelphia, was it not?

A. This is a memorandum prepared for me at my telephone request by the bureau of public convenience of the Commission, and I believe covers all the proceedings referring to Mr. Menke as the certificate holder. As a witness, he testified no complaints had ever been made against him, but the official record will speak for itself in that respect. If this Committee is to judge on the basis of facts and not on the deductions or conclusions of an individual of that type, then I think it is only fair that the Committee should have the facts from the official records spread upon their minutes.

BY MR. COOKE:

Q. Was this action taken because Mr. Menke gave bad service?

A. This array of facts is offered to show that Mr. Menke misrepresented the facts to this Committee for his recollection of the treatment accorded to him by the Commission was very derelict.

#### WILBUR F. MENKE PROCEEDINGS ARRANGED CHRONOLOGICALLY

A.4724. Filed March 28, 1921. Route on Roosevelt Boulevard between Broad Street and Asylum Pike, in the City of Philadelphia. Heard before Examiner Phillips April 15, 1921. No protest. Approved April 19, 1921.

A.7043. Filed July 15, 1922. Routes on Cottman Street, Oxford Pike, and Roosevelt Boulevard, in the City of Philadelphia. Hearing held Sept. 7, 1922, before Examiner Phillips. Protests by William C. Whitaker, Albert Neibauer and Philadelphia Rapid Transit Co. Refused Sept. 11, 1922. No necessity.

55119. Filed July 29, 1922. William C. Whitaker versus Wilbur F. Menke. (Phila. Rapid Transit Company, intervening complainant) Alleging inefficient and unsafe operation of autobuses on Roosevelt Boulevard, Phila. Hearing held Sept.

7. 1922, before Examiner Phillips. Complaint sustained, certificate issued at A.D.4724 revoked and canceled and respondent ordered to cease and desist from operating motor vehicles in common carriage Sept. 11, 1922. Petition for rehearing filed Oct. 11, 1922. Rehearing refused and order of Sept. 11, 1922, reaffirmed Oct. 24, 1922.

C.5120: Filed July 29, 1922. Albert Neibauer versus Wilbur F. Menke. (Phila. Rapid Transit Company, intervening complainant). Alleging inefficient and unsafe operation of automobiles on Roosevelt Boulevard, Phila. Hearing held Sept. 7, 1922, before Examiner Phillips. Complaint sustained, certificate issued at A.D.4724 revoked and cancelled and respondent ordered to cease and desist from operating motor vehicles in common carriage Sept. 11, 1922. Petition for rehearing filed Oct. 11, 1922. Rehearing refused and order of Sept. 11, 1922, reaffirmed Oct. 24, 1922.

C.5151. Filed Aug. 9, 1922. Trenton, Bristol & Phila. St. Rwy. Co. versus Wilbur F. Menke. Alleging operation of automobiles between Eddington and Cornwalls and vicinity, Bucks County, without the approval of the Commission. Hearing held Sept. 14, 1922, before Examiner Phillips. Oral argument heard Oct. 2, 1922. Complaint sustained and respondent ordered to cease and desist from operating motor vehicles in common carriage Oct. 2, 1922.

A.7443. Filed Nov. 2, 1922. Route between the corner of Rising Sun & Cheltenham Aves. & the corner of Bustleton Ave. & Bridge St. in the City of Phila. Heard before Commissioner Benn Nov. 16, 1922. Protest by Phila. Rapid Transit Co. Approved Nov. 20, 1922. Expired June 1, 1924. Certificate contains if and when stipulation.

THE WITNESS: I believe that Mr. Rotan, cousin of a former district attorney of the City of Philadelphia, represented him, and he didn't protest and I believe Mr. Rotan on behalf of his client and the client himself agreed to the stipulation, and I intend to get in touch with Mr. Rotan later.

In December, 1922, he filed an application for a route on Cheltenham Road, Ayers Avenue and Cottman Street to Oxford Pike, in the City of Philadelphia, Pennsylvania, and asked for leave to withdraw on January 15, 1923.

There was a complaint of William J. Henderson, filed on February 8, 1923, against Wilbur F. Menke alleging operation of automobiles in violation of certificate. It showed by the record that three hearings were held, which I conducted and I have a vague recollection of the testimony. But such recollection that I have is that he was operating in a manner prejudicial, or dangerous to the public safety. What the other allegations there were on the complaint, I don't at all recall, but the complaint was satisfied but how it was satisfied. I don't know, it was satisfied on the record and marked closed June 6, 1923.

Then on February 8, 1923, Charles Guldin who was a certificate holder filed a complaint against Menke alleging violation of his certificate and there were two hearing in March and one in June of that year and that complaint was satisfied and the record marked closed.

An application was filed by Menke on September 4, 1923, for a route between the intersection of Oxford Road and Rising Sun Avenues in the city of Philadelphia at the intersection of Rhawn and Elverson Streets, Fox Chase A hearing was held on the 15th of December before the Commission, and on March 6th, 1924, before Commissioner Benn and Commissioner Clement. Protests were by the Reading Transit Company and Charles Guldin. That application was approved March 10, 1924, and that contained an if and when stipulation according to this memorandum. That certificate expired on June 1st, 1926, and was renewed by the Commission to August 31, 1926, when it became inoperative under order 14.896.

He filed an application on January 29, 1924, and a preliminary order of approval was issued by the Commission without hearing which contained a stipulation and he filed another application—that was for an extension of a read—

He filed another application on February 7, 1924, heard by Commissioners Benn and Clement and was approved. That certificate contained if and when stipulation. That was also as I recall it an extension of this Frankford-Fox Chase route. He filed on the 16th an application which was heard before Commissioners Clement, Benn and Stewart, and that was for a route between Rising Sun Avenue and Cheltenham Road in the city of Philadelphia and the intersection of Central Street

and Cheltenham Road, in Cheltenham Township, Montgomery County, and that was approved with a stipulation. Was subsequently extended for a part of the year, from June 1, 1926, to August 31, 1926.

He filed another application in renewal of certificate 7443, and a hearing on that was held on June 12, 1924, before Commissioner Clement. That was approved on June 16, 1924, and contains the stipulation. He filed an application for a sight-seeing route between Broad Street and South Penn Square and Evergreen Farms in the city of Philadelphia, and the hearing on that was held on June 26, 1924, by Commissioner Clement, it was refused on the ground of no necessity on September 16.

He filed on November 5, 1924, an application for a route between Cottman and Central Streets, and the intersection of Huntingdon Pike to Fillmore Street in the city of Philadelphia, and that was heard before Commissioner Stewart November 28, 1924, and was protested by C. H. Springer; approved December 8, 1924, and it contained the stipulation. He filed an application February 20, 1925, for a group and party service in Philadelphia and Montgomery counties, heard before Commissioner Benn March 12, 1925. That was protested by the Reading Company, the Pennsylvania Railroad, the Philadelphia Rapid Transit Company, Springer Brothers and the Fox Chase and Richboro Bus Company. Oral argument was heard on May 6, 1925, and it was refused on the ground of no necessity.

He filed an application for a certificate on June 26, 1929, between the corner of Huntingdon Pike and Fillmore Street, and the intersection of Cedar Road and Huntingdon Pike in the city of Philadelphia. It was protested by the Fox Chase and Richboro Bus Company, and leave to withdraw was granted, or an application was filed and was granted on July 27, 1925. He filed on July 15, 1925, an application for a route between Huntingdon Park and Fillmore Street and the intersection of Jenkintown Road and Pine Kiln Pike, Montgomery County, and the hearing was held on August 19, 1929, before Commissioner Scattergood; protested by the Fox Chase and Richboro Bus Company, approved October 20, 1925, and expired June 1, 1927.

BY MR. EVANS:

Q. Did that certificate contain the stipulation that you referred to?

A. It did not. It was entirely outside of the city of Philadelphia, and therefore the stipulation would not apply. I might say that Examiner Wolfe yesterday afternoon stated that he reviewed this testimony for Commissioner Scattergood, the Commission Scattergood's inclination on that was that the Menke application should be denied, the reason for that being that Commissioner Scattergood—

MR. EVANS: Had we not better get Examiner Wolfe here for that?

THE WITNESS: He reviewed the testimony in that application, and it was an application for a route over one on which there was another man operating by the name of Rush.

MR. COOKE: I don't think it is fair to have Mr. Scattergood quoted.

THE WITNESS: I am quoting my conversation—

MR. TURNER: I don't think we want to get that in the testimony. We have had a lot of hearsay testimony, and Mr. Evans has stated that there is already too much hearsay evidence in the record, so I do not see any reason why this testimony should be taken of Commissioner Benn, because we can produce Mr. Wolfe, and we can get the direct testimony in a better way.

THE WITNESS: An application was filed—

BY MR. EVANS:

Q. I would just like to read from the minutes of the Commission in regard to this application; the minutes of the Commission in the volume of September 9, 1925, to May 24, 1926, page 14011 in the matter of the application of Wilbur F. Menke for approval of the granting of the exercise of the right to operate motor vehicles as a common carrier for the transportation of passengers on schedule between Fillmore Street andunting Park and the intersection of Jenkintown Road and Time Kiln Pike, Montgomery County. Commissioner Scattergood reported that he had examined the record, and recommended that the application be approved. On motion the application was approved, a certificate was directed to be issued.

THE WITNESS: I talked with Examiner Wolfe in reference to this—

MR. TURNER: I don't think you ought to go on with that here.

THE WITNESS: Mr. Evans and Mr. Scattergood during my absence from the Commission, upon their recommendation, Examiner Wolfe was made an examiner of the Commission, and he is a high minded gentleman, a sound lawyer, and a man for whom I have the highest regard, and for whose judgment I have the greatest respect, and I am sure that if Mr. Wolfe was brought here as a witness before the Committee, he will substantiate what he told me with reference to the particular application which he reviewed for Commissioner Scattergood. That was before I knew Mr. Wolfe, but he has been brought into the testimony by this witness in a way that Mr. Wolfe thought at least from the newspaper accounts, reflected upon him.

MR. COOKE: For the purpose of the Menke case we depend on the record.

THE WITNESS: He filed an application December 15, 1925, for a route between the Jenkintown Road and Lime Kiln Pike and York Road and Olney Avenue, Montgomery County, and the hearing was heard before Commissioner Benn, and protested by the Philadelphia Rapid Transit Company, the Philadelphia Rural Transit Company, the Reading Company, and the city of Philadelphia, and refused on February 9, 1926, on the ground of no necessity.

He filed an application on March 18, 1926, between Norristown and the Frankford terminal in the city of Philadelphia. This hearing was heard before Examiner Wolfe and protested by the Philadelphia Rapid Transit Company, the Pennsylvania Railroad Company, by the borough of Norristown, the Reading Transportation Company, the Lehigh Valley Transit Company, the Philadelphia and Western Railway Company and the Reading Company. An amended application was filed October 11, 1926, fixing the terminals at Lafayette Street and Strawberry Alley, Norristown, and Oxford Pike and Olney Street, Philadelphia, the hearing held November 17, 1926, before Examiner Wolfe, and protested by the same utilities. That was refused February 7, 1927, on the ground of no necessity.

He filed an application May 10, 1927, a renewal of certificate issued A.D. 11020; the hearing was conducted on the 25th, by Examiner Wolfe, and was protested by the Rapid Transit Company and the Rural Transit Company, and was refused June 15, 1927, by reason of the approval of the application of the Philadelphia Rural Transit Company that operates over routes "N" and "O." Their bus routes extending from the Frankford terminus, or the Frankford L to Fox Chase. On May 10, 1926, he filed an application for a renewal of his certificate Application Docket No. 11917, and May 10, 1928, renewal of certificate in Application Docket 10902 was granted.

May 10, 1926, renewal of certificate in Application Docket 10082, same date; renewal of certificate 9248; May 26, renewal of certificate 13445, hearing before Examiner Wolfe, no protest, approved June 20, 1927.

April 20, 1929, renewal of certificate issued at Application Docket 16983, hearing held May 14, 1929, before Examiner Wolfe, approved November 19, 1929, but the certificate was not issued, and the action of November 19, 1929, rescinded and leave to withdraw granted. That, as I recall it, was because Menke sold that bus route from Fox Chase to Jenkintown to the Fox Chase and Richboro Bus Company, which in turn sold it to the Rapid Transit Company. In other words, no application came before the Commission for the approval of the sale, he simply withdrew his application. Now, there are the records of the Commission as to the certificates.

BY MR. TURNER:

Q. Where was this one case that we had yesterday; which was that one?

MR. EVANS: May I just ask Commissioner Benn while we are on that matter, if I understood you correctly to state earlier in your testimony that there were numerous cases where certificates were issued to Menke during the time that Commissioner Scattergood and I were members of the Commission, containing this stipulation?

THE WITNESS: I don't recall such a statement.

BY MR. EVANS:

Q. That was not the case?

A. I believe that all the proceedings with reference to Menke, or while you were on the Commission and Mr. Scatter-

good, and while I was on the Commission, are included in this list.

Q. Was any of this during the time that Commissioner Scattergood or I—I will confine it to myself, was on the Commission?

A. Whatever there was during the period.

Q. You made the assertion, Mr. Commissioner, that I would have to clear it up one way or the other?

A. I made the assertion that during the entire time, you or the colleagues appointed by Governor Pinchot during this time were on the Commission, this stipulation, or the condition on which it was based, was before the Commission, just as it has been since, and just as it was before.

Q. But can you point out any case where such a stipulation was inserted in the certificate during that time?

A. Well, let us see. (Referring to record.)

MR. TURNER: What period of time did that cover?

MR. EVANS: From April 20, 1925, to January 17, I think, 1926.

THE WITNESS: Mr. Commissioner Scattergood antedates that.

MR. EVANS: I am talking about my own case.

THE WITNESS: The application of November 5, 1924, which was heard by Commissioner Stewart, as I recall, and Mr. Scattergood, that was heard by the Commission at that time—it was heard by Commissioner Stewart, and that contained the if and when clause.

BY MR. EVANS:

Q. Did you confine it to the dates between April 20, 1925, and January 17, 1926?

A. No, the application, while you were a member of the Commission, apparently with the clause filed June 26, 1925, for operation between the corner of Huntingdon Pike and Fillmore Street and the intersection of Huntingdon Pike in the city of Philadelphia, that was heard July 23, 1925, protested by the Fox Chase and Richboro Bus Company, and leave to withdraw granted July 27, 1925. The application filed July 15, 1925, for a route between Huntingdon Pike and Fillmore Street and the intersection of Jenkintown Road and Lime Kiln Pike, Montgomery County, heard by Commissioner Scattergood, which was approved October 20, 1925. The application filed December 15, 1925—well, that was not refused until February 8, 1926, and you were not on the Commission then.

Q. So during that time there were no such stipulations?

A. No sir, no such stipulation while you were on the Commission, nor certificates granted.

Q. I just wanted that clear, because I understood you to say that there has been. In regard to this letter to city solicitor Gaffney, to which you have referred, the secretary of the Commission or the acting secretary of the Commission has now produced a folder in which it appears that that is a matter, the taxicab applications in Philadelphia, has nothing to do with busses as far as I can see.

A. Whether it had or not, it covered a principle involved and so what is the use of quibbling about it, the communication speaks for itself, and I have testified that every city solicitor, every city officer of the city of Philadelphia since I have been a member of this Commission has consistently held to the same principles, and that principle is embodied in these stipulations.

Q. This is the only written communication that you have so interpreted.

A. That is the only one I know of, Mr. Evans.

MR. COOKE: That is stated, as I understand it, three years before.

MR. EVANS: Dated December 14, 1925.

MR. COOKE: That is three years before the conversation that you had with Mr. Sweeney and Coleman.

THE WITNESS: That conversation, Mr. Cooke, was between—

BY MR. COOKE:

Q. That particular conversation.

A. Was in 1919.

Q. I am calling your attention, and it is a matter of record, that the conversation was with Mr. Coleman who has been for many years counsel for the P. R. T. that he was at this conference, if I recall it, and was sometime before President of the Quaker City Cab Company, and it was rather a family party.

A. I don't know that I am called upon to answer for the business activities of a former city solicitor of the city of Philadelphia, nor am I called upon to excuse or apologize for the business activities of a former colleague now dead, that arose subsequent to his service upon the Public Service Commission.

Q. Those were the people who were at this conference.

A. Yes.

BY MR. EVANS:

Q. Now, Mr. Benn. Mr. Menke testified at a hearing after Commissioner Scattergood had approved the granting of the certificate that you have referred to in 1925, you stated to him, Mr. Menke, that if you heard that case you would not have granted the certificate, is that the case?

A. I will state that that is absolutely untrue, and I will add to that, Mr. Menke is the type of a person that I would not have, and have not had for years, a conversation with, except in the presence of witnesses. The last conversation that I had with Mr. Menke was on Saturday of last week when he came to my office, and one of the engineers, or investigators of the Commission had previously phoned to me and stated that Mr. Menke was coming to see me, he said—I have the witness, if the Committee desires—that if the Commission, presumably through me would grant him a certificate for taxicab operations or taxicabs at Bethayres and Fox Chase, that he would not respond to a subpoena by this Committee or by the Senate Committee.

BY MR. TURNER:

Q. Where is this witness, Mr. Benn?

A. Right here. Was a Saturday morning, and I declined to see him, I told Mr. Mackey, that I would not talk to him—

MR. TURNER: Just a minute. I think we ought to halt there and have the witness sworn, and let him give his statement.

C. L. P. RUSSELL sworn.

BY MR. EVANS:

Q. Mr. Russell, you are an employee of the Public Service Commission, are you not?

A. I am.

Q. How long have you been employed by the Public Service Commission.

A. Since the fall of 1927, I think it was the latter part of October, or November.

Q. In whose office did you receive employment by the Public Service Commission?

A. I applied to Dr. Snow.

Q. Did any member of the Commission take any interest in your appointment that you know of?

A. No, I didn't know a member of the Commission until after I was appointed.

Q. You didn't know anybody?

A. No.

Q. Who had previously employed you?

A. I had been employed by several different concerns in my time.

Q. What had been your most recent employment?

A. My most recent employment was with the Philadelphia Improvement Company of the Pennsylvania Railroad Company.

Q. In what capacity had you been employed by the Pennsylvania Railroad Company?

A. As an engineer, and tracks maintenance man.

Q. And you were then on furlough, were you not?

A. I was not.

Q. And you were not receiving any compensation of any sort from the Pennsylvania Railroad or any agency connected with them?

A. Absolutely not.

Q. Have you at any time during the time you have been connected with the Public Service Commission received any remuneration, directly or indirectly from the Pennsylvania Railroad or any agency which was affiliated with them?

A. None at all. My connection with the Pennsylvania Railroad Company was severed before I went with the Commission.

BY MR. TURNER:

Q. Where is your home

A. Germantown.

BY MR. EVANS:

Q. Where had been your home prior to your connection with the Public Service Commission?

A. Philadelphia.

Q. Have you not had some connection with the western end of the State?

A. Oh, yes, I was in the western end of the State I lived in Ohio and I lived in West Virginia.

Q. Where were you living when you were in the employ of the Pennsylvania Railroad?

A. Well, I have lived in various places in the State of Pennsylvania, all over the State.

Q. Where?

A. Well, I have lived in Philadelphia, Pittsburgh, Cresson, Johnsonburg, Oakmont, Kittatinny, all the way down the river.

Q. Where did you happen to live in the year prior to your appointment by the Public Service Commission?

A. In Philadelphia, 48th and Walnut Streets.

Q. Were you ever active in politics, while you were connected with the Pennsylvania?

A. Never. Never been active in politics at any time.

Q. You were located at one time at Cresson, Pa., were you not?

A. Yes, sir, I was located at Cresson for three years.

Q. Was not there a campaign for State senator while you were located at Cresson?

A. I believe there was.

Q. And you did not take any part in that campaign?

A. I took no active part in that campaign at all.

Q. I didn't say that, I said did you take any part in that campaign?

A. No, I took no part in that campaign.

Q. Did you ever know Superintendent Davis?

A. F. B. Davis, I know Supervisor F. B. Davis, or I knew him at that time.

Q. You were associated with him?

A. He was company supervisor of the division, he was my neighbor.

Q. And he was sent to Wilkes-Barre, was it not at this time?

A. I don't remember where he went from there; he was moved from there, but it was a long time ago, Mr. Evans.

Q. Did you take any particular interest in the recent campaign for Governor?

A. I did not.

Q. Did you make any political contributions?

A. I did not.

Q. Now, Mr. Commissioner Benn has testified that you had some conversation with Mr. Menke last Saturday?

A. That is correct.

Q. Will you state to the Committee the substance of that conversation.

BY MR. TURNER:

Q. In the first place where was the conversation held?

A. In my office 1106, The Public Service Commission Office, 43 National Bank Building.

BY MR. RHODES:

Q. Who was there, besides yourself?

A. I don't remember whether Mr. Rush, an inspector, was there during that conversation or not or whether I was alone. I had several conversations with Mr. Menke.

Q. But you don't remember whether it was in the presence of others or not.

A. I rather think that this particular conversation on Saturday morning, I was alone. Do you want me—

MR. TURNER: Go ahead.

BY MR. EVANS:

Q. What time about was this conversation held?

A. I judge it was between 10 and 11 o'clock in the morning.

Q. On Saturday?

A. Yes; it was between ten and twelve I should say.

Q. Would you relate the circumstances?

A. The circumstances?

Q. The circumstances of your conversation?

A. About a week after Mr. Menke's service—if I remember correctly, around April 1st Mr. Menke came to me and asked if Mr. Benn was in, he wanted to see Mr. Benn, and I told him he was out of town. I think Mr. Benn was in Harrisburg, and he said he wanted to see him very badly, and he asked

me to convey the information to Mr. Benn that he had been down to see Mr. Gray, who wanted him to appear before the Senate Committee, and he had also been approached by two of the Committee's investigators, they had interviewed him, and wanted him to appear, and talked to his counsel, that is, his counsel that represented him in the last hearing, a gentleman by the name of Cohen.

BY MR. TURNER:

Q. What was his first name?

A. I don't know his first name, he is a tall light haired fellow, a Jewish gentleman, and he had requested a transcript of the testimony of that hearing. Mr. Menke said that he felt very kindly toward Commissioner Benn, and that Commissioner Benn had done a great deal for him in the past, and that any irritation that had been between the two had been due to his quick ungovernable temper, and he said it would be very important that I get this information to Commissioner Benn, as he would like to see him, because if he could make the right kind of a deal with Mr. Benn he would not testify in Harrisburg. I notified Mr. Benn of this, of the gist of this conversation, and last Saturday morning Menke called me up on the telephone—

Q. Where was this conversation held?

A. Held in my office.

Q. When?

A. That was the first—as I stated before, Menke came there in the week of April 1st.

Q. Who was there?

A. Rush was there at the time, Mr. Rush.

Q. What day of the week?

A. I cannot give you the day, but I rather think it was the middle of the week, Wednesday.

BY MR. RHODES:

Q. What day was the first of April?

A. I don't remember, I think about Wednesday or Tuesday.

Q. I thought you said this conversation took place in your office last Saturday?

A. This was the previous conversation.

Q. Did you have two conversations with him?

A. Yes, I am just getting to that now. He came up on Saturday morning—

Q. Which conversation, the one you have just testified to, so that we get this straight, this conversation that you just testified to, took place when, Saturday of this week, or the previous Saturday?

A. This took place this Saturday; this took place I think around the first of April, about ten days ago.

BY MR. TURNER:

Q. When did he call on the telephone?

A. About Saturday morning last.

Q. This last Saturday?

A. Last Saturday morning. Mr. Menke came in and asked if Mr. Benn was there, and I said, no, that he was not in his office at the Commission, I thought he was in his private office, and I told him to call him there. About, probably three quarters of an hour after that Mr. Benn called me on the telephone and told me that Mr. Menke had been there to see him, and that he would not talk to him, and that he would send him over to me, and told me that if Menke wanted an application, I was to give it to him. Mr. Menke came in and said that he had been over to see Mr. Benn, in response to my query, and I asked him what had been said, and he said that Mr. Benn refused to talk to him; would have nothing to do with him.

BY MR. RHODES:

Q. What time of the day was that last Saturday?

A. That was between—we will say between 10 and 12—I would say it was 10.45—between 10.45 and 11.15.

Q. What time did he call you in Philadelphia last Saturday morning?

A. After 10 o'clock, I will say.

BY MR. TURNER:

Q. Anybody else in your office?

A. Yes, there is an inspector there by the name of Rush.

Q. Have you a telephone operator or stenographer there?

A. No, there was nobody there but myself at that time.

Q. Don't you have a stenographer?

A. We have a stenographer that we use once in a while. Now, we have no telephone central at all, our telephone is connected with the city central, outside.

Q. Go on, you say that Mr. Menke came there to your office?

A. Yes, Mr. Menke came over to my office, and he said that Mr. Benn had sent him over, and he told me that he wanted an application, or a certificate rather for a taxicab at Bethayres Station, and also one at Fox Chase. I gave him the application blank, the requisite number of blanks, and he said to me, "I cannot fill this out," I said, "Why not." He said, "I have no money, and I have no money to engage an attorney." I said, "You don't need an attorney, all you have to do is fill out these blanks and file them, for hearing." He said, then he could not fill out the blanks because he could not meet the Commission's requirements for public indemnity insurance. He said what he would like to have would be to have Commissioner Benn use his influence to have the Commission grant him a certificate without any hearing or any formality, and suspend the public liability clause, that after he got started, and had been in business a sufficient length of time he would probably be able to get the money together to meet the insurance requirements. I gave him the blanks and he said good bye. He called me again on Monday morning at about 10.00 o'clock, that is, Monday of this week, about 10.45, and asked if Commissioner Benn was there, and if I had talked to him and I said "no," Commissioner Benn was in Harrisburg, and he said, "I will probably see him there tomorrow, because I am going up, I am subpoenaed to testify before the House Committee."

BY MR. TURNER:

Q. Is that all the conversation you had with him?

A. That is all.

Q. None of these conversations were in the presence of Mr. Benn, were they?

A. None of them.

BY MR. RHODES:

Q. There was nothing said in your testimony that would indicate that he wanted to get a particular kind of deal with Commissioner Benn, was there?

A. Well, he wanted the Commissioner to grant him a certificate, as I understand it, without going through any of the formalities that are required by the Commission, have no hearings, and no notice, allow nobody to protest.

Q. No harm in asking for it, even if he didn't get it?

MR. COOKE: I understand Mr. Benn to say that this witness quoted Mackey as saying he was practically threatening unless something was done, he would go ahead, and there is nothing about that in what you have told us that would indicate that to me.

BY MR. RHODES:

Q. Did this man Mackey tell you that unless he was given the certificate of public convenience that he would come up and testify adversely.

A. Well—

BY MR. EVANS:

Q. Now answer the question, and then explain, Mr. Russel, did he or did he not.

A. No, not in plain words, but the entire inference from the conversation was that he was there for the entire purpose of making a deal.

MR. MOORE: We don't want you to testify from inference.

BY MR. RHODES:

Q. The testimony that you have given does not indicate anything of that kind. Did you communicate with Mr. Benn that unless he was given these particular certificates of public convenience that he was going to testify adversely.

A. He requested me to—

Q. Requested you to do what?

A. To enumerate his conversation which was as I testified here to Mr. Benn.

BY MR. MOORE:

Q. What were the exact words?

A. Well, his exact words were as I testified to you here a few minutes ago, that he had a perfectly friendly feeling for the

Commission, and that if he could get what he wanted before the Commission that he would not testify.

BY MR. RHODES:

Q. Did he say what he wanted out of the Commission?

A. Yes, he wanted the certificates.

Q. Did he tell you specifically that he wanted these two certificates of public convenience?

A. Yes, he did, as I said before, the Bethayres Station, and then on last Saturday morning when he came in he wanted Fox Chase.

Q. Did he specifically say he wanted these two certificates in consideration of his not testifying?

BY MR. RHODES:

Q. Did he so state, and then say what you inferred?

BY MR. EVANS:

Q. Say yes or no.

A. He didn't come out as raw as that but his inferences—

BY MR. EVANS:

Q. Your inference?

A. Oh, my inference rather was that in a suave way.

BY MR. RHODES:

Q. It may be clear in the minds of some of the members of the Committee, but it is not clear in my mind as to just what conversation there was, and whether there was any inference as this witness has said, and if you can get it out of the witness here that we can understand it, I would appreciate it.

BY MR. EVANS:

Q. Now, Mr. Russell, let us confine ourselves to the conversation of last Saturday in your office; no one being present besides yourself and Mr. Menke, what did Mr. Menke open the conversation with?

A. He came in and said he had been over to see Mr. Benn—

Q. What did you say?

A. I said, what did Mr. Benn say?

Q. What did he say?

A. He refused to talk to me; refused to see me, and he said that you should give me the application as I remember it.

Q. Then what did you say to him?

A. Well, I talked to him—

Q. As near as what you said?

A. It was a general conversation—

Q. What was the substance of what you said to him?

A. It was that I would give him the applications, and I went over to the file and got them and handed them to him, and told him to make them out.

Q. Then what did you say?

A. He said he could not make these out.

Q. Did he explain why?

A. That he did not have the money to engage an attorney, which I told him was unnecessary, that he could make them out and file them and appear before the Commission as he knew without an attorney.

Q. What then did he say to that?

A. He then said that he could not fill out the application, because he did not have the money to meet the public requirement of the Commission.

Q. Now, Mr. Russell, you know that in addition to an attorney there is a fee for filing such applications, do you know?

A. Five dollars.

Q. Also advertising required, is there not?

A. Yes.

Q. And that advertisement the applicant must pay?

A. Yes.

Q. You know that Mr. Menke had no money, did you not?

A. Only from what he said, not from my own personal knowledge.

Q. What further was said after he told you that he could not afford to do it?

A. Well, he then acknowledged and explained that what he wanted was the Commission to grant—

Q. What did he say?

A. That is it as nearly as I can explain it to you.

Q. He said he wanted the Commission—

A. He said that he wanted the Commission certificate.

Q. That was perfectly proper for him to want.

A. He wanted the certificate without having to appear before them or meet their liability requirements, insurance requirements.

Q. And you said all that was because he did not have the money with which to pay those requirements?

A. Yes, he said that, and he said that he did not have the money to pay for this, but that after he operated for a certain length of time he would probably be making enough to pay this at a later date.

Q. What then was said?

A. I think after that, that was all that was said then.

Q. That was all that was said, and from that conversation you inferred that if the Commission would grant him a certificate for taxicab service that he wanted, that he would not come here and testify?

A. No, not only from that conversation, but from the previous conversation a week or so before.

Q. Why did this conversation cause you to infer this?

A. I inferred that.

Q. You did?

A. Yes.

MR. TURNER: Let us get the other conversation from which he inferred it?

MR. EVANS: I was going back.

MR. TURNER: I don't think that this testimony proves what it is offered for, but we have an awful pile of testimony from which certain inferences could be drawn and I think we ought to be fair, if we are going to find these facts and inferences, let us have all the inferences on both sides, don't resolve them all in favor of the plaintiff and against the defendant.

MR. EVANS: Quite right sir.

MR. TURNER: I sometimes get interested in examinations and seem to be more emphatic than I mean to be.

BY MR. EVANS:

Q. Now, Mr. Russell, will you state the substance of your previous conversation with Mr. Menke, which was held, you say, on or about April 1st?

A. Around that time.

Q. And where was this conversation held, also in your office?

A. In my office.

Q. This conversation was held in the presence of Mr. Rush?

A. I think Mr. Rush was there, as I recall, or he came in—I think he was there when Mr. Menke came in, and whether he went out during the conversation or not, I am not positive, but my recollection is that he was there during the entire conversation.

Q. Now, what did Mr. Menke say on April 1st?

A. Well, Mr. Menke came in and asked to see Mr. Benn, and the substance of his conversation was—

Q. We will not take that; what did he say?

A. Well, as I remember it, he asked for Mr. Benn, and when he was advised that Mr. Benn was out of town, he told me what he wanted to see him about.

Q. What did he say?

A. That he had been approached by Mr. Gray, had been downtown to see Mr. Gray, he had sent for him in connection with testifying before the Committee, which I surmised was the Senate Committee, and he said that he had also been approached by two investigators from Harrisburg, one's name he gave me, which I don't remember, and I cannot give you the other one, I cannot remember it, until just before he went out, and as I recall it, he stuck his head back in the door and said his name was so and so.

Q. What did he say?

A. I don't remember those names. I didn't pay any attention to them. He said that he had been approached by four or five people in one day from Harrisburg, to see him to get him to come up and testify, and that they had approached his attorney, asking for a transcript of the testimony in the last application he had, giving him the last application and he said that he had told them he would not tell them yes or no, that he wanted to see Mr. Benn first, and he left me under that impression.

Q. Don't tell your impression.

A. That is what he told me.

Q. He wanted to see Mr. Benn?

A. He wanted to see Mr. Benn first.

Q. What did you say to that?

A. I didn't say anything, I let him talk.

Q. I see.

A. Then he told me, he went into quite a discourse on his friendly feeling for Mr. Benn, and said at times that Mr. Benn had taken him to task, and that they had arguments that they had been due to his own impulsiveness and quick ungovernable temper, and that he had a very kindly feeling for Mr. Benn, and that he felt he could get more from the Commission by being friendly and continue friendly than by coming to Harrisburg and giving testimony.

Q. What did you say?

A. I didn't say anything, I let him go ahead and talk. Then he said, then he told me what he wanted, that he would like—

Q. What did he say?

A. Would like to be taken care of, would like to get something to do, that he was out of work, had lost his home, his wife had to go to work, had gone to work with a family, and he was rooming around, that he wanted to get on his feet again.

Q. Did you keep silent still?

A. Oh, I had probably a casual conversation with him, I would put in a word now and then, but I don't remember—

Q. You don't remember what you said?

A. No, it was just a general conversation, then he started out; then he came back and said to me, he didn't mention Mr. Benn's name, but he just told me that he would not give an answer yes or no until he had seen somebody.

Q. That was the substance of that conversation?

A. Yes, that he wanted to make an engagement with him, to be able to talk to Mr. Benn.

Q. And the two conversations that you have now related the substance of, constitute the whole of your conversations with Mr. Menke on which you had based your inference?

A. Yes.

MR. TURNER: Now, let us see what Mr. Menke has to say. I realize that it is long past lunch time, but we don't want an interruption between this testimony. Menke is here, let us hear what he has to say about this.

MR. EVANS: Are there any other questions that the members of the committee have to ask?

MR. COOKE: I would like to know what his duties are.

BY MR. EVANS:

Q. How are you carried on the books of the Commission, Mr. Russell?

A. I don't know, I think—

Q. What salary do you receive?

A. \$4000 a year.

Q. Dr. Snow testified—

A. He got my initials a little twisted there.

Q. Are you not listed as a railroad engineer?

A. I think—you have got my name down there.

Q. Are you getting \$4000 a year?

A. Yes.

Q. Were you getting \$4000 on December 31st, 1930?

A. Yes.

Q. Dr. Snow is going to correct this list. What engineering duties do you perform for the Commission, for the bureau of engineering?

A. Well, I am sort of a pinch hitter; I do work for all the different departments; I make investigations of all kinds; I make surveys and reports.

Q. In other words, Mr. Russell, you are attached to Commissioner Benn's office in Philadelphia?

A. Well, no, I would not say that. I have charge of the Philadelphia office of the Commission, the offices that used to be in City Hall, and since the first of October, have been in the Market Street National Bank Building.

Q. And your duties are connected with that office?

A. Yes.

Q. Who ordinarily directs you in the performance of your duties?

A. Well, considerable of it is on my own initiative.

Q. Which member of the Commission directs you?

A. All members, as the case may be, Commissioner Benn being the commissioner located in Philadelphia, it is only natural that he would give me more instructions, and he would have more work for me than the other commissioners.

Q. Practically all of your time is spent in work in and around Philadelphia, is it not?

A. Yes, I do a great deal of work for Chief Blenning of the Bureau of Public Convenience.

Q. And your work principally is in connection with the controlling of the bus and taxicab situation around Philadelphia, is it not?

A. Well, yes.

WILBUR F. MENKE recalled.

BY MR. EVANS:

Q. Mr. Menke, you have heard Mr. Russell's testimony in regard to conversation that he had with you. Will you tell the committee your recollection of these two conversations, first in regard to the one on or about April first?

A. I was in Commissioner Benn's office several times, in fact a dozen times in the past two or three years, since I lost my bus line, asking for some aid.

BY MR. TURNER:

Q. By Commissioner Benn's office, you mean the office of the Commission, or his private office?

BY MR. EVANS:

Q. You mean Mr. Benn's office in the Commercial Trust Building do you not?

A. Yes.

Q. What sort of aid were you asking?

A. I was asking that he give me compensation for what he had done, what he had taken away from me in one instance while I was still operating the bus through from Fox Chase to Jenkintown, I went to see him about some ruling about running over a detour, and as soon as he saw me approaching him, he said, "Get out of here; get out of my office; I don't want to see you; I don't want anything at all to do with you." and I said to him, if it were Mr. Atterbury or Thomas Mitten, he would leave them in with a pair of silk gloves, and he says, "You get out of here." and I said to him, "You made me lose everything I had, I lost my home and everything, and now you want to wipe your feet on me," and he said, "Shh, shh, get out of my office," and when he tried to put his hands on me, I told him that if he put his hands on me, "I will kill you." That is the words I said to him at that time.

BY MR. TURNER:

Q. Was Mr. Gray's office in touch with you?

A. No, I was not in touch. I did not know anything about coming to Harrisburg here.

Q. Did Mr. Gray's office get in touch with you?

A. Mr. Gray was not in touch with me.

Q. Any representative of his?

A. No sir.

Q. Any representatives from Harrisburg down to see you?

A. No sir.

Q. Before you received that telegram?

A. No sir.

Q. Never had any conversation with any of these people?

A. No sir, I went into the Commissioner's office at the bank building there in Philadelphia and ask for an application blank to file to operate a taxicab line—

Q. When was this?

A. Well, it was two or three days before Saturday, before I had this conversation.

BY MR. EVANS:

Q. That would have been about the first of April?

A. That was Wednesday. Yes and I asked for application blanks to operate a taxicab line from Bethayres Station, and then I said to Russell, I said, "Do you think that I could get this bus line off Commissioner Benn, because he has refused everything else?" Russell said, "Was there anybody else operating there now," and I said, "No, but there was a man operating up there, and he got in from \$100 to \$125 gross receipts with a Ford car." "Well," he said, "I will investigate and find out," which I think he investigated and found out, and I called him again on Saturday morning.

Q. That was last Saturday?

A. Yes.

Q. Just state as nearly as you can what was said?

A. I asked Russell whether he had saw Benn, and he said that he had not. There was a girl there, Miss Anderson, I think is the stenographer's name, she sat there, and she went over to Commissioner Benn's office in the Commercial Trust, and she carried the word over that I wanted to see him. I went over to the Commercial Trust and Commissioner Benn was there, and when he saw me open the door, he said, "I don't want anything at all to do with you. Sh, get out, I don't want to hear anything from you. You know that I cannot talk to you on applications now while this case is pending in Harrisburg against me." And I said, "All right." He said, "If you have anything to say, go over and tell Russell." And I said, "Will Mr. Russell tell you about it then?" He said, "I don't know whether he will or not." So I went back and there was no one else in the office but Mr. Russell.

Q. That was last Saturday morning?

A. Saturday morning, and I asked Mr. Russell, I said, "Mr. Russell—" He said, "How did you make out?" And I said, "Benn would not talk to me," and he said, "I know, I heard about it, he telephoned me." And I said, "Mr. Benn said that I should tell you, and I asked him whether you would tell him, and he said he didn't know," and I asked Russell then about it, if it would be all right to make the application out for this taxicab line, and about getting an additional stand on it, I was asking for Fox Chase in the first place, and he said, "You want too much." He said, "You might have got a taxicab stand at Fox Chase, but now you want a taxicab stand at some other place, and I know that you cannot get the one at Fox Chase, because the P. R. T. runs in the city of Philadelphia, which practically has been granted the P. R. T., and that was all, and I went out of the office.

BY MR. TURNER:

Q. Was that all the conversation you had?

A. Yes.

Q. You didn't mention Mr. Benn's name.

A. No sir.

BY MR. RHODES:

Q. Did you make a telephone call on Monday morning of this week?

A. No sir.

BY MR. TURNER:

Q. What is the date of this telegram?

A. Harrisburg, Pa., April 6, 1931, 4.02 P. M.

Q. What does it say?

A. Philadelphia, Pa., will call for this—this is a notification on the application, I called up the Postal Telegraph and asked if there was a telegram there for me, which I heard there was, and I told them I would call for this telegram this morning, that is on a Tuesday morning, it says here, expect to present your testimony Wednesday morning. Come Tuesday, if possible for discussion. Harold Evans. I was to talk to Mr. Evans' office, and he said he was not going to Harrisburg on Tuesday, and I thought, I could get the money—

BY MR. TURNER:

Q. What did you say? Were you in Mr. Evans' office?

A. Last Tuesday.

MR. EVANS: Tuesday of this week.

BY MR. TURNER:

Q. And the telegram is dated the 6th, if you will recall your testimony, the 6th was on Monday?

A. Yes.

Q. Now, the telegram was dated on the 6th, according to your testimony, and you must have had some conversation before the 6th?

A. Yes, but I didn't know I was coming to Harrisburg.

Q. Would you state you had no conversation with anybody about the testimony in Harrisburg before you received that telegram?

A. Neither I did.

Q. If that telegram there is a call for your testimony, how would they know anything about it?

A. That is, I had no talk with Mr. Russell, when he says about coming up here.

Q. No, I am asking you the question whether you had any conversation with Mr. Gray's office, and you said no, or any representatives of Gray's office and you said no, and

you were asked the question whether you had talked to any representative from Harrisburg and you said no, no one else.

A. Neither I did.

Q. Before you got the telegram?

A. No.

Q. This telegram says, "expect to present your testimony Wednesday morning, come Tuesday, if possible for discussion," signed Harold Evans, and it is dated April 6th.

BY MR. EVANS:

Q. Mr. Menke, you had had no prior conversation with me in regard to this case before last Tuesday had you?

A. Yes, I did. On last Tuesday, I called you on the phone there and asked you whether I could do anything, if I could get my bus line, and in the telephone conversation, you said that would not be in this case at all, that you would probably have to file a suit, bring it up in law—Do you remember that conversation.

Q. Not me.

A. Well, three or four weeks ago.

Q. I don't remember the instance; what was this conversation?

A. I just called you in reference to getting an attorney to act for me, not in reference to this case, coming up here, it was merely a conversation—I called up the office, and the girl answered on the first one, I said is Mr. Evans here, and I don't know whether she said Mr. Evans is in or not, but I called back later and Mr. Evans was in—

BY MR. TURNER:

Q. When was this?

A. Oh, I will say about two weeks ago, before last Monday.

Q. You had called Mr. Evans about a private matter?

A. Yes, a private matter, in conducting a law suit against the P. R. T. trying to get my bus line, or reimburse me for my bus line.

Q. And Mr. Evans didn't say anything at all to you?

A. He only said that would be probably a case he would have to take up through a civil suit.

Q. What did you understand by this telegram, expect to present your testimony on Wednesday.

A. That they wanted me to come up here and testify, he wanted my side in the case of the P. R. T. that they had taken away my bus lines from me, about that clause put in there, and I was told by several councilmen in City Hall that I had the chance in the world now to go to Harrisburg.

BY MR. TURNER:

Q. And you had no other conversation with any other person with respect to this testimony?

A. No sir.

BY MR. RHODES:

Q. You were not solicited to testify here until you got this telegram here?

A. No sir.

BY MR. MOORE:

Q. Did you volunteer to testify before the Committee?

A. Did I volunteer?

Q. Last week or any other time?

A. No sir.

BY MR. TURNER:

Q. You never got a letter of any kind from the House Committee or the Senate Committee or Mr. Gray?

A. No sir.

BY MR. EVANS:

Q. Did you ever come up prior to Tuesday, to discuss with me your appearing before the House Committee; I have no remembrance of it?

A. I remember I called you two or three weeks before the first, I am not sure when, when all this stuff I was reading in the newspapers and I thought it would be a good chance for me to get a lawyer, which I called up Mr. Evan's office in reference to getting an attorney to see whether I could get my right back.

Q. Mr. Menke, I have not been acting as your attorney in any way in this matter, have I?

A. No sir.

BY MR. TURNER:

Q. I don't think you need in any way explain that to this Committee, Mr. Evans.

MR. EVANS: I wanted to get it straight on the record.

THE WITNESS: I called to see whether Mr. Evans could take my case in reference to getting that bus line back.

BY MR. RHODES:

Q. Did you say anything to Mr. Russell at all about coming up here to testify?

A. I didn't know anything about coming up here until I got notice last night to come up here this morning.

MR. ARTHUR H. HULL: May I ask one question.

MR. EVANS: You ask me and I will tell you.

MR. HULL: Will you ask him whether or not he had complained to Mr. Gray about three weeks ago with regard to this situation.

BY MR. EVANS:

Q. Did you complain to Mr. Gray about three weeks ago in regard to this situation?

A. Of coming up here.

MR. HULL: Mr. Gray, the counsel from Philadelphia before the Senate Investigating Committee.

A. This matter of coming up here on Tuesday?

MR. HULL: Complain to Mr. Gray in regard to the action of the Public Service Commission on your certificate.

A. I was talking to Mr. Gray in his office the same day I called Mr. Evans --

MR. HULL: About three weeks ago?

THE WITNESS: The same day I was talking to Mr. Evans in his office, whether he could get my bus line back, while this case was going on in Harrisburg.

BY MR. TURNER:

Q. Then you did talk to somebody about it?

THE WITNESS: In reference to this case—not on this case against the Commission or anything, but whether he would take my case, the same as I talked to Mr. Evans, because I have so many lawyers, that I lost out in everything, and I wanted to see whether I could get a good one, and I was told by several councilmen in Philadelphia why didn't I get William Gray and I immediately went down and had a talk with him.

MR. HULL: The reason for my inquiry was this: that during the Senate investigation Mr. Gray made a request of the Public Service Commission for those very same records, and there is on file in the Commission the reply transmitting this information in response to the request, and there was a statement by Mr. Gray made to the Senate Investigation Committee with regard to the record in the nineteen cases and since it has resolved itself to a question of veracity here I think it would be enlightening to have Mr. Gray called.

MR. TURNER: If it is a question of remarks made during the Senate Investigation Committee, let us get the Senate record.

MR. HULL: I am informed by the Secretary of the Commission that he was present when this matter was discussed across the bench, if you can call it such, with the Committee.

MR. EVANS: Suppose we have Mr. Tevell take the stand.

LOUIS TEVELL sworn.

BY MR. EVANS:

Q. Mr. Tevell, you are acting Secretary of the Public Service Commission?

A. Yes sir, I am.

Q. You have heard Mr. Hull make the statement that Mr. Gray requested records in the Menke case from the Public Service Commission about three weeks ago?

A. Yes.

Q. Will you state briefly to the Committee the facts in regard to that?

A. I received a telephone call during one of the days that the Senate Committee was in session—

Q. From whom?

A. From Boyd Hamilton, and he said that Mr. Gray wanted to see me right away. I immediately went over to the Senate Caucus Room, where the hearing was being held, and of course the hearing being in progress I waited a few minutes until there was a pause in the proceedings, then I went and told

Mr. Gray who I was. I said, "I understand you want to see me, Mr. Gray," and he said, "Yes." He called me over to the bench, and I think Mr. Hart, or Mr. Hepburn, was with him, and he said he wanted the records in the chemical lime case, and he said that he had gotten a complaint from a former bus operator in Philadelphia, Menke, who said that after he had started his business, he conducted it until it was worth \$125,000, and that his rights were arbitrarily taken away from him by the Commission, and he said he wanted the records in the Menke cases.

Q. That is all you know about it?

A. That is all I know about it. I went back to the office and made a summary of the records and transmitted that summary to Mr. Gray, accompanied by a letter of transmittal. I have sent for the file, and it ought to be here in a minute or so.

MR. BENN: I am due at a conference in the Highway Department, and I do not want to trespass on the Committee's time, but there are two questions in connection with this matter that ought to be brought right out on the record.

As I understand, Mr. Menke's testimony was that he was driven out of business by this stipulation and lost a considerable amount of money. I communicated last night with two gentlemen in Philadelphia, two reputable members of the Philadelphia bar. The one was Mr. William T. Brenner, who represented the White Motor Company, and Mr. Menke when he went into business on the certificate granted upon my recommendation in 1922, had nothing. He got his equipment from the White Motor Company and gave judgments, which were never satisfied. The White Motor Company was obliged, finally, to replevin its property; he owed them something like \$76,000, and we had an informal complaint from the White Company in the records of the Commission, and when Mr. Brenner told me last night, he stated that he would verify these facts before this Committee. As the result of Menke's operation, not with property owned by Menke, but by the White Company, the White Company lost fifty some thousand dollars. Mr. Joseph T. Henderson, who was Mr. Menke's attorney, called me from Philadelphia this morning, and stated that he would verify to Mr. Evans or to the Committee, that Mr. Menke, when he represented him in the renewal of the certificate, that Mr. Menke was entirely satisfied, and not only entirely satisfied, but two of the provisions in that certificate. Mr. Menke's operation cost the Mack people a very substantial loss, so that that feature is rather out of the picture. Now—

BY MR. TURNER:

Q. What do you mean by that statement?

A. Menke did not lose any of his money, he lost the money of two motor companies, the White Company and the Mack Motor Company.

BY MR. EVANS:

Q. Do you know how much, Mr. Commissioner, Mr. Menke had paid on those debts. He advised us he had paid \$61,000 on them?

A. I don't know what Menke did. I know that Mr. Henderson told me that he had the papers to show in the White Company that Mr. Menke entirely defaulted on his payments, and Mr. Henderson called me this morning and volunteered the information. I don't know anything about the payments.

BY MR. TURNER:

Q. Did he default in these payments before this order refusing him the certificate?

A. Oh, the White Motor truck, he used the White trucks for a year or two years—whenever he was using the Mack trucks—that was two years before, because they were compelled to replevin them.

Q. Two years before when?

A. Two years before his certificate was refused.

Q. Was refused?

A. Was terminated. I do not like—

BY MR. COOKE:

Q. It is in the evidence here, Mr. Commissioner, that he was pretty prompt in his payments and they ran up into thousands of dollars?

A. I am giving you the statement of a reputable Philadelphia attorney who states that he is perfectly willing to give

that information to Mr. Evans and come here and testify before the Committee.

MR. EVANS: I cannot see that the question in regard to the payment for the White trucks is really material, and if it is material, we can easily establish the facts.

MR. TURNER: It is only material to the issue in the case in that one side having developed it, and it having been spread across the pages of the public press, it seems to me it is fair to an accredited arm of the government of the State to be given a chance to explain or answer it.

MR. RHODES: There was testimony that he has lost his equity, lost everything, lost his trucks.

MR. TURNER: Did he lose them before this certificate was taken away from him or after?

MR. BENN: I have some—

MR. EVANS: I have some more questions that I would like to ask you, if you are in a hurry to get away.

A. I have some information here, and I think it ought to be put in evidence.

Q. You will be given an opportunity to give that evidence if you will let me finish with this examination. Referring to the files in connection with the Menke cases, in Applications Nos. 14892-3-4-5-6, they were applications for the renewal of certificates containing the stipulations that have been referred to, were they not?

A. Yes.

Q. Those applications were heard by Examiner Wolfe in Philadelphia, in 1926, were they not?

A. Yes.

Q. The minutes of the Commission states: At a stated meeting of the Commission held in Harrisburg, June 1, 1926, containing the following notation, in the matter of the following applications of Wilbur F. Menke, for approval of the continued exercise of the right and privilege of operating motor vehicles as a common carrier for the transportation of persons in the places designated?

A. Yes.

Q. A-14892, designating the route; A-14893, designating the route; A-14894, designating the route; A-14895, designating the route; A-14896, designating the route, Examiner Wolfe reported that the testimony had been concluded, that protests had been filed, and he recommended that the cases be reported to Examiner Blanning for consideration in connection with the Philadelphia Rural Transit Company. On motion it was so ordered. A minute of the second meeting of the Commission, was held June 13, 1926, the application of Wilbur F. Menke for approval of the continued exercise of the right to operate motor vehicles as a common carrier for the transportation of persons in places designated (designating the same by pieces) Commissioner Benn presented a proposed Commission report granting the application to the Philadelphia Rural Transit Company with permission to inaugurate this September 1, 1926, and continue in effect the Menke service until that date, at which time they expire and become null and void. Said report was read and on motion adopted and order directed to be issued.

That correctly states what happened, does it not?

A. Yes.

REPORT AND ORDER OF COMMISSION IN APPLICATION DOCKET NUMBER 8527, produced and marked Exhibit No. 128.

BY MR. EVANS:

Q. In the report of the Public Service Commission in this matter, you have stated, Mr. Benn, that Mr. Menke assented to the insertion of this stipulation, have you not?

A. I said that his attorney assented to that, and I said that Mr. Henderson stated over the phone to me this morning that Mr. Menke approved, and was entirely agreeable upon the renewal for him to do so.

Q. And that was the only condition as announced by you, on which the certificate would be granted?

A. Well, the record speaks for itself.

Q. As a matter of fact in a similar case of Albert Neibauer in Philadelphia, did Neibauer consent to that condition?

A. Neibauer bought a certificate as I recall it, of an operator who had previously been granted a certificate upon my recommendation incidentally, in which that stipulation was on the certificate. I don't recall—I didn't conduct the hearing; I think Mr. Wolfe did; and the stipulation was inserted in that case; yes.

Q. I will read into the record the application of Philadelphia Rural Transit Company, and of Albert Neibauer, application docket No. 8527-Folder 21, 16970, 16971 and 16972, in Public Service Commission Reports, volume 8, page 756:

Neibauer claims by reason of the fact that his attorney at the time the application was made did not formally consent to insertion of such a stipulation in his certificate, that therefore the stipulation is not binding or of effect. The Commission cannot concede this claim. The stipulation was inserted in the Neibauer certificate by the Commission in the light of all the facts bearing upon public necessity and convenience, and in the light of its experience with Neibauer's predecessor and with other operators under comparable circumstances and conditions. Then the certificate was issued with the stipulation it was accepted by Neibauer and his operations were of course conducted under the condition and restrictions specified in the certificate. Stipulations, conditions and restrictions in certificates of public conveniences are inserted by the Commission not by grace or consent of certificate holders, but for reasons which in the Commission's judgment make them necessary or advisable in the public interest," and a view of that statement of the Commission, is immaterial whether or not the applicant consents to the insertion of these stipulations.

A. In my judgment, absolutely. It is not for an applicant to stipulate the terms under which he shall render public service. It is for the Commission to do so.

Q. As though your reference to Mr. Menke's consent to this was not a controlling factor in the Commission's decision?

A. No, my reference there was due to the fact that Menke's testimony, as I recall it, it appeared that there were a threatening imposition upon him, whereas it is to the contrary in matters of creditability and of veracity have risen, and the creditability of the testimony of this witness, who has been dealt with most considerably and most leniently by the Commission make it, I think, imperative on my part and on the Commission's part to allow this to go in, as far as the Commission's consideration is concerned, they know what kind of a man we have been dealing with.

BY MR. RHODES:

Q. Now when you say that we have dealt leniently with him—

A. No, I did not say that you did, I say we did.

Q. I just wanted you to feel that we are not in any way partial, because we are all desirous of getting the facts. We are not interested in personalities.

A. Certainly. I am here to give you the facts.

BY MR. COOKE:

Q. Before you take up this question, will you enlighten me on this; apparently, reading this letter, dated in 1925, there is a great deal of importance attached to the fact that the city in 1927, I think that is the date, is to take over the property by the payment of certain sums?

A. Yes sir.

Q. And that, therefore, it is against the public interest that commitments shall be created which will interfere with the early purchase of these properties at that time; is that right?

A. Yes sir; that is one reason, and the law further states that the—

Q. But that reason is rather stressed?

A. Yes sir; in the recapture clause.

Q. These licenses or permits, whatever you call them—

A. Certificates.

Q. Certificates for a limited period, some for two years and some for five years.

A. The original certificate goes for two years, and all certificates formerly were limited to two years. Now, an initial certificate is for two years and a renewal for five years.

Q. So that in 1927, Menke or Smith or Jones might have a dozen of these certificates, but they would not offer an obstacle or handicap to the city at that time?

A. No. As a matter of fact, under the law, there is no franchise value to these certificates. This certificate owner or any certificate holder has not got a right—

Q. What is going to happen in 1927, A certificate holder or any other certificate holder has not a right to—

A. What is going to happen in 1927 is very much stressed in that letter but I do not think that it is relevant.

BY MR. COOKE:

Q. The Commission does not run the affairs of the city of Philadelphia or dictate the policies of its laws department, nor did we write the 1907 contract. However, this Committee has heard a lot about Home rule and the operation of the Public Service Law as to what has been done to this and that municipality and borough.

Q. As a matter of fact, you would not act for or against one of these contracts—

A. No; I think it is sound policy, whenever the Commission can follow it, to officially outline and designate the policy of any of the municipalities or any municipal sub-division of the State of Pennsylvania, it should do so.

Q. But that was the opinion of individuals; there was no councilmanic action in support of this?

A. No.

Q. It seems to be that you are governed—

A. Well, there was a law. I have no desire at all. I would not have said anything if the question of veracity had not been raised; it goes to the creditability—a communication of March 22, 1929, from the mother and father of a twelve-year-old girl who was arrested on a criminal charge which was called to the attention of us and is in the records of the Commission—

MR. RHODES: I think from the standpoint of myself that we ought to know as a Committee, the contents of that allegation or charge before we let it become public through this Committee, because it is in itself irrelevant as to what this moral character may be, to a certain degree, and although I am not prejudicing what your testimony is going to disclose, I still feel that before that kind of a proposition goes out of this Committee, you ought to submit it to the Committee, and we can look at it.

THE WITNESS: Very well. Mr. Evans has called for the records of the Commission in consideration to the little girl and her parents.—

MR. TURNER: Let us see what the record is. If it goes to the veracity of this man, because we are dealing with veracity, then I think it ought to go in, if it is not raising the question of veracity—

THE WITNESS: Very well.

(Discussion off the record.)

THE WITNESS: Mr. Chairman, I withdraw the offer.

THE CHAIRMAN: All right.

MR. EVANS: If the Committee, please, in order to clarify the situation I would like to make a statement of this situation as I understand it, and have Commissioner Benn correct me if am wrong:

Menke was granted a certificate by the Public Service Commission in 1922 and the following years, in which the Commission inserted the stipulation that if and when the Philadelphia Rapid Transit Company or any of its subsidiaries are furnishing service in the territory serviced by Menke's lines, that his certificate would be revoked; that Menke operated under those certificates until 1926 and built up those lines; and that in 1926 he applied for a renewal of the certificates and at the same time the Philadelphia Rapid Transit Company applied to the Commission for certificates for the same or very closely identical routes; that the Commission, in view of the stipulation in Menke's certificate refused the renewal of his certificates and granted these routes to the Philadelphia Rapid Transit Company, and that by reason of that Menke lost his business and his buses.

BY MR. EVANS:

Q. Is that substantially a correct statement?

A. That is substantially a correct statement. I don't go along with the conclusion, for the reasons which I have previously testified, but as a narrative of the facts in the case, I am entirely agreeable to have it go upon the record.

Q. By the "conclusion" you mean in regard to the loss of his business?

A. Yes.

BY THE CHAIRMAN:

Q. He lost whatever equity he had in that business?

A. I have no doubt, if he had any equity; he lost it, yes sir.

MR. EVANS: I have some more questions that I want to ask Commissioner Benn, but in view of the fact that he has important engagements now, and the Committee wants to adjourn for lunch, I will be glad to hear him later.

THE WITNESS: If the Committee can persuade counsel to let me know sufficiently in advance, so that I can arrange the Commission hearings to which I am assigned, I will be very much obliged.

(Discussion off the record.)

THE CHAIRMAN: We will take a recess now until 2.30 o'clock P. M.

#### AFTER RECESS

The Committee was called to order and resumed its deliberations at 2.50 o'clock P. M.

MR. MOORE: Mr. Evans, Mr. Cooke has a statement here which I think ought to be offered in the record.

MR. COOKE: This is a classic definition of "net investment" as used in the Federal Water Power Code of June 10, 1920, and is the starting point for anybody who is going to consider a rate basis in this case. I will not read it, but it can be copied into the record.

"The following is an excerpt from the Federal Water Power Act of June 10, 1920:

"'Net investment' in a project means the actual legitimate original cost thereof as defined and interpreted in the 'classification of investment in road and equipment of steam roads, issue of 1914, Interstate Commerce Commission,' plus similar costs of additions thereto and betterments thereof, minus the sum of the following items properly allocated thereto, if and to the extent that such items have been accumulated during the period of the license from earnings in excess of a fair return on such investment: (a) Unappropriated surplus, (b) aggregate credit balances of current depreciation accounts, and (c) aggregate appropriations of surplus or income held in amortization, sinking fund, or similar reserves, or expended for additions or betterments or used for the purposes for which such reserves were created. The term 'cost' shall include, in so far as applicable the elements thereof prescribed in said classification, but shall not include expenditures from funds obtained through donations by States, municipalities, individuals, or others, and said classification of investment of the Interstate Commerce Commission shall in so far as applicable be published and promulgated as a part of the rules and regulations of the Commission."

MR. MOORE: I think in view of the testimony of yesterday and last night that the financial manipulations of the Hanover-McSherrystown Water Company and the Gettysburg Water Company, that these manipulations, as disclosed by the testimony, while differing in methods and purposes, show a very loose method; and I think it is in the province of this Committee to call the attention of the Attorney General's office to these facts for such action as he may deem proper in this situation.

MR. TURNER: I think that is entirely correct. I thought you were going to get that this morning, Mr. Evans. Don't the Security Bureau have anything to do with the issuance of securities?

MR. EVANS: We would have asked Mr. Leitch in regard to that if Commissioner Benn had not been anxious to get away.

MR. TURNER: In my understanding of the law, I cannot quite see why they should not have had some control over the issuance of these securities.

MR. EVANS: As I understand the situation, they, in a case of public utility securities, call the Commission, and if the Commission have approved the issue, the Bureau of Securities does not go any further.

MR. TURNER: Well, I think we should fix the responsibility.

MR. EVANS: I think probably between the two agencies the thing has not been properly supervised.

T. J. KEADY sworn.

BY MR. EVANS:

Q. Where do you live, Mr. Keady?

A. In Westfield, Allegheny County.

Q. What is your occupation?

A. Certified Public Accountant.

Q. What has been your experience as an accountant?

A. Eight years of public accounting experience and my public utility experience consists of working on an audit of the Beaver Valley Water Company in connection with a

stock issue some years ago, and the American Fuel and Power Company audit, and several investigations in connection with a bond issue of a holding company and bond issues of the subsidiaries, the principal subsidiaries being the Inland Gas Corporation and the Kentucky Fuel and Gas Corporation, with headquarters at Ashland, Kentucky. I have worked on several investment audits including the sale of the Freeport Water Water Company. These had principally to do with the verification of these companies income. I worked on several annual audits of the Fayette City Water Company. I have done considerable auditing in various departments of this State, having had charge of various divisions of audit of the Treasury Department and the Highway Department, the State Workmen's Insurance Fund, and numerous State institutions throughout the State.

Q. And you have been employed in the research bureau for this Committee?

A. Yes sir.

Q. Have you in connection with your work for the Committee made examination of the financial structure of the Pennsylvania and the Federal Water Service Companies?

A. Yes sir.

Q. These are the companies, if I remember correctly, that control the Chester Water Company and the Scranton-Spring Brook Water Company?

A. Yes sir.

Q. Will you state what the situation was as it existed in the summer of 1927 and explain to the committee what initial steps were then taken which were the subject of action by the Public Service Commission in regard to their finances?

A. In the Public Service Commission's decisions, Volume No. 8, page 700 to 715, there is recorded a decision on December 13, 1927, which refers to the application of the Pennsylvania Water Service Company and the underlying water companies for permission to sell their property and franchises to the Pennsylvania Water Service Company, and these companies were the Citizens Water Company, the Clymer Water Company of Indiana, the Jersey Shore Water Company, and the Clear Springs Water Company, and the following additional information is set out in this decision:

"The Federal Water Service Corporation, a holding company of the State of Delaware, in addition to having acquired the entire stock of the Pennsylvania Water Service Company and their four operating companies, has also acquired control of the Spring Brook Water Supply Company, which supplies the city of Wilkes-Barre and vicinity, and the Ohio Valley Water Company serving the suburban district of the city of Pittsburgh, and the New Chester Water Company, it being the intention to merge the three last named companies with the Pennsylvania Water Service Company at a later date."

The Pennsylvania Water Service Company had, under date of August 1, 1927, issued \$9,200,000 worth of bonds and 60,000 shares of preferred stock. The properties covered by these securities are the properties mentioned in the decision referred to. Inasmuch as the Public Service Commission refused to approve the application, other means had to be provided.

Q. This decision which you have just referred to is a decision of the Public Service Commission refusing to receive the certificates of notification?

A. They refused the merger application.

Q. What reasons did the Commission give for its disapproval?

A. It cited several reasons, in summary form, using the exact wording:

"The Commission upon petition refuses to approve the purchase of capital stock and all the property and franchises of a number of water companies for the applicants were widely separated utilities and the financial plan would place their plant under one blanket mortgage, would greatly increase such charges and decrease the investment of a holder of common stock and seemed chiefly to be based upon prices paid for the stocks and upon reproduction cost new depreciated estimates, which are not accessible as estimates of values without considerable check, comparison and revision by the Commission."

Q. What happened next?

A. At this point I want to introduce that photostat, showing the cost of the various properties acquired by Federal Water Service Corporation, which you will note is the holding company mentioned in the Commission's decision.

Q. And these photostats, as I understand it, Mr. Keady, are photostatic copies of a part of the data submitted this

morning by the Securities Bureau under subpoena, and introduced here as Exhibit No. 127?

A. Yes, sir.

MR. TURNER: Has this a number?

MR. EVANS: That is a part of Exhibit No. 127. It is not a complete exhibit.

BY MR. EVANS:

Q. Now, speaking of this photostat, which is a part of Exhibit 127, will you explain it to the Committee?

A. This exhibit represents the cost to the Federal Water Service Company their cost of acquiring these various properties, and at this point—there is a foot note on there in respect to the investigation of Jersey Shore, it can be disregarded because of the fact that the annual report of this company shows—that in the annual report? This preferred stock as shown in the photostat, and the other footnote—

Q. In other words, you mean that on page 1 the cost of retiring the preferred stock of the Jersey Shore was shown to be \$126,035?

A. Yes, sir.

Q. Right.

A. The other footnote or explanation, namely, a further reduction in the investment of the Federal Water Company should there be disregarded as the Commission's decision mentioned a complete reorganization and refinancing, and therefore, no further bonds or preferred stock of this company were sold.

Q. In other words, am I correct in understanding after that the Commission refused to approve the merger of these various companies?

A. The Pennsylvania Water Service Company, Inc., the securities of that company were issued.

Q. Will you go ahead and take up the matter to which you wish to refer?

A. The first company we will discuss is the Clear Springs Water Company of Catasauqua, Pennsylvania, serving the following territory: Catasauqua Borough, Northampton County; Coply Borough, and White Hall Township.

Q. What part of the State is that in; do you know?

A. I don't know.

MR. COOKE: Lehigh and Northampton Counties.

THE WITNESS: The reorganization of this company took place on March 15, 1928. The plant, as covered by the following journal entries; this is a copy of the journal entries charged to the certificate of notification covering the securities issued for this reorganization and filed with the Public Service Commission.

Q. And in order that we may have a perfectly clear understanding of this, am I correct in understanding that all of your testimony is based on data with the Public Service Commission or with the Securities Bureau of the Commonwealth?

A. Yes.

Q. I show you a paper headed, "Pennsylvania Water Service Transactions," Clear Springs Water Company journal entries, and ask you whether that is the paper to which you refer?

A. Yes, it is.

Q. And that was prepared by you or under your direction?

A. Yes, sir.

MR. EVANS: I offer this as Exhibit No. 129.

(Paper in question so marked.)

BY MR. EVANS:

Q. Will you explain this exhibit to the Committee?

A. The first entry covers the right of a plant and property account. This is the fixed capital; or the explanation of this entry immediately below it, you will note that it brings the plant and property account and reserve for depreciation in agreement with an appraisal dated January 1, 1927, and based on reproduction cost new.

The annual report of this company shows that the fixed capital account less depreciation is \$400,949.87. Now, this figure does not agree with the amount shown in the journal entry, and subsequent judgment have apparently been made on the books of the company. Now, the purpose of this entry is very apparent when you consider the next entry; that is, the sale of \$650,000 in bonds.

In order to float this bond issue—

Q. Just before you take that up, that was the book value of the property and plant account prior to the writeup?

(No answer.)

MR. TURNER: This was an issuance of securities of which the Commission had jurisdiction?

MR. EVANS: So far as the Clear Spring Water Company is concerned, Mr. Turner, I think the Commission does have jurisdiction. I think the Pennsylvania Water Service Company is a holding company.

MR. TURNER: I wanted to know whether the Commission had jurisdiction or not.

BY MR. EVANS:

Q. Was this an issue of securities by the Clear Spring Water Service Company or by the Pennsylvania Water Service Company?

A. No; this was by the Clear Springs Water Service Company. Fixed capital assets net of depreciation, these figures are as of December 31st, 1928. This refinancing was in March, 1928. Of course, the annual reports of the company show only at the beginning and the end of the year. So, the fixed capital assets net of depreciation as of December 31st, 1928, including the writeup was \$1,064,513.38.

Now, the net writeup was \$400,949.86. In other words, the fixed capital assets net of depreciation, exclusive of writeup, was \$663,563.52.

Q. Proceed. I interrupted you?

A. In order to float this bond issue of fixed assets, on which the agreement was based, it had to be increased in order to provide sufficient money for the company. Of course, this is where the reproduction comes in handy. The appraisal was made, and the books were written up, and the bonds were sold to a bank.

BY MR. COOKE:

Q. Who made the appraisal? Is that on there?

A. I don't have any knowledge of that. The company received \$585,000 in cash, according to the entry, that is, Entry No. 2, and this same information is shown in their annual report for 1928 to the Public Service Commission.

Now, the next entry, No. 3, covers the exchange of the old common stock of 5,812 shares of stock having a par value of \$50 per share, or a total par value \$290,600. That was exchanged for 2,200 of no-par value preferred stock, having a stated value of \$220,000, and 15,950 shares of no-par value common stock having a stated value \$638,000.

This transaction resulted in a charge against the surplus of \$547,600 and against a discount in preferred stock of \$19,800.

Q. And those are shown under the Item on Exhibit 129?

A. Yes. Preferred stock was exchanged on the basis of \$91 and there, as previously pointed out, the stated value was \$100 per share. Now the next and most important step in this reorganization as shown in General Entry No. 4, in which 13,750 shares of the new common stock was retired on the same day it was issued for \$550,000 in cash. This entry means that practically all of the cash received from the bond issue was paid to the Federal Water Service Corporation, the holders of the old common stock, which was exchanged for new preferred and new common.

BY MR. TURNER:

Q. I would like to have just a little explanation on that. I tried to follow your figures pretty closely.

(No answer.)

BY MR. EVANS:

Q. What were the proceeds of the bond issue?

A. The proceeds of the bond issue were \$585,000.

Q. And of this amount \$550,000 was used to retire—

A. The common stock.

Q. The common stock?

A. The holder of the common stock was the Federal Water Service Corporation.

Q. But the Federal Water Service Corporation was still left with some common stock, was it not?

A. Yes, they retired—they still have 100% control. In other words, they still have all of the outstanding common stock, but this number of shares or 13,750 shares, was the original issue or the issue upon the exchange of 15,950 shares.

Q. Now, they retired 13,750 shares, and they still have all of the common stock, and their control is still 100%, and yet there is \$550,000 in cash going to the former holder of this stock.

(Discussion off the record.)

THE WITNESS: Now, the purpose of the bond issue is shown in the certificate of notification filed with the Public Service Commission as follows:

"To provide cash for the corporate purposes of the company." Of course out of that explanation is not very specific, in that it fails to point which company is to be benefited.

BY MR. TURNER:

Q. Or what the corporate purpose was?

A. Yes. And what actually took place, and interpreted as being a benefit to the Clear Springs Water Service Company.

Q. In other words, in the end that company got no new capital at all?

A. No sir. There is a difference there of \$35,000, of course the cash received from the bond issue was \$858,000, and they get \$550,000.

BY MR. EVANS:

Q. What happened to the \$35,000?

A. The annual report shows that \$25,000 in bonds—No; \$25,000 in bonds, \$109,085 reacquired in preferred stock, so apparently this money was used to purchase these bonds and preferred stock.

BY MR. RHODES:

Q. Do you know who bought the bonds at the discount of \$65,000?

A. G. L. Orstrom handles all the financial transactions of the Federal Water Service Corporation.

Q. Does the record show which company handled this transaction of \$65,000, or did you just assume it?

A. I couldn't say that without looking it up.

Q. They are the bankers for the Federal Water Service Corporation, is that correct?

A. They are the bankers for the Federal Water Service Corporation.

Q. So that the deduction would be that they handled these bonds?

A. In fact the Tri-Utilities is still higher up. They control the Federal Water Service Company, and this G. L. Orstrom is one of the officers of the Tri-Utilities.

Q. Who controls the Tri-Utilities?

A. I haven't gone back to that.

BY MR. EVANS:

Q. If you later find any definite evidence as to how these securities were sold, will you present them to the Committee?

A. Yes sir. And now, the total investment of the Federal Water Service Corporation in stocks and bonds of this company prior to the refinancing, is shown on the photostat; capital stock, \$456,242, bonds, \$115,439.75 or a total of \$571,681.75.

BY MR. TURNER:

Q. They got back \$550,000 and still have the same common stock?

A. Yes sir. In other words to get the control of this company the Federal had to pay \$571,681.75. The bonds have been retired in 1927, their investment in common stock is \$571,681.75.

As previously pointed out Federal received the following as a result of the refinancing: Cash: \$550,000; Preferred Stock, \$220,000; Common Stock, \$886,000; or a total of \$858,000. Federal deducted from that \$571,681.75, leaving a profit of \$286,318.25. And now, that there was \$88,000 left in the company; that is the stated value of the common stock and they took out in excess of the original investment \$198,318.25.

BY MR. EVANS:

Q. Was the preferred stock sold to the public?

A. Yes sir; the preferred stock was disposed of, and it was disposed of at a discount through the bankers of \$19,800. And now, of course, the bankers would pass this on to the public at about par. This discount would reduce the Federal's profit because they got \$19,800 less from the bankers than the figure read there, but that would leave them a profit of \$178,513.25.

BY MR. RHODES:

Q. Now that profit is in cash?

A. Yes sir; that is over and above their original investment.

BY MR. EVANS:

Q. And they had \$88,000 the stated value of the common stock besides?

A. Yes sir.

Q. Which was all of the outstanding common stock of the company?

A. Now, it must be remembered that Federal's original investments as made to secure control of this company, at prohibited prices are not unusual in a case of that kind, and the common stockholders would naturally get top prices for their holdings, and values including reproduction cost, new, are not considered when such deals are arranged.

BY MR. TURNER:

Q. What was the value of the reproduction cost, new here.

A. I don't know what the value of the appraisal is, but the write-up—

Q. I thought you said you had an appraisal there?

A. No; I just have the original entry, bringing the appraisal into agreement with the books, which necessitated a write-up of \$400,000.

Q. What is the result of this, so far as the public is concerned?

A. It looks to me as though they are holding the bag. That they not only enabled Federal to get their money, but also a very large profit. The public money is running the company, and they have nothing whatever to say about the management or the policies of the company, as the common stock which represents 9.19% of the capital structure of this company has a full voting, dictatorial power, and control of this company.

Now, the value of this common stock, which has a stated value of only \$88,000, is more clearly shown by subsequent declarations of dividends.

In 1928 the dividends amounted to \$24,500; in 1929, \$15,000; or a total of \$39,500.

Q. These are dividends on the common stock?

A. On the common stock. The bondholders got five per cent. on their investment the preferred stockholder six per cent. whereas the common stockholders got 27.8% in 1928 and 17.4% in 1929.

Q. What were the reasons, just refresh my mind, that the Commission gave for its refusal of the merger?

A. "The Commission upon petition refused to approve."

Q. What was the capital structure of this company before and after the refinancing?

(No answer).

BY MR. TURNER:

Q. After this was refused, what did they do then?

A. No sir, this was not refused. The original purchase of these various companies by Penna. Water Service Corporation was refused in September, 1927, and one of the reasons given was that there was a mortgage placed over non-contiguous properties, and that is the only reason, and they have eliminated in subsequent—

Q. Then the holding company came along and stepped into the picture?

A. The holding company was already in the picture but the first deal didn't get across.

BY MR. EVANS:

Q. So that the Company following the proceedings which you have just outlined, and just to summarize that, what was the capital structure of this Company, the Clear Springs Water Service Company, before the refinancing as compared with the refinancing?

A. Before the refinancing, the common stockholders had one hundred per cent. Their equity represented 100% on all the money that was in the company.

Q. How much was the par value of that stock?

A. The par value of that stock was \$290,600.

Q. There was no preferred stock and no bonds?

A. The bonds were retired in 1927, and then after the refinancing, what was the situation?

Q. And then after the refinancing, the bonds amounted to \$650,000, which represented 67.85% of the total structure; the preferred stock \$220,000, or 22.96% of the total structure; and the common \$88,000, or 9.19% of the total structure.

Q. And that made the total capital including bonds and stock how much?

A. \$958,000.

Q. As far as this company is concerned, as I understand it, it has accomplished all of the things which the Commission gave as its reasons for refusing the merger with the exception of the blanket mortgage through non-contiguous properties?

A. Yes sir.

Q. Do these facts all appear on the records of the Commission?

A. All but the Federal's investment as shown on that photostat, the cost of acquiring the properties.

Q. You mean the photostat copy, the part of the data furnished by the Securities Bureau?

A. Yes sir.

Q. Can you explain why the Commission should not have taken some action in regard to the refinancing if it was going to disapprove the original mortgage?

A. All the reasons are shown. It is a complete reversal of everything that they already had on record of being against in the original line-up, but everything that was in that original line-up is still in there with the exception of that mortgage.

BY MR. COOKE:

Q. Did they make any reply at all on this excellent application or certificate of notification?

A. According to this certificate of notification, it went through in the regular way of procedure.

BY MR. MEMOLO:

Q. This refinancing was carried out, was it?

A. It apparently was. It is true. The bonds and everything were issued. That was in 1928 and they are still outstanding.

BY MR. EVANS:

Q. Now is there anything more you wish to say about the Clear Springs Water Company?

A. No sir.

Q. What is the next company you want to take up?

A. The Chester Water Service.

Q. This is a company that operates in Chester, Pennsylvania?

A. Yes sir.

Q. Tell us about the Chester Water Company? What territory does it serve outside of Chester?

A. It serves the borough of Upland, the borough of Trainor, the borough of Clarksides, Marcus Hook, the townships of Lower Chester and Lower Ashland, and the township of Nether Providence, and the township of Chester.

Q. Now, have you an exhibit of the journal entries of this company?

A. Yes sir.

MR. EVANS: This is offered in evidence as Exhibit No. 130.

BY MR. EVANS:

Q. Now Mr. Keady, will you briefly explain this exhibit to the Committee?

A. This is practically the same procedure, journal entry No. 1 refers and will show the write-up and the actual amount according to the annual report for 1928 was \$1,514,508.71.

Q. Now, what was the fixed capital exclusive of this write-up?

A. The fixed capital at December 31st, 1928, amounted to \$380,533.76.

BY MR. TURNER:

Q. Are you talking from this exhibit?

A. These journal entries were prepared subsequent to the actual refinancing to support the financial end of it, and as an explanation of what happened, they are filed with the Public Service Commission. The figure I am quoting here is the actual write-up shown by the annual report of this company for 1928, that is \$1,514,508.71.

BY MR. COOKE:

Q. You don't mean the write-up is that much?

A. Yes sir, the write-up is \$1,514,508.71.

BY MR. EVANS:

Q. Wouldn't the fixed capital, exclusive of this write-up, have been sufficient to cover the three-million-dollar issue of bonds that I see listed on the Journal entry?

A. The fixed capital account amounted to \$3,805,333.76. Now, according to these journal entries and the annual report of this company, there was \$3,000,000 in bonds and \$1,200,000 in preferred stock issues. Therefore it was absolutely necessary to have this appraisal in order to get these bonds across.

Q. Now, what does Item 2 on this journal entry indicate?

A. This represents the sale of the bonds to the bankers, and according to this entry the bankers had a margin of \$300,000 profit to work on in the disposal of this issue. The Company has still that \$3,000,000 for which they have to pay out 4% annually, in other words, the bonds that were sold to the banks at 90.

Q. What is item No. 3?

A. That covers the exchange of all the old common for new common and preferred stock. All the preferred stock is 5½% dollars cumulative and here again is \$1,200,000 of indebtedness of which this company has to earn 5½% per annum. This stock was issued on the basis of 98.50. The set value was \$100 per share, so the total discount was \$126,000. In certificate of notification there was an ad in the Public Ledger of Philadelphia of March 16, 1928 that showed this preferred stock was offered to the public at \$98 a share, a great advance. The bankers apparently secured this stock from the company at 89.50, and received \$102,000 less their expenses for disposing of the issue.

Q. You don't know at what price the bonds were issued to the public, do you?

A. No. The records didn't show anything on it.

Q. What does entry 4 indicate?

A. Entry 4 shows that the cash \$2,700,000, being paid in. Item 3 indicates that they received 552,000 shares, and on the same day 540,000 shares were retired, taking this \$2,700,000 which was received when the bonds were disposed of to the bankers.

Q. Now, what was the purpose of this bond issue in the certificate of notification?

A. It is the same as in the preceding company to provide cash for corporate purposes and restricted therein, "See Journal Entry." I think these entries are very clear and point out very clearly that the Public Service Commission in this certificate of notification but I fail to see where anybody benefited but the bankers and the Federal Water Service Corporation.

Q. So after this transaction it would seem that the Federal Water Service Corporation had 100% of the stock consisting of 1,200,000 shares, but how much did it have in the property?

A. Their investment according to the photostat—they owned all the common stock, \$1,804,500; bonds, \$2,727,999.43.

Notes, \$80,000, making a total of \$4,612,499.43.

Q. Now, the total par value of the common stock was—

A. \$1,125,000, and the bonds, \$2,600,000, and the notes \$80,000; a total of \$3,805,000.

Q. I thought the par value of the bonds was \$3,000,000?

A. This is the old bonds that were retired in 1927 in order to clear the deck for the new bond issue.

BY MR. TURNER:

Q. Where did they get the money to retire the old bonds?

A. That was part of their cost. They had to buy the bonds to retire them. The bonds were retired and the notes were retired in order to clear the property of lien, in order to issue the new bonds and preferred stock.

Q. Now, the common stock was—

A. \$1,212,499.43 on a net value of \$1,074,000, the net cash value received by the Federal interests, and in this reorganization, the net cash was \$3,774,000.

Q. Did the common stock have any stated value?

A. The common stock had a stated value of \$100 a share.

Q. And you have not included that in what the Federal received, they left that money in the company, that was Federal investment?

A. The Federal's Investment was \$112,499.43.

Q. And the net cash value received in the reorganization?

A. \$3,774,000.

Q. And the net investment after the reorganization was—

A. \$880,499.43. Now this investment represents what they paid for the common stock, which has a stated value of \$60,000 on the books of the company.

BY MR. COOKE:

Q. Now over what period of time does it take to make this transformation; Is it a matter of days or months?

A. Well, the certificates of notification and these appraisals, of course I don't know how long the company took in making these appraisals. I mean how long out of the money they put into this.

Q. Is it kept in there for weeks?

A. The notes on the photostat they had \$23,000,000 invested there. You will also notice that the bonds of the Pennsylvania Water Service Corporation of \$9,200,000 were sold and that sale took place in September of 1927, and also they sold the preferred to the total par value of \$15,000,000, which they received \$15,369,000 from the sales of these securities and this to the Federal according to that photostat copy. That reduced the investment in the Pennsylvania Service Corporation which was the original set-up and which had been approved by the Commission.

Q. Was that their own investment in that being about \$7,500,000?

A. That is \$9,511,000 and some odd dollars.

Q. Did they actually have that much money?

A. No, indeed not. After this transaction in the original group or what they call non-contiguous property that is exclusive of the Spring Brook Water Supply Company which is also on there for some fifteen million dollars, that left their own investment in these properties \$8,000,000. As a result of all these transactions they cut that down to something over a million dollars that is taking all the company.

Q. Now what dividends were paid on the common stock of the Chester Company during 1928, 1929.

A. In 1928, they got \$180,000 and in 1929, they got \$150,000, or a total of \$335,000.

Q. What was the percentage of return on the stated capital or investment?

A. On the stated valuation in 1928 the return was 300%; on the stated value of \$60,000. And in 1929, the return was 258.33%. Of course this stated value does not represent what is actually invested in the company, because they have an investment by their refinancing of \$888,499.43. Now, the return of this investment for 1928 is 21.43% and for 1929 is 18.48%.

Q. Now in the case of the Chester Water Company what was the capital structure before and after the refinancing, and the reorganization sale of the water company was 100%. All of their money was tied up in it and represented 100% of the capital structure.

Q. What was the net common stock after the retirement of the bonds?

BY MR. TURNER:

Q. What did that total?

A. This is the common stock at par value, it was \$1,725,000. That cost them \$4,612,499.43.

BY MR. EVANS:

Q. That is including the bonds?

A. Yes sir. Now, the bonds after the refinancing was \$3,000,000.00 or 70.42 per cent. of the total structure. The preferred stock was \$1,200,000.00 or 28.17 per cent. and the common stock was \$60,000.00 or 1.41 per cent.

Q. And the holders of the common stock entirely control the company?

A. Yes sir.

Q. And once more, as you expressed it, "the public is holding the bag?" Take up the Pittsburgh Suburban Water Company next. Where does this company operate, Mr. Keady?

A. This company was formerly the Ohio Valley Water Company and operated in Bellevue and Avalon, Benavon, Emsworth, Westfield, McKees Rocks Boroughs, Ross Township, Stowe Township and part of the City of Pittsburgh.

Q. Now, have you prepared a copy of the journal entries of this company?

A. Yes sir.

(Exhibit No. 131 offered, being copy of journal entries in the Pittsburgh Suburban Water Company (formerly the Ohio Valley Water Company).)

BY MR. EVANS:

Q. Will you explain this to the Committee, Mr. Keady?

A. Well, before we take up the journal entries I want to state in connection with these journal entries that number 6 and number 7 are rather separated from the rest and they were put on to cover additional bonds that were issued subsequent to this refinancing. In other words, there are some other

transactions that I think are pertinent and I want to be understood they are not in the certificates of notification following the original refinancing. They were taken from the annual reports of the company.

Q. With that exception, Mr. Keady, as I understand it, these journal entries that have been offered in evidence are taken from the certificates of notification filed with the Commission?

A. These journal entries are submitted with the certificates of notification and are on file with the Public Service Commission.

Q. Will you go ahead with the explanation of these?

A. These entries show that practically the same procedure was followed as with the other companies with the exception that this company had a \$1,000,000.00 bond issue dated January 1st, 1904, and maturing January 1st, 1954, which was not retired.

Q. Where does that appear?

A. That does not appear on these journal entries. You will also note that the Federal Company does not buy the bonds of this company. In other words, the bonds are still outstanding. They were not retired as in the other companies. Now, entries number 2 and number 6 cover new issues totaling \$872,000.00, for which, according to the reports of the company, they received \$839,080.00 in cash.

Q. How much was the write-up in the case of this company?

A. The write-up in the case of the Pittsburgh Suburban Water Service Company was \$400,107.50.

Q. Now according to entry No. 5, the Federal Water Service Corporation received \$630,000 of this cash as shown in No. 4 and No. 7 and \$170,260 was used to reacquire bonds of the 1904 issue?

A. Yes sir, they were the value of \$172,000. Now as a result of these transactions this company's surplus was reduced from \$232,182.59 to \$41,299.47 as of December 31, 1928. The first figure as of January 1, 1928.

Q. What was the Federal investment in the common stock here?

A. The Federal investment amounted to \$482,273.03. That appears on the photostat which is part of the Exhibit No. 127. This stock at par value amounted to \$999,800. Now the surplus of the company as of January 1, 1928, amounted to \$252,182.59. Therefore the common stock had a book value of \$1,231,982.59 and the premium paid thereon amounted to \$250,290. This premium was readily taken care of as the Federal Company received the following: Cash, \$630,000, Preferred stock, \$500,000, less the discount of the preferred stock of \$52,500, or a net for the preferred stock of \$447,500, making a total value secured the reorganization of \$1,077,500.

Q. Mr. Keady, did the Federal Company get this \$630,000 in cash for the proceeds of the bond sale?

A. Yes.

Q. Then what did the Federal Company have up on this?

A. They secured the common stock having a set value of \$525,000 and the taking of the cash value and securing cash received in the reorganization from their original investment this common stock cost them \$404,773 which is all the money they have invested in the company.

Q. What dividends were paid in 1928 and 1929 on this stock?

A. The dividends paid in 1928 and 1929, in 1928 they paid \$46,000, in 1929 they paid \$57,500, making a total of \$103,500. This represents a return of 11.36% on their investment for 1928, and 13.21% of a return on their investment for 1929, or a total of 25.57% for the two years. Of course, the bondholders get the usual 5% on the preferred stockholders.

Q. What was the capital structure of this company?

A. Before refinancing the bondholders had 50.1 of the common structure of the common stockholders, the Federal Company had 49.9. After refinancing the funds were increased to \$1,872,000 or 64.62% of the new structure, and the preferred stockholders were \$500,000 or 17.26% of the new structure and the common stockholders \$525,000 or 18.12% of the new structure.

Q. What, after all, was the investment of the Federal company?

A. The Federal investment originally was \$1,482,273 and it was reduced to \$404,773.03, but they still maintain complete control and the public supplying the difference of \$1,077,500.

Q. Now, in all of these cases, Mr. Keady, the returns to the public investors in these securities are fixed?

A. They are either 5% interest on bonds or 5½ on preferred dividends, and some are 6% preferred.

Q. In any event they are fixed, whereas the returns to the Federal Water Service Corporation, as the holder of the common stock are the high returns you have mentioned in these cases, totaling 25.57% in the years 1928 and 1929?

A. Yes sir.

Q. Now, do these increases in book values represent any additional burden on the consumers?

A. Yes sir, the cost of any bonds and the cost of refinancing is one of the elements considered in appraisals made for rate purposes.

Q. Did the company benefit in any way by the refinancing?

A. It did not benefit the company, but it did benefit the common stock holder, namely the Federal Water Service Corporation, and the bankers involved, but in reality it works a hardship on the company on account of the additional interest paid on the investments now in the hands of the public.

Q. The common stock interest is very much reduced in percentage, is it not?

A. Yes, sir.

Q. Will you take up the Citizens Water Service Company and the Morris Water Service Company cases?

A. Yes, sir.

Q. Have you prepared a statement of the journal entries as shown in the certificate of notification of the Citizens Water Company and the Morris Water Company?

A. Yes, sir.

MR. EVANS: I offer in evidence this statement as Exhibit No. 132.

BY MR. EVANS:

Q. Will you explain this, Mr. Keady, to the Committee?

A. The Citizens Water Service Company and the Morris Company will be discussed together, as the Citizens Water Company own all the stock of the Morris Water Company, and the water sold by the Morris Water Company is purchased from the Citizens Water Service Company. The Morris Water Company serves the following territory: Morrisdale and Hawk Run; and the Citizens Water Service Company serves the town of Philipsburg. Now the Morris Water Company was not refinanced although the fixed capital, not the depreciation, was written up during 1928 \$38,884. The fixed capital assets, exclusive, amounted to only \$22,506.16 on December 31st, 1928. Now, these journal entries covering the refinancing and the reorganization are taken from the certificates of notification to the Public Service Commission. The writeup of the Citizens was \$232,485.11. Now, the bonds covered by Entry No. 2 were not issued according to a letter on file with the certificate of notification, after the issuance of new common and new preferred stock, and also the annual report of 1928, that does not show this issue, therefore, this entry must be eliminated from consideration, but the exchange of the old common for the new common and preferred took place as outlined in the Entry No. 3. Entry No. 4 covering the reduction of 646 shares of new common stock for \$23,479 in cash, therefore, will require further explanation, inasmuch as this cash was to be received from the bond issue shown in journal Entry No. 2, which bonds were not issued. Now the balance sheet of this company at January 1st, 1927, shows an investment of \$20,000 representing the entire outstanding stock of the Morris Water Company. This stock was purchased from the Citizens Water Company for \$20,000 and dividends passed amount to \$6,058.93, and the company also carried reacquired bonds at that date of \$10,000, making a total of \$36,058.93. These assets were not shown at the end of 1927, but in accounts receivable for affiliated companies the amount of \$38,073.03 was shown on December 31, 1927. In other words, the comparison of these two balance sheets indicated that the Federal had these transactions charged on their accounts during 1928 when the reorganization took place and the original intention of issuing bonds was abandoned and bonds in the amount of \$26,300 were acquired and \$23,729 was charged to capital surplus as evidenced by the company's annual report and the credit on the other side of this case evidently was made to the affiliated companies instead of being cash, because the affiliated companies reports shows \$30,000 as of January 1, 1928 and at the end of 1928, the Citizens Company and the affiliated companies showed \$15,489.34 and the entry at the beginning of the year supports this as a very likely explanation of what occurred between

the two utilities. In any event the charge of the redemption of the common stock was not against surplus and not credited back to surplus, and so the Federal got the money or got the credit, which amounts to the same thing. The above explanation also covers entry number 5 which shows a reacquisition of \$25,900 worth of bonds. The amount actually acquired as shown by the actual report amount to \$26,300, as pointed out heretofore. Now, the Federal investment in the common stock which had a par value of \$125,000 was \$137,000, this item was reduced in the reorganization by the repeat of the preferred and \$23,079 cash and credited to the Federal's account as follows: The cash and credit received \$23,579. Preferred stock received \$100,000, taking the discount on the preferred stock of \$11,500 would leave a net amount \$88,500 or the total cash value received on the refinancing of \$112,079. This amount of \$112,079 deducted from the \$137,500, leaves the net cost to the Federal people of \$25,421. This is represented by common stock having stated value of \$33,500.

Q. Now, what was the dividend on this in 1928?

A. In 1928 7.47%.

Q. And what were the dividends in 1929?

A. In 1929, they were 15.73%.

Q. What was the capital stock of this company, before and after the refinancing?

A. They had \$250,000 outstanding or .67% of the total structure of the common stock having a par value of \$125,000, and after refinancing the structure the bonds totaled \$250,000, or 64.68% and the preferred stock was \$100,000 or 25.87% and the common stock was \$36,500 or 9.45%.

Q. So that the result here was about the same sort as in the other cases?

A. Only not such a great change.

Q. And again do you see any benefit to the investors or to the public from this refinancing?

A. No sir.

Q. Will you take up the Jersey Shore Water Company. Have you prepared an exhibit showing the general entries of the Jersey Shore Water Company, as shown on its certificate of notification to the Commission?

A. Yes, sir.

MR. EVANS: I wish to offer this statement as Exhibit No. 133.

BY MR. EVANS:

Q. Will you explain this exhibit briefly to the Committee?

A. These journal entries, covering the refinancing were secured from the certificates of notification.

The first step shows the usual writeup and, according to their annual report, it amounted to \$312,246.40.

The second entry covers the usual bond issue, the company receiving \$405,000 in cash, and Entry No. 3 is the retiring of the old common for the new common. Preferred stock was not issued in this refinancing.

Entry No. 4 shows cash of \$440,960 paid to the Federal, the holder of the new common, a part of which is now being retired.

Federal's investment in Jersey Shore was \$15,541.54, which includes the cost of retiring bonds and common stock.

The cost of retiring the preferred stock, shown on the photostat introduced as an exhibit is in agreement with the amount shown in the annual report. Now, this investment of common stock, \$170,000; preferred stock, \$126,035; bonds, \$206,506.54, or a total of \$502,541.54.

Federal received for retiring of 5,062 shares and 6,062 shares they received in exchange for the old common stock, \$404,960, leaving a net investment in the company of \$97,581.54, for which they held all of the common stock outstanding, having a stated value of \$80,000.

Now, this common stock was sold during 1928 to General Water Works and Electric Corporation. Of course, the subsequent profit or loss could not be determined, as the selling price was not available.

The dividends paid on the common stock during 1928 amounted to \$15,500, representing a return of 15.88 per cent. on the net investment, and 19.38 per cent. on the stated value of the common stock.

Now, the capital structure of the company before refinancing was all in common stock and represented 100 per cent., and after refinancing the bondholders had 84.91 per cent. of the total structure, amounting to \$450,000, and the common stockholder \$80,000 or 15.9 per cent. of the total structure.

#### IN RE PUNXSUTAWNEY WATER COMPANY

Q. The next company is the Punxsutawney Water Company. Will you take that up? You have prepared an exhibit covering the journal entries of this company, as shown on the certificate of notification filed with the Commission?

A. Yes, sir.

MR. EVANS: I offer this in evidence as Exhibit No. 134.

(Paper in question entitled "Pennsylvania Water Service Transactions—Punxsutawney Water Service Co." admitted in evidence and so marked.)

BY MR. EVANS:

Q. Will you explain this to the Committee?

A. This refinancing followed the usual procedure.

The writeup, shown by the annual report, was \$105,948.82.

Now, prior to 1926, there was a writeup of \$75,161.95, so that the total writeup at that point is \$181,110.77.

The bonds were issued, and cash of \$450,000 was received.

The old common stock was exchanged for the new common stock.

There was no preferred stock issued.

Journal entry No. 4 shows the retirement of 4506 shares issued in exchange for the old common stock, and this stock was retired for \$450,000 cash, which was the amount received from the sale of the bonds; Federal, being the holder of the common, received this money.

Federal's investment totalled \$826,535.97.

Q. How was that made up?

A. That was made up of the cost of the stocks and bonds, which are not separated on the photostat there, \$729,763.89; cost of the notes, \$36,772.08, making a total of \$826,535.97.

Now, in the reorganization they received \$450,000 in cash, leaving a net investment of \$376,535.97.

The bonds and notes were retired and donated to the company in 1927, so that the new bond issue could be floated.

Federal's investment was \$376,535.75, they receiving all of the common stock of this company, having a stated value of \$150,000. The return on this investment, by way of dividends, for 1928 was \$30,000 or 3.97 per cent.; for 1929, \$21,000 or 5.58 per cent., or a total amount of \$51,000 or 13.54 per cent. for the two-year period, or an average return of 6.77 per cent.

Q. So, this return was considerably lower than those received from the other companies?

A. Yes, sir. The capital structure of this company, before refinancing, consisted of common stock and represented 100 per cent., and after refinancing the bondholders had 76.92 per cent., of \$500,000 of the structure, and the common stock \$150,000 or 23.8 per cent. of the total.

Q. And the total capital had been increased from \$150,000 to \$600,000?

A. Yes, sir.

Q. What did the fixed capital assets of the company on December 31, 1928, amount to?

A. Including the writeups and net of depreciation, it amounted to \$817,210.79; and exclusive of writeups, \$636,100.02.

Of course, it can be readily seen that these assets can not stand any further bonds or preferred stock, and it is hard to understand how the amount floated was accomplished in this particular instance. This also explains why the Federal could not get any more money out of this company at this time and why the return on the investment, which was a fair return, is so much lower than the return received from the other companies previously discussed.

#### IN RE CLYMER WATER COMPANY

Q. Turning to the Clymer Water Service Company, have you prepared a similar exhibit giving the journal entries as shown on the certificate of notification filed with the Commission?

A. Yes; I have.

MR. EVANS: I offer this in evidence as Exhibit No. 135.

(Paper in question, entitled "Pennsylvania Water Service Transactions—Clymer Water Company of Indiana," admitted in evidence and so marked.)

BY MR. EVANS:

Q. Will you explain this briefly to the Committee?

A. This company is located in Indiana County, Pennsylvania.

There are the usual journal entries, and the procedure is the same as the preceding companies.

The writeup was \$239,830.17, and the bonds were sold for cash. In the amount of \$315,000, which was received for the issue of \$350,000, and the old common stock was exchanged for the new common and preferred stock.

Journal entry No. 4 covers the retirement of 10,677 shares of common stock, which had been received for Federal in exchange for the old common stock, for \$314,971.50, which took practically all of the \$315,000 in cash received in journal entry No. 2.

Federal's investment, represented by the cost of the old common stock, was \$360,000, and the cost of notes retired was \$50,000, making a total of \$410,000.

Now, according to the journal entries, Federal took out of this company: Cash, \$314,971.50; preferred stock, \$150,000, and the discount on preferred stock amounted to \$14,250, or a net of \$135,750; the total amount of cash received from the reorganization, \$450,751.50.

Now, the original investment was \$410,000, and deducted from the cash value or the cash securities received in the reorganization of \$450,751.50, exclusive of the common stock, which was not retired, resulted in Federal receiving \$40,751.50 more than their original investment, and control is still retained by Federal.

The entire outstanding common stock after reorganization, having a stated value of \$44,250, is owned by Federal and represents 1500 shares, or the difference between the 12,177 shares received, less the 10,677 shares retired in Journal Entry No. 4.

The original Federal investment was \$410,000 was not only shifted or unloaded on the public, but the public paid \$40,751.50 more than the Federal's investment, yet Federal's control is 100 per cent., the same as it was before the refinancing took place.

Q. That was a particularly juicy melon, was it not?

A. Yes. The common stock having a stated value of \$44,250 which was received in addition to the cash of \$40,721.50 over and above their original investment, paid the following dividends:

In 1928, \$18,000 or 40.7 per cent. of the stated value;

1929 \$20,000 or 45.2 per cent. of the stated value.

The total was \$38,000 or 85.9 per cent. of the stated value.

The above common stock did not cost Federal anything, yet they received in dividends 41.7 per cent. in 1928 and 45.2 per cent. in 1929, whereas the bondholders got 5 per cent. on the par value of their bonds, and the preferred stock holders six per cent. on the stated value of their bonds, and their money is running the company.

Q. What was the capital structure of this company before and after the refinancing?

A. With the exception of advances from affiliated companies of \$11,177.32, the balance sheet represented in common stock \$180,000 or 94.15 per cent. of the total.

The advances represented 5.85 per cent. of the total, and after the refinancing this was shifted over to bonds \$350,000 or 64.34 per cent.; preferred stock \$150,000 or 27.56 per cent.; and common \$44,250 or 8.13 per cent.

Before refinancing the total amount was \$191,174.32, and this was increased to \$544,250 after refinancing.

Q. What did the certificate of notification for the issue of these bonds show, as the purpose of the issue,

A. "To provide cash for corporate purposes (see journal entries attached)"

Q. Are these journal entries, that you have been referring to, self-explanatory?

A. Yes; they are very plain. They show what was to take place.

Q. And yet, so far as the records show, the Commission raised no objection to this method of financing?

A. No, sir; and yet they contain all the reasons given by the Public Service Commission itself in their original decision where these same companies are concerned.

Q. Are there any portions of the decision of the Commission in the Pennsylvania Water Service case, that you have already referred to, that you wish to call to the attention of the Committee?

A. Yes; there is a transcript of a paragraph here that I would like to read in connection with this:

"Furthermore, if the Commission should approve the acquisition of the properties involved by a Pennsylvania corpora-

tion, certain results would follow in reference to the issuance of securities (Act of April 13, 1927) which must be taken into consideration. Of course the Commission does not attempt to assume in any manner the duties and prerogatives under the law of other departments of the State government, but nevertheless it must give due weight to matters that may involve the protection of the public in connection with the issue of public utilities securities." Then some other paragraphs here that are also pointed out:

"The Commission can not, without reserve, accept estimates of value as a basis upon which to issue securities. The law contemplated that the books and accounts of a utility shall accurately represent the several elements of cost in the development of its property, and where for any reason such actual information is not revealed in the books, the practice of the Commission provides means for establishing estimates or original or historical cost.

"Engineering estimates are too variable and some of them are based upon too many theories of valuation (Particularly in reference to 'intangible elements') that are not recognized as proper or reasonable under the Public Service Commission Law, to be accepted without check, confirmation, or revision by the Commission. Furthermore, it must be obvious that high estimates of value made in periods of inflation or of abnormal or peak prices afford very unstable bases for security issues. Such securities would be subject to violent fluctuation and depression; not only would the investing public but also the utilities themselves and their ratepayers inevitably suffer from such instability."

The public utility or, rather, the holding company in this case has seen to it that they are not affected by fluctuations and depressions by getting theirs and still holding control. It is the investing public and the ratepayers who are footing the bills.

Q. As I understand it, this completes the Pennsylvania Water Service and Federal Water Service companies, with the exception of the Scranton-Spring Brook Company?

A. Yes, sir.

THE CHAIRMAN: This meeting will stand adjourned until next Wednesday at 2.00 p. m.

Adjourned until Wednesday, April 15, 1931, at 2.00 o'clock p. m.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION No. 10

Pursuant to adjournment, the Committee reconvened in the House Caucus Room, on Wednesday, April 15, 1931, at 2.00 o'clock p. m.

There were present:

Messrs. D. Glenn Moore, Chairman

Bart Richards,

Louis J. Hagmaier,

Martin Memolo,

Chester H. Rhodes,

Ellwood J. Turner,

Frank L. Bowers,

Rev. James R. Cox,

Morris L. Cooke,

Harry J. Crawford,

John M. Walker, Esq.

. HERBERT SNOW (Recalled)

BY MR. WALKER:

Q. Dr. Snow, you have already been sworn in this hearing, have you not?

A. Yes, I have.

Q. I believe that you have some data that was requested by Mr. Evans at a former hearing?

A. Yes; I have. That letter of transmittal goes with the chart and the report.

(Paper marked exhibit No. 136)

BY MR. WALKER:

Q. I show you exhibit number 136 and ask you if that is the data you are submitting?

A. Yes sir. May I make a brief explanatory statement?

Q. Certainly.

A. Gentlemen, the letter of transmittal explains somewhat the chart and the report. The report of the number of staff necessary in my bureau to handle the flow or work into it, as it has flowed in the past, in all its fullness and in contemplation of any people's counsel, making more demand on the bureau, is the best that I can do, not knowing just what the volume of work will be.

I have called attention in the letter of transmittal to the fact that the titles in my bureau do not mean anything, such as in some other bureaus of the State government. We may have an engineer under a certain title, and we may take him from his particular activities at the time and put him into some other activity.

If in this lay out, which I submit for your consideration, I have no valuation section, except a nucleus of three people to devote all their time to it, just as we have had to do in the last ten years, in drawing from any titled man of the staff to do that work, and not knowing how much valuation work if you please, might be put upon the bureau or how fast the work might flow in, I have provided a fund of \$100,000, an emergency fund, to take care of the uncertainties of the work.

Q. But, as I understand it, this exhibit 136 represents your idea of the proposed staff organization of your department?

A. To handle all work promptly and completely, in all its fullness, that may come into the bureau, as now constituted.

Q. And this represents your recommendations on the subject?

A. On that basis.

Q. On that basis?

A. Yes sir. I would like to add that this has not been submitted to the Commission, and it is the same lay out that I submitted to the Senate Committee.

#### IN RE HANOVER-McSHERRYSTOWN WATER COMPANY

EDWARD A. KRUGH (Recalled)

(Paper marked exhibit number 137).

BY MR. WALKER:

Q. Mr. Krugh, I understand that you have some data to submit, that was requested at a former hearing?

A. Yes sir.

Q. I show you here a bundle of papers, marked exhibit 137, and ask you if that is the data referred to?

A. Yes, sir.

Q. Do you have any comment you want to make on the exhibit?

A. Any comments?

Q. Yes; any comments that you care to make on that exhibit?

A. Well, I am not familiar with the analysis of the water.

Q. I understand you stated that at the previous hearing?

A. Yes; Mr. M. B. Litch is our chemist. He is here, and will be glad to explain everything.

MR. TURNER: Mr. Walker, we are not going back over this ground again, are we? We have given two solid days in going over this situation down there, and one man that knows nothing and the next man knows nothing, and what is the use of cross examining people that don't know anything? The net result is always the same; nothing.

MR. WALKER: I agree with you, Mr. Turner.

MR. TURNER: I am not going to sit here and waste my time on that kind of testimony.

MR. WALKER: The only question I asked of this witness was whether he had any comments he had to make on this exhibit.

MR. TURNER: We know that the witness has no comment to make from past experience.

#### PUBLIC SERVICE LAWS IN GENERAL

JOHN BAUER sworn.

BY MR. WALKER:

Q. Where do you live, Dr. Bauer?

A. Montclair, New Jersey. My office is in New York City, 280 Broadway.

Q. What is your business?

A. I am a public utility consultant, engaged by municipalities, and public groups and others in rate cases, especially surveys and studies relating to rates, and markets, and so forth—public utilities.

Q. Will you briefly outline some of the experience you have had in this work?

A. I am a graduate of Yale University with the degree of Doctor of Philosophy in Economics and Finances. I have lectured—I received this degree in 1908, and then I was instructor and assistant professor at Cornell University in Economics and Finance for six years. During that time I lectured on Corporation, Finance and Accounting and Public Utility Regulation and Finance.

In the spring of 1914, I went to the Public Service Commission of New York, the first district of New York City as statistician. During that time I was engaged in rate analysis, valuations, investigations of a financial character that were before this Commission; that is, the city of New York Commission.

In 1916, I went to Princeton as professor of Economics, and lectured there on Corporation Finance and Accounting, and gave special graduate courses in public utility regulation, rate making and finance.

After the United States entered the War, I took leave of absence from Princeton University and returned to the Public Service Commission in New York City as Chief of the Accounting Division, and had charge of the various financial matters, conducting investigations in the adjustment of war time rates.

After the War in 1919, I resigned from the Commission and also from Princeton University and have since been devoting my self to advisory and consulting work in the field of utility rates, and services, I have been engaged mostly in connection with municipalities. During the greater part of the time I have been engaged by the city of New York in its transit litigation, gas rates, telephone rates, and other matters; lectured at Columbia University during semester in the graduate school, giving lectures on public utility regulations and finances. Those lectures have since been worked up into a book entitled "The Effective Regulation of Public Utilities."

Two years ago I was engaged by the New York Revision Commission as an economic valuation rate expert, to make a report to help bring out the facts in regard to the effectiveness of regulation in the state of New York. I helped to draft bills, that were adopted by the minority, and have been supported by the Governor of the state of New York.

During the last year I was engaged by the St. Lawrence Power Development Commission to make a study and report on the marketing problems, especially in connection with distribution, if and when the St. Lawrence project is completed. That was a state commission, and its recommendations have since been embodied in legislation, which will result in a special body being organized for the purpose of taking up the St. Lawrence Hydro-Electric Development.

My interest has been in utilities—

MR. TURNER: I do not think we will go farther into that question. You are qualifying the witness, I presume, and as far as I am concerned, I am satisfied.

MR. WALKER: And I am satisfied.

BY MR. WALKER:

Q. Do you have any comments that you care to make on the set up of the present Pennsylvania Public Service Commission?

A. You mean—

MR. TURNER: What do you mean by that?

MR. WALKER: If he has any comments to make on the Commission as it is constituted.

MR. TURNER: Do you mean the law or the personnel of the Commission?

MR. WALKER: We are not dealing with the personnel, Mr. Turner.

THE WITNESS: I think the Pennsylvania system, as it has been developed under the law, is similar to New York state and to the systems that prevail generally throughout the different states.

BY MR. TURNER:

Q. Have you had any experience with the Pennsylvania Law in this work you have done?

A. I have had a limited experience, Mr. Turner, with the Pennsylvania law. Specifically I have appeared before the Public Service Commission. I have followed, generally the work of the Commission, but I have never given this Commission the special intensive study that I have given to the New York Commission.

Q. You have read the act?

A. I have read the act, and I have been acquainted with the work of the Commission, but as I say, as in a general way, I have never gone into the record of this Commission for the purpose of criticizing; I mean from a public standpoint, or to criticize or analyze the system.

Now, from that general approach, I think your Pennsylvania system is extremely faulty, just as is the New York system or the New Jersey system, and as systems generally are; with respect to the basis—the fundamental basis of rate making: (All A) With respect to the provision for personnel. That is as a sweeping, general indictment I think the commissions over the country are largely ineffectual in their work, because of the inadequate basis of doing their work, so far as the system is concerned; and, secondly—

Q. You mean by that an inadequate personnel?

A. Well—you mean as to a system?

Q. Yes.

A. No; I mean personnel distinct from the basis. I think the personnel—of course, it is connected with it, but I am looking at it from the standpoint of where I mean to say the system, I mean particularly with regard to rate making. And now, I don't want—unless you want me to—I will go wherever you want me to go.

Q. No; we have been through two days of this.

A. All right. In rate matters the Commission in this State and all other states, the Commission had not a factual basis on which to base its rates. If they attempt an adjustment in rates, it starts in motion a long dispute, a conflict of interests and there is no yard stick, and until there is a yard stick of rates, so that the rates to which a company is entitled can be definitely determined, on an exact basis, rate making is largely inadequate whatever the personnel or character of your Commission or staff may be.

Q. What is the actual basis?

A. The actual basis should be that the rate basis or the valuation in every instance is a definite figure that can be taken from the books and that can be administered systematically as the Commission goes along. As long as regulation is based on that vague thing, fair value, it is not clearly defined, and it can be established through only a reappraisal of any company's property, and whatever elements are to be considered; you have debate and guess work and a Commission—I presume that this Commission has a thousand companies to supervise—a Commission can't do that work.

Q. Thirty-five hundred?

A. How many?

Q. Thirty-five hundred.

A. Good night.

That is worse than I thought it was. They can't do it, but if the Commission has every company on a rate basis, that is shown as a definite fact—

Q. Don't they try to get a rate basis as a definite fact? What you mean, don't you, you feel that from the books—

A. From the books.

Q. The costs?

A. Exactly.

Q. Now, you are getting back to the theory of prudent investment, are you not?

A. Yes sir. I think that prudent investment, that is, the investment, assuming it to be prudent, is the only basis that can be administered, that can be made to work, and the only basis that, as a long run proposition is financially sound. It is the only basis on which a regulatory job can be carried out, and it is the only basis on which the investors, as a long run proposition, can be safeguarded and secured in their investments.

BY MR. COOKE:

Q. Sound from whose standpoint?

A. Sound from the standpoint of the ordinary investor, who actually put his money into the business, and it is the only basis under which as a long run proposition, such investor, the ordinary person could be secured in his investment, and, of

course, it is the only basis on which the rate payer, the consumer, can get job of rate regulation carried out.

Now, of course, the establishment of prudent investment, Mr. Turner, is a difficult—

BY MR. TURNER:

Q. Doesn't this result: if you take the theory of prudent investment and take the figures on the books under all circumstances, representing prudent investment, then, a lot of times, if the facts are true, as it is assumed that they are, and the claims are true, when you go into these companies, you find that it is not really the true investment, and then you get back to the controversial question, don't you, as to whether these figures represent actual investment, and then, after that, don't you get back to the question as to what is the amount of the rate base?

A. Not to be facetious at all, I will say yes and no. I don't believe, Mr. Turner, that it isn't possible, and I don't advocate, I don't think it would be both unfair and unworkable; I don't think it would stand a constitutional test to go now to the books of the companies and take their book accounts out of properties as they stand at the present time. That is my view, as I have worked it out, and all I can tell you is how I feel about it and why.

According to my view the way to get prudent investment is to distinguish definitely between the properties as they now exist and future extensions and improvements.

With respect to the properties that now exist, I think the only practical way under the circumstances, is to make present appraisal, and in that appraisal give an account of the reproduction cost to the extent that it is reasonable actual cost under present conditions of the properties. What should be done is an appraisal should be made under due legal provisions; the statute definitely providing that it will fix in each case a value that is going to stay fixed. Then, my idea is that every property could be taken on the books and maintained and not changed subsequently, whatever the change in price levels may be, upward or downward; and to that amount should be added thereafter the actual investment in extensions, improvements, and so forth.

MR. TURNER: Then, as I understand, Mr. Cooke's theory of putting in a plug, and going on from that place.

MR. TURNER: All right. I haven't your theory.

THE WITNESS: The adequacy and reasonableness and fairness by proposal would come into the initial valuation. Of course, that initial valuation would involve a certain amount of give and take. You could not follow absolutely any particular principle. You would have to make a compromise, but you would have to make a compromise only once. You can get a figure in each instance that is fair both to the consumers and the investors, and then nail that figure down, and then on for all future additions, as I said before, take the actual investment. Of course, the Commission ought to be in contact when future additions are made. It ought not to permit any costs or any charges to be included in the property account that should not be included. Then there ought to be a continuous contact between the Commission and the companies. That would be a regular administrative proposition. Now, that way I think that you can have a rate base that is shown by the books constantly, put through the accounts, and the rate base would be the costs as shown in the account less depreciation and operating reserve. Then, you could do that for any property in 15 minutes time, and the debate and the cross purposes would be eliminated.

BY MR. COOKE:

Q. Over what period of years would you expect to make these appraisals?

A. If such a system, Mr. Cooke, were adopted, and were under a comprehensive statute of the State, and if there were methods—practical methods used, as could be used, I think a period of three years would be sufficient to make the appraisals.

Q. That is taking in street railways and gas and water?

A. Now, as I look at it, I wouldn't take in street railways.

Q. Why not?

A. Because I believe street railways mostly are not worth valuing.

Q. You are not going to pick the most profitable?

A. No. I would, however, intend it to be reasonably successful. The problem of regulation lies primarily in the field of

electricity and in the field of gas; that is, so far as ordinary utilities are concerned; and in telephones. It doesn't run in street railways.

BY MR. TURNER:

Q. What about water?

A. Water? I am thinking of water as mostly municipally owned. When they are privately owned, then, of course, put in water, to be sure.

BY MR. COOKE:

Q. There are a few privately owned water companies?

A. Yes; I would include water companies.

Q. You say three years. That seems to me a very quick job. How many millions of dollars would it take, do you think?

A. I made an estimate for New York, I made an estimate for the state part of it, the Public Service Commission part of it, that the cost should be \$5,000,000 or \$7,500,000 for the job.

Q. In one rate case that I know intimately we spent \$400,000 for one company's.

A. Yes; I know that. I said, practical methods and with the intention of getting the job done. I know that is bound to happen. I know that the New York Edison company spent over \$5,000,000.

Q. You and I, of course, if we had to do it, as engineers, we would use practical methods, but you recognize that those might be contested in court and you would lose it?

A. No; I don't think we would lose it. I think if the object is to be sensible and to get results that would be sensible, you would not lose it. I don't think it is necessary to itemize and appraise every bolt and every nut and every little part. You can take a power house and value it, and you can take a transmission system in the same way. So, if you are going to spread out every spike and every bolt and so forth, you defeat the whole job.

Q. That would be the normal procedure under the so called "law of the land." If the company—

A. If the company wanted to play horse with it, I think it could play horse.

MR. COOKE: Mr. Chairman, I think we are right at the heart of the problem, and I would like to ask your indulgence to read here a short statement of what I believe to be the only way out for us, and I would like to read it now, and get criticism on it. Is that agreeable?

THE CHAIRMAN: Yes.

MR. COOKE: I will read this paper, it is very short:

# 1. PRUDENT OR NET INVESTMENT SHOULD BE FORMALLY ANNOUNCED AS THE PENNSYLVANIA STANDARD FOR RATE BASE DETERMINATIONS.

Fundamental to the re-establishment of public confidence in regulation are measures through which prudent or net investment depreciated can ultimately be enforced as the Pennsylvania standard in determining the base upon which return is to be computed in valuation cases. Valuations arrived at through the reproduction-cost-new method are so indefinite as to render regulation futile.

The question of doing justice as between the utility companies and the community is not involved. Because under either of the two methods of determining value for rate making purposes any proper return can be allowed. Prudent investment is an amount exact within reasonably narrow limits, stable and one which can very largely be obtained "from the books." Reproduction-cost-new valuation depends upon the use of intangibles, is largely imaginative in its conception and constantly fluctuates with the price level.

The rising price level following the War led our higher courts to give increasing weight to the reproduction-cost-new method but the lowering price level of recent months has somewhat modified the enthusiasm of its advocates. The moment therefore seems ripe for the adoption by the Commonwealth of valuation techniques without which regulation as a means of controlling monopoly prices seems doomed to failure. The breakdown of regulation would mean only one thing, i. e. widespread public ownership. These are the only thinkable options.

In shifting from the reproduction-cost-new to the net cost or net investment basis the one most effective step that can

be taken is to provide that the new base shall control operations after a certain date allowing the adjudication of the rate base for property acquired before that time to be settled as occasion offers according to "the law of the land." Because of court rulings it will be necessary to effect this modest start toward the complete adoption of the new policy through contracts with the individual utility companies.

Because there is no existing property interest involved, a charter for a new company can provide, as one of the considerations for the grant, that fair return be computed upon the basis of its actual legitimate capital prudently invested. Mergers can be refused to those who will not accept the new basis on all future operations. It is believed that many of the companies already in existence will voluntarily accept the proposal. To those who do not there must be refused material increases in their charter rights unless and until they contract with the Commonwealth to effect this reform.

There remains the problem of bringing to the prudent investment standard those book values and rate basis representing property which was acquired previous to the adoption of the new rule. If original cost is definitely established for all new operations some time—say a decade—may well be allowed for the completion of the task of adjusting all rate basis to the single standard.

The current downward drift in the price level, obsolescence, the rapidly increasing volume of new construction which is inherent in expanding industries and a saner interpretation of the reproduction-cost-new method that has been practiced in Pennsylvania in recent years are all causes which may be depended upon to minimize the differences between current depreciated reproduction-cost-new valuations and those which will result from net investment as defined in the federal water power act of January 10, 1920. Under the procedures to be provided for validating security issues it should be stipulated that statements be given the public showing the relation between outstanding securities and the net investment.

These procedures for putting valuations in Pennsylvania on a factual basis are admitted to be far from drastic. But under the plan there will be avoided endless litigation as well as the necessity for immediate, extensive and costly valuations made under "the law of the land" with all the possibility of "freezing" rate bases at high and indefinite levels. To pass too rapidly from the present basis to the new even if there were no legal hurdles has serious operating difficulties. The new system will require novel and adequate accounting and management mechanisms, the orderly development of which will be facilitated by the somewhat gradual transition to the prudent investment basis. Further, if the change is made too rapidly one utility industry, or one company, may be affected quite differently from another depending on the prices obtaining during the period of most active construction.

This is obviously a situation where to take only a first step, and one to which no interest can reasonably object, will give the most satisfactory long run results.

THE WITNESS: You want to make comments on it?

MR. COOKE: Cut it to pieces. What is the difference in your opinion—what are the relative advantages and disadvantages of the procedure you have just outlined and this?

THE WITNESS: To do that, there ought to be more strength in me. Of course, Mr. Cooke, so far as the objective is concerned, I think you and I have the same purpose in mind. I think we are absolutely agreed on everything you say, as to the basis and reproduction cost and the present fair value standard that is referred to, under the law of the land. We all agree on that. There is no doubt about that. The only question is how to get there. We all agree that what we need is a fixed rate basis—the whole question is how to get to that destination.

There are two ways; yours is the more gradual. It takes a much longer time.

BY MR. COOKE:

Q. What makes you say that it takes a much longer time?

A. In this whole discussion, naturally there has to be a great deal of guessing, for instance, as to what Courts will do and what they don't do, and a number of other things.

Q. On the other side, there is the opening for indefinite litigation with thousands of companies?

MR. TURNER: Where are you going to get enough Courts to try these cases?

THE WITNESS: I don't think you would have this trouble. I don't agree on that—

MR. COOKE: Have you ever tried a rate case in your life when the company behaved in what you considered a reasonable manner—one case where you were received in that fashion—have you been familiar with a single case?

THE WITNESS: I think in every case that I have been connected with, the company has attempted to get all that it could, just exactly as the opponents have tried to get all they could. The one side wanted a high valuation and as a high a rate of return as possible; the other side wanted as low a valuation and as low a rate of return as they could get established. I have never blamed the companies for that position. That is the inherent difficulty with the system of regulation. That is why we want a fixed rate basis. The question is, how are we going to get that?

MR. COOKE: Then, in your judgment, will we get the ten years prudent investment standard in a more orderly fashion and more rapidly by the method that you have outlined?

THE WITNESS: I frankly believe so, in my judgment, as I look at it. That is the most expeditious and most practicable way. On the other hand, there are a lot of people, high-minded, intelligent and fair people, who do not agree with me.

MR. COOKE: No criticism of your suggestion—you have had a large majority of people on the New York Investigating Committee that did not consider that a workable plan?

THE WITNESS: That is true, but most of the people who criticized that course were people who were interested in not having that course pursued. For the other thing, even among those who were not interested to have an effective system introduced, and among those who were intelligent and fair spirited, there were comparatively few who have gone through the processes of what is involved, and think it through. Of course, you have had at least as great experience in those matters as I have, and I am shaken somewhat in my confidence by the fact that you think that the method could not be worked out, but mostly I have not been terribly bothered, so far as the essential soundness and workability is concerned by those who have opposed it. Of course, if the full legal basis would fall down—if those people should say that constitutionally you cannot fix or establish a fixed rate basis through legislative policy, if that should be right, of course, what I am suggesting is not any good. But, I do not agree with that. I think a fixed rate basis introduced with the desire really to be fair to the investors and to get somewhere, to get this whole big question out of politics and field of contention; to get a regulation to protect the consumers and investors—I think it would get the approval of the Supreme Court of the United States.

Conversely I do not think your contract system—I mean the contract proposal, if it is opposed by powerful utility interests, will be able to just march along without legal attack. As I read over your bill—

MR. COOKE: The bill, No. 1275, which we have had in front of us, is more drastic than this. It says prudent investment practically immediately for all properties.

MR. TURNER: The one thought I cannot get over in the prudent investment theory, is that you do not give the man, or the company, or the stockholders any benefit of any future increase in values or valuations which they acquire. Every individual, every corporation, every business, has the right to buy today at a cheap price, if they can, and tomorrow receive a larger return because of the increase in the value, take advantage of the changing value of the day.

BY MR. RHODES:

Q. Why should they have that? They are protected in their 7% return.

MR. TURNER: That is one of the things that has bothered me. Whether it is just exactly fair—suppose thirty years ago you built a water company in some community. Just because thirty years ago you were fortunate enough to build at that time when prices were low and you have grown up with the community and the business has been wisely and competently managed, you are to say to them that you cannot have any more than the money you originally put into it.

MR. COOKE: You don't state that correctly.

MR. TURNER: I mean under the theory you are putting forward now.

MR. COOKE: If they put their money into a water company thirty or forty years ago and the company has slept on its rights in the meantime, the values of that property will be adjusted according to the law of the land.

DR. BAUER: Assuming that we had known what the fixed rate base would be; however, it might be adjusted for the past profits that would have been produced there on that fixed rate basis adding any additional investment.

BY MR. TURNER:

I am speaking of prudent investment. For instance, a man in my home town some years ago bought four properties for \$60,000 and later on sold each one of these properties at an individual price of \$60,000. A change in conditions that came about enabled him to do that.

DR. BAUER: There are several other distinct points that I want to call attention to, and the one I want to make is that we all recognize there is a distinct question of reasonableness and fairness. You might take a water company that was built away before the war and take now the actual investment, then as Mr. Cooke suggests, that community has slept on its rights in the meanwhile, to take now the actual investment it does not raise the question whether we are fair with them, but if the policy has once been clearly and definitely announced so that the investors will know what their rights are and they are protected in their rights, I don't think there is much question arises. Assuming that the policy is announced, and investors know, you have the first point, that the investors have due notice that when they put money in a public utility they are differentiated by the law from the ordinary investor, and they know where they stand and that they will be limited, but on the other hand that they are protected, so I come to point two.

With the elimination there goes protection. On the other hand your money may be doubled or you may lose half of it or you may lose all of it, but if a public utility decides to purchase \$100,000 worth of real estate, and no matter what happens afterwards, that would evermore be the value of the real estate, the \$100,000 is protected; there is that protection that goes with the limitation.

Third, a long time ago it became recognized that utilities are in a different position from ordinary business, they are vested with public interest.

MR. TURNER: Let us block that out right here. If that is true, take those who invested in traction companies. They had a monopoly; they invested their money in something that was protected, but it was not protected when the automobile came along, and they went busted, and in the same way some of the present utilities may go busted with the use of the air.

DR. BAUER: That is one of the indictments against our system that the investors in street railways securities lost so much money. The street railway system should have been so regulated as a public utility that investors would not have lost their money. If back in 1890 we had had a prudent investment theory on our books and regulated it in a sane, sensible, efficient way, there would not have been (a) the very obvious and conscienceless disregard of public rights over the two decades that followed.

Second, all the retirements and obsolescence and supersessions would not have been thrown into securities outstanding. There would have been proper, systematic depreciation of the property as they took place, and second, there would have been proper amortization of the investment as time goes on, and it appears that another agency is going to crowd in. The automobile and the bus didn't come over right. There was ample time for depreciation and amortization. The greatest indictment I think against our present system of non-regulation is that investors can and will lose their money, millions and billions of it have been lost by investors because of the idiotic way we have of dealing with an industry which is a utility upon which the public interest, both as investors and as consumers, depend. We think that is the answer. We have got here an industry that is a utility. It is an industry that is fundamental in our social and industrial life, and it is a monopoly. Dealing with that kind of a public proposition, I don't believe really that your standards of normal competitive business apply. You have different forms that you have to apply and then there comes the question (a) what are we going to do about it, and (b) how can we get this accomplished? It is a fact that if you safeguard the investment and the return on the investment, you can get as much capital as

you want to safeguard that investment, so as I said earlier, when we started this—whatever it is—I think that the prudent investment basis is essential as a matter of sound public policy whether you look at the matter from the standpoint of the consumer or of the investor, the fellow who puts his money into it and not the fellow who is promoting something, but the real bona fide investor.

BY MR. WALKER:

Q. Do you have any further comment, Dr. Bauer, that you want to make on Mr. Cooke's statement?

A. I imagine Mr. Cooke and I would probably take several hours of give and take on that. I think our differences in point of view are perfectly clear. I think my proposal is more expeditious and more prompt. Mr. Cooke doubts it. Perhaps he is right, I don't know. We may both be wrong as far as that is concerned.

MR. COOKE: I think it would take ten years under either system. There will be less progress made under mine in the first few years and more in the last few years, while I think there will be more progress made under Dr. Bauer's plan in the first few years, but I am not certain but that it will be more chaotic in the last few years.

DR. BAUER: I agree in the first five years, but I disagree in the second five.

MR. TURNER: Let us count it a tie and get on.

BY MR. WALKER:

Q. Dr. Bauer, do you have any comment to make on the depreciation theory?

A. Of course this depreciation is involved in this rate basis question. I think as a systematic fact, a systematic basis of regulation rate making, I think depreciation ought to be included systematically in the operating expenses. I think the Commission should not only have the right, it should have the duty to see that proper depreciation is charged to the expenses. On the other hand, I think there should be depreciation reserves created so that provisions in operating expenses for depreciation are safeguarded, if they need the depreciation reserve, so that will serve as a deduction from gross costs of operation, but cannot be diverted to other purposes of the corporation. I think there should be included obsolescence, and that it should be liberally included.

BY MR. WALKER:

Q. Dr. Bauer, do you have any comments to make on the recapture theory, as contained in these bills?

A. As I went over the bill with regard to the recapture, three points occurred to me. The first point is just with regard to the mechanics as the bill is set up now. I think I can handle it from memory without taking the time to refer back to the bill. As I recall it, the net earnings will be recaptured after 7% has been realized on the capital value of the company but in computing the return there is included not only the operating expense and taxes and depreciation but also interest on the indebtedness. Now this is a technical point that probably someone overlooked or probably a little point that mechanics should clear up. If you are going to allow 7% on the capital value before you recapture any earnings, you surely ought not to include interest on the indebtedness in the operating expenses so-called, or if you do you should deduct from the total of the value of the property the amount of the bonds outstanding.

BY MR. TURNER:

Q. Why?

A. Because if you don't deduct the amount of the bonds outstanding, you are making a double allowance.

BY MR. RHODES:

Q. You are paying 4½% for your money and you are making 7%?

A. Exactly. Another point; if you decide to include interest on the operating expenses why not on preferred dividends also, and then compute your recapture on the fair value, the net return value, less the bonded indebtedness and preferred stock outstanding, and then you would predicate outright your recapture provisions on the net value applicable to the common stock, that is the common stock capital available. It seems to me you would want to indicate that capital value is not capital value applicable only to common stock in the company.

The second point that occurred to me is that under the present conditions and you have got a prudent investment basis or a fixed rate basis established, you will have a lot of trouble administering the regulatory or the recapture provision. The Interstate Commerce Commission under the transportation act of 1921, has had a recapture provision. It actually yet I think has not recaptured anything in a single instance. The job is an unmanageable job unless you have a fixed rate base to work with; then it would be easy. Without it, it is extremely difficult.

Third, I have and have had some doubt as to the desirability of the recapture policy as a whole in so far as such ordinary utilities are concerned as electricity, gas, water and light. I thought it was a sound policy and I have been awful sorry that the policy has been defeated so far as the railroads are concerned. For railroads it is plain that you have to have a continuous network of rates spread out over wide territories, hence, if you fix your rates in general on a level that will give to the poorer carriers a chance to live, you will by the same rate give to the other carriers in dense territory extensive returns, hence the provisions in the transportation act for recapture were designed and made to govern the situation. You don't have that in gas and electricity and water. If there are excessive earnings you can determine that readily. Here in Harrisburg you can readily readjust and let the people get the benefit. I think there ought to be in the cases that I have quoted a rate classification reserve. I think any systematic provision for effective rate-making ought to have a substantial reserve which will accrue during good business, that can be drawn on during periods like the present time without a rate advance. I think that the mechanism should be supplied. Apart from that I don't see why you should permit the continuance of excessive returns and recapture them. I do not see why rate provisions should not be made.

BY MR. WALKER:

Q. Do you have any comments to make on municipal ownership or municipal competition?

A. Did I understand there was a time limit here?

Q. Absolutely not.

A. Let me say just to make it clear to the committee that I personally am not a proponent particularly of public ownership and operation. I have not as yet reached that view although the last year or two I have been rather tending that way, that public ownership is really the ultimate remedy. I think that if regulation can be worked out effectively along the lines that Mr. Cooke and I have been talking, on prudent investments, and you get an effective commission going, I don't see why regulation should not work pretty well. I think in every city, every municipality should have the informal right to institute public ownership and operation. Why should not Harrisburg, for instance, have the right to acquire and establish its own system of electric distribution? Whether it does or not is another question, but why it should not have the customary legal right as a legal proposition I don't see. I think furthermore that if you had in this State, and if you had in New York, three or four or half a dozen of signally successful municipal distribution systems, I think it would be about as good a yardstick to go by to get a general rate adjustment and permit the economics and retrenchments as otherwise. I have gone over this situation extensively in New York recently. I was astounded when I came to compare the distribution expenses of the municipal plant in New York with the expenses of distribution from a private plant. There are fifty-one municipal distribution systems in New York State. As a major proposition—I am giving this to you for what it is worth—it is a challenging figure and I cannot be given the go-by very easily. I made an analysis of the operating expenses, that is, distribution operating expenses alone, no taxes and no return on depreciation of property, just operating expenses; I found for the fifty-one systems an average rate per kilowatt hour for electricity sold for the ordinary consumers purpose was 5.2 mills per kilowatt hour for the state at large, excluding the Niagara Hudson System, which deals very largely in industrial power and therefore hardly belongs in the same class as those for little distribution. I found that the cost of local distribution for the state at large, that the average was little over 11 mills, the average of the private distribution over the public distribution is a little over two to one. It indicates that a few successful municipal systems might be worth while. The city of Jamestown

has its own distribution system, and also it has its own generating system. In the generating part I cannot see much advantage to Jamestown. I don't believe anybody can figure out a more striking example and is the result of the municipal distribution in the city of Jamestown, and their expense per kilowatt hour comparable with previous figures I mentioned was something like 2½ mills per kilowatt hour. Jamestown has had the lowest rate in New York, 4 cents per kilowatt hour for domestic customers in the highest bracket, and that has since been reduced as of March 1st, 1931, to 3½ cents; and yet with these low rates the city of Jamestown has financed most of its recent additions and extensions out of earnings. It has amortized most of its investment and has a whale of a renewal reserve. I think that is something like ten to fifteen per cent, I am talking from memory, but its total prime investment today is covered by outstanding obligations. The rest has been either amortized and built out of reserves or out of earnings. It has the lowest rate by far of any city in the State of New York. You may have there just a case of exceptional municipal industrial ability and efficiency, but a few instances of this kind in New York and Pennsylvania and elsewhere throughout the country I think would have a tremendous influence in promoting efficiency on the part of the private companies and bring about a general revision of rates.

MR. TURNER: I have not been quite able to see where the big difference comes in. Certainly these utilities comprise what are supposed to be experts in their line. They are business men, they are trying to run a business, and what I cannot understand is why their costs run up so much greater than that of the municipalities.

DR. BAUER: I do not want to push the figures further than they go. My purpose is not to compare anything. I don't know whether in a particular instance where a close comparison might be made, I cannot say that the municipal figures would work out better than the private figures. I can indicate to you I think two or three lines that would give an explanation. First, the supervising and administrative superintendents of the private companies as against the municipality. The municipality is pretty well held in check on these matters. I happen to know the Jamestown situation very well. One of their big gains is just along that line of a supervisory nature and an administrative nature of their line.

Second: Where the private companies distribute they have no competition. Whenever anybody has plenty of money and is without competition there is not a great deal of inducement to keep down overhead and supervisory. I think one of the big things is right there. With the plentiful revenues the private companies have had, I think that they have allowed the overhead and supervisory and administrative to creep up on them and I think it is inefficient. I mean that is my impression.

Third: The municipality has an opportunity to carry out a good many points of co-ordination. Let us take the electrical distribution with other municipal departments. If they are serving both water and electricity, there will be two meters that can be handled by the same meter reader, and there will be two accounts that can be handled by the same accounting system, and there will be economy of that kind all along the line there. In the maintenance, there will have to be recourse to the streets, and street openings, and there will be a more ready and equal co-ordination where the company has a distribution system than if the company is furnishing the service. When you come to the returns on property of course then you have the further fact that the municipality has a constant extensive credit and that it would be able to get the money at 4 or 4½ or 5%, and when you take that low rate as against 7½ and 8% that the companies demand they have to have a higher rate of return and there may be still other margins that work tremendously in favor of the municipality. I do not say that the private companies can be as economical and cheap in their public distribution as the municipalities can themselves; my impression is, however, that they have not done it and I think if you gave the municipalities in this State a greater freedom to go out and establish their own systems if they wanted to, I think it would be a tremendous urge upon the companies to cut down their overhead and supervisory, and to use more economic methods and cut down the cost of electricity all along the line.

MR. TURNER: I have often wondered whether or not in these municipal plants in charging up their costs whether they don't get a lot of it into other branches of the municipality.

DR. BAUER: Sometimes they do.

MR. TURNER: Mr. Crawford has suggested that they have no taxes to pay.

DR. BAUER: That is a serious problem. I think the tax problem, that may very well be handled, but the figures I quoted to you were exclusive of taxes in any case. Now in Jamestown I have not audited their accounts specifically but I have gone over their policies and methods and my judgment is that practically all of the costs that belong to the electric distribution plant are charged to the electric plant. There is another thing, take now the legal department. The city of Jamestown has corporation counsel, and mighty good, and incidental to the rest of the works this corporation counsel also handles such legal questions as come in connection with the municipal system.

BY MR. TURNER:

Q. He doesn't have to go before a Public Service Commission?

A. No. Now there is a board of public utilities which consists of fine, high-grade men, and there is very little additional cost to the municipality for that board. There is a superintendent, a young fellow about thirty to thirty-five years of age, a good engineer, who believes in his job and he handles that job, and that is pretty near the extent of the supervisory.

BY MR. COOKE:

Q. There are no holding companies to get their share, or no managing companies whatever to be paid fees.

There is where the economy comes in. If you had for instance in the city of Jamestown a private company and they didn't have any municipal competition you would have there a vice-president, a general manager and a controller, legal fees and the whole thing would be covered up to the extent 5 mills per kilowatt hour or whatever may be customary for that kind of supervisory administration.

Now here is a small town, the name of which I will not give you, that I struck which the ordinary utility could not serve properly because of its condition. It had its own distribution system this is the way they manage to get away with low distribution costs. It simply shows what adjustments can be made and are made, if the people want to make them. I do not say that they always do make them.

In this little town the general plant manager, the general superintendent and manager, was the agent of the Erie Railroad Company. The Erie had a station there. It had to have an agent, and the agent was not fully occupied for the two trains that stopped there a day, or something like that. So, he was plant manager of the electric system. He had an office. The office was not altogether occupied, so the general headquarters of the electrical plant was in the Erie station. He had to have a stenographer for his Erie work, and the stenographer was the secretary and did the stenographic work—was the stenographic staff for the electric plant. I think that the agent got for this additional job \$650.00 or \$750.00 a year. There was a bank in that town. The bank wanted the money. So, the bank undertook to handle the collections and do handle the collections free of cost, so that it would have the money that came in. It cost them nothing for collections.

The town got along; it had light; it probably didn't have as good service as we would want here in Harrisburg, as we would want in New York, but it had service, the means can be more readily, and more likely to be adjusted to the ends in the municipal system. What should be done as to policy, I do not know.

MR. TURNER: Between the bank and the railroad company they paid the overhead involved.

THE WITNESS: Yes, it wasn't a burden on the bank; it wasn't a burden on the railroad. I believe that the railroad would have had to pay a bigger salary for its agent if it had not been for the electric people, and the bank would probably have closed its doors along time ago if it had not been for the depositing of the money of the electric company.

BY MR. WALKER:

Q. What is your opinion as to the primary functions of the Public Service Commission?

A. First, in your question, what you have in mind is whether the Commission should be regarded primarily as a body representing the public at large, or as a quasi-judicial body or court.

Q. That is the idea.

A. Of course, primarily, the Public Service Commission, that is a representative body. There is no doubt that here and in New York—wherever a public service commission is created, it was established for the purpose of protecting the public, and more particularly the consumers. I think if they have been established, the small investors as a group have come to be almost as important as the consumers. I think that it is the function primarily of the Commission to protect consumers and investors. It ought to be on the job constantly for that purpose, to get for the consumers the best service at the lowest possible rate, consistent with sound financial policy. It ought to safeguard the investment mass of people in bonds and stock.

Of course, under our present system of fair value, where we have a shuffling rate basis, a commission cannot help but be converted to a large extent into a court. Its job of rate adjustments is primarily, I think, a representative and administrative one—you can call it a legislative one—but the Legislature is in the same broad sense a representative one for the people, to do a job for the people that ought to be done, but when rates are adjusted, and the claims that the value of its property is \$50,000,000, and the consumers claim it is only \$20,000,000 willy-nilly, then the Commission, whether it desires or not, is converged into a Court. It must give the hearings; it must take evidence of value; it must give the company its day in Court, to prove its value. Then, it becomes pretty difficult for a body to sit at the same time as judge on evidence presented by a company; and at the same time be a potent, a real vigorous exponent or representative or attorney for the public at large, so far as the consumers are concerned. It is a difficult job. I have watched it often and long, and with varying emotions, depending on how the job was done.

MR. TURNER: In other words, you cannot be both a prosecutor and a judge too?

THE WITNESS: Yes sir; it is a hard thing to do. If you get, and as you get a fixed rate basis, prudent investment, so that that is fixed, then I think the judicial function just naturally sloughs off. I think the matter largely takes care of itself; I think the Commission can act as a representative of the public at large, but as long as you have the fair value basis, without any yardstick, and with every rate adjustment carrying conflicts of interest that require judicial determination, it is useless, I think, to say that the Commission is the representative of the public, when it just cannot avoid but being the judge in the case. Under those circumstances I think it is just a little bit hard for the Commission to really exercise its representative functions. I think every municipality should have the right to appear before the Commission in every rate case and in every public utility matter, and I think it would be a pretty good idea under those circumstances to have a separate office of public defenders, or people's counsel, to appear without the quasi responsibility, but I don't believe that even such a special organization will really protect the public. Why—because in any given instance the company will have the inside records; it will have a trained personnel.

MR. TURNER: Couldn't the department develop that—

THE WITNESS: It would be handicapped. Suppose you were put into the Attorney General's Office as people's counsel under the present system, it is almost inconceivable to me that the Legislature will give you money enough to cope with the numerous cases—

MR. TURNER: Might that not be done in this way? If the case is lost by the utilities, the costs are allocated by the Commission. It pays into that department the amount of money that the Commission sets aside as costs. If the case is lost by the complainants, then the amount of money is amortized and is paid back into that fund.

THE WITNESS: I think that something of that sort could be done. My own thought has been that there is a lot of merit to that—

MR. TURNER: The people have to pay it in the end.

THE WITNESS. The people have to pay it in the end, yes sir. If the people's counsel had a staff large enough and expert enough to handle systematically and satisfactorily the

people's interests, comparable to the company's interests, I think it would be a step forward.

MR. TURNER: Don't you think that a department of that kind, properly constituted, would more than likely do away with a great many cases—they might be dismissed—

A. I think so.

Q. The large cases are not so much of a bugaboo, as the smaller cases. The small borough cannot afford \$15,000 or \$20,000 to go into a case. They will likely not go into it. They will likely be subject to making adjustments.

A. I think that is so. My experience has been, if in large communities, large territories, rate adjustments have been headed off over and over again because of the prohibitive expense that was involved. I have in mind three instances—I am not going to name them—where, as it looked to me, the rates were obviously away out of line of what they should be. There ought to be a radical revision and adjustment. The public authorities were headed off because of the representation to them that it would cost \$200,000 or \$250,000 to carry the case through.

The people's counsel would face that same situation.

BY MR. RHODES:

Q. Don't you think the people's counsel would have a tendency to make the commission feel more than ever they were a judicial body?

A. I think so, as long as you have the present rate basis. I think it is a distinct step in advance to have the people's counsel, that is, with a representative role, who does not have to bother with that judicial poise and careful regard for justice.

Q. Do I understand that you approve of this people's counsel, as recommended by the State Senate?

A. I have not seen the thing, I am talking in general.

BY MR. COOKE:

Q. Assuming we were on a reproduction cost new basis.

A. Yes sir; if we were on a prudent investment, if we can get on that basis reasonably soon, my opinion is altogether different. Then I think the Commission itself could be that administrative arm of Governor and Legislature of the State at large to protect both the investors and the consumers.

BY MR. RHODES:

Q. If the Public Service Commission fulfilled its function of taking care of the public, it would not need any people's counsel in connection with it?

A. Without regard to personnel or the personnel quality of the Commission—I haven't any criticism to make against the personnel of your Commission, but if you had the ablest Commission obtainable in the State, you would still have the system that is unworkable and which would transform the Commission into a quasi-judicial body, and you would face inevitably the question that Mr. Turner mentioned awhile ago, whether the same body can be a judge and prosecuting attorney at the same time. In the meantime, my own judgment is that a separate representative by people's counsel would be a desirable adjunct to fight the people's cause.

Q. Under the present circumstances?

A. Yes sir.

MR. RHODES: Under the present circumstances?

THE WITNESS: Yes sir, under the present circumstances.

FATHER COX: I think the Public Service Commission ought to be accountable to somebody. This advocate is a joke. How is any one man going to take care of all the complaints over a state like Pennsylvania? He is going to be the eighth Commissioner, and will decide with the other members in favor of the companies, just the same as in the past.

MR. TURNER: I don't think that is a fair statement.

FATHER COX: It is my opinion, whether it is fair or not.

THE WITNESS: I do not know how good your Commissioners or otherwise, as individuals are or have been. My whole contention is, and I admit I may be wrong in it—we are in an economic field, where we are practically experimenting. Suppose you had Mr. Cooke and me as a Commission; suppose you trusted us, that we are both intelligent, fair-spirited. Still the case comes before us; we believe there should be reasonable rates; we believe the consumers ought to have the lowest possible rate; yet we have to give the company a hearing, and in giving them a hearing, we would have to take tes-

timony; we have got to swear the witnesses; we have to go through the judicial process; our decisions are judicial in character, since a question at issue arises. Then we must face this inevitable question—how we can take care of this judicial responsibility, and at the same time carry a fight against the company as a corporate counsel might do, who does not have that judicial responsibility. This has been, I think, the experience of a good many hundred years of judicial experience in practice. It may be you can have in the same body both responsibilities.

FATHER COX: Don't you think they ought to be accountable to some agency? Here in Pennsylvania they go on year after year and nobody can dismiss them. I think there should be a better system, where they can be accountable to some sort of body or committee that represents the people.

THE WITNESS: The same thing would be true—you would have the same question of accountability if you had the people's counsel. We want our judges accountable. If any particular judge goes into a case and is manifestly one-sided, there is a procedure by which he can be brought to account. If your Commission has not lived up to its public trusts, of course, it ought to be accountable to the Legislature and the Governor, or both, but, granting that under the present system, you cannot escape the fact that a Commission has to act as a judge in every rate case, and since it does, the question arises, can it at the same time act really effectively as a representative of the people, to push for better service and lower rates.

MR. TURNER: It seems to me that Father Cox is mistaken on that. While the Commission may be said to be the representatives of the people, the utilities likewise have interests and rights under the law.

FATHER COX: I am not very much afraid that their interests will not be protected. The only body that I believe will give the people something, and not just ice is a legislative body. These men have to go back and depend on the votes of the people. Whether school keeps or not, they have their job. I believe more in you people than I do in the Public Service Commission.

O. M. RAU (recalled)

BY MR. WALKER:

Q. Now, have you made a study of rural electrification?

A. Yes sir, I have. In 1925 I made an extensive study for the Giant Power Survey of rural electrification in Pennsylvania, and this was followed up by a similar study for the Public Service Commission. In 1929 I made a report on rural electrification for the New York Board of Revision of Public Service Law, which has just recently been completed.

Q. In your studies of electric service to farmers in Pennsylvania, what did you find?

A. In the original study there was very little attempt made to furnish farmers with service. There were no regulations under which a farmer could obtain service without either paying an exorbitant price for line extensions—then if the company did not care to make them, then there were no conditions under which he could make the company make the extensions. The outcome of the inquiry that brought about the investigation by the Public Service Commission, who made on their own order an investigation as to the proper rules and regulations, so that the farmers could get service, and that resulted in the well known order No. 27.

Q. What did Order No. 27 cover?

A. Order No. 27 required the companies to make extensions to farmers, free of cost, when there were three or more farmers requiring service, and where there were less than three farmers, the cost was not to be in excess of \$300 per customer per mile.

Q. When you say three farmers contracting for service, you mean three farmers per mile?

A. Yes sir.

Q. Was Order No. 27 helpful to the farmers in obtaining electric service from the utilities?

A. No, it was not. Order No. 27 was objectionable to the utilities, and, therefore, no action was forthcoming under that order. They finally succeeded in having it superceded by a draft of an order that was prepared by the Pennsylvania Electric Association, which was practically controlled by the utilities.

BY MR. COOKE:

Q. The companies resisted the order—

A. Yes, practically no action was taken under it at all.

BY MR. WALKER:

Q. Was this new order that superceded Order No. 27, that was prepared by the Pennsylvania Electric Association, adopted by the Commission?

A. Yes sir; that is known as Order No. 28.

Q. What is the difference between Order No. 27 and Order No. 28?

A. In Order No. 28 the companies are allowed to make any charge—that they base a charge on any amount that they see fit as a minimum guarantee. In other words, every farmer had to guarantee a minimum revenue to the company for any extensions that they made.

Q. Under this Order No. 28 did the farmers obtain service at a reasonable cost?

A. The minimum charge was unreasonable. It was based on the line costs.

BY MR. RICHARDS:

Q. You mean they are not now getting it?

A. They are not and they did not.

Q. Do you know what the construction cost per mile of line was on which the minimum is based?

A. There is no stipulated amount, but it appears from the basis on which they have a minimum guarantee is arrived at, that the cost approximately is \$2,000 per mile, that is the standard with most of the companies.

BY MR. COOKE:

Q. What are these minimums? Can you give us some representative minimums in the different parts of the State?

A. The amount of the minimum is in the filed rates. That varies from 21 to 24%.

Q. What does that mean in dollars per month?

A. It depends upon the number of consumers. The minimum, \$2,000 if it is 21%—

Q. Do they get the low \$5.00 or above that?

A. On four to the mile, the minimum will run from \$5.00 to \$5.50 per month.

BY MR. RICHARDS:

Q. You don't mean that they do not now get down to the minimum—

A. Not of the four to the mile.

Q. What you are saying about the cost per mile being \$2,000, the cost is divided,—I am not sure whether I understand it. If the fact is that this cost is divided to the farmer on the basis of 1%.

A. A month.

Q. Per mile of construction?

A. That is correct.

Q. That doesn't mean \$17.50 per month, divided among the consumers, per mile.

A. Yes sir.

Q. Don't they get the minimum down to as low as \$3.50 to \$4.00 a month?

A. If there is enough consumers.

Q. Even in sparsely settled communities that would be true?

A. This is based on \$2,000 a mile.

Q. You wouldn't want to say that \$2,000 was the standard price per mile. I am not holding a brief for the utilities, but I want to be fair, knowing some of the conditions surrounding the territory in rural electrification.

A. As far as I can find \$2,000 is the average price throughout the State.

BY MR. COOKE:

Q. You don't mean to say that that is the average cost—it is the average assumed cost price?

A. On which they base 1%.

BY MR. RICHARDS:

Q. Would you be surprised to find out that they build them for less than \$1,000 a mile and charge the rate?

A. I haven't any evidence of that fact. Every bill in the State was not examined. I took the general conditions as they existed.

Q. They are doing it in some localities. That may be peculiar to some parts of the State?

MR. COOKE: I believe it would be interesting to get a case or two of that on the record.

MR. RICHARDS: I would be glad to give that to you after the witness is finished.

BY MR. WALKER:

Q. In constructing line extensions, is it likely that the company would make such an extension with ample capacity to take care of additional customers to those paying the minimum guarantee or so that the line could be extended to serve additional consumers in the future?

A. They are constructed in excess of capacity that the immediate consumers would require, to take care of any reasonable requirements for the future.

Q. Is there any allowance made in the construction cost for such future business?

A. There has been no instance that I could find where the cost was less than \$2,000. I have an instance where it is considerably over \$2,000.

Q. What is the minimum guarantee on the line costs of \$2000 per mile?

A. As I stated before the present rate is one and three-quarter per cent. by most of the companies. Prior to the latter part of last year these minimums were on a basis of from twenty-four to thirty-one per cent. When the agitation for lower costs of service was started some months ago, it appears that a general reduction has been made. In other words, in the filed rates of the tariff bureau, from October on, there has been any number of new rates filed in which the cost is based on one and three-quarter per cent. or twenty-one per cent. instead of the higher figure.

Q. Is there any justification for that \$2,000 a mile?

A. Not that I can see. It is evidently an arbitrary figure that is used as a basis for arriving at what the minimum guarantee should be.

BY MR. TURNER:

Q. What should it cost?

A. The cost of that line—I have some data that would indicate what lines cost. This is a tabulation obtained through the sub-committee of rural electrification.

BY MR. COOKE:

Q. I think that is the Pennsylvania Committee on the relation of electricity to Agriculture, is it not?

A. This is the joint committee on rural electrification; the chairman of that committee. I believe all complaints are handed to him and he adjusts them, instead of going to the Commission, and the cost of line extension for three years, that were made by different companies, were submitted by him.

Those costs run—during 1927 to 1929, the minimum average cost of any one company extended line was \$800 a mile, and the maximum was \$3000 a mile. The average construction during the three years, which amounted to 430 miles, was \$1401 a mile. In other words these are the companies' own statements of what it costs to construct lines and it is evidently obtained from each of the companies.

Q. Based on \$3000 and 21%?

A. The minimum guarantee would be \$420, would it not?

A. Yes.

BY MR. COOKE:

Q. What is your own judgment of a proper cost of a mile of rural line in Pennsylvania, built for the service of those people wanting service?

A. In a very elaborate investigation of the costs of line extensions, made both for the Giant Power Survey at that time, and made for the New York Committee Report, the result of 8 or 10 different companies' figures, in other words, that each of them supplied, the figure of what their own cost would be for line extensions—the average results of that study indicate the \$1100 was a reasonable cost for extending a mile of line, including transformers for 4 customers. In other words, a line of sufficient capacity to carry the normal use of 4 customers, including transformers, is \$1100.

(Paper entitled "Data on Rural Line Extensions Tabulated from Information on File" marked exhibit 138)

BY MR. WALKER:

Q. I show you here a mimeograph sheet, marked exhibit number 138, and ask you if that is a set up on the cost of rural electrification?

A. Yes; furnished by that committee.

Q. As furnished by that committee?

A. Yes.

Q. Is the maximum guarantee adjusted so that the annual demand does not exceed one and three-quarters per cent. per month?

A. Your maximum will possibly run over the guarantee. In other words, it has that same objection that the building in Philadelphia had; over runs. In other words, if you used more than your one and three-quarters per cent. in one month and you used less than one and three-quarters per cent. in the next month it is not an average of the 12 months. You have paid more in one month and less in the next month.

Q. It is, therefore, possible that on an annual basis, the total payments would exceed the minimum guarantee; is it not?

A. Yes; it is.

Q. What are the rates under which the farmers are held for electrical service?

A. There are approximately thirty-two different rural or agricultural rates filed with the Public Service Commission. They vary from a maximum of thirty kilowatt hours at fifteen cents to a minimum of five cents for the high step in the rate.

A. Typical average rate is that of the Metropolitan Edison Company which is nine cents per kilowatt hour for the first thirty kilowatt hours used; twenty cents per kilowatt hour for the next twenty kilowatt hours used; six cents per kilowatt hour for the next twenty used, and four cents for all over 70. To this is added 20 kilowatt hours to the second and third steps on each horsepower in excess of three horsepower in the farmer's installation. The minimum guarantee is 1¼% of the line extension cost.

Q. With four farms per mile at this rate, what would it cost a farmer for electric service?

A. To give an idea of what the cost is—some kind of an idea of what the cost is, taking a typical farming area, which is likely to be spaced for two a mile, a farm having lights and a little number of electrical appliances, a water system, and milking machines, the average use would be 45 kilowatts in the summer time, and 75 kilowatts in the winter time. A similar farm, more extensively equipped, including a 5 horse-power motor, would average 75 kilowatts in the summer and 125 in the winter. And the average agricultural rate of the Metropolitan Edison Company, the cost per kilowatt hour would be 19½ cents per kilowatt in the summer time and 11 cents in the winter time. The small farm, and for the large farm it would be 11½ cents in the summer time and 7 cents in the winter. In other words, under this rate, these two farms would hardly use the minimum guarantee on a basis of four farms to the mile. In other words, the minimum guarantee is in excess of what the rate figures. The amount of service they use, and that is the case practically in all farm electrification in the State.

Q. How long do they have to pay this minimum guarantee?

A. The minimum guarantee is indefinite. It is paid just as long as they take service. In most of the rates, its stipulates that the period must be not less than three years. In other words, they must take service for three years. So, of course, if you don't take service after that time, you don't pay the minimum, but if you do, you do pay it.

Q. Does that have any effect on the service end?

A. That rate has very little effect on what it costs the farmer to use electric service. The minimum charge, usually, is in excess of what the rate would earn him, if the rate is applied to his bill.

BY MR. COOKE:

Q. In other words, the minimum controls the amount of current that the farmer uses in Pennsylvania?

A. No, the minimum controls the amount that he has to pay for service. His normal use is below the amount that he would pay under the rate. So, of course, that cost for service is his minimum charge for practically any use under normal conditions.

Q. Do you mean that the rates, being what they are, that the quality of current that he uses is limited in that way? Is the quantity of current that the farmer uses limited by the rates that he has to pay at the present time?

A. I should say that the rate or the amount of cost per kilowatt limits his use on account of the expenses; that he is up against it.

Q. That is what I mean?

A. It is too expensive for him to use more.

BY MR. TURNER:

Q. If he would use less than the minimum it would not cost him any more to use it?

A. If he could use it. The idea is that the cost is not an inducement for him to use more, because he can't get up there unless he does go into a considerable equipment, in excess of what is the normal equipment.

BY MR. RHODES:

Q. If he uses 50 kilowatt hours per month?

A. It is rather surprising in the surveys in both New York and Pennsylvania that the normal use of a farmer is about as stated in these two typical farms. If you get a farmer who uses 1200 kilowatts per year he is the exceptional one. The average will run away below that.

Q. He is not using much more than a few lights in his house at 50 kilowatts?

A. Yes; that is the trouble, and, of course, the reason he does not get into other equipment is that the cost of the service appears too high. There is no inducement in the rate for him to use more. He seems to be satisfied to have a little installation, and he goes along that way; no inducement for him to increase that rate, due to a lower rate, or something of that kind. In other words, the minimum is hardly reached, and third steps or each horsepower in excess of three horsepower.

Q. Do you happen to know what the typical farmer uses in Canada and Ontario?

A. I do not. It runs considerably higher there than it does here.

Q. And that you attribute to the lower rate?

A. The lower rate.

BY MR. WALKER:

Q. What, in your judgment, should be the proper rate on which the farmer should obtain service?

A. A basis of rates that would rapidly decrease the cost per kilowatt hour. The effect of a rapid decrease in the kilowatt hour cost is best indicated by the conditions in the domestic consumers in cities or suburban towns.

In Sullivan county the electric company in 1928, had a revenue per domestic consumer of 16.9 cents per kilowatt and the average use was 223 kilowatt hours per year. The Duquesne Electric Company have an average revenue per domestic consumer of 4.88 cents, and the average use is 674 kilowatt hours. The increased use would be a great deal more pronounced in the rural farming areas, because the economic advantage of electric service would easily be more than it is in the summer home.

Q. Would a rate structure, having a charge in the form of a fixed or demand charge help the farmer in his service?

A. A rate structure containing a charge in the form of a fixed or demand charge, that would assure a fair return on line extension costs, based on efficient construction of the necessary capacity of the immediate requirements of the consumer, and an energy charge with a top rate not exceeding 6 cents, would give a fair return to a company, and it would be a rate that would induce the use—would encourage use to the farmer.

BY MR. RHODES:

Q. You say that Sullivan county is your one extreme there?

A. Yes.

Q. Sullivan county could hardly be taken as a fair example. Is it not a summer resort which is more in use from about June 1st to October 1st, because of Eagles Mere and a lot of small transient cottages? They do not have many people there in the winter time; isn't that true?

A. It is the highest average of any company in the State and the other is the lowest.

Q. Sullivan county is also the wildest county in the State?

A. Yes.

Q. That is, I mean not in moral living, but the physical condition of it?

A. But I believe that if the rate was around ten cents, instead of sixteen, you would see them taking current around 400, instead of 200; they would use more if they could get a lower rate.

BY MR. WALKER:

Q. Have you made a study of the comparative costs of electric service to farmers in various localities?

A. Yes.

(Paper entitled "COMPARATIVE COST OF ELECTRIC SERVICE TO FARMERS IN VARIOUS LOCALITIES" marked exhibit number 139.)

BY MR. WALKER:

Q. I show you a mimeograph sheet, marked exhibit number 139, and ask you if that is the study you mentioned?

A. Yes. It shows the rates in various states as compared with Pennsylvania.

Q. Will you take exhibit number 139 there, and explain it briefly to the committee?

A. The first column shows the number of kilowatt hours used per month.

The second, third and fourth columns are the maximums, and minimums, averages of costs in Pennsylvania.

The next column is the cost under the Adirondack plan in New York.

The next is the average cost of all the farmers under the Alabama rate, which is given below.

The next is the Wisconsin rate. The next is the Michigan rate.

The last is the proposed rate by the New England Farm Council, I believe it is called.

BY MR. TURNER:

Q. It is more than Pennsylvania; the New England rate is more than Pennsylvania?

A. Yes; it is a better rate when it gets down to larger consumptions.

BY MR. WALKER:

Q. Then in your statement Example 1, your Pennsylvania minimum for 45 kilowatt hours was 16¼ cents? Is that right?

A. That is right.

Q. In the year 1928 that jumps to 19½; is that right? These are under the order of 1928?

A. It is under the minimum rate filed under that order 16½ cents.

Q. And what is the maximum rate?

A. That is 28 cents.

BY MR. COOKE:

Q. In what company or territory do you find that 28 cents?

A. I think that is the Renovo Edison Company. There is a rate, they have a guarantee of 2½ per cent. on line extension cost, which has not been changed recently. They still maintain the 2½ per cent.

BY MR. WALKER:

Q. Are there any other comments you care to make on Exhibit 139, Mr. Rau?

A. There are no particular comments to make except that the permitted rates throughout the country are too high. They are all based on these various minimum guarantees, and it makes very high rates for the farmers on the cost per kilowatt hour.

Q. Now Mr. Rau, from your study of the records of the Public Service Commission and the fact that you have kept yourself in touch with the attitude and the acts of the Public Service Commission, you have done this in connection with the rural electrification for the past four years?

A. Yes sir.

Q. Can you tell the committee of any single acts of the Commission that have been to the benefit of the users of rural electrification?

A. That Order No. 28.

Q. And what percentage of the dirt farmers of Pennsylvania have an opportunity to use electricity from the service station?

A. I would say not to exceed 16 to 17% of the rural dirt farmers, as you call them, have electrical service.

Q. If this service was under proper regulation, would that percentage increase?

A. With a reasonable rate and a proper basis for line-extension costs and a proper basis for extending lines so that the extension would not be made for an individual farmer but for a territory covering a certain territory indicated, there would be no question but what 50% would be reached very quickly.

Q. Now Mr. Rau, are there any other comments you wish to make on this rural electrification system?

A. Nothing but to perhaps comment further on the fact that extensions as they are made today are dependent upon the desirability of the farmer getting service rather than upon the company desiring to furnish him service, and he has to go to considerable trouble before a line is extended. If the lines were extended into rural districts and a real effort was made to get the farmer as a customer, there would be a great many more farms electrified and the cost reduced immediately.

BY MR. COOKE:

Q. Have you looked into the rural electrifications abroad?

A. I have, yes.

Q. In what countries?

A. I went to Sweden and Germany and through France and England.

Q. Now, in any of the countries of Europe did you find rather complete electrification in the rural areas?

A. In Bavaria and in Sweden they were very complete. I do not know of any farmer without electric service in either of these two districts. The extensions are very liberally made, and the costs are very low.

Q. Are there differences in the conditions in Pennsylvania and the conditions you found in Sweden and in Bavaria that would preclude our having fairly complete electrification here?

A. If the same methods were applied in this country, there would be no reason why the same conditions would not result.

BY MR. HAGMAIER:

Q. Doesn't the government help in some of these countries in some of that work?

A. Not to any material extent. The companies themselves extend their lines with what might be called sub-stations into central farming districts and they have this service available there and from there local companies extend the lines to farmers so they get the current at the sub-station at a very low price, and then the local extensions are made by the farmer organization, and I found that it is a very effective way to electrify the rural districts.

BY MR. COOKE:

Q. What is your attitude toward polimutual companies?

A. If the same plan was adopted in this country that was adopted in Europe, they would be very effective. The trouble particularly in Pennsylvania, is that the distributing company, the smaller company, has to go too far to get to the transmission line. Now, if the transmission lines, or the sub-stations, were placed locally near the farming district, from where the distributing company could take the current.

BY FATHER COX:

Q. What is the reason there has not more of that been done in this country?

A. Principally, the high cost of extensions. As soon as the farmer starts to use service he is discouraged. He has an eight or ten-dollar bill and it is too high for him to start in. If he would start in with about a two-dollar bill or a three-dollar bill he would soon get up to the eight. It could be done easily on the basis of \$1100 for a mile of extension and on that basis the cost should not exceed three dollars as the guaranteed minimum per month.

BY MR. COOKE:

Q. That is the price you think the farmers would pay?

A. Absolutely, yes sir.

BY MR. WALKER:

Q. Mr. Richards, do you have that data that you wanted to put into the record?

A. (BY MR. RICHARDS) I have the data that Mr. Cooke wanted—

MR. MOORE: The entire committee wants it.

MR. RICHARDS: This particular case is one of rural electrification by the Pennsylvania Electric Power Company in Slippery Rock Township, Lawrence County. The line I think is four or four and a half miles long, and was completed and finished within the last six or eight weeks, I would say, at a cost not exceeding \$975 per mile, which included to the best of my knowledge 30-foot poles spaced about 300 feet apart, and using six transformers to the mile. This case is compared with the Aspinwall Company which I think use about four transformers to the mile. This was six to the mile and the minimum to the farmers in the district for service I believe is \$3.50 per month with an average of about 50 to 60 kilowatt hours per month. This is only one of several projects in that county by this same company. Another project in the country is a line about two and one-half to three miles long and the cost of this electrification in this district seldom run over \$1100 to \$1200 a mile. In this particular case this low cost was brought about by the co-operation of the farmers with the company permitting the poles to be set on their property as against setting them on the highway, and they also agreed not to use anchors in the fields but to permit the farmers to get around the poles for farming activities; and to my mind this particular piece of work is evidence of co-operation between the people of the community and the utility. I am not using this in a boasting way.

MR. COOKE: I would like to ask, is the Pennsylvania Power Company an operating company?

MR. RICHARDS: It is now a subsidiary of the Commonwealth and Southern. The rates to the consumer in the city of New Castle I think are shown in a report by Professor Roushenbush as being the lowest rates in the State. Whether they are particularly a beneficent corporation or not I do not know, but I do know that the cost in these districts has not been \$2000 and \$3000 a mile, and the farmers are getting their service at a nominal rate, as low as any in the State.

MR. COOKE: Does the Pennsylvania Power Company operate throughout Lawrence County?

A. Yes sir, throughout Lawrence County and a part of Butler.

Q. There are no other companies in there?

A. No. There was another company in there, the Harmony Company, operated in part of Lawrence County, but was taken over by the Pennsylvania Power Company some time ago.

Q. That is the county that has shown 5.7, the lowest average in the State?

A. Yes sir.

MR. WALKER: I offer in evidence a letter from the Mack International Motor Truck Corporation with regard to W. F. Menke. The committee will recall some testimony on the part of Mr. Menke and Commissioner Benn in regard to his financial transactions with the Mack Motor Truck Company, and this is a statement from the Mack Motor Truck Company showing that at the time that Menke lost his buses, his financial transactions were satisfactory to them.

We are offering in evidence Exhibit No. 140, being a statement from the Mack International Motor Truck Company, in re Wilbur F. Menke's account.

MR. RHODES: I think you refer to the transactions of the White Truck Company.

MR. WALKER: We sent a similar letter to the White Truck Company and we expect to have a reply from them.

I also have a number of complaints which it will be necessary to just briefly enter on the record, and which we received from borough in Pennsylvania. With the Chairman's permission, I will just briefly read them into the record:

Muncy Valley, Pennsylvania. A telegram protesting against the Associated Gas and Electric System rate.

Bethlehem. A letter which was not entered at the time they made their appearance and protest.

MR. COOKE: What did they protest about?

MR. WALKER: They were protesting the contracts with their utilities which had been divested by the Public Service Commission and their testimony is already in the record on that protest.

Upland. A protest in regard to the services of the Chester Water Service Company, which has also been placed on the record.

Coatesville. We have a letter from Greenwood and Greenwood, borough solicitors, protesting the excessive rates of the

water company and the Atlantic Public Utilities which serve that borough.

Manor. We have a protest from the borough solicitor from the borough of Manor protesting the excessive rates of the water company serving them and I might state that that case is now before the Commission.

Fallston. This protest is signed by the president of council and the burgess protesting the excessive rates of the Beaver Valley Water Company.

MR. MOORE: That was referred to by Mr. Elliott.

MR. WALKER: Yes sir.

Kittanning. We have a protest from the borough of Kittanning, in which they protest the rates of the Columbia Natural Gas Company, the rates of the West Penn Power, and the rates of the water company. The Armstrong Water Company.

Sykesville. They are protesting the excessive water rates but don't mention the company.

Cooperstown. We have a protest from the borough of Cooperstown, protesting the rates and the service of the Sugar Creek Telephone Company.

Lebanon. We have a protest from the city of Lebanon, protesting the rate of the Consolidated Water Company, and in conjunction with the protest of the city of Lebanon, there is also a petition signed by quite a number of the citizens of Lebanon protesting the rate.

West Conshohocken. We have a brief filed by the borough of West Conshohocken, protesting against the rates charged by the Philadelphia Suburban Water Company for public fire hydrants.

MR. HAGMAIER: Mr. Walker, do they give the price there?

MR. WALKER: Yes they do. \$60 a year.

Arnold. We have a protest from the borough of Arnold, protesting the rates of the West Penn Power Company and the Phillips Gas and Oil Company, and also protesting the action of the Commission in cancelling their free light and gas contract with the utilities.

Crafton. We have a protest from the borough of Crafton, protesting the high rate of the gas company. They don't state what company was serving the borough, and they also state that it cost them \$5000 to contest their last rate case.

MR. RHODES: Who makes the protest?

MR. WALKER: It is signed by the Council of the Borough of Crafton, J. O. Schreiber, Secretary.

Beaver County Federation of Boroughs. We have a protest in the form of a resolution from the Beaver Valley Federation of Boroughs, in which they are protesting against the action and rulings of the Public Service Commission of Pennsylvania. This is a blanket indictment.

Danville. We have a protest from the borough solicitor of the Borough of Danville against the rights charged by the Pennsylvania Power and Light Company, also protesting the readiness to serve charge.

Orbisonia. We have a protest from the borough of Orbisonia, protesting against the excessive light charges.

Tatamy. We have a protest from the borough of Tatamy, protesting against the rates of the Penna. Power and Light Company, and further stating that when these new rates went into effect in 1930, they could not protest the increase in rates because they did not have the money, and is signed by Harry M. Johnson, President of Council.

Palmyra. We have a protest from borough of Palmyra, protesting the rates of the North Annville and Gravel Hill Water Company.

Leechburg. We have a protest from the borough of Leechburg, protesting the excessive rates of the Vandergrift Water Company. I might state here, by the way, that the charges per hydrant in this borough are \$99 per year a plug.

South Renovo. We have a protest from the borough of South Renovo in which they protest the rate charged by the Renovo Edison Light, Heat and Power Company, and it is signed by the chief burgess of South Renovo and the chief burgess of Renovo.

MR. COOKE: What is the holding company for Renovo?

MR. WALKER: I don't know, Mr. Cooke.

Pinchot Lehigh County Club. We have a protest from the Lehigh County Pinchot for Governor club in which they are protesting the high rates of utilities and which is signed by Mrs. Mary E. Dootson, Secretary.

MR. COOKE: That is the Penna. Power and Light Company again?

MR. WALKER: Yes sir.

MR. WALKER: I have here a number of exhibits that have already been introduced. We promised to have them photostated for the Committee. I would like to get these distributed. They are numbered 84, 85 and 86.

We also promised to have some supporting data on some of the charts that went in the reproduction estimates on gas, water and light cases, which will go in as Exhibit 141.

Also the balance of the charts, which was asked for, which will go in as Exhibit No. 142.

Adjourned until 7 o'clock P. M.

P. J. KEADY recalled

BY MR. WALKER:

Q. Mr. Keady, you have been sworn and testified previously have you not?

A. Yes sir.

Q. In your testimony last Friday you placed certain exhibits and testimony in the record that covered the Pennsylvania Water Service and Federal Service Water Company, with the exception of the Scranton-Springbrook Company, did you not?

A. Yes.

Q. Now, have you made similar studies of the Scranton-Springbrook Water Company?

A. I did.

BY MR. TURNER:

Q. From what reports?

A. Why, from the annual reports of the respective companies before consolidation and after consolidation, also in connection with the issuance of the securities and certificates of notification, which were inspected.

BY MR. WALKER:

Q. Where did you obtain those reports?

A. Those reports were all obtained from the Public Service Commission files.

Pennsylvania Water Service Transactions—Scranton-Springbrook Water Service Co., Journal entries, produced and marked Exhibit No. 143.

BY MR. WALKER:

Q. I show you some mimeographed sheets, marked Exhibit No. 143, and ask you whether that is one of the exhibits that you prepared of the Scranton-Springbrook Water Company?

A. Yes.

Q. Now, Mr. Keady, will you please take Exhibit No. 143 and explain the journal entries there on that merger?

A. These journal entries were secured from the certificates of notification with the Public Service Commission, and they reflect the cost of the Scranton Gas and Water Company and the assets of the Pennsylvania Water Service Company, and the financing incident thereto, these companies forming the Scranton-Springbrook Water Company. Before the journal entries are gone into, I would like to make a brief outline of the merger. The Dunmore Gas and Electric Company, a non-operating company was purchased by the Pennsylvania Water Service Company for \$34,000, the name of which company was changed to Scranton-Springbrook Water Service Company. The Pennsylvania Water Service Company after releasing these various non-contiguous properties that we went into on Friday, they had certain assets and liabilities left. Now, the Pennsylvania Company sold its entire assets, which included the stock of the Springbrook Water Supply Company, and the \$10,666,300 in cash, which was deposited with the trustee by the Federal, to relieve these non-contiguous properties. This cash was one of the assets which was turned over to the new company. This new company—

BY MR. TURNER:

Q. Where did this cash come from?

A. It was paid in by the Federal Water Service Corporation; they had to deposit that with the trustee in order to release the properties. Now, that cash and various other assets, including the stock of the Scranton-Springbrook Water Supply Company, and all other liabilities, which also included \$9,200,000 worth of bonds, which were out—which were in the hands

of the public, were assumed by the Scranton-Springbrook Water Service Company. That will convey to the new company the right of this cash in the hands of the trustee, and that covers in substance the acquisition of the one division of this company, namely, the Springbrook Division.

Now, the Scranton Division comprises four main companies and a number of subsidiaries. The main companies are the Scranton Gas and Water Company, the Olyphant Water Company, the Consolidated Water Supply Company and Hyde Park Gas Company. All of the common stock of the three latter companies was held by the Scranton Gas and Water Company. The Hyde Park Gas Company was sold to the Scranton Gas and Water Company, and the Scranton Gas and Water Company thus enlarged was in turn sold to the Scranton-Springbrook Water Service Company. The Federal had a contract by the majority, or as much of the capital stock of the Scranton Gas and Water Company as could be obtained. That contract was in effect transferred to the new company as the money to buy the stock was paid to Federal by the Scranton-Springbrook Water Service Company and Federal agreed to cause to be retired all such stock acquired with this money. The actual amount acquired was 80,197 at \$295 per share or \$25,658,115. There were 84,000 shares outstanding. A proposition was made to the remaining stockholders whereby they could either accept \$5.00 Preferred Stock or \$295 cash per share. There were 12,075 shares of preferred stock given for 5,785 of Scranton Gas and Water Company common. This left 18 shares still outstanding in the hands of the public and these were acquired by cash. Through the various acquisitions of stock the Scranton-Springbrook Water Service Company comes into control of the companies previously known as the Scranton companies, and as the Scranton Gas and Water had no control, Hyde Park Gas was now merged with the Consolidated Water Supply Company and the Olyphant Water Company. This outline therefore covers the acquisitions of the second and final division known as the Scranton Division of this new company, namely the Scranton-Springbrook Water Service Company.

Q. Now, Mr. Keady, did this merger directly influence the rates?

A. This merger—the rate case that followed this merger was a natural result, it could not help but be otherwise. These companies before demanding had \$11,725,000 worth of bonds outstanding. The annual interest charges amounted to \$586,250. After this re-financing the bonds and preferred stock of these various companies amounted to \$40,780,000, requiring \$2,016,927 in annual interest charges.

BY MR. COOKE:

Q. What did that raise from and to, and what were these two figures, interest charges?

A. The interest charges before re-financing amounted to \$586,250.

BY MR. TURNER:

Q. That was the interest alone on bonds?

A. Yes, all on bonds.

BY MR. MEMOLO:

Q. There was no preferred stock outstanding at that time?

A. Not before re-financing. After re-financing there was \$7,000,000 worth of preferred stock, which is included in this \$2,016,925. Now, the difference between these two amounts is \$1,430,675, which is almost identical with the amount that the Scranton-Springbrook Water Service Company requested or estimated that they would receive from the new tariff that was published two months and a half afterwards.

BY MR. COOKE:

Q. Where did you get that estimate, that estimate of their increased earnings under the new rates?

A. It is in the decision of the Commission.

MR. COOKE: All right, that is all I wanted to know.

THE WITNESS: That was the original estimate furnished by the company; they estimated that their new tariff would result in an increase in revenue of \$1,500,000.

BY MR. WALKER:

Q. Mr. Keady, will you take your Exhibit No. 143 and explain journal entries 1 and 2 that you have shown on the first page?

A. Journal entries 1 and 2 will be taken up together as they cover the acquisition of the Scranton-Springbrook Water Service Company. The fixed capital assets shown as plant and property account in journal entry No. 2 is \$29,744,456.55 less depreciation reserve of \$1,639,965.97 or a value of \$28,104,491.48.

The fixed assets that were carried in the annual reports of the former companies in this division \$14,826,768.04.

Now, in that is included \$2,038,155.54, representing the book value of non-operating subsidiaries previously carried as investment but shown in the balance sheet of the new company as fixed assets.

I want to make it clear at this point that these journal entries with particular reference to fixed assets are not as of March 31, 1928. These journal entries were prepared previous thereto in accordance with the refinancing, and there will be some slight changes, but the changes will be slight in comparison to the total involved. That is due to additions as of March 31, 1928, and also in the reserve for depreciation for subsequent accruals to March 31, 1928. Of course, the journal entry does not include these subsequent transactions. However the net write-up shown on an exhibit which will be introduced as at March 31, 1928, and on the opening balance sheet April 1, 1928, are however comparable. The purpose of this comparison is to bring out the effect of these journal entries, therefore as stated heretofore this journal entry shows the fixed capital as \$28,104,491.48, whereas the annual reports at March 31, 1928 shows the fixed capital at \$14,828,768.04 or a net write-up of \$13,277,723.44. The reason given for this write-up is that it represents cost of acquiring the properties. Why not enter all of the other companies at cost? That is the companies that we discussed the other day here, on Friday? In the decision of the Public Service Commission in respect to Pennsylvania Water Service Company, they stated as follows in respect to the financing of Pennsylvania Water Service Company:

The net result of these financial changes is three-fold:

1st, the amount of securities which the consolidated company purposes to issue seems to be entirely dependent upon the proceeds necessary to acquire and cancel the common stock and other securities of the four vendor companies; in other words the consolidated company is so financed as to purchase its own property in part.

BY MR. WALKER:

Q. The quotation that you read, as I understand it, is in application docket numbers 17125 to 17134, inclusive as reported in the Pennsylvania Public Service Commission Reports, volume 8, at page 710; is that not correct?

A. Yes sir. Now, in this case they are not purchasing the property in part, but purchasing the entire Scranton division by issuing securities that are to be unloaded on the public. According to this \$495 a share could have been paid for this stock, which was entered at \$25,200,000 higher and it would have represented more.

Q. Is this a proper method of recording the value of the book assets of this company, when such assets are entirely purchased by mortgaging its own property and using its own credit?

A. Absolutely not.

BY MR. TURNER:

Q. That is what it costs the companies?

A. And the Commission's own decision bears this out. If it was wrong then, it surely must be wrong now.

BY MR. WALKER:

Q. In other words, what they allowed or what they did not allow this quotation that you read from volume 8 of the Public Service Commission Report they now allow in this Scranton-Springbrook Case; is that right?

A. Yes sir.

Q. Go ahead.

A. If Federal had paid this money for the stock, they would have some argument for the write-up but this company is purchasing its own property by obtaining money cheaply from the public.

Q. Does that make that purchase of the property more valuable?

A. No.

Q. Would you say that this write-up was justified?

A. Absolutely no.

BY MR. TURNER:

Q. On what do you base that?

A. This company is buying its own property their own assets are being put up as security to secure this money to buy this property.

Q. There is nothing in the value to permit this write-up.

A. The company doesn't get a cent of this money. The money all goes to the former stockholders and there is no further value to go into the company, and this write of \$13,-000,000, does not add one cent to the value of the property.

Q. I mean, there is nothing else in the cost but that?

A. This is one division; the Scranton division.

Q. I say nothing else in that particular case; I mean, to show the value of the write-up?

A. No; they do not mention anything in connection with the write-up. They just acquiesce in the line up as furnished by the respondents in the application for the merger.

BY MR. WALKER:

Q. In other words, they accept this valuation as placed upon it by the company in the merger?

A. Yes sir.

MR. TURNER: Who sat in that case, Mr. Walker?

MR. COOKE: Who was the Commissioner?

THE WITNESS: Commissioner Brown sat in the merger valuations, and according to the testimony there wasn't any witness against the merger present at the time it was before the Commission.

BY MR. WALKER:

Q. You have an uncompleted answer there.

A. The book value of the fixed assets is one of the important elements in arriving at fair value for rate making purposes. As you all know rate case was instigated, and the decision of the Commission appealed to the Superior Court, and this, therefore is important because the Commission had an opportunity to stop this merger when the applications were before it.

Q. Would a merger that would mean a write-up of \$7,325,-514.96 appear to be justified, when such a write-up did not contribute one cent more in the value to these properties?

A. Absolutely no. Now, higher rates are being fought for, and I contend that it has placed the blame where it belongs because if the first merger was wrong, this merger should be thrown out.

Q. When you say the first merger, you mean the merger referred to in Volume 8?

A. Yes sir.

A. There would not have been any justification for a rate case, as these companies all were running along smoothly before Federal got hold of it. At this point I want to show how this company purchased its Scranton Division of its own property. At the bottom of the sheet of Exhibit 143, the last page—it is right under the double line there—there is a summary of the cash transactions in these journal entries. Now, on the first column there, the amount shown there represents the cash received. The first one is \$10,375,000, representing the proceeds of \$11,000,000 bond issue; the company's own property is the security in back of these bonds. Line two, covering entry 4, showing receipt of the cash of \$10,666,300 from the trustee; in order to get this money some of the property of this company had to be substituted, and was substituted as security. In other words, the trustee under the \$9,200,000 bond issue of Pennsylvania had to get something to put up there to take the place of this cash, and this company's property was put up as security.

The proceeds from the sale of the preferred stock and the serial notes, shown on lines 3 and 4, are further liabilities of this company, and this company has to pay the interest, and eventually pay off, at least the serial notes must be paid off, and the credit of the company is their own, to get this money.

The advance from Federal Water Service Corporation is a loan made to this company and must eventually be paid, so that the entire amount necessary has been secured by mortgaging the company's property and using this credit.

BY MR. TURNER:

Q. Where does the \$25,689,100 worth of advance in Federal come in?

A. That \$25,000,000 has nothing to do with Federal. That advance from Federal Water Service Company is \$1,981,800. You see, there was \$2,975,000 worth of bonds there that had to be retired. Some of the bonds of the old company were retired, and in order to float these bond issues, there were certain bonds that had to be wiped out in order to clean the slates for these new issues. Of course, they really needed \$28,698,100 there, instead of the amount of the \$25,689,100, which went to the stockholders of the Scranton Gas and Water Company.

BY MR. WALKER:

Q. That item, advanced from the Federal Water Service Corporation of \$1,981,000, how was that carried on the books?

A. It was carried as an account payable. In other words, the new company owed that much money to the Federal Water Service Company. It eventually would need to be paid back to them. It was not put in as additional money, into the capital structure.

BY MR. TURNER:

Q. I do not understand whether these proceeds of the \$11,000,000 of bonds—was that a sale made after the merger of these companies?

A. Yes sir, that \$11,000,000 worth of bonds was put out in connection with the financing, in connection with this whole merger.

Q. The merger of these four companies?

A. Yes.

Q. The money on deposit with the trustee, would that remain in the picture or come out?

A. The new company had to put up their own property, and these mortgages would go to the trustee in this \$10,-666,300,—would then be taken down from the trustee and would go into the new company, but they didn't stay in. It is part of this \$25,000,000 that goes out to the old stockholders.

BY MR. RHODES:

Q. In other words according to this set up, there wasn't any actual money put into the equity of the company.

A. Nosir, the money was put in, but it was taken right out. In other words, it wasn't left in. The old stockholders got all of the money, with the exception of some expenses there. You will notice in general entry No. 1, it cost them \$9,100 for commissions and expense in connection with the purchase of this stock.

BY MR. TURNER:

Q. Is this \$11,000,000, I don't get that picture in my head yet, was that a general mortgage on their property?

A. Yes sir, I think I have a notation on that that may straighten it out. This here is a description of the \$11,000,000, first mortgage placed on physical property of the Scranton Gas and the former Hyde Park Gas properties, excluding the office building. The Consolidated and Olyphant properties were pledged under the \$9,200,000 bond issue, which was assumed from the Pennsylvania, and the office building of the Scranton Water and Hyde Park Gas was pledged under the same \$9,000,000 in order to take the cash down from the trustee that had been deposited with him under the \$9,200,000 bond issue.

Q. Is that the \$10,666,000 we are talking about?

A. No sir, the first one is a new issue, \$11,000,000. The mortgage was placed upon the physical property of the Scranton Gas and Water Company and the former Hyde Park Gas properties, but it excluded the office building, and also the Consolidated and the Olyphant properties. Now, these excluded properties were placed under the \$9,200,000 bond issue—assumed from the Pennsylvania Water Service Company.

Q. Does that represent the \$10,666,300

A. Yes sir. They excluded certain properties there. There were four companies all involved in this division. Under this \$11,000,000 they put in the physical property of the Scranton Gas and Water Company and the former Hyde Park Gas Company and excluded an office building which they had there. In addition to that, they had left the Olyphant and Consolidated companies, which, together with the office building, were put under the \$9,200,000 bond issue.

BY MR. WALKER:

Q. Do you have any other comments to make on Journal Entries 1 and 2 in your Exhibit No. 143

A. No.

Q. Will you take Journal Entry No. 3 and explain that?

A. You have seen write-ups as the result of appraisal, write-ups as the result of the purchase price paid for by a company buying its own property, but this is still another plan. In this entry they record the plant and property account as \$25,232,783.53, and the depreciation reserve as \$1,330,170.00, or a net amount of \$23,902,613.53. Now, this \$25,232,783.53 was arrived at as follows.

Purchase of Spring Brook Water Supply Company common stock by Federal of 100,000 @ \$150 a share .....	\$15,000,000.00
Expense in connection with above purchases ....	322,613.53
Indebtedness assumed:	
Spring Brook Water Supply Co. 5's .....	7,800,000.00
North Mountain Water Company 5's .....	780,000.00
Depreciation reserves assumed .....	1,330,170.00
Total .....	\$25,232,783.53

We have the element of cost of the common stock, but we have also the additional element of indebtedness assumed by this company, including the depreciation reserve. If one company owns a plant valued at \$10,000,000, having a \$5,000,000 bond issue against this plant, and \$5,000,000 in common stock, and another company wants to buy this plant and they pay \$5,000,000 for the common stock and assume the bond issue of \$5,000,000, you could arrive at the plant valuation by adding the purchase price of the common stock and the bond issue, and get a total valuation of \$10,000,000. In other words, the value of the plant did not change, as the common stock was purchased for the same price as it was carried on the original company's books. However, here the stock cost over \$5,000,000 more than the par value, and this par value included two stock dividends of \$2,500,000 each, one of which was declared in 1920 and the other in 1926. Now, with this information in mind—

MR. TURNER: I thought I saw what you were getting to, but I don't see because of the space of time that elapsed between the two stock dividends. All right, I get it now.

MR. KEADY: The stock they purchased at a par value of \$10,000,000 but they paid \$15,000,000. That included two stock dividends. In other words, there was \$5,000,000 represented in money in that \$10,000,000 of par value, because the other five million dollars was given to the stockholders as stock dividends. It was taken out of surplus, one in 1920 and the other in 1926.

MR. TURNER: What would be wrong with that? That was all in the stock.

MR. KEADY: They paid \$15,000,000 for that stock.

MR. TURNER: I understand they paid \$5,000,000 more, but why the criticism of it?

MR. KEADY: I wanted to let you know what was included in this par value.

MR. TURNER: If it came out of the reserve, it was money just the same.

MR. KEADY: There was nothing wrong with the stock dividend, but what I want to bring out is how much of that the stockholders had actually put in there. In other words, there is a profit there of \$10,000,000 including what they put in and what the Federal paid for it when they got control.

MR. RHODES: Would not that \$5,000,00 represent what was put in by the rate-payers?

MR. KEADY: Certainly. The rate-payers put it in and it was taken out in the way of stock dividends. Now with this information in mind let us go back and see what the book value of the fixed assets of this company were at March 31st, 1928. The annual report shows that these assets were valued at \$19,716,071.43. This Journal Entry shows a net valuation of \$23,902,613.53 or a write-up of \$4,186,542.10. Could this plant serve the people in this community any better on the morning of April 1st, 1928, than it could on the night of March 31st, 1928? There is approximately \$4,000,000 increase in value here in this short space of time according to the records. This appreciation in this instance is the result of the price Federal had to pay to get control, and I do not see how the Public Service Commission was justified in allowing this merger after

reviewing these facts, as the people in these communities are the ones who are and will, according to the present line-up, shoulder these additional values.

MR. WALKER: In these mergers, is it not customary and do not the companies state that as a result of these mergers there would be economies and savings to the consumer?

MR. KEADY: These companies were to get the benefit of the expert advice and experience of the holding company. It would result in substantial reduction in operating cost.

Q. Did they get the reduction?

Q. Did they get that?

MR. TURNER: They got a lot of experience.

THE WITNESS: The answer is the present rate case.

MR. RHODES: The holding company showed them some new methods of financing.

THE WITNESS: And another important phase in connection with the contention with reference to the holding company's management of these companies, as brought out in the rate case testimony, is that the Federal Water gets 3% of the gross income as management fees from this company.

BY MR. COOKE:

Q. 3%?

A. 3% of the gross revenue as management fees of all these companies.

BY MR. TURNER:

Q. What is the gross revenue?

A. I don't have the figures here.

Q. I thought you did.

MR. COOKE: P. R. T. only got 2%.

MR. WALKER: Bigger and better management fees.

THE WITNESS: The balance of these journal entries covers mostly the issue of the new securities, and these have already been discussed in connection with the explanation of the journal entries Nos. 1 and 2, and the purchase money obligation shown as the last item on these sheets. I will add another explanation of journal entry No. 9. In my outline or this merger I stated that Federal paid \$34,000 for the old common stock of Dunmore. This old common stock is being exchanged in journal entry No. 9 for new common stock, and you will notice in journal entry No. 3 that \$34,000 is being paid to Pennsylvania, and they also receive 99,600 shares of common stock of this company. Now, this \$34,000, is to be paid to Federal for 3,400 shares of stock, giving Pennsylvania the entire outstanding common of 100,000 shares, and Federal gets back their \$34,000.

BY MR. WALKER:

Q. Now, Mr. Keady, did you also prepare an exhibit showing the Federal Water Service transaction?

A. Yes.

Federal Water Service transactions, produced and marked Exhibit No. 144.

BY MR. WALKER:

Q. I show you these mimeographed sheets, marked Exhibit No. 144, and ask you if that is the exhibit that you prepared?

A. Yes.

Q. Will you just take Exhibit 144, please, Mr. Keady, and explain the various columns, starting with the first column on the left.

A. Before we go into the explanation of this here, and while all of these other remarks are still fresh in our minds, I would like to call attention to Federal's net investment as shown on this exhibit, it is on page 4 of the exhibit, \$11,614,436, for which they now own through Pennsylvania \$6,000,000 of preferred stock, which approximately owns the \$6,000,000 of Pennsylvania's own preferred stock, which was sold to the public in 1929, and they own all the common stock of this company, having a stated value of \$5,000,000 from Pennsylvania. Now, the dividends they received in 1928 and 1929 are shown on this exhibit, and in 1928—

Q. What page?

A. Page No. 4. The rate of return on the stated value is 14.89%, and in 1928 it is 17%.

BY MR. TURNER:

Q. There is a difference there between 14.89 and 17, is that right?

A. The amount of dividend in 1928 was \$744,738.37, and in 1929 it was \$850,000. In the photostat which was introduced on Friday night Federal received \$14,369 from the sale of securities of Pennsylvania back in 1927, and which according to this photostat went to reduce Federal's investment in these properties. Now, it may be contended that there probably would be some basis for such a contention, that this \$14,369 should be applied as a reduction against all of the properties, and therefore I want to go on record and give my reason for handling it the way it is shown on this exhibit. You will notice on this exhibit there is originally an investment of Federal in Springbrook Water Supply Company of \$15,317,136. Now, from that is deducted—

Q. What page is that on?

A. On page 2. On page 3 there is \$14,369, deducted from that amount, and these are my reasons for deducting it from the investment in the Scranton-Springbrook Water Service Company, rather than applying it over all of the companies. This amount of money represents the proceeds from the sale of Pennsylvania's bonds, having a par value of \$19,200,000, and Pennsylvania's preferred stock having a par value of \$6,000,000, and inasmuch as these bonds are eventually assumed by Springbrook Water Service Company and Pennsylvania receives this company's preferred stock for a par value of \$6,000,000, therefore the final stopping place of this transaction is in the Scranton-Springbrook Water Service Company, and was therefore considered as a reduction of Federal's investment in this company.

BY MR. WALKER:

Q. Just a minute, Mr. Keady. When you say this amount of money, which amount are you referring to?

A. This \$14,369,000. Now, on the next page there is \$10,666,300 added back to Federal's investment in the Scranton-Springbrook Water Service Company.

The \$10,666,300.00 added back to Federal's investment although Federal paid this money to release non-contiguous properties, this money eventually went into Scranton Springbrook when they put up their own property as security for the mortgage of \$9,200,000.00, therefore this amount was considered as an addition to Federal's investment in this company.

This exhibit shows what Federal put in, what Federal took out and what is left. In two instances you will note that they took out more than they put in.

BY MR. WALKER:

Q. Perhaps you had better explain the column, so that the Committee will understand.

A. The first column shows the name of the various water companies that are included in this group.

The second column is the investment of the Federal Water Service Company in the Pennsylvania Water Service Company, representing the cost of acquiring properties, less subsequent receipts and additional payments. Before reorganization and refinancing of March 19, 1928. These costs are shown on the photostat which was submitted on Friday as an exhibit.

Column three is the cash and cash value of the securities received by Federal Water Service Corporation in the refinancing of March 19, 1928, exclusive of the stated value of the common stock left in the company.

The next column is the net investment of Federal Water Service Company or corporation after refinancing.

The next column is the stated value of the common stock of the respective companies held by Federal Water Service Company.

The next two columns cover the dividends paid; the first column representing the amount received during 1928 and the next column the amount received in 1929, and the next two columns cover the per cent. of return by way of dividends, based on the stated value of the common stock during 1928, 1929.

Q. And these columns you are reading from are from exhibit 144, are they not?

A. Yes sir.

Q. All right, go ahead?

A. Now, the two companies in which the Federal Water Service Company got out more than they actually invested are marked with a number mark there (indicating).

The first one on the sheet is the Clear Springs Water Company. The amount taken out in excess of the investment was

\$178,518.25; and on page 2, the Climers Water Service Company, they got out \$40,721.50 more than they put in, and in both these companies they still own one hundred per cent. of the common stock.

Q. In order to get this money out, they still hold the stock, but who supplied the money that enabled the Federal Water Company to do this?

A. The public supplied the difference through the purchase of bonds and the preferred stock.

Q. And this would be another instance where the public was holding the bag and the Federal holding the companies; is that right?

A. Absolutely.

MR. TURNER: A water bag.

MR. COOKE: A water bottle.

THE WITNESS: In this particular group; that is, the first group here (indicating), the companies, excluding the Scranton Spring Brook Water Service Company, the Federal's original investment was \$8,563,031.72. This was reduced to \$1,003,750, and their control was and still is one hundred per cent.

Q. And was all the information regarding this set up in the Public Service Commission files?

A. Everything with the exception of what Federal paid to acquire these properties, and that was secured from the bureau of securities, and the information was submitted on the photostat which was introduced as an exhibit.

BY MR. TURNER:

Q. This is what I have been wondering about, in reference to these securities, and this has happened two or three times in these cases—where do they come into the picture on the issuance of these securities?

A. Well—

Q. Every time I have been before the securities bureau, I have had an awful time. It may be my companies were not big enough.

A. Well, in the next exhibit that will be explained. The net investment was \$1,543,571.22.

BY MR. WALKER:

Q. And that figure is given in the place of the \$1,300,750.

A. The \$1,300,750, which represents the stated value of the common stocks of the respective companies.

Q. And all of these figures you have given us so far were available to the Commission, were they not?

A. Yes; with the exception of the cost of acquiring the properties.

Q. And that was in the files of the bureau of securities, was it not?

A. Yes.

Q. And those files were available to the Accountants of the Commission, were they not?

A. I imagine they would be. I don't see why they shouldn't be. If they would call up on the telephone, I am pretty certain they would get the information.

BY MR. TURNER:

Q. Can you tell us whether in this particular case the securities bureau had any control?

A. This next exhibit, I think, Mr. Turner, will explain why the bureau of securities were put out of action in connection with the issuance of these securities.

MR. TURNER: All right.

MR. WALKER: Mr. Turner, in reference to that question, I don't know what the practice is, but I think it will be interesting to the Committee to have somebody from the bureau to tell us what the practice is.

MR. TURNER: Not the practice; but the law.

MR. COOKE: Yes. Hasn't it been testified here that the cases that come under the Public Service Commission are laid off somewhere?

MR. WALKER: Mr. Evans, I think made the statement that where the question came before the Public Service Commission, they just accepted the statement.

MR. COOKE: In other words, the securities bureau was depending on the Commission?

MR. WALKER: That is what we understand.

MR. BOWERS: I had a case before the securities bureau and they depended on the Commission.

MR. TURNER: I think we had better amend our resolution so as to investigate the Public Securities Bureau.

(Paper entitled "Federal Water Service Transactions" marked exhibit 145)

Q. Mr. Keady, I now show you here a mimeograph sheet No. 145, and ask you if that is a further exhibit you prepared of the Federal Water service transaction?

A. Yes sir.

Q. Would you take this Exhibit and explain the different columns to the Committee?

A. This exhibit covers the same companies that were also shown on the previous exhibit. The first column, covers the fixed capital assets, not of depreciation December 31, 1928, including the write-up. The second column is the net amount of the write-up. The third column is the fixed capital assets, not of depreciation, exclusive of the write-up. The column after that is the total bonds and preferred stock issued by these respective companies, and the last column is the percentage of the write-up.

Now, the important column of this exhibit is the total bonds and preferred stock issued by those companies. Take the first case, the Clear Springs Water Service Company. The amount of the preferred stock and bonds after refinancing was \$870,000. The fixed capital assets before the write-up was only \$665,-563.52. In other words, without these write-ups, these companies would never get by the Bureau of Securities. Now the Public Service Commission has jurisdiction over the write-ups.

Q. Did they check these and approve them?

A. In connection with the certificates of notification, there was a summary appraisal submitted by these various companies, showing in summary form the amounts, broken down of the various descriptive headings of fixed capital assets. It would be impossible to make any check of these write-ups from that summary sheet that was submitted with the certificates of notification.

BY MR. COOKE:

Q. Were the names of the valuation engineers who made these various valuations in there.

A. No sir.

BY MR. WALKER:

Q. Were there any marks upon the appraisals to show how they arrived at these figures?

A. No sir, there are no marks which would indicate that the appraisals were ever checked, of course, whenever you take into consideration that the Scranton Springbrook Company, although their write-up is different from the rest of them, you know of your own knowledge that it would be impossible to check the appraisals or make any test of the appraisals in the space of time during which the application or the certificate of notification was presented to the Public Service Commission, and up to the time that the securities were actually issued.

BY MR. COOKE:

Q. Is that a matter of weeks.

A. Some of these companies submitted original certificate of notification in January, 1928—I think the latter part of January—January 7th—there was some of the companies submitted.

Now, the appraisals were not submitted at that time. There was a letter written to the companies of March 1st, or February 1st, I don't recall which, requesting these various appraisals, and the securities were issued on March 15th, 1928—the most of them.

BY MR. HAGMAIER:

Q. Were they allowed to write-up before they received the reports from the engineers.

A. Apparently they did. It is still on the books of the Company, according to the annual reports.

BY MR. WALKER:

Q. Do these summary appraisals show in detail the various amounts.

A. No details whatever. There was no price, unit of price, or anything else, that would enable anybody to make a check of the appraisals. Unless the Public Service Commission had previous work papers on all of these companies, the appraisals could not have been checked from these summary sheets.

In connection with these appraisals, I want to read from Volume 8 Public Service Commission decisions, in respect to the Pennsylvania Water Service Company, a decision in which the Commission disapproved of the applications at that time.

Q. What time is that?

A. September 15, 1927. This was the original set up of the Pennsylvania Water Service Company. I want to read a paragraph in here in connection with these write-ups, which were being brought on the books at that time, in the original set up:

"The Commission cannot, without reserve, accept estimates of value as a basis upon which to issue securities. The law contemplates that the books and accounts of a utility shall accurately represent the several elements of cost in the development of its property, and where for any reason such actual information is not revealed in the books, the practice of the Commission provides means for establishing estimates of original or historical cost.

Engineering estimates are at times too variable, and some of them are based upon too many theories of valuation (particularly in reference to "intangible elements") that are not recognized as proper or reasonable under the Public Service Company Law, to be accepted without check, confirmation, or revision by the Commission. Furthermore, it must be obvious that high estimates of value made in periods of inflation or of abnormal or peak prices, afford very unstable bases for security issues. Such securities would be subject to violent fluctuation and depression; not only would the investing public but also the utilities themselves and their rate-payers inevitably suffer from such instability."

MR. TURNER: It sounds like a very sound theory.

MR. HAGMAIER: They did not practice what they preached, however.

BY MR. WALKER:

Q. Were these ideas carried out? Did any one of these various set-ups appearing here now?

A. These were the same companies that I am noting here that were included in this original set-up and this is one of the reasons the Public Service Commission gave for disapproving.

BY MR. TURNER:

Q. Does it show who wrote that opinion? So it is clear on the record, that is the decision they handed down in regard to the merger of these companies?

A. Yes sir, that is right; the only other companies that are included in the subsequent set-up are the Scranton division of the Scranton-Spring Brook Water Company. At that time they didn't have control and my testimony showed you that they secured control of that division in this merger application which we discussed tonight.

Q. What was the date of filing this second merger which included the Scranton group?

MR. TURNER: The Commission had no control of the Federal issuance of securities?

A. The Federal securities are not involved. I don't have the date the application was filed, but I can get it. The numbers are 18029 to 18033, inclusive, and the report of the Commission approving the application is dated February 21st, 1928.

MR. WALKER: Within about six months after refusing the merger they turned around and granted practically the same thing?

A. Yes sir.

Q. And were practically the same conditions existing then that existed before?

A. The only difference was that these properties did not include the blanket mortgage that was placed on the other properties. In other words, each company was set up as a separate company. The Commission also objected to that, and that is the only difference that I could find in the subsequent line-up.

MR. HAGMAIER: Then practically in 1927 they refused the proposition and in 1928 they did that which they said they would not do before?

MR. TURNER: It would seem to me to be very valuable if we could find out the reason of the Commission for granting the application in 1928 and their reasons for the refusal in 1929.

MR. KEADY: The reason as given for refusing in 1927 and the companies turned around and made a new set-up containing the same elements including the Scranton division, and the Commission granted the merger in February, 1928, after refusing it in September, 1927.

MR. TURNER: Q. Have you that decision there?

A. This decision here covers only the Scranton-Spring Brook merger. The only companies, there was no reason for

filing application because the company was just being refinanced. There was no merger involved but certificates of notification in connection with this refinancing were filed with the Public Service Commission.

MR. TURNER: Q. Did the Commission have jurisdiction or anything to do with this refinancing in 1928?

A. The certificates could not be issued without the writeups. I think that exhibit covers that very plainly, the fixed value of the capital assets would not sustain the additional securities.

Q. Would there not be some report from the Commission on that?

A. The certificate of notification they submitted to the Commission and apparently they didn't object to it because the refinancing went through.

Q. That is what I want to know, whether they sanctioned it or refused it, or whether they didn't know anything about it?

FATHER COX: He wants to know if they gave as beautiful reason for doing it as they gave for refusing it.

MR. TURNER: That is right. I think it is very important because it seems to me very vital to these questions we have here.

MR. WALKER: I think when the Commission appears before the Committee they should be given an opportunity to explain the two distinctions.

MR. MOORE: Also add to it, whether the same commissioner heard both cases.

MR. HAGMAIER: Mr. Walker, make a note of that so we are sure it comes up.

MR. KEADY: The Commission I contend cannot pass the buck in connection with the issuance of these securities to the Bureau of Securities without proving conclusively that these values are proper and doesn't it seem strange that all these properties that were so ably managed should have these remarkable changes in their values just at the time that the Federal wanted to get their money out.

BY FATHER COX:

Q. How do you figure the mess is going to be untangled?

MR. WALKER: I don't think that is a fair question to ask Mr. Keady.

R. HUSSELMAN recalled.

BY MR. WALKER:

Q. You have been sworn in this case, have you not?

A. Yes.

Q. Have you made an investigation of the records and files of the Public Service Commission with respect to the rate case of the Borough of Clearfield versus the Clearfield Water Company?

A. Yes.

Q. Will you please give a brief outline of this case to the Committee?

A. Yes. The Clearfield Water Company filed new rates effective August 21, 1926, which became effective October 1, 1926. Complaints were filed September 17, 1926, and the burden of sustaining them was on the company. The hearings were held in the early part of 1927; the case was argued on October 10, 1927, and decided January 23, 1928. I selected this case for the reason that it is a clean cut rate case involving a company that is locally owned, no holding company connections, no management corporation involved, and no writeups in the capital account of the company.

BY MR. RHODES:

Q. Would you not call that a rather exceptional case?

A. No sir.

Q. I just want to know whether it is typical or whether it is exceptional?

A. It is typical up until the last year or two, before the mergers.

Q. Up until the holding companies came into the picture?

A. Yes.

BY MR. WALKER:

Q. Now, will you give a brief financial history of this company?

A. The company was organized in 1882 with an original capital consisting of 1,500 shares, with a par value of \$20, or a total of \$30,000. The plant was put in operation in January of 1883. At the time of the investigation there were outstanding

17,400 shares with a par value of \$348,000. Evidently 2,800 shares, or \$56,000 of this capital stock was issued in stock dividends, leaving \$292,000 paid in by stockholders, and there was no funded debt, nor other outstanding capitalization. Compared with this capitalization the company's books showed an investment of \$397,133, which included some non-used property. They laid a pipe line in 1927, during the progress of the case, which brought the investment up to \$403,133, which included \$22,183 of property which was not used or useful, and leaving \$380,950 as the original or book cost of the property. This was determined by the Bureau of Engineering, which added to that figure \$3,000 for working capital, giving a total of \$383,950. The books of this company showed \$403,133—\$403,600, and as I stated before, the outstanding capitalization was \$348,000. The books showed a surplus of \$22,000, which was invested in property, or a total of \$370,000, of which \$292,000 was paid in by the stockholders, and \$33,345 of the depreciation reserve was also invested in the property, which makes up the total of \$403,000. Now, this company paid dividends in the first year of its operation, and in each year from 1883 down to the time of this investigation, a total of dividends paid of \$497,087. Those were the cash dividends. The consumers of this company contributed those dividends, the depreciation reserve and the surplus, and \$56,000, which was paid in the form of stock dividends. The total they contributed in addition to the cash dividends was \$111,345, or the consumers paid a total of \$608,432 in that period of the \$292,000 paid into this company by the stockholders.

BY MR. TURNER:

Q. What rate of dividend did they pay?

A. Anywhere from 6 to 10 per cent, varying with different years. The company made some additions to its fixed property in 1926, about the time it started this rate case, which cost about \$55,000, and by these additions increased the number of customers from 2,482 to 2,744, and borrowed money on temporary notes, but notwithstanding paid dividends throughout the entire period. In the year 1924 the company increased the general officers' salaries and expenses from \$5,878 in 1923 to \$9,157 in 1925, and \$9,410 in 1926. This was about the time the rates were increased. Also just prior to the increased rate schedule, there was a big jump in the maintenance of the distribution system, which was increased from \$903 in 1923 to \$1,715 in 1924, and \$3,988 in 1926, which was the year that the increase in rates was filed. After the rate case was decided the minimum charges were dropped back to the level that prevailed prior to the bringing of the rate case.

BY MR. WALKER:

Q. How was the presentation of this case to the Commission handled?

A. This case was presented to the Commission in a very thorough manner by both the company and the complainants. The appraisal of the property for the company was made by the firm of Morris Knowles, represented by Mr. Jacobs.

BY MR. COOKE:

Q. That is, Morris Knowles, Inc., of Pittsburgh?

A. Yes, they were represented by Mr. Jacobs who had two or three assistants, but he did the testifying. The complainants employed two engineering experts, who also made appraisals on the basis of cost of reproduction new, and cost less depreciation. The principal of those witnesses was John M. Rice, and the record shows that Mr. Rice was engaged in engineering work 15 years or more before Mr. Jacobs was graduated from college—and that he had fifteen years, at least, of practical experience in the designing and constructing of dams and reservoirs and other similar engineering works. The complainant—

BY MR. TURNER:

Q. Do you mean to note by that that Mr. Rice was better qualified than Mr. Jacobs?

A. I say that to indicate as the basis of something that I expect to say later. I think, probably, that Mr. Jacobs was qualified, but not to the extent by experience and training, that Mr. Rice was qualified, because of his long years of experience in the actual design and construction of that class of work, which in this case he was employed to appraise. I am not casting any aspersions, however, on Mr. Jacobs or the firm of Morris Knowles, Inc.

MR. TURNER: I just wanted to know, because the attorney general of Pennsylvania was graduated from law school after I was.

THE WITNESS: Being an engineer, I cannot criticize either of them, but I am just merely saying what the record states as to their experience.

The complainant also employed an engineer, Mr. Kendig, and the records show that he and his associate had been acting as engineers for the borough of Clearfield for many years, and his experience also included the construction of dams, pipe lines and sewers in the territory involved in this case.

The companies' engineers in this case showed a reproduction cost new including all over head and intangibles that is, including going costs of \$67,000 and cost of obtaining money of \$17,000; in the total sum of \$925,476, and \$803,378, as the cost of this property depreciated.

The engineers for the complainant showed a cost of reproduction new of \$583,576, as compared with \$925,476, and \$413,344 depreciated, as compared with \$803,000, just about half.

BY MR. WALKER:

Q. What did the Commission's engineers show?

A. This work of analyzing the record and the exhibits are assigned to Engineer Parmley of the Public Service Commission. The report shows that he and Mr. Curry, and an assistant engineer of the Commission's office—

BY MR. COOKE:

Q. Is Parmley the water engineer? What was his title?

A. Just Engineer, so far as I know. I don't know what his specialty is.

MR. WALKER: I think, if I recall Dr. Snow's testimony correctly, he stated that Mr. Curry was one of their engineers. I don't recall Mr. Parmley.

MR. TURNER: Is he the mysterious man that Father Cox has been talking about?

FATHER COX: No; you will hear about him later.

THE WITNESS: I never met either of these engineers; no, I don't know, Mr. Cooke. They made up the figures of the cost of reproduction new, and these two engineers first drafted the Commission's order or opinion in the case.

BY MR. WALKER:

Q. What valuation did they place on the property?

A. They found, on their first effort, a reproduction cost new of \$842,443, and \$751,492 for that element depreciated. Their figure of cost new is 91% of the company's and almost one and one-half times that of the complainant's. For the depreciation amount the Commission's engineers figure is 94% of the company's and one and three-quarter times the complainant's.

A few of the details where the methods used by these engineers show up is in the item of two reservoirs. The company claimed \$189,600, and \$178,170 depreciated. The complainant's engineers, who were as I pointed out, experienced in this class of work, claimed \$115,300, and \$97,000 as the depreciated figures. The Commission's engineers allowed \$165,265, cost and \$161,695 depreciated.

The Commission's report states that "The Bureau accepts respondent's unit prices as reasonable," and then makes a deduction of \$24,370 for a quantity of embankment. In other words, they took the unit prices used by the respondent's engineers in the face of the unit prices submitted by Messrs. Rice and Kendig, who were engaged in that work in the vicinity at the time. On one large item of supply line, totaling \$124,000, the Commission used the company's identical cost figure, and approximately the same figures for the depreciation; their allowance in this instance exceeded the complainant's by \$41,000.

The largest item of property was the distribution system, for which the company claimed \$258,000 cost and \$211,800 depreciated. The complainants' engineers claimed \$210,000 cost and \$134,200 depreciated. The Commission's engineers allowed \$255,476 cost and \$221,052 depreciated, or \$9,200 more than the company claimed. In other words they increased the complainants' figure by \$86,000.

BY MR. COOKE:

Q. Have you any explanation of that?

A. Have I any explanation?

Q. Well, was there any made?

A. No sir.

BY MR. RHODES:

Q. Was that before the intangibles were allowed?

A. It was before the intangibles. That was just the physical items of the property without over heads and intangibles.

The cost figures on that property were company engineers \$729,476; complainants' \$512,860; and Commission's \$642,715.

The books of the company do not show any overhead costs had been incurred, but the company added to the physical property figure \$108,000 for overhead; complainants' added \$46,316; and the Commission added \$104,768; almost as large in dollars in their lesser value as the company claimed.

For a going cost the company claimed \$67,000; the complainants, for some reason conceded \$17,400; and the Commission's engineers allowed \$60,000, regardless of the fact that no such item appeared on the books as a cost, that any such item had ever been incurred. The same is true of the cost of obtaining money, which the company claimed, in the amount of \$17,000. The complainant though conceded \$5,000, and the commission engineers allowed \$15,500. The company claimed \$4,000 for working capital. The complainants claimed \$2,000. The Commission split the difference at \$5,000. The Company claimed \$7,000 for materials and supplies, and the complainants \$5,000. The engineers of the Commission allowed \$7,000 claimed by the company.

Q. What have you to say in respect to the work of the Commission engineers.

A. In my opinion, the Commission engineers in this case went a long way to find a high value of this property. I believe this reflects the attitude and the policies of the chief of the bureau of engineering, Dr. Snow, who has been chief of that bureau for a great many years.

BY FATHER COX:

Q. Did the Commission engineers make a thorough investigation in this case, or was it just one of their flying visits, and then accept the reports of the engineers of the company.

A. In the Clearfield case?

Q. Yes.

A. They didn't make an inventory and appraisal of the property at all. These are figures that they compiled from the testimony, submitted by the engineers of the complainants and the respondent. These engineers did not make any inventory and appraisal of this property, but this work was done in drafting the opinion and order of the Commission.

BY MR. RHODES:

Q. Do you have any reason for coming to the conclusion relative to Dr. Snow's attitude.

A. Yes sir, I have. I have known Dr. Snow,—I have worked for him on committees; I have examined more of the records of the Public Service Commission than there are incorporated in this Clearfield Water case, which I hope to explain later, and I have a very definite opinion with respect to Dr. Snow's policies and theories with respect to the valuation of a public utility property.

Q. That opinion has been formed by virtue of your contact and association with him.

A. It has been formed out of that, and partly out of the results that have been secured out of the Bureau of Engineering of the Public Service Commission.

Q. Has this attitude been reflected in these various cases you have examined?

A. Yes sir.

Q. What is his attitude on this?

A. His attitude in my opinion, is that he is merely theoretical; that he is very technical, that he has drafted the element of value,—so called value,—or purported value, that is coming in before this Commission, in order to secure large valuations for utility properties.

Q. You think that he has a propensity for creating large values in these cases?

A. I do, in this case,—in the cases that I have been connected with, and in the cases that I have examined.

Q. Do you think there is any other reason for his inclination along that line, other than his frame of mind, which is technical.

A. No, I do not.

Q. You think that this inclination is due to his mental make-up?

A. Probably his mental make-up and his training. I don't know.—I cannot answer what causes that. It may be his experience.

Q. The examination of these cases indicates to you that Dr. Snow is very technical to allow every possible claim in connection with these rate cases.

A. It strikes me that way.

MR. RHODES: Q. That figures the case with the benefits to the company?

A. It does.

BY FATHER COX:

Q. It affects a great many other people the same way, not only in Harrisburg but throughout the State?

A. I cannot speak of how it affects other people.

BY MR. COOKE:

Q. Take the element there of this reservoir, how far apart on actual cost would you expect engineers who were right-minded to be? What would be the percentage of difference that you would expect in ordinary engineering judgment?

A. On a thing of that kind I would not expect over 5%.

Q. You were one of the engineers back in 1916 that valued the Philadelphia Electric Company, am I right?

A. That is right.

Q. You represented the complainants?

A. Yes sir.

Q. And you joined the representatives of the company in planning a unanimous report?

A. On the actual cost of that property.

MR. HAGMAIER: Q. The Commission engineers are higher than the Morris-Knowles all the way through?

A. No sir. They were in a couple of items.

BY MR. RHODES:

Q. But they were not in the aggregate?

A. No sir.

BY MR. COOKE:

Q. They were about 90%.

A. 94%.

Q. What overheads could there be, and what intangibles could there be in building a reservoir?

A. This thing, Mr. Cooke and gentlemen of the Committee, we have not got the intangibles and overhead yet except what they call the structural overhead, such as compensation insurance and expediting the structure, but we have not come yet to all the overhead and intangibles that are added on to this.

Q. You mean there is more to this story?

A. A little more. We are simply talking about the things that go to make up the actual physical construction of a reservoir, such as the excavation and the concrete, and on that phase I would not expect anybody to differ very widely. Any right-minded engineers who wanted to get themselves to agree on the facts of a piece of work as far as the actual concerned, they could agree on that, but when it comes to the application of overhead in construction, it is a new theory. Then the difference comes. I made in 1913 an appraisal of all of the properties in the city of New Orleans in conjunction with the engineers of the companies, and we agreed all of the way through on some thirty-four million dollars worth of property so far as the physical property was concerned, but we could not agree on some of the overhead, and I have done the same thing in Toledo, Ohio, and in Elmira, New York, and in other places. I am discussing the going value and intangibles.

In this appraisal they have an item of going costs. I am frank to admit that in more than a good many years of practice as an engineer I do not yet know what going cost is. I know what going value is purported to be but I don't know what going cost is.

MR. MOORE: That is an intangible?

MR. HUSSELMAN: That is an intangible. I know what going value is purported to be but I don't know where you can get the going cost. They have called it sometimes in the Commission "the cost to get going" but when you analyze the operating expenses of any utility the cost of developing the business has been charged to operating expenses as the years go on.

When you make an inventory for rate making purposes, you go out and appraise the property and inventory it as it is,

every meter and service connection every customer connected up ready to do business. There is some element of value in some properties over and above their cost and when you make an appraisal to include every item of property going to make up that property the engineering and the cost of organization and administration to build that property up to the very day that it will go into operation, all this is theoretical and hypothetical.

BY MR. COOKE:

Q. Your theory is that the physical value includes going cost?

A. Yes. If you are operating on this reproduction cost new theory when you make an appraisal you include everything in there because you cannot go and put a meter in a man's house unless you have an application and a contract with him and that has to be included in the cost of organization.

However the company in this case claimed \$67,000 going cost and the Commission allowed them \$60,000. These gentlemen, Mr. Parmley and Mr. Curry, allowed \$60,000 in their set up. The complainants stated \$17,000 for going cost, but the counsel or attorney for the complainants argued in his brief that there their evidence didn't support any allowance whatsoever.

BY MR. WALKER:

Q. Did you find anything new and startling in the way of rules for the ascertainment for fair value in the engineers notes in this case?

A. Yes I did. Engineer Parmley's report I find the formula by which the fair value is determined. The formula is as follows: "Fair value. From the foregoing the bureau suggests the fair value of \$628,978 derived by using the bureau estimate of fair book cost figure of \$383,950.03, and the reproduction new less accrued depreciation figure of \$751,491.54 and giving double weight to the latter." That seems that they took the reproduction new figure less accrued depreciation that they found and made in the way I have explained, and multiplied that by two and added the book figure and dividing the answer by three that gives the identical figure that they suggest as the fair value of the property.

BY MR. COOKE:

Q. Is there any legal, economic explanation of that on an engineering basis?

A. Don't make me laugh.

BY MR. BOWERS:

Q. Those engineers have graduated from college since you have?

A. Well, I think I have read pretty nearly all the decisions of the Courts, and I never found any rule, and I was never so surprised at anything in my life as when I found that rule for the ascertaining of fair value. Now, I took it up in some of these other cases that I have investigated here, and I assure you in the Springbrook Water Case they did not use that rule, because it would have brought a very much lower figure than the \$43,600,000 they found in that case.

BY MR. COOKE:

Q. Did you find any other cases where they used this ingenious rule?

A. I have not been able to find any, but I did not investigate so many simple cases.

In this report of Mr. Parmley's, he discusses the cost of cast iron pipe, which was rather high at the time this rate case was filed. He said in this connection, "If consideration be given to the decrease in the price of cast iron pipe since date of inventory and appraisal, October 1, 1926, and October 1, 1927, there would be a reduction of about \$144,600 in the reproduction cost new figures—decreasing the Bureau's figures by this amount—a figure of \$697,581.69 is obtained, which is comparable to \$751,491.54, figure shown in tables." That I referred to above. Using this same rule for the determination of fair value, the amount would have been \$593,038. In other words, the cost of bare pipe actually decreased in that year \$44,600, and by the use of this rule the result was only \$35,940. It is interesting to note too in this connection that pipe was very much higher at the time this appraisal was made and this order issued in this case than it is at the present time, and for that reason the valuation established by the Commission at that time on this property is about 25% in excess of what it would be if

that property were appraised now, and that means a considerable amount for return and depreciation that must be paid, and is being paid at the present time by the consumers of water in this community due to the weight that was given to this cost of reproduction now under this appraisalment.

BY MR. WALKER:

Q. Did the engineers make any suggestions to the Commission?

A. Yes. This is quoted from the report of Engineer Parmley, "If, from the foregoing, the Commission finds that the new tariffs shall be sustained, the Bureau offers the following figures for basis of the Commission's findings, 'Fair Value, \$604,000; annual allowance for depreciation, \$6,200.'"

BY MR. COOKE:

Q. How do you suppose he figures the \$6,000 depreciation on a \$600,000 basis?

A. About 1%.

Q. What would you expect that to be?

A. I should think that would be about right, probably, if anything, a little bit low. Of course, this was a gravity system, and consisted largely of mains and reservoirs that are quite permanent. Also in order to show allowable revenue, for instance, the information given to the Commission at a rate of 7% would be \$42,280; operating expenses, \$13,215; taxes, \$7,800; annual depreciation allowance, \$6,200, a total of \$69,495, which amount is \$5 less than the respondent's anticipated annual revenue under the new tariffs.

On the valuation first determined the engineer found that the allowable earnings were \$1,905 in excess of the anticipated revenue from the new tariff. After he deducted for the difference in the cast iron pipe, he found earnings were \$839 less than the anticipated revenue. With his last effort after juggling, he got this worked down to \$5.

BY MR. TURNER:

Q. How are they going to make that up?

A. That was quite enough. It appears that the method used by the Commission's engineer was that they did quite a bit of juggling until they got the desired end.

BY MR. WALKER:

Q. Do you know who prepared the Commission's opinion?

A. In the files of the Commission requested by the Committee, I find the report of the Bureau of Engineering in the form of a proposed Commission report, with the sticker attached thereto, stating that the same was prepared by Messrs. Parmley and Curry. There were certain pencil memoranda on this report, one which is, "Corrected by Snow, January 17, 1927." Comparing this report with the final printed draft, I find that Dr. Snow changed the wording slightly in places without changing the meaning, and in other places that he cut and eliminated various paragraphs of description contained in this original report. He or someone also reduced the allowance for going concern value from \$60,000 to \$35,000, the basis for which does not appear.

In drafting this report the engineers evidently did not include the allowance for cost of obtaining money as made in their first setup, for they used the round figures, \$837,000 for cost new and \$740,000 depreciated. Dr. Snow's reduction of \$25,000 in going value brought these figures down to \$792,000 and \$717,000 respectively. Using the rule above set forth, of giving double weight to the cost of reproduction new after these changes, the answer would have become \$605,783. Since the sum of \$600,000 for the rate base was ample to sustain the rates filed by the company, this engineer's report, which when changed by Dr. Snow became the report and opinion of the Commission, found the fair value of respondent's property to be in the sum of \$600,000.

The final order of the Commission allowed 7 per cent return on that base, or \$42,000 annually. It allowed the company's claim for operating expenses and for taxes, which are set up in Engineer Parmley's first report, and increased his allowance for depreciation \$100.

BY MR. WALKER:

Q. What did the Commission do about the Company's expenses in this rate case?

A. The company made a claim of \$2,500 for amortization of the rate case expenses, but to have allowed this would have meant that the allowable revenues would have been increased and the rates increased; so that the Commission did not allow that; but in its operating expenses for the year the company increased or includes \$9,000 for general office salaries, and in 1928 this item jumped to \$11,012; and in 1929 to \$11,228, which just about makes up for the amortization of the rate case expenses.

In the years 1928, '29 and '30 the maintenance expenses decreased from those for the years 1925, '26 and '27, when the rate case was pending.

Q. What has been the result of operations in this company since this case was decided?

A. In 1928, under the new rates, the company paid all its operating expenses, including the increased general office salaries; set up the depreciation reserve; paid its taxes, including \$5,759 of income taxes, which is 1.65 per cent on the outstanding capital stock; paid 10 per cent in cash dividends, or \$38,280, and carried \$2854 to surplus.

In 1929, the company paid all its operating expenses and taxes; set up a depreciation reserve; paid 9 per cent cash dividends, or \$34,552, and carried \$5,171 to surplus.

In 1930, the company paid 8 per cent stock dividend on \$30,620 par, and 8 per cent cash dividend in the amount of \$31,236, and carried \$5,672 to surplus.

In other words, in 1930, it paid 16 per cent in stock and cash dividends, and carried a substantial amount to surplus. In the other years it paid 9 and 10 per cent dividends and carried a substantial amount to surplus.

Q. What, in your opinion, would have been a reasonable finding in this case.

A. I think, after a study of the records in this case, the appraisals and so forth, that a reasonable, fair value on this property would have been \$400,000. There was \$252,000 paid in. There was a record of dividends and so forth throughout the entire history of the property. The book figures show a cost of less than \$400,000, and it strikes me that a fair sum would have been \$400,000, and allowing taxes, the expenses and the depreciation and so forth. Seven per cent on that sum would have involved an increase of \$5,777 over the 1925 operating revenues. In other words, the company was entitled to an increase over the old rates, but I should say somewhere between five or six thousand dollars. The operating revenues in 1927, the first year when the new rates were effective, provided \$20,872 increase; and in 1928 \$22,675 of an increase.

I think the Commission, in justice to the company and in fairness to the company and to the consumers, could have in this case granted that company an increase of 5 or 6 or 7 or 7500 dollars, which would have been just and fair to the company and to the consumers at the same time.

Q. Does that case tend to show the importance of the engineering bureau of the Commission?

A. It certainly does; and so with other cases that I have investigated. The first drafts of the orders and opinions of the Commission in every case that I have investigated so far have been drafted in the engineering bureau of the Commission. The valuations and so forth of the property, in the first instance, have been set up in the engineering bureau, and in this case the opinion and order—the opinion of the Commission at least, was written by the engineering bureau as shown by the records on files.

MR. WALKER: Now, Mr. Chairman, Mr. Evans issued strict orders that I was not to abuse the Committee during his absence. We have one more case that we would like to take up, if the Committee is willing to hear it. It not, that is all we have for this evening.

THE CHAIRMAN: This hearing will stand adjourned until ten o'clock tomorrow morning.  
(Adjourned until Thursday, April 16, 1931, at ten o'clock A. M.)

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10.

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Thursday, April 16, 1931, at 10.00 o'clock A. M.

There were present:

Messrs. D. Glenn Moore, Chairman  
Bart Richards  
Chester H. Rhodes  
Martin Memolo  
Frank L. Bowers  
Ellwood J. Turner  
Louis W. Hagmaier  
Harry J. Crawford  
Rev. James R. Cox  
Morris L. Cooke  
Harold Evans, Esq.  
John M. Walker, Esq.

THE CHAIRMAN: Before the hearing is resumed, the Chair wishes to make this brief announcement.

The impression seems to have gone out that the utility side of this controversy would not be heard. In other words, that we were putting in the Public side and leaving them out in the cold. There is no intention of doing that, and announcement was made at the beginning that all sides would be heard. This is not a whitewash, absolutely a fair investigation. We followed what we considered was the most expeditious way of getting at the situation. We have an orderly program for putting in the complaints, and we have a program that will carry us through the next two weeks. Invitations have already gone out, or will be sent out to the heads of all the large utilities operating in this state, whose operations have been called in question, and they are invited to appear here in person or to appear by representative to answer any testimony that may be prejudicial to their own interests. They will be heard just as the public has been heard.

R. HUSSELMAN recalled.

BY MR. WALKER:

Q. Mr. Husselman, have you made any examination and study of the work of the Commission in connection with the Scranton Electric Rate Case?

A. Yes.

Q. What records have you examined?

A. I first examined the file and the motion of the Commission on March 11, 1930, making certain averments in complaint form and requiring the company to file its answer, the testimony taken in the case, the appraisals filed by the Company and the Commission's Bureau of Engineering, and the report of the Bureau of Accounts and Statistics. Afterwards I examined the reports, the annual reports filed by this company with the Public Service Commission. Later I was furnished with the field sheets, the working data, reports and papers in connection with this case, and have examined them.

Q. Will you give a brief description of the procedure in this case?

A. The Commission instituted a rate case on its own motion on March 11, 1930. It assigned its engineers and auditors the job of making reports on the property. The engineers began the field work on March 17, completed the same on May 10, and filed their report on June 30, 1930. The report of the Bureau of Accounts and Statistics was filed May 22, 1930. The first hearing was held by Commissioner Benn on July 15th, the second hearing by Commissioner Young on August 12, and the third and last hearing in August 26, 1930. The record consisted of 158 pages of transcript. The Commission called its engineer and its accountant as witnesses, and the company had five or six witnesses. On September 30, 1930, the company filed a further answer advising that it had filed a further answer advising that it had filed a new schedule of rates to take effect as of November 1, 1930, and in that answer averred that the new rates, "Will result in annual savings of over \$750,000 to the customers of the company, over half of which goes to the domestic consumers." These rates became effective as of November 1st, and without further hearing, on November 25th, 25 days after the new rate became effective, and before new bills were sent out under this new rate, the Commission adopted the following motion:

"It appearing from the records in Complaint Docket No. 8273, the Public Service Commission v. Scranton Electric Company, that since the filing of the inquiry and investigation by the Commission, and the hearings had thereon, the respondent filed a new tariff, being P. S. C. Pa. No. 9, becoming effective November 1, 1930, making reductions in estimated revenue of approximately \$750,000 and it further appearing that this

tariff has met with public approval and that no protests or complaints have been filed against the tariff and that the objections lodged against the old tariff have been met and satisfied, the Electric Rate Committee recommends that the inquiry and investigation instituted by the Commission at the above number be terminated and the record marked closed. The Commission may subsequently institute a new inquiry if the reports of the Company show that the new tariff will produce more than a fair rate of return or will result in any other features inequitable to the rate payers."

The above motion was presented by Commissioner Young, and is an excerpt from the minutes of an executive meeting of the Commission held in Harrisburg, November 25, 1930.

Q. Have you in the investigation of the records come across any reports or data indicating that the Commission, or any of its Bureaus, made any check upon the figure of \$750,000 which the Company gave as its estimate of the amount by which its revenue would be reduced annually under the revised schedule of rates?

A. No sir, I have found no such data.

Q. I will ask you whether it would have been possible for the Commission to have made an estimate of the amount of reduction that it would sustain by reason of these new rates?

A. Yes, it would have been possible to apply these new tariffs to the customer data for the preceding year and make an accurate estimate of the effect of those rates on the revenue of the company at the quantity of energy consumed in the preceding twelve months, or any other preceding period.

BY MR. COOKE:

Q. You would not expect that estimate to be accurate, within what per cent?

A. Well, on the preceding twelve months. It could be made accurate, wholly accurate.

Q. But what I am talking about, how accurate will that be as effective subsequent years?

A. Oh—

Q. That question has frequently come here.

A. That is something one cannot tell exactly, because a reduction in rates generally produces an increase in the consumption of electricity by the consumers, and of course, it is impossible to estimate for a future period just how much the reduction in rates will increase the sales of electricity.

Q. When a company indicates that it has made a reduction in rates, I mean a reduction in income, what does it mean, a reduction based on the years that have passed, or what they expect the deduction to amount to in the future?

A. I have checked this up, in expectation of the future reduction for a coming period, and I have found a computation, and in fact, from the statement in this case, found out that it would reduce this revenue \$750,000 annually. I might say in a case that I just investigated down in Indiana, where a company made a reduction the tenth day of March, 1930, and stated that its revenues would be reduced by such a reduction \$48,300 the actual result in the next twelve months was a reduction of \$15,000. In the Cambridge Electric Light case, a few years ago, where the Commission reduced the resident's rate from 8c to 5½c, the year following the reduction, which was a material reduction, the revenues from the sale of energy to that class of consumers, exceeded those of the preceding year under the higher rates, so that it is difficult to estimate exactly the effect of a rate reduction for a future time, because you cannot tell just where the increase in consumption is going to run, but you can compute it accurately on the basis of the energy sold in the preceding twelve months.

Q. In the light of your information, Mr. Husselman, is there anything about the order of the Commission in this case, that strikes you as being strange.

A. Yes.

Q. What is it?

A. May I correct you in saying, that I understand it is not an order of the Commission, but a motion passed in executive session of the Commission dismissing the complaint brought on its own motion, and that motion is just as I have read. It states that there were no protests or complaints filed against the operation of the rates that became effective 25 days before this motion was passed. Now, it is my judgment that no bills having been rendered under these new rates, the only way the consumers have of knowing of a rate reduction is to see its application in the bills. In fact, no complaints or protests will probably be filed until after the time has elapsed sufficient to

permit customers to get their bills and see the effect of those rates on their pocketbooks.

Q. Mr. Husselman, do you consider that the rates now in effect, that these rates that became effective on November 1, 1930, are reasonable and fair rates for electric service in a community the size of Scranton and under the conditions up there with respect to the cost of generating and distributing electricity, disclosed in the annual reports of the company filed with the Commission?

A. No, I believe those rates that are now in effect are excessive for electricity, especially to the domestic consumers under the conditions that prevail in Scranton and in that territory, taking into consideration the size of the community and the accessibility of fuel, the cost of fuel and all of the things that enter into the rendering of electric service.

Q. On what else do you base statement?

A. On my knowledge of the rates for electricity in a great many other communities, of my knowledge of the cost of generating electricity and distributing it, and on an examination of the operating costs and expenses of the Scranton Electric Company, which is involved in this case. It was testified in that case, that the company had its coal consumption per KWH generated from 5.65 pounds in 1920 to 2.8 pounds in 1926; to 1.62 pounds in 1928 and 1.32 pounds in May, 1930. The coal consumption per KWH generated is less than one quarter of what it was in 1920, but the sale price of the product is still eight-ninths of what it was.

It was brought out in the Federal Trade Commission hearings that the operating revenue of the Scranton Electric Company increased from \$4,896,000 in 1923 to \$6,911,948 in 1929, a growth of 41.17 per cent. It was also brought out that the net operating revenue increased in the same time 104.5. The witness before the Federal Trade Commission said this "must mean that operating expenses did not increase as rapidly as operating revenues.

The cost of producing energy in the last ten or thirteen years has decreased by reason of increased efficiency in the design of turbo-generator units and boilers, and because of the higher steam pressures that are now used, because of the inter-connection of utilities, of better load and power factors and the greater diversities of loads, and the increased uses and consumption of electricity. These increases in efficiency, of course, require the investment of considerable sums of money, but at the same time the economies that have been effected have not been passed on to the consumers.

The Scranton Electric Company built a generating plant in 1927 in conjunction with the Pennsylvania Power and Light Company. This is called the Stanton Station. This plant is owned half by the Scranton Electric Company and half by the Pennsylvania Power & Light Company. It is operated by the Stanton Operating Company. This Company does not file an annual report to the Public Service Commission. However, I find that the company generated and purchased 244½ million kilowatt hours in 1929 of which it generated 226 million. I find that the total production cost of the 244 million four hundred and six thousand kilowatt hours generated and purchased was \$783,826, or 3.2 mills per kilowatt hour. The cost of generating current in that Stanton Station in 1929 was 2.366 mills per kilowatt hour; that is without fixed costs. If the depreciation, taxes and return on the generating plant property the total cost should not exceed 6 mills; 3/5ths of a cent. The transmission expense including maintenance, was .005 of a mill. The distribution operating expenses including maintenance in 1929 was 1.45 mills per kilowatt hour. As charged on the books of the company 2.55 cents per kilowatt hour or practically a cent and a quarter a kilowatt hour.

BY MR. COOKE:

Q. That is for all current used for all purposes?

A. Yes; that is all current sold. That is the full and complete cost as charged on the books of the company, due to operating expenses, production, transmission, utilization and everything and includes the general and miscellaneous expenses, which were very heavy. That includes a sum for depreciation, and includes officer's salaries and everything of that kind.

The rates under which this company is now operating; one schedule is first 250 kilowatt hours per month, or less, the charge is eight cents per kilowatt hour. They have a rate in effect which is a service charge of one dollar plus a five cent energy charge per kilowatt hour. A consumer who uses 40

kilowatt hours at these optional rates of one dollar service and five cents a kilowatt hour, based on an average of four and one-half cents per kilowatt hour; 40 kilowatt hours to 50 kilowatt hours is about the average residence consumption of electricity.

Under these conditions, the cost of one cent and a quarter, I think the spread between that and seven and one-half cents or eight cents, which are the domestic rates of the Scranton Electric Company, are excessive.

I believe that a rate not to exceed five cents a kilowatt hour on the average, including a service charge or full cost to the consumer would be sufficient to provide for all operating costs, taxes, depreciation, and a reasonable return on the fair value of the property.

Q. A five cent top rate?

A. A five cent top rate.

Q. They are charging—

A. They have two schedules, one of which is 250 kilowatt hours at eight cents with the five per cent penalty to be added for non-payment in 30 days, and then they have another rate, which is a service charge of one dollar plus five cents per kilowatt hour for energy consumed.

Q. There is no discount in paying that bill, is there?

A. No; on the other hand a penalty for not paying it within certain time.

BY MR. WALKER:

Q. Mr. Husselman have you made an investigation of the records in the files of the Public Service Commission with respect to the rate case of various parties in Luzerne County against the Luzerne Gas and Electric Company?

A. I have.

Q. Please give to the Committee a brief outline of this case?

A. This is a case in which the complaints were filed against the gas rate and the Luzerne County Gas and Electric Company in December, 1917. This case continued, the company filed a revised schedule on April 1st, 1918, increasing the then effective rate, and on June 10, 1918, filed a revised rate on gas. There were about 45 separate complaints filed by various boroughs and consumers against the new rate schedule and these complaints were consolidated and heard as one case. The opinion and order of the Public Service Commission of Pennsylvania in the matter of the complaints was issued March 27, 1923.

Q. How long a time elapsed between the filing of the complaints and the filing of the decision?

A. Between the time of filing the first complaint and the filing of the Commission's decision was five years and three months.

Q. How was this case presented?

A. In the presentation of this case the parties arranged for a conference of engineers to make a valuation of the property; one engineer representing the company and one representing the complainant, and one representing the Public Service Commission. There were other engineers in consultation with these principal men of the committee from time to time and also assistants. It was necessary to make an inventory of the property which was done largely by the forces of the company and then prices were applied to the various items of property after agreement between the engineers representing the parties. You might say that in this case substantial agreement was reached by the engineers on practically all of the items particularly going to make up the physical property. There was some question about the use and usefulness of certain items of the property and of some of the overhead, but the report as submitted to the Commission was pretty well an agreement of all the engineers involved in the matter as to the physical property and so-called construction overhead. There was of course no agreement as to certain items of intangible property. These items were presented to the Commission separately by the engineers of the different parties. Also in this case the first part of the program was ascertained and there was presented to the Commission all of the evidence with respect to the fair value of the property, that is original cost, actual cost, cost of reproduction new on the basis of five year average prices, together with the cost of reproduction new as of the time of the investigation. This was submitted to the Commission for the purpose of securing the rate base of the fair value of the properties involved, the amount of depreciation to be allowed annually, and the rate of return, and then after that decision came down from the Commission,

further testimony and evidence was presented with respect to the operating expenses, revenues, and so forth, of the company, and provide the element of operating cost and estimated revenues on which the Commission could fix and determine the schedule of rates to become effective. On the first phase of the proceeding, which was the determination of the fair value of the property, the oral argument was heard on April 19, 1921.

BY MR. EVANS:

Q. What do the records show with respect to the work of the Commission?

A. The docket sheets in the file indicate that the record was referred to Commissioner Brecht on April 19, 1921. It also discloses that Commissioner Brecht referred the reports to Assistant Commissioner Ehlers for the preparation of the report, and that Mr. Ehlers received this instruction on April 20th. Mr. Ehlers submitted to the Commission a report on July 25, 1921. This proposed form of order prepared by the Bureau of Engineering was considered by the Commission at an executive session on the 15th of August and referred to Commissioner Brecht for consideration and advice to the Commission. This proposed order was under consideration from August 15th to October 11th, when the opinion of the Commission fixing the rate bases for electric and gas properties, the rate of return to be allowed on the bases so fixed, and an annual allowance for depreciation handed down. In the way that the case was decided, the order of the Commission dismissed the complaint as to the reasonableness and legality of the Commission's electric and gas rates, which were effective from April 18th and from July 1st respectively, which they increased in 1920, and retained jurisdiction as to the rates which were filed by the company and which were to become effective on July 1, 1920, and on June 12, 1920.

Q. Did the engineer's bureau prepare and submit a tentative report to the Commission?

A. Yes. Mr. Ehlers submitted to Commissioner Brecht, a letter on July 19, 1921, in which he made the following statement: "The Bureau has prepared and submits herewith a draft of a Commission Report in the above matter. I have incorporated my suggestions as to the value of the properties. It will be noted that there is a wide difference between the relation of the values suggested to the respective cost estimates, and this merits explanation. The electric property has been and is growing very rapidly. It is a very promising property."

Comparison of this original draft of a Commission report as prepared by Mr. Ehlers with the final printed report and order of the Commission discloses very few changes in the text of Mr. Ehler's report. There were a few revisions in the wording and some few additions and eliminations made.

Q. What were the material points of difference between the bureau's draft and the final report of the Commission?

A. The greatest difference is in the fact that Mr. Ehlers found a value of electric property in the amount of \$4,000,000 and for the gas property of \$700,000, whereas the final opinion of the Commission fixed these at \$4,900,000 and \$725,000 respectively. Also Mr. Ehler's report shows a return from earning in the electric department of 8.4% which was reduced in the Commission's final report to an even 7%.

Both Ehlers' draft and the Commission's final opinion state that "the complainants do not question the reasonableness of respondent's operating expenses except with respect to 'gas unaccounted for' and the possible inclusion of Federal income taxes which should be set forth separately in the exhibits to be filed."

In the manner in which this case was presented was misstatement of the fact. There was no evidence before the Commission with respect to the operating expenses except such as was necessary for the determination of the fair value of the property. The complainants in their brief state, with respect to operating expenses, "but the fixing of rates for the future involves a more elaborate and careful study of operating expenses to be allowed than the data now before your Commission will permit." The complainants requested the Commission to fix the fair value of the properties and determine the rate of return and the amount of annual depreciation to be allowed. The complainants further requested the Commission that before fixing or determining the amount to be allowed as a reasonable and necessary operating expense, to be provided in the rates to be fixed, the Commission requests the company to submit a full and detailed statement of

operating expenses and revenues and further, that upon the submission of this data by the respondent, the complainants would ask for a further hearing.

Q. Then what have you to say about the Commission's determination of fair value?

A. Mr. Ehlers in his preliminary draft determined the value of the electric property to be \$4,000,000, and the gas property \$700,000. Insofar as the electric property was concerned, this showed that the company was earning considerably more than 7% on his determination of fair value, and this, of course, would require a finding by the Commission that the rates complained against were excessive. It seems from various papers filed in this case that the Commission was desirous of sustaining the company's rates, and to that end finally increased Mr. Ehlers' figure by \$800,000 for the electric property and \$25,000 for the gas property.

Q. Now, with regard to Mr. Ehlers' \$4,000,000 value, was that in your opinion a fair value?

A. I believe it was a very generous value on this property.

Q. What was the original cost of the property?

A. As shown by the company's records, the original cost was \$3,994,000. The historical cost was \$3,528,000. The reproduction cost new on a 5 year average price basis was \$3,490,000, and on this basis less accrued depreciation, \$3,144,000.

BY MR. COOKE:

Q. That is the reproduction cost new less depreciation, was the last figure?

A. Yes, on a basis of 5 years average prices. On the company's figure as of June 1, 1920, which was the peak of prices, their reproduction cost was \$4,486,000, which are all less than the \$4,880,000 finally determined by the Commission.

BY MR. EVANS:

Q. In other words, the Commission fixed a fair value for the property which was in excess of the amount claimed by the company on any basis?

A. Well, they later claimed a higher figure based on the addition of certain overheads and intangibles. The complaint showed the actual cost of this property to be \$3,128,000, and that the actual cost depreciated was \$2,815,000. The complainants claimed that the fair value of the electric property, including all overheads and intangibles was \$2,815,000, and the company's final claim was \$5,816,000. I find that the Commission sustained practically all of the company's claims on the items in dispute, and allowed the company's claims mostly in full. On one item of land, coal storage lands, Mr. Ehlers states that, "Respondent's claim the \$43,650 is supported by the actual cost in 1916, but it is not supported by the agreed value of the neighboring power station site or by the testimony as to the present value of the parcel. On the weight of the evidence the Commission determines the present value of this item is \$13,500. Later on, in the final report of the Commission, this estimate was increased to \$43,650, which was claimed by the company. Mr. Ehlers allowed \$36,000 for development costs, which was later increased to \$52,000."

Q. Were there any notes in the file to indicate how much their value was determined by the Commission?

A. In this paper of the Commission the \$4,800,000 figure as the value of the electric property is disclosed in part in the date requested of the Commission by the Chairman of this Committee. It is stated above that the Engineering Bureau's first draft of the report was submitted to Commissioner Brecht on August 17, 1921. I find a memorandum among those notes dated September 6th, 1927, which was evidently made by Mr. Ehlers for it bears the inscription "Ehlers Memo after 1st interview Com. Benn."

BY MR. RHODES:

Q. That memo was attached to the working sheet?

A. It was in the work sheets. As found in the first column—

MR. EVANS: We have the original here, Mr. Rhodes, but these are photostatic copies, because we did not want to put the original in evidence.

BY MR. EVANS:

Q. I show you a photostatic copy headed Bureau of Engineering, Public Service Commission, and ask you whether that is the sheet to which you refer, or a copy of the sheet to which you refer?

A. Yes.

Q. This bears a notation at the top, which seems to read, "Ehlers memo after 1st interview Com. Benn" and on this sheet also appears the date September 6th, 1921, does it not?

A. Yes.

Q. Now will you explain this to the Committee?

A. Well, these figures that are set down on this sheet represent items No. 1 as the respondent's original cost—I will simply explain the electric figures—\$3,994,000, under which is a little note that reads, "includes to certain extent going value as of 1908."

The next item is respondent's historical cost, \$3,528,000, under which is the property value, almost entirely, no going value.

The next item, 3, is "Comps" or complainant's actual cost, which is \$3,128,000, and there is a note under that, "Could be increased by our conclusions" (\$59,000).

The next item 4, is RCN. Which stand for reproduction new 5 year averages \$3,490,000, and under that is a bracket and out on the side "Could be increased item D, \$20,150." Item H \$17,000; total is \$47,150, and development costs \$486,000.

BY MR. COOKE:

Q. Where they use "our" there, what does that refer to; our conclusion?

A. I don't know, Mr. Cooke, I suppose it refers to Mr. Ehlers and probably whoever was in conference with him.

BY MR. RHODES:

Q. That would probably refer to the engineering department, would it not?

A. I doubt that, because Mr. Ehlers had already submitted his conclusions in the form of a report, and for that one item or two items he had set forth that figure; so, I doubt whether that is Mr. Ehlers' conclusion.

Q. It is rather uncertain as to who "our" represents, is it not?

A. Yes sir; I don't know.

BY MR. COOKE:

Q. Do you identify in whose handwriting this document is?

A. I believe that is Mr. Ehlers' handwriting.

BY MR. EVANS:

Q. In subsequent sheets, is there any letter or notation?

A. Yes; in subsequent sheets it bears the notation "j", then to go on here there is computation down below here which says, top figure \$5,000,000 I don't know where that top figure came from, but it is \$5,000,000, bottom figure original cost depreciated \$2,875,000, and the computation indicates that those two figures were added and divided by two to get the \$3,943,000 and rounded out into \$4,000,000 which appeared in Mr. Ehlers' original report as prepared before the Commission.

Under the gas property there also appears the \$700,000 as appeared in his report as his recommendation for the value of the gas property.

MR. EVANS: I offer this sheet in evidence as exhibit number 146.

(Paper in question so marked.)

BY MR. EVANS:

Q. What other sheets have you had photostatic copies made of?

A. This is the next (indicating).

Q. This is also a photostat copy of one of the work sheets as appearing in the reports of the Bureau of Engineering?

A. Yes.

Q. And this sheet is headed "Bureau of Engineering form EB 18," with 2 headed "Electric Propy." I ask you whether that is the correct copy of the sheet to which you referred?

A. Yes, this is a photostatic copy.

MR. EVANS: I offer this in evidence as exhibit number 147. (Paper in question so marked.)

BY MR. EVANS:

Q. And this sheet in the original volume immediately follows exhibit number 146, which has just been offered in evidence?

Q. Will you explain the sheet to the Committee?

A. This is a working sheet, and there appears in the corner here a little note which I interpret to be, "Conference with Mr. Snow about 9.15 P. M." It is headed here "Electric Property" in abbreviated form. Then, there is a formula presented here.

Q. It is a formula for arriving at a rate basis, is it not?

A. I don't know. It is a formula. It says "Base equals A." It says, after that, "Plus 10% brokerage etc. equals 110 A." Then it says, "Plus 20% going value equals 132 A," and that equals \$4,500,000, and then A by the process of division becomes \$3,400,000 and that equals the base.

A. They are.

Q. In other words, the total valuations of the property, as I interpret it, is \$4,500,000, the base or the value of the physical property less the overheads of brokerage and going value will have to be \$3,400,000.

A. Exactly. That is what I interpret this thing to be.

Q. What do these figures indicate to you?

A. I can't escape that thought that this indicates that somebody was working to a predeterminate figure. Evidently ten per cent. was to be included for brokerage in the electric base and twenty per cent for going value.

BY MR. RHODES:

Q. Whose work sheet is this; Ehlers'?

A. Yes sir. Using \$4,500,000, which is required to give a property base \$3,400,000. Following this in the data that appeared in other sheets, there are 2 sheets of figures, bearing date 10-10-21 with a "9" over the "10" in red figures.

Q. I show you volume entitled "Borough of Wyoming v. The Luzerne County Gas and Electric Co. list of volumes submitted by the Bureau of Engineering to House Investigating Committee, Thursday, April 12, 1931; volume 1, containing Ehlers' notes and conference and first study of records; B Snow's notes on complaints, organizations; C Ehlers' notes, preparation of first Commission reports; D Ehlers' notes discount study." Now, these sheets, to which you are referring, are included in that volume, are they not?

A. They are.

Q. Now, will you briefly explain the first of these sheets?

A. Yes; there are only a few figures on these sheets. One of them is a computation that starts off with a base of \$3,400,000, and ten per cent. is added for financing, and 20% for going value. There are some other computations on the sheet indicating that there was an intent to figure out in some way a rate and arrive at a desired answer. On the second of these sheets, is a computation of where the figures set down—

Q. Have you referred to the note at the top of this sheet, "Conference—"

A. No; that is a short note "Conference Commissioner Benn, Mr. Snow, Ehlers."

In the second sheet it shows the computation where they set down the respondent's original cost as \$3,933,649, and the complainant's actual cost \$3,128,164, reproduction cost new five year average \$3,489,706. Respondent's estimated reproduction cost new 1920 prices, \$4,485,613, adding these four figures together and obviously divided it by four, getting \$3,774,000 from which was deducted \$377,000, leaving \$3,398,000 and this was changed to a round a figure of \$3,400,000 which the formula heretofore explained provided for.

BY MR. RHODES:

Q. Which formula was that?

A. That was Formula A, that was shown as Exhibit No. 147. This you understand is for the electrical property. There is also some computation on this sheet which shows the figure of \$3,600,000 to which \$360,000 was added, and also added \$540,000, and that seems to be the derivation of \$4,500,000.

Q. Was there another page to which you desired to call the Committee's attention?

A. Yes sir.

Q. I show you photostat, the same sort as this preceding, bearing Number, page 3, and dated 9-17-21 and ask you whether that is a photostat of the page to which you refer?

A. Yes sir.

(Photostat of Page 3 dated September 17, 1921, offered in Evidence as Exhibit No. 148.)

BY MR. RHODES:

Q. Mr. Husselman, can you tell me any reason from an engineering standpoint why the going concern cost on gas is 5% and the going concern value on electricity was 20%?

A. No sir, I cannot.

Q. Is there no explanation for this difference between these two going concern values?

A. The gas property is that community up there was having a hard time of it. They had a great many miles of main to

serve these different communities, these different boroughs, in a manner in which gas mains were constructed at that time before the development of the weldless joint, and they lost unaccounted for gas very materially, and the consumption per mile of main by the consumers was very low, and it was very difficult for the company to make a reasonable, or anything like a reasonable return on their investment on almost any value on that gas property.

Q. And that is probably more or less correct as far as these differences are concerned?

A. Under the circumstances of a losing venture, I question whether the gas property had any going concern value whatever.

BY MR. EVANS:

Q. Will you continue to explain this third sheet which has been offered as Exhibit No. 148?

A. The abbreviated "Invest't" analysis, Item 2, \$3,528,000, and the five-year reproduction new was \$3,490,000, and the 1920 was \$4,485,000. In the figures I cannot see what the processes were here, but there is a figure set down there at the side which shows cost base \$3,600,000, and to that is added \$360,000 which evidently is for the cost of financing.

BY MR. COOKE:

Q. Does that cost base bear any arithmetical relation to the other three figures you have given before?

A. I don't know what the process of arriving at that is. Then there is this going value of evidently 13½ per cent. to which is added \$540,000, which gives the \$5,490,000. Pasted on that sheet is a sheet on another kind of paper showing electricity \$4,500,000, gas, \$725,000. Now the \$725,000 is the value that the Commission finally placed on the gas property and to get the \$4,800,000 for the electric property.

There are some notations on the bottom of this sheet that say, "Told by Mr. Benn to make values as per above—that Mr. B. was agreed—then interrupted. After conf. Mr. S. on next day, got revised sheets ready but am waiting to hear from Com. Brecht. Not heard up to 8-23-20."

Q. Who is Mr. S.?

A. I don't know.

Q. Who do you assume it is?

A. Mr. Snow.

Q. And who is Mr. B.?

A. I assume that was Mr. Brecht who was absent. You will note the sheet reading "waiting to hear from Commissioner Brecht."

BY MR. EVANS:

Q. What is the next sheet of notice, to which you wish to call the Committee's attention?

A. That is in the same set of notes, dates 9-25-21, and there is a note "Revision of per cent. earned as set forth on page 12." This is a computation, using the \$4,500,000 in connection with the amounts available for return showing that the return to be 7½%. It also shows that with a value of \$582,000 the return would be 7.7%. It refers to a page of notes made on July 16, 1921, whereon Mr. Ehlers found returns of 8.65% by using a value of the electric property of \$3,880,000.

Q. What inference do you draw from these calculations?

A. I draw the inference that they were fixing a value on the property to fit the earnings, and not fixing value of property to be used as the basis for determining rates. In other words, the earnings were so much,—they were going to allow a certain per cent. return,—how much is this property going to worth,—not how much is the property worth from an inventory and appraisal and from the evidence before this Commission. That is the only inference that I can draw.

Q. This seems to be a case of regulating the fair value, rather than regulating rates. Do you find, or did you find, any correspondence between any member of the Commission and Mr. Ehlers on the subject of fair value?

A. Yes sir. I find that Mr. Brecht was evidently away, because he wrote a letter to Mr. Ehlers from Lancaster, Pa. under date of August 20, 1921, as follows:

BY MR. TURNER:

Q. Where was this company located?

A. Kingston, the office was in Kingston, Pennsylvania.

Q. Is this part of the Scranton—

A. It is the Luzerne County Gas and Electric Company.

BY MR. EVANS:

Q. What other letter have you?

A. Attached to this letter of August 20, was another sheet, which contained some suggestion from Commissioner Brecht as to the change,—various bright changes in the wording of the Ehlers' report, which was a draft of the Commission's report. There was also a letter from Commissioner Brecht, which was written under date of August 30, 1921, which throws a little light on the attitude that he took towards the determination of fair value in this case.

Q. I show you a photostat composed of two sheets, setting forth these letters, and ask you whether those are the letters to which you refer?

A. Those are the two letters, and the suggestions that he made for changes in the order.

Q. The original of these letters are in the correspondence files of the Commission?

A. They are in a file of the Commission.

MR. EVANS: I offer this in evidence as Exhibit No. 149.

BY MR. EVANS:

Q. Will you just read the letter of August 20, 1921 to the Committee?

"Lancaster, Pa.,

"August 20, 1921.

"My dear Ehlers:

"The suggested changes enclosed will shorten the spread of the report and at the same time get rid of the 'flaming' sub-heads. I have written them in capitals so as to preserve their identity which will be of some advantage in carrying the underlying train of thought with respect to the line of discussion. If perchance you should find that the change will not jibe at every point with the language following, make such change as will appear to be necessary. I would also suggest that all tabulations and summaries set forth in figures be typed in half space and thus cut down the space length of the report. I trust you will get this in time to save extra labor beyond the first change that must be made. Assuring you that this is, and shall be, the tall of the comet now about raising its head over the good citizens of Luzerne, I remain

"Very truly yours,

"Signed) M. J. Brecht."

Q. Attached to this letter was a list of suggestions contained in the photostat, the same sheet.

A. Yes sir.

BY MR. RHODES:

Q. What do you think that astronomical reference means?

MR. EVANS: He is an engineer, not an astronomer.

BY MR. RICHARDS:

Q. Who is Mr. Brecht,—A Commissioner?

A. Yes sir. I might say that the changes suggested on this memorandum were made as they appear in the final report.

BY MR. EVANS:

Q. Will you read the letter of August 30, from Mr. Brecht to Mr. Ehlers?

A. There is a stamp of the Bureau of Engineering, P. S. Com. August 21, 1921 received.

"My dear Ehlers:

"I do not know what your method will be of increasing the figures of Fair Value but it occurred to me that you might be able to justify a higher estimate on a few of the items on physical property upon which the engineers did not agree. For instance: Is there no way of escape in eliminating all of item C in Fair Value? Were there not some conditions perhaps involved which slightly differentiate it from other cases upon which the Commission has rules? Could not item D be lifted eight or ten thousand? How about item H, might that not allow a little stretching of ten thousand? In J is your position correct that the claim is substantially comprehended in Going Concern, etc.?

"These questions are asked not in the way of criticism but with a view of helping you or rather of making me feel that I did not desert you and make you carry the whole burden without giving the case any further thought. You may have discovered a better line of approach and found some line of cleavage that will help you through the mire. I think the

report as drawn up by you is a splendid piece of work. Let me suggest that on page 12 first copy you take out the word "Net" before Earnings making the heading read "Earnings from Operations."

"(Signed) Brecht."

BY MR. COOKE:

Q. It is a fair question to an engineer,—What does "Help through the mire" mean?

MR. EVANS: He is not a geologist, either.

THE WITNESS: I think the letter speaks for itself.  
(Remarks by Mr. Evans at his request off the record.)

BY MR. EVANS:

Q. Now, will you explain what these items C. D. J. in Commissioner Brecht's letter referred to?

A. Item C refers to paving over mains, over gas mains.

BY MR. COOKE:

Q. What would be his object in eliminating all of item "C"?

A. Under the rule of the Supreme Court in the Des Moines Gas Case, paving over mains which was not cut at the time the mains were laid, is not allowable in the cost of reproduction new valuation, and there was a considerable item of paving over mains in this case where the paving had been laid after the mains were laid, and we in the Engineering Conference eliminated the cost of that paving over mains, and Mr. Ehlers so excluded it in his report.

BY MR. EVANS:

Q. And Commissioner Brecht asked if there was not some way of escaping that elimination?

A. That is what he asks. There was nothing to my knowledge added in for paving over mains, because on the side here there are some pencil memoranda which says, "C paving no."

Q. Is that in Mr. Ehlers' handwriting?

A. I don't know.

Q. Now, on the side of this same letter, with respect to "D" which was an item of coal storage land which Mr. Ehlers has included in his report as \$13,500, is the note, "could raise," as I can read that figure, "\$42,500," from which the \$13,500 is subtracted, leaving an amount indicated by the arrow of \$29,000. Now, in the final workup of the thing, this was actually increased to \$43,600 which was the amount claimed by the company, so that it was raised \$30,150. Now, the next item which is marked and referred to in there is, "H," is abbreviated here on the side, and the abbreviation stands for preliminary organization and development, and I cannot read all of that note, it says, "Could raise, but" and something, "not on,"—

BY MR. COOKE:

Q. Logic, is it?

A. I cannot read it, Mr. Cooke, I don't know. With respect to item "J", that refers to development cost, and says there, "My position that early losses are up to Commission." Now, this item is "H", which Mr. Ehlers included \$36,000 in the final order of the Commission was \$52,000, and so it was stretched \$16,000. Concerning the item "J", that is a rather important item which the Commission in its final order says, "The Commission will not make any specific allowance for this item, but in its determination of the fair value of the property as a going concern, it has given it consideration in connection with the other factors presented and therein made such an allowance as in its opinion is warranted." In the beginning of the discussion in the opinion of the Commission on this item, the Commission points out that the respondent presented exhibits purporting to show it failed to earn reasonable and adequate return, 7½% return and 4% on depreciable property for reserve, by an amount of \$486,000. Notes on a sheet made on October 9, 1921, two days before the order was issued, indicate that the full amount of \$486,000 was allowed by the Commission in its final figure of \$4,800,000. On this sheet there is a computation starting with \$3,600,000, to which is added \$450,000, evidently for cost of financing, and this development cost, and to the sum of \$4,050,000 is added \$750,000, evidently for going concern value, and thus the grand total of \$4,800,000 value of the electric property was arrived at by the Commission, and this figure showed that the net earnings would provide exactly a 7% return, and that therefore, it would be proper for the Commission to deny the complaints, and permit the company to continue to charge its excessive and unreason-

able rates for electricity, which were complained against by these 45 complaints. I might add that throughout his draft of the Commissioner's report Mr. Ehlers used \$150,000 as the annual charge for depreciation, and in its final order the Commission set up \$180,000, that is a deduction from operating expenses, so that the Commission by this means decreased the amount of net earnings available for return in the amount of \$30,000.

BY MR. EVANS:

Q. Now, this letter to which you refer is contained in the volume furnished to this Committee in this case, marked Volume 2?

A. Yes.

Q. Containing various drafts of the first Commission report?

A. Yes.

Q. Now, the net result of all this then is, as I understand it, to increase the Bureau's original valuation of \$4,000,000 to \$4,800,000, and thus to justify the existing rates of the company?

A. And also to increase the allowance for depreciation by an amount of \$30,000, which, of course, was a direct charge from the revenue and to increase this valuation to get this down to 7%.

BY MR. TURNER:

Q. How near did this come to the company's valuation?

A. Well, it was higher than the company's valuation, except for one valuation that was put in at the last hearing, which did exceed this figure.

Q. Did this base then justify the rates as asked by the company, or where the rates lowered or raised?

A. No; the complaints were dismissed and they justified the rates that were then effective.

Q. That, on the basis of this figure, the rates were justified?

A. Yes, sir.

BY MR. COOKE:

Q. This was before the Commission, through what period of time, you say this one valuation, that was high, was put in in the latter days?

A. I think that last valuation I mentioned. Now, that is my recollection, that that was the figure set up in the respondent's brief. That was a figure of \$5,000,000. That, as I recollect, was the figure that was set up in the respondent's brief and filed with the Commission. I know that the figure contended for the electric property by the complainants was \$2,816,000—for this electric company.

BY MR. TURNER:

Q. That was the complainants' valuation?

A. Yes, sir.

BY MR. RHODES:

Q. Just referring to that exhibit 148, where that notation is on the bottom of the page as I gather from your testimony, Mr. Ehlers according to the exhibit was told by Commissioner Benn to make the values as stated above; that is, the electric property \$4,500,000 and the gas property \$725,000; is that correct?

A. That is my inference, sir.

Q. If a Commission is going to tell the Engineering Department how much to fix the value, what good is the Engineering Department?

A. I expressed that a moment ago, when I said I thought they were attempting to make a value on the basis of earnings, and not a valuation on which to determine the reasonable rates.

If you are going to fix the values of a property on the basis of earnings, you don't need an engineer, because all you need to do it to make your figure of income, capitalize it, and divide it by the proper percentage that you want, and you have got the answer.

Q. Are we justified in concluding from these figures, that were submitted, that the Commissioners told the Engineering Department what their answer was to be, and the Engineering Department was only utilized in justifying that figure?

A. I don't want to answer that question, sir. I think, with the evidence that is before you, it is really up to everybody to make their own conclusions.

MR. RHODES: I was merely asking you that as an expert, because you made an examination of these papers and are more familiar with them than we are.

MR. EVANS: Would the Committee like Dr. Snow to go on the stand and give his interpretation of this sheet?

THE WITNESS: Will you read the question?

The question read as follows:

("Q. Are we justified in concluding from these figures, that were submitted, that the Commissioners told the Engineering Department what their answer was to be, and the Engineering Department was only utilized in justifying that figure?")

THE WITNESS: I do not hesitate to say that is my opinion; that is just what happens.

BY MR. COOKE:

Q. At the beginning here you said there was a set of engineers who had practically agreed on the base value?

A. Yes, sir.

Q. What is that figure? Have you got it?

A. That was this figure of \$3,490,000, to which—

BY MR. HAGMAIER:

Q. That was agreed to by the Commission, the company and the complainants?

A. The Engineers.

Q. The Engineers?

A. That did not include intangibles and so forth, they were to be added to that.

Q. There was a fair agreement between the three people?

A. Oh, yes. The actual cost that the complainants submitted was \$3,128,000.

BY MR. COOKE:

Q. If you take that figure, which excludes as you say, certain intangibles, and subtract that from the figure finally used by the Commission, what do you get?

A. You would get a difference of about \$1,310,000.

Q. And that is what percentage of the figure that the engineers arrived at? I am just trying to get an idea of what percentage the Commission allowed for intangibles?

A. That wouldn't give it to you Mr. Cooke,

Q. Wouldn't it?

A. No.

BY MR. HAGMAIER:

Q. It is evident that all these people got together and then the Commission dropped that part of the case, didn't they?

A. Oh, they used it here in various ways, as I explained.

BY MR. EVANS:

Q. You were an engineer for the complainant in this case, so that you have personal knowledge of the engineering problems, have you not?

A. Yes; I was.

Q. Now, what happened after the first order of the Commission in this case?

A. The case was continued after this first order, and after the Commission fixed the rate base, and the rate of return, and the annual allowance for depreciation, further testimony was offered with respect to operating expenses and revenues, briefs again were filed, and in the briefs of the complainants considerable exception was taken to the value fixed by the Commission, especially for the electric property, but no reference was made to this in the next decision of the Commission.

Q. When was that dated?

A. That was on March 27, 1923, and in that final order of the Commission, the Commission again dismissed the complaint as to the electric rates, which were established in 1920, and fixed a rate of \$2.50 a thousand cubic feet.

Q. For the gas?

A. Yes. Those rates fixed for gas by the Commission, were so unreasonable that even the company realized the fact, and after about six weeks, or on May 10, 1923, wrote the Commission, that "There is still considerable dissatisfaction on the part of our consumers, both over the rates we have charged in the past and the rates which your order fixes for the future."

In this letter the company asked authority to adjust the charges paid for gas since June 13, 1920, and to refund the

money in excess of certain rates which had been collected from consumers during that period, and to file on one day's notice, a schedule which would reduce the rates to \$2.10 per thousand cubic feet, with a minimum charge of \$1 a month. This reduction was a material reduction below the rates established by the Commission.

BY MR. EVANS:

Q. Was there any decision with a dissenting opinion filed in this case?

A. Yes, the final order bears a notation that Commissioner Rilling dissenting for the reason that in his opinion the rates determined in the report for respondent's services are excessive. That is one of the few opinions of the Pennsylvania Commission where I have seen that there is a dissenting opinion.

BY MR. TURNER:

Q. That makes one of the three?

A. I think that is four.

MR. EVANS: We have asked the Commission for a report showing the cases in which there were dissenting opinions filed.

DR. J. HERBERT SNOW recalled.

BY MR. EVANS:

Q. Dr. Snow, I show you the original of the Exhibit No. 148, which has been offered in evidence in this case and which is a sheet from Dr. Ehlers' work sheet in the Luzerne County Gas and Electric case. You are familiar with Dr. Ehlers' handwriting, are you not?

A. Yes, sir.

Q. Is the notation at the bottom of that sheet in his handwriting?

A. I believe it to be.

Q. Are you familiar with Commissioner Benn's handwriting?

A. No, I am not.

Q. Then you don't know whether the memorandum pasted in the middle of that sheet is in Commissioner Benn's handwriting?

A. No, I could not testify to that.

Q. Do you have any idea of whose handwriting that is?

A. No sir.

Q. What does Dr. Ehlers' notation on the bottom of this sheet indicate to you?

A. I believe it is a correct one.

Q. In other words, that Commissioner Benn directed Dr. Ehlers to decrease the valuation he made?

A. The note says, "Told by Mr. Benn to make valuations as above, that Mr. B. was agreed. After conference Mr. S. on next day got revised sheets ready but I am waiting to hear from Commissioner Brecht." and that is dated September 23, 1920.

Q. Now, Dr. Snow, as Chief of the Bureau of Engineering is it in your opinion practicable for the bureau to function effectively when it is directed by the Commissioners to the valuations it is to find?

A. No and yes. In this instance an engineering conference was provided I believe by agreement of all the parties and they functioned as such conferences should and it works I believe where considered and compiled, and then the duty of the engineering bureau ceases until further order. It seems that from time to time Commissioner Brecht, while the matter was in committee or before the entire Commission, that Mr. Benn and Mr. Brecht had something to do with it. That is the ordinary practice. Then Mr. Ehlers was told to prepare a report for the Commission. That was an added duty. And he did it. And then there were several revisions to it. I have no doubt that while the notes in my bureau will show that we had contact with Mr. Benn and Mr. Brecht, I had little or nothing to do with this case. I would presume that to be the fact because usually in those days the aim of the Commission was to reach an agreement and avoid a dissenting opinion if possible. Now therefore, I don't know—I think that Br. Brecht and Mr. Benn were probably working with Mr. Ehlers toward that conclusion. That would be my view and explanation.

BY MR. TURNER:

Q. Dr. Snow, why would the Commissioners tell the engineering department to raise these figures?

A. Well, I cannot justify why men do things. A commissioner might come to the office and say, "I sat in this case," or "I sat in a part of the hearing. I formed a conclusion of my own and unless my ideas are incorporated in this report I shall not vote for it but I will make a dissenting opinion."

Q. Doesn't it seem to you that the engineering department could make its report, and then what the Commission wanted to do with it afterwards was something for the Commission, and not to have the Commission seek to justify its stand by getting the engineering department to change its figures?

A. We cast up figures of all kinds for the Commission and for different commissioners, but in this instance—

BY MR. COOKE:

Q. Are these engineering figures you refer to?

A. Not as a conclusion. If the commissioner thinks 4% instead of 3½% should be allowed, they will instruct us to cast up figures on that basis.

Q. Are there any engineering items that would not be open to change by order of the Commission?

A. I don't know of any change on inventory of properties or appraisal of them, but on various items of overhead there is shown quite a difference of opinion, and there is no set rule as to what is to be done with them.

Q. These figures go all the way to the bottom?

A. They go all the way to the bottom and make up the fair value including, if any, their going concern value.

BY MR. RICHARDS:

Q. These work sheets would later on be made up into a report as given to the Commission?

A. No, they stay in the engineering bureau.

Q. Would not a report be made and given to the Commission?

A. Yes sir. In this case an engineering conference was provided. If that had not been done and we had been sent out in the field to do the work ourselves, there would be an engineering report.

Q. Is it not the practice to make a report from your work sheet? And give it to the Commission, and from that they make their conclusions and hand down their findings?

A. Yes. A report direct from the bureau, a report of engineering conferences, or perhaps we have not been called in at all. That is often done, and until after the testimony is on the record and the record is closed and the arguments are put in, then sometimes the matter is referred to the Bureau and then our work is to transfer it to the record. In this case there were two reports, one of the engineering conference then there was a report prepared for the Commission.

Q. The thing I am getting at, Doctor, is this: If these figures that have been put down on the work sheet by the engineers were added to by the Commission and for some reason the Commission added \$700,000 to that report of the engineering bureau, the report would appear to be the work of the bureau while as a matter of fact it would not be?

A. Yes, in that matter I think it would be correct.

BY MR. HAGMAIER:

Q. Who was the engineer from your department in this conference?

A. Mr. Ehlers.

Q. They didn't take the conference report at all?

A. Evidently they had it and added to it to express the view of the Commission.

BY MR. TURNER:

Q. It seems to me the engineering department would make up its report on what it conceives to be the proper figures from an engineering standpoint, and the duty of the Commission would be after that to formulate its report from the report of the engineering department?

A. And the record and the argument in brief.

Q. Apparently it seems in this case that if it showed that the Commission didn't do that except to go back to the engineering department and ask them to make up figures that bore out what they thought should be the figures?

A. I think that is what happened in this case.

Q. Under that, the engineering department is more or less of a department to figure simply for the sake of the Commission?

A. Yes, your honor, if the engineering bureau were a statutory bureau and the Legislature fixed its duty and purposes, then it would be identified as a unit itself.

Q. It seems to me it is the duty of the Commission to maintain the integrity of the engineering department on which it would have to arrive at its own conclusions?

A. I think it is not well to overlook the fact that the Commission has to consider a complete circle. It must take into account the brief and arguments of the attorneys and of the law, and of accounting, and so forth, and the Bureau of Engineering exists simply for the broad scope of engineering.

BY MR. EVANS:

Q. This sheet is dated 9-19-21. It has been testified that on July 19, 1921, two months ago, Dr. Ehlers had submitted to Commissioner Brecht the form of Commission report, fixing the value of the electric properties at \$4,000,000. Subsequent to that he received a letter from Commissioner Brecht, dated August 30, in which Commissioner Brecht says: "I don't know what your method will be of increasing the figures of Fair Value, but it occurred to me that you might be able to justify a higher estimate on a few of the items on physical property, upon which the engineers did not agree. For instance, there no way of escape in eliminating all of item E which refers to the paving charge." In the margin of this letter, there is a pencil notation, do you recognize that handwriting?

A. I think it is the same as this writing here.

Q. In other words, that is Mr. Ehlers'.

A. Probably.

Q. He says "Paving no."

A. He says "No".

Q. No way of including the paving charge, which Commissioner Brecht asked him to include,—that is your interpretation of that?

A. Yes sir.

Q. Commissioner Brecht's letter continues: "Were there not some conditions perhaps involved which slightly differentiated from other cases upon which the Commission has ruled? Could not item D be lifted eight or ten thousand?" Now, item D refers to the coal storage lands. Isn't that a direct request to the Bureau of Engineering from a member of the Commission to raise its value on that item?

A. Yes sir.

Q. The letter continues: "How about item H might that not allow a little stretching of ten thousand?" Item H referred to preliminary organization and development. That originally would be an item which the engineering bureau would include in its appraisal, would it not, of fair value?

A. Yes sir.

Q. Don't you interpret that as a direct request to the Bureau of Engineers to stretch that item above what it thought was correct?

A. Yes sir.

Q. Commissioner Brecht's letter continues: "In J is your position correct that the claim is substantially comprehended in Going Concern, etc.?" The J referred to development cost. Is there in your opinion any question but what development cost and going concern comprehend the same item?

A. I don't think so. I think the effect is the same, but the going concern value is a value. In a great many of these cases there are a great many theories of development cost. They are put up as measures of a going concern value.

Q. You think Commissioner Brecht might have been correct in suggesting that both development cost and going concern value should be included as separate items?

A. I really don't know what he means in that. Certainly I have never known anything like 20% for going concern value,—when it sticks out where you can see it.

Q. It has to be hidden,—tucked away?

BY MR. RHODES:

Q. What is the contract? You said you never knew it where it stuck out like this.

A. In a going concern value, which is not a cost, when the going concern value is allowed, I think it ought to be set out so you can see what is allowed, because it is a value and wholly dependent upon judgment and the weight of testimony, and there is no formula for it.

Q. You have never seen such a going concern value as sticks out here—

A. I don't know what they have got for going concern. I heard something said about 20%. I never knew of any such

allowance. Personally I don't believe there is such a thing as 20% allowance.

Q. They have 13½% going concern value,—\$540,000.

A. The results of years of study of going concern value,—in my opinion the limits are not less than 5% and not over 15%. I think so far as I am informed, the Commissioners never allowed over 10%, and denominated it as going concern value.

BY MR. COOKE:

Q. On this Exhibit No. 147 it is put down at 20%.

BY MR. EVANS:

Q. I show you Exhibit No. 127, which is a photostatic copy of a prior sheet in Dr. Ehlers' book, which is headed "Conference with Mr. Snow 9-15-21." It is on that, is it not, that there is a reference to 20% going value?

A. Yes sir.

Q. That sheet, Dr. Snow, appears to be a calculation as to what will be necessary to justify a fair value of \$4,500,000, does it not?

A. That is the summation, \$4,500,000, in "A" right following it is "a" \$3,400,000, equal base.

Q. Now, it starts out with the base equals "a", and you add 10% for brokerage, and that will be 110A, then you add 20% to that, that will be 132 a, and 132a on this sheet must equal 4 million and a half, and on that basis if you divide four million and half by 132, you obtain approximately \$3,400,000 as your base, exclusive of brokerage and going value, is not that what the calculation indicates?

A. Those are the figures as he has given them here on this page.

Q. Then there comes this sheet introduced as Exhibit No. 148, in which as you state apparently Commissioner Benn directed Mr. Ehlers to make a valuation of \$4,500,000 for the electric property, and Mr. Ehlers adds in his notes, "After conference, Mr. Snow the next day got revised sheets ready." Now, does not that indicate to you that what happened was Mr. Ehlers after getting directions to find a valuation of four and a half million dollars for this property, he set about revising his work sheets to justify that value?

A. Well, I don't know. I have not seen anything here that he has given to justify it, just notes on what was going through his mind.

Q. What do you understand was meant by his notation, "After conference Mr. Snow on next day got revised sheets ready."

A. I think that relates to revised sheets of the Commission report.

Q. Then on the second page to this, Dr. Snow, this is headed, "Revision of percentage earned as set forth on page 12," and starts out with a valuation of the electric properties for four million and a half?

A. That is right.

Q. Now then, it then proceeds to have a series of calculations as to what percentage would be earned on these various figures, does it not?

A. I think so.

Q. In other words, does that not indicate to you that the attempt was to find a valuation which justified certain revenue?

A. It looks very much so, figuring backwards.

Q. Now, if the Bureau of Engineering figures backwards, does it in your opinion fulfill its functions for the Commission?

A. I have already said that when a Commissioner, or when the Commission or any member thereof asks us to make calculations, we do it.

Q. Now, it is true, is it not, Dr. Snow, that in a number of cases the Commission advised the Bureau of Engineering what results it wants to attain, and asks the Bureau to furnish figures which will justify that conclusion?

A. Yes, not quite as strong as you put it. The Commission working as a Sub-Committee, or as the Commission as a whole, in its meetings, may after discussing a matter perhaps all day, may decide, or conclude that the fair rate is so much money, and then it will, of course, have to have the proposed Commission report cast up to equal that answer; it is a finding of the Commission and not of any agent of the Commission.

BY MR. RHODES:

Q. Dr. Snow, in this case at least are we not justified in concluding that the Commissioners have interfered in the preparation of the engineering reports of your department?

A. No.

Q. We are not?

A. No sir. They are within their province. It would be different if we were a statutory bureau, but we are agents and have only the duties to perform that are given to us; it is our duty to cast up any figures that they ask us to.

Q. In other words, you are to be subservient to the Commissioners, regardless of whether or not what they want corresponds with good engineering practice?

A. No, don't say that. They don't interfere with us on our strictly engineering work.

BY MR. COOKE:

Q. You mean counting articles and measuring them; they don't tell you how to count them?

A. No, and they don't tell us what price to put on to them, what price to put on so much concrete, or anything of that kind, but when it comes into their province under the law, they cannot delegate their judgment to any bureau chief or any agent, they must determine that themselves.

BY MR. RHODES:

Q. Don't these reports that you have before you now indicate that the Commissioners have taken part in the preparation of these engineering reports which should be impartial and fair?

A. I see no difference in this report than might arise in many cases.

Q. In other words, we are to conclude that the Commissioners in all of these cases interfere in the impartial finding of your department?

A. No sir. I didn't say that, your Honor.

BY MR. COOKE:

Q. What is its routine. All the procedures that have been described in these papers and by this testimony, what you would say would be a fair example of the way in which—

A. No, I would not say it is an average; I would say it is not unusual, especially in cases where there is a division of opinion of the Commission.

BY MR. EVANS:

Q. Will you explain to me, Dr. Snow, how the value to be placed on lands to be used for coal storage is anything of an engineering problem?

A. I don't know the problem; I don't know what that coal storage land is. If they have vacant land, and instead of shipping their coal out, which I thought was the practice in the anthracite fields, and they store it up on the ground, why, that would not be an engineering matter at all; that would be for a real estate man.

Q. Don't you as a matter of fact fix land values in the Bureau of Engineering?

A. Never, unless there is a record complete.

Q. Would you have a record in this case?

A. If there is \$100 and \$10 per acre between the complainants and respondents, if we can do so, and are told to do so, we may say, or use the weight of the various witnesses upon it, and come to a suggested conclusion for the Commission; have the people do it—

Q. And that is part of your function?

A. Well, if they delegate it to us, we do that as they tell us.

Q. And in this case Mr. Ehlers found a value for this coal storage land of \$13,500?

A. Evidently the Commission did not agree with him, and told him to raise it up.

Q. Now, isn't that a matter that is within the province, in your opinion, of the Bureau of Engineering, to determine?

A. Only to suggest. The power is absolutely fixed, of determination, in the Commission, and nobody else can.

Q. I understand, Dr. Snow, that your position is that the Bureau of Engineering is there to do exactly what the Commission asks it to do—now, that is correct, is it not?

A. No.

Q. Here is a case, is it not, where on a matter of valuation of lands used for coal storage, the chief of the Bureau of Engineering submits a report in which he puts a value of

\$13,500 on it, and a member of the Commission writes to him and asks him to jack it up?

A. Yes.

Q. Is that not a plain case where the Bureau of Engineering has felt it its duty to do what the Commission wants in a matter within the province of the Engineering Bureau?

A. Yes.

Q. Therefore, it is your attitude as chief of the bureau of Engineering, that it is the duty of the bureau to find values requested by the members of the Commission?

A. No, we don't find the values.

Q. Didn't you in this case?

A. No. Evidently Mr. Ehlers—it is a very simple matter—Mr. Ehlers found and suggested to the Commission \$13,000.

Q. That was matter of valuation, was it not?

A. I don't know whether it was a record of real estate experts—there must have been real estate experts' testimony in the matter, and probably they were far apart. This may have been an agreement with the engineering conference.

Q. Then you say on all matters of real estate the Commission has nothing to do with finding the value?

A. No sir; after the record is complete, and we have not had any report, and then if they told us to cast up the figures, any single Commissioner's judgment has to be confirmed by the majority of the Commission, but they can have engineers to determine values of real estate. They can cast up the figures.

Q. Does the engineering bureau, then, determine the unit prices to be used as a basis of valuation?

A. Yes sir; in our report we do, but the Commission is not bound to accept it.

Q. It is within the power of the Engineering Bureau to set up an inventory of the property?

A. Yes.

Q. And that, again, is a matter for the Commission to determine?

A. Well, they can determine it if they want to, and they can put aside our work.

Q. Unit prices are matters of opinion?

A. They are matters of opinion.

Q. Then, in matters of opinion, does not the bureau of engineering bend it's opinion to meet the opinion of the Commission?

A. In unit prices, never.

Q. They do on matters of land values, do they not?

A. Yes.

Q. So, you distinguish between determination of land values and unit prices?

A. Certainly.

Q. Why do you distinguish between them?

A. Because there is a law of the Commonwealth of Pennsylvania that requires that the values of land given by licensed men, and there is a similar law for engineers that work in the State of Pennsylvania under a license. Under our engineering profession, no Commissioner or Commission, has any right and should not have it, to ask us to depart from our engineering opinion, but in real estate it is not engineering.

Q. And now, Dr. Snow, you don't mean to give this Committee the impression that the Bureau of Engineering has not in rate cases constantly passed upon the value of real estate, as shown by the record in the case?

A. Never fixes a value.

Q. I did not ask you that. I ask you—

A. But we do look up the record, and set up for the use of the Commission, as an aid to them, wholly and only in their determination, and what they will fix is the value, where the value is not in accord. That is absolutely so.

Q. You have spoken about the laws of the Commonwealth of Pennsylvania. What law of the Commonwealth of Pennsylvania is there that prevents an engineer from expressing a value on real estate?

A. He may express a value to his superiors. The Commission—

Q. That is what you do do.

A. When the testimony is of record.

Q. And you do the same thing with unit prices? You see the evidence, and express your opinion to the Commission on the matter of unit prices?

A. Yes; plus our knowledge, and so forth, which aids us in determining the record.

Q. You have just testified that you only prepared these valuations from the record. Do you want to change that, by saying that in some instances you can go outside of the record?

A. No; but in interpreting that record, we have to use the knowledge that God has given us and that is all cumulative. You can't be an engineer for 65 years and not accumulate experience. That is part of your work, the same as you see, as you see with your eyes and hear with your ears.

Q. And in determining your land values you also use the intelligence that God has give to you, do you not?

A. We don't fix values on land, but we do what our Masters tell us: Here is a case in which the Commission has the power to fix the value, and we don't.

BY MR. COOKE:

Q. Who are your masters?

A. The Public Service Commission who hired us.

Q. What would have happened in the valuation of that land if Ehlers had not obeyed the orders of the Commission, and raised the prices; jacked it up?

A. I don't know, sir.

Q. He fixed a value of \$13,500; was it not?

A. Yes.

Q. He was told by the Commission to jack them up, raise them up. What would have happened if he had refused to set this as a fair value for this land?

A. I don't know.

Q. You just said they were the masters.

A. Yes.

BY MR. EVANS:

Q. What would generally happen to a servant not do what his master tells him.

(No answer).

BY FATHER COX:

Q. You say you have a personnel?

A. Yes.

Q. What is the use of that personnel if you only do whatever the Commissioner you are to do? You do not need to send anybody out to work?

A. There is a great deal more. We are very useful to the Commission, in way judgment in engineering matters; absolutely indispensable. It would be better if there were real estate experts on the staff of the Commission, to value rights of way and so forth, but we do not have such experts.

BY MR. HAGMAIER:

Q. Would it not be better if you made your reports unbiased and unmolested?

A. If the report to the—

BY MR. EVANS:

Q. Answer that question of Mr. Hagmaier.

(No answer).

MR. EVANS: Read the question.

(Question read).

BY MR. HAGMAIER:

Q. What I asked you was, if your department would not be in a better position not to be under the jurisdiction of this Commission, and could make your reports unbiased and they could be used.

(No answer).

BY MR. EVANS:

Q. You answer that yes or no, if you will, then explain.

A. All right, sir, I think there would be advantages, and I think there would be disadvantages, and I want to explain now, because I have given you a serious answer. I think there is a peril for any Commissioner or any similar high officer in being tied down to a technical branch, from which he can take no exception. I think that the superior officer ought to be superior and not the subsidiary department of government superior to the master. On the other hand I think that the work, for a given number of staff could be done more expeditiously and probably economically if it was handled and could do this work without any orders from above.

BY FATHER COX:

Q. In the manner in which they have done it, they might just as well be accepting the reports of the company that made the surveys, and not to send out any men at all. What is the use of that engineering department whose opinion is not accepted?

A. Well—

FATHER COX: I would feel quite hurt if I were in your place, and was disregarded so frequently.

BY MR. HAGMAIER:

Q. That is what I am trying to get at. You take that Engineering Conference, you had some of the best in the country, and then the Commissioners sees fit not to use it. I feel that this organization, by itself, could go out in the field and do a man's job, and you would have some pride in making your report, and you would feel better in doing it?

A. Yes.

THE CHAIRMAN: Mr. Evans, may I ask, how much acreage was included in this real estate in question?

MR. EVANS: I don't know.

MR. TURNER: It is coal.

MR. EVANS: It is coal storage. I hope that is clear on the record.

BY MR. MOORE:

Q. That would necessarily be just vacant land on which coal was stored around the plant?

MR. EVANS: Mr. Husselman says that he can explain that.

MR. HUSSELMAN: My recollection is that coal storage land is a parcel of land that the company had purchased by reason of the fact that it was necessary to run a transmission line across the river and across that piece of land, and it was not in use for any purpose except this little strip that was occupied by this transmission line, and it was across the river from the power plant of the company. The company claims it is a possibility that sometime in the future it would be used for the purpose of the storage of coal. I don't remember the acreage. As Dr. Snow says, I don't appraise real estate either.

BY MR. TURNER:

Q. How near to the center of Wilkes-Barre was it?

A. It was out at Kingston.

Q. Was the plant at Kingston or at Wilkes-Barre?

A. The plant is at Kingston, so it must have been on the Wilkes-Barre side. It has been ten years or more ago, and I don't remember the details.

BY MR. CRAWFORD:

Q. The location of that land might have quite a bearing on the value of it?

MR. EVANS: I suppose, Mr. Crawford, it was worth \$200,000; if it was not used and usable, it would not be entitled to be included in these calculations.

MR. HUSSELMAN: As I recollect, the reason the engineers could not agree on it was because it was not in use, and there was no possibility that I could see myself how that land could economically be used for coal storage, and I seem to recollect I appraised the worth of that land for transmission purposes while the company claimed the entire tract to have a value of \$43,650, and I don't remember what the value placed on that land was by the real estate experts for the complainant. It was probably a less amount than the \$43,650, but anyway in his first draft of the report Mr. Ehler agreed with the complainants that this land was used and usable only to the extent of \$13,500, and that is the figure he incorporated in the report—and that was a right and proper figure to put in for the appraisal of this land.

MR. TURNER: I desire to make a few remarks which I would prefer to make in an executive session of this Committee, but as the matter to which I refer has been given wide publicity, I feel that this statement should be presented at a public hearing.

I should also prefer not to make this statement for the reasons that it may be interpreted by the public, in the first place, as an indication of dissension among us—the contrary being true, there having existed in this Committee a fine spirit of tolerance and good fellowship; and secondly, an attempt on my part at a defense.

However, whether my motives be misunderstood or not, I conceive my duty to be too plainly marked in this instance, by

reason of my office as a Representative in the General Assembly, because of my training as a lawyer, and by every dictate of fairness, which the Governor pledged in his statement to the people when he insisted upon a House investigating committee, and observers to be appointed by him.

The American people may at times be misled, but never for long. In these hearings we have, but with a few slight exceptions, heard but one side of the case. Only a few of the officials of the interests involved have as yet been called to give their testimony as to their version of the facts as produced by the experts employed by the Governor. The Committee has agreed that these interests shall be heard. But until we can have the answer of those parties, no one should publicly convict the "defendant" before his testimony is in. Even the lowest criminal under our law has the benefit of being believed to be innocent until he is proven guilty.

We should be the exemplars of orderly Government. Orderly procedure will produce confidence in us. Irrational methods will destroy the confidence of all thinking men and women and lessen the value of any recommendations we may make.

On two occasions statements have been made to the press which I believe to be detrimental to the best interests of this Committee and misleading to the public. Irresponsible statements are not in keeping with orderly procedure. They becloud the issues. We have no time to waste if we are to be fair to all parties. We must hear the testimony on the vital problems. We must stop hunting "ants" and go after the "elephants." Our program is set for May 1st, but fifteen days away. There is a tremendous amount to be accomplished in that time. To follow up irresponsible statements would take time. We are dealing with actualities not figments of imagination.

The Committee has demonstrated the proper procedure on those matters upon which legal action should be taken. When the evidence showed a situation that warranted legal action, as in the Gettysburg and Hanover cases, the Committee referred the matter to the Attorney General. Such action is the considered action of the Committee by and with the advice of its counsel. Any attempt to convict through the press rather than by such orderly processes, is embarrassing to this Committee, contrary to its policy, and unfair.

FATHER COX: The statements referred to were made by me, and I stand on what I said, and I think that there has been enough evidence produced here to warrant criminal action in many, many cases. I am only a member of this Committee by reason of my appointment by Governor Pinchot. At that time and in my opinion now I think there should be criminal procedure in many of these cases.

Another thing I said was that this evidence or a lot of it pointed to one man. I am not ready to give the name of that man until I have facts that will satisfy a gentleman like Mr. Turner and other legal minds. I am not irresponsible. I am very responsible and stand back of just what I said, and my opinion is just as good as the opinion of Mr. Turner, and I stand on my opinion and if the people believe these things it is not because of what I say but because of what they have known for a long, long time, but this is the first opportunity they have had to bring it out before the public in an official way. That is all I have to say.

MR. MOORE: The Committee will now adjourn, to reconvene at 2.30 o'clock this afternoon.

#### AFTER RECESS

The Committee reconvened at 2.30 P. M. Mr. Rhodes, presiding.

W. M. BLACK sworn

MR. EVANS: I might say to the Committee that Mr. Husselman this morning made some analysis of the case instituted by the Commission a year ago on its own motion, in regard to the rates of Scranton Electric Company. Mr. Black was the engineer for the Bureau of Engineering in that case, and we want to make some inquiry in regard to the valuation that was then made.

BY MR. EVANS:

Q. Mr. Black you were the engineer in charge of the valuation of the Scranton Electric Company a year ago, were you not?

A. I was.

Q. Before coming with the Pennsylvania Commission, what was your training and experience as an electrical engineer, particularly as to your experience in appraisal work in the design and construction of electro generator plants, transmission systems and distribution systems?

A. How far back do you want me to go?

Q. As far back as you want.

A. In college, I took a civil engineering course specializing hydraulic power development and electric transmission. Following graduation I went to work with a water power development on a stream emptying into the Delaware River, located at Columbia, New Jersey, just opposite Portland, Pennsylvania.

Q. Of what college were you graduated?

A. University of Maine. Later I went into general construction work. I was resident engineer on construction of the New York subway.

Q. Will you just confine your experience to electrical—

A. That was electrical railway. That involved the building of tracks, the subway structure, and the placing of systems for the distribution of the electric energy. Following that I went to the Public Utilities Commission of the State of Maine. That was in April of 1918,—primarily under the designation of bridge engineer, making and inspecting of railway bridges, and later went into the valuation work of the Commission there of electrical companies.—became chief engineer of the Commission for the Maine Utilities Commission, in October, 1919, my work being principally with the electric companies with a view of going over properties for the approval of issues of securities, for construction of lines on extension, and valuation of properties for rate making cases.

I came to the Pennsylvania Commission in May, 1924, where I have continued in a similar line of work.

Q. If I understand you correctly, before you came to the Pennsylvania Commission, your only experience in the design and construction of electric generator plants, has been that of the hydro plant opposite Portland—

A. That is the only plant that I have worked on specifically.

Q. That is your only experience in the design or construction of electric transmissions for distribution system,—the only experience you had in that regard was in the New York subway.

A. Except as I came in contact with that work in my position with the Maine Commission, where my work was primarily on electrical development.

Q. That was not in design or construction, but rather in work for the Commission? You are not engaged in the construction of any electric property?

A. I did not go out and build the electric properties.

Q. When were you appointed engineer of the Public Service Commission of Pennsylvania?

A. In May, I don't remember the exact date, 1924.

Q. When did you commence your field work in the Scranton Electric Case?

A. March 17, 1930.

Q. When did you conclude it?

A. I believe it was May 10th, I am depending upon my recollection, I have not seen the record for sometime.

Q. Do you remember, Mr. Black when you first started to commence this appraisal?

A. On March 10th; I received oral instructions to proceed on such valuation.

Q. Who gave you these instructions?

A. I don't recall whether they were given to me directly by Commissioner Benn or through Chief Snow.

Q. Did you receive any special instructions as to how you were to proceed?

A. I did.

Q. What was these instructions?

A. My instructions were to proceed with a valuation so thorough going that we could substantiate it right thru the Supreme Court, if necessary.

Q. Were you instructed to work with the Bureau of Accounts of the Commission in setting up your appraisal?

A. We were supposed to work together.

Q. Did you receive any instructions in regard to observing or regarding the books figures of the fixed capital of the property?

A. I received no instructions whatever, except those I have just told you.

Q. In your opinion, it is possible you did complete a thorough going appraisal of the property of this company in the period from March 17th to May 10th.

A. No sir.

Q. Where you not instructed so to do?

A. I was.

Q. Did you carry out your instructions?

A. I did as well as I could, in the time allowed for the work.

Q. Who put the time limit on you?

A. The Commission.

Q. Did they put this limit when you were instructed to make the appraisal.

A. No sir.

Q. When was that put on?

A. Sometime in the latter part of May, I believe.

Q. Who imposed that time limit?

A. The Commission.

Q. How was it imparted to you?

A. I believe in the presence of the Commission's Rate Committee.

Q. Consisting of Commissioners Young, Brown—

A. And Benn.

Q. In other words, as I understand you, after you started to make this appraisal, you were told by the Committee that the appraisal must be finished by a certain time and you were unable to complete your appraisal as originally planned?

A. That is a fact.

Q. Now, as a result of this limitation of time, did you consider in making your appraisal the figures of fixed capital, as set up in the books—

A. I don't think I understand you correctly. I did not if I understand you correctly.

Q. You never in any way in making your appraisal have any regard for the book value of the property of the company?

A. No; we never use book value. We did use construction ledger, however, on certain items of recent construction.

Q. Did you make any effort to make your cost of reproduction new figures correspond with the bond and security accounts entered in the books of this company after the consolidation on March 1, 1928?

A. None whatever.

Q. This amounted to \$29,564,178.86?

A. I don't know how much they amounted to even today.

Q. What figure did you arrive at, as to the value of the property of the Scranton Electric Company undepreciated, as of June 30, 1930?

A. The total undepreciated property and business \$29,508,598.

Q. As compared with the bond and security accounts entered in the books of this company after consolidation of March 1, 1928, in the amount of \$29,564,178.86?

A. I don't know what that amount is.

Q. Now, did you make any examination of the books of the company?

A. I didn't.

Q. Did you make any examination of the job orders, working orders of the company?

A. I did.

Q. For what purpose?

A. To determine the construction costs as they were actually carried in their construction ledgers.

Q. Who assisted you in making this appraisal?

A. Mr. Bierman, Mr. Palmer, H. R. Palmer, Mr. Haymer, Mr. Reagan, Mr. Bennedum and Mr. Parry.

Q. Which of these gentlemen has ever had any experience in the designing and constructing of transmission or distribution system?

A. Mr. Palmer and Mr. Bierman have been connected with that type of work for some time. I cannot tell you offhand their experience. Mr. Palmer was for many years engaged in the electric industry; he was at one time local manager of the Harrisburg company.

Q. Which of them have ever had any experience in the designing or construction of generating systems, or substations?

A. I don't know about Mr. Bierman; Mr. Palmer certainly has.

Q. What position did Mr. Palmer have with the Harrisburg company?

A. He was general manager.

Q. Did he come to the Commission directly from the Harrisburg Light and Power Company?

A. He did not.

Q. When was he general manager of the Harrisburg Light and Power Company?

A. Prior to its sale to the Pennsylvania Power and Light Company.

Q. And when was that?

A. 1927, I believe. The same holding company took control of it, it did not go into the Pennsylvania Power and Light Company until last year, I believe.

Q. When did Mr. Palmer come with the Commission?

A. I think it was about two years after he left the company; sometime in 1928, is my recollection.

Q. And he left them in 1927?

A. 1926 or '27.

I think there was a year and a half or two years intervening there.

Q. Do you know what he had done in the meantime?

A. I think he has done some appraisal work.

Q. Did you, or any of your assistants make a complete inventory of the Scranton Electric Company's property?

A. We made as complete an inventory as was possible in the time available to us.

Q. How complete was that; tell us what you inventoried?

A. We inventoried the entire property, if that is what you mean.

Q. You made an inventory of the entire property?

A. Yes.

Q. Then how did you proceed?

A. We figured unit prices and applied unit prices to the property found, and arrived at a total.

Did you go out and examine the property in the field?

A. Yes.

Q. And you counted all the poles?

A. No.

Q. How did you make an inventory?

A. The company had complete plans of all their pole lines, and all their systems, and of their transmission lines, and all of which plans were submitted to you and are in the record here, and from those plans, and they are a complete pole record of the property, showing their poles—every pole that they own, on a card index, and we took from that card index that information as to the character of poles. We checked those things of the company that they had there; we took a record of what their own inspectors found as to the condition of their poles, as they reported them for operating conditions. We checked those statements against their purchases of materials throughout the last few years as shown by their voucher records, and otherwise spot checked the plans made by the company.

Q. What check did you make of the number of poles and the transmission and distribution systems of this company?

A. As I said, the checking over of the plant in the time could not possibly cover some 60 or 70 miles of pole line. We checked them from the plans, and checked the plans against the lines.

Q. How did you check them against the lines, that is what I want to find out?

A. You find the beginning of the line, some point in the middle of the line and the end of the line, and you know there must be a line there, and if the plan is complete and agrees with the scale of your general maps, there cannot be any question but what the line is there, and as far as the standard of poles is concerned, we checked one record of the company made by one group against records made by another group. There was no other method possible in the time.

Q. I appreciate you were limited in time, and I am merely trying to find out how you proceeded. In other words, as I understand it, you practically relied on the data furnished you by the company in regard to its inventory, excepting the spot checks, such as you have described?

A. No, that is hardly a statement of fact. We relied on the company's own record of what their property consisted of. The company said, "Here are our records that we keep, our own operating records, they show exactly what we have here. Now mind you, these records are operating records, not complete for any valuation purpose at all, and you go ahead and use them in any way that you see fit." They turned their complete records over to us, and we took that property record as it had been compiled for their operating uses, and used that to compile our data as to what the property consisted of.

Q. Did you inspect the property to determine its condition with respect to depreciation?

A. Oh, yes, in part. Of course, with a distribution system of the magnitude of that system, it was not possible on the pole lines, and we depended in large measure on the report of their inspectors. The inspectors go around and make an inspection of those lines every two years, and they make a card index for each pole; show the condition, and we depended in large measure on that, and spot checked it in a few places.

Q. Who did the work in regard to the electric transmission and distribution systems and city systems?

A. Mr. Bierman.

Q. What assistance did he have?

A. Why, whatever assistance any of us could give him, when we were not busy on our own part of the work; no particular assistant assigned to him.

Q. Who did the work on the power plant?

A. Mr. Palmer.

Q. Did he make a separate estimate of the quantities of building material in the various power station structures of the Scranton Electric Company?

A. Not completely.

Q. Did he put a price on the structure?

A. Yes.

Q. When did he obtain these prices?

A. The prices were, in part, built up in our own office, and in part were adapted from a valuation which the company made in 1927. After checking the quantities and prices in that valuation which was made in great detail, if we found the price to be in line with our own information, we accepted that price.

Q. Is that what is commonly known as the Endress valuation?

A. I don't know how it is, commonly known. It was made by Mr. Endress of the American Gas and Electric Company.

Q. For what purpose was that appraisal made in 1927?

A. That appraisal was made for the purpose of merging the properties.

Q. On which the plant values were written up on the books, some four or five million dollars.

A. I believe the accounting report shows some such figure as that.

Q. Was this Endress inventory and appraisal ever submitted to the Public Service Commission of Pennsylvania?

A. It was.

Q. For what purpose?

A. In connection with the merger proceeding; merger or sale. I don't recall just the exact character of the case.

Q. Did you check it at that time?

A. I did not.

Q. Did any one in the Engineering Bureau so far as you know?

A. No.

Q. In other words, so far as you were informed, the Commission approved the merger without any check of this appraisal?

A. That is correct as far as I know.

Q. In working up your unit prices, did you use prices prevailing as of June 30, 1930, or were your prices of some other date?

A. We used the prices which had prevailed over a period of years, and some 1927.

Q. You have stated that you used prices running over a period of years. What did you mean by that? Did you use a five-year average price?

A. No.

Q. Did you use the prices in the Endress appraisal?

A. In some circumstances, and in some instances not.

Q. To what extent did you use the prices in the Endress appraisal?

A. I don't know just how I can apportion that. Half of the times, half of them perhaps, I don't know, I couldn't say off hand. I would have to go back over the record and refresh my memory. I made no—

Q. Did you use them in your appraisals of the generating stations?

A. In the generating stations, I would imagine that our prices are the same for equipment, because we both of us had the quotations from the manufacturers of that equipment.

Q. Your appraisal was made as of June 30, 1930; was it not?

A. Yes.

Q. Had there been any change of prices since 1927?

A. There had been a slight downward trend of prices, but the general run of prices remained fairly constant in those years. The quotations in 1927 agreed with the quotations on some of that equipment at the time it was put in. We actually took the contracts under which that equipment was put in, some of it back in 1921; the actual prices that that company paid to the contractor to put the equipment in place. We had, again, the contractor's statement of quotation of prices in 1927, and in many instances they were identical, and our comparison with the general level for similar equipment showed no great change at the time the appraisal was made. The principal change in price was in the price of copper.

Q. In other words, there was no marked change between 1927 and 1930?

A. On the electrical equipment of the type installed in those generating stations, that is true.

Q. Now, how about the sub-station equipment. Did you use the Endress prices there?

A. In some instances there we used—certain sub-stations had been under contract, and we took the actual contract and analyzed it as to the amount of material and prices paid, and we accepted certain of those figures. In other instances we put in prices which were less than Mr. Endress' prices, and there were cases where we even used prices higher than Mr. Endress' prices. In other words, we were not tied to Mr. Endress' prices. We used our own prices and only accepted those when they checked with our information rather than to take the time to recompute another set of units, when there was nothing to be gained by it.

Q. In other words, Mr. Black, what you practically did was to take the Endress appraisal and make certain checks of it and change the system of unit prices, and made your valuation on that basis?

A. Oh, no; you are absolutely incorrect in that assumption.

Q. Well, we will go through it then?

A. We made our figures, and accepted Mr. Endress' figures only when they checked with our information.

Q. You stated that in 50%, I think you said, probably of the cases you took the Endress prices. In the case of generating station equipment, you said you took them generally?

A. That is included in the 50%. Don't assume they are two separate items.

Q. In the sub-stations, to what extent did you take them?

A. I couldn't tell you. The basis here to determine a thing like that, and the only way to determine it, is to take Mr. Endress' valuation which contains the unit prices, and take our valuations item by item and count them up. I don't know of any other way to determine it.

Q. Have you a copy of the Endress appraisal?

A. Filed; made a part of the record in that case.

Q. It was made a part of the record of the case?

A. Of the Commission's record.

Q. This Committee has asked for a complete record in that case, and it has not been furnished with the Endress appraisal. When you return to the office, will you see if you can find that appraisal and furnish it to us?

A. The record that was furnished to you; didn't that include the merger proceedings? They were made a part of the record in this case.

Q. I don't think they were. You will furnish it to us upon your return to the office?

A. If that is a part of the Commission's record. Of course that is not in my possession.

Q. I think the Commission will be glad to follow your recommendation.

Q. Now how many men from your bureau altogether were engaged in the field work in this case?

A. Six, I believe.

Q. And how much of their time between March 17th and May 10th was spent on the case?

A. We left Harrisburg about six o'clock Sunday night and went to work about eight o'clock Monday morning and worked until eleven o'clock every night until Friday when we came back to take care of our week's work here in Harrisburg on Saturday and left again on Sunday night.

Q. That was true of all six?

A. No, I think Mr. Bierman, Mr. Reagan were only there one week, I believe. I have to depend on my recollection.

I think they were there a week or a week and a half, maybe, on this work.

There were only the four of us for the entire period in the field.

Q. Now continuing with the matter of the Endress appraisal, to what extent did you use the Endress unit prices in the transmission system?

A. I don't recall that we used the Endress until prices in the transmission system at all. The major portion of the transmission system had been built in 1927, and the construction ledger showed in detail exactly what had gone into the line down to the last bolt and nut, and we checked the unit prices carried on the construction ledger, and on each of them accepted the ledger figure. I think Mr. Endress in his valuation in August, 1927, also accepted on that construction the construction ledger figure.

Q. So you didn't use the Endress figures, but you used the same figures Mr. Endress used?

A. They were not his figures; we used them and so did he.

Q. And when you came to the distribution system to what extent did you use the Endress figures?

A. I don't know that we used the Endress figures at all on the distribution system.

Q. What figures did you use for unit prices?

A. I could not say for certain. I cannot recall, unless you have some specific items you refer to.

Q. I mean, did you get your unit prices as of June 30, 1930, and apply them, or take some other prices that you found on the books of the company or the Endress appraisal?

A. We built up our own figures on most of the distribution system.

Q. That would apply to transformers and meters and all such things?

A. Yes.

Q. What figures did you use for copper wire? Where did you get these?

A. Why, we have a record of the prices of copper wire clear back to 1899, month by month.

Q. Did you use the copper prices as of June 30th, 1930?

A. No.

Q. Why?

A. Because the figures were made somewhat in advance of that.

Q. Did you use copper prices as of the date of your field work?

A. The copper prices we actually used were the prices the Scranton Electric Company had actually paid as shown by the vouchers and bills of the companies from whom they purchased the wire.

Q. In other words, you were not taking reconstruction prices on copper wire, but what you found the company had paid?

A. Over a period of the last two or three years.

Q. If you had used the present market prices as of that date, would it have affected your estimate particularly?

A. If we had used the price of copper as it stood around June 30th, 1930, it would have made a difference of about \$250,000 to \$300,000 of a reduction.

Q. A reduction in your appraisal?

A. Yes.

Q. And you did not think it worth while to use them?

A. Copper had maintained a steady price right up to the end of 1929 for years, and then started on a down grade in the last months of 1930, and as anybody who knows the market knows, it went lower than it has been for twenty-three years without any expectation that it is forever going to remain there.

BY MR. RHODES:

Q. What price did you use?

A. You will find that copper wire prices are all on a base price. We used about 15.8 cents a pound for the price of copper. That was about 5 cents above the market price on June 30th.

Q. In other words, the market price was about 11 cents?

A. That is the base price of copper, not the price of wire.

BY MR. EVANS:

Q. Mr. Black, didn't your total appraisal of wire, copper wire, run about two million dollars?

A. I don't recall. There was some 184 or 185 miles off transmission and distribution lines. It made a difference of from \$250,000 to \$300,000 from what it would have been had a different base price been used.

Q. As I understand it, the base price that you used was something about 15 cents a pound?

A. Yes, a little above 15 cents a pound.

Q. And the current price as of June 30th, 1930 was about 10 cents?

A. Yes, but it dropped under 10 cents at one time; it was around ten to eleven cents.

Q. So in this item you added approximately fifty per cent. to the reproduction cost on your copper wire by using the higher prices?

A. Fifty per cent.?

Q. Fifty per cent. over the current price?

A. Well, yes, you can put it that way.

Q. Is that not a correct way to put it

A. Yes, that is all right.

BY MR. RHODES:

Q. I don't understand why you didn't take the current market price if you are figuring on reproduction cost?

A. The market prices on these materials are just like anything else. If in a valuation one attempted to follow the market up and down, we would never get done. We have to head in somewhere on about what the companies are paying?

Q. Don't that all depend on the condition of the market?

A. When you take reproduction prices, there are as many different theories as to how they should be made as there are different people, whether to take the average price over a period of years, the instantaneous price, or what someone may estimate.

Q. Can your engineering department give us any light on what reproduction cost means?

A. The foundation of values is a matter of opinion, and for the purposes of regulation, value is the consensus of opinion of men thoroughly informed of all the circumstances affecting these things, provided these men are qualified by law to make their opinion effective. That is what value is and is about the basis of determining reproduction cost, but it is frequently presented on several different bases of estimate. Sometimes they have used one-year average prices, three-year average prices, instantaneous prices, ten-year average prices, all depending on the policy to be established and followed.

Q. What is the policy of the Commission.

A. As far as I know, there is no fixed policy. It depends upon how the matters are presented to them.

Q. You mean the real presentation has something to do with it.

A. Yes sir.

Q. Why hasn't the Commission a definite policy to determine it without regard to the method of presentation.

A. My point is this: In determining value, value is opinion—nothing else but opinion.

Q. You mean it is guess—everybody's is as good as another one.

A. No sir, it is opinion; it must be based on knowledge of the circumstances.

BY MR. EVANS:

Q. Were you directed to prepare a statement of the fair value of this property for rate making purposes.

A. I was not.

Q. You were told to prepare a statement of the reproduction cost new, less depreciation of this property.

A. Yes sir.

Q. You stated, in answer to the question of Mr. Rhodes, that there are various methods of doing that; one is the spot reproduction prices—did you use that method.

A. No sir.

Q. The other is the five year average price, did you use that.

A. No sir.

Q. The other is the ten year average price, did you use that method.

A. No sir.

Q. What method did you use?

A. Taking the prices the company had paid for the equipment, as shown by the bills, over a period of three years—the last three years.

Q. You didn't get the reproduction cost of the property at all, but you took the actual book cost in places; you took reproduction cost in other places, and combined them into a valuation.

A. That is an absolute misinterpretation of my entire testimony.

Q. You stated you took the generating machinery, the generating equipment, the price paid by the company, 1921, found those were not substantially different from current prices, and used that.

A. Yes sir.

Q. You stated in the case of Copper you used prices paid by the companies is I understood you correctly.

A. Yes sir.

Q. That was not at all the reproduction cost, current prices of that copper, was it.

A. It was not instantaneous prices.

Q. Was it a five year average.

A. No sir, about a three year average.

Q. In other words, in this case you think you used a three year average.

A. Most of the figures would be based approximately on a three year average. As you ought to know, it is not possible in the time we put on that to develop unit costs, and build up one on the fine spun system. We had to use the most reasonable price we could determine at the time, by inspection of the prices; not as shown by the books of the company, but as shown by the bills of the people who furnished the equipment.

Q. Do you believe those were the same as the books of the company.

A. I don't know that.

Q. I agree with you that in the time allotted to you it was physically impossible to do that. I wanted to find out whether as a result of that it is not practically true that you accepted the Endress appraisal.

A. No sir.

BY MR. COOKE:

Q. You said one qualified by law, in your testimony, what did you mean by that.

A. The Commission, unless the court supersede it with its own opinion.

Q. What does that do to your engineering opinion?

A. It does nothing. My opinion is my own. I state what I think the value should be, and the report on that is my opinion from start to finish.

BY MR. RHODES:

Q. How do you know what method to utilize?

A. I used my own judgment, from experience in value.

Q. In other words, you did not follow any established method of the Commission.

A. No sir, they didn't give me any instructions as to method.

Q. Does the Commission have any established policy in the determination of reproduction cost.

A. They have never given me any rule of procedure.

Q. They send you out and you use your own judgment?

A. Yes sir.

Q. Supposing you had found that the price of copper in the market was 20 cents a pound would you still have used about a 15 cent average?

A. If the figures would have shown they were paying over that period of years 15 cents, we would have used it.

Q. In so far as the determination of the reproduction cost is concerned, what difference does it make what the company paid for this material?

A. It was only used as a device for finding what the market prices were.

Q. Why didn't you use the current market price of eleven cents?

A. At the time the figures were compiled, in the beginning of May, the prices were higher. The prices went down very rapidly. There was no reason at that particular moment why we should attempt to follow a rapid swing in the market, up or down. This reproduction field theory is not a device for accurately following the market.

Q. Don't you think the Commission should utilize some more or less definite policy in determining the reproduction cost.

A. It seems to me that would be attempting to coerce engineering judgment considerably.

BY MR. COOKE:

Q. What would be your reaction—you say you have your own opinion—what would have been your reaction to what was referred to this morning, where one of the Commissioners asked one of the engineers in the Bureau of Engineering, to stretch an item.

A. I have never been asked to do that. If I make up a report, which involves my engineering opinion, it is my opinion that I put in, if, however, the Commission has considered a case and has made up its mind, and brought that case to me and said, "You prepare a report, we are going to find so and so." I would prepare that report, in accordance with that finding. I might do that even though my report recommended something different. That wouldn't affect my report one iota, because my report is my opinion, and the Commission or nobody else can change, but the Commission has the authority by law to make the final decision, if they have made that decision, then it is no longer my problem. I might assist them in anyway that they desire in the preparation of their report I am in no way responsible for what they do. That doesn't affect or change my opinion one particle.

BY MR. RHODES:

Q. In other words, you make a report as an engineer, and if the Commission wants to change it, that is their responsibility; they are responsible for it?

A. Absolutely.

BY MR. COOKE:

Q. And you change not only the total, but you change the details—I don't mean to say that you—

A. I never have.

Q. You have never been asked to do any stretching?

A. I have never been asked to do any stretching, and I have never done any.

Q. What do you mean than by saying you put in your report and the Commission determines that they are going to reach an entirely different decision than that, and ask you to make a report based on that change of total, what does that mean?

A. I didn't say that they make any other report under that condition, but they may turn and ask me to help them in the preparation of their report, which is an entirely different matter. I think I have made it clear.

Q. It is done on the stationery of the Bureau of Engineering, isn't it?

A. I would not be surprised, we do not go around to fine the stationery of some other department to send it through, we use our own; it would be ridiculous to go to other offices and hunt for some other kind.

Q. My conception of engineering has been very decidedly widened.

A. You are not differentiating between the function of the engineer and the function of the Commission; they are two decidedly different functions.

BY MR. EVANS:

Q. Mr. Black, early in your testimony you stated that you had never seen the books of the Scranton Electric Company; that you know nothing about the book value of its property, is that correct?

A. That is correct.

Q. Did any of your assistants ever see the books?

A. Now, wait a minute. Will you please repeat that again.

(Last question read as follows: Mr. Black, early in your testimony you stated that you had never seen the books of the Scranton Electric Company; that you knew nothing about the book value of its property, is that correct?)

A. That is correct; I have never seen the books of the Company.

Q. But you did know the book value?

A. I didn't know at the time of our valuation what the book value was.

Q. You knew it before you made your report, didn't you.

A. Yes.

Q. Then why did you tell us earlier in your testimony that you didn't know anything about it?

A. You asked me if I had ever seen the books—

Q. No, I asked you if you had ever seen the books, the figure of \$29,564,178.86, and you said you had never seen that figure; didn't know anything about it?

A. You are referring to stocks and bonds, or were referring to stocks and bonds, and my reference was to stocks and bonds entirely.

Q. In other words then, it is true that you knew all about the book value of the property that had been written up between 4 and 5 million dollars on the books of the company, and you made your appraisal come out within a couple hundred thousand dollars of that written up book value, that is correct, isn't it?

A. The book value had nothing—

Q. Won't you answer the question, and then make any explanation you want?

(Last question read as follows) In other words, then it is true that you knew all about the book value of the property that had been written up between 4 and 5 million dollars on the books of the company, and you made your appraisal come out within a couple hundred thousand dollars of that written up book value, that is correct, isn't it?)

A. No, that is not correct. If you will separate that question into two items instead of involving it in one, why, I may be able to answer it intelligently.

Q. Now, we will try to divide it. When did you first know the book value of the Scranton Electric Company?

A. Oh, sometime the latter part of March, or April.

Q. And you knew then—

A. You mean the figure that they had written up on the books?

Q. What is that?

A. You mean the figure that they had written up on the books?

Q. Yes. You knew that that value included between 4 and 5 million dollars, based on the Endress Appraisal?

A. Yes.

Q. And your appraisal of June 30, 1930, came within a couple hundred thousand dollars of that book value that you had known ever since you had started?

A. I don't know the exact difference, whatever it was.

Q. What was the book value?

A. I have not the record of it here in front of me.

Q. Now, Mr. Black, let us get down to brass tacks. I show you volume 3 of your work sheets, do you recognize that?

A. Yes, surely.

Q. There is a tab marked "Adj.-Val. to books"?

A. Yes.

Q. What does that mean; what does that stand for?

A. That is adjusted value to books.

Q. Adjusted valuation to books?

A. Yes.

Q. That was used as part of your work sheets?

A. Yes.

Q. And that shows plant and securities, which was what I asked you for as being the value of \$29,564,178.86, is it not?

A. Yes.

Q. Now, what was the valuation you put on this plant?

A. \$29,308,598.

Q. And what was the amount of the Endress Appraisal?

A. The Endress Appraisal is a depreciated value of something like \$21,000,000, to which was added afterward some seven or eight million dollars for the construction of the Stanton Plant, which was not involved in the Endress valuation at all.

Q. Now, what was the purpose of this sheet which I showed you, which is adjusted value to books?

A. The purpose of this sheet—Mr. Endress made a valuation, and that is a record of the way in which his valuation was carried into the books.

Q. Why were you interested in that?

A. I was interested in everything relating to the value of the plant.

Q. But that had nothing to do with the reproduction cost valuation of the plant?

A. Not specifically, no.

Q. You just put that in as one of the early entries in this book of work sheets?

A. That is part of the information that came to me in the matter of investigating that property, and every bit of information that had any relation to their property that came to me, I made a record of it.

Q. And that sheet is in your handwriting?

A. Oh, yes, that is mine.

Q. Now, let us look at the following sheets?

A. Yes—that is May instead of April, that is all.

Q. This is headed transition from valuation on books; what is the purpose of this sheet? This shows valuation on the left, books on the right?

A. The company always maintained that their book figure as it was carried, the final figure was based on Mr. Endress' valuation, and I was attempting to find out how they got from his valuation to the figure they show.

Q. Then you considered that a very important item in your reproduction cost new valuation?

A. It had no bearing on the reproduction cost new valuation.

Q. What was the purpose of putting it in the book in which you were putting your work sheets on that valuation; is this all a waste of time?

A. No.

Q. What was the purpose of it?

A. So that we might have all the information possible about that company's property.

Q. But you didn't put information in here that had no bearing on what you were doing, did you, Mr. Black?

A. No, but this had no relation to our reproduction value.

Q. Then it had some bearing on what you were doing?

A. It might have a bearing on the carrying on of the case in future testimony, or whatever might have happened; we didn't know at the time we were making the investigation what would happen.

Q. Now, what bearing did the book value on the books of the company have on the reproduction cost valuation which you were making, will you explain that to the Committee?

A. None whatever.

Q. So you might just as well have written Mother Goose Rhymes in here?

A. As far as valuation was concerned, yes.

Q. That would have been interesting. Now, the next sheet also pertains to the adjustment of the book value—

A. This data given here is entirely a study of how Mr. Endress' valuation was carried into the books.

Q. So, you spent another page of figuring. How much time did this calculation take you?

A. Oh, I don't know. I couldn't tell you.

Q. It looks to me like there is a great deal of arithmetic involved in this calculation?

A. There is.

Q. How long did you spend on it?

A. Oh, perhaps a couple of days.

MR. RHODES: That did not have any relevancy to this case, according to the testimony?

MR. EVANS: He says that it is just as relevant as Mother Goose rhymes.

THE WITNESS: Just a minute. I didn't say it had no relevancy. I said it had no relevancy on the reproduction value of the property.

BY MR. RHODES:

Q. You were making a reproduction value, were you not?

A. Yes.

Q. And all of these things had no relevancy to that?

A. It had nothing to do with my figures in my valuations.

Q. What relevancy did it then have in the case, if it had no relevancy to what you were doing?

A. Here is the point: Some point in the carrying on of this case, it is necessary that our work ties in with the accounting bureau work; that was the instructions; and that was the point of tie in between the two; but it has no bearing whatever on the figure found for reproduction.

Q. You mean that it ties in with the work of the accounting bureau and of your bureau?

A. Exactly.

Q. In just what respect does it tie in?

A. You can proceed through these figures to the report and valuation made by Mr. Endress, which is also a valuation in this case, and tie the work back with our reproduction cost so you can tell what became of various items of property and how they were treated at various points.

BY MR. HAGMAIER:

Q. Mr. Black, about the third or fourth question you answered here today, you made the statement that you had

never heard of the amount or saw the figures of the book value?

A. As I recall the question, the question was not asked in that way, it was what was in my mind: my recollection was entirely of stocks and bonds which had been mentioned in that question or the previous question, and I said I knew nothing about the stocks or bonds of the company. They had no bearing.

Q. I did not hear the word "stock" or "bonds" being used at all. You said you had never seen or heard of the amounts.

A. Well, if I said that I had never heard of the amount of the book figures, then I want to correct that answer. But my answer was directed to stocks and bonds entirely.

BY MR. RHODES:

Q. Then, if I understand you correctly, you never heard of the book value of this property?

A. I knew the figures they carried on for fixed capital?

Q. Including the write-up?

A. Yes.

Q. Did you know the total figure carried on the books before you made your valuation?

A. No; I don't think I did.

BY MR. EVANS:

Q. You just said you knew it in March?

A. Oh, you mean before I made the report?

BY MR. RHODES:

Q. My question is that you said you didn't know?

A. I wanted to say this: That figure was in my possession, and no other man in my party knew that figure.

Q. When you spoke of that figure, you meant the book value of the property?

A. As shown up here in this record (indicating), and it may have been picked up in the statement. There was no man living—let me go back a moment. My report was submitted Monday morning, and no man, myself or anybody else knew what our total figure was to be until seven o'clock Sunday night of the 29th of June.

Q. Did you know what it was to be?

A. No. No man living knew it. We completed our work under pressure, working all day Sunday and no man knew what the final answer was to be.

BY MR. COOKE:

Q. Didn't you know it within \$200,000.

A. The trouble with you gentlemen is that you are talking about a write-up. You are assuming that is something different?

Q. Isn't it?

A. Oh, no.

Q. I think that is a right we have to assume in most of these cases?

A. You don't know without a proper investigation. Here is a property that is created and the write-up may or may not be a fact. It is easy to talk about it. It is not a fact if money has gone back into the property and the plant has been built up.

Q. The reports to the Public Service Commission do not show a cent going into the property and nothing tangible.

A. This property shows something tangible.

MR. TURNER: Mr. Rhodes, perhaps we ought to find out a little more about this matter.

MR. RHODES: I think the reports to your Commission certainly indicate the basis of these write-ups, and we have had a lot of these reports to your Commission submitted to us, and they show nothing except a recapitalization of the operating company.

THE WITNESS: The accounting may or may not reflect the actual condition of the investment.

Q. Why do these investments take on such a different aspect just as soon as the holding company goes over and buys the property of the operating company?

A. It wasn't so in this case, was it?

BY MR. EVANS:

Q. Just as soon as it was merged in 1928, the book value was written up between four and five million dollars, was it?

A. On the valuation, yes. They changed the book figures.

Q. It was done on the basis of the Endress appraisal which was unchecked by anybody?

A. Yes.

Q. And by using the prices in the Endress report and by using the prices which you got from the company, you set up a valuation which was within \$200,000 of the Endress appraisal—

MR. COOKE: In a total of how much?

BY MR. EVANS:

Q. In a total of how much?

A. You are neglecting entirely that we used our own prices and we checked everything that we could.

Q. You have been very vague as to what of those prices you did use. Will you point out a few of those prices that you did use, the books there?

A. Yes; get me the book on meters.

Q. Yes.

A. Or get me the details on meters.

Q. Now Mr. Black, let us hear the unit prices you worked up and applied for meters?

A. This is just a sample of one of the prices. G. E. Polyphase meter, type D, 110 volts, 5 ampere meter, the price used was \$21.528, inspection of meter, 52 cents, cartage 12 cents, labor 66½ cents, installation and material for setting 6.4 cents, breakage, loss and waste, 2 of a cent, storage and purchasing expenses 34.8 cents, freight 20.4 cents, total cost of meter in place \$23.451.

Q. What was the Endress appraisal on this type of meter?

A. I don't know, I have no idea. I never made that comparison.

Q. Did you get the same kind of unit prices for poles?

A. We used our own unit prices for poles. We had actual quotations from the pole supply houses.

Q. Will you turn to page 46 in your appraisal—first, what does this entry indicate, what does this entry in your book refer to, Mr. Black? Read it?

A. (Reading) "Suburban Station, Wheeler Condenser and Engineering Company, equipment, one cooling tower plate (there is a word there I cannot read; this is not my writing) in March 28, 1914, complete price \$189,100."

Q. And that was the price you used for that piece of equipment?

A. I could not say. I would have to go back over the details. That was a quotation from the Wheeler Condenser and Engineering Company to put the equipment in.

Q. What does the date 1914 indicate?

A. That was the date of that original contract, that is March 28, 1914.

Q. Don't you understand that the price shown there was the price in the contract.

A. I would say so.

Q. Wouldn't you suppose that that was the price you used in your appraisal for the reproduction of this engine.

A. It might be and it might not be. I don't know without comparing them. That is the 1914 price. I don't recall off hand how the market has changed.

Q. I show you page 46 of your appraisal, the Seventh item, 58½ poles,—

A. Yes sir.

Q. This sheet covers poles erected without cross arms, hardware or fixtures of any kind.

A. No, it does not.

Q. What does it include?

A. It includes poles, fixtures, and wire. It is the line complete.

Q. I show you the column marked "Poles, \$26,990.17,"—that is the figure, is it not, for the bare pole without any fixtures?

A. Yes sir.

Q. If you will take my word for it, that shows a value of \$46 per pole.

A. Yes sir, I will take your word for it; that looks about right.

Q. Will you explain how you can justify a price of \$46 for a bare pole set in the ground, without cross arms, hardware and fixtures.

A. It depends upon what the type of digging was, the conditions, under which the poles had to be set.

Q. Do you know what the type of digging was.

A. We did know at the time—suburban—Old Forge—Pittston line—my recollection is that that line if you are familiar with

Seranton, cuts off, I believe it is the north and the suburban plant away across the hills there, involves practically ledge work all the way.

BY MR. JOOKE:

Q. How many of these poles were there?

A. 584.

BY MR. EVANS:

Q. As a matter of fact, you took those pole figures, unit prices, from what source.

A. It depends upon what base that line is built. If there is any information there I can tell you. If it was built since 1927, it undoubtedly came out of the construction ledger, actual money paid by the company as shown by the vouchers for material and are a review of what was carried on for work done. I cannot tell you off hand.

Q. Mr. Black, in appraising power station equipment, did you use any prices prior to 1927?

A. Yes sir, some of the prices we used were the actual contract prices at time the equipment was put in—some of it back in 1921 and 1920, but the quotation obtained from the makers of the equipment in 1927 were identically the same price, and our information that we get at the present time indicates approximately the same price—no great change.

Q. How did you obtain those 1927 quotations?

A. Those are quotations submitted by the company in connection with the 1927 valuation, by Mr. Endress.

Q. You took those from Endress' appraisal.

A. No sir, those are not carried there.

Q. The company furnished you with them?

A. Yes sir.

Q. Do you know anything about the circumstances under which those quotations were requested.

A. Yes sir, we had the letter that went out in connection with the Endress appraisals to the manufacturing companies and the contractor who put those things in place, stating in detail what equipment he wanted prices on. We had the original letters of those manufacturers replying as to what the price was at that time.

Q. Don't you know as a matter of fact, Mr. Black, that where the manufacturers know that those requests are made for appraisal purposes, not on the basis of purchasing on a competitive basis, that they give very different figures from what they would on a competitive basis.

A. I have never had any such experience, no sir.

BY MR. RHODES:

Q. On those particular items, Mr. Black, that you got from the manufacturer, you took the current market price?

A. We took the price—that is mostly on large equipment.

Q. You took the prevailing market price?

A. Yes sir,—your price showed a constant price level since 1921.

Q. You did take the market price for these items, but you did not take it for copper?

A. What else can we do, if that equipment has been sold for years at a standard price, we cannot say that the manufacturer is wrong and don't know what the equipment costs and what he sells it for.

Q. It seems to me if you are going to take the current market price for one, you ought to take it for all of them, it isn't fair to give the company the benefit in one case and not in the other, or vice versa?

A. Am I supposed to discuss whether we are to use the original cost or some other basis?

Q. You are figuring the reproduction cost—not by any established method?

A. Whatever those established methods are.

Q. I guess the established method is everybody's opinion?

A. As long as you are talking value, it is opinion.

Q. Do I understand you that in making your reproduction valuation, you included brokerage?

A. No sir.

Q. Or going value?

A. Yes sir. I recommended that—

Q. Did you include real estate values?

A. Yes sir. I stated that we took those real estate values directly out of the Endress valuation, because we didn't have any time to go in and make a study ourselves, nor did we have made available to us a real estate man to go over these properties.

Q. Do you also include the brokerage, getting the capital together?

A. As far as overheads are concerned, we allowed about 2½%, as I recall it, for organization and general expense of bringing the company together.

Q. What did you allow for going concern?

A. \$2,000,000.

Q. Did you consider those items, matters of engineering judgment.

A. They may be.

Q. Is it the custom of your department to put a valuation upon those particular items in determining the reproduction value of the property.

A. We frequently make recommendations of that kind.

BY MR. COOKE:

Q. Did you think you were acting as an engineer when you arrived at that \$2,000,000?

A. Certainly, it was my opinion as an engineer, based on engineering judgment, certainly.

Q. Where did you get that, out of what engineering literature did you get that suggestion?

A. Why, I don't know. When you go into the question of going value you are getting into a rather involved discussion; there is no rule for going concern value.

Q. Why do you say that that is engineering; now, just let me get that?

A. Well, I don't know why you call anything engineering.

BY MR. RHODES:

Q. Going concern is something that you can utilize in producing any answer that you want, cannot you, and call it going value?

A. It could be done.

Q. Isn't it done?

A. No, not necessarily. Your question assumes that we are all crooks.

Q. No, it does not.

A. Yes, it does; it assumes that we are all crooks, and that there is no honesty in the engineering profession.

Q. I am not assuming anything. I am just trying to find out; that is what this Committee is here for, and that is what the Public Service Commission is here for, to try to tell us.

A. That is what we are trying to do.

BY MR. EVANS:

Q. Reading your definition of going concern value at page 12 in this volume, going concern value is the figure here recommended by you of \$2,000,000?

A. Yes, it is.

Q. That is made after observation of the territory, its prospects and growth and development?

A. Development and growth.

Q. It is the prospect of growth and development in the operation of the electric system and its development, it is a recognition of the economic worth whileness of this utility property and service in comparison with unregulated business undertaking in this area served. In other words, as I understand that, going concern value is the value which a property has through being regulated, which it would not have if it were not regulated, is that correct?

A. No. No.

Q. What is it?

A. There are in connection—

Q. Will you just explain what you mean; it is just a recognition of the economic worth whileness of this public utility service in comparison with unregulated business undertakings in the area served, will you just explain that to the Committee?

A. It is a consideration of this property as a property unit serving that community, and the general earning capacity of money or the general business conditions in which that property is situated.

Q. In other words, this was more profitable because it is an unregulated business, and therefore had a going concern value?

A. Oh, no, not necessarily so.

Q. If it had a less earning value than unregulated business that would not be an element of value, would it?

A. I will say not.

Q. If it had the same earning power as unregulated business, that would not be an element of value, would it?

A. No.

Q. Therefore, the only element of value it can possibly have is that it has a greater earning capacity than unregulated business, is that not true?

A. How?

Q. Now, just answer the question, will you please?

A. What was that question?

(Last question read as follows: Therefore the only element of value that it can possibly have is that it has a greater earning capacity than unregulated business, is that not true?)

A. No, that is not true at all; you are relating things that are unrelated.

Q. I am trying to find out what you mean by this definition of going concern value which you have put at \$2,000,000 for this property, and you say it is the recognition of the worthwhileness of this utility property to serve in comparison with unregulated business undertaking in the area served, and I understand that you said unregulated business had certain earnings, and by comparing this with these unregulated businesses, you determined its going concern value, is that not true?

A. I recommended that going concern value—

Q. Isn't that the way you got at it?

A. It is a matter of opinion, yes.

Q. I say, isn't that the way you got at it, you compared it with unregulated business?

A. It is compared with unregulated business, I compared it with the situation in which we found that company actually operating.

Q. You found that it was earning more than unregulated businesses in the community were earning, did you not?

A. If you are talking now of what the company was actually earning, I had not reviewed that specifically at the time. I was only aware of it through the general statements that had been made.

Q. You were making a comparison here you say of unregulated business in order to determine whether or not it had a going concern value?

A. Yes.

Q. And you were doing that on a basis of earning capacity?

A. Oh, no, if you had done it on a basis of earning capacity, it would have been much more than \$2,000,000.

Q. What other basis did you have to compare it with?

A. Pure judgment.

Q. Well now, that is the last resort of all engineers, pure judgment?

A. That is where the thing stands any way.

MR. COOKE: I ask you to be very careful in your distinction.

MR. EVANS: I will say valuation engineers.

MR. TURNER: I think you can leave it in as you originally had it.

MR. EVANS: All right, we will leave it.

BY MR. EVANS:

Q. Now, we want to get at this question, and I show you page 45 of your valuation under the heading of transmission and overhead conductors?

A. Yes.

Q. That was copper, was it not?

A. Ought to be.

Q. \$205,840.87. Will you take your pencil and write these figures down. I show you page 50 of your appraisal under the heading of wire, that was copper, was it not?

A. I assume so.

Q. Are you not sure so?

A. I don't know instantly—let me see, distribution system, yes.

Q. And on page 51 of your appraisal, the same heading, wire?

A. Yes, \$931,769.49.

Q. What then was the total of your appraisal of the total copper in this case, shown by these two items. Now, one-third of that value was due to the use of the unit price of 15 and a fraction cents as against 10 and a fraction cents, is it not?

A. Approximately.

Q. And that would approximate \$370,000, would it not?

A. Our estimates—

Q. Answer the question, will you please?

A. No; it would not.

Q. Will you divide three into that?

A. If you mean just the one-third then I will take your word for that one-third.

Q. You testified that you used a price of fifteen and one-half cents for copper?

A. Yes; and I also testified—

Q. Just a minute. That the current market price was ten and one-half cents per pound for copper, which is approximately two-thirds; is it not?

A. Yes; you are using "approximately." I testified that the change in the price of copper, made a difference of two hundred and fifty to three hundred thousand dollars. I don't know just where the one-third figures in.

Q. The difference in the price of copper was five cents a pound; isn't that what you said?

A. Approximately.

Q. Coming back to the question Mr. Rhodes asked you about the subject of overheads, I show you one of your work sheets. Will you explain to the Committee what percentage of overheads you used for these various items of property; for instance, real estate?

A. That is not our statement of overheads at all (indicating).

Q. What is that sheet.

A. As the case progressed, the company maintained we had made an insufficient allowance for overheads, and we made a study of the overheads actually carried into the Scranton Electric Company valuation in 1927, and that is a statement of the overheads that they carried into their valuations. It is not ours at all.

Q. What did those overheads amount to carried into their valuation?

A. On what?

A. Well, we will take the various classes of property.

A. In those reports that you asked for, they give a tabulated statement there as to what they are based on. I think they carried real estate—I think they carried in 24% on real estate.

Q. What per cent of the turbine room building?

A. Thirty-two per cent.

Q. The boiler rooms buildings.

(No answer.)

BY MR. COOKE:

Q. Do you mean thirty-two per cent over heads?

A. Yes. That is the value percentage in 1927 by the Scranton Electric Company.

Q. How nearly did you approximate that?

A. Our overhead allowance was less than that.

Q. How much?

A. I couldn't tell you off hand. We didn't do them in the same way. I would have to go back through our figures to get that.

In building up our valuation, the time element became a very important item for us to get through to an answer, and we didn't stop along the way to segregate every item, we have carried in, and it requires a study of the details. For instance, insurance, if you will remember, when we were talking about meters, there was an insurance item there. We applied that insurance item to the actual costs rather than making an over all allowance. We felt that we could come closer to the actual fact as to the actual cost of the insurance, if we allowed at that point where it was actually charged and not as an overall allowance at the end. We made very few overall allowances.

BY MR. EVANS:

Q. Going on with these overheads, except in the case of garage equipment and machine shop equipment, they vary between twenty per cent and thirty-three per cent do they not?

A. They do.

Q. And in the case of steam and electric plant equipment?

A. Twenty per cent is the figure (indicating).

Q. And that is correct there (indicating); twenty per cent?

A. They actually carried in thirty-two.

Q. They actually carried into the Endress appraisal thirty-two per cent.

A. Yes; on that one item. That was put in through error. That does not match up with their statement as to what they did.

Q. These overheads, do they include going concern value, and intangibles and things of that sort?

A. In the Endress appraisal of which we are speaking now, going concern value was carried in as a separate item afterwards.

Q. And so that the top of all these overheads ranging from twenty to thirty-three per cent, items of going concern value, what other intangibles were added in the Endress appraisal—

A. I believe—no; that is all he added.

Q. That is all?

A. I believe so, that is my recollection.

Q. How about the cost of financing?

A. He states in his testimony that they included that in his going concern value.

Q. And do you know what he included for going concern value?

A. At the rate of twelve and one-half per cent on his depreciated value found.

Q. And what approximately did that amount to?

A. On the basis of his twenty-one million dollars, \$2,300,000; just under \$2,300,000 is my recollection.

Q. As compared with your \$2,000,000 for that item?

A. Our \$2,000,000 for that item, however was based on about \$8,000,000 more property. That is the Stanton Plant brought in afterwards. This (indicating) by the way was not in that record.

Q. And now, the first sheet in this volume is what?

A. That was made up during the progress of the case, or attempted to, or to be prepared on cross examination, it just occurred to show where differences between our valuations and the Endress valuations actually occurred; made up in the process of being prepared for cross examination.

This particular set up was finally abandoned because there were errors found in it; it did not check out, and never was cast up in that form again. I believe the form was entirely abandoned. This is simply a work sheet that was built up for a purpose, and then found not to fit that purpose and it was not used.

Q. Why was it abandoned?

A. Because we couldn't make the differences check out; that is, one against the other; and pluses and minuses, wherever those occurred, we couldn't make any balance, and we didn't go ahead with it, because we didn't have to use it; didn't attempt to bring it into form.

Q. And it shows in parallel columns the Endress appraisal and your appraisal?

A. Yes, this was made out after the report was filed and was done in the progress of the case so that we might be fully prepared for cross-examination and know exactly where our differences were.

Q. The last hearing in this case was held on August 26, 1930. At any time prior to that date were you advised by any one connected with the Scranton Electric Company or any one connected with the Public Service Commission of Pennsylvania that it was the company's intention to file a revised schedule of rates?

A. There had been talk when the case started that the company intended to file such rates.

Q. After you started in 1930 to prepare this valuation you knew the company intended to file a schedule of reduced rates?

A. I knew they said they did.

Q. Didn't you believe them?

A. I didn't know what their intentions were. They stated they were, and they filed new schedules.

Q. From whom did you obtain this information?

A. I believe from Mr. Campbell, the General Manager of the Company.

Q. Where was that information given to you?

A. At Scranton, I think.

Q. Did Mr. Campbell tell you why they intended to file a schedule of reduced rates?

A. No, he did not.

Q. Were you or any of the engineers of the Commission assigned to make a study of the electric rates of the Scranton Electric Company?

A. No sir.

Q. Have you made any study or have you any knowledge of the effect on the revenue of this company under their revised schedule of rates which became effective April 1st, 1930?

A. Yes, I have some knowledge of the effect.

Q. Did you make a study of these rates to see what the reduction in revenue would produce?

A. We made a study of the rates as to the changes in the rates themselves, but not study as to the effect on revenue.

BY MR. COOKE:

Q. What would be the purpose of that?

A. Just simply to compare the effect of the new schedules as against the old schedules to see if they were in effect a reduction. Taking the assumed kilowatt hours used and compare the schedules just as you people have been doing here.

Q. Have you these comparisons as a part of this record?

A. No, they are not part of this record.

Q. Did you reach the conclusion that the new schedule would produce a reduction of \$750,000 in revenue?

A. I never was asked to reach a conclusion.

Q. You have no knowledge of that?

A. I do have some knowledge of it.

Q. Will you tell us what in connection with that your knowledge is?

A. An officer of the A. G. E. showed me personally the company's estimate of the effect of the change and I went over that simply sat down and reviewed it.

Q. That shows \$750,000?

A. Yes sir, but there was no check on it, it was just simply a review of it.

Q. So far as you know, is the Commission making any check of that?

A. I don't know.

Q. Would you consider such a check an engineering job?

A. Yes sir.

Q. Did any member of the Public Service Commission ever discuss with you the reduction in revenue that would be caused by these new schedules?

A. Not that I recall.

#### RECESS

MR. MOORE: This hearing will now stand adjourned until 7.15 o'clock this evening.

#### AFTER RECESS.

The Committee reconvened at 7.15 P. M. Chairman Moore, presiding.

P. J. KEADY recalled

BY MR. EVANS:

Q. Mr. Keady, you have already been sworn.

A. Yes sir.

Q. Have you made a study of the Duquesne Light Company with regard to any write-ups in its fixed capital and in regards to its earnings.

A. Yes sir.

Q. How much was the write-up?

A. In 1927 the fixed capital assets, according to the annual report filed with the Public Service Commission, was \$24,515,-326.95. Now, there was also a write-up in the reserve for renewal and replacements,\* amounting to \$9,782,747.89.

Q. What were the returns in percentages, with and without the write-ups.

A. The percentage of over all return, including the write-up, for 1927, amounted 8.9%; in 1928 10.13%; 1929, 9.66% 1930 10.08%. The percent of return, excluding the write-up for 1927 amounted to 10.08%; in 1928 1.5%; 1929 10.7% 1930 11.1%.

Q. Were these write-ups shown on the reports to the Public Service Commission?

A. Yes sir.

Q. What were the total earnings over 7% for the years 1927 to 1930, first, on the basis on including the write-ups.

A. The returns over 7% for 1927 including the write-ups amounted to \$2,606,531.; 1928, \$4,369,219. 1929, \$3,975,728; 1930, \$4,929,928. The total earnings for the four years, over and above the 7%, amounted to \$15,881,408.

Q. What were the total earnings over 7% for the same years, if the write-ups are excluded?

A. For 1927, \$3,623,811; 1928, \$5,386,499; 1929, \$4,992,565; 1930, \$5,946,765. The total for the four years is \$19,949,642.

Q. What dividends were paid on the common stock of the company during these years?

A. In 1927 the rate was 10%, the amount \$2,000,000; in 1928, 16%, \$7,666,666.67; 1929 16%, \$8,000,000; 1930 17.8% \$9,950,000. This amount includes a stock dividend \$1,050,000.

FATHER COX: I think a lot of these certified public accountants could let us know something about the salaries paid and the general wage scale for employees for these various companies. We never definitely know until we find out the high salaries being paid to the officials of the company, bonuses and all that kind of thing.

THE WITNESS: The annual report does not give that information. The only way you could get that is from the books of the company.

BY FATHER COX:

Q. Don't you think if you get some of the books of the company it would be well to supplement your reports?

A. I think it would be very useful information.

Q. Cannot you get it?

A. If we are instructed to do that by the Committee.

FATHER COX: I think it would be a good thing to help Mr. Turner to get the other side of the case.

MR. EVANS: I am afraid, Father Cox, if we get started on that, that we will not be able to finish up within our allotted time.

FATHER COX: Are we in a hurry to finish?

MR. TURNER: Maybe we are not so well and favorably situated as you are.

FATHER COX: I am not favorably situated. I think this is something that will be looked to for some years to come, when we are doing it, we ought to do it right, there will be a lot of people affected by this.

THE CHAIRMAN: I will take this opportunity of putting this letter in the record:

#### COMMONWEALTH OF PENNSYLVANIA

(Seal)

Department of Justice  
Harrisburg

April 15, 1931.

The Attorney General.

Honorable D. Glenn Moore,  
Chairman, House Committee Investigating  
Public Utilities,  
House of Representatives,  
Harrisburg, Pennsylvania.

Dear Mr. Moore:

Permit me to acknowledge your letter of April 13, referring to me for study and such action as is warranted the testimony relative to the financial manipulations of the Hanover-McSherrytown Water Company and the Gettysburg Water Company.

I shall study the testimony, and you may rest assured shall take any action which is warranted by the facts.

Sincerely yours,  
(Signed) Wm. A. Schnader,  
Attorney General.

MR. TURNER: It seems to me I might say that some of tonight's papers carry a couple of purported paragraphs from the report, the preliminary report of this Committee. I think it would be well to say that the reports from which that was evidently copied was simply the draft of something that was proposed to the Committee, by certain individuals. Their final and considerate action and report is still in drafting. It seems to me highly unfair to have stated that in the papers.

THE CHAIRMAN: I might say that the newspapers were informed this afternoon that the report would not be released, —it would be released Monday in confidence, but not to be published until after it was presented to the Legislature.

R. HUSSELMAN recalled

MR. EVANS: We propose now to take up some of the Scranton-Springbrook cases, and I am going first to offer in evidence copies of the minutes of the Commission relating to this case as furnished by Chairman Ainey in response to a request of this Committee.

Excerpt of Minutes of Public Service Commission, produced and marked Exhibit No. 150.

BY MR. EVANS:

Q. Mr. Husselman, have you made a study of the records of the Public Service Commission in the Scranton-Springbrook Water Case?

A. Yes.

Q. Dr. Snow was examined in regard to this case by the Senate Committee as follows: "Q. Didn't you give your opinion as to valuation to the Committee? A. None whatsoever. Now, have you examined the report of the Bureau of Engineering to the Commission signed by Dr. Snow under date of June 30, 1930? A. Yes."

Q. What does that report say?

A. In part: I have the honor to submit the following report by the Bureau of Engineering on its review, study and check of the record, together with the so-called fair value determined by the Bureau. The Bureau's appraisal based on the record and deduced from this study and check of the appraisal of the respondent and complainant, is set up and submitted for the Commission's consideration, totals \$52,621,064 new and \$50,684,378 depreciated.

Q. Now, what is his testimony before the Senate Committee in the Scranton-Springbrook Case Dr. Snow was asked: "Q. Did the Commission take your basis there? A. No sir. Q. Were your conclusions, or would your conclusions have made a less rate there? A. Well, I cannot answer that question in that way. There are 75 water works combined in one, and they are based on everyone of those 45 or more water companies." Was that question put to Dr. Snow capable of a direct answer?

A. I think so, yes.

Q. What was the rate basis fixed by the Commission?

A. \$43,650.

Q. And what was the original value stated by the Bureau of Engineering?

A. The depreciated figure was \$50,648,378.

Q. So that on a 7% basis, there would have been considerably more revenue allowed under that latter valuation?

A. Yes, there would.

Q. Now, among the papers and reports which were submitted to this Committee by the Public Service Commission, in conformity with Chairman Orr's letter of March 17, 1931, is a bound volume entitled: "Chief Snow's report," without date, in the form of a proposed general report, Scranton-Springbrook Water Service Company Rate Case, submitted to the Commission in July, 1930. What is the last sentence of the conclusion of Chief Snow's report?

A. "Since the actual revenue from the rates in temporary effect is \$4,324,005, which is \$148,383, less than the sum to which respondent is entitled, the Commission sustain the temporary rates and an order will accordingly issue."

Q. Will you compare this with the final order of the Commission dated December 9, 1930?

A. The wording is as follows: "The several complaints relative to the rates of domestic consumers will be sustained. Respondent company will be directed to file, post and publish effective January 1, 1931, a new tariff reducing the total gross annual revenue to be derived by the company to a sum not in excess of \$4,219,000. All the reductions to be accorded to domestic consumers. This reduction to be in addition to the reduction of \$245,000 ordered on December 21, 1928."

Q. In his testimony before the Senate Committee on this subject, Dr. Snow was asked this question: "Then the Commission fixed the rate?"

A. Yes sir.

Q. Can you tell whether that was fixed in accordance with the report or higher or lower?

A. No sir; I cannot.

Q. By comparing the concluding sentence of Dr. Snow's report, which you have just read, with the order of the Commission of December 9, 1930, can you tell whether the record was fixed in accordance with Dr. Snow's report or higher or lower?

A. It was not fixed in accordance with his report, but was fixed lower. The two figures in the concluding sentence of the report drafted by Dr. Snow total \$4,532,988, as compared with the \$4,219,000 finally determined by the Commission, a difference of \$313,000 in the annual allowable revenue.

BY MR. TURNER:

Q. Do I understand from this that the Commission refused the increase of rates in the Scranton Spring Brook Case?

A. They ordered the company to file rates lower than those which were in effect.

(Discussion of the Record)

BY MR. TURNER:

Q. Then, can you tell me how much that amount increased the revenue over the former rates before the company applied for its new rates?

A. The revenues for the proceeding fiscal year were \$2,000,000—

Q. I don't mean revenues, because there may be a difference between revenues and rates.

A. No; I have not studied the rate schedules, because there are meter rates, there are flat rates of various sorts and I have never made an off set of one against another; I don't know.

Q. All right. Tell me what the revenues were?

A. The revenues were \$2,295,172 in the preceding period before this rate increase took place. It was increased by the Commission's order to \$4,219,000.

Q. \$1,300,000.

BY MR. EVANS:

Q. In order that we may get this chronologically straight, in the absence of the exhibits, which we had hoped to have, this case was argued before the Commission, was it not, in April, 1930?

A. Yes sir.

Q. Would you read into the record the minute of the Commission dated April 15, 1930, at the bottom of page 7 of exhibit 150.

A. An excerpt from the minutes of an executive meeting of the Public Service Commission held April 15, 1930: Argument was resumed and presented on behalf of the respondent, by Mr. Evans and on behalf of the complainants by Mr. Geyer;

Excerpt from minutes of an executive meeting of the Public Service Commission of April 15, 1930:

Argument was resumed and was presented on behalf of the complainants by Messrs. Atchison, Little, Morgan, Gunster and MacDonald and on behalf of the respondent by Mr. Ballard. The Commission reserved decision.

Q. Then, as of June 30, 1930, the Bureau of Engineering presented a report showing the reproduction cost new and the reproduction new less depreciation of this property, did they not?

A. They did.

Q. And what values did they arrive at in this original report?

A. The grand total figures you want?

Q. Suppose you give us the total physical property with over head totals and then the tangibles, and then the grand total.

A. The total physical property, including additions and betterments, between the time of the inventory and the date of the appraisal, cost of reproduction new was in the amount of \$34,453,659. That figure depreciated \$32,602,876. The total construction over heads added to this physical property, item was \$6,418,113; depreciated \$6,096,210. The physical property for overhead with construction overhead totalled \$40,671,772 and depreciated \$38,699,086. To these figures were added other allowances for working capital, cost of financing, going concern value as water company rights, totalling \$11,949,392 in both cases of reproduction new and depreciated, giving a grand total of cost of reproduction new totalling \$52,621,064 and depreciated \$50,648,378.

BY MR. EVANS:

Q. The bureau of engineering then early in July presented the report in the form of a Commission report, did they not?

A. Yes sir.

Q. And what was the total reproduction cost new of the physical property in this report?

A. \$34,423,052.

Q. And depreciated?

A. \$32,774,817.

Q. And have you added the additions and betterments to that, and after they were added, what was the total physical property depreciated?

A. \$34,115,075.

Q. What were the construction overheads added to this report?

A. The figures totalled up \$5,962,347.

Q. And what were the intangibles added to this?

A. \$6,988,008, making a grand total of \$47,065,430.

Q. That compared with the grand total depreciated of what amount?

A. \$50,648,378, as compared with \$47,065,430.

Q. Then I will read into the record an extract from the minutes of the executive meeting of the Commission held July 15, 1930:

"A proposed Commission report, prepared by the chief of the bureau of engineering, was read and discussed, and on motion of Commissioner Benn, seconded by Commissioner Walker, action was deferred and the report referred to Chairman Ainey, Commissioners Brown and Young for revision and resubmission to the Commission at its next executive session."

And on July 29th: "A discussion was had of the progress being made in the preparation of the proposed Commission report, and on motion of Commissioner Shelby, seconded by Commissioner Young, the committee having the matter in charge was directed, in conjunction with the law and engineering bureaus of the Commission, to have prepared and distributed to the members of the Commission, prior to its next executive session, a proposed final report, which report was made a special order of business for Tuesday, August 12th, at 9:30 A. M."

I show you a draft headed "Scranton and Spring Brook Water Company Case. Report of Commission, dated August 6th, 1930," and submitted by the Commission as the report prepared in accordance with the minutes of July 29th. This is referred to in the Commission's letter of transmittal to this Committee as Appendix I.

Q. What was the value then of the property in this report?

A. \$46,982,636.

Q. And how much of this was physical property?

A. \$34,928,459.

Q. That included the additions and betterments since the date of the inventory?

A. Yes sir.

Q. And what engineering overheads were added to this?

A. \$5,920,884.

Q. And what intangibles were added?

A. \$6,132,293, and that figure includes working capital, by the way, which is not intangible.

Q. What I have referred to here is included working capital, cost of financing, going concern in the report to the Commission of June 30th, and water rights of \$4,000,000?

BY MR. TURNER:

Q. You don't want to include working capital?

A. It is included here. There is \$849,340 in that figure for working capital and supplies.

BY MR. EVANS:

Q. Now then, the minutes of the Commission at a meeting held August 12, 1930, read:

"A proposed report by the committee having the matter in charge in conjunction with the bureaus of law and engineering of the Commission, was read and duly considered, and certain statements, facts and conclusions therein agreed to. On motion, final actions were deferred until the Commission's next executive session to permit of further opportunity and study of the questions involved."

That was the report according to the Commission's letter of transmittal which was considered at the meeting of the Commission on August 12th.

MR. EVANS: In order to keep the record clear, I will offer this so-called appendix I being the Commission's report of August 6, 1930, in evidence as Exhibit No. 151.

Continuing with the minutes of the Commission, under date of August 26, a tentative Commission report prepared by the special committee having the matter in charge, in conjunction with the bureaus of the Commission, sustaining the complaints, in so far as they relate to the rates to the domestic consumers, and directly the respondent company to file, post and publish on or before October 1, 1930, effective upon one day's notice to the public and this Commission, a new tariff reducing the gross annual revenue, was submitted and read. The report was on motion agreed to and adopted, and subject various proposed

revisions, which the Chairman was authorized to prepare in connection with the chief engineering and accounting bureaus."

That report has been marked appendix J, and I offer that in evidence as Exhibit No. 152.

I might say so far as the valuation goes, this report did not differ in any way from the report of August 6, 1930. It bears date of August 16, 1930. It has some changes in the phraseology but not in the valuation.

BY MR. EVANS:

Q. This final report, Mr. Husselman, was as you have testified, adopted on the December 9, 1930.

A. Yes sir.

Q. Would you compare the valuations in the report of the Bureau of Engineering, dated June 30, 1930, with those of the report of July, 1930.

A. You mean item by item?

Q. Pointing out where there were charges. Before you take that up, let me ask you, what percentage did the construction overheads and the working capital and cost of financing, going concern value and so forth bear approximately to the value of the physical plant in the valuation of June 30, 1930.

A. A percentage of 53.5% on the physical property including real estate, right of way, water rights, and additions; and a percentage of 56% exclusive of the additions, and betterments.

Q. Now, would you take up the changes which were made from this valuation to that of July 1930.

A. The first change is in the item of real estate, rights of way, and water rights. In the June 20th report that figure was \$3,881,456. In the July report it was \$5,393,653.

Q. Can you make any explanation of that change.

A. Well, I can say that in the June 20th report there was included a separate item under intangibles of water rights in the amount of \$4,000,000, which was excluded from the July 1930 report, and I recall that there was a notation in the report to the effect that \$1,500,000 was included in the real estate, rights of way, and so forth for water rights; so that evidently the \$4,000,000 allowed in the June 30th report was eliminated and the \$2,500,000 for water rights was included with the real estate and rights of way.

Q. Will you read that portion of the July report which refers to this item, and read it into the record. There is first, a discussion, is there not, of the inclusion of these water rights in the amount of \$4,000,000 on the testimony of Professor Fuller.

A. Yes sir.

Q. What does the report seem to say after discussing that matter.

A. "Whatever economies and efficiencies there may be due to these things, have been enjoyed by the public. The Pennsylvania Public Service Company Law provides that it shall be lawful for every public service company, to participate to such an extent as may be permitted by the Commission and deemed by the Commission wise for the purpose of encouraging economies, efficiencies or improvements in methods of service in the additional profits which will be offered by such economies and efficiencies or improvements in methods of service." The Commission recognized the force of respondent's contention based on the calculations and testimony of Professor Fuller, and it made in its judgement sufficient allowance in real estate, rights of way and water rights in the sum of \$1,500,000."

Q. Now, Mr. Husselman, Professor Fuller had according to the report in effect testified that owing to the interconnection of the Scranton System and the Spring Brook System there were certain advantages to the entire system which he thought were worth \$8,000,000, of which he thought half the benefit should go to the public and half to the company, and that was what was referred to in the June 30 report as water rights, was it not?

A. Yes, and he gave other reasons for his testimony of \$4,000,000 besides the mere interconnection of the two systems.

Q. I was summarizing it very briefly. Then the effect of this gauge was to take the item of \$4,000,000 out of the intangibles in the June 30 report and to transfer \$1,500,000 of this item into the real estate, rights of way, and so forth, account?

A. Yes.

Q. Now, what was the next change that was made in the July report as compared with the June 30 report?

A. The next change was in the matter of the construction overheads, in which a total of \$5,962,347 was included in the July report as compared with \$6,069,210 in the June 30 report. There was also a change in the item of cost of financing in the June 30 report, that item was \$2,811,943, whereas in the July report it had been reduced to \$1,993,189. There was also a slight reduction in the item of going concern value, comparing \$2,498,255 to \$4,155,725. Those were all the changes there were between the June report and the July report.

Q. And the total effect of these, in regard to the percentage of construction overheads and intangibles, if we may so call them, and the physical property, was the considerably reduced that percentage, was it not?

A. Yes.

Q. Now, will you take up next the August 6th report, which is introduced in evidence as Exhibit 151, and referred to also as Appendix "I", and compare that with the July valuation?

A. Yes. In this report of August 6th, the item of real estate, right of way and water rights was again changed to \$4,181,456, which figure was used in place of \$5,393,653. That was a change, a subtraction in the amount of \$1,212,197. There was an addition to the item of impounding reservoirs in the amount of \$874,953. Now, that sum just mentioned was added to both the cost of reproduction new and to the depreciated figures in exactly the same amount.

BY MR. COOKE:

Q. What is the logic back of that?

A. I don't know. The next item was collecting reservoir and intake wells, there was an addition of \$100,000 flat to both the reproduction cost new and the reproduction cost new depreciated, \$100,000 added to each of the figures. There was an addition of \$100,000 flat to both the reproduction cost new and the depreciated cost. In the item of aqueducts and supply mains, there was an addition of \$50,000 to both reproduction new and depreciated cost. For their collecting conduits, there was an addition of \$300,000 to those figures for tanks and standpipes. There was an addition of \$500,000 to both figures for distribution mains. There was an addition of \$100,000 to both figures for service pipes and stops. The total net addition, July report being in the amount of \$812,756 to both reproduction cost new and depreciated figures.

Q. Was any change made in the construction overheads, or in the working capital, cost of financing or going concern value?

A. Not in that report, no sir.

MR. COOKE: Mr. Evans, have you told us where these changes were made?

THE WITNESS: I am sorry, I am looking at the wrong column. There was a change in the total construction overheads in the item of cost during construction, the total being \$5,920,884 in the August 6th report as compared with \$5,962,347 in the July 30 report. There was also a change in the item of going concern value, in this August 6th report, that was reduced to \$3,300,000, so that the total of intangibles including working capital, \$6,132,293 as compared with \$6,988,008.

BY MR. EVANS:

Q. And this has been accomplished by increasing the valuation of the physical property both new and depreciated by the sum of \$812,756, and somewhat decreasing certain items of overheads?

A. Yes.

BY MR. COOKE:

Q. Have you ever seen valuations changed that way before?

A. No sir; this is the first time I have seen lump sums in even dollars added to the cost of reproduction new and the depreciation column.

Q. That is considerably of an arithmetical way of getting a result, is it not?

A. I can't account for it, Mr. Cooke, because it seems to me that if the property, to which those things were added depreciated, in the first place by the engineering department, that there must have been some depreciation if those various amounts were added for some specific item of property or some increase in unit costs or something of that kind. Naturally one would assume that the addition would bear some portion of depreciation, and would be reduced in accordance, I should say, with the relative condition percent of the property as found in the first instance.

Q. Is it in the record that these changes were made in the engineering department, or were they made up—

A. No; I couldn't say that they were made in the engineering department.

MR. EVANS: These were made between the engineering bureau's report of July, 1930, which was submitted to the Commission on July 15, 1930, and the taking up of this report with the bureau of engineering and the bureau of law by the special committee of the Commission consisting of Chairman Ainey, and Commissioners Brown and Young.

MR. COOKE: Is it possible for lawyers to make those changes?

MR. TURNER: Oh, no. No lawyer can figure that way. They have a slide rule to make those.

FATHER COX: They handle millions so carelessly in these reports, that I can't think in dollars and cents any more.

BY MR. EVANS:

Q. Now, will you next compare the report of August 6, which is identical with the report of August 15, so far as these values were concerned and which the Committee well remember was acted on by the Commission on August 26, the minute stating that the Commission's report was prepared by the special committee having the matter in charge in conjunction with the bureaus of the Commission, and sustaining the complaints in so far as they related to the rates to domestic consumers and so forth, was submitted and read. The report was on motion, agreed to and adopted subject to various proposed revisions, which the Chairman was authorized to prepare within connection with the law, engineering and accounting bureaus. Now, what changes were made from that time until the final report was issued by the Commission on December 9, 1930.

A. There was another change made in the item of real estate rights of way and water rights, a further deduction of \$400,000; the final figure being \$3,781,456. That was the only change made in the physical property.

The item of omissions and contingencies was reduced \$79,697;

The item of engineering, superintendency and inspection \$442,131;

The item of promotion and organization was reduced \$18,446;

Administration and legal \$15,000;

Insurance and taxes, \$9,748;

Interest during construction \$433,155. Total for the construction overheads of \$797,884.

Q. Reductions?

A. Reductions. The working capital was reduced \$339,094.

Cost of financing was reduced \$193,199.

Going concern value was reduced \$700,000.

The total reductions therefore between the August 6 report and the final report to the Commission in the grand total property was \$2,330,177.

I might say that the grand total in depreciated figure set up in the Commission's report is \$44,651,459.

If the summary tables in that report total to that many dollars and the Commission finds a fair value of \$43,650,000, which is just slightly over a million dollars less than the sum total of the detailed items going to make up the total figure of \$44,659,059.

Q. There evidently was a stock market crash in overheads and intangibles between August 26, 1930, the date of the final report, was there not?

A. There was a fall off. I don't know what the reason was for it.

Q. Now, Mr. Husselman, would you turn for a moment to some of the questions discussed in the reports taking up the question of real estate rights of way and water rights, and will you tell the Committee what the bureau of engineering's report has to say about this, in regard to fluctuation of values, and so on.

A. Yes. In discussing the value of real estate, rights of way and water rights of the Scranton division of this company, for which the company set up a claim of \$3,776,460; the complainants of \$786,639, for which the bureau allowed \$2,439,088; under a heading of "The principles of value determination" Dr. Snow says that in these days of fluctuating and rumors of slumps of property values, it has been discovered that well selected real estate maintains a value over a period of years despite the fluctuating conditions and that an appraisal of such real estate based on sound principles, and not a matter of guess based upon rumor, will bring this fact to light. In utility profits practice, even if property be acquired for a song this does not

obviate its value in an inventory of property used and useful in the public service for a fair value. Elsewhere in this report it is shown that the earning value is a factor in determining the fair value of real estate.

Q. Do you happen to remember whether that was in the June 30th report or in the July report?

A. That is in the June 30th report. It may be in both: I don't know.

Q. What have you to say in regard to that discussion.

A. Well, I think that this man has somewhat of a different viewpoint from Dr. Snow as to the effect of the inflation of real estate and also the effect of slumps and depressions on property values, especially as applied to real estate. I know of a good many conditions in various cities in this country where real estate was very much inflated some few years ago and where real estate has come into a very bad way. That situation prevails in Cleveland, and I am sure the slump and depression had a further effect of bringing real estate values down below their former level. I do believe that slumps and depressions have an effect on real estate regardless of whether or not they are owned by and used for public service by a public utility, or whether they are near property and owned by private individuals or unregulated concerns.

MR. TURNER:

Q. Then for a utility in rate-making cases, you believe that with a slump that properties should be valued at the price at the time that valuation is being made?

A. I do. If you are going to give way to the reproduction cost new theory, and use that as the predominating element in determining value, my understanding is that the value has to be determined as of the time of the investigation, and if that should be when real estate values are down, they should be put in at the fair market value.

Q. Mr. Black this afternoon testified that for commodities they took a range over about three or five years period; that he did. Is that the proper way to arrive at valuations?

A. Well, on a valuation, it is not the proper way, in my opinion to arrive at a cost of reproduction new?

Q. That is, you think you ought to take it on the day you take the inventory?

A. Yes. A great many commissions do that. For instance, in the Public Service Commission of Indiana, which has a staff of engineers which makes appraisals and inventories of property, it takes a certain day and attempts to determine the proper cost of commodities as of that time. It doesn't spread it over a two or three year period.

Q. Does that appeal to you as fair?

A. Well, I am not a strong advocate of the reproduction cost new theory in the determining of the value of property.

Q. It appears to me wrong when just because of the action of a rate case coming at a time when commodities are off-take the case today as we had it here today, in this case the price of copper was down four or five cents, but in a few months it might be up again?

A. Mr. Turner, I am not in favor of it of course, but I want to give you my opinion on it.

Q. I am not asking you this to cross-examine you. I am asking for information?

A. I want to give you what information if I can. I think that the cost of reproduction new theory is a theory. It has been necessary to use it at times and give weight to it, and the Supreme Court and the law of the land requires that it be considered as an element to be used in the determination of fair value. The Public Service Law of the State of Pennsylvania requires that it be given consideration in determining fair value. The law does not say what weight it shall be given, nor as far as I know has the Supreme Court of the United States ever said what weight it was to be given in determining fair value. It is a theory for the determination of an element to be considered in the determination of fair value, but I cannot conceive of making a cost of reproduction new appraisal and picking out here and there some prices of a few years ago for one class of property and selecting a five-year average for some other item or class of property and probably using the actual cost of some real estate in place of its fair market value and throwing various unit prices and data of that kind together and calling it a cost of reproduction new on that property. I believe if you are going to make an appraisal on the basis of cost of reproduction new, you have to choose some time before, probably a month or so, and settle on the price

of the commodities and labor as of that time, and use those prices.

BY MR. RHODES:

Q. Doesn't the theory presuppose a formula for the determination of a proposition?

A. What are you asking me?

Q. I am asking you if a theory doesn't presuppose a formula for the determination of the proposition? How can you have a theory unless you have a formula for the determination of the proposition?

A. I think the man who first conceived this theory of cost of reproduction new didn't have any idea of what it would lead to, or he would have gone out and shot himself.

Q. Mr. Husselman, you speak of a cost of reproduction of new theory?

A. Yes sir.

Q. Now, if there is a theory, there must be some kind of a formula to work out that theory in a given case?

A. There should be and I believe there is.

Q. Mr. Black, when on the stand today, said there was no formula for working out the cost of reproduction new theory, and if there is no formula there is no theory?

A. I don't agree with Mr. Black. I think that there is a formula to be followed. I have done so and other engineers have done so, and very many of them have, and properly too. I don't think that it is the right and proper method of determining value to place a value on a property on the basis of cost of reproduction new less depreciation and not give any weight to any other element that might be involved in that property, and you have got several elements in the law of the land that have to be considered, original cost, if known, actual cost, the Smythe versus Ames case of which the Public Service Law of Pennsylvania is almost an exact duplicate, mentions other elements, and it mentions reproduction cost new less depreciation.

Q. I have been interested in trying to find out what formula the Public Service Commission of Pennsylvania utilized in arriving at the cost of reproduction new, and I have not been able to learn that. Mr. Black was frank enough to say there is no formula, and that each engineer works it out on some formula he devises himself?

A. From Mr. Black's testimony this afternoon, a part of which I heard, and such examination as I was able to make of the work they did in the Scranton Electric case, I doubt very much if that is what could be termed really and truly and strictly a cost of reproduction new appraisal, for this reason, that he has not applied, according to his testimony, prices—he said he used some prices as of 1921 for a power station equipment on the assumption that these prices had not changed materially down to 1927 and perhaps to 1930. Now there may be some classes of equipment of which that is true, but I know of other equipment that the prices have receded from 1921 to 1930. Certainly copper is down, and he said he used a five-year average price.

BY MR. RHODES:

Q. What do you say as to that—

A. The law of Ohio states that the Commission must value the property as of a day certain. Those are the words used in the law of the Public Utilities Law of Ohio. I do know from my experience with other commissions that they choose some day which is designated as the appraisal, to be made as of June 30, 1928, or 1929, or whatever it may be.

Q. If the Public Service Commission is going to utilize the reproduction cost new theory, shouldn't they apply that theory to all the cases, through some recognized formula?

A. I think so, yes sir.

Q. Without doing so, it is rather a haphazard way of determining reproduction cost new, isn't that the idea?

A. If they do not use a price as of the time of the investigation, I do not think it is a reproduction cost new.

MR. TURNER: It doesn't seem to me to be quite fair to the owner of a property for rate making purposes during the slump period, as we have had—when it has been almost impossible to give real estate way. Your rates may be in existence for a considerable space of time. In case as large as this 7,000 pages of testimony, I don't think anybody would want to tackle it in a short period of time.

MR. EVANS: Is it fair to the owner of the property to use it as of the very high period?

MR. TURNER: I don't think it would under those conditions. I don't think it would be fair to take real estate values in that way.

MR. COOKE: We have been making prices during the peak periods.

MR. TURNER: The trouble is all of the witnesses we have had have been in favor of the reproduction cost new. I would like to get some fellow who dislikes and is in favor of something else and let us hear what he has to say about the argument on the other side.

THE WITNESS: I have never been very strong for reproduction cost.

FATHER COX: In a company serving the people and serving the public, what is the idea of all this inflation at all? Why do they have to have such high values?

MR. TURNER: Father do you own any property?

FATHER COX: That is all right about owning property. If I own property I only want a fair return and if I am getting a fair return I am satisfied. I may say to Mr. Turner, here is a nickel, it is \$5,000,000—it is about the same principle. In my opinion it is an excuse for inflation to bleed the people. I listen here until I get dizzy, and it all goes back to the original thing, they are trying to gouge the people.

BY MR. MEMOLO:

Q. Do you know what method was used in this case, whether it was a five-year period, or what was the average?

A. I believe in the Scranton Springbrook case they followed pretty close—I really don't know what they did do, whether it was a five-year average or not. I have an idea that they stuck pretty close, that is, the men who appraised the property for the respondent and for the complainant—stuck pretty close to the prices as of the time of the investigation. They may have spread it over some period—I don't know.

Q. How long has this law in Ohio, fixing the rate been in effect?

A. Since 1913.

BY THE CHAIRMAN:

Q. What has been the general reaction to it?

A. We do not have many rate cases in Ohio, except for some few telephone and natural gas cases. We hardly ever have an electric rate case, because the cities of Ohio have home rule. The Constitution of the State of Ohio provides that every municipality may own and operate a municipal plant. The municipal councils of the cities of Ohio are the fundamental rate making bodies. They can pass an ordinance, fixing and establishing the rates, that any utility company may charge for service. If the company accepts that rate, it becomes a contract and a binding contract for the period of the ordinance. If they choose not to accept it they can appeal to the public utilities commission. Then they have a rate case. Very seldom is there a case going to the federal court out of the utilities commission. We haven't had a large electric rate case to my knowledge for a good many years, because—I am saying this with knowledge, the municipalities have found that competition was a better regulation than the commission, and the threat of competition is as good a regulation as they need, and if the municipal officials find that they are paying too high a rate, in place of making a rate case before the commission, they propose to build a municipal plant, and by the way, the Constitution of Ohio, also provides that this plant may be financed by the sale of mortgage bonds, which are not a liability upon the taxpayers, which are over and above the limit of indebtedness prescribed by law. So that our public utilities commission is not a very strong functioning body in the regulation of rates in Ohio, but where they do make an investigation on the valuation of the property, the law does provide that the appraisal must be made as of a day certain.

BY MR. RHODES:

Q. If you utilize the five-year average it is not a reproduction cost new.

A. No, sir, sometimes, the thought is handed out that you cannot build a property in a day. Of course, you cannot, so that they say we will take the price that prevailed over a period back, projecting the price into future, which I don't believe anyone has the right to do, to attempt to prophesy what the price of copper, for instance, is going to be a year from today, or machinery or anything of that kind because it would

take five years or four years or two years to build a property from the day of investigation. I do not think it is a proper part of the theory of reproduction cost new that you should take this price, based upon the past two years or five years, because it is going to take five years to build up, because you wouldn't build the plant away in the way it is build. It is very theoretical and hypothetical. Sometimes it is the only way you can get at a figure, if the books are not available. You have got to have some means of finding out as to the cost of reproduction new. There is this to say about it, as prices have repeated, I think it is a fact that reproduction new is more nearly approaching prudent investment, because a lot of property has been installed from 1918 to 1929 that the materials and labor is high, and many utility properties have made considerable additions during that period, and the probable before-the-war prices came to end, and probably if we have a recession in prices, it will even it out, so that the reproduction cost new and depreciation will be about the same thing.

MR. TURNER: That would be a great blessing, both on the same basis.

BY MR. EVANS:

Q. Now, Mr. Husselman, coming down to earth again, Dr. Snow in his report says that the earnings value is a factor in determining fair value of real estate. What have you to say about that idea as applied, I mean, to a utility valuation?

A. Well, a utility valuation for rate making purposes?

Q. Yes.

A. Well, earning value is the figure you are seeking, and if you take earnings as they are and seek to make the value of the property correspond to those, why, you get into a vicious circle, the higher the value the higher the earnings, and the higher the earnings the higher the value, and you just go around in a circle, and if you increase rates, your property would be worth more, and then you would have to increase the rates again, and your property would be worth more, and that would not bear any relation either to the reproduction cost new, prudent investment or anything else. The earning value of property is not the thing that you are seeking to ascertain when you are attempting to fix rates. Lots of properties have been bought for their earning values, and the value for purchase and sale is fixed in the minds of a lot of bankers and people who have purchased those properties almost wholly on the basis of what will they earn, and that is an answer to Father Cox's question a little bit ago as to why this cost of reproduction new theory, because when they bought and buy a property on the basis of earnings, then it becomes necessary if somebody brings a rate case against that company to establish or attempt to establish it according to what we call the law of the land. The law of the land being established by various decisions of the Supreme Court of the United States, which requires Commissions to give consideration to cost of reproduction new and the other elements of value, and an effort has been made—there is no question in my mind but what a great many utility properties have been purchased at excessive prices, and that the effort has been made to sustain those prices, because of the higher reproduction cost of those properties at the time they were purchased as compared with either the prudent investment of the value of the property from the standpoint of rate making, or for rate making purposes.

BY MR. TURNER:

Q. Mr. Husselman, you take a property we have up in the upper part of the State, a place known as Wallenpaupack, large dams built, and I suppose the property was worth possibly a dollar or two dollars an acre before the dam went in. What would you say about the valuation there; how would you evaluate that dollar or two dollars an acre?

A. What is it; does it take water rights with it?

Q. Of course, it has water over it now.

A. Water over it—well, you have chosen a very hard thing to value.

Q. Some of these things are hard to value?

A. A fellow has to think about some of those things a little bit. As I understand the valuation of real estate, and I don't purport to be an expert in the valuation of real estate, but as I understand the law, the proper thing to do is to include real estate at all times at its fair market value. I think that is one of the things that has been definitely decided by the Supreme

Court of the United States, and under the law, as I understand it, it is required that you include real estate at its fair market value. Now, this type of real estate people who are familiar with real estate values and who place those figures on land, they usually do that by comparison with recent sales in the neighborhood, and they take it out of their knowledge and experience of what land is worth in that vicinity as of the time they make the investigation.

Q. Well, let us take another example of it—

A. Now—

Q. Pardon me—

A. The—

Q. Go ahead. This power dam has to have a power house, and there is one down the gorge about two miles, we will say, the land on which the power house is installed, I suppose was worth one dollar or two dollars an acre before the power house was put there, but it was possibly the only location for a power house. Is it worth today a dollar or two dollars?

MR. EVANS: Mr. Turner, if you will read the decision of the Supreme Court of Pennsylvania in the Lehigh Water Case, the report of that in 85 or 86—I am not sure of the number—but the decision was handed down in July, 1930, you will, I think, find a discussion of the valuation of land in these water cases, which perhaps would be more authoritative than expressions of opinion from Mr. Husselman.

MR. TURNER: You say about 1930?

MR. EVANS: Yes. I think the decision was handed down in 1930, in the Lehigh Water Company Case against the Public Service Commission, and there is also another decision in the Matamoras Water Company against the Public Service Commission which discusses the question.

BY MR. EVANS:

Q. I want to refer you, Mr. Husselman, to another statement in the report in regard to land valuations, where Dr. Snow says, "In finding valuation—referring to valuation of land—this one used from the operator's standpoint the complainant's realtors erred, there is another positive value, and it is used, the very use which respondent is making of these lands, as a source of water supply, the market value is much greater per acre than for agricultural or residential purposes. What is your view in regard to that theory of valuing land.

A. My idea of that is that companies are not entitled to a separate allowance in view of the special use to which the land may be put by the company; that if you are going to attempt to value real estate on the possibilities to which that land might be put or is put at the time you would get into such a realm of theory that there would be no limit to what imagination might produce.

Q. In certain cases, the bureau took not the reproduction cost of the land but the original cost didn't they?

A. Yes sir.

Q. Will you just briefly refer to that?

A. Yes; in one place the report states, "While the acquiring of the lands that the respondent now owns was a necessary expedient in the control and preservation of the purity of the waters, to a certain extent there were menaces still existing, that now exist and will continue to exist, and the only remedy as a last resort is the erection and operation of a filtration plant for the treatment and purification at all times and under all circumstances of the water taken from the source supplied to the public."

In this instance, in which this statement occurred, the company claimed \$40,258; the complainants \$581,274, and the chief of the bureau states in determining the fair values of these lands they take with few exceptions, the original cost of the land. Here there was an example wherein a reproduction cost new appraisal—the theory of a reproduction new as a reversion made to original cost.

Q. On page 52 of this report Dr. Snow, again states, "The true investment value is based in practice almost entirely upon the earning power of the company." That, is covered by what you have already said. You have already referred to the fact, also, that the bureau of engineering in its report of July increased the land, rights of way and so forth from the \$3,881,454, shown in the June 30th report by adding in \$1,500,000 for water rights.

A. Yes sir.

Q. Now, the ultimate finding of the Commission on real estate rights of way and water rights was \$1,000,000.

A. \$3,781,456.

Q. Just \$100,000 below that originally shown by Dr. Snow.

A. Yes.

Q. Have you any knowledge of the reason for that change in the value of real estate, other than what you have already explained.

A. No.

Q. Now, in regard to unit prices, what criticisms did Dr. Snow make in the complainants' evidence in regards to the reproduction costs of the Gouldsboro dam.

A. He said, "Complainants' cut the Gouldsboro dam and reservoir entirely out of the property used and useful in the public service. The bureau does not agree with this proposition."

Q. I meant, first, with regard to the unit prices?

A. He has said in regard to the Gouldsboro dam and reservoir "that the complainants' engineering expert was too low in unit prices as applied to excavation, concrete and riprapping. He made no special estimate whatever for building or for form work where lumber was used twice."

Q. For "Hauling"

A. For hauling or other form work where lumber was used twice. These items of cost were included in his unit prices for concrete and rip rap.

Q. And now, as an engineer, who has had experience in designing and constructing plans, what have you now to say with regard to this criticism? What basis as a matter of fact, do contractors use in making their bids on work of this sort?

A. Why, they make up their bids for work of this sort—I never knew of a contractor making up a detailed estimate in the way of a separate allowance for hauling or for reclaiming form lumber that is used twice. They generally make a figure based largely on experience, considering the accessibility of the job, and so forth, but it is not necessary at all in making a competitive price to quote a price including every item to set up the separate estimate for hauling rough form work where lumber is used twice.

Q. Well, then will you go on about the Gouldsboro dam and comment on the statement made by Dr. Snow, which reads as follows:

"Complainants cut the Gouldsboro dam and reservoir entirely out of the property used and useful in the public service. The bureau does not agree to this proposition. The right to take from the Lehigh Water to the extent of 2,000,000 gallons at this point is an emergency right, and not to be lightly cut out or dispensed, with. This source of supply is capable of being developed to several times its present capacity. The source of supply in the respondent's property in the Lackawanna and Wyoming Valleys of about the same capacity as the Gouldsboro Reservoir was in daily service, and no one would think it advisable to throw out of commission at this time all supply and in the judgment of the bureau which coincides with respondent, there is no justifiable reason for the Gouldsboro Reservoir Supply to be dispensed with, but to the contrary it has a decided use when necessity requires a capacity capable of further development. In the hands of a competitor, and in the bureau's judgment if the respondent were to give up this property, some enterprising citizen or citizen could acquire the properties and possibly develop a public water works, to which in emergencies or perhaps ultimately for a daily supply, the respondent would have ultimate access."

BY MR. EVANS:

Q. What have you to say in regard to that?

A. It appears from this that a substantial item of property is not in use or service and is held against the possibility of some enterprising citizen getting it and developing it to a competitive water supply, it becomes valuable to the property and is included in the rate base on which the Commission is forced to put rates. In other words, in making a valuation of a property you are supposed to use the property that is used and useful and being used in the service of the public, and I don't believe it would be proper at any time to include a property held against the possibility of a competitor securing that and so including it in the rate basis and requiring the consumers to pay rates to provide a return on that property.

BY MR. TURNER:

Q. How much was the valuation?

A. I don't recall the figure.

BY MR. EVANS:

Q. Have you anything further to add in regard to what you have already said in regard to the subject of overhead?

A. Well, I made a computation of the construction overhead and other overheads added to physical property figures, the respondent's cost of reproduction new overheads, construction overheads, were 17.1% of their physical property, less real estate. The complainants added 14% and the Bureau added 22.1%. The other overhead such as working capital, cost of financing, going concern values, brought this total down to the depreciated value of the property for the respondent of 48%, the complainants 14.5%, and for the bureau on the final figure to a figure of 63% for all overheads and intangible values added in the June 30 report.

Q. These are based on the physical property less real estate?

A. Yes, that is the reason for the difference between that figure I gave you a while ago and the present figure, because in my opinion overheads are not applicable to real estate.

Q. Did Dr. Snow apply them to real estate?

A. Yes.

BY MR. COOKE:

Q. Give us a few of these overheads, so that we can see what we think of them?

A. Omissions and contingencies.

Q. That is for failure to count?

A. Yes sir, and contingencies of a general nature that may arise, generally considered to be failure to count. As a matter of fact, you may list something twice and get it in twice as easily as you may omit something. In my opinion.

Q. But you could not fail to count real estate?

A. I don't think so. Engineering superintendence, inspection, promotion and organization, administration and legal expenses, insurance and taxes, and interest during construction.

MR. EVANS: Just before concluding this part of the picture of the Scranton-Spring Brook Water Company case, I want to read into the record an excerpt from the minutes of the executive meeting of the Public Service Commission of December 9, 1930, which has been offered as Exhibit No. 150:

"A proposed revised report, fixing the fair value of the respondent's property at \$43,650,000 was read and duly considered. After discussion over various items entering into the factors of reproduction cost, including various figures proposed as findings in the matters of real estate and rights of way, cost of financing, working capital and various percentages of overheads and contingencies, the Commission proceeded to vote in detail upon the amount of the fair value to be determined. Commissioner Benn moved, and Commissioner Shelby seconded, that the fair value be fixed at \$42,750,000. This motion was defeated, 4 to 3, Commissioners Shelby, Benn and Collins voting in the affirmative. Commissioner Benn then moved that the fair value be fixed at \$43,321,000. This motion was defeated, only Commissioner Benn voting in favor of it. Commissioner Benn then moved that the fair value be fixed at \$43,521,000. This motion was defeated, only Commissioner Benn voting in favor. Commissioner Young moved that the fair value be fixed at the figure proposed in the revised report, namely, \$43,650,000. The question being put, the motion was carried, 5 to 2, Commissioners Shelby and Collins voting in the negative. In the revision of the items upon the reproduction cost of the property, Commissioner Young further moved that the cost of financing be fixed at \$1,900,000. This question being put, the motion was carried, 5 to 2, Commissioners Shelby and Collins voting in the negative. On further motion of Commissioner Young, carried unanimously, the item of working capital was fixed at \$500,000. Commissioner Young further moved that the item of real estate, rights and way and water rights be fixed at \$3,781,456. This question being put, the motion was carried, 5 to 2, Commissioners Shelby and Collins voting in the negative. Commissioner Benn then moved that the operating expenses be fixed at \$778,800, and that the allowance of \$133,594 for federal income tax to be deducted from the allowance for taxes. Said questions being put the motion lost, 3 to 4, Commissioners Shelby, Benn and Collins voting in the affirmative. On further motion of Commissioner Benn, seconded by Commissioner Young, and duly carried, the report with the revised figures as above stated, with further allowances of 7% return on the fair value, operating expenses of \$750,000, taxes of \$213,833 and annual depreciation of \$200,000, sustaining the complaints in so far as they relate to the rates to domestic consumers, ordering the Scranton-Spring

Brook Water Service Company to file, post and publish, effective January 1, 1931, upon one day's notice to the public and this Commission, a new tariff schedule reducing the gross annual revenue of said company to an amount not in excess of \$4,219,000. Such reduction to be applicable to the rates to domestic consumers; further ordering the company to file with this Commission at the time of filing such tariff schedule certified statements showing its annual revenues under the temporary rates for the entire period beginning July 1, 1928, and further ordering the company to rebate to all consumers whose rates are reduced under this order all amounts charged or paid at higher rates since July 1, 1928, and directing that where payments have actually been made at such higher rates the amount rebated shall carry interest at the rate of 6% per annum, was adopted by a vote of 5 to 2, Commissioners Shelby and Collins voting in the negative, and directed to issue."

MR. TURNER: Was that an increase over and above the agreement that was made between all the parties?

MR. EVANS: It was a reduction, Mr. Turner, from the temporary rates which the Commission had fixed, as I remember it, was—I don't think the agreement covered that phase of it. The Commission ordered a reduction in the temporary rates.

MR. TURNER: As I understand it, there was agreement to go on under the old rates.

MR. EVANS: That is covered by a paper attached to Exhibit No. 150, which you will find on the first page of it. It is not a part of the minutes, but, as the Commission explained, they included it so as to complete the record.

THE CHAIRMAN: This hearing will stand adjourned until tomorrow morning at 10.00 o'clock.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10.

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Friday, April 17, 1931, at 10.00 o'clock. A. M.

There were present:

Messrs. D. Glenn Moore, Chairman  
Martin Memolo  
Chester A. Rhodes  
Ellwood J. Turner  
H. J. Crawford  
Rev. James R. Cox  
Morris L. Cooke  
Harold Evans, Esq.  
John M. Walker, Esq.

MR. WALKER: Mr. Chairman, I will offer here from the United Gas Improvement Company of Philadelphia, a letter addressed to Harold Evans, Esq., which reads as follows:

UNITED GAS IMPROVEMENT COMPANY  
1401 ARCH STREET  
PHILADELPHIA

April 17, 1931.

Harold Evans, Esq.,  
1935 Commercial Trust Building,  
Philadelphia, Pa.

My Dear Mr. Evans:

In going over the transcript of my testimony before the House Committee on Investigation on Resolution No. 10, I note that the stenographer has made some mistakes in recording some of my answers.

On page 1263, the word profit should appear instead of fee, where the transcript now reads: "The fee of the United Engineers & Constructors," etc.

On page 1265, the word do should be inserted between the words "nevertheless" and "they," so that the testimony shall read: "they nevertheless do."

On page 1267, where the testimony reads "and 60% of the work it does is on open orders," the word open should be changed to repeat.

On page 1280, where the testimony reads: "That is simply a mathematical problem, depending upon the proportion you take of the cost of each security," the word cost should be changed to class.

On page 1299, beginning with "but I think full and reasonable powers should be given them to control the bond issue

of securities," I think the word bond should be left out as I have no recollection of using it.

On page 1205, where it reads: "and that is the reason for this par value established by the Supreme Court, I think," the word fair should be substituted for par.

While the above are more or less minor mistakes, there is on page 1616 quite a serious one, since the transcript reports that in answering your questions as to whether, from the standpoint of effective regulation, I do not think it desirable that management and purchasing contracts between affiliated utilities should be made subject to regulation, I replied that I did not think that management contracts should be. I think you will recollect that my answer was just to the contrary; therefore the evidence should read that I do think that management contracts should be, etc., etc.

On page 1627, where the testimony reads: "Operating ratios that have been taken out of there—the total operating ratios." the word "are" should be inserted between "there" and "the;" and the second line further down, where the testimony now reads "where you have operating ratios that really is an appropriation account," this should read: "where you have renewal and replacement charges, that really is an appropriation account."

On page 1629, where the transcript says: "That is an improvement of very nearly ten millions, and yet the operating expenses only increased \$10,000, the \$10,000 should be changed to \$100,000.

On page 1603, where I am reported as saying "I think scientifically the discount is better than the penalty," the words that I really used were that psychologically the discount is better.

You will recollect that I promised to furnish you with a copy of the annual report of The United Gas Improvement Company, as on the day of the hearing I only had a galley proof before me. I now take pleasure in enclosing this.

Very truly yours,  
(Signed) John E. Zimmerman,  
President.

W. M. Dietrick recalled

MR. EVANS: If the Committee please, a matter has come up in connection with the present issuance of the Pennsylvania Power and Light Company of \$100,000,000 of first mortgage gold 4½% bonds, due 1981, which according to the circulars of the Investment Banking House provides that temporary bonds or interim or trust receipts will be ready for delivery on or about April 25th, 1931. The Pennsylvania Public Service Company Law provides that before the issuance of any securities, certificates of notification shall be filed with the Public Service Commission setting forth the issue and other matters.

MR. TURNER: Is that true of all issues?

MR. EVANS: All issues except those maturing in twelve months or less.

This situation involves matters which the Committee may desire to call to the attention of the Public Service Commission, or possibly to the Securities Commission, and in order to get prompt action I have asked Mr. Dietrick to make a statement of what he has found from the examination of the records in the Public Service Commission's office and in the office of the Securities Commission bearing on this issue. I may say to the Committee that there is involved in this situation the Lehigh Power Securities Company, which as the Committee may remember refused to open its books to the Federal Trade Commission in the course of its investigation.

MR. COOKE: Is there anything on the record to show the attitude of the Pennsylvania Power and Light Company toward opening their books to the Federal Trade Commission; was that an issue?

MR. EVANS: I cannot answer that, Mr. Cooke, I am sorry.

BY MR. EVANS:

Q. Will you proceed, Mr. Dietrick?

A. In the year 1928, in Application Docket Nos. 19199 to 19237 the Pennsylvania Power and Light Company petitioned to acquire the entire assets and capital stock and assume the entire liabilities of the following companies. Now, there are 36 companies, so I will read them if you wish me to.

MR. EVANS: I think they ought to be in the record.

A. Ariel L. H. & P.  
Benton Hydro-Elec.  
Big Spring L. & P.  
Dennison Elec.  
East Penn Elec.  
East Penn Traction Co.  
Franklin Twp. Carbon Elec.  
Honesdale Cons'd L. H. & P.  
Hummelstown W. & P.  
Jamestown Elec.  
Juniata Pub. Serv.  
Middleburg L. H. & P.  
Middlesex L. H. & P.  
Milleville Elec. L.  
Montgomery & Muncy L. H. & P.  
Montoursville Elec. L.  
Mt. Pocono L. & Imp.  
Orangeville-Columbia P. & L.  
Panther Valley Elec.  
Parryville Elec.  
Panpack Elec.  
Prompton Elec.  
Prospect Rock Elec. H. & P.  
Ringtown L. H. & P.  
Schuylkill Elec.  
Stockertown L. H. & P.  
Tatamy L. H. & P.  
The Beach Lake Elec. L.  
The Citizens Elec. L. & P.  
The Clymer Power.  
The Coopersburg Elec. L. H. & P.  
Macungie Elec. L. H. & P.  
United Electric.  
Varden & Lake Ariel L. H. & P.  
Weissport Elec.

In application Docket No. 19238, the Pennsylvania Power & Light Company was also to acquire the capital stock of the following companies:

East Penn Traction Company,  
Juniata River Water Power Company,  
Lehigh Electric Light, Heat & Power Company,  
Mauch Chunk Gas Company,  
New Kingston Light, Heat & Power Company,  
New Perryville Consolidated Gas Company,  
Pine Grove Electric Light, Heat & Power Company,  
Watts Water & Power Company,  
Harrisburg Light and Power Company,  
Carlisle Gas & Water Company,  
Hummelstown Water Supply Company.

On April 1, 1928, the Pennsylvania Power and Light Company brought on the books of their company the fixed assets of the companies shown in Exhibit No. 1, and in addition thereto, the assets of the Harrisburg Light and Power Company at 8-31-28. From the reports filed by the companies merged with the Pennsylvania Power and Light Company during the year 1928, the book value of the fixed capital and assets and the reserve for replacements and renewals were compiled as follows:

Total book value of capital assets purchased .....	\$28,505,742.86
Reserve for R. & R. ....	3,962,137.46

BY MR. EVANS:

Q. What does the R. and R. stand for?	
A. Reserve for replacement and renewals.	
Net book value of capital assets purchased.	24,543,612.43
The total of the fixed capital assets purchased as shown by the 1928 report of the Pennsylvania Power & Light Company was .....	59,036,626.32
Reserve for R. & R. for companies acquired during 1928 was .....	4,742,722.79
Net book value of assets purchased .....	54,293,903.53
Excess over net book value of assets purchased .....	29,750,291.10

We will now see who owns the companies merged with the Pennsylvania Power and Light Company. I am not going into that in detail, but with the exception of four companies, all

were owned by the Lehigh Power Securities Corporation. The companies which the Lehigh Power Securities Corporation did not own were owned by the Harrisburg Light & Power Company, which in turn was owned by Lehigh Power Securities Company. Another Company was owned by the Valley Railways which in turn was owned by the Pennsylvania Power & Light and two of the companies were owned by the Pennsylvania Power & Light themselves.

BY MR. COOKE:

Q. How many did you say were owned by the Lehigh Securities Corporation?

A. All but three of them, the Lehigh Power Securities Corporation has control through the ownership of the companies owning those companies, and I wish to add here that the Pennsylvania Power & Light Company itself is owned by the Lehigh Power Securities Corporation through 100% common stock ownership.

According to the testimony attached to Docket 19199, the 1928 transaction is to be as follows:

Pennsylvania Power and Light Company will receive Retirement of its bonds, including under-	
liers .....	\$52,878,776.00
Current assets .....	3,360,925.00
Fixed assets .....	56,951,479.00
Or a total of .....	113,461,180.00
Pennsylvania Power & Light will pay 4½% —50 year bonds .....	100,000,000.00
Cash already expended for securities .....	9,168,199.00
Liabilities of acquired properties assumed ..	2,542,981.00
Preferred stock .....	1,250,000.00
Cash .....	500,000.00
Or a total of .....	113,461,180.00

In an agreement between Louis F. Mentz—and later I will show you that Mr. Mentz is the Lehigh Power Securities Corporation—in an agreement between him and the Pennsylvania Power and Light Company—which agreement the employees of the Public Service Commission had a very, a very hard time finding—Mr. Mentz very agreeably consents to retire \$66,956,513 of bonds for the \$100,000,000 of the fifty-year four and one-half per cent. bonds of the Pennsylvania Power and Light Company, leaving an excess of \$33,033,450 for Mr. Mentz or the holding company.

Q. Will you just tell the Committee the difficulty you had in obtaining from the Commission a copy of the Mentz agreement?

A. I was inquiring for this Mentz agreement for a week, and they have searched the files, they have searched the records in all these cases, and they couldn't find it in any of their files, and yesterday, as a last attempt, I went to the acting Secretary, Mr. Tevell and told him I absolutely had to have this agreement, and he sent out the order that the agreement must be found and everybody that you met over there yesterday was hunting for the Mentz agreement, and at 4 o'clock they found it. I asked him where they found it, and he said he would rather not tell me.

BY MR. COOKE:

Q. He did not explain that remark any further?

A. No sir.

BY MR. EVANS:

Q. That is Mr. Tevell who said that?

A. Mr. Tevell.

BY THE CHAIRMAN:

Q. Was there only one copy of that agreement in the office?

A. That is all he could find; unless they could dig up one in the cellar or somewhere. Adding to this the preferred stock of \$1,250,000 (the cash of \$500,000 apparently having been paid) we have the sum of \$34,283,450, and the report of Pennsylvania Power and Light Co. at December 31, 1928, shows a liability for securities to be issued in accordance with the Mentz agreement of \$34,021,113.62.

We will now see what Pennsylvania Power and Light Co. really purchased:

Total capital stock of acquired companies.	\$7,894,562.36
Less: Deficits of certain companies .....	112,948.67
Net value of capital stock acquired: .....	\$7,681,613.69

The surplus of these companies acquired according to the Mentz agreement reverted to the old owners of the capital stock or the Lehigh Power Securities Corporation. So, the Pennsylvania Power and Light Company did not get the surplus of the companies which they acquired.

MR. TURNER: Mr. Evans, haven't you any set-up of any kind. This is terribly hard to follow.

MR. EVANS: I am sorry, Mr. Turner, this was done over night.

MR. TURNER: That is not by way of criticism.

MR. EVANS: I know. I wish I could do it.

BY MR. COOKE:

Q. I wish you would clarify your last statement in making these purchases, that these surpluses did not follow the purchases.

A. That was in the agreement with Mr. Mentz, that any surplus on the books of the underlying companies at the time of acquisition reverted to the old owners of the capital stock, which at that time was the Lehigh Power Securities Corporation.

In 1930, Pennsylvania Power and Light Company makes another agreement with Mr. Mentz. They acquired the following companies, and again I have a big list of the companies, which are as follows:

Citizens Elec.  
Conestoga Valley Elec.  
Donegal Gas.  
Farmers Elec.  
Farmers Elec., Conestoga Twp.  
Farmers Elec., Manor Twp.  
Farmers Elec., Martin Twp.  
Farmers Elec., Pequea Twp.  
Farmers Elec., W. Hempfield.  
Gas Co. of Northumberland.  
Halfpenny and Grove, Inc.  
Hazleton Power & Light Co.  
Hubley Electric.  
Intercourse Electric.  
Lancaster Electric L. H. & P.  
Lancaster Gas, Light and Fuel.  
Laurel Park Power and Light.  
Lititz Gas.  
Mr. Lebo Electric Light.  
New Perryville Consolidated Gas.  
Nacmi Pines Electric.  
New Kingston Elec. L. H. & P.  
Penns Creek Hydro Electric.  
Pequea Electric.  
Pioneer Electric Light.  
Shermans Valley Elec. L. H. & P.  
Wrightsville Light and Power.

BY MR. COOKE:

Q. Can you identify Mr. Mentz. Who does he work for?

A. A letter with this merger shows who Mr. Mentz is. There are twenty-seven companies taken in in this merger.

The net book value of the capital assets of the companies acquired according to the 1930 report is .....	\$11,833,467.65
Net value of capital assets purchased 1930 report of Pennsylvania Power and Light Co. is .....	25,549,628.18

Write-up above book value ..... \$13,716,260.53

Again let us find out who owns the companies purchased.

According to the reports filed by the companies merged on April 1, 1930, or the companies except one, are shown as being owned by the Pennsylvania Power and Light Company. That one was owned by the Lehigh Power Securities Corporation. But to go back further the report of December 31, 1929, of these companies shows that all of these companies were either owned directly or indirectly by the Lehigh Power Securities Corporation, which, in turn, owns the Pennsylvania Power and Light Company.

The total of the capital stock acquired from these companies, which were merged, was \$4,919,550, less deficits of certain companies, \$72,233.68.

Mr. Mentz again agrees to keep the surplus of the underlying companies. To this he had a write-up of fixed capital \$13,-

716,260.53, and we have a total of \$18,560,546.85. Mr. Mentz agrees to take only \$16,200,000 of the Pennsylvania Power and Light Company in six per cent. debenture bonds for these companies.

In Docket record No. 23,201 Mr. A. C. Ray, who signs himself as treasurer of the Lehigh Power Securities Corporation informs the Pennsylvania Power and Light, that the Lehigh Power Securities Corporation has an agreement with Mr. Mentz whereby this company is to receive the \$16,200,000 or 6% debentures; that is, the Lehigh Power Securities Corporation is to receive it.

He, Mr. Ray, further ventures the information that neither Louis F. Mentz or any other person whatsoever is making any profit in connection with this reorganization—he says nothing of corporations. At the present time the Pennsylvania Power and Light Company has placed on the market one hundred million dollars of 4½% fifty-year bonds. You will remember the first Mentz agreement, these bonds were to be paid in the first Mentz agreement. These bonds are now being quoted on the market when, if and as issued. Yesterday, April 16th, I received a quotation of 96½ bid and 96% asked. The bond circulars of this issue state that temporary bonds or uniform trust receipts will be ready for delivery on or about April 22nd, 1931, just five days away, and to date—Yesterday I inquired of Mr. Dunlap, an employee of the Public Service Commission, and he informed me that—the Public Service Commission has not as yet received a certificate of notification as to this bond issue. Surely the Penna. Power and Light Company would want the members of the Commission at least to get a notice to the effect that these securities are to be issued. Further inquiry was made of the securities commission regarding this issue, and the Chairman, Mr. Paul W. Leitch could see no reason why the Security Commission should question the issue.

BY MR. COOKE:

Q. How do you explain that?

MR. EVANS: Their power are quite limited in these matters. They provide for licensing of dealers as one of their functions, and another of their functions is where securities that are fraudulent are sold, to take that matter up, but their powers are quite limited in matters of this sort.

Q. Am I right that it was the Lehigh Power Securities Company that was testified to as having been moved up from one dollar to \$31,000,000 on the books of the Lehigh Coal and Navigation Company?

A. My remembrance of that is that the Lehigh Coal and Navigation Company had held a large block of stock of the Lehigh Power Securities Company which it carried on its books at one dollar, and that several years ago that stock was exchanged for stock of the National Power and Light Company, which is a holding company above the Lehigh Power Securities Company. But that was also carried at one dollar, but at the end of the year 1930 was written up to \$31,000,000, or some such figure.

Q. In other words, it was an enhancement in the value of the securities of the company now being discussed that permitted the Lehigh Coal and Navigation Company to change the entry of one dollar to \$30,000,000 at the end of ten years?

A. If my memory serves me right, the Lehigh Coal and Navigation Company acquired this stock of the Lehigh Power Securities Company through the sale of certain operating utilities which the Lehigh Coal and Navigation Company owned in Pennsylvania, among them being the Harwood Electric Company, and it sold this company first the Lehigh Power Securities Company had carried it on its books at one dollar.

MR. TURNER: In regard to the power of the securities Bureau, I would like to have an opinion from the Attorney General on that.

MR. EVANS: May we take that up at the same time we ask for action on this matter?

MR. TURNER: Yes, except that the opinion is something that we would like to have right away and the other matter may not be acted on so promptly.

MR. EVANS: I don't consider that the Committee would want to refer to the Attorney General this matter, but rather to the Public Service Commission and perhaps to the Securities Commission.

MR. DIETRICK: On September 31st, 1930, the balance sheet of the Pennsylvania Power and Light Company submitted to the Public Service Commission shows a liability of \$33,807,563.62

for the issuance of securities in accordance with the net agreement they still held over from 1928. The circular in connection with the new bond issue states that bonds totaling \$69,218,650 are to be retired by the \$100,000,000 bond issue, leaving a balance of \$30,781,350, supposed for the Lehigh Power Securities Corporation.

In order to present a calculation of the actual investment in plant property upon which bonds and preferred stock should be based, let me analyze the facts of this issue. In an additional bond circular of the Pennsylvania Power and Light Company there is shown total bonds outstanding after re-financing of \$131,000,000. And the liability on this balance sheet, the liability of Mr. Mentz disappears from the liability side of the balance sheet. This circular shows plant and investment \$208,605,328.38, less a reserve of \$17,069,917.30, or a net value of plant and investment of \$191,344,411.08. So far this setup shows the plant and investment in the figure which I just read of which \$43,466,541.63 is write-up over the original book value, leaving actual book investment in plant and investment of \$147,877,959.

Now against this is already outstanding and unchanged by the new financing \$45,578,604 in preferred stock. That leaves \$102,399,355 as security for the total bond issue of \$131,000,000. So either the equity of the bonds or the equity of the preferred stock is seriously impaired. The bonds apparently cannot be touched as they are a prior lien on the physical assets of the company. The obvious conclusion is then that the equity of the preferred stock will be lowered by \$28,660,645. This preferred stock is apparently held in the hands of the public. And I wish you to keep in mind that I refer only to mergers in 1928 and 1930. I have a long list of applications for mergers of other years. I can read them if you wish, but they are longer than the others.

The Pennsylvania Power and Light Company is an operating Pennsylvania corporation; it is not a holding company. It is asking the public to buy bonds behind which the actual investment in property runs into a minus quantity.

BY MR. EVANS:

Q. That is, as shown by its books?

A. Yes sir. There may be possibly some financing in explanation, but I could not find it in any of the reports, circulars and agreements to which the Public Service Commission gave me access. Only the data on the books of the companies involved would reveal that.

Q. Certainly \$43,466,451.65 write-up, above original book values, accumulated in speculating periods by companies holding each others hands, should put the government on guard to look into the matter.

The Lehigh Power Securities Corporation has refused the Federal Trade Commission to examine its books,—I quote from Volume 22 of this hearing, on the ground that it was not engaged in interstate commerce. Examination of the books must be done by the authorization of the Legislature.

MR. EVANS: Does the Committee wish to call this to the attention of either the Public Service Commission or the Securities Bureau Commission, or both, or wish to wait action on that for an executive session?

THE CHAIRMAN: We will take it up at an executive session.

FATHER COX: Don't you think it would be a good idea to have at least the books of one company at hand? Why should we pass them over without the serious consideration? Why pass it up?

MR. COOKE: The witness said he will tell us who Mr. Mentz was.

THE WITNESS: During my testimony I stated in a letter from Mr. A. C. Ray, Mr. Ray that the \$16,200,000 in bonds which Mr. Mentz was to receive, belonged in reality to the Lehigh Power Securities Corporation, through an agreement which the Lehigh Power Securities Corporation had with Mr. Mentz.

MR. COOKE: That shows, according to Mr. Ray's opinion, Mr. Mentz was not to get anything out of it, but it does not tell us who Mr. Mentz was.

THE WITNESS: As to his identity I am just as much at a loss as you are.

LOUIS TEVELL recalled

BY MR. EVANS:

Q. Mr. Tevell, Mr. Dietrick has just testified in regard to the difficulty in locating certain agreements, between Louis

F. Mentz, Pennsylvania Power and Light Company; another agreement between Mentz and the East Penn Traction Company; and another agreement between Mentz and the Valley Railways; another between Mentz and the Lehigh Power Securities Corporation, each dated April 1, 1928, in the files of the Commission. He testified that yesterday afternoon you were able to find these and deliver them to him. Would you be good enough to tell us where you were able to find these in the files of the Commission?

A. Yes, Mr. Evans, may I say a few words preliminary to that, and sort of tie it together. I did not know that these papers were missing or being searched for until yesterday morning, when Mr. Walker called me up and said Mr. Dietrick was having difficulty in finding them in the Commission's files. Of course, I immediately issued orders that all of the files of the Commission be searched. We could not find them. I read the transcript of the testimony of the hearing held in Philadelphia in 1928, where these papers apparently were at hand, and I noticed that the reporter, the reporting stenographer rather, had a notation in his transcript that the papers in question were turned over to the custody of Major Vale. The hearing in Philadelphia was held by two Commissioners, and examiner Vale, and as I say, the record showed the reporter, the stenographer rather, turned them over to Major Vale. There was no trace at all in the Commission's office of the papers having been received from Major Vale. I talked to Major Vale yesterday and asked him if he had any recollection of it. He said, he did not, that he presumed if he did have the papers, that he handed them into the filing department in the usual way. Then I discovered in Major Vale's office that there was a filing cabinet full of papers, and, by the way, I think I should say to the Committee, that Major Vale left the employ of the Commission on January 1st, of this year. I found out that there was a filing cabinet full of papers in Major Vale's office. I myself searched in that cabinet and found these papers. I don't know of any other more complete disappearance of papers. I have been with the Commission for thirteen years. This is the first time in my experience that no trace of the papers is to be found in the Commission's office,—nothing on the docket, or any other records. It seems that Major Vale when he came back from Philadelphia, did not file the papers in the regular way. I talked to Major Vale and he said he had no recollection of it at all. I think I said to Mr. Dietrick, when he asked me,—I think I would rather not say,—it might reflect on someone who is no longer in the employ of the Commission. Later in the afternoon I think I told Mr. Walker that I had found the papers in Major Vale's office. I think I added a few words, which might reflect on someone who is no longer an employee of the Commission. I think I put it that way, and subsequently I told Mr. Walker I had found them.

FATHER COX: Maybe they didn't want to destroy them,—just hide them.

BY MR. WALKER:

Q. There was no attempt to conceal the papers or take Mr. Dietrick sleigh ride?

A. No sir; I didn't know that the papers were being searched for until Mr. Walker called me up. Mrs. Bacon, our chief file clerk, told me that they had been overturning everything for two days, trying to find them.

MR. EVANS: I think in order to complete our records on this matter, I will offer in evidence these letters, agreement between Louis Bentz and the Pennsylvania Power and Light Company evidenced by a seven-page letter from Mentz, dated April 1, 1928, together with schedule A, B, and C referred to therein, as Exhibit No. 153.

MR. EVANS: A similar agreement between Mentz and the East Penn Traction Company, dated April 1, 1923, consisting of two sheets, and marked as Exhibit 154.

A similar agreement with the Valley Railways dated April 1, 1923, Exhibit No. 155.

A similar agreement consisting of five sheets with the Lehigh Power Securities Corporation, dated in 1928, as Exhibit No. 156.

The latter also refers to the schedules, C, and D, attached hereto, but these schedules do not seem to be attached—probably these are the schedules A, B, C, D, that are here physically attached to the letter to the Pennsylvania Power and Light Company.

W. D. B. AINEY sworn

BY MR. EVANS:

Q. Mr. Ainey, you have been a member of the Public Service Commission since 1915, have you not?

A. Yes.

Q. How long of that time have you been Chairman?

A. I was acting Chairman from the beginning of my appointment until the following fall, when I was made Chairman. I was acting Chairman under the provisions of the Act, which you will no doubt recall, Mr. Evans.

Q. Among others, the duties of the Chairman are to preside at the meetings of the Commission to fix the time and place for hearings; the assignment of cases to Commissioners, or to Examiners, and to direct and designate officers and employees of the Commission to make investigations, inspections, inquiries and studies and other like assignments for report to the Commission?

A. That is the present duty of the Chairman; it was not so initially.

Q. And what were the original duties of the Chairman of the Commission?

A. Well, you will recall that the Chairman's duties originally were to preside at the meetings and participate in the conduct of the cases, as did other members of the Commission.

Q. Mr. Ainey, attention of the Committee has been called to a number of cases where according to the reports of utilities filed with the Commission, these companies have largely written up the book values of their property, and have established securities on the basis thereof. In what cases that you remember has the Commission taken steps to prevent this?

A. Well, I don't know, Mr. Evans, over a period of 16 years, that I would be able to state or give you a list of those. If that inquiry was left in abeyance so far as an answer is concerned, why, I could ascertain very definitely and inform you.

Q. Now, Mr. Ainey, a number of these cases have been within the past three or four years, and do you remember any case?

A. Suppose you call my attention to those cases.

Q. Do I understand then your answer is that you don't at the present time remember any case where the Commission has taken steps?

A. Well, that is a little bit broad. I have an indistinct recollection of cases, but I could not recall the names of them other than I would refresh my recollection.

Q. So at the present time you don't remember the name of any case where such an attempt was made by the Commission?

A. Well, I recall the fact that there were attempts made by the Commission, but I cannot, without an examination of our records, designate the particular companies at this present time.

BY MR. TURNER:

Q. What about the Federal Water Company; does that suggest anything to you?

A. The Federal Water Company?

MR. MEMOLO: Scranton-Spring Brook?

THE WITNESS: Scranton-Spring Brook—well, I recall that in my absence there was action taken by the Commission with respect to the proposal on the part of the Federal Water Company and the Commission's decision, which I acquiesced in, after my return from a trip abroad, we struck down, or refused to file for the particular reason that there was an adherence clause, or adherence mortgage provision, which we thought was inimical to public policy.

Q. You are referring, are you not, Mr. Ainey, to the application of the Pennsylvania Water Service Company in September, 1927, involving the proposed merger of the Jersey Shore Water Company, the Clymer Water Company and others?

A. Yes.

Q. The Committee has had laid before it the action of the Gettysburg Water Company in issuing—I think in 1928—\$200,000 of bonds, and using the entire proceeds to pay dividends on the common stock, as shown by the reports of the company to the Public Service Commission. So far as you remember, did the Commission take any action in regard to that?

A. I do not recall any action that the Commission took, and the particular reason, in the matter of the issuance of securities under advice from the then Attorney General (Mr.

Woodruff) and by the advice of Mr. Phillip Wells, the Deputy Attorney General, we were held to have no jurisdiction over the issuance of securities.

I can furnish you a copy of these opinions of Attorney General Woodruff and of Deputy Attorney General Philip Wells, if you so desire them. I think they were submitted to the Senate, but I do not know that they appear in your records.

MR. TURNER: I should like to have copies of those opinions.

BY MR. EVANS:

Q. Will you be good enough to furnish us with a copy of the opinion which will be marked exhibit 157.

A. Now, if Mr. Tevell will be kind enough to look through my files, I think I have a copy that I may be able to leave with you now.

Q. Very good. Thank you.

A. Unfortunately, gentlemen, I am somewhat a little crippled in my hands, and so forth, but I hope that I am able to function outside of that.

Q. While Mr. Tevell is hunting for that, Mr. Ainey, the reports of utilities to the Commission also show a large number of cases, where returns very much in excess of seven per cent. on the book value of the capital assets the companies have been earning. Do you remember any case, prior to 1930, when the Commission has taken action in regard to these matters on its own initiative?

A. Now, you are referring to book value?

Q. I am, sir.

A. Well—

Q. If you will just answer the question, and then make any explanation that you wish.

A. I am trying to do that, Mr. Evans. I am sure that you and I will get along. I think we followed exactly the same practice up to the latter date when we were honored by having you sit at the table with us. I do not recall any difference at all in your practice at one time or another.

Q. Do you remember any time when the Commission has acted on its own initiative in these matters, prior to 1930?

A. I do not. I want that to go down as a negative, however. May I interrupt you, Mr. Evans?

Q. Yes, indeed.

(Discussion off the record).

MR. EVANS: This letter, if the Committee pleases, from Attorney General Woodruff, is dated October 2, 1925, pertaining to the Conowingo Power development and consists of eight pages. I would suggest that it be put in as an exhibit together with the other material attached to it, which is a summary of data in re jurisdiction over securities issues involved in the Conowingo project, and is in the form of a paper containing 22 pages.

THE WITNESS: If that is the desire of the Chairman and the members of the Committee, I would just like to make this as a preliminary statement to this exhibit:

Mr. Merrill, executive secretary of the Federal Power Commission, addressed a letter to Governor Pinchot, asking to be advised as to the power which the Public Service Commission had, not only over the issuance of securities, but several other matters. It came up, as Mr. Evans has suggested, in conjunction with the Conowingo case.

That matter was referred by Governor Pinchot to me, and a suggestion that the Attorney General's opinion be obtained. In connection therewith, however, there was the opinion of Mr. Wells, then Deputy Attorney General, in which he stated, in his opinion that the Public Service Commission had no authority whatever over security issues.

BY MR. TURNER:

Q. May we have that opinion also?

A. I have a copy of it right here.

MR. EVANS: That is not a part of the exhibit.

THE CHAIRMAN: I am not interrupting?

THE WITNESS: Not at all, sir.

THE CHAIRMAN: You said that that would be made exhibit?

MR. EVANS: Yes; exhibit 157.

BY MR. EVANS:

Q. Mr. Ainey, it seems that this has been multigraphed or mimeographed, could additional copies of this be furnished?

A. We will furnish you with additional copies. Mr. Tevell is now—

MR. TEVELL: I have sent for some now.

MR. EVANS: All right then.

BY MR. EVANS:

Q. Then under Article 3, Section 14, the Commission is given power to investigate security issues and to certify to the Attorney General in cases where the law has been violated by public utilities in regard to security issues, has it not?

A. Yes; that, however, refers to the illegality of the issue, other than as to a question of the reasonableness or the justice of it.

It is not broad enough to protect the public and there ought to be in the minds of the Commission, broader power lodged somewhere.

Q. Just to get this correct, Mr. Ainey, the Act provides that every utility shall before it issues securities file a certification of notification with the Commission; does it not?

A. Yes.

Q. And among other things that the certificate must state the purpose for which the issue is to be used?

A. Yes.

Q. And the act also provides that no utility shall use any such securities for any purpose other than those stated in the certificate of notification?

A. That is my recollection of the act.

Q. And it further provides in Section 5, Article 14, that every violation of the law in regard to securities may be certified by the Commission to the Attorney General so that in view of that fact it is within the power of the Commission where the proceeds of securities issued are wrongfully used to certify the matter of the Attorney General, is it not?

A. To the extent you mention, yes.

Q. Now, who appoints the chiefs of bureaus of the Commission?

A. The chiefs of bureaus are appointed by the Commission.

Q. And who appoints subordinates? In those bureaus, as for instance, the engineers?

A. Likewise they are employed by the action of the Commission but not by the Chairman.

Q. In the employment of engineers and accountants in the Commission, has it ever been the practice of the Commission, as I see is now the practice in the Maryland Commission, to hold competitive examinations for these positions?

A. No, it is not, but it has been the practice of the Commission in picking its technical staff to require information as to the qualification of those whom we propose to employ. That was followed in a case I have in mind, because he was on the stand yesterday, Mr. Black, who came to us from Maine, and he was appointed as an electrical engineer with the approval of Governor Pinchot in the former administration.

Q. Now among others you have as engineers in the Bureau of Engineering a Mr. C. P. Russell who is listed as a railroad engineer at \$4,000 a year?

A. Yes.

Q. What is your idea of a railroad engineer, Mr. Ainey, not a locomotive engineer?

A. I should assume not.

Q. What is meant by that designation?

A. Well I would assume that it meant one that was familiar with railroad proposition as well as transportation problems by rail.

Q. Now, do you happen to know Mr. Russell's qualifications on that score?

A. I think I do. I think I know that we went into it very carefully before he was employed and I thought he was a very competent man.

Q. As a matter of fact, Mr. Ainey, Mr. Russell I think testified that his work was in the Philadelphia office supervising motor bus and taxicab transportation chiefly. Would you consider that as railroad engineering?

A. Not entirely so, but with the limited staff we have we have been obliged to call upon, well, members of the law department considered examiners we were short-handed; we have been called upon to call upon all our engineers to make studies even along lines that they do not specialize in.

Q. I think you have also as an engineer in the bureau of accounts a Mr. Krick, have you not?

A. I don't recall the name, it is quite doubtful.

Q. You don't happen to know that he was the son of the vice-president of the Pennsylvania Railroad?

A. I do not. In fact I overlooked the fact that we had any one by that name.

Q. You also had at one time in your employ an engineer by the name of William Finley Downs, did you not?

A. Yes sir.

Q. Do you happen to remebber about when he was appointed?

A. I could not give you the date, no sir.

Q. It was prior to 1917?

A. I would think so.

Q. And at that time Mr. Francis Shunk Brown was the Attorney General of Pennsylvania, was he not?

A. I am not sure.

Q. You were appointed, were you not, by Governor Brumbaugh?

A. Yes sir.

Q. Mr. Brown was Governor Brumbaugh's Attorney General?

A. Yes sir.

Q. And Mr. Downs was appointed while you were a member of the Commission, was he not?

A. Yes sir.

Q. And he was appointed prior to 1917?

A. You are giving the dates, sir, I cannot recall them. It would be very easy to ascertain. I can get it for you or Mr. Walker by telephone in fifteen minutes after I get back to my office.

Q. Do you happen to remember whether Mr. Francis Shunk Brown had anything to do with his appointment?

A. I know he never had anything to do with it as far as I was concerned, he never mentioned it to me.

Q. One of the handicaps of the Commission has been its lack of funds, has it not, Mr. Ainey?

A. Yes sir.

Q. And it has been unable to pay adequate salaries to some of its more highly skilled employees?

A. That is unquestionably true, and with the result that when we had gotten these technicians up to a point of very great serviceability to us, these other interests took them away from us at a very much higher salary.

Q. And that generally means that they were taken away by the utilities or the railroads?

A. Not necessarily that. That has been so in a number of instances.

Q. That is true of Mr. C. J. Joyce, who left a \$5000 position with the Commission to receive \$40,000 with the public utility company in Philadelphia?

A. There is quite an hiatus between those two points. In the meantime, as I recall, Mr. Joyce became an attorney.

Q. That increased his earning power by that extent in addition to making it desirable to pay him \$225,000 in one year for his services?

A. I don't know whether that is addressed to me as an inquiry or whether you are making a statement. But if I was the chairman of the Committee, I would ask to have it stricken from the record.

Q. Mr. A. B. Millar was another one?

A. Yes sir.

Q. What salary did he get?

A. Five or six thousand dollars. He was secretary for a number of years.

Q. He went to the Philadelphia Electric Company?

A. I don't think he went directly to the Rapid Transit, but I am not sure.

Q. He is now secretary of the Pennsylvania Electric Association?

A. Yes sir.

Q. Dr. Ehlers, chief of the bureau of engineers, is now vice-president of Day and Zimmerman?

A. Yes sir, but before that he served as director of city transit in Philadelphia during the Kendrick administration.

Q. And Mr. W. F. Downs is now president of Day and Zimmerman?

A. I think that is so, but I do not know. I have not seen him for a long time.

Q. Do you remember a Mr. Schmunk? Whom I understand was with the Commission?

A. I remember him very well, he was a very able accountant.

Q. He also went to Philadelphia Rapid Transit?

A. I am not sure of that. I understand that he was connected with a bank down there but I might be in error in regard to that.

Q. Do you remember any other case, Mr. Ainey, where employees of the Commission have been taken from the Commission either directly or indirectly by utility interests or by those connected with those interests?

A. I know that there are some, but I do not want to depend upon memory.

MR. TURNER: Are we to infer that there was something wrong in that sort of procedure? I think I said yesterday, that Mr. Cameron complained to me all the time I had been a member of the Legislature that all of his good men were taken by the banks of the state. Are we to infer that the banks had some insidious purpose in employing them?

MR. EVANS: No sir, I am trying to draw the picture as to the lack of adequate appropriation, the Commission cannot pay salaries in competition to utilities.

THE WITNESS: There is no doubt that that is a serious handicap, so far as the Commission is concerned, but it is handicap that practically all of the Commission throughout the United States have.

BY MR. TURNER:

Q. And always will have?

A. I presume so, unless we can secure a much larger appropriation than we have heretofore obtained.

Q. The Government never pays for service of that kind very highly?

A. I am afraid not.

BY MR. EVANS:

A. In the same way, the Commission has been handicapped by a lack of sufficient personnel, has it not?

A. Yes; at times more than at other times.

Q. At what period did it have sufficient personnel in your opinion.

A. I don't think it ever had sufficient personnel but that has been accentuated on one or two occasions. During the Pinchot administration, both in conference with Governor Pinchot and also by communication, he directed that in the preparation of our budget that we cut down our appropriation, which was already small, by 25%, which meant that we had to discharge quite a number of employees, and I addressed a letter to him, calling his attention to what would be the result of that, which letter I have, if the Committee desires it.

Q. Prior to 1923 did the Commission have adequate personnel?

A. Never; never since I have been a member of the Commission have we had an adequate staff, to do all the things that I as chairman think it would be very helpful that we should undertake to do.

Q. Was this one of the reasons, Mr. Ainey, why the Commission did not act on its own initiative to protect the interests of consumers.

A. You mean in taking up rate cases?

Q. Yes; matters of that sort.

A. That was involved. Now, take the Scranton-Springbrook case. It was mentioned in the Senate hearings that the complainants,—it cost the complainants something like \$240,000 to carry on that litigation. I don't know whether that is true or not, but I assume it was true. That would have taken up nearly a third of our appropriation for all purposes, had we borne that expense. Of course, it was impossible. The more statement of it would be sufficient.

Q. In what cases, has the Commission, so far as you remember, issued certificates of valuation?

A. There have been a very limited number, and none of late years that I can recall. Mr. Tevell called my attention to the fact that it is his recollection that the last one was the Springbrook Water Company.

Q. You also issued a similar certificate a year or so prior to the Downs' report in the Springbrook case for the Springfield Water Company.

A. I think so.

Q. Do you remember any other certificates of valuation?

A. I know there were, Mr. Evans, but I am not able to tell you from memory. I will be very glad to supply it, if you so desire.

Q. I don't think that will be necessary. A large amount of time is required for the Commission to prepare a certificate of valuation, is it not?

A. We found it so.

Q. Do you happen to know the time, the approximate time, that was spent in the preparation of the so-called Downs' report in the Springbrook case.

A. I couldn't tell you; it was over quite a long period of time.

MR. TURNER: You have referred a number of times to the Downs' report. I think it might be a little bit helpful to place something on the record now in connection with the Downs' report.

MR. EVANS: Probably the witness knows more about that than I do.

THE WITNESS: Mr. Downs had much to do and in connection with Professor Ehlers, but chiefly Downs in the preparation of the Commission's report for the certificate of valuation which the Commission issued in the Springbrook Water Company case.

BY MR. TURNER:

Q. Downs was an employe of the Commission at that time?

A. Yes, sir.

Q. Holding a similar position to Mr. Black?

MR. EVANS: He was an engineer in the Bureau of Engineering. Mr. Black is primarily an electrical engineer.

THE WITNESS: Mr. Downs was a valuation engineer. We have several kinds of engineers, you understand. Mr. Downs was a valuation engineer.

BY MR. EVANS:

Q. Do you remember what experience Mr. Downs had as an engineer prior to his coming with the Commission?

A. I couldn't tell you now. I investigated that but that takes me back sometime.

Q. Who paid for the Downs' report,—the Public Service Commission?

A. I don't understand what you mean.

Q. I mean, did the Commission pay for the services and expenses involved in the preparation of the certificate of valuation in the Springbrook Water case.

A. There was no other way out of it, for to be paid, and the Commission would not, for a moment, have permitted its employes to be paid by the interests that were being investigated.

Q. Do you happen to have any idea at all as to the approximate cost of preparing this valuation?

A. I couldn't tell you; I have never seen the papers segregated. Mr. Downs was on a salary, and, of course, the expense accounts came in monthly, and so with the others that were assisting.

Q. Was this valuation made on the application of the Springbrook Water Company?

A. Yes sir.

Q. And a large amount of time was consumed in its preparation?

A. Yes.

Q. Would it in your opinion have been more worth while for the same amount of time and money to have been spent in investigating rates or other matters in which the consumers had an interest?

A. Well now, you are trying to make a comparison, or suggest that I make a comparison, where there is no basis for a comparison. The certificates of valuation have to be made where there is an application made, and we have no opportunity to refuse or neglect it, we have to do it.

Q. Mr. Ainey, this Committee is considering possible changes in the law, and it may be desirable to revise the law in that respect, and that is what I want to get at. Would it in your opinion be desirable that the amount of time taken, for instance, in the Downs' Report, should be spent on this sort of thing, or could it better be spent in the interest of the consumers?

A. I think there are two entirely different questions there. I think that there ought to be some provision whereby certificates of notification call for a larger payment by the utility company demanding it, and that our law—

Q. Do you mean notification or valuation?

A. Certificate of valuation. My recollection is that the statute has prescribed, under the wisdom of the Legislative fathers, that the utilities shall pay for a certificate of valuation the sum of \$25 into the State Treasury, and that is all that they do pay, because that is the sum total. I think that here

ought to be some means whereby they would pay into the State, or to the State Treasurer, a larger sum, commensurate with the value of the work that is required.

Q. Now, copies of the Downs Report were furnished to the Springbrook Water Company, were they not?

A. That would be my recollection.

Q. And the Commission has always refused to furnish copies of this to anyone else except the Springbrook Water Company, has it not?

A. I don't think so. It may be so, but I don't recall it.

Q. Do you think that is a desirable policy, if it is the policy of the Commission?

A. I would think that where a certificate of valuation has been reached by the Public Service Commission, that there is no good reason why that should not be available for anybody that might desire to inspect it, and I don't recall that in any instance have we ever refused to acquiesce.

Q. And you are not aware of the fact that until recently at least those applying for copies of the Downs Report have been told that they would be furnished only upon order of the Springbrook Water Company?

A. No, I am not. Of course, we have this, Mr. Evans, and I think the Committee ought to bear it in mind, that if someone desired to prepare a copy of the Downs Report, or certificate of valuation, or the basis upon which that valuation was made, covering how many pages, Mr. Evans, will you be kind enough—you have it right before you there—

Q. 577.

A. Covering 577 pages, why, our clerical staff would not permit us to undertake that, and we could not do it, that is all.

Q. But you did furnish a copy of it to the Springbrook Water Company, did you not?

A. Of course, we had to do that, that is what they applied for, and that is what they paid their \$25 for.

Q. They applied for a certificate of notification, that did not include the Downs Report?

A. I thought that was what you were referring to.

Q. I am referring to the Downs Report, on which our certificate was based.

A. Oh, yes. I catch your point.

Q. Now, that you have caught my point, is it your remembrance that copies of the Downs Report have been refused to applicants except on the written permission of the Springbrook Water Company?

A. I could not tell you as to that, but I don't think so.

Q. And your answer still holds good that you don't think that should be the policy?

A. No, I don't.

Q. How about other engineering reports of the Commission, Mr. Ainey, on which decisions have been made. In your opinion ought they to be granted to the parties interested for inspection?

A. Now, I think that they should not in the main, bearing in mind that the conscience of the Commission is advised by its technical staff; on the other hand the engineers of the Commission are sometimes assigned to the duties of making a field examination, and that field examination is the kind of work when gathered in a report, there is no reason why the public should not have the benefit of that, but those reports which are calculated merely to advise the conscience of the Commission in the performance of its duties are confidential. We may agree or disagree. I think you should bear that in mind, that there is a distinction and a very vital one.

Q. Now, Mr. Ainey, the Downs Report and all other reports for the purposes of certificates of valuation are ex-parte, are they not. In other words, the public is not represented in any way in the making of these valuations?

A. Not usually, and I don't recall a single instance where the public has been so represented. Our method of procedure used to be that a certificate of valuation was applied for; the matter was set down for hearing and the company presented its testimony as it so desired and then the Chairman, if he presided, or the sitting Commissioner, would say that we would take the record and submit it to our Bureau of Engineering, and they would make a field examination and reach a conclusion with respect to it. That was the method of procedure, and I know of no other method by which you could accomplish what the Legislature had in mind under the provisions of the Public Service Company law.

Q. I have before me the Commission's Folder in the case of the application of the Springbrook Water Supply Company

for the approval of the determination of the value of the property and assets of the said company, Application Docket No. 1639-1927.

Attached to this is, a report of the bureau of engineering signed by Mr. H. E. Ehlers, assistant chief of bureau, in which he says:

"In response to your request for a suggestion as to the fair value to be fixed by the Commission, I submit for your consideration the amount of \$16,000,000, which figure I believe gives ample recognition to the reproduction estimate, the water rights and the going concern values, and recognizes the cost of the property as carried on the books. The probable original cost of the physical property, the market value of the securities, the condition of the property and the character of service rendered, the prospect of a continued and increased demand for water, and recognizes to some extent, the present and prospective earning power of the property under the rates it is proposed to continue in effect, and can be presented to the petitioners and the investing public as a safe basis for credit for future undertakings."

According to the minutes of the Commission, attached to the file, Harrisburg, March 11, 1919:

"A report was presented from the Bureau of Engineering, being a review of the testimony in the application of the Spring Brook Water Supply Company for a determination of the value of the property and assets of said company, which report was read and discussed. Commissioner Rilling moved that the record be set down for agreement, which was seconded by Commissioner Alcorn, but failed of adoption as less than a quorum voted in the affirmative. Commissioner Alcorn moved that the Commission determine the valuation of the property and assets of the Spring Brook Water Company of \$16,000,000, and a certificate of valuation issue, which certificate shall contain the stipulation that the value is not made nor to be considered as a basis for rate making purposes. That motion was seconded by Commissioner Clement. Prior to a vote being taken, Commissioner Rilling moved to adjourn until one thirty o'clock P. M. Tuesday, 1919, which was seconded and carried."

Continued, the minutes provide:

"The discussion of the motion before the Commission, fixing the valuation of the Spring Brook Water Supply Company at \$16,000,000, was resumed and Commissioner Clement, moved to amend the motion by striking out the word 'sixteen' and substituting the word 'seventeen' so that the motion would read that 'the Commission determine the value of the property and the assets of the Spring Brook Water Supply Company to be \$17,000,000 and a certificate of value issue which certificate shall contain the stipulation that the valuation is not made nor to be considered as a basis for rate making purposes.' This motion was seconded by Commissioner Brecht, and adopted. Commissioner Rilling did not vote on the motion and reserved the right to file his dissent on the record and to file reasons for such dissent. The Chairman did not participate in the vote fixing the valuation."

Q. Why did you not participate in that vote, Mr. Chairman?

A. I did not know that I did not until you called it to my attention. Probably I was not in sympathy with it, I do not know. There is no reason why I should not if I was in sympathy with the motion.

Q. At all events, before lunch Commissioner Alcorn and Commissioner Rilling asked that the valuation be placed at \$16,000,000, and after lunch the Commission adopted a valuation of \$17,000,000.

A. Well, probably they had—

Q. A good lunch?

A. They had a good lunch, probably.

FATHER COX: A million dollar lunch.

THE WITNESS: Probably that is it, Father.

BY MR. EVANS:

Q. Do you know of any other reason that affected that result?

A. I do not, but I would not in these times, where there is a little change in the statutory law, assume that that would have anything to do with it.

BY MR. TURNER:

Q. It might change it to the jurisdiction of the Public Service Commission?

A. It might.

BY MR. MEMOLO:

Q. In that case you did not follow out the advice of the technical experts in the field?

A. Well, in that case I cannot, after this flight of years recall what was the discussion around the table. Practically all of those who participated, at that time, have passed over. Mr. Brecht has gone, Mr. Clement has gone, Mr. Rilling has gone. Mr. Alcorn is still living as I understand, but not a member of the Commission.

Q. Mr. Ehlers made the physical valuation and recommended \$16,000,000?

A. Yes.

Q. And after lunch it was \$17,000,000.

A. There was no particular change that I can recall, except somebody refused to vote for it, and the Chairman did not vote for the increase.

BY MR. EVANS:

Q. I want to call your attention to the provision in the motion which was adopted by the Commission, that the certificate shall contain the stipulation that "the valuation is not made nor to be considered as a basis for rate making purposes." That was in accordance with the public service company law, was it not?

A. I think so.

Q. And if in any rate case the certificate or the report on which it was based, was used for or considered as a basis for rate making purposes, the action of the Commission based thereon, would be invalid, would it not?

A. No; I do not so understand.

Q. Will you explain that to the Committee?

A. I think I may be able to do so.

Q. The provision is that the certificate shall contain the stipulation that the valuation is not made nor to be considered as a basis for rate making purposes.

A. I think that that is correct, and I think that is a wise procedure, and one we follow at the present time.

Q. But don't you think it was binding on the Commission?

A. Yes; I think it was binding on the Commission so far as the conclusion was concerned, but so far as the facts that were developed in the field, would come under the examination of the physical property, the inventory that was taken, the application of unit costs to the different elements—that is a fact, but that is not the same as what you are now referring to, and I think that that might be considered as some evidence and it might not be considered as some evidence by the Commission in any later rate proceedings.

Q. In other words, the valuation placed by Mr. Downs on individual items of property may properly be considered, but the total valuation placed by the Commission cannot be considered? Is that your position?

A. That is not quite my position, Mr. Evans.

Q. That is what I understood. Now, will you explain why it is not your position.

A. That is not my position for the reason that we have attempted by inserting that provision in certificates of application to state that we had not made a judicial or a quasi-judicial determination of the value of the property, but thereafter should be used as a basis for determining rates, but that if there were any facts involved in this, that were pertinent in a rate case, that would be perfectly legitimate for the Commission to take into consideration as a fact.

Q. Well now Mr. Ainey, let me ask you this question, in view of this action of the Commission in a subsequent rate case is it or is it not proper for the Commission to consider valuation of individual items of property made in the Downs report?

A. Subject to such check as the Commission may make at the time the proceedings are going on.

Q. And it is not proper for you to consider the total valuation?

A. It is not proper for us to consider the fact that we have reached a judicial determination of the merits of the case.

Q. Is it proper for you to consider the total valuation?

A. I think it is proper for us to consider the different elements that go to make up the conclusion that the engineers submitted and which the engineers pass on.

Q. It is proper for you to consider the total valuation, Mr. Ainey?

A. You may reach that total valuation or you may not. I am not able to answer that in the way your inquiry is presented.

Q. I will present it again; is it or is it not proper in a subsequent rate case to consider the total valuation which you place on that property in the certificate of valuation?

A. I think it is perfectly proper—

Q. Won't you answer that, yes or no?

A. No, because I cannot, and I don't think it is fairly capable of being answered yes or no.

Q. I don't see how any question could be any plainer?

A. I think your question is plain and my answer is plain; evidently we are not travelling in the same pathway.

Q. Mr. Ainey, is it or is it not proper in your opinion in subsequent rate cases for the Commission to consider the total valuation placed by the Commission on a property in a prior certificate of valuation? I think that can be answered yes or no, and any explanation that you may want to make?

A. I do not think that we can accept any valuation as a stated figure as binding on the Commission in a subsequent rate case. I do think, however, that the bases upon which the conclusion is reached by the engineers and the Commission including the same point which you mention is very properly to be considered by the Commission in a rate case.

Q. Then what did this action of the Commission mean when it said, "The valuation is not made or to be considered as a basis for rate making purposes"?

A. That is just exactly what I have been trying to explain to you. That means, in my judgment, that there is no adjudication on the part of the Commission, that that sixteen or seventeen million dollars has been determined by the Commission so as to foreclose the public from having an opportunity to raise a question when the rate case comes up.

Q. Then there is no difference in your opinion in saying that a valuation shall not be considered and saying it shall not be considered binding?

A. I would rather leave it as my answer indicated.

Q. Will you answer that question?

A. I have already answered that?

Q. Do you consider there is no distinction between saying, it is not to be considered, and saying, it is not to be considered binding?

A. I think the language as contained in the certificate is clear and I accept every word of it without deletion. On the other hand, I do not think that it follows that in a subsequent rate case the Commission should not take any evidence of fact. Let us say it was a pair of shoes Mr. Downs evaluated, assuming there were shoes in the water company, I know of no reason why that pair of shoes if it still continues to exist, should not be considered in a rate case.

Q. Will you now answer the question, whether in your opinion there is any difference between saying, that it shall not be considered, and saying that it shall not be considered binding? Will you answer that question?

A. I do not think that there is any difference that I am willing to accept along the line of your interpretation, and I stand squarely upon the language of the limitation as it is carried in the certificate of valuation, Mr. Evans.

Q. Won't you explain the fact that when the action of the Commission was that the stipulation will be inserted in the certificate "That valuation is not made or to be considered as the basis in rate making cases," you issued a certificate in a different form?

A. Did I issue one in a different form? I would like to know how.

Q. The certificate you issued said, "Nor shall this certificate of valuation be deemed to require the Commission in subsequent determining of rates that can be charged by the applicant company to provide a rate which shall be sufficient to yield a return on its securities." That complied with the action of the Commission in your opinion, did it?

A. I don't recall whether it did or not.

Q. Does it seem to now?

A. I don't recall that now. I would like to read it.

(Mr. Evans handed to Chairman of the Commission, Mr. Ainey, the paper from which he has been reading.)

BY MR. EVANS:

While Mr. Ainey is reading this, I wish to formally offer the following:

# SUMMARY OF DATA IN RE JURISDICTION OVER SECURITY ISSUES INVOLVED IN THE CONOWINGO PROJECT, AS EXHIBIT NO. 157.

MR. AINEY: I am frank to admit that I would have preferred a different verbage in the certificate of valuation than appears before me in this that you submit, Mr. Evans.

BY MR. EVANS:

Q. That is signed by you.

A. That is my signature, but the Chairman signs because he is chairman, and that doesn't mean that he approved this to start with, because he did not approve it, according to the minutes that you have submitted.

Q. The certificate does accord with the action of the Commission—who else besides yourself is responsible for the certificate.

A. I think I am responsible in part—

Q. There is no other member of the Commission that is responsible for the form of the certificate.

A. Yes sir; we have our law department; we have—

Q. I say, member of the Commission.

A. To the extent that that rests upon the shoulders of the Chair, the chairman is willing to assume it. I understand from what Mr. Tevell says that the certificate follows the language of the act.

Q. But it did not follow the action of the Committee.

A. It did not follow the language of the act of the Commission, but I still feel that the action of the Commission is binding upon the Commission.

Q. Mr. Ainey, I would like to call your attention to the fact, as appears from page 223 of the Downs report that Mr. Downs estimated the reproduction cost new of the Spring Brook Water Supply Company as of October 1, 1918 at \$11,-849,879.—

A. That is the physical property, is it?

Q. Yes, and that if the office furniture, road equipment, in the amount of \$51,125 is added to that, and miscellaneous tools and supplies as shown by the appraisal at \$69,800, you arrive at a total valuation of the physical assets without the addition of the overheads at \$11,970,804.

A. That would appear to be what appears on page 225, but additionally to that—

Q. Then if you add to that the items of contingencies, engineering, general expenses, interest and going value, these items of overheads total \$5,196,792.

A. I am assuming your arithmetic is all right.

Q. I am hoping it is.

A. I am accepting it.

Q. So that, in round figures, the valuation shows reproduction costs new of the physical property in the neighborhood of \$18,000,000, including \$2,075,337 of going concern, and \$1,505,027 of interest during construction.

A. That would appear there on page 223.

Q. And that the depreciated value of this property, after deducting secured depreciation in the amount of \$1,252,496, was \$16,819,914.

A. Yes sir, that appears correct. Will you take the next clause or next paragraph of the Downs report, right here, the total cost new.

Q. That is a deduction.

A. The \$18,000,000 is not a deduction. The total reproduction cost new, reproduction cost new of the property depreciated,—it is the same figures, but that you didn't refer to, \$18,072,410.

Q. Mr. Ainey in 1921 the metered rates of the larger consumers of the Spring Brook Water Supply Company were increased, and a complaint was filed by a man named McDade, was it not?

A. I would like to see the record of that.

Q. We will get that after lunch, Mr. Ainey. When did the Pennsylvania Water Service Company acquire the Spring Brook Water Supply Company?

A. I wouldn't be able to tell you, Mr. Evans. Our records will show it. There would be others, that could answer that question much more easily than I could.

Q. Don't you remember that it was in September of 1927?

A. I do not, but I would assume that it was about that time.

Q. Do you remember that immediately following the acquisition a complaint was filed against the existing rates by Gillis and Tobias?

A. That may be.

Q. Mr. Ainey, Mr. Loveland testified that he intervened in the Gillis-Tobias Complaint in October, 1927, that is correct, is it not?

A. I have no reason to dispute that.

Q. And he further testified that on December 6th he testified: We have called upon to come to Harrisburg and appear before Mr. Ainey about the 6th of December, and there we met the attorneys for Mr. Tobias and Mr. Gillis, and my attorney and myself, and Mr. Ainey, constructed—or the construction of an engineering conference, and turned us over to Dr. Snow, and we went—let me see—before we were turned over to Dr. Snow in the hearing before Mr. Ainey, the Downs Report was submitted as the basis for finding the value." And then he describes what the Downs Report was. That corresponds with your recollection, does it not?

A. It does not, Mr. Evans.

Q. Will you state your recollection, Mr. Ainey?

A. The proceeding referred to by Mr. Loveland in his conversation with me, is in Gillis and Tobias versus the Springbrook Water Supply Company. The complaint was filed on September 17th, the rates which were the subject of complaint, were those which had been in force for many years, and at the hearing on November 2nd, Mr. Loveland asked permission to intervene as a party complainant, and with the consent of all the parties this intervention was permitted. At that hearing the complainants said that they had made arrangements for engineering assistance in the proceedings and requested the Commission to organize an engineering conference. At the Executive Session of the Commission held November 14, 1927, the Engineering Bureau, upon recommendation of Commissioner Benn, the sitting Commissioner, was directed to organize an engineering conference for report and subsequent hearings.

Q. Now, Mr. Ainey, did you not have a conference in your office on or about December 6th, with Mr. Loveland, as he testified?

A. I think it was about that time.

Q. And as a result of that conference was not an engineering conference constituted?

A. I don't think it was as a result of that conference.

Q. Didn't you turn Mr. Loveland over to Dr. Snow?

A. I don't recall that I turned him over to Dr. Snow—I was trying to give you the action of the Commission which created an engineering conference.

Q. Your memorandum makes no reference to the conference with Mr. Loveland of December 6th, does it?

A. I don't recall that it does.

Q. Mr. Loveland testified that when he was before Mr. Ainey the Downs Report was submitted as the basis for finding the value, is that not correct?

A. I don't recall that I presided or sat in that hearing at all.

Q. This was a private hearing in your office?

A. Well, I don't recall that there was any private hearing in my office in which the Downs Report was presented.

Q. You would not say that Mr. Loveland was wrong in so testifying?

A. Well, I think he was wrong in some other things, maybe not intentionally so.

Q. You would not say he was wrong in that particular?

A. I don't want to say anything about that, because I don't want to characterize anyone.

Q. You say you don't remember, but you would not go so far as to say that no such conference took place?

A. I would go so far as to say that no Downs Report was discussed in my office at any time I ever talked with Mr. Loveland, very definitely and very positively.

Q. Now, are you familiar with a man by the name of Parry, who was formerly an engineer of the Commission?

A. I remember Mr. Parry.

Q. Do you happen to know whether he was in the employ of the Commission during the latter part of 1927?

A. I don't, but I think he was. But before you get rid of this Loveland matter, I desire—

Q. I am coming back to that, Mr. Ainey. Was Mr. Parry loaned to Mr. Gillis and Dr. Tobias as their engineer in this proceeding?

A. Well, I could only tell that from the records, Mr. Evans; I don't recall; probably he was, if Mr. Loveland says so—

Q. Mr. Loveland did not say that he was employed by the Commission at the time or not.

A. I think he was, but I am not quite sure as to dates.

Q. Then on or about January 5th you called Mr. Loveland to your office and requested him to withdraw his complaint, did you not?

A. No. In my conversation with Mr. Loveland in my office, I called his attention to the fact that the complaint he had filed was against the rates that had been long in effect; that here had been no increase at that time, and I suggested to him the advisability of his considering whether he wanted to inaugurate a rate case against these old and long established rates on the mere rumor that they were going to file an increase, when if they did have an increase he would have a 30 day period and could preserve the status of the case—

Q. At that time you knew that the company intended to file increased rates?

A. No, I did not. In fact the company in former proceedings had intimated it was not going to.

Q. Now, you refer to the Gillis and Tobias complaints as being against the Scranton-Spring Brook Company?

A. Yes.

Q. And I think you meant against the Spring Brook Company, did you not?

A. Yes, against the Spring Brook Water Supply Company, and that is the one that Mr. Loveland intervened in.

Q. I merely wanted to get the record straight?

A. Yes.

Q. The Scranton-Springbrook Company was not brought into existence until later through the merger of the Springbrook Water Supply Company and the Scranton Water Company?

A. That is correct. But if I may complete now, Mr. Evans—

Q. May I ask you whether Mr. Loveland was wrong in saying that he was called to your office on January 5th?

A. I think he is in error in regard to that.

Q. Would you say he was asked to go to your office by you or anyone else having connection with the Commission?

A. No, I had no occasion to ask him. On January 6, 1928, the complainants, Gillis and Tobias, filed a petition to withdraw their complaint, and alleged the following reasons:

If the Chairman and the Committee will permit Mr. Tevell to read this, it will aid me somewhat.

Mr. Tevell then read the paper in question as follows:

"PETITION TO WITHDRAW COMPLAINT

TO THE HONORABLE THE MEMBERS OF THE PUBLIC SERVICE COMMISSION OF PENNSYLVANIA:

The petition of J. F. Gillis and J. B. Tobias, Complainants above-named by their Counsel, B. W. Davis and W. A. Valentine, respectfully represents:

1. That on September 16, 1927, your petitioners filed with your Honorable Body their complaint against the above-named respondent.
2. That at the time of filing the same your Petitioners were under the impression that the Respondent Company had filed with your body a new schedule of rates, and that in filing said complaint it was their purpose and intent to protest against and, if possible, present any increase in the existing rates then prevailing.
3. That said respondent filed an answer averring, inter alia, 'That a schedule of rates changing and amending its old schedule of rates, eliminating discrimination and producing sufficient revenues to give the company a fair return on the present fair value of its properties and to fairly measure the value of the services rendered by it should be substituted for the existing schedule.'
4. That since the filing of said answer the respondent company, in paid advertisements appearing in local papers of general circulation and published in the city of Wilkes-Barre, have asserted, inter alia, 'Neither the Spring Brook Water Supply Company nor the Pennsylvania Water Service Company which now controls it, have taken any step to increase rates—
- 'Should the inquiry thus precipitated develop facts justifying a revision upward of rates charged for water, the responsibility of an increase at this time must rest with those beginning and prosecuting the proceedings.'
5. That the respondent having thus publicly asserted that it has taken no steps to increase rates, and thus recognized that the present prevailing rate is reasonable and proper and

will be allowed to remain, your petitioners do not desire to further prosecute their complaint.

WHEREFORE, they respectfully pray:

That your Honorable Body may permit the withdrawal of the complaint filed without prejudice however, on the part of your petitioners to renew the same should the service company file a new schedule of rates increasing the charges now made for service rendered."

That is signed by J. F. Gillis and J. B. Tobias, with the certification of W. A. Valentine and F. B. Davis attached.

THE WITNESS: This is the proceeding in which Mr. Loveland intervened, and it was a complaint against the rates as then in existence, and Mr. Dando, attorney for Mr. Loveland, withdrew his intervention, and the whole point of it was that under a misapprehension they did not care to file a complaint and prosecute it against an old established rate, but what they did want to do was to file a complaint against any new or increased rates, should such increased rate be filed by the Water Service Company, and I think I called these other people's attention to the fact that their complaint was apparently directed against something that they were not desirous of following up, and which might inure to some disadvantage if they pursued it, and that all rights that they would have would be preserved because they could file—the moment the company should increase its rates, they could file a complaint within the thirty day period, and put the burden on the company, and their status would be immediately better than that which obtained at this particular time.

Q. You have loaned an engineer of the Commission to Messrs. Gillis and Tobias to help in the prosecution of their case?

A. Well, that is what you said, and I have no reason to controvert it. I do not know.

I asked you—

A. But, Mr. Evans, there are thousands of cases that we have, and I am not able to determine that without a reference to our proceedings.

Q. Are you sure that Mr. Parry was an employe of the Commission?

A. I am not sure that he was then, but I think so. I am trying to be as frank as I can, but the limitations of memory are such that I could not keep these things in mind to save my life, and I do not think you gentlemen could.

Q. It is true, is it not, that this withdrawal was granted by the Commission on January 9th, 1928?

A. I think that is the correct date.

Q. And it is also true that on that very date, the Federal Water Service Company bought the Scranton Gas and Water Company, is it not?

A. I couldn't tell you. Our records will show, but I can't recall whether it was that date or some other date. If you say so, I am perfectly willing to accept your statement that that is the date, but dealing from the standpoint of memory, I can't tell you whether that was the date or some other.

Q. We will have the records after lunch, Mr. Ainey. It is true, is it not that if this complaint had been proceeded with and an application for merger had been filed between the Spring Brook Water Supply Company and the Scranton Gas and Water Company, that the complainants in the rate case would have received notice of that merger proceeding.

A. I assume so. I assume that they did receive notice.

Q. Mr. Loveland testified that they did not.

A. Well, of course, I am not responsible for what Mr. Loveland testified.

Q. Do you happen to remember, without reference to the records, that an application for the merger of the Scranton Gas and Water Company with the Spring Brook Water Supply Company, and I think the Hyde Park Gas Company was filed with the Commission in the latter part of January, 1928?

A. I could not give you the date, but I would assume it would be about that time.

Q. Do you happen to remember whether you were present at the argument that this application involved?

A. The whole rate case?

Q. No; the merger proceedings?

A. No; I do not recall that. Our minutes will show.

Q. Do you have any recollection—

A. Perhaps I have not been quite frank in answering that. I have an indistinct recollection that I was present, but I am not sure.

Q. Perhaps, it will refresh your memory if I remind you that Mr. Ellis Ames Ballard appeared as counsel for the applicants, and argued the matter; and do you happen to remember that Mr. Ballard in the course of his argument, stated that no increase in the rates was contemplated?

A. I do not recall that Mr. Ballard—Oh, I have a recollection that somewhere along the line there was an intimation—how broadly stated, I am unable to give you—that the company did not contemplate an increase in rates. I don't know just how it was couched, but I am assuming that our records will show.

Q. It has been testified in this proceeding that the result of the merger of these companies was to add \$29,000,000 of outstanding securities to those already standing against the property. You do not have any reason to doubt the correctness of that, do you?

A. Well, I do not have reason to doubt the correctness, nor to assert the correctness, either way.

Q. Do you have any remembrance at all of the price paid for these water properties by the Federal Water Service Company?

A. I could not give you the figures.

Q. Approximately?

A. No.

Q. Nor the earnings of the company as shown at this time?

A. No.

MR. EVANS: If the Committee please, I think that we have held Mr. Ainey a good while, and as we will have other questions to ask him, I think if we should adjourn at this time it would be well to have a period of rest.

MR. AINEY: I would like to state before we do adjourn this, all this data was familiar to me at the time. This whole territory that was served by these companies is up in my neck of the woods, as some of you gentlemen know, and I was naturally somewhat interested.

BY MR. EVANS:

Q. Just before we adjourn, Mr. Ainey, I show you the state copy of notice to consumers of the Spring Brook Water Supply Company, which reads in part, "The Spring Brook Water Supply Company and subsidiary companies filed with the Public Service Commission of Pennsylvania a new tariff P. S. C. Pa. No. 17, substituting P. S. C. Pa. No. 16, to become effective January 1st, 1928." Did you ever see the tariff or that notice?

A. I have seen the tariff but I never saw the notice.

Q. Then you did see the tariff increasing the rates that were effective January 1st, 1928?

A. I could not remember the date, but I do recall the fact that there was a tariff—Spring Brook Water Supply Company. This is not the Scranton-Spring Brook Water Company?

Q. No?

A. I do not recall seeing a tariff of the Spring Brook Water Supply Company. I do recall the tariff of the Scranton-Spring Brook Water Supply Company.

Q. You knew nothing of the proposed increase of rates of the Spring Brook Water Supply Company in December, 1927, or January, 1928?

A. That is my present recollection, Mr. Evans.

RECESS

MR. MOORE: The Committee will now recess until 2 o'clock this afternoon.

AFTER RECESS

W. D. B. Ainey recalled

BY MR. EVANS:

Q. Mr. Ainey, at the recess, you were, as I remember it, stating that you did not have any remembrance of the increase in rates, or proposed increase in rates of the Scranton Spring Brook Water Supply Company covered by a photostatic copy which I showed you, and you say you want to amplify your answer?

A. With the permission of the chairman and the courtesy of Mr. Evans: Mr. Evans showed me an advertisement, a photostatic copy of an advertisement of a proposed increased rates of the Scranton-Spring Brook Water Supply Company, which I had stated that I had never seen it, nor had I seen any tariff that would correspond with it. I, during the recess,

examined our tariffs for that period of time, and no such tariff was ever filed, whatever the company may have contemplated at the time they advertised this, the advertisement not being called to my attention, as a matter of fact they did not file a tariff that would correspond with this advertisement. I do not think I need to apologize very much for not being certain in recollection, for the reason that we have 20,000 tariffs filed each year with the Commission. There is one thing more, Mr. Evans, that with the courtesy of the Committee and your indulgence; Mr. Evans asked me the form of the certificate of valuation which we issued, and some variation in the certificate in the minutes of the Commission. I found on examination of the Public Service Company Law that the certificate follows the language of our act. I don't think that minimizes in any wise whatever legal significance or other obligation there would be insofar as the minute of the Commission is concerned.

There is one other thing: Mr. Evans asked me if I had not assigned a man named Parry to the assistance of Dr. Tobias and Gillis, and I find on examination that Mr. Parry was not in the employ of the Commission at that time. He had been in the employ of the Commission on a special assignment for a limited period prior to that, to wit: From January 1, 1922, to June 30, 1922, and then he was later employed by the Commission, but that was quite some considerable time after the Tobias incident. So, with that explanation, I think I have sufficiently emphasized my testimony of this morning.

Q. Mr. Ainey, then as I understand you now, you state that you never had any knowledge, direct or indirect in December of 1927 or January of 1928, that the Spring Brook Water Supply Company contemplated an increase in its rates?

A. I did not. I never saw this, of which a photostatic copy is submitted.

Q. And you had no knowledge of it from any other source?

A. I have no knowledge—no recollection of it whatever—that would be better than to state knowledge.

Q. Following the merger of the Scranton and Spring Brook Companies, tariffs increasing the rates of the company were filed, were they not, Mr. Ainey?

A. Yes.

Q. And that was effective July 1, 1928?

A. You have the date, I have not.

Q. The complaints filed against these increased rates—

A. Yes, and prior to the effective date.

Q. According to the Scranton Times on June 21, 1928, a dispatch from Harrisburg, Pennsylvania, of June 21st, states:

"My authority is fixed by law, but I am here to see that the people of the anthracite region get a square deal," with these words W. B. Ainey, Chairman of the Pennsylvania Public Service Commission, today gave 500,000 water users of the hard coal region their first ray of hope, of escaping the outrageous charges by the Scranton Spring Brook Water Service Company." As far as you remember, that is a correct quotation from you, is it?

A. I don't think, much as I respected the writer of the newspaper article, that I am not willing in this distinguished presence to assume the accuracy of any newspaper comment.

Q. As far as you remember it?

A. I don't remember whether it is accurate or not. I know that was the general sentiment I had in my heart.

Q. You attended the opening hearing in this case, did you not, in Wilkes-Barre?

A. No, I did not.

Q. At Scranton?

A. At Scranton, I was there two or three days.

Q. After the close of one of these hearings you were quoted as stating that you expected a deliverance by the Commission in the case within six months, do you remember that?

A. I don't, but we did. I don't remember the utterance, but I know we did.

Q. You did expect that?

A. I expected that the parties would be able to present their case and have it completed.

Q. This was the largest water rate case that had ever come before the Commission, was it not?

A. The largest water case I think that was ever tried in the United States.

Q. You know that the respondent had for a period of nine or ten months been preparing an inventory and appraisals of its property as of July 1, 1927?

A. I did not.

Q. Wasn't that testified to at the opening hearings?

A. Well, it may have been testified to, but you were speaking—I would like to differentiate between the testimony that was introduced and that of which I had personal knowledge.

Q. How did you expect the complainants would be able to make an inventory and appraisal and present their case fully to the Commission, so as to get a decision within six months, when it would have taken the respondents nine or ten months to prepare an inventory and appraisal.

A. But you are making a comparison that I had no knowledge of at the time that I had that view. I know, if you will examine the record of the Scranton hearing, you will observe a very great pressure that I put upon counsel of the water company who had the burden of proof to accomplish their case.

Q. Have you, ever, Mr. Ainey, in your experience as a member of the Public Service Commission known of a rate case of this magnitude or anything like this magnitude in which the Commission was able to make a deliverance within six months, where they had a real contest?

A. I don't know; I don't recall.

Q. You don't recall any such?

A. I don't either way.

Q. You have submitted to the Committee a statement of the cases that have been before the Commission, which have not been decided within one year from the date of institution, and that list comprises most of the important rate cases, does it not before the Commission?

A. I don't recall the statement that we submitted.

Q. I do not want to press you now, Mr. Ainey, but will you, before the next hearing, be good enough to submit to the Committee a written statement of any important rate case, comparable in any way to this, in which the decision was reached within six months?

A. Very well, if Mr. Tevell will make a memorandum of that. I would like to say this, Mr. Evans, and with the permission of the Chairman, that the Chair used every effort to expedite the hearings in this case. I informed all the parties in interest that we would give the Scranton-Spring Brook case the first place, even to the relief of the two sitting Commissioners—Commissioners Brown and Young—of every other line of activity, and Commissioner Brown who was the senior that sat all through the hearings, urged that as much speed as was possible—we had no standard by which we could measure it, but we wanted to do what in order to expedite it.

BY MR. TURNER:

Q. Who was the chief counsel for the complainants?

A. As stated of record that the Commission had done everything in its power to expedite the hearing; he averted to the fact that this was the largest water company, and that it had taken up more time than he had anticipated, and that he had been forced to ask for continuances, that he regretted very much. I am only paraphrasing what he said both in the record and what he said orally.

Q. I hope to be able to let you go within a reasonable time, and I think it will save time if you will confine yourself to answering the questions, as far as possible.

A. But, Mr. Evans, you do not expect to confine me, so that I do not have an opportunity to explain the full position of the Chairman. I hope I may have that opportunity, and I do not wish to trespass on your or on the Committee's time at all.

Q. Who did you designate to hear this case?

A. Commissioners Brown and Young.

Q. In connection with the merger proceedings, had you not ordered that the accounts of the Scranton Gas and Water Company and the Spring Brook Water Supply Company be kept separate?

A. I think if such action had been taken, it would appear in our minutes rather than by any action of the Chairman.

Q. But do you remember whether such action was taken?

A. I do not, but I have an indistinct recollection that there was such action.

Q. And one of the reasons, was it, that there was a demand for the acquisition of the Spring Brook Water Supply Company by the municipality; was it not?

A. Well, it has always been the policy of the Commission in water cases, wherever a municipality could demonstrate that it has the ability to buy, to permit it to acquire the property, and for that reason it would be quite consonant with the Com-

mission's policy that we would make such an order or such a statement.

Q. But in the rate case, and in the Commission's dealing with it, all of these matters are lumped together into one, are they not; all the accounts and the property and everything?

A. I think that perhaps that may be. I think there are some grounds of segregation as between the Scranton and the Spring Brook.

Q. And you had no particular reason for designating Commissioners Brown and Young for this hearing, had you?

A. No; except—that one had to be designated and I thought it was a good assignment to make.

Q. Now after the hearings had commenced in this case the Commission received a petition from the Company for a temporary approval of the increased rates, did it not?

A. Yes.

Q. And what action did the Commission take in regard to that?

A. I think you probably have the action in the record which would speak better than my recollection on it.

Q. And this action that you refer to is shown by minutes of the executive session of the Commission on December 10, 1928: "Discussion was had on the argument and on motion, the record was referred to Commissioners Brown and Young with direction to the Bureau of Engineering and Rates and Tariffs to make analytical studies of the records and prepare memorandum reports for the information of the Commission, the Commission expressing the opinion that the rates for domestic service should be restored to their prior level." Is that the minute to which you refer?

A. I presume it is. I could not tell you more than that. I am not controverting it in any way.

Q. You have furnished the Committee with copies of all the minutes referring to this case (counsel laying before witness copy referred to) and if you will just call attention to any minutes you have in mind, perhaps it would save us time.

A. I am assuming this is the minute to which reference is made.

Q. Now, the Commission then issued an order that the rates to domestic consumers should be restored to their prior level?

A. I don't recall whether it was to their prior level or whether it was a very substantial reduction. In other words, we refused the petition of the company and made an order reducing the rates to the domestic consumers. I have forgotten what the gross amount was.

Q. Mr. Ainey, I show you a pamphlet entitled "Chief Snow's Report December 12, 1928, Data for Commission, Intermittent Rate, Scranton-Spring Brook Water Service Company," furnished this committee by you in response to its request, as "Appendix A." Will you look at that and see whether that is the report of the Bureau of Engineering on which the action of the Commission was taken?

A. I think you are right, Mr. Evans.

Q. Do you know how the Commission arrived at the proposed reduction of \$245,000 in the rates at that time?

A. On an examination of the record, aided by the report of the Bureau or Bureaus.

Q. But it was on the basis of this report to which I have just referred you?

A. It was in part that, and it was on the recommendation of Commissioners Brown and Young and I think Chief Fickenscher of the Bureau of Rates and Tariffs.

Q. This is the only report that has been furnished to us, Mr. Ainey, by you?

A. I think you will find in that report—I am pretty broad-shouldered, but I am only one member of the Commission, although I have the honor to be the Chairman of it—I think you will find that Mr. Fickenscher's name appears in that report as furnishing some part of it, how much I do not know.

Q. In the minutes of the Commission referring to the hearings in this case through 1929 and under date of December 9, 1929, this minute appears:

"Commissioners Brown and Young reported that testimony had been concluded; that briefs are to be filed and oral argument presented."

Then later minutes show that oral argument was had on April 14 and 15, 1930. That is correct, is it not?

A. I think you have the dates correct. That would be my recollection, Mr. Evans. I know we put in two solid days of listening to the argument and I don't know how many counsel participated.

Q. The minutes of April 15, 1930, reads as follows: "Argument was resumed and was presented on behalf of the complainants by Messrs. Acheson, Little, Morgan, Gunster and McDonald, and on behalf of the respondent by Mr. Ballard. The Commission reserved decision." The next minute is of the meeting held July 15, 1930, and states: "A proposed Commission report, prepared by the Chief of the Bureau of Engineering, was read and discussed, and on motion of Commissioner Benn, seconded by Commissioner Walker, action was deferred and the report referred to Chairman Ainey, Commissioners Brown and Young for revision and resubmission to the Commission at its next executive session." Will you state what had happened between April 15th and July 15th in this matter?

A. This was a record involving seven or eight thousand pages of testimony, and 5000 pages of exhibits, and over 1000 printed pages of briefs and arguments and an examination of the record was being undertaken during the intervening time.

Q. Who directed the Bureau of Engineering to prepare the report?

A. I don't recall whether it was done by action of the Commission, but it probably was?

Q. Would that not be on the minutes?

A. I assume that it would be, although not necessarily.

Q. In other words, the minutes of the Commission do not record all of its actions?

A. No I didn't say that. There are a great many details, for instance, Chairman Moore of this Committee has sent requests over to us to supply a large amount of detail and it has been prepared and supplied, and that does not appear on our minutes at all.

Q. Well, what I am trying to find out, Mr. Ainey, is whether you directed the Bureau, or whether the Commission by formal action gave the directions or whether Commissioners Brown or Young gave them?

A. I think you will find somewhere that Commissioners Brown and Young were implicated in conjunction with our technical staff.

MR. EVANS: Mr. Tevell, will you make a search and see if you can find any such minutes?

MR. TEVELL: I shall be very glad to.

BY MR. EVANS:

Q. In all events, the Commission then presented a report giving this valuation of the Scranton-Springbrook property, this report being dated June 30, 1930, and furnished to this Committee by you as Appendix "B," that is correct, is it?

A. Now, you have got a question, I think that is correct, it looks very much like the sizable volume that Dr. Snow prepared covering his engineering studies and judgment, which was submitted to the Commission.

MR. TURNER: Has it been identified by Dr. Snow, Mr. Evans?

MR. EVANS: It was furnished to us by the Commission.

THE WITNESS: I don't think there is any question about it, Mr. Turner.

MR. TURNER: I just thought if Dr. Snow had identified it, you could just go on from there.

MR. EVANS: I don't think there is the slightest question about it.

THE WITNESS: I don't think there is the slightest question about it, but I do think it would be more quickly ascertained by calling some of the technical men than inquiring of me.

BY MR. EVANS:

Q. Now, Mr. Ainey, I want to get down to the action of the Commission in regard to this matter. This report as testified here last evening, showed a total reproduction cost depreciated of the property, including additions and betterments of \$32,-602,876, and the construction overheads amounted to \$6,096,210, making a total of physical property with overheads of \$38,-699,086. Added to this for working capital, cost of financing, going concern value, water rights, in the amount of \$11,949,292, making a total reproduction cost new depreciated as shown by this report of \$50,648,378. Can you state on whose authority, or by whom the figures in this report were changed in a report

of the Bureau of Engineering in the form of a Commission Report dated July, 1930, which was furnished to this Committee by you as Appendix "C"?

A. There was never any change in the report of the Bureau of Engineering as contained in that volume.

Q. May I just ask you this. I have given you the figures referred to by that report, and in order to save time, I will ask you if you find these figures are not correct, that you have them corrected at the next hearing?

A. Very well.

Q. Now then, in the report submitted by the Bureau of Engineering to the Commission in the form of a Commission report, which is referred to in your minutes of June 15, 1930, the total physical property depreciated, including additions and betterments, is increased from \$32,602,876 in the June 30 report to \$34,155,075 in the July report. Can you give us any information at all as to how that increase was made, or at whose direction?

A. Well, you have two or three questions there, Mr. Evans. In the first place, I think if you analyze that, I think you will find that there was no increase of the nature and character that you mention. There was in Dr. Snow's original report \$4,000,000 for water rights, in addition to the value of the physical property. The Commission was not content to allow that \$4,000,000 but they did feel that there was value that should be allowed. I cannot recall what the amount of it was, but it was less than the four million dollars which we cut out, or which was cut out by the Committee and by the Commission, and that apparently makes the increase to which you have made reference.

Q. The decisions of the Appellate Courts have held have they not, that no special value shall be included for water rights in valuing such property.

A. Well, there is a dispute whether that is the correct law or whether it is not.

Q. At all events, Mr. Ainey, what happened was as you say that \$4,000,000 as a direct value of water rights was taken out of the original report and \$1,500,000 added to the value of lands to cover these rights.

A. I would not say so, Mr. Evans. In the first place, there was, and that is perhaps substantiating the increase which we made in the value of the lands of the company, but we struck down the \$4,000,000 and we gave a larger value to the water holdings of this company—but which left considerably less than the original report of Dr. Snow, and in that connection so that we may not get into confusion, there is Dr. Snow's report to the Commission, and then there was a Commission decision, which was prepared by Dr. Snow.

Q. Now, Mr. Ainey, I read you from page 67 of the proposed Commission report of July, 1930, as follows:

"The Commission recognizes the force of the respondent's contention (referring to water rights) based on the calculations of the testimony of Prof. Fuller, and which made in its judgment sufficient allowances under real estate rights of way and water rights in the sum of \$1,500,000."

Am I not, therefore, correct in stating that the values of land were increased by \$1,500,000 to cover water rights?

A. I think that that amount is right, but I do not think it would be acquiescence on the part of the Commission of the principle that was involved in the set up of \$4,000,000 which the company claimed.

Q. In the Leighton Water Company case decided by the Superior Court on July 10, 1930, the court said: "The proper test in fixing present value of lands, the market value, considering all its available uses and purposes, which affect market value and not a special value of water shed purposes." In the view of that decision, do you think it is proper to add to your land values an item of \$1,500,000 for water rights?

A. I think it was, but inasmuch as our decision is before the Appellate Court, and if we are wrong the Appellate court will correct us without question; it represented our best judgment, and I do not feel like arguing about the case now resting in the hands of the Appellate Court.

Q. But perhaps, these facts are not before the Appellate Court.

A. Well, they have to be, because under the decision in the Penn Avon case, that went through the Supreme Court, of the United States, which was a reversal of our own Supreme Court, which, in turn had reversed the Superior Court, there was a statement that we must find, or the courts must find a method of independent judicial determination

and the Supreme Court sent that case back, and since that time an appeal by a company from the decision of the Commission, the Superior Court has to go into the record in minutes to reach an independent judgment from the facts that are disclosed.

Q. But you do not mean to give this Committee the impression that all of these reports of the bureau of engineering and the preliminary draft of the report go before the Superior Court, do you.

A. I do not intend to give any intimation, other than that Court.

Q. And these are not part of that record (indicating)?

A. That report of Dr. Snow was for the advice of the Commission.

Q. It was not a part of the record?

A. It was never adopted by the Commission. As long as we did not adopt it, I do not know of any reason why the Superior Court should sit in judgment upon us for not having adopted the report.

Q. The next minute of the Commission is that of July 29, 1930, which states that a discussion was had of the progress being made in the preparation of the proposed Commission's report, and Commissioner Shelby moved, seconded by Commissioner Young, that the Committee having the matter in charge be directed, in conjunction with the law and engineering bureaus of the Commission to have prepared and distributed to the members of the Committee or to the next executive session a final report to be presented to the Commission in the order of business on Tuesday at 9 A. M. You and Commissioners Brown and Young composed that Committee, did you not?

A. I think I was on that committee, although I was on it in an honorary sense, that I had sat for three days up at Scranton, but the heat and burden of the day, so far as I was personally concerned, had to be borne by my colleagues Brown and Young.

Q. Did you subsequent to July 1929, confer with the law, and engineering bureaus of the Commission in regard to this report.

A. I am quite positive I did. I have not any specific case.

Q. And what instructions did you give either the law or the engineering bureaus in connection with the revision of the report.

A. I can't recall what instructions I gave.

Q. Did you give them any instructions.

A. Only so far as the Committee had directed it.

Q. How far had the committee directed it, so far as you remember.

A. I don't recall the details now.

Q. Do you remember the substance of it.

A. No.

Q. So that you have no remembrance of any sort of any instructions or directions given either to the law or engineering bureaus.

A. That takes me from a positive clear over into side of the negative. I have no doubt that I had frequent conferences as did Commissioners Brown and Young with the Bureau of Engineering and with the Law Department.

Q. Do you remember any instructions which you gave to either these bureaus in regard to the revision of the report.

A. I do not recall it at the present time. It may be that I could refresh my recollection from an examination of the records.

Q. Will you just explain to the Committee how the revised report, which is dated August 6, 1930, was prepared?

A. Now, which is that report, Mr. Evans? There are quite a number of different drafts that were submitted.

Q. This is the report, which has been introduced as Exhibit No. 151, which I show you.

A. Mr. Tevell advised me, and I am willing to take that as part of my answer, that he is of the opinion that this report that was before the Commission is August 12.

Q. And that is the report which you and Commissioners Brown and Young prepared in conjunction with the law and engineering bureaus.

A. I think so.

Q. And on this report, Mr. Ainey, there are certain pencil figures, are those in your handwriting?

A. No sir.

Q. Now will you explain to the committee how the changes which are set forth in this report over that of the July report

were determined? First I will call your attention to the fact that there was a reduction in land values of \$1,212,197?

A. I do not recall at present just how these reductions or increases were accomplished, Mr. Evans.

Q. Well, Mr. Ainey, is there not somebody connected with the Commission, either you or Commissioner Brown or Commissioner Young, who will be able to explain changes?

A. I think you have Commissioners Brown and Young under subpoena. They can very easily explain.

Q. In other words, you say you do not know, but Commissioners Brown and Young do know?

A. I am jumping at a conclusion; they will at least state whether they do or do not.

Q. Doesn't your Commission assume the responsibility for making these changes?

A. I am perfectly willing to assume the responsibility, but you are asking me for definite information as to detail and figures.

Q. That is your best recollection of why \$1,212,197 was knocked out of a valuation of \$4,481,456 on real estate?

A. Because I think that was the attitude of the Commission and probably my own attitude, but I don't know.

Q. Now the item of impounding reservoirs which had remained unchanged in the reports of July as \$4,132,726 depreciated, was in the August report increased to \$5,007,679, an increase of \$874,953, can you explain to the Committee how that change was arrived at?

A. I can only say to you, Mr. Evans, what I have attempted before, that there were several reports which did not meet the views of the Commission that were presented, and this one was on prepared by Dr. Snow with 200 or 300 pages, now—

Q. I am trying to get this so you can get away?

A. I don't want to get away so badly as to not give you my recollection concerning this.

Q. Do you have any recollection at all as to how the item of \$874,953 as an addition to the impounding reservoir valuation was arrived at?

A. I do not at present moment recall just how that was arrived at, but I know it was represented by what at least some of the commissioners thought was a proper adjustment of it.

Q. Now Mr. Ainey, in arriving at the depreciation of the physical items of property, the bureau of engineering applied certain percentages to the reduction cost new, that is the ordinary method, is it not?

A. Yes.

Q. So that if you increase the reproduction cost new of an item of property, you would increase the depreciation item on that item also, would you not?

A. That would seem to follow.

Q. Then will you explain to the committee how it was in the August 6th report you had \$874,953 added to the reduction cost new of the reservoirs and added exactly the same figure to the reproduction cost new depreciated?

A. Is that the report that was adopted finally?

Q. That is the report submitted by your Commission to the committee? In your mind it was not a proper method.

A. I would not say that.

Q. Will you tell why you thought it was?

A. I could tell by going over the report in detail.

Q. The figure was exactly the same lump sum as added to the reproduction cost new and the reproduction cost new depreciated? You have just stated if you increase the reproduction cost new you could increase the depreciation by adding the same amount to both columns. Was that the correct method of arriving at a conclusion?

A. I am not sure it was, but I do not want to admit that it was not; but I do know that we didn't adopt that report.

Q. Will you explain how you think that might have been a proper conclusion?

A. Because you are going on the assumption that one figure simply because it happened to be the same amount as the other, as a method of adding to on the one side and subtracting from of the same amount on the other.

Q. No, we are adding it on both. They are adding \$875,000 practically on the reproduction cost new on the property and the same amount to the reproduction cost new depreciated? Cannot you frankly admit that so far as that is concerned, that you think that was a mistake?

A. I don't know whether it was a mistake or not, and I am not prepared to admit it is a mistake. I know we didn't adopt that report.

MR. COOKE: I don't think that this committee in the first instance is interested in the conduct of any case, but I do think we are deeply interested in finding the principle on which regulation is practiced in Pennsylvania. For instance, we might never have seen the Scranton-Spring Brook case, but we have before us the Chairman of the Commission, and to me, and I am not especially expert in these matters, it is perfectly patent that a mistake of the heart or of the head or a mistake of some kind was made in making entries this way, and it seems to me that the witness should answer that question. If it has not been made clear to him I believe it is the duty of the Committee or of counsel or some of us to make it clear to him because it is perfectly clear to me.

MR. EVANS: Perhaps I can clarify the question this way: You have stated these figures did not enter into the final report. I now call your attention to the fact that the final figure for the valuation of the impounding reservoir reproduction cost new was \$5,129,925; and depreciated \$5,007,679, which appear in the August report and also appear in the final report of the Commission. You have just stated these figures did not enter into your final report?

A. I said you were discussing a report that we did not approve.

Q. Now that you are informed that it did enter into the final report, what now have you to say in regard to that method?

A. Nothing more than I have already said, I think you can get better information from the Commissioners who in the heat of the day bore the brunt in this particular matter.

Q. Well now, Mr. Ainey, you are Chairman of the Commission, and were a member of this Committee which presented this report, and I think this Committee is entitled to a frank explanation from you as to how these values were arrived at?

A. Well, Mr. Evans, I attempted to give it to you. I regret that there is any question in your mind as to the willingness of the Chairman to be perfectly frank, but I am not willing to put myself in the position of depending upon my recollection as to what my mental processes were at that time.

MR. COOKE: I share the reluctance of the counsel of the Committee to delay you a minute beyond what is necessary, but it is not necessary for you to refresh your recollection about the facts in that particular case to give us your opinion as to whether the principle followed there in making reductions or arithmetically subtracting the same amount from the undepreciated items as you subtracted from the depreciated items.

THE WITNESS: Mr. Cooke, I quite agree with you that pure mathematical conclusions with respect to matters of this kind are rarely if ever satisfactory, and that you cannot come to a mathematical formula by which you determine that matter any more than you could have a store that kept only one size of shoes for all the people that were to patronize the store. Now, as to the question Mr. Evans has propounded, and which I know you have desired to be answered, I have attempted to give what little I can to the enlightenment of Mr. Evans and the Committee.

BY MR. COOKE:

Q. You recognize that this is not arithmetical, at the best, the difference of handling things arithmetically here, which goes right to the root of valuation, and you don't need to have the facts in any particular case before you?

A. I have heard people say that they could sit in an office in Chicago and determine going concern value without ever having seen the property, or anything but a few papers before them, but I never acquiesced to that kind of statement, and I don't now.

BY MR. EVANS:

Q. In view of the statement you have just volunteered, that you never determined going concern value of a property which you yourself have never visited—

A. Oh, yes, but I visited it through the agency of our technical bureaus, and have had their reports and analyzed them.

Q. Now, I want to call your attention to the next item: Aqueducts and supply mains, the valuation of the reproduction cost new was increased in the August 6th report over the July report \$100,000 in reproduction cost new, and \$100,000 on the reproduction cost new depreciated. The same item was added to both columns. Do you have any further explanation in regard to the propriety of that as relating to aqueducts and supply mains?

A. No, I have not.

Q. Collecting reservoirs and intakes, the same amount in round figures was added to both reproduction cost new and to reproduction cost new depreciated. Have you anything further to say in regard to that?

A. That would come within the same.

Q. The items of collecting tanks, the sum of \$50,000 was added to the reproduction cost new and the reproduction cost new depreciated, have you anything to say as to that?

A. No.

Q. The items of tanks, standpipes, the sum of \$300,000 was added to reproduction cost new and to reproduction cost new depreciated, have you anything to say to that?

A. That is the same, Mr. Evans.

Q. In the case of distribution mains, the sum of \$500,000 was added to the reproduction cost new and the reproduction cost new depreciated, have you anything further to say as to that?

A. No, but I think there is something that should be said?

Q. What should be said?

A. I think there is something should be said by the Commissioners who are more familiar with this than I am, the details.

Q. And who specifically would you suggest that we interrogate as to that?

A. Well, I think your subpoena calls—

Q. We have not subpoenaed anybody, Mr. Ainey. We have merely asked you to come.

A. Well, I understand, and I also understand that you asked two of my Commissioners that are sitting here.

Q. And which of them is most qualified to testify to this?

A. I would not differentiate between good men.

Q. If you were in my place, which would you interrogate?

A. Mr. Evans don't ask that question of me, withdraw that please.

Q. I will withdraw it.

A. I think either one of them is.

Q. You think both of them could answer it very satisfactorily.

A. I think either of them is thoroughly well qualified to answer it.

Q. Now, just to complete this picture, service pipes and stocks in the sum of \$100,000 is added to reproduction cost new and \$100,000 to reproduction cost new depreciated, and the same applies to that, I assume.

A. I would assume so.

Q. So that in this August 6th report you added \$812,756 to the reproduction cost new, and the same amount to reproduction cost new depreciated, and you have no further explanation to that, other than refer us to Commissioners Young and Brown. Now, in this particular case, Mr. Ainey, have you ever made a sufficient examination of this property and business to determine the going concern value.

A. You mean, have I traveled over the property.

Q. I mean have you within the past few years been sufficiently familiar with this property to be able to determine of your own knowledge the going concern value.

A. Independently of the engineers?

Q. Yes.

A. I don't recall that I have been over any part of this property within the last five years.

Q. So that you yourself would not feel competent to pass on the going concern value without the assistance of others.

A. Whatever incompetency there may be rises from the answer to your question just proceeding, that I have not visited the property within the last four or five years. I have gone over it prior to that.

Q. And so far as you are informed have any members of the Commission gone over the property within the last five years?

A. Well, now, I will—

Q. I say so far as you are informed.

A. Well, I am not informed.

Q. You have no knowledge of that at all.

A. I don't know, but I had in mind that some of them have, I think Brown or Young.

Q. You think they would be the ones.

A. I think they could tell you whether they have or whether they have not.

Q. And in the main then you feel that you rely on the information furnished by the bureau of engineering in determining going concern value.

A. On the information furnished by my colleagues and a study of the records as of the time.

Q. If it appear that no member of the Bureau of Engineering had thoroughly gone over the property within the last five years, and no other member of the Commission had, you would feel that there was no one on the Commission who was competent to pass on the going concern value.

A. That is further than I desire to go.

Q. Was that not just what you said a few minutes ago.

A. You asked me who would be the one who could more readily give this information because of the fact that I had not been around that property for four or five years, and I had informed you that I had relied upon the technical staff of the bureau and upon the judgment of my colleagues who sat throughout the case and upon the testimony that was introduced.

Q. And that going concern value could only be determined by one who was familiar with the property and had gone over it comparatively recently?

A. I don't want to go quite that far.

Q. I am willing to have the record stand on that point?

A. All right. I am too.

Q. You have furnished us with another draft Commission report dated August 15, 1930, furnished by you as an appendix "D" and introduced as Exhibit 152, containing identically the same figures as the August 6 report, but somewhat different phraseology in the report, and in the letter of transmittal you have stated that that was the report which was submitted to the Commission at its meeting on August 26, 1930. That is correct, is it not?

A. I am assuming your dates are correct, Mr. Evans.

Q. Will you check—

A. Well, I don't want to question you, Mr. Evans.

Q. I just don't want to have any question about it.

A. Well, you are not getting any from me.

Q. Will you just examine it and see if it is and see if it is correct.

A. I will have to ask Mr. Tevell to help me check it up.

Q. Yes.

A. Have you the letter of transmittal? It may help Mr. Tevell to check this (indicating). Mr. Tevell advises me that the paper you have submitted was before the executive session of the Commission on August 26. I adopt that as my answer.

Q. And now, in the minutes of the meeting of August 26, there is the following: A tentative Commission report (Exhibit 152) prepared by the special committee having the matter in charge in conjunction with the bureaus of the Commission sustaining the complainants in so far as they relate to the rates of domestic consumers, and directing the respondent company to have posted and published on or before October 1, 1930, effective upon one day's notice to the public and this Commission, a new tariff reducing the gross annual revenues, was submitted and read. The report was on motion agreed to and adopted subject to various proposed revisions which the chairman was authorized to prepare in connection with the law and engineering and accounting bureaus. What were the proposed revisions which you were directed to make in the report at that time?

A. As I recall it, the phraseology concerning the original cost that the Commission felt that the draft was not sufficiently clear. Secondly there was some question as to whether or not there was a sufficient description of the real estate covered in the report. I think there were one or two other matters that I can't recall at the present time.

Q. In other words, they were primarily matters of phraseology and change of words?

A. Well, there was some mathematical substance Mr. Evans.

Q. Were those of material moment?

A. My recollection is that they were.

Q. Will you call our attention to what those were, as you remember them?

A. Well, I can't do that now.

Q. In other words, you have covered the revision so far as you are able to remember?

A. So far as I am able to at the present time. I would be very glad to check up on this and advise you.

Q. What did you do as a result of the direction of the Commission?

A. There was a report submitted, and then there was some difference of opinion; if I have the correct report, now, with all of these numerous ones that were presented as tentative reports and this was a tentative report according to the minute as you read it; I think the minutes will show just what I did. Mr. Tevell hands me our minutes of September 6, which is before you I assume, and is in the record, is it not?

Q. Yes; that is and that states that the Chairman reported that pursuant to directions of the Commission at its last meeting had in conjunction with the law and engineering and accounting bureaus prepared the proposed revision, which he submitted to the Commission for consideration. And now, copies of those have been furnished to the Committee and they cover the matters that you refer to.

A. I think so, and I think probably some others that I can't recall at the present time.

Q. And now, the only other reference to the matter of the report is in the minutes furnished to us prior to the adoption of the final report, which was on September 30, 1930: "Commissioner Shelby moved that the bureau of accounting and statistics be directed to analyze the testimony concerning the value of the respondent's land and water rights—"

A. Yes.

Q. "—and furnish a statement as to the bureau's judgment as to said value."

A. Yes.

Q. What is your remembrance in regard to this change of view as I understand on the part of one member of the Commission?

A. I don't know whether that was a change of view on the part of one member of the Commission. I recall that Commissioner Shelby made that request and some of the Commissioners felt that the Bureau of Accounts was not qualified to determine land value; it was not a part of its function, but that that was purely an engineering function.

Q. In your final report dated December 9, 1930, the only change made in the items in the final report was a reduction to the amount of \$400,000 in your land valuation. Does that accord with your remembrance?

A. I would think that would be so but I am not sure, Mr. Evans.

Q. Can you tell us when that change was made?

A. It was made as it appears in that report.

Q. It was made between September 30th and December 9th. At what time in that period did you arrive at that change?

A. I could not tell you that.

Q. Was not this matter in your charge at that time?

A. It was in my charge, but I was in consultation with my colleagues and with the bureaus.

Q. We get down to the matter of overhead, the item of construction overhead, in your final report it was reduced \$797,884?

A. Yes.

Q. That was a very material change?

A. Yes sir, it was material.

Q. And the item of working capital, cost of financing, and going concern value were reduced by \$1,132,293?

A. That is correct.

Q. Were these changes made subsequent to the election or before?

A. I have no means of judging but I know they had nothing to do with the election.

Q. But nothing appears on the minutes of your Commission in regard to this matter between September 30th and December 9th, according to the minutes furnished us?

A. Mr. Tevell advises me that is correct and I adopt his statement.

Q. Now Mr. Ainey, you visited Wilkes-Barre during the fall of 1930, did you not?

A. I think so.

Q. What was the purpose of your visit there?

A. A visit to Wilkes-Barre in 1930, why I don't recall that I visited Wilkes-Barre in 1930. If course when I motored to

my home, it being a long trip, I very often stopped off at the Hotel Sterling because of my physical incapacity. It is a long trip up to Montrose, although it is worth it when you get there.

Q. When you were in Wilkes-Barre, did you discuss the political situation with any one?

A. No sir.

Q. What was the occasion for your conference with Abe or Morris Saltsburg?

A. I didn't have any conference with them concerning any matters that were involved in this case, or on the political situation generally.

Q. One of them was the attorney for Mr. Francis Shunk Brown in the election contest of Mr. Pinchot, was he not?

A. Not to my recollection, I don't know; if he was I will take your statement for it; I don't know he was.

Q. And at this time you didn't know he was in any way actually connected with politics in Luzerne County?

A. I have known Mr. Saltsburg for a great many years, and if there is anything going on that he is not actively interested in up there, I have failed to ascertain it.

Q. You know as a matter of fact he was an active leader in the primary campaign?

A. I do not know any such thing, Mr. Evans, and the best way to ascertain that would be to get Mr. Saltsburg down here because I cannot answer your question.

Q. What did you discuss with Mr. Saltsburg in Wilkes-Barre on this occasion just prior to the election?

A. I don't recall that it was just prior to the election. I recall that I stopped on my way up to Montrose and I presume I stopped on my way back because that was my custom to do so.

Q. And you state to this Committee that you did not in any way discuss the political situation with Mr. Saltsburg?

A. I do not recall having said one single word about the political situation.

Q. You made this trip, according to a newspaper dispatch, which I have from the Times-Leader of November 5, 1930, by airplane, did you not?

A. I think that probably was the time. There was a dinner given in my honor by the members of the bar of Susquehanna County, at which Judge Maxey, Judge Smith and Judge Watson, who are all Susquehanna County boys, attended, and I spoke at that dinner, but I was not able to stay through the dinner, and the next morning I motored down to Wilkes-Barre and I called Mr. Gallagher and arranged with him that they bring me down to Harrisburg in an airplane. My daughter was with me and Miss O'Hara who is I think a Deputy Attorney General at the present time; she came down in the airplane with us.

Q. I read further from the dispatch: "Importance may be attached to the fact that Chairman Ainey took the trip by airplane back to Harrisburg today from his home in Montrose. The Chairman of the Public Service Commission on arriving here last night gave word out at the hotel that his presence was not to be divulged under any circumstances. He left in the early morning by the Airplane Bellanca of the Martz Line in company with his personal physician, Dr. C. E. Woodhouse." Does that accord with your recollection?

A. There are two times I made the trip from Wilkes-Barre to Harrisburg by airplane, the one to which I have made reference I cannot give you the date. The one to which I have already made reference there was Dr. Woodhouse, my daughter and Miss O'Hara came down in the plane from Wilkes-Barre, not from Montrose. I motored from Montrose down that far. I have no doubt that I gave instructions at the hotel that I didn't want to be disturbed, and went to bed immediately on my arrival and stayed over night, and I got up the next morning and motored out to the airport.

Q. On which of these visits to which you refer did you confer with either of the Saltsburgs?

A. I don't think that I saw Mr. Saltsburg on either of these occasions, although I am not sure, although I do not think that I saw him or either one of them. I saw Mr. Gallagher, the man with whom I made arrangements to bring me down by airplane.

Q. I read to you further from this dispatch, and ask you if this is correct: "Mr. Ainey and his physician were here two weeks ago, staying over night at the Hotel Sterling. The efforts of local newswriters to interview him were futile. Dr.

Woodhouse refusing to allow him to be seen. However, a number of political leaders were admitted to his room, among whom were William Gallagher, —Shuman, and Abe and Moses Saltsburg."

A. No.

Q. In other words, that is a mistake?

A. Yes, in large part. Mr. Gallagher was there to see me, and Mr. Woodhouse, who is not a doctor, by the way, but is my personal attendant, and has been for upwards of three years, he insisted that I should go to the hotel and go to bed. At that time I had a faint spell in the car, and he insisted that I could not go on through to Harrisburg, and that I had to stay overnight.

Q. Did Mr. Joseph G. Schuler visit you then?

A. I don't think so. I think the last, or only time I have seen Mr. Schuler, if I recall correctly, was when he called on me in Harrisburg.

Q. Is he politically active in Luzerne County?

A. I don't know.

Q. Did Mr. Abram Salsburg visit you as stated?

A. I don't think he did.

Q. Did Mr. Mose M. Salsburg?

A. I don't know him at all.

Q. You don't know him?

A. Never met him to my knowledge.

Q. So that this dispatch from the Times-Leader is incorrect, except insofar as William Gallagher is concerned?

A. Yes. Of course, Mr. Gallagher is the one that they speak of as "Red" Gallagher, and not familiarly known around the Capitol as Bill Gallagher, who is a political force, as I understand—I don't know how much force it is, but I didn't see him at all.

MR. EVANS: I think that is all it is fair to ask of Mr. Ainey this afternoon. We appreciate very much your coming over.

We have called a witness from Philadelphia, and I think it is hardly fair to keep him waiting any longer. If the Committee is willing to go ahead and hear him, he will be called.

ISSAC S. WALKER sworn

BY MR. EVANS:

Q. Mr. Walker, you have already been sworn in this proceeding?

A. Yes.

Q. And you were the president and general manager of the Scranton-Spring Brook Water Supply Company in the fall of 1927 and the winter of 1928 were you not?

A. That is correct, also 1929.

Q. I show you a photostatic of a notice to consumers of the Spring Brook Water Supply Company, and ask you whether that is a correct copy of a notice to consumers prepared by the company in their contemplated increase in rates, to be effective January 1, 1928?

A. That is correct.

Q. When was this increase determined on?

A. This was ready for issue to consumers, as I recall, the early part of November, thirty days prior to the date of filing.

Q. Thirty days prior to the date of filing. When was this proposed increase abandoned?

A. It was abandoned—I was instructed not to issue this notice to consumers about the same day that it was due for filing, otherwise about thirty days before January 1st.

Q. And what were your instructions in regard to that?

A. I had no instructions whatever, except a telephone message.

BY MR. TURNER:

Q. Where did that come from?

A. From New York.

BY MR. EVANS:

Q. Did that come from the office of the Federal Water Service Company?

A. Yes.

Q. Who phoned to you?

A. I cannot recall, it was one of the officials over there, and I cannot recall who it was at this time.

Photostatic of notice to consumers of the Spring Brook Water Supply Co., produced and marked Exhibit No. 158.

MR. EVANS: I offer that photostatic copy consisting of two sheets, in evidence as Exhibit No. 158.

BY MR. EVANS:

Q. Now, Mr. Walker, when the Federal Water Service Company acquired these properties, the Scranton and Spring Brook, did it do it on the basis that increased rates would be granted?

A. That was out of my province, Mr. Evans. I believe it was so stated in the advertisement which was issued at the time of the rate increase, which was instituted six months after this date.

Q. And that advertisement was signed by you, was it not.

A. No sir.

Q. By whom was it signed.

A. C. T. Chenery, president of the company, I believe you may infer from that, from the statement which I recollect, I have not seen it for sometime, but I believe that it has been generally inferred from the statement in the advertisement that it was frankly the principles of law to provide for a fair return on a fair valuation of the property, and I think it was plainly so stated, but there was no understanding so far as I was concerned.

Q. What did the Federal Water Service Company pay for these properties, so far as you are informed.

A. I had nothing whatever to do with the financial transactions of the company—Do you mean the Scranton also?

Q. I mean in round figures, the total.

A. The Wilkes-Barre property, as I recall was in the neighborhood of twenty-two or twenty-three million dollars, and the Scranton property about \$28,000,000, making a total around \$52,000,000 or \$53,000,000 for the total combined properties.

Q. Now, this advertisement that you have referred to, is that which appeared in the Wilkes-Barre Record of May 2nd, and which Father Curran in his testimony before this Committee on page 48 and 49 of the record read as follows: "The purchase prices were fixed on the frank understanding that the well known rules of law would call for a fair return on the actual value of the property devoted to public use, justified and required a substantial revision of water rates, which had not been materially changed for upwards of thirty years." "It is a well known experience that the cost of living has practically doubled and the wage standard trebled." That is correct so far as you know?

A. That is what I referred to.

Q. Now, then the prices which you have referred to, of \$52,000,000 or \$53,000,000 for these properties, included \$7,000,000, paid for the Dunmore Gas Company, did they not?

A. Yes sir.

Q. Which is not included in this proceeding.

A. That is correct.

Q. So that the total amount so far as you can recollect, in round figures for the water properties have been between forty-five and forty-six million dollars.

A. About that figure—forty-four or forty-five million.

Q. You have no reason to doubt the correctness of the statement made in this advertisement, have you?

A. No sir.

Q. What did you understand was meant by "The purchase prices were fixed on the frank understanding that the well known rules of law which call for a fair return upon the actual value of the property devoted to public use justified and required a substantial revision of water rates?" With whom did you understand that understanding was?

A. I, of course, had nothing whatever to do with it.

Q. I realize that, but you had more knowledge than the general public, and what does that convey to your mind, as vice-president and general manager of the Spring Brook Water Supply Company? With whom was the understanding?

A. I don't know that I can testify there was any understanding because I don't know. I never heard of any understanding; simply the general practice, a fair return on a fair value of the property.

Q. In other words, you interpreted that this was merely an understanding of the purchaser not with anybody?

A. I don't know of any understanding.

Q. The situation then was that the company bought the property of the Spring Brook Water Supply Company in September, 1927; did they not?

A. That is correct.

Q. What date?

A. I don't know the exact date, Mr. Evans.

Q. It was September 15, 1927, I think.

A. My first connection with the Company was on September 15.

Q. When did they buy the Scranton Gas and Water Company?

A. In March, 1928, I believe.

Q. These merger proceedings were started in January, so I think it must have been prior to that.

A. It may have been before March.

Q. According to the testimony of Mr. Loveland, that purchase was announced on January 9, 1928. You have no reason to think that that was incorrect, have you?

A. I don't know the date of it at all. It was out of my province.

Q. When the Federal bought the Spring Brook Water Supply Company in September, 1927, it had an understanding that the rates would be increased?

A. I don't know who the understanding was with.

Q. But according to this advertisement, it had that understanding?

A. The only understanding that I know of was the simple fact that they were buying a property in which the rates had never been increased, with the exception of a minor increase in the lowest scale of the meter schedule in Wilkes-Barre. With that exception—in the Spring-Brook territory there had not been any increase for, I think, thirty-three years.

Q. You are perfectly aware of the history of this property, are you not?

A. I am aware of it in a general way, and the general features of the property.

Q. You know that between 1896 and 1918 there were \$6,000,000 in earnings plowed back into this property, and out of that dividends were declared. There was no question about what this property had earned to cover the full return on the investment, was there?

A. I can't testify from recollecting and my testimony wouldn't have any value because it is second hand testimony, but I do know this, that in the early days, the Spring-Brook Water Company, 1896 forward for a period of ten or fifteen years, they declared no dividends, and then there was a two per cent. and then one per cent. and that was increased to two per cent. and finally for the latter period; I don't know how long, I believe at the rate of 6%.

Q. You do not mean to give this Committee the understanding that there were not adequate returns paid to the investors on the capital invested in this company?

A. No sir, I don't want to convey that impression. I imagine the stockholders of the old Spring Brook Company were very well satisfied with the ultimate returns.

Q. What price did they get for their stock?

A. I don't recall.

Q. You know that the original stock was all bonus?

A. I am not qualified to testify on any original—

Q. Who are they talking about?

A. There are others who can do that better than I can.

Q. You are as much qualified to talk about this as you were to tell us that there had been no increases for fifteen years. That is hearsay too, is it not?

A. Yes sir.

Q. And you volunteered that information. Now can you volunteer this to us?

A. Just what do you want me to say, that the stockholders were satisfied?

Q. I just want you to be frank with the Committee, and tell them what you know about the investment in this company, and the adequacy of the earnings as compared with the invested capital. You might just as well be frank about it.

A. I certainly will be as frank as I am able to, but I don't feel myself qualified; I had no experience with the company prior to September 1927. I don't feel qualified at this time.

Q. You did feel qualified to say that no dividends were paid for fifteen years. How did you know that?

A. I happened to recall that. I did not expect to be called here to testify on such matters, but I did happen to recall that.

Q. You have no knowledge about the earnings and the dividends of the company after that time? You were a bear in the market.

(No answer).

Q. The Federal Water Service Company went in and bought this property in September, did it, that with the understanding there would be an increase of rates?

A. I didn't say that.

Q. Well, the advertisement says so.

A. That was out of my province.

Q. In November you actually prepared a schedule of increased rates to be effective January 1, 1928?

A. That is correct.

Q. About the first of December you were directed by the Federal Water Service Company to file that tariff?

A. That is correct.

Q. And you, I think, have testified that you did not know any reason for that?

A. I was advised—I testified that I didn't know any reason at the time I was notified not to issue that schedule.

Q. What was the reason.

A. The reason, as I found out later, at least, as I understood, was that the plans were crystalizing for the purchase of the Scranton company, and there had been a complaint pending against the rates of the company.

Q. And that is the matter in which Mr. Loveland intervened; you know that, don't you?

A. Yes.

Q. Then the companies merged and in May, 1928, filed a schedule of increased rates on July 1st, 1928, did they not?

A. That is correct.

Q. Then it is true, is it not, that there was from September, 1927, to May, 1928, there apparently was a clear intention on the part of the company to increase its rates?

A. I was advised, Mr. Evans, following the notification, not to issue the circulars in connection with the increase until January 1st, 1928, the plans were off for any increase in rates.

Q. Do you believe now as you look back on the history that that was a true statement?

A. That was the instructions I had.

Q. I am asking you in the light of history, do you think that was a true and correct statement?

A. I cannot answer that.

Q. So you were instructed that owing to the merger of the Spring Brook Company with the Scranton Electric Company, which was then in mind, that the rate schedule was to be withdrawn and that no increase in rates was contemplated?

A. I was so instructed.

Q. I know you were so instructed, but did you believe it?

A. I must believe the dictates of my superiors.

Q. That sounds remarkably like Dr. Snow, that he had to do what his masters told him. Is that your philosophy as vice-president and General Manager? Just be frank with us, Mr. Walker, you didn't believe that the idea of increasing rates had been abandoned?

A. I could not infer so. I must frankly state—

BY MR. TURNER:

Q. From your knowledge there that there had not been an increase in thirty years and with the going value of the company as it was at that time stood, you knew there would have to be a rate increase; in other words, that an increase in rates was necessary for proper earnings on the investment on the property?

A. Yes sir.

BY MR. EVANS:

Q. You were in a position where you were ordered to do certain things by your superiors, is that a fact, owing to the unfortunate position in which found yourself?

A. It was very unfortunate, and it was not the most pleasant thing in the world up there. I was under orders from the New York office, of course, and I was attempting to appease a very fiery public up there, and my experience was not the most pleasant in the world.

Q. You were ordered by the New York office to insert an advertisement in the Wilkes-Barre papers at the end of December in the matter of rates, were you not?

A. There is a number of them, Mr. Evans, I don't recall just the date.

Q. I read you a copy of an advertisement appearing in the Times-Leader of Wilkes-Barre, December 29, 1927: "Announcement—the present proceeding before the Public Service Commission attacking the water rates as the result of complaints filed by certain users of water.

"Neither the Spring Brook Water Company nor the Pennsylvania Water Service Company which now controls this, have taken any steps to increase rates.

"The complaints filed must necessarily be defended by the water company. Such proceedings impose a heavy burden and expense.

"Should a general inquiry in this proceeding develop facts justifying an advance upward of the rates for water consumption, the responsibility must rest with those beginning and prosecuting the proceedings.

"Signed—Isaac A. Walker, Vice-President and General Manager; and for the Pennsylvania Water Service Company, Isaac A. Walker, Vice-President and General Manager."

Q. Do you remember that advertisement?

A. I remember it. I did not prepare it.

Q. Who did prepare it as far as you remember?

A. I could not answer that; it was prepared in the New York office.

Q. Did you insert it, or did the New York office insert it directly?

A. I am not sure, I believe I caused it to be inserted, but I am not positive.

Q. But you were acting solely under instructions from the New York Office, and you felt that you had to put out this advertisement whether it was in accordance with your views or not?

A. I could not do otherwise.

Q. As you see it now, was that a frank statement on behalf of the company?

A. It was true, I believe, at the time, I don't think there is any question about that. The entire point, just as I said, it was necessary to have increased rates in order to bring a fair return on the amount that they had paid for the property, and that caused them to put an advertisement in of that kind, and there is no time stated, it would not preclude them from raising the rates either six months or six years or six centuries later?

Q. Or six days?

A. Yes.

Q. And it was necessarily obvious, considering the amount that they paid for the property, that they had to have an increase in rates in order to pay dividends on the stock?

A. I would not go as far as that, Mr. Evans. It is obvious they may be able to pay dividends on the stock if the increase is not as substantial as asked for, but they must secure an increase in rates in order to have a fair return.

Q. Mr. Walker, what was the net revenue of the company for the year 1928, roughly, as far as you remember?

A. Of the combined companies?

Q. Yes, of the combined companies, yes, take that?

A. As I recall, it was in the neighborhood of \$4,000,000 on the combined companies.

Q. The net revenue?

A. Oh, no, I thought you said the gross. I don't recall the net figure, but the gross revenues were in the neighborhood of \$4,000,000, as I recall. I have no figures with me.

Q. It was obviously an insufficient return to justify a price of \$44,000,000 or \$45,000,000, as you have testified?

A. I believe, as I recall, I have to go back a year and a half in these recollections, but according to my best recollection, the earning at that time netted a return of about 5% on what was paid for the property.

Q. Perhaps this might refresh your recollection. There is a letter from Dr. Snow, Chief of the Bureau of Engineering of the Public Service Commission, addressed to the Committee, dated December 18, 1929, in which he said that the old rates returned a gross revenue of about \$3,000,000?

A. \$3,000,000? That is the combined Scranton and Springbrook—I have the gas confused in this, I expect.

Q. I expect so. Cannot you remember?

A. I would rather not testify without my records. That testimony can be secured without my assistance, I guess.

Q. Now, after the increase of rates was made public in May, 1928, you attended a meeting of the Wilkes-Barre city council, did you not?

A. That is correct.

Q. And you were questioned regarding the advertisement appearing over your name, which you mentioned here today, and during the course of that hearing there was a good deal of dissatisfaction with the increased rates, the brunt of which you had to bear?

A. That is correct.

Q. And when did you sever your connection with the company?

A. December 15, 1929.

Q. And since that time you have been practicing as an engineer?

A. Consultant, yes.

MR. EVANS: I think that is all, thank you.

BY MR. RHODES:

Q. Mr. Walker, do I understand that these rates were withdrawn in anticipation of the acquisition of the Scranton Company?

A. That is correct. Yes, they were withdrawn, that is my understanding, as far as I know now, they were withdrawn pending the acquisition of the Scranton Company.

Q. Then did you realize that they were withdrawn in anticipation of the Scranton acquisition, and if you did, you must have realized that as soon as that was acquired the rates would again be raised, did you not?

A. I was instructed, as I testified, that there would be no increase in rates, and therefore that advertisement went out under my signature. I knew that, and everybody connected with the company, knew that some rate increase must be instituted, but when it was coming, I had no knowledge at the time.

Q. Would it be just ordinary logic to conclude that the raising of rates was deferred until both properties were put together by purchase or merger?

A. Yes.

BY MR. WALKER:

Q. The mere fact that this was withdrawn by telephone orders from New York, and they had increased industrial rates, that would have no significance on the withdrawal, would it.

A. You mean that there was a higher industrial rate, in the one that was withdrawn than in the one which followed subsequently?

Q. Yes.

A. Why, if it had something to do with it I had no knowledge of it, but in conferences and negotiations with the New York Office, they may or may not have had that in mind, but that I had no knowledge of.

BY MR. EVANS:

Q. And as I understand you, Mr. Walker, it was your understanding, that the company would be satisfied with a fair return on \$44,000,000 in round figures, that is what they were aiming at?

A. The schedule filed in July, 1928, was designed as I said, although I had personally nothing to do with the creation of that schedule, but as I understood it was designed to net a return of about 7% in addition to operation and depreciation on the actual price which was paid for the property, and it would only net a 6% return on the valuation which the company testified that the property was worth.

Q. Did you have anything to do with the making up of the rate schedule, effective July 1, 1928?

A. I had nothing whatever to do with the schedule as of July 1, 1928. I had a little to do with the first schedule which was contemplated.

Q. That was the one that was withdrawn in December of 1928. The principle difference between these two schedules, Mr. Walker, was the fact that in the latter schedule the large users were given a lower rate.

A. That is the principle difference, yes.

Q. What, in your opinion, was the purpose of that change?

A. I believe the mining industry being the dominating industry in the Wilkes-Barre district—was undoubtedly, I be-

lieve, the main feature in the desire of the company to provide a low rate or an attractive rate for the mining industry.

Q. In other words, by doing this the company secured the good-will or least did not incur the antagonism of the large business interests of the community?

A. I believe that is correct.

MR. TURNER: Mr. Evans, when Mr. Walker was here before, as I recall it, we asked him, some questions with reference to some of the testimony given as to excessive charges. As I recall it at the time, Mr. Walker didn't have the data and you said it would be taken up later in the case.

MR. EVANS: I lost sight of that. I thought he had furnished that phase of it.

BY MR. EVANS:

Q. Have you anything that you want to add?

BY MR. TURNER:

Q. You recall that Mr. Geiser made a statement that he had some forty or fifty bills that he figured were over charges, and from them he estimated that the company was over charging the people about a million dollars a year?

A. The statement of Mr. Geiser that the company over charging the people \$2,000,000, is, of course, absurd. There is no foundation whatever for it. It can readily be ascertained by the Committee, I believe, if you understand Mr. Geiser's bookkeeping, but I believe, if it is a question or a subject of investigation, the Committee can readily ascertain it. There is no foundation whatever for it.

I was condemned unmercifully up there in requesting some customers to put meters in, who had quite large bills under the flat rate schedule. There are many consumers in the city of Wilkes-Barre at the present time who will secure substantial reductions in their water bills by adopting the meter service under the present rates.

Speaking generally and from recollection, I would say that the average bill on metered service at Wilkes-Barre under the present schedule, with a service charge of forty cents a month or \$5.00 a year with a rate of thirty cents a thousand gallons for domestic service, would not occasion an average rate for the moderate household consumer in excess of—well, we will say sixteen to eighteen dollars a year, and many of them are paying much higher rates than that on the flat rate service. As I recall, there were only 1,400 meters in Wilkes-Barre. It was one of the few remaining plants in the country that was still on the obsolete flat system and you can't convince those people in their anxiety for publicity and the methods which they pursued to listen to reason; it is utterly impossible. My life has been threatened time and time again in Wilkes-Barre. Even my wife received threatening letters saying that men were after me, and I would be murdered or put on the spot, unless I vacated Wilkes-Barre. Many times, I have been threatened of being ridden out of town on a rail and tarred and feathered and my burden in Wilkes-Barre between two masters was not very pleasant.

BY MR. TURNER:

Q. You had nothing to do with the control of the rates?

A. No.

Q. Senator Harvey told me that the Staigmaier Brewery Company, I think he said used to pay something like \$2,000 a year for a sprinkler system, and after your people went in the bills had gone up to \$6,000 a year. I don't know whether I quote him exactly.

A. I may say that, Mr. Turner, the rates for sprinkler systems in Wilkes-Barre are identical with the rates in Chester.

Q. Of course, I don't say anything about that. I don't have any sprinklers in Chester.

A. Of course, the rates depend on the size of the meter installed. We are getting into a long story if you want to tell it?

Q. I do not want you to go into it. I just wondered if you had any knowledge on that; why the rates would jump from \$2,000 to \$6,000.

A. There was one rate in the old schedule at Wilkes-Barre for fire protection service which is as follows: Fire protection for each four inch connection, \$75 a year. And now, the company will only permit a four inch connection; they wouldn't put in a six inch connection in Wilkes-Barre, at the rates as they stand, and the rates as established under the new schedule filed as of July 1, the rate for a four inch con-

nection under the new schedule would be \$96 a year compared with \$75 a year on the old schedule for a four inch connection. So many consumers with more or less lax methods and freedom of operation of the old company were permitted six inch connections for \$75 a year. That is immediately after the tap in the main, and so, the new company then charged on the basis of a six inch connection which was \$18 per month, and many consumers have taken out their six inch meters and installed four inch meters. So, there are many of them at the present time who are only paying the charge as based on a four inch connection, which is \$8 per month or \$96 per year, as compared with \$75 under the old schedule.

Q. At one of the earlier hearings the sprinkler rate of the Johnstown Engineering and Manufacturing Company was in question and at the direction of the Committee I wrote this concern to the effect and they stated that our old rate for sprinkler system with the old company was then \$75 a year; but the proposed new rate was increased \$325 a year, which was changed to \$150 a year by the officials of the company, at which time we paid them on that basis. We are now being charged \$150 a year, but are paying the first old rate of \$75 per year and permitting the balance to stand.

A. I am not familiar with that. I don't know how they arrived at that figure of \$150 per year. They are evidently not paying bills directly under the charges as listed in the schedule.

Q. In the testimony you have just given in regard to the new rate schedule, you are not intending to express any opinion as to whether or not these rates are too great or too little to yield a fair return on the fair value of the property? You are speaking merely about the individual consumer and what his bill would be?

A. Yes; I am speaking generally as a fair rate to the consumer.

BY MR. TURNER:

Q. Did the trouble start up there when this application for increased rates was put in or was it before that? I tried to get that picture more or less in my mind, and I have talked to a lot of these Wilkes-Barre people, and I just wanted to see whether we could get both sides of this.

A. I believe the trouble started prior to my connection when it was rumored that the company was about to be sold to New York capital, then immediately certain people prepared to oppose it. I was not able to carry through the policies which had been my practice for ten years as manager of the Chester Water Company and two water companies in Indiana which I had charge of for the Bucknell estate.

Q. You mean, your New York people would not let you carry out your policies?

A. I did not have the latitude of operation which I had in my capacity as the operator for the Bucknell estate. I was able to get closer into touch with these people. My record at Chester is an open book. I am not afraid of any examination of the books of the Chester Water Company. What I did in Chester, I laid the cards on the table. I went to the mayor and to the council, and to the manufacturers association, and I told them, there are the books on the table, and the whole records of the company are on the table. Our opponents in the Chester rate case engaged Morris-Knowles as their engineer, and I threw all of the records open to them. We had a case before the Public Service Commission which lasted three hours and I had a lawyer's bill of a hundred dollars.

BY MR. COOKE:

Q. You mean that Morris-Knowles represented your opposition?

A. Yes sir.

Q. And you had no trouble?

A. No sir. I will say this, in setting up the amount I requested to the Public Service Commission at Chester, I purposely, in view of the Pennsylvania law, I purposely fixed the amount of revenue which I asked for at thirty to thirty-five thousand dollars less than I could get, simply because I didn't wish the ignominy of having the Commission lower the rates in Chester, and they were not lowered.

BY MR. EVANS:

Q. If the increase in the Wilkes-Barre territory was as economical as you have pictured them, how do you explain the fact that your total increase of revenues as it appears on the record amount to 41%?

A. Of course most of that is made up of the increase on industrials, the increase on flat rate as I recall was eighty-two or eighty-three thousand flat-rate customers. Of course the flat rate customers was only 25%, omitting the addition of the extra figures which were at very much distributed points in Wilkes-Barre; and taking a customer as it was before and as it is now the rate he paid before was \$8 and now he pays \$10; for water-closet he paid four and now it is five; for a bathroom the old rate was four and now it is five, as fixed by the Commission in a temporary decision, and the rates on a wash-basin were increased from \$2.00 to \$2.50, that is 25% of an increase to 82,000 or 83,000 customers, but the increases have been quite substantial on the meter rates.

BY MR. TURNER:

Q. Mr. Walker, these rates allowed by the Commission, how do they compare with the other rates, not in the immediate locality, but from your experience under like conditions?

A. The rates to domestic consumers and householders on metered service, the flat rates are about midway I would say in speaking of the conceded statistics of many companies. Some are lower and some are substantially higher, and the meter rates to householders under this new schedule are not out of line whatever. They are less than they are in Chester.

Q. Are you familiar with the rates in Hazleton?

A. No, I am not.

Q. In spite of the fact that they have to pump the water in Hazleton as compared to the gravity system in Wilkes-Barre, it is only \$7.50 as compared with Wilkes-Barre's \$8 before the increase?

A. I have the rates of Hazleton, happen to have them here, but they are only for large consumers. I can tell you the rates of Hazleton for those consumers using half a million gallons per month, amounting to \$7.60 for half a million gallons, compared to Wilkes-Barre under the new rate of \$90. Under the old rate of \$44.44. Now, you go into the larger figures, the large consumers, for instance, the large consumer using 5,000,000 gallons a month under the new rates in Wilkes-Barre will pay \$515, and in Hazleton will pay \$556.

Q. In other words, the Scranton-Springbrook Company wanted to keep the rates for the large consumers at a minimum?

A. Yes. We may go farther and take 10,000,000 gallons, and Hazleton will pay \$765, and for 10,000,000 Wilkes-Barre will pay \$1,306.60.

Q. Now, Mr. Walker, in regard to the old rates, the large users in Wilkes-Barre as compared with Hazleton, this was merely to cut out the big user of water in Wilkes-Barre from complaining of the rates, wasn't it?

A. I presume, Mr. Evans, that may be true, but I cannot state definitely.

MR. EVANS: That is all, thank you.

J. W. BROWN recalled (Public Service Commissioner)

BY MR. EVANS:

Q. Mr. Brown, you heard Mr. Ainey testify this afternoon?

A. I did.

Q. You were one of the Commissioners who sat and heard testimony in the Scranton-Springbrook Case, were you not?

A. I was.

Q. You are also a member of the Committee to whom the preparation of a report was referred by the Commission under date of July 29, 1930, were you not?

A. Yes.

Q. Did you have anything to do with the instructions that were issued to the Bureau of Engineering in regard to the preparation of a report after this case was argued in 1930?

A. Well, I suppose I had some part in that. I have no distinct recollection of it. I know that the Commission as a whole discussed it, and I think the order was given by the Commission. That is my best recollection of it.

Q. If that was the case, should it not appear in the minutes of the Commission?

A. Well, I think so, yes. I may be wrong about that. That was my best recollection. There was so much went on in this case that I cannot remember it all.

Q. There is no mention of it in the copy of the minutes furnished us.

A. So I understood.

Q. Will you have Mr. Tevell make a further search and see if there was any such reference which has been omitted, and advise us?

A. I certainly will. Did you ask Chairman Ainey to do it?

Q. No, I did not. I was trying to get through with him.

A. Yes, I will do so.

Q. You heard Mr. Ainey explain the striking out of the item of \$4,000,000 for water rights in the valuation prepared by the Bureau of Engineering dated June 30, 1930, and the inclusion of \$1,500,000 covering the same item, real estate rights of way, did you not?

A. Yes.

Q. Turning to the comparison between the July report which was considered by the Commission at its meeting on July 15, 1929, and the August 6th report which is entered in this case as Exhibit 151, the item of value for real estate rights of way, and so forth, was reduced from \$5,393,653 to \$4,181,456, or a reduction of \$1,212,197. Can you explain why that reduction was made?

A. The only explanation I can give you is that we went over this thing time and time again, and time and time again, and every time we went over it we reached a different conclusion, and I think the final result of the reduction there was the expression of our best judgment in the matter after examining the record, and having the assistance of our bureaus.

Q. I show you a letter from Dr. Snow, Chief of the Department of Engineering, to the Special Committee of the Commission, William D. B. Ainey, J. W. Brown, Charles E. Young, dated August 13, 1930, as furnished to this Committee by the Commission as appendix "D" and ask you whether it was on the basis of that letter that you fixed this valuation of real estate, at \$4,181,456?

A. I have no doubt that that influenced our decision, but there is so much of it that I can hardly recall this, but I have no doubt that that influenced?

Q. It contains an itemized statement of real estate and totals \$4,181,456. I recall your attention to the fact that included in this valuation are two sums, one of \$200,000 for water rights in the Stanton division and the other of \$100,000 for water rights in the Spring-Brook division, or a total of \$300,000 for water rights. Was not the real difference between the two appraisals the fact that the \$1,500,000, which had been included for water rights, in the July valuation, was now reduced by approximately \$1,200,000?

A. That may have been.

Q. Was that it, in your opinion?

A. Well, it is likely it was, I wouldn't like to be bound by that definitely, and as I said before, this is such a stupendous matter and we went over it so often that my recollection of items is not as distinct as it might be, but I think that is right.

Q. Now, what instructions did you give to the bureau of law in connection with the preparation of the August 6 report so far as you remember them?

A. As far as I remember the only instruction we ever gave to the legal department was to prepare a report, carrying out what we gave them in the way of the findings.

Q. It was true, was it not that Mr. Weiss, counsel for the Commission, did not agree with all of the things which the Commission wanted done?

A. I think that is true.

Q. Did the Commission follow Mr. Weiss' advice as to legal matters in the preparation of this report?

A. In legal matters, we did, but not in the development of values.

Q. Not in the development of values?

A. No sir.

Q. And he disagreed with you in regard to these values?

A. He did in some cases, yes sir.

Q. Do you remember particularly any special items?

A. No; I can't recall. I remember that he said on a number of occasions he did not agree with us, but I can't recall any specific instance.

Q. In this August 6 report certain items of valuation were largely increased and in making these increases, exactly the same sum was added to the reproduction cost new depreciated. Was that, Commissioner Brown, in your opinion a proper method of changing these values?

A. No; I think that must have been a mistake. I don't think that is proper.

Q. In other words, the item of depreciation should be increased when you are increasing the reproduction cost new?

A. Exactly, and I heard that brought out when Mr. Ainey was on the stand and I took those items and Commissioner Young and I together made a calculation which would have made a difference of about \$87,000. It would not have affected the result, because we have made a fair value in this case of \$1,000,000 less than the reproduction cost.

Q. In reaching that conclusion, which you have just stated, what rates of depreciation did you take?

A. Well, we consulted with the engineers who told us the usual sum was three-quarters of one per cent.

Q. On items that were involved in this change?

A. Yes sir.

Q. Well now Mr. Brown, you have been very frank about that. Doesn't that cause some doubt in your mind of the methods used reaching these valuations?

A. No, not in my mind.

Q. Aside from these questions of not making any allowance for depreciation, what do you think of the method of taking an appraisal of physical property and adding round sums like \$500,000 to this item and \$300,000 to that item? Is that a true method of arriving at that valuation?

A. I don't think that was the method employed. I know the methods employed with the examination of the record and all the valuations given and exercising our best judgment.

Q. Now Mr. Brown, was not the actual method that was followed an attempt to reach the desired result for fixing a valuation of individual items of property to effect that desired result?

A. No sir.

Q. Then will you just explain to me how it could be that the Commission in reviewing the evidence can take an item like distribution mains which was appraised at a reproduction cost new less depreciation by the Bureau of Engineering in this July report at \$8,554,189 and added to that the round sum of \$500,000?

A. I suppose that was done because we didn't agree with our engineering bureau in many things.

Q. This is a matter of valuation of physical property and it is on the reproduction cost of that property?

A. Yes sir.

Q. Is there any way of arriving at the reproduction cost of property other than by applying unit prices to an inventory of that property?

A. That is the way to arrive at it, but the testimony in this case was so divergent that we certainly had room to change our judgment.

Q. Did you make any change in unit prices in adding \$500,000?

A. I don't know whether we made a change in the unit price but we made a change in totals.

Q. You must have made a change in unit price or a change of price in inventory?

A. Whose inventory do you mean?

Q. I suppose you were going on the report of the Bureau of Engineering?

A. We had before us in the decisions in this at least three inventories submitted. Two of them were presented by the respondents and one by the complainants.

Q. You reached the conclusion that the inventory of your bureau of engineering was incorrect?

A. No, I didn't say we reached that conclusion, but I say we didn't agree with them in many cases.

Q. Was it not necessary for you either to change the inventory or to change the unit price?

A. We had totals of the whole thing.

Q. In other words, your theory is that if in a given case you have two most extreme estimates of reproduction cost, then the Commission can arbitrarily fix any value between those two extremes to justify its decision?

A. I think they can exercise their best judgment on all the evidence that is submitted.

Q. And you speak of the scope of the evidence in the range of utilities being sufficient to make this valuation fall within that range?

A. I think so.

Q. So your theory of valuation is that it is justifiable for the Commission to fix a valuation which falls within the range of reproduction cost estimates in the case?

A. I didn't say that is a theory of valuation. I think the theory of valuation embraces so many things and I do think we have the right to exercise our judgment under all of the evidence submitted in the case.

Q. Mr. Brown, I think when we are valuing the physical property there are only two things that can be considered, one is the number of units of property and the second the unit price, is it not?

A. I don't think that is all. I think the Act of Assembly tells us, the Public Service Law tells us, that we may consider a number of things.

Q. You mean to say that these round lump sums were put in to cover things like going concern value?

A. Oh, no.

Q. If you have a dozen oranges and you want to value them, don't you value them at so much an orange?

A. You can value them at so much an orange or you can value them at so much a dozen.

Q. But you think for appraising property it is perfectly proper, take a line of pipe of a given size a thousand feet long and know that that pipe is worth a given amount per foot reproduction cost, we will say ten cents a foot, and in order to arrive at a valuation of the total thousand feet of pipe by multiplying the thousand feet by ten cents?

A. I think that is right. But you are talking about depreciation.

Q. How do you arrive at the conclusion that the distribution mains of this system could be increased in value \$500,000 over the value fixed by your own bureau of engineering?

A. I told you before, that the only way I can answer that is that I think that in going over the entire situation we exercised our best judgment as to what we should do.

Q. Now in the course of this evidence, was there any testimony for instance on the value of dams where one witness says, "I value that dam at \$50,000," and another one says, "I value that dam at \$100,000"?

A. I cannot answer that.

Q. No valuation engineer values dams as a whole, they take the other things that go into the making of a dam?

A. Yes sir.

Q. Still it is not clear to me at all how the Commission in the exercise of what you call best judgment, can take these estimates which are prepared and based on inventories at unit prices and add lump sums to them. It is very arbitrary, is it not?

A. I cannot make it any clearer than I have.

Q. You will agree with me that it is arbitrary?

A. I suppose it is; yes.

Q. Why did you pick out the item, for instance, of service pipe and stocks, and add \$100,000, rather than the next item which is meters?

A. I cannot tell you that.

Q. Who decided on these changes?

A. We did it together, we went over these things, you see there was a large multitude of them.

Q. Mr. Ainey testified he didn't think he had much to do with it, but you and Commissioner Young were the ones that had the most to do with it, is that your recollection?

A. As a matter of fact, Chairman Ainey consulted some, and Commissioner Young, the Engineering Bureau and the Accounting Bureau and other members of the Commission at different times were all in on this.

Q. Now, I am just dealing with the one change from the July appraisal to the August 6th appraisal.

A. I know you are.

Q. And that involves a change in these items of physical property. Which of those items of physical property did you have charge of.

A. I didn't have charge of any particular item, nobody has charge of any particular item, we had it altogether.

Q. Did you go into a huddle and determine this in a conference?

A. Yes.

Q. Who were present at that conference?

A. I was most of the time, I think all of us, Commissioner Young was there, Chairman Ainey was there sometimes, Dr. Snow was there very often, Mr. Morgel of the accounting bureau—

Q. Mr. Morgel of the accounting bureau has nothing to do with the valuation of the physical property?

A. No, that is true, but he had of other things.

Q. We are dealing now with the valuation of physical property. So you and Commissioner Young and Dr. Snow together worked on this?

A. And Chairman Ainey was there, a number of times.

Q. And Chairman Ainey?

A. I am giving you my best recollection, and that is the best recollection I have.

Q. Isn't it true, Mr. Brown, that in order to justify the temporary rates, which you had approved, it was necessary to get a valuation of \$43,000,000 or \$44,000,000?

A. I don't know that.

Q. Don't you know what the rates which you had approved were estimated to produce in revenue?

A. The temporary rates?

Q. Yes, the rates that were in effect during the pendency of this case?

A. Yes.

Q. And approximately what was that amount?

A. Well, we reduced the rate by about \$245,000 by that temporary order, and for the year ending June 30 was \$4,384,000.

Q. \$4,389,000.

A. \$4,384,605, yes.

Q. Just give me that figure again.

A. \$4,384,506.

Q. Now, you allowed operating expenses in what amount in this case?

A. \$750,000.

Q. So that on that basis the amount available for fair return was approximately what?

A. Well, but there were other allowance, Mr. Evans.

Q. What other allowances were there?

A. There was income tax.

Q. All right. We will put all of them in. What was the income tax?

A. \$133,594.

Q. What else?

A. Other taxes \$80,000.

Q. What else?

A. Depreciation \$200,000.

Q. Anything else?

A. That is all.

Q. What was the total of these, do you have it there?

A. I have the total with the fair return. The fair return was \$3,055,500, making \$4,219,333.

Q. And that is on the basis of a valuation of \$45,650,000.

A. Yes.

Q. So that the total gross revenue which was allowable on the basis you have just indicated was about \$100,000 less that gross revenue of the company under the temporary rates.

A. I will have to have the question read.

(Last question read as follows: So that the total gross revenue which was allowable on the basis you have just indicated was about \$100,000 less than the gross revenue of the company under the temporary rates.)

A. No, I think it was more than that, wasn't it?

Q. So the temporary rates produced about \$165,000 more than the Commission allowed?

A. Yes.

Q. Therefore you reduced the allowable return by that amount?

A. By about that amount I think, yes.

Q. Now, in order to justify the temporary rates or approximately the temporary rates, a valuation of somewhere in the neighborhood of \$44,000,000 or \$45,000,000 would be required, would it not?

A. Yes, it would be, but I say to you very honestly I never heard it gotten at in that way.

Q. Well, we perhaps will have some indications later on as to how it was gotten at. Now, in order to fix these values on physical property, is it your conception as a member of the Commission that you are better able to fix value on items of physical property than your technical experts in your Engineering Bureau?

A. I would not say that, no. I think the final judgment rests with us, and engineers differ, as they did in this case, very materially.

Q. Now, Mr. Brown, there is a wide difference, is there not, between the determination of the value of physical property and the question of what is to be allowed as a rate basis; there are many items entering into the rate base, other than that?

A. Yes.

Q. But you don't think as a member of the Commission that it is necessary in order for the Commission to function effectively, that it have a Bureau of Engineering on whose judgment it can and does rely in the matter of fixing value of items of physical property?

A. Oh, I think it is very important to have an Engineering Bureau, that can assist us.

Q. Now, that does not quite answer my question. I will ask that the question be read.

A. I will answer the question without having it read again. I don't think that we ought to be bound by any findings of our Engineering Bureau when the final judgment and the responsibility rests with the Commission.

Q. And, in your opinion, it is perfectly proper and desirable for the Commission to take the values found by its engineering bureau of items of physical property on the reproduction cost new basis, and make arbitrary changes in those?

A. No sir; I don't think that; not arbitrary changes.

Q. You said these changes were arbitrary, Br. Brown?

A. No; I don't think—if I did say that, I didn't mean it. I said we had made those changes like in exercising our best judgment by everything that went before us.

MR. TURNER: Perhaps this will help a little bit, Mr. Evans, in your decision. In *Louisville Ry. Co. v. Louisville, P. U. R. 1930 B 207*, decided by the United States District Court for the District of Kentucky, involving an issue of confiscation the court observed (page 210):

"The problem of determining such fair values is one of the most difficult questions with which courts are required to deal, and the result in any given case of necessity must, be largely in the nature of an approximation. In determining this value, the Supreme Court has declared that the court must not be controlled by any artificial rule but that there must be a reasonable judgment having its basis in a proper consideration of all the relevant facts."

MR. EVANS: Mr. Turner, Commissioner Brown, I think is very familiar with that rule, but that deals with the determination of fair value and not the determination of items of physical property.

MR. TURNER: It is all part of the facts.

MR. COOKE: Mr. Evans, it seems to me that Commissioner Brown on one hand says that these acts of theirs as to the physical property are not arbitrary and on the other side he says they did not consider quantities and unit prices. Personally I would like to hear that question put to him again, and ask him whether he wants to abide by it.

BY MR. EVANS:

Q. Will you answer that question?

A. Yes. I don't mean to say that we did that in an arbitrary way. I tried to explain that we took all the matters that were before us.

BY MR. COOKE:

Q. In dealing with this section of pipe which is far removed from these higher reaches of intangibles and company overheads—we are dealing with physical property, and you say you neither acted arbitrarily on the one hand nor did you upset the bureau of engineering in regard to the quantities or unit prices?

A. In the price of pipe there was a difference in the evidence. They were not agreed upon in the evidence, and the inventory and appraisal furnished by the complainants and the respondents were different.

Q. Do you mean to say that in these conferences, that Mr. Evans, in a lighter vein referred to as "huddles" you brought into them the different view points of the different parties to this thing, in the matter of such detail as the price of pipe?

A. No; but we had all that before use. That is, we had the evidence before us or had a recollection of it.

Q. And you added a thousand dollars on, was that arbitrary or was it based on changes in unit prices or quantities or by the different things or information that was before you?

A. Well, I would say it was arbitrary putting it on the basis of different unit prices, but we thought we were warranted in putting that in. There was a vast difference in the values placed on these pipes and we thought we were justified by the difference in the prices to exercise our own judgment as to what it would be.

BY MR. RHODES:

Q. How many pages of details, approximately, are there in this engineering report; five hundred or a thousand? (No answer).

MR. EVANS: As I remember, there are some twenty volumes of details covering these various items.

BY MR. RHODES:

Q. Your answer is that they were affected by something. Now, do you want to stick to that that it was not arbitrary?

A. I can't understand your point of view. I have tried to make it clear that we had before us the inventory and appraisal of at least four engineers outside of our own. They all varied as to the price of pipe, and we thought that we had a right—at least, I thought we had a right to exercise our judgment and arrive at a price of this pipe which would be fair.

Q. I presume, Mr. Brown, that there was a difference of opinion among you as to the various items, was there not?

A. Oh, yes.

Q. Then, in the final analysis, the Commission tried to reconcile these differences, by making an arbitrary determination? A. Yes; they made a determination. You may call it arbitrary; I don't call it arbitrary. I think it was based on all the evidence before us.

Q. We have been sitting here during the last week and we have heard a lot of discussion about the determination of reproduction cost new. In the final analysis, it is an arbitrary determination, is it not?

A. Yes; I would call—

Q. There is no fixed rule?

A. There is a formula. The formula is fixed by the law.

Q. So that the reproduction theory is largely a matter of individual opinion?

A. Very largely; yes.

BY MR. EVANS:

Q. I am still a little uncertain about the value of the physical property. Take stand pipe what were the estimates of unit prices on stand pipe which you added to this \$500,000?

A. Oh, I couldn't tell you that.

Q. Do you have that?

A. Yes; we have it.

Q. Did you base it on the detailed value per unit of stand pipe?

A. I think we based it on the prices that were in the different inventories.

Q. We have all the work sheets of your bureau of engineering, we have asked for every shred of work sheet that was used in it. Will you have your Engineering Bureau, or will you find out in this mass of volumes, where any calculation was made on a basis of inventory and unit price which justified the addition of \$500,000 to the item of distribution mains?

A. I could not point it out, because I never went over those volumes.

Q. Will you have Dr. Snow point it out?

A. If he can, yes.

Q. You know it was not done that way? you know it was done by the addition of a lump sum to an appraisal?

A. Yes, it was done—

Q. It was not done on any basis of unit prices at all?

A. I don't know that, but I don't know how you do it.

Q. I am asking you if it was done that way. You surely ought to know it?

A. I say I think it was. I think it was taken as an average between the prices that were given for pipe.

Q. But how does it happen that you have round numbers, \$100,000, \$500,000, \$300,000?

A. Well I can't tell you any more than I have told you. I have given you the best information I can.

Q. Now let us be perfectly frank about it?

A. I am trying to be perfectly frank.

Q. Was not this the situation, that in the July appraisal the value of the physical property as compared with the overheads was such that it made this percentage of overheads too high to appeal to your best judgments?

A. No, I don't think that was the case.

Q. Ther. will you tell me why it was that in increasing the items of physical property in this manner which you have at times designated as arbitrary and at other times as not

arbitrary, you at times simultaneously reduced some of the overhead?

A. We did it in the exercise of our best judgment and doing the best we could in arriving at a fair and equitable conclusion.

Q. And your best judgment was that the overhead in the July appraisal appeared to be too high in the appraisal of physical property?

A. Yes sir.

Q. After all these changes were made, Mr. Brown, of increasing your physical property by \$812,756 in your August 6th appraisal over your July appraisal, you reduced you overhead almost a corresponding amount, and arrived at the total value in your August 6th appraisal of \$46,982,636, as compared with \$47,065,430 in your July appraisal. Now in the face of that, do you not think you considered it a shift from overhead into visible property?

A. I don't think we did. We did both. Every member of the Commission, I believe, felt that that figure was too high and in order to and in an effort to reduce, in order to bring it down, we were only making the changes that our best judgment dictated.

Q. Your total efforts in this case between the July appraisal and the August 6th appraisal amounted to \$83,000 out of a total of \$46,000,000, and the final result amounted to a good deal less? After all your efforts to bring the value down, that was the best you could do?

A. That was what we did.

Q. It was in an attempt to bring the values down?

A. Yes.

Q. Then is it not peculiar that you didn't think of the matter of depreciation which seems obvious and which you stated would have decreased the total value?

A. And I believe now it ought to have been done and that it was a mistake that it was not done.

Q. Now then, did you have anything to do with the change in the Bureau of Engineering report from the June 30th report to the July report by which the item of \$4,000,000 for water rights was eliminated from the earlier report and \$1,500,000 added to it as real estate rights of way and water rights.

A. Yes, I had something to do with that. I was one that was opposed to allowing them \$4,000,000 for water rights.

Q. You wanted to include it in the values of land?

A. Not all of it. We felt something ought to be allowed, but we felt that \$4,000,000 was too much.

Q. How do you reconcile that with the decision of the Superior Court in the Leighton Water Case?

A. I don't think the Leighton Water case was brought up at that time, I don't think we considered that.

Q. In other words, at that time you were of the opinion that it was all right to add \$1,500,000 for water rights into the valuation of the land?

A. I think there were some other things in there except water rights in that. My impression was that that was not all confined to land but a part of it went to something else. I may be wrong about it.

Q. Page 67 of the report of the Bureau of Engineering on July 7th contains a reference to the additions in the sum of \$1,500,000, is that right?

A. That is right.

Q. Which of the members of the Commission were in favor of including the \$4,000,000 for the water rights? You said you were opposed to it?

A. My recollection is, and I want to be sure I am right, but it is my recollection that we were all opposed to it, I think so.

Q. At an executive session of the Commission on August 15th to frame a Commission report which has been introduced here as Exhibit No. 142 bearing date of August 15, 1930, it was approved in substance, was it not?

A. That is the one that was tentatively approved and referred to the Chairman; yes, that is right.

Q. That minute says: "The report was on motion, agreed to and adopted, subject to various proposed revisions which the Chairman was authorized to prepare in connection with the law, engineering and accounting bureaus." What is your your remembrance as to the proposed revisions that were then discussed?

A. I will have to refresh my recollection of that, I can do it but I cannot recall it now, I know that when we came back there was such a difference of opinion that the report

was rescinded but I will have to refresh my recollection as to what the points were. I cannot remember them all.

Q. As far as the date of August 25 was concerned was not the Commission practically united on all of the principle propositions of the report, and differed only on smaller matters such as the phrasing and paragraphs in regard to land values?

A. In my recollection there material difference which I think could be outlined by the chairman.

Q. Do you have a memorandum showing that?

A. I think I can refresh my memory on that.

Q. Will you produce that memorandum?

A. I have no memorandum, but I think by consultation and by going over with other members I may be able to refresh my memory; there are no written records.

Q. You have no written record?

A. No, I didn't have any written record but I am satisfied certain members of the Commission can tell me and I know it is right.

Q. Who do you have in mind?

A. I don't mean just members, but all who were there. I think the chairman could remember.

Q. The chairman testified he could not remember certain matters of phraseology and minor matters.

A. I do not know that there were material differences and when we came to the subsequent meeting there was serious differences again.

Q. There is nothing in the minutes of the Commission so far as has been furnished to this Commission on this subject whatever?

A. I don't, but will accept your statement.

Q. On this subject between September 30, 1930 and December 9, 1930, did the Commission during that period take any action in this matter?

A. No sir, they took no action, work was being done—

Q. Was it not during this period, Mr. Brown, that the real differences of opinion between members of the Commission developed?

A. Oh, no.

Q. And the report of August 15, Exhibit No. 152 in this proceeding was adopted on August 26th, subject to various proposed revisions which the chairman was authorized to prepare in connection with the Law, Engineering and Accounting Bureaus, is not that usually about the final action that the Commission takes?

A. Yes, I think that is, but as I say to you, these things that the Chairman was to prepare in connection with the Bureaus, were not agreed upon when they were prepared.

Q. But, Mr. Brown, that would not have been adopted if the Commission had not at that time been substantially agreed on the total fair value to be found, would it?

A. I think we had agreed practically on the fair value, but that thing later came up again, so on September 30th—

Q. Excuse me until I finish the question. So that on August 26th the Commission was substantially agreed on a total fair value of \$46,982,636, as set forth in this report?

A. Well, that report was adopted subject to these changes.

Q. Yes, but I say they were substantially agreed on the total fair value, and you said yes.

A. Now, just let me explain. I say it was adopted, but not without opposition, and on September—

Q. Did anyone at that time vote against it?

A. Yes.

Q. Why was not that shown on the minutes?

A. I don't know—

Q. But who voted against it?

A. Commissioner Shelby voted against it and Commissioner Collins voted against it.

Q. They voted against it?

A. Yes, and on September 30th, if you look at the minutes, Commissioner Shelby, not satisfied, came in and wanted the Bureau of Accounts and Statistics to analyze the value of the land, and a number of other things which he wanted to use to make something different from this.

Q. But at that time you and Commissioner Young and Chairman Ainey and Commissioner Benn and Commissioner Walker were all agreed on a total fair value of substantially \$46,982,636?

A. Well, it was carried by a majority, I don't know whether they all voted as you say they did.

Q. And you have only mentioned two?

A. I say that is my recollection. I cannot recall whether any others voted against it or not, but then substantially the matter was reopened.

Q. I see. So that subsequent to that time your own ideas on this matter very materially changed, did they not?

A. Yes.

Q. What caused them to change?

A. Well, we had the feeling all the time, it was a matter of trying to get the Commission together, to get a report; we could not agree, and we did the very best we could, we were trying to get a meeting of minds, we were coming together and we exercised our privilege to try to get a lower value, which I wanted and which others wanted.

Q. So that the changes that were made after August 26th, so far as you are concerned, were made not because you changed your views as to the fair value, but in order to try to obtain a unanimous decision of the Commission?

A. I don't understand that question.

(Last question read as follows: So that the changes which were made after August 26th, so far as you are concerned, were made not because you changed your views as to the fair value, but in order to try to obtain a unanimous decision of the Commission?)

Q. As I understand you then, the report of August 26th was tentatively adopted trying to get your minds together?

A. And trying to get a report out on this, but still there was dissatisfaction.

Q. Well now, Mr. Brown, between August 26th and December 9th there was only one change made in the valuation of physical property, namely, a reduction of \$400,000 in the value of lands. Can you give the Committee any information as to how that lump sum in the value of lands was arrived at?

A. No, I cannot; I don't remember.

Q. Was that done on the basis of any reappraisal of lands by the Engineering Bureau?

A. I don't think there was any reappraisal. I told you I cannot tell you how it was done.

Q. It was done on the basis of the lump sum changes that were made in August?

A. I think so.

Q. Now, I call your attention to the fact that as compared with the reduction of \$400,000 the construction overhead was reduced in the amount of \$797,884, and the item of working capital, cost of financing and going concern value were decreased in the amount of \$1,132,293, making a total reduction of these overheads of \$2,330,177?

A. That is the reduction that was made as shown in the final report.

Q. During August?

A. Yes.

Q. Was that not done in order to make the overheads bear less percentage to the physical property?

A. I answered that before, Mr. Evans, I don't recall that it was done in that way.

Q. Can you explain to me why after adopting a value of \$46,982,636—

A. Well, I know what you mean, if you cannot locate the figure. In the August meeting we arrived at that figure.

Q. And you reduced the overheads alone?

A. Yes.

Q. By the amount of \$2,330,177 between August and December, 1929?

A. We did it, yes, as I told you to try to arrive at a conclusion that everybody would agree to, and get this report out.

Q. When during that period were these reductions made?

A. Oh, well, it was worked on at different times, time and time again, and the report even in the final analysis, even when we came to the final adoption of the report it was not satisfactory to everybody.

Q. Can you explain, Mr. Brown, why there is no mention of this in the minutes of the Commission between September 30th and December 9th?

A. Because I don't think it was brought up in the Commission, we didn't meet again in Executive Session on it, it was being worked on by different members of the Commission and by the Engineering Bureau and others on the outside, until we arrived at some conclusion.

Q. As a result of the process, which you have described, you finally arrived at a total reproduction cost of new valuation on this property, less depreciation, of \$44,651,459; did you not?

A. Final?

Q. As a reproduction cost new, depreciated?

A. \$44,651,459, is that what you said?

Q. Yes.

A. Yes sir.

Q. What information had you as to the original cost of this property?

A. The only information we had was what was produced at the hearings.

Q. And was that as to the original cost of that property?

A. I don't recall.

Q. As set forth in your report?

A. I haven't the report before me.

(Hearing witness paper)

A. I don't think the original cost is set forth in this. (Indicating) I don't see where it is.

Q. Was there any testimony as to the original cost of the property?

A. I think there was; yes.

Q. And the Commission gave no regard to that testimony at all?

A. I have no doubt that it gave consideration to it. I would have to read this report. Of course, they did.

BY MR. RHODES:

Q. Mr. Brown, your reproduction values, you don't pay any attention to the original costs; do you?

A. No.

MR. EVANS: Mr. Rhodes, they can in determining the fair value use both reproduction and original cost.

BY MR. EVANS:

Q. Does that accord with your remembrance, that the testimony as to the original cost of this property was somewhat under \$25,000,000?

A. You mean for this entire property?

Q. Yes.

A. No; I have no recollection of any figure of that kind.

Q. Did you ask your Bureau of Accounts to prepare a statement for the Commission as to the original cost of the property, as shown by the evidence?

A. I can't answer that. We asked for so many things that I can't tell you that.

Q. You attended all these hearings, did you not, Mr. Brown?

A. I don't think I was absent more than a day or two from any of them.

Q. Don't you remember the testimony of Mr. Heinbockel as to the original cost of this property?

A. I remember Mr. Heinbockel very well, but I don't remember any \$25,000,000 cost figure.

Q. Don't you remember any of the testimony of Mr. J. L. Lance as to the original cost of the Spring Brook property?

A. Oh, I remember all of that testimony, but I can't remember figures.

Q. What I want to get at is what consideration the Commission gave to the original cost of the property in arriving at the fair value?

A. Well, I don't think a great deal of consideration was given to it, because I don't think it enters into it very largely. The original cost of this property, if my recollection is correct, was very largely guess work; records were lost; they couldn't find the records, especially up in the Scranton District; they couldn't find records of a great many years, and they could not establish a very good original cost on the subject.

Q. But so far as you have been able to find—and that corresponds with my understanding—no mention is made of original cost in your cost value of this property?

A. I think so.

Q. Now, as to finding a reproduction cost new less depreciation of \$44,651,459, you knocked off around \$1,000,000, and found a fair value of \$43,683,000 as the value of the property, did you not?

A. Yes; we did.

Q. How did you arrive at the knock off?

A. I don't think we arrived at any amount to knock off.

Q. You say you didn't consider original cost because the records were not sufficient. You did consider evidently reproduction cost?

A. What other items of value do you consider?

Q. In arriving at the—

A. Fair value?

Q. Yes.

A. We considered just about what would be the probable earning capacity of the property under the rates, and what the acts prescribe, the reproduction cost of the property based upon public service, price of materials, labor and supplies.

Q. You heard Mr. Walker testify that this property cost the Federal Water Company about \$44,000,000 or \$45,000,000, did you not?

A. I didn't hear him, I was outside.

Q. I see. You were familiar with that fact when you decided the case were you not?

A. I think we were.

Q. And you fixed a valuation approximately of the amount—a fair value of approximately that amount?

A. Yes; \$43,000,000.

Q. Did that have anything to do with your final determination?

A. The price that they paid?

Q. Yes.

A. Not in the slightest.

Q. The whistle is almost going to blow, but I would like to ask you a few questions about operating expenses. You allowed the full estimate amount which the company might be required to pay in the way of Federal income taxes, did you?

A. Yes sir.

Q. Did you make any allowance for the individual stockholder's exemptions in fixing the fair value of this property?

A. No sir.

Q. Didn't you know in the Galveston case decided by the United States Court and the city of York against the Public Service Commission decided by our Superior Court they held that in the case of Federal income taxes the exemption of individual stockholders should be taken into account in fixing the fair return?

A. We did not allow that.

Q. You did not allow that?

A. I don't think, however, Mr. Evans,—I want to amend my answer there. I don't think we allowed the full amount that was asked.

A. I am not saying the full amount that was asked. As a matter of fact this company produced no evidence to show that it was going to pay any income taxes at all, on account of the consolidation return of the companies.

Q. There was something said about that?

A. Yes.

Q. Is that not in your report?

A. I think that we did call attention to that and said that if they were appraised they would have to pay the taxes.

Q. And you allowed the taxes that the company would have to pay?

A. Yes sir.

Q. So you didn't make any allowances at all for the exemptions which the stockholders would be entitled to?

A. No sir.

Q. Now, the date of the appraisal of the commission was based on July 1, 1927, was it not?

A. The appraisal of the company?

Q. The appraisal of the Bureau of Engineering.

A. I don't know the date; I don't recall the date. It was about that time; I will assume that you are right.

Q. You added to the appraised value of the physical property an item for additions and betterments in the amount of \$1,340,888.00?

A. Well, I just want to say that in the appraisal, inventory and appraisal submitted by the complainant in this case there were four items which were omitted entirely. No allowance at all made for them, which we thought ought to go in and which allowance was made for.

Q. That is not quite what I am getting at. Subsequent to the date of this inventory and appraisal of July 1, 1927, the company made certain additions and betterments to its properties and you allowed these as claimed by the companies, did you not?

A. We did allow for additions and betterments.

Q. Now, the other items, the reproduction cost new depreciated of the other items of physical property was therefore based as of July 1st, 1927, was it not?

A. Yes sir.

Q. And what allowance did you make for depreciation in that property from July 1, 1927 to December 9, 1930, when your decision was rendered?

A. For depreciation?

Q. In the property as it existed on July 1, 1927?

A. I don't recall any allowance made for that.

Q. Should you not have made an allowance if the appraisal was made three years prior to this time?

A. I think that we ought have but I don't know that we did.

Q. Now, you allowed depreciation at the rate of \$200,000.00 a year, did you not? In this company as an operating expense?

A. Yes sir.

Q. So if you had allowed them depreciation at the same rate in your valuation you would have deducted \$600,000.00 from your valuation, in round figures?

A. Yes.

Q. So that is something that was also overlooked, was it not?

A. Well, it was not allowed.

BY MR. TURNER:

Q. I have wanted while Mr. Brown was here to ask a question. I am rather interested in the control of the Commission over security issues and I would like to know if Mr. Brown knows anything about the issues in the Hanover-McSherrytown and Gettysburg cases.

A. I never heard of them until I heard of them in these proceedings.

Q. Do you know of any water case in the State where there have been security issues on which the Commission has passed?

A. I do not.

BY MR. MOORE:

Q. We had testimony this morning that the Pennsylvania Power and Light Company were advertising an issue of \$100,000,000.00 4½ per cent. bonds on April 22nd. Do you know whether the Commission has received any notification of that?

A. I understand that they did not. My understanding is that no certificate of notification has been filed in any way.

BY MR. TURNER:

Q. Is it required?

A. Yes sir, under the law.

BY MR. COOKE:

Q. These bonds are now being sold?

A. So I understand.

Q. I am much interested in this Commission and its relation with its Bureau of Engineering because I have seen some phases of engineering developed here that frankly I didn't know existed. I wondered what your interpretation was. Mr. Ainey used the expression "The conscience of the Commission is advised by the technical staff." Does that have any definite meaning in your mind?

A. I would not use that expression "the conscience of the Commission." I would rather say we are advised by our Bureaus in coming to a judgment in matters.

Q. I inferred from the statements of Dr. Snow and Mr. Black that after first advising you they were rather guided by your wishes in the rendering of their estimates.

A. I don't quite understand you.

Q. Reconsider, revamp, revise?

A. I have never been a party to a request to the Engineering Bureau to revamp anything. Frequently we don't agree with them.

Q. In other words, they put in their reports and you take it or leave it? Any changes you make in your final findings you don't charge them with?

A. No sir, they are subject to our own judgment. But I don't know in cases supported by testimony.

Q. It was testified to there that more than once in the passing of estimates back and forth from the Engineering Bureau to your office and back and forward was more or less a matter of routine?

A. We certainly exercise our right of exercising our judgment.

Q. And as far as you know you never ordered or asked the Engineering Bureau to put in a revised estimate?

A. I never have.

Q. You don't know that it has been done?

A. Not that I know of. If I don't agree with it I exercise my judgment supported by other facts and circumstances but I never asked the Engineering Bureau to change their opinion.

BY MR. WALKER:

Q. What happens to these certificates of notification when they come into the office?

A. They are filed in the Bureau of Accounts and Statistics, and I think a number of times they are looked over.

Q. When they come in to the Public Service Commission are they immediately referred to the Bureau of Accounts and Statistics?

A. They are filed with the Bureau accompanied by a fee as established by the Act but unless something unusual occurs to call the attention of the Chief of the Bureau to it they are filed of course.

Q. Unless there is something unusual to it they are not brought to the attention of the individual Commissioners?

A. No sir.

Q. For your information, there were certificates of notification filed in this Hanover-McSherrytown and Gettysburg water cases and I wondered whether they had been called to the attention of the individual Commissioners?

A. I don't think so.

BY CHAIRMAN MOORE:

This hearing will now stand adjourned until April 22, 1931, at 2:00 o'clock P. M.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION No. 10

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Wednesday, April 22, 1931, at 2:00 P. M. There were present:

Messrs. D. Glenn Moore, Chairman  
Bart Richards  
Chester H. Rhodes  
Martin Memolo  
Frank L. Bowers  
Ellwood J. Turner  
Louis W. Hagmaler  
Harry J. Crawford  
Morris L. Cooke  
Harold Evans, Esq.  
John M. Walker, Esq.  
Father James R. Cox.

MR. WALKER: I offer in evidence Exhibit No. 158, being a copy of the Tri-State Power map of New York, Pennsylvania and New Jersey, issued by the Commission on Revision of Public Service Commission Law, as of October, 1929.

CHAS. H. YOUNG recalled

BY MR. EVANS:

Q. Mr. Young, you were one of the two Commissioners who heard the testimony in the Scranton-Spring Brook case, were you not?

A. I was.

Q. Did you hear all of the testimony?

A. Well, practically all. I think maybe there was a half day one or two occasions that I did not sit.

Q. You heard the argument on the case?

A. I did.

Q. What recommendation did you make to the Commission in regard to the decision of the case after it was argued?

A. I made no recommendation at the time. The matter was left in the hands of the sitting Commissioners, including the Chairman, Mr. Brown and myself, and was referred to the Engineering Bureau to compile from the large volume of testimony the necessary data on which we could reach a conclusion. They were working on it I think until about the latter part of June. Later there were several reports considered. They were tentative reports more for the purpose of being

used as a basis of discussion by the Commission until the latter part of August, one of these tentative reports was adopted, with certain conditions. Action was later rescinded, as you know, by the minutes of the Commission.

Q. Mr. Young, you spoke of a conclusion having been reached in this case on August 26, 1930. What was the value then arrived at by the Commission?

A. My recollection is that it is not over \$46,000,000, or about that figure. I cannot give the exact figure now.

Q. That was a figure which would have justified the temporary rate, was it not?

A. About that, yes sir.

MR. EVANS: In order that the Committee may have before it the figures in this case, I am going to offer in evidence the tabulation showing the figures arrived at in the Bureau of Engineering's report, and the subsequent tentative Commission reports, so that they may be able to make the comparisons which will be referred to. This will be Exhibit 159.

Statement showing tabulation of Bureau of Engineering, Public Service Commission, produced and marked Exhibit No. 159.

MR. TURNER: These are the missing plans?

MR. EVANS: These are some of the missing links. They are not done over again.

BY MR. EVANS:

Q. Mr. Young, the report of the Commission, which was tentatively adopted on August 26, 1930, and introduced in this record as Exhibit 152, finds the fair value of the respondent's property at approximately \$46,982,632, does it not?

A. This figure is a little dim—I presume that is what it is. Yes, that is correct.

Q. And on the basis of this valuation, the reports state that the company will be allowed a revenue of \$4,481,418?

A. That is correct.

Q. Which was slightly less than the revenue of the company under the temporary rates, was it not—or slightly more, I should say?

A. Yes.

Q. And the report states that for the year ending June 30, 1929, it shows a total operating revenue under the temporary rates filed January 1, 1929, of \$4,384,605, or approximately \$97,000 per year less than the above figures would indicate—

A. That is correct.

Q. However, in view of the numerous economies and efficiencies claimed by the respondents claiming to be forthcoming as a result of the consolidation, following the adjudication, no increase in the existing rates would be proper. I am reading from Exhibit No. 152. In other words, at that time the Commission upheld the temporary rates?

A. That is correct.

Q. What happened subsequent to that time to change your personal views in regard to the value of the property?

A. Well, there were several things happened. At the subsequent meeting in September, I believe it is September 9th, I am not certain as to the date, the date on which this conclusion or action was rescinded, the counsel for the Commission raised some questions about this report. One thing was that he thought there ought to be a tabulation of the real estate, setting it out in detail; incorporate it into the record, and some other questions, which I do not recall what they were, and one or two of the Commissioners raised some questions about it. They were not satisfied with it. That is the reason it was rescinded. After it was rescinded Commissioner Shelby asked for certain data to be compiled, that he wanted to be informed regarding, and we all started to study it. The purpose was to cut it down just as small as we could. That is what we were all trying to do, and after having studied it, we found where we could cut off some more. That is how that came about.

Q. As far as the physical property was concerned, the only thing you cut off was \$400,000 in real estate, was it not?

A. Yes, that is all we cut off the physical property. We raised some of the physical property.

Q. After August 26th—

A. We didn't raise any after that.

Q. What was it that made you suddenly think that the going concern value of this property, instead of being \$3,300,000 as found in your August report, was only \$2,600,000, or \$700,000 less?

A. That is just a conclusion that a majority of the Commission came to.

Q. I am not asking you that. I am asking you what made you personally conclude it?

A. I cannot point to any single thing that did. We discussed it pro and con. And another thing, I had to yield on some points that I was not personally satisfied were correct, but we had to reach a decision, and I think every member of the Commission yielded some point.

Q. You are still of the opinion that the August valuation was correct, are you?

A. No sir, I didn't say it.

Q. I am trying to find out. Are you still of the opinion that the valuation, August valuation was correct?

A. I am not, because I voted for the final adjudication, and I will stand by that.

Q. Are you of the opinion that the going concern value should be \$3,300,000?

A. I am not. I am satisfied with the going concern value as found by the Commission in its final determination.

Q. What was it that determined you that that figure should be reduced \$700,000? You first stated that it was done because other members of the Commission wanted it done. What convinced you of it?

A. The discussion around the table among the members of the Commission.

Q. That changed your mind?

A. Yes sir. We change our minds—I change my mind on a number of items, resulting from the discussion among the members of the Commission, and we also had Dr. Snow with us in these discussions.

Q. How do you determine going concern value?

A. That is not an easy thing to explain,—going concern value. There is a lot of elements that enter into it.

Q. Taking this case—how did you determine, or how did you reach the going concern value was \$3,300,000 in August, and then later reach a conclusion it was only \$2,600,000? Explain the process of reasoning that brought that change about?

A. It is simply that the members of the Commission—

Q. I am speaking of you personally?

A. I will speak for myself then. I changed my mind as a result of the conference and discussion that took place among the members of the Commission. Going concern value is a thing that you cannot calculate definitely as you can some mathematical problem, it is a matter of judgment, taking into consideration all of the circumstances surrounding the case. This is a water plant, one of the finest in the country. They have a large supply of water, sufficient for every purpose, of pure water, well managed company. It was grown up over a period of 75 years, and all of those things give it a value, a going concern value. Those are the things that we take into consideration, as well as the cost of attaching the business.

Q. Let us start with the last. What was the cost of attaching the business of this company?

A. I cannot tell you that.

Q. You must have had something in mind—you must have had some evidence of that?

A. I don't know that it is in the evidence. We know that in a company of this size, with the number of consumers that it has, it would cost something to attach the business.

Q. Don't you know as a matter of fact that this company had excess earnings for many years?

A. Yes sir, it did for a number of years.

Q. There was never any lag on earnings, as far as any evidence shows?

A. I don't know that that is so.

Q. Will you show me any evidence of any lag of earnings?

A. I cannot do that.

Q. Do you remember any such evidence?

A. I don't know that there is a better company in the country. This company is the result of the merger of about 100 companies. Some of those companies made no money during the early years.

Q. Do you mean to say that the lag of earnings in the early years was one of the reasons why you fixed a going concern value of \$3,300,000 in August?

A. It is one of the elements to be taken into consideration in determining going concern value. We considered every element that we could lawfully consider in determining that.

Q. Was that element present in this case?

A. I think it was.

Q. Will you point to any evidence referred to in the brief of the case, which would show any lag of earnings in this company, and bring it before the Committee at a future hearing?

A. I don't think there is anything in the record, not any definite amount. I am not saying it is. I know that it is one of the elements to be taken into consideration.

Q. You think every company is entitled to an item of going concern value, whether it is based on anything in the record or not?

A. No sir, I don't think so.

Q. If there is no evidence in the record, of course, then you could not attach much reliance on that. What were the other elements you said you used in finding \$3,300,000 going concern value?

A. I would say, Mr. Evans, we considered all of the evidence that could be legally considered in determining what the going concern value is. It is just a matter of judgment.

Q. You say you did consider the lag of earnings. What other elements did you consider in this case?

A. We considered the fact that it was an efficient, well operated, well constructed, adequate water company, with adequate service and facilities; there was uninterrupted service, efficient management, sound financial condition.

Q. Can you point to any decision which authorizes you to consider efficient management as an element of going concern value?

A. I cannot offhand, no sir.

Q. Will you at a later session of this Committee produce the authorities on which you rely in fixing going concern value on the basis of efficiency of operation?

MR. TURNER: I was going to ask whether that has ever been set forth in a decision of the court, not on that particular point but as to the elements that go to make up going concern value.

MR. EVANS: I think there are a good many decisions.

MR. COOKE: You are interested, Mr. Turner, in finding out what this particular witness used.

MR. TURNER: Have you any information, I would like to ask?

BY MR. EVANS:

Q. Now Mr. Young you spoke of another element and that was that they had an adequate water supply. Would that not be taken into account in fixing the value of the lands of the watershed?

A. I could not say that it was.

Q. Didn't you in your report state that you considered that in valuing the land?

A. No, that was not what we considered if you are referring to the four million dollars, that is water right.

Q. I am not referring to the four million dollars, I am referring to your decision as to the valuation of lands. In your report you said:

"The general territory involved in this proceeding is one in which coal mining is the chief industry. Land which is not underlain with coal or which has been or may be mined, is consequently at a premium and its value is accordingly higher than otherwise. In order to purify the water from springs and unpolluted streams which are not liable to destruction by undermining, it is consequently necessary for the water company to go to areas where no coal exists. Such watershed areas consequently have a special value which is reflected in market prices. This fact of market prices, while not equal to the total value to the advantage and the fact of having such watersheds as against the use of filtration, for their supply is an item which must be considered in arriving at a market value of the real estate for rate making purposes."

Q. Did you consider the adequacy of the water supply in determining the value of the land?

A. I think we took that into consideration. That is one of the items.

Q. Then what authority did you have for including this in going concern value?

A. My own judgment is that the dominant element in determining the going concern value is the cost of attaching the business.

Q. And it was on that basis principally that you determined the value of \$43,000,000 in the case?

A. I want to add to that, that finally when you come to the last analysis it is a judgment, a figure decided upon by those

on whom the law places the responsibility for making that decision, and it is my judgment that the amount finally agreed upon by this Commission was a fair amount for going concern value and I think it will be sustained by the courts, that is my own opinion.

Q. But they add an item of \$700,000 to \$3,300,000 of valuation on a proposition of this sort without considerable justification is a serious matter?

A. Yes, but it is up to the Superior Court to say whether we did that or not, I don't think we did.

Q. You were familiar, were you not, with the decision of the Superior Court in the Matamoras Water Company case, were you not?

A. I don't recall that case.

Q. I think I perhaps called it to the attention of Commissioner Brown and Chairman Ainey as appearing in No. 86-152 Superior, "Allowance of certain sum as going concern value to compensate for losses during the period of development necessary until business is put on paying basis, will not be allowed without evidence that there was deficit in operating expenses during the years of developing the business."

A. I think that is good law.

Q. So that unless the Superior Court finds evidence in this record of losses during a period of development, you are agreed that this item will have to be stricken out?

A. I am not agreed it will have to be stricken out. I have already said that I thought it will be sustained.

Q. You think in that case that there is evidence of earlier losses?

A. I think that there will be evidence to sustain it.

Q. I say, of earlier losses?

A. I would not put it in that language, the cost of attaching the business.

Q. What do you mean by the cost of attaching the business outside of the expenses of the earlier days while building up the business?

A. They might operate at a loss.

Q. Suppose you have a company which from the day it is put into operation earns 7% on the fair value of its property, has that company any going concern value in your estimation?

A. No I would not say that it had.

Q. Therefore, unless there is evidence in this case that this company did not earn 7% on the fair value of its property during the period of early operation, this item will have to be stricken out?

Q. We finally got to the point where you think that going concern value depends on the cost of attaching the business—that is a definite figure that appears in the evidence?

A. Yes sir—not necessarily. I would not answer that yes.

Q. Surely, there must be evidence as to the cost of attaching the business. You did not pull it out of the blue?

A. I say it was a dominant thing in determining the value.

Q. What was the cost of attaching the business, as you express it, that you found on the basis of your August value of \$3,300,000 for going concern.

A. I could not determine that for you now.

Q. Could you ever determine it?

A. It is a judgment figure.

Q. It is just an arbitrary figure pulled down out of the blue to determine how much you could add onto a valuation, is it not?

A. I wouldn't say so; no courts have said it, and I wouldn't say it.

Q. You sat in the Nakomis Water Case?

A. I don't know; I might have.

Q. At Factoryville?

A. Yes sir.

Q. Didn't you in that case say there was no evidence of any lag of earnings on cost of attaching business, therefore, you have made no allowance for going concern value?

A. We may have; if that was a fact, that is probably what was said.

Q. There must have been some evidence which you considered, showing the cost of \$3,300,000—

A. There must be some evidence in the record—or it wouldn't be sustained.

Q. I am trying to find out what there was in the way of new evidence presented to you after August 26th, which changed your views on this subject, and made you reduce that sum by \$700,000?

A. There was no new evidence offered—

Q. I said called to your attention?

A. It was a matter of judgment, and the figure was changed by reason of the discussion around the table. That is the only answer I can make on it.

Q. Let us see if there is anything more definite on some other items in your August report. You fix the item of interest during construction at \$1,775,115. Interest during construction is based, is it not, on the period of construction and the rate of interest?

A. Yes sir.

Q. Do you remember the rate of interest you considered in fixing that?

A. I cannot recall at the present time.

Q. You are fixing the cost as of 1928 or 1929. What rate of interest would you allow as a member of the Commission?

A. Well, that would depend on what they had to pay for their money. I don't recall what the figure was, whether it was 6% or less than that.

Q. So far as the rate of interest is concerned, was there anything that occurred after August, 26, 1930, to make you change the interest?

A. Nothing more than the discussion among the members of the Commission. They agreed on a different figure.

Q. You had all agreed in August on one figure, hadn't you?

A. Yes sir, but they changed their mind about that. The Commission are not so set in their ways, but if they find they have made a mistake, they are willing to correct it.

Q. What called your attention to the fact that you made a mistake in the rate of interest?

A. I cannot tell you just who suggested that change, or what the incident was that brought it about, but it was the result of the discussion among the members of the Commission over these several items.

Q. Did you determine of any different period of construction?

A. No sir.

Q. In other words, you arbitrarily lopped up \$43,115, and reduced interest during construction in that final report to \$1,342,000?

A. That is correct.

Q. So far as you remember, there was no determination that a shorter time should be allowed for construction on that and a lower rate of interest should be allowed—

A. We changed the figure after the discussion.

Q. You do not remember any decision that a lower rate of interest should have been allowed?

A. I don't recall the incident.

Q. This is not so long ago. It is the biggest water rate case that you ever had.

A. It would be simply impossible to remember all the discussion that took place in the consideration of this question. It occurred on a number of different days. This is not the only case the Commission has to consider.

Q. Mr. Young, this is a large figure; you are dealing in large figures here, to knock off \$433,115 interest during construction—that required some proper reason, didn't it?

A. The way these changes were brought about, Mr. Evans, I think it applies to all of them, we had a tentative report, in this report that was adopted in August, and as I explained to you before the Commission were endeavoring to cut it down just as much as possible, and they considered it from time to time informally and in session, and these changes were the result of these discussions and consideration. I cannot remember every incident that occurred, that brought it about.

Q. You don't mean to say that you personally were making any attempt to cut these figures down, were you?

A. Yes sir, I was.

Q. Will you show me a single incident in any of the minutes in any of the consideration of this case, where you were in favor of any reduction, where you proposed any reduction in these figures, as I fail to find them?

A. It may not appear in the minutes. Only motions appear in the minutes.

Q. Commissioner Shesby was the only one that actively after August 26th tried to reduce the value—

A. No, that is not so.

Q. What other Commissioner was there then trying to reduce it?

A. Every member of the Commission was desirous of reducing that figure.

Q. Why didn't you have all that data before you in August that enable you to reduce it?

A. At that time it was their judgment that was as far as we could reduce it.

Q. Were you considering the attitude of the consumers—is that what made you change?

A. No sir.

Q. Were you considering the fact that there was a political campaign in progress, that made it desirable to change your figure?

A. The political campaign was in progress in August the same as in September. That had nothing to do with it.

Q. It was not decided in August as to who was the Republican nominee?

A. Yes sir.

Q. Was it decided when this report was written?

A. Yes sir.

Q. I just cannot see—maybe you have explained it to the Committee's satisfaction what there was—

A. That nomination was made in May; this report was in August.

Q. There was a contest over that nomination?

A. I don't know that anybody gave that much consideration.

Q. Will you just explain to the Committee—I don't want to take any more time on this than is necessary—what facts there were that were brought to your attention after August 26th, when you had adopted the valuation of approximately \$47,000,000, which made you make all of these very large reductions, principally in overheads?

A. I will answer that the same as I answered it before. It was a result of the discussion around the table among the members of the Commission, that these reductions occurred. That is all I can say in answer to your question.

BY MR. RHODES:

Q. Are your conclusions compromises then?

A. Yes sir, on almost every item that was necessary. I don't think there were any two Commissioners that had exactly the same idea.

Q. In the final analysis it is simply a compromise of differences of opinion?

A. Yes sir.

Q. There was no basis on which you determined these things, except by your own judgment?

A. Yes sir.

Q. That is a very indefinite method?

A. It is the only method you can follow, where you have all kinds of different items. Some of them must yield their position in order to get a decision. That is the only way they can reach a decision. That is what resulted here. It results in juries and in the courts—

BY MR. TURNER:

Q. And investigations?

A. Yes sir.

BY MR. HAGMAIER:

Q. Is it the policy of the Commission to find out what interest they are paying during the time of construction for borrowed money—to find out what the fellow who is doing the construction is paying for borrowed money?

A. That enters into what is known as reproduction less depreciation. That is one method of finding value. They don't actually borrow this money. That is a figure that must be agreed upon, the amount that would be necessary for them to borrow. Of course, you cannot give any evidence of the actual borrowing of money, because they don't borrow it.

Q. You made a statement that it depends on what they paid for the money, the interest you allowed during construction. If they don't borrow it, you ought to have a basis of what you charge for it?

A. The money market at the time would be the best evidence, what they would have to pay for it if they borrowed it.

Q. What would you allow then, the same as they paid for it, or more?

A. Not having borrowed it, we would have to determine a figure which we felt they would have to pay for it, if they did borrow it.

BY MR. RHODES:

Q. In determining the reproduction cost new, shouldn't you come to some established policy of arriving at a conclusion, either take the cost of all the items at the market price, or a three year period, or five year average, rather than mix them up?

A. I don't know that I understand what you mean by mixing them up.

Q. Take on your copper wire, you make it a three year average; on certain other items of machinery you make it the present market prices, for instance pipe and things of that kind. You make it three year average on copper, and five years on something else. If you are going to determine the reproduction cost new of a plant, why shouldn't you take everything on the present market price, or everything on a three year average, or everything on a five year average, instead of putting these things all together and arrive at some conclusion.

A. That don't mean anything. The law it says to use average prices. It doesn't say to use the prices at the time. Average prices may be construed to be average prices for five years, over ten years or over three years, or any period.

In hearing these cases, one party may introduce evidence, base their prices on an average of three years; another on an average of five years; another on ten years. Often in these cases we get testimony of average prices, based on a different period of time. Then, it is up to the Commission to pass on the proper average price, under all the testimony.

Q. How can you arrive at a logical conclusion unless you use evidence on all these different items, from one particular standpoint.

A. I would think myself that it would be better to have a uniform policy. It might be. I wouldn't say that it is. It might be that the average period of one article would not be proper for another. The fluctuation might be greater. The three year period on one article might be proper, while it might not be on some other article.

Q. It represents such an indefinite conclusion, when you follow the method that has been described to us by your engineers. Mr. Black described the method utilized by him in connection with the Scranton Electric Company. The prices on copper at the time you made the appraisalment was 11.8. He took into the case 15.8 average. On the other commodities he took the existing prices. It doesn't seem to me to be fair to give the companies the advantages of the increase in copper, because the prices happened to be down at the time.

A. Reproduction cost new is rather more or less of a misnomer. It means reproduction of the existing price, at the prices prevailing over a five or ten year— In the reproduction it takes a period of time to reproduce. In this case they estimated it would take five years to reproduce this plant.

Q. Isn't it true that the method that is utilized in the determination of reproduction cost new depends upon the individual that is making it—

A. I don't think we can adopt a formula that would apply to all cases.

Q. It depends upon the engineer or the individual doing the work,—he utilizes such methods—

A. He exercises his judgment. We get in the testimony the result of the judgment of all the engineers who have testified. Then we have to pass on that.

Q. You get a conclusion that is somebody's individual judgment.

A. Yes sir.

Q. You have no logical basis on which that basis is arrived at.

A. I don't know whether it is logical or not.

Q. I have been listening to the testimony here about a month and I cannot find anything logical in it yet.

A. When it comes down to the last analysis, of course, every case must be determined on the facts, in that particular case.

Q. In the analysis of the testimony, the Commission should have some logical basis upon which it arrives at a conclusion. It should fit the testimony on some established theory in order to arrive at a conclusion.

A. I do not see how we can do it. For instance, in a particular case, if one engineer uses a three year period, another a five year period, and the Commission may think that some other period is proper, but we do not have the evidence

to support it. It is only a matter of judgment with the Commission. It is not based on any testimony.

BY MR. RHODES:

Q. Your testimony is going to be conflicting. You are going to have testimony as to the cost at the present time, the cost over a five year period, and a ten year period. The Commission ought to arrive at some definite method to arrive at a conclusion that is logical and not allow it to be determined by individual judgment. That is to indefinite it seems to me.

BY FATHER COX:

Q. Dr. Snow said when he went to make an investigation, he came back with the report, it didn't make any difference what he said that he obeyed his master's hand. He mentioned the fact that the Commissioners were his masters. I am just wondering if in making these values the Commissioners had some other master. I am not saying this to be insulting—I am just saying that probably somebody in politics or somebody in finance insisted with the Commission that they put the strained values on the property—

A. Father Cox, I have only been on the Commission for three and one-half years. I have never yet had anyone call or seek to exert any undue influence over my actions, and I think every man on the Commission can say the same thing. The nearest to it was in this very case, and that is when the delegation of a couple thousand people came down here while we were hearing this case, parading the streets with a brass band, and congregating outside of the hearing room, where they were harangued by speeches, which was done for no other purpose than to intimidate the Commission. It could not have been done for any other purpose. If it had been a Court of Justice, there would probably have been somebody punished for it, but we do not have the power to do that.

Q. Would it have been a good idea under those circumstances, when they raised such a great fuss, for the Commission to go down and look the thing over? You say you were trying to render a fair decision?

A. I don't know what we could have looked over, if we had gone down. We were up there; we held hearings there. Our decision was to be based on the testimony, and not on what the newspapers say or on what speeches are made outside. We cannot consider those things, but we must rely solely upon the testimony to render a decision. You can speak about the excitement and all that that has taken place up there, but the truth of the matter is that the people in that district are not paying any higher rates than in the other parts of the State. In fact, they are paying lower rates. I had a tabulation made of the cities of the third class, which are comparable to this district, because there are more cities of the third class in this district; Scranton is comparable with a third class city.

BY MR. EVANS:

Q. Have you not decided in other cases that a comparison of rates between various communities is not justifiable?

A. I think you misunderstood me. That was not offered in evidence. That was a comparison that has been made within the last three or four weeks, based upon tariffs on file with the Bureau, in the Commission.

Q. You have taken the gravity system, such as there is in Wilkes-Barre?

A. Based on the tariffs on file with the Commission—

Q. Is it fair to compare the gravity system with the pump system on rates?

A. The cost of operating the pump system would be greater than the gravity. This is not the only gravity system in the State.

BY MR. EVANS:

Q. Now Mr. Young, you reduced in a period of three and a half months from August 26th the total valuation of this property on reproduction cost less depreciation method, by \$2,330,177. You could have perfectly well, could you not, if you were going to reduce it by that much, reduce it a million dollars more and still have been within the evidence?

A. Well, I don't know.

Q. Take the going concern value alone, you don't remember having any evidence that justified your fixing it at \$2,600,000; you could have fixed it at \$1,600,000 just as well, could you not?

A. No sir, we could not, because that is the amount that the Commission agreed upon for the going concern value, and I will leave that to the Superior Court.

Q. I am asking for your opinion?

A. I don't know that my opinion will be of any value.

Q. It would be interesting?

A. I have already said that in my opinion there would have to be evidence to support the finding of the going concern value.

Q. And unless there is evidence in the case that the company has not earned 7% on a fair valuation of the property from the beginning of its operation, there is no going concern value?

A. I would not say that.

Q. It is evident you don't want to say it. Merely pruning it down to 7%.

A. I would not say that.

Q. Is that not what the Commission has allowed as a fair return?

A. Yes.

Q. And if the company has earned 7% on its fair valuation from starting operation, is there then any cost of attaching business?

A. I don't think that that necessarily follows.

Q. We seem to be going around in circles. You stated a moment ago where a company earns 7% from the time of the beginning of its operation on a fair valuation, it has no going concern value. Do you want to change that answer?

A. No.

Q. Do you stick to it, that a company that earn 7% on a fair valuation of the property from the time it started its operation has any going concern value?

A. If it started in earning—

Q. And unless this company failed to earn 7% on the fair value of the property, since it started its business, it has no going concern value?

A. I think the two situations are comparable, Mr. Evans. This company as it now exists has existed for only a very short period of time. It is the result of a growth over a period of seventy-five years started by a number of small companies, some attached to coal companies and afterwards absorbed by others and there is about 100 different companies which finally resulted in this company.

Q. I am not trying to do anything, Mr. Young, except to get the facts clearly. Assuming that there is no evidence in the case that this company or its constituent companies failed to earn 7% on the fair value of their respective properties from the time they respectively started in operation, has it any going concern value?

A. With that modification to that question I think I would make the same answer as to the other question, that there probably would not be.

BY MR. RHODES:

Q. Does the Commission take into consideration good will in determining going concern value?

BY MR. HAGMAIER:

Q. Didn't you give in your definition of what made up going concern value, the value of the water? Who furnishes the company with that water?

A. They have to acquire the rights of the water.

Q. How can they put the prices on something that they don't have any jurisdiction over?

A. I don't understand your question.

Q. Your definition of going concern value, you said they included the value of the water, and the amount of the water?

A. I think I understand what you mean now. As to whether or not they acquire title to the water. Well, they have to accumulate the water and distribute it for use and that costs money. Of course they don't own the water as it falls from the clouds, but they have to gather it together in these reservoirs and distribute it through their mains and distribution system to the customers.

Q. Is that not figured in the cost of the plant?

A. Yes; of course, the reservoirs and distribution system are appraised separately.

Q. Why would you figure it in the second time?

A. I don't think that we did.

Q. What I want to know is whether you are charging for the water the good Lord furnishes?

A. I stated the dominant factor in going concern value is the cost of attaching business, but we have to take into consideration the whole picture of the testimony as to the system and the service. We cannot pick out just one item and disregard everything else.

BY MR. COOKE:

Q. What are some of these expenses; what do they look like on the books of the company; how do they read?

A. As an illustration, a company may employ—I am referring to this case which appeared in a case just recently but which is not a water company case—

Q. I would like you to take the testimony in this case and state something in this case when you refer to the expense of the value of attaching the business it will show what you mean?

A. It is the cost of attaching business. I don't suppose you want me to search this record.

Q. Just point out something that came up in that case, some definite item, such as, buying oil or paying wages or what was it?

A. No, that would not be such an item, it is the necessary cost of securing consumers of a product which they have to sell. I started to illustrate with an electric company—

Q. Take this water company. We are reasonably intelligent people, and I would like to have an item in this case of the type to which you refer to when you say, cost of attaching business?

A. Any expense that the company would go to encourage and extend the consumption of water that would bring to them revenue would be properly cost of attaching business of this company.

Q. How would you spend, say, ten dollars on that action?

A. I could not tell you how you could spend ten dollars, but I can easily understand how the company would advertise and solicit.

Q. Now advertising, do you mean the expense of advertising is one of these costs of attaching business?

A. I think so.

Q. How do you differentiate between that and the advertising charged up to operating expenses? Why does it not all go into operating expenses? Do you suppose that in this last year one dollar of the advertising was set aside to put on the books of this company under the head of the expense of attaching business or was it included in their operating expenses?

A. I don't think so, I don't think there would be any advertising in this stage of the development of this company for the purpose of attaching business. It is already developed.

Q. It has been for seventy-five years. When did this attaching process cease?

A. I don't think that it has ceased entirely and I say I don't think there would be any advertising to attach.

Q. Do you suppose there was in the last year or in the year before that anything that was entered on the books as an item of going concern valuation?

A. I could not tell you.

Q. Do you know of any single item that the company at any time in seventy-five years of history was entered on the books as advertising and kept separate from operating expenses?

A. I would have to refer to the books. I do know this, however, that the courts not only in Pennsylvania but every state in the Union recognize the going concern value and sustain it time after time. If we didn't regard that principle, our position would be reversed.

Q. It is not a firm figure?

A. No, and it is a very hard figure to determine and is only a matter of judgment by those to whom the authority has been given, and the responsibility to determine.

BY MR. EVANS:

Q. This matter was referred to Mr. Brown, to Chairman Ainey and to you to thrash these things out?

A. Yes sir, but it was finally determined by the entire Commission.

Q. You, or three of you, did it?

A. Just as a matter of judgment.

Q. How did the three of you do it?

A. Just as a matter of judgment.

Q. Now in regard to the earnings, what evidence was ever brought to your attention after the 26th day of August to

justify you in reducing the figure of \$3,300,000 to \$2,600,000 by December?

A. I answered that question before, but I will answer it again if you wish. That we changed our figures from time to time resulting from a discussion around the table among the Commission, and in the early period all these were changed a number of times.

Q. Suppose you had been the only one, how would you have arrived at it?

A. If I had been the only one and had acted arbitrarily—

Q. You acted arbitrarily in this case?

A. No, we used our judgment.

Q. Could you not have used your judgment had you been alone?

A. If I had fixed it at any other figure it would have been arbitrary.

Q. It was not arbitrary then to reduce it \$600,000 between August and December?

A. That is true, but I have explained three or four times, Mr. Evans, that the Commission in considering these matters reached different conclusions than we had in August.

Q. I am talking about yourself?

A. I agreed to the reduction. I have explained that it was caused when we came to meet, and was the result of our discussions around the table.

Q. You could just as well have reduced it another million?

A. I would not have done that, but it could have been reduced without being arbitrary.

Q. You say that you could have reduced this further without being arbitrary?

A. The figure we fixed was our judgment.

Q. I am talking about you as an individual?

A. I am speaking about the Commission.

Q. Explain why it would have been arbitrary to fix a value for this property of any different figure from that which you did fix?

A. Because it was the exercise of my judgment after the discussing the facts around the table and the discussion of the members of the Commission.

Q. Then you are not able to give us a single item of evidence that was called to your attention after August 26th that in your judgment in any way resulted in your change of position?

A. It was not that, it was the discussion among the members of the Commission, the decision we reached.

Q. Yet you knocked \$400,000 off of the land value? You think that was just a matter of the exercise of judgment?

A. Yes sir.

Q. You must have had some basis to fix land value, surely, you are not dealing with intangibles now?

A. The only basis we could have was on the evidence and the record.

Q. What property did you drop out?

A. We didn't drop any out.

Q. Then the value of what property did you reduce?

A. We didn't reduce the value of any particular property, it was the whole.

Q. You reduced the value of the total by \$400,000?

A. Yes.

Q. And yet you don't think that is arbitrary?

A. I don't think it is.

Q. Can you tell me how you can value ten pieces of real estate at one million dollars without knowing what the values of each of them is?

A. I will explain my theory of that: In this case we have the testimony as to the reproduction cost new from four or five engineering firms, none of whom agreed exactly.

Q. Will you name the engineering firms?

A. There was the Public Works Engineering Company, Day and Zimmerman, Morris-Knowles, for the respondent, and the Lance Brothers for the complainants. They were assisted by Bemus and some other engineer I cannot recall his name.

BY MR. COOKE:

Q. What Bemus?

A. From Chicago, I believe.

BY MR. EVANS:

Q. What other engineers did the complainants have?

A. Mr. Craig here in town did part of the work.

BY MR. TURNER:

Q. Does the record show what they each valued this property at?

MR. YOUNG: I would like to complete this answer. We had Dr. Snow's analysis of this testimony and he made up tables showing what each engineering firm arrived at and what calculations they reached in the valuation. This we had the benefits of before us. Anyone would get lost in details if they started to pick this out from the records, and that is what we had the Engineering Department do. When we came to consider these tables and these estimates of engineers, we found that there was a difference of almost \$50,000,000 between the highest and the low, or almost double what the complainants put on it. These figures could not be harmonized in any way, and it could not be explained on the ground that they were simple differences of engineering judgment because engineers would not differ that much in valuing property, outside of any differences there might be in engineering judgment. Now, it was the duty of the Commission and the Commission alone to base their judgment on these figures. Now it has been mentioned here now and again as to why we reject the engineering bureau's judgment at times. This is the reason: The Act of Assembly doesn't mention engineering bureau. The only officials provided for are the Commission, the secretary, the solicitor or counsel and assistant counsel and an investigator of accidents. The engineering bureau and the law bureau and the accounting bureau have been set up by the Commission as the machinery to do the work which it has to do and the law imposes upon the Commission the obligation of finding the fair value of property in these rate cases. Now where there is this wide divergence in testimony it is up to the Commission to determine the credibility of witnesses, the bias of witnesses, the knowledge which they had of the subject of which they speak, and it is for them finally to determine the case, because they had to reach their decision, because they had to find that certain testimony was entitled to more weight than other testimony. They had these problems before them, and then it comes to just a question of judgment of what we think is the one that comes the nearest to it and then we have to apply our own judgment. We cannot escape that responsibility.

BY MR. RHODES:

Q. Therefore it is inevitable to arrive at anything except an arbitrary determination?

A. I don't know whether I can call it an arbitrary determination? I don't know whether I can call it an arbitrary determination, it is a determination of the fact by the judgment of those who are required by law to exercise that.

Q. That is true, but nevertheless your conclusions are inevitably arbitrary, because when you add \$300,000 to an item here and \$100,000 to one there and \$200,000 to another and deduct a \$1,000,000 from still another, that is not based on logic but is an arbitrary fact?

A. It is in this case inasmuch as there was no witness who testified to that amount.

Q. There is another question. I want to ascertain whether you agree with Mr. Brown in a matter concerning which I asked him last week. I asked him if reproduction cost new is not largely a matter of individual opinion and he said yes. Do you agree with that?

A. You mean as found by the Commission?

Q. No, as a general proposition, is it not largely an individual opinion?

BY MR. TURNER:

Q. Do you mean as to the valuation?

A. Well, the figure you arrive at by the Commission is the composite judgment of the majority of the Commission and each individual of course has to exercise his own judgment based on the testimony.

MR. RHODES: In the final analysis, this reproduction new theory is largely a matter of individual opinion in any given case; there is no logic back of it, no scientific formula back of it, but it is purely a matter of individual determination from individual opinion and judgment?

A. There must always be some authority to determine the fact, and I would not say there is no logic back of it.

Q. The individual in coming to his conclusion can combine any set of facts he sees fit?

A. No, I would not say that.

Q. The testimony of your engineers tells that they make such computations as they want to. Take in this case, take a certain item, they will average over a three year period, or average over a five year period, or over a ten year period and determine that according to the way they desire?

A. The engineers may do that, but the Commission has their own way of finding out.

Q. How does the Commission do it?

A. They just simply exercise their own judgment.

BY FATHER COX:

Q. It is done largely I think for rate making purposes. There is the logic there to get the right rates?

A. We are not responsible for reproduction new being placed in the act as one of the elements determining fair value.

BY MR. RHODES:

Q. You may not be responsible for the theory, but you are for the way you apply it?

A. Yes sir.

BY MR. HAGMAIER:

Q. Are not the engineering facts and figures prepared and furnished to the Commission?

A. Yes, but they cannot perform the services which the Legislature says that we are to do.

Q. They go out and make the survey and make a report to you; how much is that worth to you?

A. I think we have one of the best engineering bureaus we could have, and I think their reports are followed in 90% of the cases, but there are cases where we cannot agree with them. Here is a good illustration in this case. Here were five or six engineers, and no two of them agreed and our engineering bureau did not agree with any of them. In fact four of them are wrong, and it may be that they are all wrong and in view of that fact somebody must determine the actual fact and the Legislature has placed that duty on the Commission.

BY MR. COOKE:

Q. You actually depend on your bureau to count right and measure right; that is not debatable?

A. Yes sir.

Q. What is there about engineering outside of counting and measuring right that you depend on your engineering bureau for. I don't like this idea that there is nothing about engineering except arithmetic. You do depend on them to count right and measure right, but beyond that according to your testimony the act doesn't permit you to depend on any thing that I always assumed to be a reality, engineering.

MR. TURNER: From some of the evidence we have had here I don't think there is even arithmetic in engineering.

MR. COOKE: I would like to explain that. I am attacking your testimony, but I think that everybody—tell me what there is in engineering in your opinion, beside counting and measuring that you depend on; are there any engineering principles applied to this work that you depend on?

A. If you will permit me to answer that question, I will do it. We have a lot of engineering to do with grade crossing matters. We rely on them when we send them out to make an observation as we do in some cases. We don't have enough of them to do it in very many cases, but when we do we follow their judgments, but in this case that was not done so we relied upon the engineers who made the valuation. Our engineers didn't do it. Dr. Snow, when we asked him to make these tabulations, he went a little farther. He set up as his own judgment as to what he thought the valuation was based on the testimony. That is not his province.

Q. You didn't ask him to do that?

A. I did not.

Q. You didn't.

A. I don't know whether he received specific instructions from anyone, but I think that is not his province, because in doing so he has to pass on the credibility of witnesses to obtain a knowledge of the subject, and he cannot do that under the law, and there is only one with authority that can do that, and that is the Commission, and for that reason they do not necessarily follow his judgment in valuation cases unless he went out and valued the property, but in this case he merely

went over the testimony and fixed his judgment on the testimony of other witnesses.

BY MR. RHODES:

Q. He gave you that for what it is worth?

A. Yes, but we are not obliged to follow that because we heard testimony.

BY MR. COOKE:

Q. You were entirely ignoring the fact that overhead goes away down?

A. That is true.

Q. Are you going to determine the company's experience, and determine these details of overhead? It has been testified tens of thousands of items here?

A. It is in the record for the Commission to pass on it and I say it is our duty to pass on it and not the duty of the engineering bureau.

BY MR. HAGMAIER:

Q. The other day it was testified that your engineers went out in the State, they practically agreed on a figure, three sets of engineers practically agreed on a figure, and it was not worth the paper it was written on to the Commission?

MR. TURNER: What case was that?

MR. EVANS: The Luzerne Gas Company.

THE WITNESS: When was that?

MR. EVANS: It was heard on Wednesday. I think it was before you were on the Commission.

MR. HAGMAIER: Pardon me, I didn't know you were not a member at that time.

MR. TURNER: What were the valuations placed by the engineers on this real estate? You say there were three different groups of engineers that gave valuations on this real estate?

A. If I left that impression I was mistaken. The real estate was appraised by, I think there were only two.

Q. What was their figure?

A. The respondent's real estate appraisal was \$5,562,246.

Q. Who made that?

A. That was made by a board of three, I cannot give their names, but there was a board of three selected. The plaintiff filed a valuation of \$1,286,640, and Dr. Snow recommended a valuation of \$3,781,456.

Q. What did the Commission decide?

A. \$3,781,456.

BY MR. EVANS:

Q. Mr. Young, in the August report, you fixed the valuation at \$4,181,456.

BY FATHER COX:

Q. When you and Mr. Aincy and the Commissioners state you don't have sufficient personnel to make an investigation and all that kind of things, what is the use to have anybody if you don't take their opinions?

A. I stated that our engineers go out and make their valuations and we accept their judgment, but we don't accept their judgment when they base their valuation on testimony received and which they didn't make themselves.

Q. Dr. Snow stated he had visited this property?

A. He did visit it, but he didn't make a valuation on the ground; his figures he set up here were all on the basis of the testimony.

Q. Would it not have been a good idea to have him investigate it thoroughly?

A. I think he testified the other day how much time and costs he would have had.

BY MR. EVANS:

Q. Now, Mr. Young, you have just stated there were four or five, or five or six engineering firms all of whom differed in their figures. Is it not true that the respondent's engineers came within 2% of each other in their values?

A. They were pretty close together but they were not exactly the same. In some items they were quite different.

Q. Two per cent. is a pretty close valuation on fifty millions of dollars, is it not?

A. I don't think it is that close.

Q. Is it not also true that the complainants' engineers, Professor Berim, Craig, and Frick, and Dodson, all sustained the valuation of the Lance Brothers?

A. They didn't all do the same work. I think they sustained the Lance Brothers in that part that they duplicated the work in, but my recollection is that Craig did a certain amount that no other engineer did, and I think Dodson did some work that the Lance Brothers didn't do, and Bemus testified as to depreciation and the Lance Brothers really made a valuation for the complainant supported in some particulars by these other engineers.

Q. Did Morris-Knowles make a valuation?

A. Morris-Knowles took the inventory of the Public Service Engineering Corporation and from that reached a conclusion.

Q. I say, did they make a valuation?

A. That is the kind of a valuation he made.

Q. He didn't do anything to check the valuations already put in?

A. He took the inventory and checked it and applied the unit cost.

Q. What three firms made valuations on the property for the respondents?

A. The three I mentioned.

Q. Morris-Knowles you state didn't make a valuation?

A. They did, but in doing it they accepted the inventory made by the original appraisal and attached a unit cost to the several articles.

Q. You were aware that Morris-Knowles made a valuation when you made the report, yet you didn't think it worth while to refer to the others except one?

A. Where there was a difference.

Q. One was the complainant and the other the respondent?

A. That was not the difference; the difference is that Dodson only did a very small part of the work and he didn't undertake to make a valuation of the whole property. That is also true of Bemus and Craig.

Q. That is true of Morris-Knowles also?

A. I would not say so.

Q. Will you produce his appraisal?

A. It is in the testimony. The amounts are in the testimony. The amount of his appraisal is in the record.

Q. What do you mean by appraisal?

A. In the sense that he went out and viewed all this property and listed it and made an inventory and put a value on it, he didn't do it; he took the inventory made by the other company, went over it, viewed the property and put his unit cost on it and reached his conclusion of the property.

Q. He didn't do any more than check the certain unit costs of the other engineer—

A. No sir, he changed some of the figures. He did not agree.

Q. That is what you call a valuation and base your findings on?

A. I think it could be called a valuation. I wouldn't say how much weight ought to be given to it.

Q. You say it was the effort of the entire valuation to get this valuation down as low as you could?

A. Yes sir.

Q. What business has the Commission to try to get a valuation down? Isn't it the business of the Commission to find a fair value of the property, find what the fair value of the property is?

A. Yes sir.

Q. Why should you want to cut it down?

A. I think they felt that the valuation that was made was too high. The respondent's engineers put it at \$58,000,000—

Q. I am not talking about the respondents, I am talking about what the Commission did. The Commission found a valuation of approximately \$27,000,000; then you come in here and say that the Commission after that time tried to cut it down?

A. They felt the figure was too high.

Q. Do you think that was fair to the company—\$47,000,000 was a fair value?

A. Yes sir.

Q. Ought you not to have stuck to it?

A. We felt that was too high. That was the reason we reduced it.

Q. You have no inkling of anything that was brought to your attention that made you think so.

A. I hope we won't have to go over that again.

Q. If you will be a little more frank and a little more specific and a little less vague, we wouldn't have to go over it.

A. I am not disposed to be evasive. I think I have answered every question. I will not answer them just the way you want me to. It is purely a matter of judgment. I cannot point to any single thing in the testimony that determined that.

BY MR. HAGMAIER:

Q. \$3,000,000 is a pretty good sized item. There ought to be some item there with a couple hundred thousand dollars?

A. We changed a number of items. The reason for changing a lot of them was a matter of judgment. You cannot give any explanation for it. That is the way it is done. You have to exercise your judgment.

BY MR. COOKE:

Q. You think it is proper in order to get a valuation to subtract from both the reproduction cost new and reproduction cost—

A. That was an error. I can recall that incident. I stated that someone—my recollection is that it was Dr. Snow, in preparing this new draft that these figures be adjusted. It was not done. Nobody detected it.

BY MR. RHODES:

Q. Don't you think that this reproduction cost new theory is not only a matter of judgment, but a matter of guesswork?

A. You may call it judgment or guesswork. It is a conclusion that is reached by those who have the performance of the task.

Q. If there is any other method of that theory which would conform to the constitution, don't you think it should be adopted by Pennsylvania?

A. Yes sir; I don't know of any—to conform to the constitution.

Q. There seems to be a difference of opinion about that, as to whether or not there is any. We had quite a lot of evidence that there is a theory that would conform to the constitution and still be more definite. If there is such a theory, don't you think that the law of Pennsylvania should provide for the adoption of that theory?

A. I would want to know what it was.

Q. I am asking you if there is such a theory that would be more specific and more definite, and still conform with the constitution, don't you think it should be adopted in place of the reproduction cost new?

A. It is hardly fair to ask me to pass my opinion on a matter that I don't know anything about. It may conform to the constitution; it may be more definite; and still not be desirable.

Q. I am asking you a hypothetical question. If there is such a method that is more definite than the reproduction cost new, if that method would still conform to the constitutional provisions, don't you think we should adopt it as a more definite method?

A. I will answer it no, with this explanation: You are presuming in your question that definiteness and conforming to the constitution are the important things in reaching the conclusion. They are important. That doesn't include every consideration. A plan ought to be adopted that is fair. It ought to conform to the constitution; it might be definite; still it might be unreasonable and unjust to those who own the property. Your question doesn't involve every consideration that should be taken into determination in determining the plan of finding the fair value.

BY MR. EVANS:

Q. Mr. Young, I show you a report submitted by Chief Snow to the special committee of the Commission, Hon. W. D. B. Ainey, Chairman, Hon. J. B. Brown, Hon. Chas. E. Young, under date of August 12, 1930, attached to which is a Schedule of real estate, rights of way and water rights, totaling \$4,181,456. I ask you whether that was not the basis of your real estate valuation in your August report?

A. Yes sir, it evidently was—the same figures.

Q. That is an itemized statement, giving the valuations by zones for the Scranton property, and by accounts in the Spring Brook Division?

A. Yes sir.

Q. What items did you take out of them in order to reduce the value \$400,000?

A. We didn't take any items out.

Q. What made you arrive at a figure of \$400,000?

A. We were dealing with totals, as I explained to you before. We reduced the total amount \$400,000, without taking any item out.

Q. Without considering any of the items which go to make up that total?

A. No sir.

Q. You left the water rights in in the sum of \$300,000 in your total valuation?

A. How do you mean?

Q. This gives water rights for the Scranton Division, \$200,000,—water right, Spring Brook Division, \$100,000?

A. We afterwards reduced this valuation. Those were cut out—

Q. You just said you didn't cut out anything?

A. We didn't cut out any individual item; we reduced the valuation.

Q. You did not cut out the water rights?

A. No sir.

Q. What did you allow for water rights in your total valuation?

A. We made no separate allowance for that item.

Q. As a common sense business man, is it possible for you to take 50 parcels of real estate and have them all valued and add up those values to a total; then in order to reach what you consider a fair value, lop off \$400,000 from that, and say that is the fair value of the total?

A. I think it is.

Q. Have you ever seen real estate valued that way in condemnation proceedings?

A. It is impossible for the Commission to view each one of the properties—

Q. Did you ever see real estate valued that way in condemnation proceedings?

A. No sir, we are not the individuals that viewed the property. We are only passing on the testimony.

Q. What was the testimony which made you decide that \$400,000 was to be knocked off?

A. All of the testimony with relation to the real estate.

Q. It was an arbitrary figure pulled out of the blue?

A. Like all of the other things, it is the exercise of the judgment, under the testimony.

Q. What you have said in regard to this change of value of real estate, applies, I suppose, to all of the changes that were made from the July report to the report—in round figures, varying from \$50,000 to \$874,953?

A. Yes sir.

Q. In other words, you took your pipe lines—we will take tanks and standpipes, and in the exercise of what you called judgment, said that the value of \$854,189, determined upon by your Bureau of Engineering, and embodied in the July report, should be increased by half a million dollars?

A. That is correct, if you have the figures correct. Yes, that is correct.

Q. You believe that is a proper way of arriving at values of physical property?

A. I don't see how the Commission can do it any other way. We had totals; we had the value placed by the complainants; we had the value placed by the respondents; we had the suggestions made by our own engineer—

Q. Wasn't it based on the evidence?

A. Yes sir, as I stated before, certain things he cannot pass on.

Q. Why couldn't the engineering bureau pass on the values of tanks and standpipes?

A. Because there is labor involved in the reproduction cost new; material and labor. There is a dispute, vast dispute, between the engineers as to what they would cost. Now, it is up to the Commission to determine what weight to be given the testimony of those engineers who testify.

Q. In valuing physical property by the Commission, isn't the first thing that the Commission arrives at a determination of the inventory of the property, based on the testimony?

A. Yes sir, we have to determine what property there is to be valued.

Q. Used and useful?

A. Yes sir.

Q. You determine that there are one hundred or one hundred and fifty miles of pipe lines, of certain size?

A. We have to determine what property there is, used and useful, and then take whatever the amount may be.

Q. In order to reach a value of this property, you have to apply unit prices?

A. That is the method followed by engineers.

Q. Is this the method followed by the Commission?

A. You mean in this particular case?

Q. I mean in this case and other case—I assume you have some method?

A. I wouldn't say it is.

Q. This is interesting. You mean to say that in determining the value of the property, the valuing of a pipe line, the Commission does not take the length of the pipe line and apply unit prices to it?

A. That is not what I said. If I did, I did not understand your question. I mean, in determining the values, when it comes to a final determination, that we don't sit down and figure, here is a pipe line, three or four miles long, we fix a unit price per foot or yard, or mile, determine that first, then multiply it by the length of the pipe. We have before us the totals by the different witnesses. We determine the lump sum, either one way or the other. That is the way this was determined, and in every case that I have had anything to do with.

BY MR. RHODES:

Q. In other words, your judgment is unrestrained?

A. I wouldn't say so. I don't think it makes much difference whether we say we have a few pieces of pipe, it is worth so much, or whether we fix the value on the total.

BY MR. EVANS:

Q. If you would have a witness who testified that a pipe line, whose length is undisputed, the character of the ground is undisputed, thru which it is run, the character of the pipe is undisputed—and one witness says that the pipe line is worth \$100,000, and another one says it is worth \$50,000, and the Commission says we can fix the value anywhere between those two without determining anything about the unit cost?

A. We don't sit down and figure those things out. The Engineering Bureau brings that to us in totals. We consider the weight to be attached to the witness who testifies, and determine the amount in a lump sum.

Q. There are a thousand meters in a water system of the same kind, are bought at the same time, and one witness says these are worth \$15 apiece, another witness says they are worth \$12 apiece. Does the Commission not decide whether they are worth \$12 or whether they are worth \$15?

A. I think we would.

Q. Then you do determine unit prices?

A. I consider unit prices, but in fixing amounts, we use the totals. That detail work is all done by the Engineering Bureau.

Q. I am speaking of the action of the Commission. The Commission has stated that the Engineering Bureau had no authority of any sort to fix values. Therefore, the duty of fixing values is on the Commission?

A. The duty of passing on the weight to be attached to the testimony of the witnesses is on the Commission.

Q. I am talking about the duty of fixing the values?

A. That is on the Commission.

Q. That can only be fixed by a determination of quantities and unit prices?

A. I wouldn't say that. We can fix the value on a large quantity of material, fix it as a total, or at a unit price, and determine what the total is. I recognize the facts that the engineers determine those things by fixing unit cost.

Q. You in this case paid no attention to unit cost, but took lump sums in fixing the Commission's valuation?

A. That is correct.

Q. Who gave the instructions to the Bureau of Engineering as to what they were to do after this case was argued?

A. I cannot tell you that. I presume it was the Chairman.

Q. The Chairman said he didn't do it, that probably it was you or Commissioner Brown.

A. The chances are, Mr. Evans, it was done right in the Commission's session, when they talked the thing over. They determined on certain things, and Dr. Snow was there. He had his instructions from all of us—I cannot recall the exact facts.

Q. You spoke of his having been instructed to prepare the analysis of the testimony, but that he went beyond his instructions and put values on it?

A. I differed with some of the members of the Commission as to the right of the Engineering Bureau to determine values based on the testimony, and present it to the Commission. As a legal proposition, I don't think that is his province. Some of the Commissioners think that is all right.

Q. In most of these items you accepted the valuations of the Bureau of Engineering?

A. The Commission did.

Q. Didn't you accept them individually?

A. I voted for the report.

Q. Your decision sets forth each item separately of the physical property, does it not?

A. Yes, because I was satisfied with his figure. I am speaking as a legal proposition, I do not think he ought to be permitted to do that. I think the parties have a right to cross examine him if he undertakes to fix valuations.

Q. Who determined which engineer in the Bureau of Engineering should work on this case, in doing this work, which you directed them to do?

A. The Commission, I think, left that to Dr. Snow, to assign anyone of his staff that could do the work. In fact, I don't know all of the engineers that did work on it.

Q. That was left to Dr. Snow?

A. Yes sir.

Q. In your report in regard to the "original cost, you state, "The Commission has given careful consideration to such evidence of original cost as can be included as an element in determining the present fair value of existing property." did you take the original cost of this property as shown by the evidence.

A. The original cost was not determined in that—

Q. Did Mr. Heinbockel testify—

A. He testified as to the original cost. He gave testimony as to the amount as he could determine it by the records, and then made computations. Where the records were not complete, that was not a complete record of the original cost.

BY MR. EVANS:

Q. And he reached a value between \$24,000,000 and \$25,000,000 for the original cost of the property?

A. I think that was his figure, but the Commission didn't regard that as the original cost of the property.

Q. What evidence were you referring to when you said you were giving consideration to the original cost?

A. We gave consideration to the testimony of Mr. Heinbockel as far as it went, but it was not complete.

Q. What did the Commission determine was the original cost?

A. We didn't determine any figures but found it could not be determined.

Q. I read you a portion from your report: "Nevertheless, the Commission has given careful consideration to such evidence of original cost as can be included as an element in determining fair value of the existing property."

What consideration did you give to the original cost?

A. I don't think it entered into the determination of fair value at all, for the reason it was not complete, but we considered it because it was evidence of the original cost, but in our consideration we could not place any reliance on it because it was not complete.

Q. Now, Mr. Young, somebody reading this report and reading what the Commission says, "Nevertheless the Commission has given careful consideration to such evidence of original cost as can be included as an element in determining the present fair value of the existing properties," do you think that conveys the meaning you have just stated, namely, that the Commission didn't consider original cost because they did not consider there was sufficient evidence? Does this convey to your mind the actual facts of the situation that I have just read to you from the report?

A. You read from the report correctly.

Q. Does that convey to your mind the correct picture of what the Commission did with the original cost?

A. Now, I don't know what you mean, Mr. Evans.

Q. I mean this; this sentence is put in here to give the impression you considered original cost?

A. Yes.

Q. And you just said you gave no consideration to original cost because there was not sufficient evidence on which to do it. But regardless of what you said, let us find out what the facts are; did you consider original costs?

A. Yes.

Q. What original costs did you consider?

A. We considered the testimony of Mr. Heinbockel, which is really the only testimony in the record relating to the original cost, and inasmuch as Mr. Heinbockel's testimony disclosed that he could not get complete records of what was the original cost, but he made computations approximating what he thought was the original cost of the property, the Commission could not rely on that testimony to determine a figure representing original cost, and did not.

Q. In other words, you had no means of finding as to the original cost, nor did you give it practically any weight in reaching your conclusion?

A. I think that is true; we could not find any figure.

BY MR. RHODES:

Q. You considered it, but you considered it was worth nothing?

BY FATHER COX:

Q. Original cost is like original sin, it causes all the trouble and nobody has any control over it.

A. It is very apparent when some of the figures are lacking we could not rely on it.

BY MR. EVANS:

Q. Did it not appear from the Downes report that some six million dollars or more of excess earnings were piled back into the property?

A. I cannot give you the exact amount, but I know there were some excess earnings went back into the property.

Q. So when you found a reproduction cost depreciated of \$44,651,459 in your final report you knocked off approximately a million dollars and said that the full value was \$43,650,000?

A. We fixed a fair value and the law allows this, reproduction new.

Q. What elements did you take into consideration in fixing it at less than reproduction new?

A. Well, that is the figure that was probably arbitrarily fixed. There are a number of things that we considered, such as the trend of prices at the time. At the period during which these rates would prevail the property might become lower, that would be one element. I don't know what was the controlling factor in fixing that except that it was what was agreed upon by the Commission.

BY MR. COOKE:

Q. They just exercised their judgment?

A. They cannot get too far away from reproduction new without being reversed particularly in this case, because there is no complete evidence of original cost.

BY MR. EVANS:

Q. Now Mr. Young, we talked a little while ago about your valuation of pipe, and you said you gave no consideration to unit price but just fixed lump sum items that came within the range?

A. Yes sir.

Q. What does your report mean when it says, "The Commission in arriving at the cost of pipe took into consideration the unit cost \* \* \* and has constantly endeavored to arrive at what might be an average price over such a period?"

A. As to pipe, we had fixed a unit price of \$36 a ton.

Q. You said you did not?

A. It is so stated in the report, but I think that is the only unit price that is definitely so stated.

Q. Then what was it that made you in the item of distribution mains, when the Commission had found a depreciated value of \$8,554,189, as set forth in your July report, increase that figure to \$9,054,189, an increase of \$500,000 flat.

A. Well, that could be caused by the cost of labor.

Q. It could be caused? I say, what was it caused by?

A. I cannot answer that. I don't know what the picture was except that it was just the judgment figures as I stated before.

Q. And you want to correct your previous testimony in saying you did consider unit prices now? That is the very item we were talking about before?

A. I don't think that my testimony would justify the statement we didn't consider unit prices. What I was referring to, Mr. Evans, was that when we came to the final determination and adjustment figures, and these figures were all up

in lump sum, then unit prices were considered because we considered all the testimony and Dr. Snow's details were made up from testimony where the unit prices were considered.

Q. Your report says, "We changed the price per ton for cast iron pipe \* \* \* \$38 with proper increases for smaller sizes and weights of pipe." What price did they use for pipe in the engineering bureau?

A. \$38 a ton.

Q. So you added a half million dollars on, and you must have increased the length of the pipe line to justify that?

A. Not necessarily.

Q. What did you do?

A. As I stated before, it could be taken up in this cost of labor.

Q. Was it?

A. I cannot answer that, except we added that much on there and added on several other items in lump sum; we didn't figure that out in unit cost.

Q. As of what date did you make your valuation, Mr. Young?

A. The decision was made on December 9th.

Q. Did you value the property as of that date?

A. It would be as of the date when the testimony was closed.

Q. Were not all of the respondent's figures based on an appraisal as of May and July 1st, 1927?

A. Yes sir, but there were additions made subsequent to that; their appraisals were corrected including certain additions made after that.

Q. Have you added no cost of extensions and betterments from July 1st, 1927, or ought you not also to have included accrued depreciation from July 1st, 1927?

A. I think that that would be correct, if you added the additions that you ought to depreciate the property for that period.

Q. You fixed \$200,000 as the annual depreciation allowance did you not?

A. Yes sir.

Q. So there should have been three years depreciation taken from that figure?

A. I would not think it would be three years.

Q. Didn't you fix the value of the property, reproduction value less depreciation as of July 1st, 1927, and after that the extensions and betterments?

A. My recollection is that that was fixed as of July 1st, 1928, the effective date of the appraisal.

Q. You largely took the respondent's appraisal which was made in 1927?

A. Yes sir, but we made corrections.

Q. You made corrections by adding the extensions and betterments?

A. And the depreciation; I presume we depreciated the property as of the date of July 1st, 1928, at least it should have been done.

Q. Now Mr. Young, here are the engineering sheets showing the cost estimates as of May 1st, 1927?

A. I don't know whether any corrections were made in them afterwards or not.

Q. That is a pretty important item?

A. Yes, but this one item would be found to be fair value which is less than reproduction new.

Q. When you testified previously before the Committee you stated that a check recently made by the Commission showed that it decided considerably more than half the cases in favor of the public. In response to my request that you file the rate cases decided in the past six years you have submitted a paper showing the rate decisions of the Commission?

A. Yes sir.

I OFFER IN EVIDENCE A TABULATION OF CONTESTED RATE CASES DECIDED BY THE COMMISSION 1926 TO 1930 AS EXHIBIT NO. 160.

BY MR. EVANS:

Q. Now Mr. Young, so far as rate cases go, you have in the case of railroad rate cases decided eighty-six (86) in favor of the complainants and twenty-eight (28) in favor of the railroads, have you not?

A. That is correct.

Q. And in electric cases, one complainant has been sustained and three have been dismissed?

A. That is right.

Q. In the other utilities including water, gas, electric street railways, sewer, auto bus, steam heat, bridges, you have sustained twenty (20) complaints and dismissed thirty-four (34)?

A. I have not figured this. I notice that as to water companies, there are eighteen of them sustained and ten dismissed, and the others I suppose, the majority of them, are the other way.

Q. Can you explain why it is that the railroad rates are so much more subject to attack than the rates of other utilities?

A. I think I can explain that difference. The reason that there is a difference between railroad rates and other utilities is because of a different method used in determining the railroad rates than there is in the other utilities. In determining whether a railroad rate is unreasonable we do not make an examination of the property. That is made by a comparison with rates in other localities and sometimes on products and not by determining a fair value of the property, while as to the other utilities we determine the rates by first fixing the value of the property and taking into consideration the operating expense. In recent years we know there has been an increase in costs and that accounts for raising the rates in a good many utilities.

Q. Is that the real reason because in railroad rates you are bound in a large number of the cases by what the Interstate Commerce Commission has done?

A. In part that is true, because if we fix a rate that discriminates against the awards of the United States Commerce Commission, the Commission can strike it down. As to intracommerce rates, the Commission is authorized to fix those rates. I don't know of where that Commission ever struck down a rate fixed by the Pennsylvania Public Service Commission.

Q. Here is a case where you have dismissed eight and decided none in favor of the public?

A. That is true; the reason is that the cost of producing and the distributing cost has gone up very materially in the last few years.

Q. Here are the street railways, you dismissed five and sustained none?

A. The same is true of street railways.

Q. Auto busses, you dismissed two and sustained none. Did the cost on that go up?

A. I would not say that.

Q. Steam heat, dismissed two and sustained none. Has the cost of steam heat gone up in the last two years?

A. I would not say so.

MR. TURNER: Are we going to meet tonight?

MR. EVANS: We have plenty to go ahead with; it is for the committee to say.

MR. MOORE: The Committee is perfectly willing to go ahead.

MR. YOUNG: May I be permitted to request that the Committee consider this tabulation that we have prepared from the briefs on file with reference to third class cities. I think that is important. It is up to the Committee to determine whether they want to consider it or not.

MR. EVANS: I offer in evidence, exhibit number 161, comparative rates of water companies serving in third class cities submitted by Commissioner Young.

(Paper in question so marked)

BY MR. EVANS:

Q. In connection with this exhibit, Mr. Young, I ask you whether the Commission has not determined the rates of the Wyoming Valley Supply Company in Hazleton?

A. I couldn't answer that. I don't believe they have since I came on the Commission. They may have.

Q. Will you look that up and advise the Committee, because I am advised that they have determined those rates?

A. Yes.

JOHN FOX WEISS sworn.

BY MR. EVANS:

Q. Mr. Weiss, you are counsel for the Public Service Commission, are you not?

A. I am.

Q. How long have you been counsel?

A. I have been counsel since the fall of 1928, I think; and assistant counsel prior to that time, from July, 1918.

MR. TURNER: Mr. Weiss has testified before the Senate Committee. Are you going into a wide scope of that, or are you going to carry up this testimony to what is before us?

MR. EVANS: I was going to cover the Scranton-Spring Brook situation.

MR. TURNER: That is what I meant; that it did not seem necessary to go into the general scope of the testimony that was before the Senate.

MR. EVANS: It is for the committee to determine how far they will go.

MR. TURNER: Well, that is my opinion.

BY MR. EVANS:

Q. You have been familiar with the Scranton-Spring Brook Water Case, have you not?

A. In a very superficial way.

Q. Did you attend any of the meetings at which testimony was taken, Mr. Weiss?

A. Not one.

Q. Were you present when the case was argued before the Commission in April, 1930?

A. I was.

Q. When were you first consulted in regard to the case by the Commission?

A. The first thing I knew about the case was some time about the middle of July. I don't carry the exact dates in my mind, but it was some few days before Dr. Snow, who was not well at that time was leaving for New Hampshire for his vacation, and it was noised about, or else on the calendar; I don't know which; that the Scranton-Spring Brook report was ready, and was coming up, and the first contact I had with it was when it came up in executive session; and by that I mean when the Commission meets in consultation to discuss matters, hear reports on hearings held during the week, to discuss and determine on reports to be issued. I presume it was on the calendar, although I don't know; the first I knew about it was on Monday or Tuesday; I think specially fixed on Monday; the minutes will show; and this report came up for consideration. It was a three hundred page report; possibly two hundred or three hundred page; written by Dr. Snow, and when it came up in time and was ready; probably one hundred or one hundred and fifty pages which I think Mr. Hopwood at part of the time, although largely by Mr. Mather, the assistant counsel, and myself; and as I recall it some of the Commissioners reading intermittently.

Q. And that paper which you have before you, entitled "Original copy of proposed original report of the Scranton-Spring Brook Water Service Company on valuation for rate making purposes submitted July, 1930 by Chief of the Bureau, Mr. Snow," is the paper you are referring to; is it not?

A. This has one hundred and ninety-two pages. I thought it was longer than that, but I think that is the report; at least it was the one that Dr. Snow wrote.

Q. According to the minutes of the Commission, this was at a session held July 15, 1930?

A. I think that's right.

Q. What was your next connection with this matter, in any way?

A. Possibly the next day or several days—two days, perhaps I—was called into the Chairman's office and the Chairman asked me to take charge of this report, and to write a revised report, and to submit it to the Commission at its next executive session. Of course, that was a week away, or two weeks, perhaps. In the summer time, frequently we are on a two week schedule of the executive committee, instead of every week, and that, of course, started a discussion with the Chairman—and by the "Chairman" as we call him, I mean, Chairman Ainey—as to what was wanted.

Well, frankly I planned a trip to Europe for a vacation, and I told the Chairman that (which he knew) but the upshot of the matter was that I said, of course, if it is work that has to be done, I would stay home and do it, and I asked for information upon the matter. I didn't know a thing about the case until we read Dr. Snow's report a day or two before, and, of course, that was a "once-over," but I didn't get much out of it because of my unfamiliarity with the case, and I asked him what the Commission—what the views of the Commission were in the matter and what their thought was. The Chairman, said that he thought I could write a report and still go to Europe, but

I said, of course, to my mind, that that was out of the question, and the Europe reservations were given up, and I buckled down to this report.

Mr. Mather came in with me, and together we took up the matter, and then asked for advice with respect to the various bindings and conclusions. I didn't know a thing about the report. It was voluminous, as I guess you know by this time; and I asked what was wanted in regard to reviewing the report and with regard to making our recommendation, our findings, our criticisms on a report submitted.

I don't mean to recite all the details, but the up-shot of the matter was that the Chairman, either then or within a day or two in the company of Commissioners Young and Brown gave a statement, a composite statement of figures, in which there was a total figure of physical property; I think one or two items in it—real estate, I remember, was set up, and then certain percentages of over heads; and that was at this time the committee's judgment as to the figures which should be embodied in the report and which represented their judgment.

I asked for details, asked whether we didn't want various items of physical property built up in the usual way, and discussion had with respect to the various items—real estate, for instance; as to how the figures—I don't for a moment carry the figures in my mind—as to how the item of real estate was arrived at, and there would be a discussion on that, the summary of the reasonably large tracts—some index, if you please, as to which, if the matter were going to the appellate court and be reviewed by that court, there would be some findings to exercise the Commission's judgment upon the evidence and the Committee thought that that was not necessary; legally that that was not required; that they could exercise their judgment and make their findings, and that that was all that was necessary to be embodied in their report.

So, we started in to write a report. Dr. Snow had in the meanwhile gone to New Hampshire, and the one assistant who had particularly worked with him in the work, did not feel free to express his own judgment as to figures, because his chief had made conclusions and recommendations and findings, and he decided, naturally, to abide by this by his chief's conclusions and findings.

Q. Who was that engineer?

A. That was Mr. Parmley.

Q. So, then, on the basis of those instructions you prepared a tentative form of report, did you not?

A. Yes. But before that we met with this committee—Oh, a half a dozen times, perhaps,—and each time we discussed figures, all in totals, if you please, and percentages to be applied for over heads, and we shifted and gave and took including all of the items I think; working capital, going concern value, and all the percentages of overheads—I think every one of them was somewhat changed during the process of reconsidering and revamping the figures, but all hanging if you please, within reasonable limitations to the figures originally given—changed here and there, but if you please, but in totals, approximately very closely the figures that were given to us upon which we were to draft a report.

Q. In the July report—

A. Pardon me, was there a July report? You mean the Snow report?

Q. The Snow report

A. All right. Thank you.

Q. In the July report prepared by the Bureau of Engineering, the total reproduction cost new depreciated, with over heads, was fixed at \$47,065,430. What figure was arrived at corresponding to this in the report, which you prepared?

A. I haven't looked at this report, Mr. Evans, and gentleman, if you please, but I do not see instantly any figure of reproduction cost new depreciated, although I do find a finding of fair value, present fair value of the respondent's properties for rate making purposes, of \$46,982,636.

I don't recall whether there is a finding of reproduction new or reproduction new depreciated in the report. I think the tabulations attached to the last page of that report does show a finding by the Commission, and set-ups by respondent and complainant of the reproduction new and depreciated in parallel columns, and it appears to be—that is, of the physical property it appears to be that the Commission's finding new was \$35,238,354, and depreciated of \$33,587,571.

Q. And to that would be added the overheads as set forth in that report, which is here introduced as exhibit 151?

A. That is right.

Q. And, now did you agree with the findings as set forth in this report?

A. Of course, I was not a Commissioner, Mr. Evans, and it was not for me to agree or disagree. I imagine, myself, that it was pretty well understood around the Commission and by the Commissioners—although in this I may err—that from my very brief and superficial contact with the case, I was in accord with the dissenting or disagreeing members of the Commission and not in accord with the majority, though frankly—I want to emphasize this, that was not within my province.

BY MR. RHODES:

Q. Who were the dissenting Commissioners?

A. I think at that time—

MR. TURNER: I think the minutes show.

THE WITNESS: I think that time—I must be careful in mentioning names, because he may have another one may have come in later, I don't know whether Commissioner Collins was at that meeting or not I do know that Commissioner Shelby and Collins were the dissenting, and later, and I think they both were there at that time, if Commissioner Collins attended that meeting, the minutes ought to show. I speak wholly from memory.

BY MR. RHODES:

Q. Do you know what their opinion was?

A. I don't know what Commissioner Collin's opinion was, because he didn't have opportunity or take the opportunity to express an opinion to me. I do not know that at that time Commissioner Collins was a very sick man, and necessarily was detained from attending the meetings of the Commission. He was here later, I am sure, but I think both he and Commissioner Shelby dissented at that time. I do know that Commissioner Shelby expressed to me his opinions with regard to value, but I would prefer not to express or repeat those opinions unless he were present. He did it, of course, in confidence, and he asked us to do quite a bit of work—"us," I mean the law bureau—to do quite a bit of work for him, compiling comparative data and other information.

MR. TURNER: I think if we want information, we should ask Commissioner Shelby to come here and state it.

MR. EVANS: I think most of the facts are set forth as to that, Mr. Turner.

BY MR. EVANS:

Q. You prepared this August 6th report. Was there anything put in the report of which you did not approve?

A. Well, I thought the report—and in this way differed, as a matter of law, the Commission, the Committee and myself—I thought the report ought to have been more detailed, and ought to have been fabricated if I may use that word, and by that I mean follow the procedure ordinarily followed—I do not mean that that should carry any nasty implications either, but I mean follow the procedure usually followed,—namely, building your report, giving conclusions, as to real estate and saying how and why; finding, if you can, the original cost of the real estate, the historical cost, with your various bases of reproduction new, present—and depreciated, five year average, ten year average, and then when you make your findings and conclusions, dependent on those, and then giving a composite total of those findings, and thus come to a fair value, and I felt that there was not sufficient in the report to sustain it on appeal. And perhaps, I ought not to say that—since it is on appeal, but I was certainly of this opinion that I would rather have the data and the findings in the report, because when it went into the appellate court, we could argue on what the finding was, what it was from. My concern was not value or figures. My concern was, if we would go to the Superior Court, we would have something to turn to.

BY MR. RHODES:

Q. Why was this report treated differently than those of lesser magnitude?

A. I don't know; at least I don't know as far as I am concerned. I don't mean to carry the implication that there was anything different. Perhaps this may be a reason, this case had been going on for a long time. The company got through its case rather promptly but you must realize that it took time—I made the statement before the Senate Committee, which was not correct, and to which the people in the North-eastern end of the state took umbrage, and the solicitors of

these people up there; that the delay was due to the complainants. That was a very unfortunate expression. I didn't mean delay in the sense of procrastination. I should not have used the word "delay" but the time consumed, that was necessary in the preparation of the complaints' case, after the respondent had put in its case, because there was a tremendous volume of matter, and the complainants had to employ counsel, experts, of all kinds, and only got their case in by raising a fund among them, to give these men time to investigate and prepare the complainants' testimony. Now, that did take time. Then the case came up for argument, summer was coming on, and I think there was an urge all along the line to get a report out. I know that the Commission gave mandatory orders to have—such as I had never received, and such as I did not much fancy either—mandatory orders that it had to be out in a certain time. Well, they didn't get it out in that time, because it wasn't possible. A week was not enough to look at that report, and with all the findings and the shuttling back and forth on the figures which they had before them, and all the time spent in discussing them and arguing them, and the committee was giving us revised statements.

BY MR. EVANS:

Q. When you contrast this procedure with the ordinary procedure, which you have spoken of as fabricating, by following it up from the bottom, are we to understand that the committee, in effect gave approximately the total value which they wanted to find and directed that the items entering into that value should be adjusted in certain ways?

A. After the committee gave us an absolute schedule of figures, which we were to incorporate in the report; real estate in total; I think it was \$5,000,000 and some dollars. I don't carry the figures in my mind. I don't know where those schedules are. They were made up, and then certain percentages were applied for over heads, and those percentages were given to us, a certain figure for working capital, a certain figure for going concern value, and we were given the Snow report and this (indicating) and told to write a report. Well, of course, the only thing you could do was to write a history of the companies, and prepare something that was a report, but it, as I felt, was very sketchy, and then we went and wrote that report.

As I gathered it from the Commission, the purpose was to reduce, and I think I speak—to reduce the amount which the company was receiving under the temporary rates by approximately—I speak in rounded figures,—\$100,000, this August 26th report—and I say frankly, I have not looked at these reports, since August; I have not seen either of them since August—contains a statement to the effect that the experience of the company for the year ended June 30, 1929, shows a total operating revenue under the temporary rates of \$4,384,605, or approximately \$97,000 per year less than the above figure would indicate, and I thought the Commission was—that the rates prescribed, that is, the total allowable gross annual revenue should be such as would cause a reduction of the rates, by \$100,000 in round figures, under the temporary rates then in effect prescribed in 1928.

Q. I think your recollection can't be quite correct in that. You will notice that this says (indicating) that the revenue of the company is \$97,000 less the allowable revenue, so the effect of this report was to sustain the temporary rates which were then in effect.

A. Yes sir. That is correct. Here in a finding,—the last paragraph. They found the original rates excessive and unreasonable and discriminatory as against the consumers and find that the rates filed in accordance with the order issued, temporary order of December 21, 1928, just and reasonable and non-discriminatory, because, as I recall it, they were yielding \$100,000 less than the gross annual revenue found to be allowable by the Commission.

Q. According to the minutes, Mr. Weiss, this report was approved by the Commission on August 26, 1930, subject to certain minor changes, which the Chairman was authorized to make. Did you have anything further to do with the matter after that time?

A. Only to draw an order, and I think the Chairman did make some minor changes in phraseology, and I drew an order.

Q. Do you remember approximately, when that order was drawn,—

A. The same day or the next day.

Q. Was that by the end of August,—so that by the end of August, the case was ready to have the decision made public?

A. Yes sir.

Q. Do you know any reason why it was not then made public?

A. No. I know of no reason. I made an objection to the Chairman, to the form of the order drawn, which was drawn at his direction, if I am not mistaken, as to the time and order of events in this report, and if I recall that,—we might as well say exactly what happened,—as I recall it the Chairman thought the order should be drawn, and I may be confused in my facts, as I speak from memory, but my impression was he thought the order should be drawn, which would effect a reduction of this \$100,000, and I pointed out to him that this is not what the Commission decided, that the Commission fixed the sum of close annual revenue, and that I thought the order should be drawn, directing the company to file a tariff which was designed to yield a gross annual revenue prescribed by the Commission, and I pointed out to him, drawn the way he suggested, by \$100,000—they were reducing it by \$100,000. It could happen that the company still could have reduced revenues of \$100,000 and still be in excess of maximum gross allowable fixed by the Commission, namely, \$4,481,418, and I did that because of the fact that that was the amount agreed upon and I was of the opinion that the order should be drawn that way, the way we always do draw orders, directing the company to file a tariff, designed to yield that amount, and not the other way. I guess I got rather insistent in my argument. The Chairman was quite convinced the other way, and I thought sure that I at least would like to confer with Commissioner Shelby in that matter. We had done quite a bit of work for Commissioner Shelby and had discussed the matter with him from his standpoint. I asked the Chairman if he objected if I called up Commissioner Shelby. He told me the matter was placed in his hands, I should leave the matter with him. He told me very politely, but rather firmly,—that I had rendered all of the services necessary in that case, and I think I got just as positive and told him that I had rendered all the service that I would render in that case. We parted; I left. That was the last I had to do with the Scranton Springbrook Water case.

BY MR. RHODES:

Q. How was the order finally drawn?

A. I don't know who drew it. The report subsequently adopted in December was changed somewhat in phraseology, and the order was drawn by someone else. I don't think in my bureau,—if in my bureau, without my knowledge, and I know nothing about that report and had no contact with it.

Q. Did you try to find out whether the order that was drawn in December was drawn in accordance with your ideas, or in accordance with the ideas of the Chairman?

A. I would rather, if you please, gentlemen—and I don't mean this discourteously—I would rather that you draw your own conclusions from the order. I think, if I may express my opinion, I think it conforms to my thought though not in my language. I may be wrong in that. One of the paragraphs read that the Scranton-Springbrook Water Service Company file, post and publish, effective January 1, 1931, upon one day's notice to the public and this Commission, a new tariff schedule, reducing the gross annual revenue of said company to an amount not in excess of \$4,219,000, such reduction to be applicable to the rates to domestic consumers. My usual phraseology is, that the Scranton-Springbrook Water Service Company file, post and publish, effective upon one day's notice to the public and this Commission a new tariff schedule designed to produce a gross annual revenue not in excess of the amount of such reduction, that is to go in, to be applicable to the rates to domestic consumers.

Q. That order is changed from the one you originally drew?

A. This is not the same order.

Q. It is changed in the respect we have been discussing?

A. Yes sir; I drafted the order, the August order for this August 26th report, in compliance with the Chairman's instructions.

BY MR. BOWERS:

Q. Has it been the custom of the Commission in other cases to have someone other than your Bureau draw orders?

A. It is not. Let me qualify that. Yes, in automobile cases—cases under that classification.

BY MR. EVANS:

Q. But not in rate cases?

A. In all cases where there is a contest of a rate, the order is drawn to my knowledge by us, the Law Bureau, and I o. k. it every time, before it leaves—either Mr. Mather or myself, and I think I do it 99 times out of 100. It goes through the final machinery, typewriting, and so forth, on my o. k. Or it may be drawn in the Bureau of Rates and Tariffs on railroad rates, submitted to me for o. k. Chief Snow does nothing as a final right, by way of reports or orders, unless it has the o. k. of Mr. Mather or myself. There may be possible exceptions.

BY MR. COOKE:

Q. This one did not have your o. k. or the o. k. of Mr. Mather?

A. Not to my knowledge. I say no. May I answer that this way: This copy before me is evidently the final writing. That would not have my o. k. upon it itself, but the rough draft which was adopted in the Executive Session, and which carries the words, "Approved" or "o. k." as the case may be—the initials of the secretary or acting secretary, and the date; then it comes to me. That copy is the basis for the typewriting and final captioning, punctuation and everything, in the secretarial office. When it is finally written, there is a little slip attached to the original, which carries the name of the Commissioner—a little printed form. It carries several things. We o. k. that copy to go to the Chairman for his signature, and it doesn't go to the Chairman until it contains Mr. Mather's or my signature on this slip.

Q. In this instance there was no order that had your o. k. on or that of Mr. Mather's. This copy has not Mr. Mather's or my o. k. I take it that that is the original copy. I didn't see that report myself until it was brought up in executive session on December 9. The original copy ought to have on it this slip containing the initials of the man who o.k.ed the order, and every order in my bureau. I should say in all bureaus, every order that goes out, carries the initials of the man who dictated it in the corner, or who wrote it, and my initials as the final o. k.

BY MR. EVANS:

Q. Were you absent from the Commission's office in December when this report was approved?

A. I was present.

Q. You were not asked to approve the final order that was sent out.

A. I was asked nothing and I said nothing.

BY MR. RHODES:

Q. When you speak of the approval of the final order, does that mean you did not approve of the entire opinion—

A. I didn't know what was in the report. I saw nothing from August 27th or 28th; I was through with the report, and I was not mistaken about that. I understood very decidedly that it was out of my hands.

Q. Your services were no longer required after August in that connection?

A. They were not. My instructions were so positive that I merely decided and made up my mind that I would not ask or inquire about anything else until I was interrogated about it.

BY MR. EVANS:

Q. Do you have any knowledge as to when the other considerable changes were made from the August report to the December report?

A. I have no knowledge when. I can fix the date as the one when the changes were not made.

Q. What date was that?

A. It was sometime after or very shortly after Commissioner Benn returned from Dakota and the northwest where he was on a trip.

Q. How do you fix that time for the changes not to have been made?

A. That I know, I have been told very positively that I was through with any contact on that August report, the last one in August, whatever the date was, I still made up my mind that I would express my opinion and views concerning it to Commissioner Benn, and that I felt that some serious fault could be found with it legally.

BY MR. TURNER:

Q. Why to Mr. Benn?

A. Because I came to have, perhaps erroneously, but I came to have an opinion that Commissioner Benn is the man who had the most influence with his colleagues. Commissioner Collins was a sick man, the Chairman was physically a much impaired man, and I tried just as hard as I knew how and I am sure the other chiefs did, to take every burden we could and to carry it ourselves, and to relieve the Chairman as much as we possibly could in matters of importance.

BY MR. TURNER:

Q. Was your position on the final report as found or in the manner in which the report was prepared?

A. Primarily and distinctly on the way in which the report was prepared. My own judgment was, though it was not a judgment to be compared to the judgment of the gentlemen who heard the case and who had studied the matter, my judgment was that that valuation, from my viewpoint, was away too high.

BY MR. RICHARDS:

Q. That led you to what conclusion?

A. It was discussed and the discussions we had in my own bureau and the discussions we had with the chief of the bureau of accounts and statistics, Mr. Morgal, and from the figures which had been submitted to me by the committee, and in my own composite picture and the coloring that goes in to make the picture.

BY MR. RHODES:

Q. Your opinion was that of the lawyer and theirs was the opinion of the jury?

A. Yes, and the lawyer's opinion is no better when you come to administrative judgment than another man's. Sometimes the lawyer's judgment is not a good one.

BY MR. RICHARDS:

Q. In your opinion, if you care to say, how much too high was this valuation?

A. I don't hesitate to say, if it will be of any help, but I say it if you please with that same condition, I might revamp my opinion upwards or downwards if I studied it in detail. My opinion was the maximum of forty million dollars, but I was not fixed in that and had I come to the point of a down-right study of the testimony, it might have been different, but I was persuaded in my own mind that I could not defend that case successfully on appeal on the report I read on account of these omissions, and yet the other lawyers thought it was splendid.

Q. Are you taking care of the appeal now to the Superior Court?

A. Yes.

BY MR. TURNER:

Q. Why did you want to consult Mr. Benn?

A. I tried to keep things away from the Chairman as much as I could. I knew this had been a tremendous task to him and I was trying my best to keep things from the Chairman and keep from burdening him with unnecessary details and I was not free to go back to him with this case after the instructions which I had had when it was taken out of my hands. When Commissioner Benn returned, I went to him and told him very frankly that I thought that opinion was wrong and I told him I would not defend it on appeal and he said he felt if I thought that way about it I ought to resign. I knew nothing more about the thing until December when the data came for writing reports, and on Monday or Tuesday this report came up, as far as I know with other reports, or it might have been the only one. It came up in the Chairman's office where we were in session, and I sat there and heard the report read and debated. Commissioner Benn went over the report with me and I pointed out to him particularly the items of real estate. This was probably in September, and I pointed out to him wherein I thought the report was reversibly weak in that great big item alone, and that there was not anything that the court would have to do so far as this report went that would give it a reason for this large block of land. I didn't go into tedious minutiae, but I would take a certain tract up and when we could reach an agreement I would note that down, then take another large tract or in a

certain group, if you please, and note that down, and another tract from a separate division, of the several sizes of this company, and note that down, and then build up the element covering the value as to real estate. Commissioner Benn didn't see this as I did, and very kindly and courteously but nevertheless firmly said that he sustained the Commission's actions and if I felt I could not defend it as it was, that I should tender my resignation and I said that if it came up on appeal and I was called to defend it I would resign.

BY MR. RHODES:

Q. It was your duty to tell the Commission wherein the report was not defensible?

A. Yes sir.

BY MR. COOKE:

Q. Mr. Turner asked you how you arrived at your conclusions on this, whether you did it as a matter of form, what you meant was these different items didn't have supporting data?

A. Exactly. I meant to give you this impression at least and to state this fact, first, I thought it was weak legally, and I felt that it was indefensible, at least I didn't want to defend it. I thought it ought to have supporting data throughout to go through with the report, and it ought to have this supporting data behind it. That is the way I wanted it to be. It is not for me to say and I certainly would have taken the Commission's findings and defended them if I could. I want to again emphasize that my judgment was a sort of a snap judgment and one that ought not to be considered as against the judgment of the Commissioners who slept with in and dwelt with it for months and years or against Dr. Snow. It is a fact that my province was the law and not the administrative findings.

BY MR. TURNER:

Q. One of the things that has been running through the minds of the committee and which we cannot understand is why the Commissioners would disregard the opinion of its engineers. Mr. Young gave us his explanation of that. In your experience with the Commission, can you give us any understanding?

A. No, I cannot. If I understood Commissioner Young—I only heard him a short time—I have not heard any of the testimony in this case—as I understood him, there is no duty on the part of the Commission to take its bureaus' judgment except when it makes a field appraisal, but when the bureau simply reviews the testimony of others and out of that testimony weaves its own findings and conclusions, then the same measure of obligation is on the Commission to take these findings the same as in other cases and on which the Commissioners should exercise their own administrative judgment. I don't know that I concur with Commissioner Young in that fully. My own thought is that every bureau is one of technical advice and that the Commission must take that technical advice, each man for what he thinks it is worth and with that advice, of the law, engineering and accounting bureaus at his own best judgment.

BY MR. RHODES:

Q. In this case they didn't take the advice of either the law or the engineering bureaus?

A. I think that is true. I will say just in justification if I had been on that bureau I would not have taken the engineering department's judgment in that case. Like the Commission, I would have disagreed with the engineering bureau.

BY MR. EVANS:

Q. Would you have checked up items which the engineering bureau valued in lump sums, amounts like \$500,000.00, like on distribution mains?

A. I would not have accepted them. If I understand the distribution property right it is so much pipe of a certain size at a certain cost or value when you come to it.

BY MR. MEMOLO:

Q. In your experience with the Public Service Commission is this not the most important case?

A. I think that "important" is a relative term. It is all justice. A little rate case to a few people to them is just as important as a big rate case to many people, but it is one

of the largest water cases in the United States, I am told. I can't tell you anything about prices. As I view it I don't think that any man can tell you how he comes to a valuation. He can tell you the bases which enter into his final figure. He takes the figures of A and then of B and then of C and then of D and in the composite is working in his own mind and judgment he uses what represents so much value as I see it. Have I answered your question?

Q. None of the Commissioners could tell us anything along that line how they arrive at this price for reproduction new costs. They didn't tell us anyway how they arrived at these figures.

BY FATHER COX:

Q. Did the Commissioners really fix a value or did they just simply sign a paper that someone else had arranged the matter for them. They didn't seem to know much about it. I wonder if they use their judgment?

A. Father Cox, in this case there were three men—the Chairman was brought into it because he was the chairman and is here and is the head of the Commission. He, as I recall it, by Commission action was brought into the case and the whole matter was referred for argument, and I speak from memory, please, about these three men, and I think the reason was because—and this is gratuitous—these two men who held the hearings and that committee gave to us for these early reports figures which they had adopted and which they wanted woven into and incorporated into the report for submission subsequently to the Commission and the whole thing was done under pressure; everybody working under pressure. Dr. Snow was quite a sick man. He had worked laboriously on this for six months and got it finished in July and went away and came back for two or three days in July for a consultation, for a consultation perhaps. I don't know whether before or after the August 26th report, he came back for two or three days—I saw him and wondered why he was back. He had no contact with me but I do know that when they were working on this report it was all rush work and every one worked at high speed, in high gear and long hours in those terrific days of last August to get that report out.

BY MR. EVANS:

Q. And then it was not issued until December?

A. No, it was not; it was adopted August 26th.

BY FATHER COX:

Q. They wanted to get a definite figure and they didn't care how you gentlemen of the law and the engineers helped them so they arrived at the ultimate figures? Where did they get the inference for them? Why did they want just a certain figure? What is the idea; getting to a certain point?

A. I can only answer you as I conceive it sir, that these gentlemen who were perfectly familiar with the testimony and had undoubtedly—though I was not present to see them—in conference with the Chairman and with Dr. Snow had come to a conclusion in regard to their judgment as to the figures.

BY MR. TURNER:

Q. Mr. Weiss, we have had a lot of discussion and a lot of testimony that has led the committee to feel that there is no certain rule in arriving at a solution of the reproduction new theory of valuation. Now what can you tell us is your opinion with your experience with the Commission? Do you think there is any better method of arriving at valuation than that?

A. I think that is such a mooted question perhaps that I don't think that my opinion would be very helpful. It is one of the factors under our law to be considered but it is not the only factor but it shall enter into the determination of fair value by the Commission. There are other items to be considered, reproduction new; depreciated, five year average or whatever it may be.

Q. After all that leaves it to the judgment of the Commission as to the fair value taking into consideration all of these elements?

A. How else could it be? Somebody must decide, sir.

Q. Is there any more certain rule that could be laid down?

A. I say very frankly that I never gave a thought to that or studied it. I really never gave any consideration to a better method. The question probably comes up of prudent in-

vestment. My opinion was never asked and if I gave it now it would simply be out of thin air. I know of no better ways than those prescribed in our act.

BY FATHER COX:

Q. They figure with the law and the engineering department and they agree with somebody to get a certain figure; there was somebody that wanted that certain figure. I myself could not subscribe to that, so far as I know.

A. I believe that these Commissioners thrashed this thing out in detail with the intimate knowledge which they had of the evidence obviously, with the Chairman because of his years of experience and training and his knowledge and his leadership and I myself believe that it was their best judgment and their duly considered judgment, whether right or wrong is a different question.

BY MR. TURNER:

Q. To clear up the situation, you might as well answer the question that Father Cox asked you a while ago, whether there was any pressure being put upon you or any pressure being put upon the Commission to arrive at a valuation?

A. First, none was ever exerted upon me or any attempt made in the slightest degree, to exert any upon me; and secondly, I know of no instance and have no reason to surmise, or infer or conjure up an instance where it was exerted upon the Commission.

BY FATHER COX:

Q. But they made their figures based upon what the merger was pleased with, and not what the people objected to. It was nearer the figure that the merger people wanted, than what the people of that district wanted. There was no half-way measures brought in, it was nearer the fifty-seven million that the company wanted?

A. That is correct. That is true.

BY MR. EVANS:

Q. You spoke several times of mandatory orders for speed being issued. Who issued those orders?

A. The Commission issued them, but every Commissioner, I think emphasized or stressed the importance of speed. The minutes ought to show that a time was fixed for us to bring in a report, and the particular man who insisted on it was Commissioner Shelby. He was insistent that those reports be gotten out.

BY MR. RHODES:

Q. Then, do I understand from what you said that this report which was finally filed, was wrong as a legal structure and might be too high as to values, in your opinion?

A. Well, I say to you, sir, that I have not read the report as adopted on December 9, 1930, since it was read aloud in the Commission. That matter is now on appeal, as I think you all know, on cross-appeal in the Superior Court, by the company and by the largest municipalities in that district; that is, the city of Scranton, the city of Wilkes-Barre and of Pittston; then, of course, it would have been my province to have studied that matter had it been argued in April, but the cases have now been continued until the fall due to the death of John R. Geyer, late of the Bar of this County, who was the leading counsel for the complainants throughout the whole matter and his death occurred on the 1st of March, I think it was. However, on our petition—that is the petition of the Commission—the Superior Court had consolidated the appeals under a rule of the court, and fixing cross-appeals to be heard at the same time, continuing the company's appeal from the February term to April, 1931, and advancing the complainants' appeals, which were not taken and the return date in them was not until March, 1932, and advancing that forward until April, 1931, and thus continuing the company's appeals and advancing the others to this time in April.

BY MR. RHODES:

Q. I think you stated some time ago that you conferred with Mr. Benn—

A. I did.

Q. After the August 6th report, did Mr. Benn have anything to do with the reductions in the August 6th report as incorporated in the December report, as far as you know?

A. Was Commissioner Benn in the August 6th report?

MR. EVANS: I am sorry, I do not have attendance records.  
THE WITNESS: Let me have that question?

(Question read)

MR. TURNER: I don't think, Mr. Rhodes, you exactly meant that, you did not mean the reductions in August 6th report?

MR. RHODES: Yes; there was a very material reduction made between the August 6th and December report.

MR. TURNER: Yes; between the August 6th and the December report.

THE WITNESS: Is this your question, do I know whether Commissioner Benn had anything to do with the changes in the December report as related to the August report?

BY MR. RHODES:

Q. That is correct.

A. I don't know. I know nothing after August.

Q. So, you don't know by whom these changes were brought about?

A. I do not.

Q. I think you stated before the Senate that in your opinion, Commissioner Benn was, more or less, a dominant factor in the Commission; is that correct?

A. Using "dominant" with the connotation, as I gave it in my testimony, which I haven't looked at for months, but I think, sir, and I am doing so from memory now—I think I qualified my use of the word "dominant." If I did not, I certainly did not mean to give the impression or carry the thought that that Commissioner dominated the Commission under duress, or had it under his thumb, or even attempted to do that. I meant to give the impression, because this is what I believe, that by reason of Commissioner Benn's years of experience on the Commission, by reason of his mental equipment, and by reason of his aggressive personality, and the Chairman's impaired health, Mr. Benn stepped into the role of quasi-chairman, if I may use that term, and became the man who insisted and who attempted to get things done.

Q. The directing force?

A. The directing force. He was the dynamo.

BY THE CHAIRMAN:

Q. Might not that have been due to the fact that for many years he had been a hard-boiled city editor?

A. I will agree with you, if there are no newspaper men here.

BY MR. EVANS:

Q. You spoke of totally disagreeing with the bureau of engineering in their valuations. May I call your attention to the fact that the bureau of engineering's report of June 30th, shows a depreciated reproduction new of the physical property \$32,602,876, as compared with the Commission's final figure for the depreciated reproduction cost new of the physical property of \$34,628,459? Was it in regard to the physical valuations of the bureau that you were speaking about or was it in regard to their overheads and contingencies and such additional items?

A. It was not in segregated form at all. I had in mind, when I said that, that the figures, which I had, of the bureau of engineering fixed a fair value. My figure was \$50,000,000—now what was that in?

Q. That was the depreciated reproduction cost new, plus all overheads. They raised it from \$32,602,876 for the physical property to \$50,648,378, by the addition of overheads, working capital cost of financing going concern value and water rights.

A. That figure when I said, was \$50,000,000 rounded, whatever it represented.

Q. I do not want to keep you, but for a moment. The question has come up several times in regard to the control which the Commission has over securities issues, what power does the Commission have over security issues, under the present act; first taking up certificates of notification?

A. My thought is, and I think it has been changed a bit during the Senate Investigating Committee—my opinion was—let me put it this way, my opinion was that we had practically nothing to do, no power with regard to securities of notification. I think now we have no enforcing power, if I make myself clear by that, no enforcing power in regard to certificate of notification; if a certificate of notification of a proposed security issue can be filed, that is, under Article 3, Section 4, it must contain the data, everything required, and is public property, open to inspection—if it is open to an examination

of that certificate, which is deposited with us, and thus called "filed" I don't think we have any power to prevent its being deposited with us—I mean "with us" the Commission—if then an examination be made and I will say that it should be made, for which we need additional accountants, the Commission needs additional accountants, and they have reason to doubt the security or its legality or for other reasons—have reason to doubt the wisdom or advisability or the legality of the issue, I believe under Article 5, Section 14 of our act—I think that is the provision—we could make so called findings. And now, a finding or a determination of that would be appealable on conclusions by the Commission, and to take the certificate to the Attorney for action in the courts, such as he would determine would be proper.

BY MR. RHODES:

Q. How about giving publicity to those certificates?

A. Well, of course, that can be done. I don't think that kind of treatment is worthy of a Commission, if you mean by "publicity" killing the proposed issue by giving it notoriety and our disapproval of it, and I, for my part, as I think there is a legal way of accomplishing, and that kind of tactics is hardly worthy of a Commission.

Q. Doesn't the act specifically say that the Commission shall have the power to give such publicity as it deems best to the matters set forth in the certificate of notification?

A. Yes; but does that just mean the data in the certificate or does it mean the Commission's disapproval broadcasted?

Q. Suppose from the certificate of notification the information obtained by the bureau of accounts it appears that the proceeds of a bond issue are to be used for the payment of dividends to the holding company, don't you think that the Commission is quite within its rights in making that fact known, so that security holders may know what they are buying when they buy those bonds?

A. That may be the impression given by that section Mr. Evans, but I start with this view, that where there is a power in the law, vested in the Commonwealth to institute appropriate judicial proceedings to restrain or undo, that is the course to pursue, and that the Commission should not attempt to kill the proposed action because forsooth, it thought it was not the right thing to do, and thus give it wide publicity, and kill it by condemnation. Now, it may be that is what that act contemplates.

BY MR. TURNER:

Q. You mean condemnation of it by publicity?

A. Yes; I mean condemning it. That is what I mean or your thought of what the act proposes and contemplates.

Q. Now—

A. I don't think that is something they have to decide, sir.

Q. Do you happen to remember the circumstances under which the Penn Central Power Company was bought by the Emmanuel interest?

A. I do not.

Q. In 1925?

A. I think you were on the Commission then?

Q. I was.

A. I remember the name of the case only. This is a new thought. Your thought is new to me with regard to what is meant by publicity. Of course, there are proper kinds of publicity. My own slant on it was publicity that condemned the issue unheard and untried, and that is what I meant by saying that kind of tactics is not quite the thing a Commission should do.

BY MR. COOKE:

Q. It would be perfectly easy for the Commission to have hearings on any such proposed action. That is what was presumably done in this case.

A. I don't know whether they did or not.

BY MR. EVANS:

Q. I want you to be perfectly frank. In the Penn-Central to which I referred, it appeared from the papers filed with the Commission and the report of the bureau of accounts that the Emmanuel interest who were acquiring the property, intended to put out a large bond issue on the property, and pay themselves out of the proceeds of that bond issue for what they paid for the stock of the company and the Commission notified them that that was not the proper financing.

and the Commission would use its powers, as far as it could to prevent it. Do you see anything improper in that?

A. No; I don't see anything improper in that, any more than any other man going into the files and seeing some things, because the instruments are public property; any man going and drawing his conclusions, making his own investigation and doing what he thought about it.

BY MR. COOKE:

Q. What would have been the effect of having these bonds withdrawn?

A. I don't know.

Q. There would have been no publicity committee or anything of that kind?

A. Granted. I don't mean that the Commission shouldn't use some power, but what I meant to convey that there was one way of proceeding and another way.

BY MR. TURNER:

Q. You don't think that it would be right for the Commission to go to the newspapers and make a big splash about it? They could either certify it to the Attorney General and say that it was not right?

A. Surely. As I say it is a public instrument.

BY MR. COOKE:

Q. It is pretty difficult for the Commission to use its own judgment in such matters, in the light of some of the testimony that we have heard here, but that presumably is what they should do?

A. As I conceive it, that is what the act gives it the power to do. I incline frankly, and this is gratuitous, but if I started it myself, I would start dealing with the Attorney General. I might be swung from that viewpoint, but that is where I would start.

BY MR. TURNER:

Q. These certificates of notification, are they ever examined in the office; do you know?

A. No; I cannot answer that. They all go to Mr. Morgal's office. They are not passed on by us, because we don't have the information. Mr. Morgal has not sufficient staff to do it. Now, Morgal does need additional men in my judgment, if the information seems to be false and needs to be corrected, and we do need water works, engineers—particularly water works engineers.

BY THE CHAIRMAN:

Q. The Chair got the impression that those certificates of notification were filed simply as a matter of routine. They were filed and lost track of. Mr. Brown's testimony on April 17th says in response to a question by Mr. Turner in reference to the Hanover McSherrystown bond issue, that he had heard nothing of that bond issue until his attention was called to it at the hearing. The Chairman asked him regarding the Penn Light Power Company and that was his first information concerning that, which gave me the impression, and I think other members of the Committee that this was just a mere matter of routine, that it did not amount to anything. I agree with you in what you said about Mr. Morgal. I think the Committee has been very much impressed that his staff is under manned.

A. I think if it has attached to it the characteristics of routine, it is because that it just has to be filed, and nothing more done by reason of the pressure on Morgal and of other things.

Q. It is only human nature to do it?

A. Undoubtedly. As I conceive it and I think others, though I speak for myself only, there was less power vested with Commission and yet I see a new slant on this law after reading these various sections, as they developed before the Senate Investigating Committee. I know the opinion that the Chairman referred to my former Attorney General Woodruff; I know that opinion, and I think we are all pretty much of the same mind, but I do see things differently. I know I do.

Q. After all, it is a pretty good thing for us just to sit down and take stock of our various bureaus?

A. It certainly is.

MR. TURNER: I agree with you. It ought to be done with all the bureaus of the State Government. To sit down and take stock of these various departments. We would have some very interesting testimony.

BY MR. EVANS:

Q. As I understand it you are not appointed by the Commission, but by the Attorney General?

A. I am appointed by the Attorney General.

Q. And are responsible primarily to him?

A. I am, and I have not been reappointed by the present administration. I have done what I did with every Attorney General as soon as he took office, I have gone to him and asked him whether he desired me to continue or resign, and I have been told to continue, and in some instances have been given a formal letter. I went to Mr. Schnader after Governor Pinchot went into office and asked him what his desires were, and he advised me to carry on. That is the situation that prevails at the present time between the Attorney General's department and myself. Of course, I am appointed by the Attorney General, but my instructions always have come—my instructions have always come from the Commission, and I have tried to carry out their wishes and their instructions.

BY THE CHAIRMAN:

Q. You are not hired or fired by the Commission, they are not your masters which was the term used here?

A. I am not.

Q. Do you think the bureau of engineering should have the same independence as the legal department?

A. That is a pretty big order.

Q. I do not want a categorical answer.

A. I appreciate that, sir, but, do you know, I might find it difficult to serve two masters. That is one in appointment and another in work. The appointing power has never interfered with my work.

Q. You have been a good worker?

A. That is very kind. I did not mean it that way, pardon me if I gave that impression. I meant I really had one superior, the Commission, and the Attorney General's Department, they haven't been near in fact they haven't give any instructions or expressed any preferences or wishes. They have just appointed me, and then for four years I would try to do what the Commission wanted done.

MR. EVANS: On my own behalf and behalf of the Committee, I want to thank you for your very frank statement this afternoon.

THE CHAIRMAN: The Chair certainly wants to compliment you. We enjoyed your testimony.

THE WITNESS: Thank you very much.

THE CHAIRMAN: Recess will be taken until 7:30 o'clock P. M.

The Committee reconvened pursuant to the recess at 7:30 o'clock P. M.

F. HERBERT SNOW recalled

BY MR. EVANS:

Q. Dr. Snow, members of the Commission have testified that after the argument in the Scranton-Springbrook case in April of 1930, directions were given you to prepare a report of the valuation of the property. So far as you remember, who gave you these directions?

A. Why, I think the Committee and Chairman Ainey.

Q. And by the Committee you mean Commissioners Young and Brown?

A. I do.

Q. What directions did they give you, so far as you remember?

A. They amplified the directions given me in October, or prior to October. In fact, beginning with the hearings, I was directed to have a representative of my Bureau sit in all the hearings and to make notes during the progress of the case, and I was to keep personally in touch through that medium with what was going on. I assigned under that authority Mr. Parmley, an engineer of my Bureau, to that assignment, and in October, 1929, the Chairman probably did, I doubt if at the time it was the Committee, or the sitting Commissioners, I think I was asked in order to save time to do what work I could to check up on the testimony the real estate and rights of way, and such part of the record as I could do with facility at that time. I started in October, along about the middle, I think, perhaps the latter part of October, and pursued my work with regard to real estate, rights of way and water rights. And finished that work early in 1930, in the

Spring, and about that time the briefs and arguments had been submitted, and from that time on I pursued my instructions to complete the review of the record and make a report for the consideration of the Commission, which I did, and that report is dated June 30, 1930.

Q. Now, Commissioner Young stated this afternoon that you had exceeded your directions in that you brought in a valuation of the property, instead of merely a report of the inventory and items of physical property, and so on. What is your remembrance as to your directions in this regard?

A. Why, I think the Commissioner was in error. I understood, and I heard the testimony, that he was speaking particularly from his point of view as one Commissioner, in variance with the viewpoint of other Commissioners, as to what the duty of the Engineering Bureau is. I clearly recollect that from away back, at the time that I assigned Engineer Parmley to sit in the hearings and make notes of the progress, that it was understood that the Engineering Bureau would check this work and make a report, and our usual reports to the Commission are complete in their view of the work, which includes overheads, or anything that we have to suggest in completing an answer for the consideration of the Commission, and that is what I did in this proceeding.

Q. Now, Dr. Snow, where there is a difference of opinion, as you suggest, among the members of the Commission, whose directions do you follow? Do you have one master or do you have seven masters?

A. Well, sir, I have seven masters in this way. I think it is understood under the law, in a question of any conflict, that the Chairman now under the revised law, his word would go with the staff, and we would be bound to follow his instructions, but that is not the way it works out in practice in the Bureau. We take the instructions and directions from the sitting Commissioners or any one of the six Commissioners beside the Chairman. I don't recall any conflict between the individual Commissioners. Oftimes the Chairman may call for me to come to his office and ask me what I am doing about this or that or the other, and if I am working under directions, or any of my staff have had directions from any one Commissioner, and it is reported to the Chairman, he argues those matters with me, and so far as I know, with no member of my staff, but it may be that after the Chairman's consultation with individual Commissioners, the Committee, that it is agreed that the Chairman's directions shall supercede.

Q. Well now, Commissioner Young testified that no directions were given you by the Commissioners as to which of the engineers in your Bureau should work on this case, is that correct?

A. I think that is correct, his preliminary statement, but I am positive that I reported at the beginning of the hearing that I would select Engineer Parmley, and no objection was made to that, and so he performed that service. I also reported from time to time who was working on this case and the progress that we were making, and the best answer we could give to it was that the Commission, the Chairman, and I believe, to the best of my recollection, the sitting Commissioners knew who was working on it, and what progress we were making from time to time.

Q. Now, take various engineers of the Bureau, will you designate briefly what part each of them played in the valuation which the Bureau finally determined upon; first taking Professor Parmley?

A. Yes. Because I had selected him to make notes of the progress of the whole case, I intended to keep him right at my elbow, through all of the work which we performed, and I would like to add that it was understood, and was specifically directed that I give my personal attention to this work, and the conclusions, the pros and cons, which I was to set up for the Commission for their consideration, were to be my own work, and I started, as I said, in October, and I did not finish until June 30th, the date of my report.

Q. Do you mean by that, Dr. Snow, that you personally were expected to arrive at the valuations of every item of property in this—

A. Yes sir, so far as the engineering is concerned, I was to be personally familiar with all the details and to personally be responsible for my own work—whatever was contained in my report.

Q. Obviously you could not do this entirely by yourself, and I assume that you delegated certain engineers in the bureau to work for you certain specific parts of the valuation, is that correct?

A. That is correct.

Q. Did Professor Parmley work up any specific parts of the valuation, or did he simply act as your right hand man in going over the whole thing?

A. No sir, his work was very extensive and very valuable and indispensable to me; else I could not have done my work in the six or eight months I had.

Q. What specific part of that did he have charge of, under you?

A. He laid out form sheets—you have them in all, twenty-five volumes here, of my own notes, my own pencil—you have several hundred sheets—these large sheets, showing details, with the Lantz and the Company appraisal, and the conclusions submitted to the Commission for consideration. He prepared those sheets—he set them up at his own figures, at first, to facilitate my work.

Q. Did he take any specific portion of the property, for instance, mains, or distribution system and work up an appraisal of that for you?

A. No sir, he did not make up an appraisal. He assisted me on mains, for instance. There was such a conflict of testimony in the record as to what mains there are in existence—there seems to be a perfectly simply thing for two sets of engineers to measure mains and come to the same conclusion, but there were thousands of feet difference in the inventory. He did a great deal of detail work, and they are all on here, every single page, every piece of paper we ever had, you have them here.

Q. You have spoken of Professor Parmley attending the hearings—how many hearings did you yourself attend?

A. Not one.

Q. So that so far as weighing the testimony was concerned, or the creditability of the witnesses, you relied on Professor Parmley, did you?

A. No sir, he had the seven thousand pages of the transcribed notes and the seven thousand pages of the exhibits all indexed as to subjects, and so forth, and so on, so that when I wanted anything he could turn to it, and I read a great deal of the testimony myself, more specially that testimony on the subject that he indexed for me.

Q. So that you, without having seen the witnesses or having heard them testify, passed on the creditability of the conflicting witnesses yourself?

A. Yes sir, I know of a number of the witnesses, but I think I am correct in saying that I exercised my judgment in the case and on the record.

Q. Now, who appraised under your direction the distribution system?

A. The pipes, Mr. Allison, did some of that work, and all of the work he did for me is included in my notes.

Q. As a matter of fact, Mr. Allison, appraised all the piping system and you accepted his figures?

A. I did not accept his figures until I had convinced myself and exercised my judgment. Whatever I did was put clearly before the Commission for their consideration—explained it in my report of June 30, 1930, as far as I thought the Commission ought to know those details, have all the facts before them.

Q. As a matter of fact, do you remember any changes that you made in Mr. Allison's appraisal of the pipes and system?

A. It did not come that way.

Q. Do you remember any changes that you made? You said he made an appraisal. Do you remember any changes that you made in that appraisal?

A. I don't mean to say that he got an answer; he weighed the cost of pipe f o b at Scranton, under various conditions and so forth. He set them up in such a way that I might exercise my judgment. That is my recollection. Anyway, whatever I said is thoroughly in the notes and sheets and so forth that you have in your possession, the record of my notes, which show just how I arrived at everything.

Q. Well, I would like to get a specific answer to this question—Did Mr. Allison make an appraisal of the pipes and this system?

A. I don't think he did. Maybe he did and got it totalled. I don't recall it.

Q. Do you mean to say that you yourself put unit prices of all the pipes.

A. Most assuredly I did, or I accepted his unit prices, set up in such formula that I could select them. I will do the best I can to answer you. Beyond that, if I can look at my notes, then I can be positive, but you have them all, everything.

Q. I thought you would remember—that is the largest water case you ever handled—I thought you would remember who appraised the properties.

A. You are using the word appraisal, which means an answer—

Q. Who gave you the figures which were used in your appraisal for the inventory of the pipes?

A. I determined some of that myself, because there was conflicting testimony as to length of this size pipe and the length of that size pipe, in some portions of the property, and we found that I had to tell the Commission what the record included, and I have to give the Commission my reasons, file it, or be prepared to give them my reasons. I had a very large report—four or five hundred pages—you have that, I don't have a copy of it; you have my only copy. Since June 30 1905, with the possibilities of a few exceptions, soon after, I haven't looked in that report since.

Q. Do you mean to have this Committee believe that your appraisal was a one man job and that you personally appraised and checked the quantities and unit prices of all the elements entering into your valuation?

A. Absolutely, sir, and my notes show it here (indicating) you have got them all here; I think 4 volumes you have here and they all show it. If you doubt my word—I don't know how the Committee feels, but I am telling you that you have all the notes here and that is the way I did the work.

Q. How did you check the quantities of pipe in that system; personally, now?

A. My report will show. Mr. Lantz would take a certain line of pipe and say it is so many hundred feet and the company would say it is so many hundred feet and there would be wide differences.

Now, we had to confine ourselves to the record, couldn't go out in the files and get further information, unless the hearings were opened. My report, that big report here—I think that is it (indicating); the big one here before you?

Q. No; that is not it.

A. The classification of pipe by the Commission's system of accounts, accounts A-205 is real estate, rights of way, and water rights.

Q. You do not need to go all over that, Doctor, I think there are a good many of them, and under—

A. You are talking about transmission mains?

Q. Yes; you take transmission mains?

A. Transmission mains, let me see what page that is on. And now, under transmission mains, the subject was divided into these sections, ten of them:

Cast iron pipe, Specials;  
Gate valves and boxes;  
Unloading and hauling;  
Excavation and back fill;  
Laying pipes;  
Setting gate valves;  
Valve Chambers;  
Crossings;  
Pavement replaced;

And a summary of these and in each one of these items there were disagreements as to the inventory of that class of property, or there might be an agreement.

Now, I had to ascertain for the Commission and for their consideration the effect as to the inventory of those classes of property from the record; and, furthermore, and this was true all the way through the whole journey—in those classes of property or any part of them whether used and useful or not, there was conflicting testimony all the way through; some times an agreement, but not often on all of those bases of inventory as well as the appraisal.

Q. Let us get down to brass tacks. Cast iron pipe, respondents' inventory, 50,823 tons, and you actually found the proper tonnage to be 49,331. Here are your work sheets. Will you tell me how you found there were 49,331 tons of pipe there?

A. That is in my notes, and it may be here.

Q. All right. Here are your notes.

A. Here it may be. There is one note under cast iron pipe on page 186. My note is that respondents' inventory makes a claim of 50,623. The bureau finds that the proper tonnage is 49,331. Respondents' primary estimate on the basis of \$47.85 to \$67.85 per ton—

Q. Well, then, let us stop right there. We are dealing with inventories now. Now, I want you to tell me how you arrived at the fact that 49,331 tons you have given us as what the respondent claims, and in that same paragraph the complainants don't set it up that way. Why did you not take off anything from the respondents' figures?

A. That is the total tons, and I have got it somewhere on my notes. I think in my notes we referred to the basis on which tonnage was computed. There was a dispute as to the thickness, there was a dispute as to the quantity of pipe. There was a dispute as to the weight of the pipe per foot, or length; with a variance between the estimates of the different engineers, and the basis upon which I determined—bearing in mind that this territory is a territory seventy-nine miles long and twenty miles wide and that under all conditions and over long periods of time some of the pipe that was put in, I presume is not made now. And now, there is a standard for water pipes at the present time that was not in vogue twenty years ago, and those things all appear in the record, and I think I would have to read my notes and have Mr. Allison's analysis of the pipe weights.

Q. I am going through some of your notes so that we can understand how this is done. Here is one of the sheets dated May 1, 1927, headed Inventory over the Springbrook Supply Company sheet number 206 of Account number 248.

A. Are you sure that these are my notes, or Parmley's?

Q. I don't know. These are what were turned over to us.

A. These sheets right here are Parmley's notes. And now, I have a similar folio. These figures are not my figures.

Q. We seem to have Mr. Parmley's notes. We will get the others over and see if you can explain them to us.

A. I want to talk about my own notes.

Q. While we are waiting for that, Dr. Snow, let us turn to the question of labor prices. What common labor prices did you use in making your valuation?

A. For the organized wage in the valley I used fifty cents an hour.

Q. What do you mean by organized labor?

A. Well, I means as the record shows in the different towns. Some seventy-five or more; they pay a wage of fifty cents, fifty-five, fifty-two, some above, some forty; hardly any forty; and I took the record and studied carefully, and decided that a fifty cent wage rate was the average price for organized labor, and that any contractors could come in and rebuild these works under this theory of reproduction new, covering a period estimated at five years; to build this property, and get away with any continuous and successful contract work at less than fifty cents an hour.

BY MR. EVANS:

Q. That is all very interesting, but you still have not told me what you mean by organized labor. I am dealing with the Commission's report?

A. That is what I mean.

Q. That is what you call organized labor?

A. No sir; that is in a district where labor is organized.

Q. You don't mean to say there is a ditchdigger's union?

A. I do not. But I say in my judgment of labor whether there are ordinances or not, the existing wage for contract work for this kind of ordinary labor work is in my judgment from the record fifty cents an hour. Now the engineers of the complainants used forty cents an hour and I should like to say that if this committee thinks, or Mr. Evans, or any tribunal wants to use forty cents an hour for labor in that field, it will take off of my conclusions of the value of the physical property which I worked for the consideration of the committee, you can take right off of that four and a half million dollars and if you can hire labor, and that is the policy and you wish to pay thirty cents an hour for labor you can take off another four and a half million, or nine millions altogether. It is my policy and I am doing it right now, we are doing the work now for the public across the river and in the first meeting I said we might as well have a scrap about labor now as later but I am going to use the price of labor that I think is right. I submitted fifty cents an hour for the consideration of the committee. They didn't have

to accept it. I heard Mr. Young say they did accept it. From the testimony I arrived at the conclusion that fifty cents an hour was the proper figure to use for labor in the Lackawanna Valley. If forty cents is the right answer, then my valuation of forty-two million is four and a half million to high.

BY FATHER COX:

Q. This has disturbed me. They never asked what was paid for labor. It is there in the operating cost. Can you tell us? How did you put in the value of fifty cents an hour for labor? From the testimony?

A. Yes, sir, from the testimony.

BY MR. EVANS:

Q. The report goes to the Downs report?

A. I cannot answer that.

BY FATHER COX:

Q. May I suggest that we are dealing now with reproduction of property, what it would cost?

MR. EVANS: What we are dealing with now is the reproduction cost, or what it would cost to construct it now, and we are not dealing with what was actually paid. He is estimating to use fifty cents an hour in determining the reconstruction cost and my present line of questions is directed to ascertain how he arrived at that basis and whether or not that is the proper basis under labor conditions as they then existed.

FATHER COX: All we know is that they say fifty cents is what they value the labor at, and they only pay them thirty-five or forty cents. If that is the case, then again the value of the labor is too high for rate-making purposes. I have been asked that question, what about labor here, does it enter into the considerations?

MR. RICHARDS: Dr. Snow, do I understand that a difference of ten cents an hour in the labor represents four and a half million dollars in the total?

A. In this class of labor, in the round numbers the labor will amount to about two-thirds of the cost, the physical cost, of the structural property, and ten cents out of fifty cents is 25% in excess of forty cents.

Q. If they use labor at fifty cents it would be so much, and if they estimated the labor at forty cents it would be four and a half million dollars less?

A. Yes sir. I took the record in this case as showing what it was and that it was a fair price. This labor is only theoretical. If it was reconstruction—this labor was not used in the reconstruction of the property.

BY MR. MEMOLO:

Q. Does historical cost have anything to do with this thing?

A. Just for the record. Just reconstruction cost and the appraisal.

Q. There has been a lot said about historical cost?

A. Yes, there was an estimate and report as to what the historical cost was.

Q. You were only instructed to investigate it in that way?

A. Yes sir.

MR. MEMOLO: In the Lackawanna and Wyoming Valley I doubt if there has been any dam except the third dam of the Springbrook Water Company built four or five years ago, and I don't think they paid much more than a dollar and a half a day when they constructed that up there.

MR. TURNER: In this case that has nothing to do with it.

BY MR. COX:

Q. He is using the price on that thing according to present day prices?

A. That is right.

Q. They are not paying 50 cents for labor on any construction, he has put too high a price on this.

A. Well, under the rulings of the Appellate Court, we have to ascertain what the price for labor would be in rebuilding properties. Now, that is regardless of whether it is right or wrong, that is the ruling of the court, and when we are faced with this theory of reproduction cost new, we have to play in that coral. When you get to ascertaining historical cost, as I have done a lot of work, had a lot of experience in historical costs, properties running well into millions of dollars, then you get into another field when you apply that. All my work here was in reviewing the record made by witnesses, and that is reproduction cost.

BY MR. HAGMAIER:

Q. You have been working on the reproduction cost theory right along in all these cases, and that being the case, then it should be up to the Commission to take that cost there of doing a lot of work for 30 and 40 cents, and not using a rate of 50 cents in the situation?

A. Yes, your Honor raises a point which should not be overlooked, in my judgment. Rebuilding of this water works would take a period of five years it is estimated, and in five years everybody hopes, and some pray, that these low prices will have passed, and people will have to come back to normal wage for that labor, and if so, it would not be fair for the price of 1930 to be used if you can get it for 30 cents an hour and take that and spread it over five years and a half.

Q. But on the other hand, you have put it in at 50 cents an hour for labor, when they were not paying 50 cents an hour at that time.

A. If I may continue the answer, the record shows this, that in 1927 in Ashley Borough, the price for labor was 50 cents, that came from the report; in Avoca 45 cents; Blakely, 50 cents; Carbondale, 50 cents, Dickson City, 43.8—

BY MR. EVANS:

Q. What are you reading from?

A. I am reading from this, from the brief of respondent, which comes from the record in the case. Unless you give me time, I cannot give it to you from the record.

Q. Now, Dr. Snow, these are rates paid by public authorities for street labor, are they not?

A. I cannot answer you right off anymore than what is in the report as I have—

Q. It says here, paid by the municipalities and boroughs?

A. Yes, and I have a lot more here.

Q. In other words, these are the prices which the public authorities paid for street labor. Now, do you mean to tell this committee that you think a contractor, like the United Engineers and Constructors, if they take a contract to go out and build this system, would pay rates, wages, the same as some little borough pays, to a few men working on the streets?

A. You didn't let me finish—

Q. Just answer that question?

A. No, I don't think I can answer yes or no to that, and I don't think you are right—

Q. You can answer yes or no, as to whether you think a contractor pays the same rate of wages that a borough pays for a few men that do work on the streets. Just answer that question, and then you can make any explanation you want?

A. I think that a contractor over five years does, that is my answer.

Q. You think that a contractor constructing a \$30,000,000 system, or a \$20,000,000 water system, whatever the size of the water system is, would pay the same rate of wages that was paid by the local municipalities for street labor?

A. Yes, I do think so, and I think if they didn't do that, there would be some strikes up there, so that the contractor would be compelled to pay local labor at local prices.

Q. Don't you know that the present rate for digging trenches on the State Highway work is 30 to 35 cents an hour?

A. No, I don't know it.

Q. Don't you as an engineer keep up with the labor prices?

A. Yes, I can get the labor prices if I am in my office. I can get them from the State Highway Department two floors above me, and have an elevator, and we are in constant touch with each other.

BY MR. RICHARDS:

Q. The peak of labor prices has not been 50 cents all the time since the war?

BY MR. COOKE:

Q. These are municipal rates?

A. Yes, they are.

Q. I never heard in Bucks County of a rate above 50 cents.

FATHER COX: Right now a man would take 15 cents an hour if he could get a job.

BY MR. EVANS:

Q. Don't you know that the respondents themselves in order to dig their test holes paid 30 cents an hour, and that is right in this same country, on this same system?

A. If it is in the record, I know it. And here is another thing that is in the record, please, on the actual pipe line—

Q. The trouble with you is, Dr. Snow, you spend too much time reading the respondent's brief, and I think that is the trouble with the valuation.

A. If I spent too much time in reading the respondent's brief, it is because the respondent's brief is very long, and I spent an equal amount of time in reading the complainant's brief, and in reading the record. I had no ulterior motive, I did it in other cases, and I shall continue to do it as long as I am in the employ of the Public Service Commission and the Commonwealth, what I have done in the last 23 to 25 years, and I have no fear or favor to ask of anyone, but I will explain all I can. If I am wrong—

BY MR. RICHARDS:

Q. Nobody is questioning your integrity, Dr. Snow, but the question in the mind of the Committee is whether there has been a mistake made in this valuation, and I think there has been. The labor cost is too high for any part of the State, and in 1927, when this report was filed, this labor cost was low in the Scranton District as well as others, and there seems to be no proper ratio about the labor cost, and coming back to the 50 cents an hour, it seems to me, before the Commission's report was filed, there could have been at least an adjustment, and at least \$4,000,000 of this valuation taken off?

A. Let me read this, however, in the actual pipe line and other construction work done by the respondents during 1927 and 1928 and the first six months of 1929 in the Springbrook Division, the respondent paid an average of 53.04 cents per hour for common labor; 63.83 cents per hour for mechanics, and 75—

Q. Hold that right there. Mechanics and laborers are entirely different, and there is more than 10 cents an hour in their wages surely. A ditch digger is not paid within 10 cents an hour of machinists, pipe fitters or steam fitters.

BY MR. EVANS:

Q. We are not speaking about anything now but common labor?

A. Cut out what I said then, I had forgotten that. The record was that they paid 53.02 cents an hour for common labor in the years 1927 and '28.

Q. Let me show you one of your work sheets here. Here is one of your work sheets headed, "Springbrook Water Supply Impounding Reservoirs, Structures, sheet 53 of Account No. 208, dated May 1, 1927"—and by the way, those dates up in the corner mean that that is the date that you made your valuation, isn't it?

A. No—

Q. The date of your valuation of the property is May 1, 1927?

A. Perhaps that is so then.

Q. Now then, I read to you from these pencil notes, "Bureau—Dr. Snow—Curry and I agreed on 'c' labor should be 40 cents instead of 50 cents used by company?" In whose handwriting is that—

A. I think that is "Fess" Parmley.

Q. Professor Parmley?

A. I think so.

Q. You have spoken very highly of Professor Parmley, and that is a correct statement?

A. That is a correct statement at the time—but those are not my figures.

Q. No, I am not talking about that. That is a correct statement of Professor Parmley as made in this book, the work sheets, isn't it?

A. Yes.

Q. That you and Mr. Curry and he agreed that the 40 cents labor rate—

A. We did—

Q. All right—

A. Wait a minute, I have answered your question.

A. It must have been May 1st, I suppose, I don't know what date it was, you will have to ask Professor Parmley what date it was. I called Mr. Curry in; I wanted to explain to Mr. Curry, who did very little work on this, and he and Professor Parmley and myself, we sat down as a sort of round

table proposition, had a round table talk. We discussed it, I think, more than one day, I think at times. We decided on 40c labor, that it would probably be a fair thing, the same as Mr. Lance has used.

At that time, in that first round table talk I wasn't familiar with the testimony indexed by Professor Parmley; I hadn't read it over, and after I did that I decided, to be fair and reasonable on record, not of my own conclusion,—if it had been my own conclusion, if I were making the inventory and appraisal on this property, the same as I did on the Scranton Railways property, I would abandon the reproduction cost new theory entirely, and work out an historical cost for that property, which could go through the Appellate Courts, I did my best with the laboring men and the leaders of labor in the Scranton district. I have no reason to conclude that I would depart from that fact as I made this original inventory and appraisal of the property myself. Please remember that I was working on the record of the testimony in this case, which had been closed, and I could not legally go beyond that, or bring in other evidence of my own.

BY MR. COOKE:

Q. When you say the record, do you mean all of the record, the complainants' as well as the respondents'?

A. I mean the complete record, complete testimony and exhibits.

Q. There is no reason why you should have been influenced by the respondents' figures any more than by the figures of the complainants?

A. No sir. When I read the record I thought that the 50c should be used rather than the 40c.

Q. You moved it up 10c?

A. I didn't move it up. I came to the conclusion that fifty was better than forty.

BY MR. RICHARDS:

Q. It is much better, but they are not paying it.

A. In this reproduction theory you don't consider what they are paying. Reproduction cost—

Q. Reproduction cost is based on some average.

A. No sir.

Q. Where do you arrive at your reproduction cost now,—you don't pick it out of the air.

A. Reproduction cost new theory is a thunderous and cumbersome thing, and to apply it you have got to make thousands and thousands of judgments, and somewhere along the line you are going to make errors in judgment. I don't conceive that you can get an answer in reproduction cost new that can approach nearer than 85% correct.

BY MR. COOKE:

Q. Do I understand you to say that this accounted for \$4,000,000 of a change?

A. The difference between forty and fifty,—I think it will probably figure some four or five million dollars,—probably \$4,500,000.

BY FATHER COX:

Q. You say you arrived at these figures at a round table conference?

A. No sir these are not figures. Mr. Parmley made a note, we were going to use. When I got into the record and saw the record I used 50c. I explained to the Commission what I had done. It was up to them whether I was right or wrong.

MR. EVANS: I would like to offer in evidence this photostatic copy of this sheet, which Dr. Snow has referred to, as Exhibit No. 162.

BY MR. EVANS:

Q. Having agreed on that 40c labor cost in the early stages of this appraisal, you actually used that figure, did you not, in arriving at your reproduction cost in this case,—which was the Campbell-Ledge Storage Reservoir?

A. That does not follow.

Q. Didn't you use this labor cost on that sheet?

A. I wasn't using any 40c labor.

BY MR. RICHARDS:

Q. In the lower left hand corner there is a notation Ehlers' labor rate 50c. Who made that note?

A. Ehlers. He was with Dan Zimmerman, when he did this work. He was one of the experts employed by the respondents.

Q. Mr. Ehlers' recommendation was 50c?

A. He used 50c an hour. I think all of the experts used that.

Q. There is a notation on the lower right hand corner, labor rate 40c.

A. That is a note that Professor Parmley used. He will tell the truth about it.

BY MR. EVANS:

Q. You said that was correct,—there is no necessity for putting it up on him.

A. I say if you want to call him.

BY MR. TURNER:

Q. What rate did the complainants use?

A. 40c. A great many of these things, all through this case I used the costs in conclusions of Mr. Lance, the engineer for the complainants.

Q. Why did you change it from 40c to 50c? What caused you to use 50c?

A. On account of the witnesses and the exhibits in the case.

BY MR. RICHARDS:

Q. You have only got one witness who said 50c was correct,—

A. I went all thru the record and decided you could not build that water works in that valley beginning in 1927 and going through five years, on 40c labor.

Q. You thought that for these five years from 1927 to 1932, that the labor would run about 50c an hour?

A. That was my judgment.

Q. In the light of what happened your judgment was not one hundred percent,—labor rates are now down to 30c.

A. Nowhere did I say in this record that my judgment was 100%. I had to exercise my judgment. The Commission exercised its judgment. The Appellate Courts have to exercise their judgment. I have explained, everything to the Public Service Commission and made available to them everything that I had.

BY MR. COOKE:

Q. Your own judgment confirmed the complainants' figures when you started, and when you got into the case, you moved it up 25%.

A. Yes sir, when I read the record.

BY MR. HAGMIER:

Q. What would be in the record to indicate a 10c an hour raise,—you wouldn't have to go into the record to find that, all you would have to do is go to the contractor.

A. The testimony of the witnesses,—they estimate that they were paying 53c—

Q. Those are records compiled by the boroughs. I am talking about the actual engineers who were doing that kind of work.

A. This is on the record: in the actual pipe line and during construction work on respondent's property during 1927 for the first six months of 1928 in the Springbrook division, respondent paid on an average of 53.4c per hour, for labor.

Q. Why didn't you go back a little,—why didn't you go back to 1925 or 1926?

A. Because I could not,—I don't know what I would have done in that respect. I probably would have done the same as I did in the Scranton Railways, when I went to the labor organizations, but in this case I had no liberty. I couldn't go out of the record.

Q. You told Mr. Evans you went all over that situation and said that those figures that you used—all used was the evidence given to you by these men.

A. On the record. I don't see any mystery about this thing.

BY MR. RHODES:

Q. There is no mystery about it, but what influenced you to raise the price from forty to fifty cents? You said the evidence of the witnesses induced you to raise it from forty to fifty?

A. Yes.

Q. Who were those witnesses?

A. They were Day and Zimmerman men and the company men. They have a name for it in the valuation section, but they were all company men. Whoever they were I don't recall, but they did testify and put in exhibits and whatever it was I used that. I read the testimony, and then I took the Lantz appraisal and the experts on the complainants' side and I formed my judgment, and submitted it for the consideration of the Commission at fifty cents.

Q. But you have disregarded the Lantz appraisals.

A. Well, they were forty cents an hour which in his judgment was a fair price for labor on the whole system and he used it uniformly, forty cents.

Q. You said that you could not go out of the record. Supposing that this condition had been reversed, and we had suddenly gone into a boom six months after this thing started and the price went up, do you mean to say that your report would not take that into consideration?

A. They would have to open the case and have further testimony put in the record, or they would have to wait until the period of time prescribed by law.

BY FATHER COX:

Q. The complainants said forty cents were right. The complainants were those who were fighting the advance in rates; isn't that true?

A. Yes.

Q. They were satisfied with forty cents, and that must have been true, and if they thought fifty cents was right, they would have fought for that, and I think every man would naturally be glad to say that he was getting fifty cents.

A. That is possible, of course, that the complainants' forty cents is nearer right than the estimate of fifty cents.

Q. I would be glad to feel that you were fighting to get them the more money than they actually got, but in this case it only helps the company.

A. This reproduction cost new theory—you see the way it is put in practice: If you get a good record, you make a good answer; if you get a poor record, you may get a poor answer, and after a record is closed you have to decide on the witnesses and then it goes up to the Appellate courts taken up on the record and that is one of the weak aspects of applying the reproduction new theory, less depreciation, to a property, but that is the law and there are many decisions of the courts, of the Federal and State Courts over the country. That is a guide as to how we must apply the reproduction cost new, and when you get your answer—there is no definite answer, except a judgment; judgment all the way through.

BY MR. MEMOLO:

Q. I am afraid, Doctor, that your average for wages at fifty cents is really high; that is, paid by this company.

A. Yes.

Q. Of course, the rate of wages up there will not run that high for labor. When you are working for the boroughs and townships, they pay fifty-five cents an hour, but as an average they have men working for those water companies for fifty cents; even in 1927, the average would be around forty cents instead of fifty cents.

A. You see, that may all be true, but an engineer who is assigned to the closing of the case, and the record is closed he cannot go out in the field and ascertain labor prices, which he could do if he was sent out per se.

BY MR. COOKE:

Q. Didn't the Commission take that fifty cent wage from the payroll of the company?

A. I don't believe they did.

BY MR. RICHARDS:

Q. There is something here that occurs to me. This little ten cents an hour increase, while in itself is a very small matter, it means that this company is being allowed \$325,000 a year in income, at the seven per cent figure that the Commission states; it means that three thousand two hundred and fifty people are going to pay the company \$10 increase a year for the water more than they should pay, and it seems to me that this matter of labor cost was not given very much consideration, otherwise, I cannot see for the life of me why you must necessarily take the peak of the respondents' estimate and disregard the complainants' entirely.

MR. TURNER: You would have to find out whether the Commission allowed it on the basis of forty or fifty cents an hour.

MR. RICHARDS: The Doctor tells me that the record is closed.

MR. TURNER: Doctor Snow's valuation was fifty million and the Commission did not allow it.

MR. RICHARDS: I think they cut one million dollars off.

MR. TURNER: The final figures was about forty-three or forty-five.

MR. COOKE: Forty-three.

BY MR. EVANS:

Q. You have been reading the respondents' brief to the Committee and perhaps the Committee would be interested in having you read the complainants' brief.

A. I have read it.

Q. Yes; but you have not seen fit to read it to the Committee.

A. Give me the report, and I will do a lot of reading.

On page 214 Mr. Lentz testified in reference to this territory that he is familiar with the rates prevailing, particularly in construction work, done under his immediate supervision and stating that he found that the Pennsylvania paid from sixty-eight to seventy-five cents per hour for ditching and hoisting engineers, for common labor thirty-three and three-quarter cents to forty-two cents per hour; the Lehigh Valley railroad have a schedule as follows, for masons and stone cutters sixty-six to seventy-two and a quarter cents per hour; for their helpers forty-nine to fifty-eight cents per hour, from the United States employment service, common labor thirty-five to forty cents per hour; that the Pennsylvania Railroad reported early in 1929, stone masons, sixty-eight to seventy-four cents per hour, the Department of Labor of this Commonwealth, common labor thirty-three cents per hour; stone masons seventy cents per hour, working day of ten hours, per day six or seven days per week.

Q. How much consideration did you give that testimony?

A. That is the brief, I think came in in April.

Q. I will read from the record at pages 32 and 32a, John H. Lantz redirect examination:

"There was a reference made by you of the record costs of labor, or labor costs of various sources, which you used, and which I think you said you would produce?"

A. Yes; we inquired of the railroads what their common labor rate was, and also the rates that various tradesmen employed. I might say that the railroads have their own union and due to the fact that their employees are engaged more steadily than those of tradesmen, who are independent, they have their own schedules of wages. We found that the Pennsylvania Railroad has a schedule of from 68 to 75 cents per hour for ditching and hoisting engineers, for common laborers, 33 and three-quarter cents to 42 cents per hour.

Q. Now that is from what railroad?

A. That is the Pennsylvania Railroad, Eastern Region, with headquarters at Philadelphia.

Q. And that information is as of what date?

A. November 7, 1928.

Q. What other railroads have you checked?

A. For semi-skilled labor, 34 to 60 cents; that is a little better class of labor than the common labor; what we called handmen in our setup.

The Lehigh Valley Railroad give a schedule as follows:

For masons and stonecutters, 66 cents to 72½ cents per hour;

Helpers to masons and stonecutters, 49 to 58 cents per hour;

Carpenters, 66 to 72½ cents per hour;

Carpenters' helpers, 49 to 58 cents; and

Laborers, 38 to 40 cents.

Q. That comes to you under what date?

A. November 5, 1928.

Q. And from what offices of the railroad company?

A. From Frank Loughman division engineer of the Lehigh Valley Railroad Company at Wilkes-Barre.

Q. Are they a considerable employer of labor through this territory?

A. Yes, the railroads probably—

Q. No; I mean that particular road?

A. Yes.

Q. What other information did you use in your labor rate?

A. From the United States Employment Service, Department of Labor; Common labor, 35—

Q. Just a minute, the date of your United States report.

A. October 19, 1928.

Q. And the office from which it came?

A. United States Employment Service, Altoona, Pennsylvania:

Common Labor, 35 to 40 cents per hour;

Handymen, 50 cents per hour;

Stone masons, \$1.00 to \$1.20 per hour;

Stone cutters, the same;

Hoisting engine runners, 70 cents per hour;

Carpenters, 70 cents to 90 cents per hour.

Q. What weight did you give to that evidence?

A. I read it.

Q. And discarded it?

A. I didn't discard it. I did recommend fifty cents for their consideration.

Q. You did that in spite of having others at forty cents, in spite of the rate quoted by the United States government for the employment service of the State government, quoted rates running from thirty-five to fifty-two cents an hour for common labor?

A. Yes, except that we gathered from four to ten of my assistants around the table to try to get our minds on a parallel that we may agree to do something tomorrow, and tomorrow may change it. I really personally think that there should be enacted into law a provision in every state in the Union that no man should work for less than fifty cents an hour.

BY MR. RICHARDS:

Q. We are dealing with facts here; we cannot change our minds about the fact that this is a desk and that it is made of wood, and it is a fact that these things are in that report and when you were advised that those are the prices that were being paid and still you are using a fifty cent rate in 1927 and the early months of 1928.

A. Well, the inventory of the Lance appraisal I believe was on July 1, 1927.

Q. And you were making a valuation for the purpose of finding the true basis for rates. I am not a financier, but certainly it doesn't take a financier a year ago to see that we were in a period of depression.

BY FATHER COX:

Q. What was the use of knowing what was paid labor?

A. What I might have done, if I were making an inventory and appraisal in the field is a different thing. In this record, I was using the testimony on the record, and if it was a good record, all right, and if it was not a good record, all right, but I want to say that this illustrates forcibly one of the arguments of the theory of reproduction cost new that applied is inherent in the theory and not the fault of the man who earnestly and honestly worked up the record.

BY MR. RHODES:

Q. You agree we ought to have another theory instead of this reproduction new theory?

A. I surely do, yes sir.

BY MR. EVANS:

Q. For the first fourteen structures in this appraisal, you used forty cents labor rate, and then you switched over to fifty-cent labor rate?

A. I don't think that that is right, sir. These are not my notes. I have notebooks of my own. Mr. Parmley may have used forty cents on this work but when I came to review it I reduced it to fifty cents.

Q. Let us take this sheet, that is the Campbell Ledge Storage Reservoir, and you get a value of \$14,802.

A. It that not Downs? Is it marked Snow?

Q. Now then I show you your report of June 30th, on page 45, Campbell Ledge Storage Reservoir, \$114,802.

A. That checks.

Q. That was forty-cent labor, was it not?

A. I don't know.

Q. Here is a note?

A. You will have to ask Mr. Parmley about his notes. He has so many notes distributed over that page that I cannot tell you what they are.

Q. You stated you could not go outside of this record to get any unit prices. Why then did you go to the Downs report

and use the Downs report prices which were not in the record at all?

A. Did I use them in the final?

Q. You testified you did?

A. Where did I, I cannot remember, I want to know when I did.

Q. Here they are, bonds based on these items. Ehlers, Downs, Downs, Downs, Lance. Didn't you use for these individual items the Downs prices?

A. I think I did.

Q. Where were they in the record?

A. The Downs appraisal was stipulated in the record.

Q. Where were the Downs prices put on the record?

A. The whole report is stipulated in the record. I don't know if I am using the right word.

Q. You base your testimony in so far as it used the Downs report on your statement that the Downs report was stipulated in the record. Will you bring in the reference tomorrow morning where the Downs report was stipulated in the report?

A. I am not sure of the words, legal standpoint, but it is available for testimony and it was given to me to use as part of the record.

Q. Who gave it to you?

A. It was handled as part of the record.

Q. Who gave it to you; who handed it to you?

A. I cannot tell now.

Q. Don't you know, Dr. Snow, that the Downs Appraisal on the certificate of valuation which was issued by the Commission was in 1918 on the express statement of the Commission, which was, that it should never be used in any way as a basis of any valuation in any rate case?

A. Yes, I heard it said; I heard you state that and I heard others state it here, and I also heard Chairman Ainey say it was perfectly competent to use parts of that as an aid to judgment in—

Q. Mr. Ainey being your master, you accepted the Downs Appraisal irrespective of whether it was presented here in this report to the Commission?

A. You make that statement too strong—

Q. I am asking you that?

A. Now,—

Q. How did you get that there? (Indicating work sheet).

A. Whatever I have there from this Downs Report, I have plainly labelled "By Mr. Downs," so that you may know where I got it.

Q. I want to know how the Downs Report got into the record?

A. In all of the 50,000 items in these pages, I will tell you that I cannot remember now.

Q. You may come in tomorrow morning and tell us?

A. I cannot do that until tomorrow morning.

Q. I mean the Downs Report was brought into the record, because that now, as I understand, is the basis for using the Downs prices?

A. On that page.

Q. You don't have any others on that page—well, we will have your book here in the morning?

A. I will do the best I can to shorten it.

Q. We will have your book here, so that we won't have any difficulty about that?

A. There may be some difficulty even with my notes, I have had difficulty enough, and I think that anybody that follows my notes will have difficulty on that, truthfully.

Q. I show you a sheet, "Concrete mass in Harvey's Creek intake No. 2."

A. Yes.

Q. Which according to this sheet was valued at \$9,300.10?

A. That is a fact.

Q. All right. There is carried into your report of June 30, 1930, \$27,960, reproduction cost new on Harvey's Creek intake No. 2 and \$26,260 depreciated, and I show you the identical figures on this sheet, and to make up the reproduction cost new there is a figure of \$9,300.10 for concrete mass. Will you tell how you arrived at that figure?

A. Well, I will when you give me my notes, those are Professor Parmley's notes. I don't want to testify on his notes, I want my own notes, then I will do my best for you.

Q. All right. However, it appears that you used that figure in arriving at your valuation, does it not?

A. From that column, it does.

Q. How else could you get the figure of \$27,960?

A. I presume I did, but I want to see my own notes, then I will be positive.

Q. All right, we will have your notes in the morning?

A. That is all right.

Q. Let us get back for a moment to labor cost. Did you happen to consider the testimony of James Harrupp in determining your labor cost?

A. I had it before me.

Q. He was the leading witness for the respondent, was he not?

A. I think he is chief of the company men—the company that they formed within the company, and I think he is chief of the valuation men.

Q. He says on page 14, 13a, in cross-examination, he was asked, "What did you count for basic unskilled labor?" And the answer was, "From 40 to 50 cents an hour, and in spite of that admission on the part of the leading witness of the respondent you took 50 cents an hour?"

A. I took 50 cents an hour, whether it rained or whether it shined, that is very plain, and there is no equivocation about it at all.

BY MR. RICHARDS:

Q. I am still a little foggy here about some point, and that is not remarkable, but this record now that appears to be the sacro sant, and what I would like to know, what was the last day for closing in your valuation date, was it July, 1928, or 1927. In other words, if you make any allowance in valuation prices of any kind, if you valued something at the market price and some upheaval upset those prices, did you make any allowance for that at all?

A. No.

Q. In other words, the prices for July 1, 1928, were the actual prices, and it didn't matter a hoot what happened, and you ran your report a year after that on that price?

A. I turned my report in on the record, at the date the record was made.

Q. What do you mean by the record, exactly?

A. Your Honor, in comes at a former hearing, Mr. A. B. C, D, E, F, G, and they testified for days, weeks, months, altogether, just the same as you are making a record here—

Q. And this is the record here, this book? (Indicating book on counsel table.)

A. The same as you got these exhibits here.

Q. I understand that.

A. And after a year or two, or the time it takes to conclude the hearings, that is the record, and then there are arguments, and then there are briefs, and then someone is assigned, like an accountant or an engineer, to go over all that stuff, and get an answer—

Q. Just like this record here? (Indicating book on counsel table.)

A. That is what I was assigned to review and serve it to the Commission in a form so that they could understand it.

Q. The record, this white book here, that we are talking about, is that right?

A. No, that is—

Q. Similar to the book here on the counsel table, or a book similar to that, that may not be the record?

A. The records in this case would completely fill this table.

Q. But this would be a part of the record, I don't want to quibble over the technicalities?

A. The record is—

Q. The record giving the data or any piece of it, and this is a piece of it apparently.

MR. TURNER: That is the paper book.

BY MR. RICHARDS:

Q. You are going over the printed record, that is, the history of the testimony taken in this case, is that right?

A. The typewritten sheets, that is it.

Q. All right, and on that record you make your prices, you take that as the basis of your report, and the record is merely a statement of witnesses, which may be right or may be wrong, and in this case it may be wrong because the record said that the labor rate was 50 cents an hour, and you used that regardless of any changes in the industrial world after that for a year, you still took that price?

A. I understand exactly what you mean, I took just what the record had.

BY FATHER COX:

Q. Then what about the complainant's record? Again we come back to what the complainant's record showed, 40 cents an hour?

MR. RICHARDS: The respondent's record is apparently what they took.

BY MR. RHODES:

Q. So as to get it down to the final analysis, if anybody is inclined to offer a high price, you get a high result, and if the inclination of the individual is toward low prices, you get a low result?

A. That is right, sir.

BY MR. RICHARDS:

Q. This hearing, this Springbrook hearing took about what, eighteen months, or how long did it take before it was settled—settled from the time that the appeal was taken?

A. I think the Commissioners sat in hearings nearly two years.

Q. Now, what I am getting at, if the labor rate paid at the time the testimony was taken was ridiculously low, and before the decision was handed down, we had a change in conditions, for example, a war had broken out, and everything went up, you don't mean to tell us now that you would still take the 30 cent labor rate against 60?

A. I would have to stick to the record, or re-open the case.

Q. Why is this record so all-important. Are not the facts worth something?

A. The Commission had been reversed by the Appellate Court in more than one instance in 17 years because they had gone outside of the record to bring in stuff that had not been in the record, that was the whole view of the Appellate Court, the practice of the Courts.

Q. In order to be sure that the respondent got the breaks on it, you gave them the peak load, gave them the 50 cent rate—that is the only thing I can make out of it, because there is no other reason for it apparently, in my opinion.

A. I have answered it to you squarely, as to how I determined the 50 cent rate. I have also said candidly it was my judgment, no one else responsible for it, and up to the Commission, and beyond that I ceased and passed out of the picture, and it was up to the Commission to determine.

Q. Would you now say, Doctor, that this labor rate should stand; would you now say that this Springbrook case should be judged on the basis of the 50 cent rate?

A. If you authorize or the Commission authorized me to go up to the Scranton territory, and I went up there in the street railway case, I went on the ground up there and conferred with the labor men—

Q. But in this case, this is the case that you decided?

A. I didn't do it in this case, I could not. Therefore, I cannot say that I would find 50 cents or what I would find, but I would go after it to find out what they were paying.

Q. You would hardly say that 50 cents an hour was a fair labor rate at the present time?

A. No sir.

Q. If that is true, would you say that the Scranton Springbrook case was valued at \$4,000,000 more than it should be?

A. At the present labor, yes sir.

BY FATHER COX:

Q. It wouldn't make any difference what you said to the Commission, if you made an investigation—if they chose in their judgment to say, we don't care what you say, it would still be 50 cents—your labor would be in vain.

A. They wouldn't have to accept my work; they can make their own determination.

BY MR. RICHARDS:

Q. Fifty cents is your story, and you are going to stick to it? A. I didn't say so. I would say I don't know what I would find—

Q. I may have misinterpreted you.

A. Yes, or I may have misstated it. I said I found 50 cents on the record, from the testimony. I hadn't said that I would have found 50-cent labor, if I had gone there in the field.

Q. You didn't find 50 cents on the record—you found 50 cents on the respondent's testimony on the record—you also found 40 cents on the record—

MR. COOKE: He also found 33 cents.

BY MR. RICHARDS:

Q. When you say you took the record, in order to keep our own record clear, I would like it to appear that you did take only a part of the record—the respondent's and not the complainant's record. We have already shown that—

A. After Professor Parmley made a notation that we agreed on at first, we would take 40 cents, which was Mr. Lance's price. Mr. Lantz was born and bred in that locality and he would know. Later on, after seeing the record and seeing what witnesses said, I determined that for the consideration of the Commission that 50 cents from the record was the right thing.

Q. In other words, it is just a coincidence that that is the respondent's figure?

A. No, it was their testimony and others—50 cents and higher. They had been paying that for two years. Mr. Lance would say that they were paying 40 cents, but he would be wrong.

Q. You think he was wrong.

A. The fact that they did pay 53.4 cents per hour, Mr. Lance would be wrong when he said 40 cents. He would be wrong as far as that is concerned.

Q. There is some doubt as to whether they were wrong or right?

A. I don't know about that.

Q. Why did you take the respondent's figure as against Mr. Lance's. They put this in in a peak time—it was a peak figure—they put in 53 cents—Lance has 40 cents, somebody else 33 cents.

A. I wouldn't question a witness or a company, if you were suspicious of them, I wouldn't question the veracity of a company, when they state a fact that they paid so much money—don't misunderstand me—they have no business to lie to the Public Service Commission.

BY MR. COOKE:

Q. If the company said something, you must believe that?

A. I didn't say that, why I didn't mean to say that for a minute.

BY MR. EVANS:

Q. Would you have someone in your department in your bureau before ten o'clock tomorrow morning study the respondent's briefs and find out whether the Downs Report is offered in evidence. We will have your work sheets here tomorrow morning and see to what extent you used the Downs prices, and where it was brought into the record. I think the Committee has some other business to attend to at this time.

BY MR. RHODES:

Q. You have a propensity for higher figures.

A. No sir, I have cut down corporations for a great deal, but I say the conclusion I come to, I put out to the Commission, I stand on my own feet, without fear or favor. I may be wrong. I would be more insistent if I could go out in the field and with my own eyes and with my staff and get the work myself then I would feel more that I was correct, but when I am confined to the review of a record, it is not mine, it is not my own ability, engineering, professional engineering conclusive, and I hope it is understood. I can't state it any better than that.

THE CHAIRMAN: This hearing will stand adjourned until tomorrow morning at 10.00 o'clock.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10.

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Thursday, April 23, 1931, at 10.00 o'clock, A. M.

There were present:

Messrs. D. Glenn Moore, Chairman  
Bart Richards  
Chester H. Rhodes  
Martin Memolo  
Ellwood J. Turner  
Louis W. Hagmaier  
Harry J. Crawford  
Morris L. Cooke  
Father James R. Cox  
Harold Evans, Esq.  
John M. Walker, Esq.

F. HERBERT SNOW recalled.

BY MR. EVANS:

Q. Dr. Snow, have you found yet where the Downs Report was introduced in this case?

A. No, I have searched in the time available, and I now believe that it was, as far as I can ascertain there, never so introduced, never stipulated into the record. I would not say positively that it was not introduced, but it was constantly referred to by both the complainants and respondents, and Mr. Downs was brought up from Philadelphia and testified to this report, and I used it constantly for half of the property, the Wilkes-Barre Division of the property, which was the original Springbrook Water Supply Company, and is covered by the Downs Report, but his report has nothing to do with the upper section of the property called the Scranton Division, and I used it all the way through for the purposes for which I have used it in my report and in my notes.

Q. Now, so far as you have examined the record, when you say that the Downs Report was referred to in the record, it was referred to as an inventory, was it not, of the property?

A. Yes, and there was also testimony as to the prices he applied.

Q. The unit prices?

A. I heard Mr. Downs testify on that.

Q. Do you mean to convey to the Committee that you only used the unit prices which Mr. Downs referred to in his testimony?

A. Oh, no.

Q. So that you did in making up your valuation use unit prices in the Downs Report regardless of whether or not you found them in the record?

A. I—

Q. Now, just answer that yes or no?

A. I didn't do that, but I would like to explain what I did do.

Q. You used the unit prices in the Downs Report which were not introduced in the record?

A. No, I was told—

Q. Now, don't say what you were told.

A. No, I didn't do that.

Q. Now, where were they introduced in the record. Now, come, let us get down to brass tacks:

A. I thought you started with brass tacks.

Q. Very well, you used the Downs prices for clearing, did you not?

A. Yes, I took his total of \$5,607.35.

Q. And you used his unit price of \$265.62 an acre for clearing?

A. I have the same total that he has in his report, \$5,607.

Q. Now, was that figured in the record?

A. It was in his report.

Q. And his report you have just said was not in the record; was that figure in the record?

A. I said I was told, and will repeat and elaborate, I was told by the Commission, or Chairman Ainey, or the sitting Commissioners, or the Law Department, that the whole Downs Report was available for me to use, not as a conclusion, but the facts and things that were used in that way were available for me to use, because all parties had used them, and therefore they were available to me. I said I did use them in that way, and that is the alpha and omega of the general situation.

Q. I am not criticizing you, Dr. Snow, in what you did, you were following the instructions of your masters, no doubt, but what I am trying to find out is whether or not you used the unit prices in the Downs Report?

A. In this instance I did, in this one item of clearing for Campbell Ledge Storage Reservoir.

Q. All right, we will take the next item, grubbing?

A. For grubbing I did the same.

Q. Now, how about item 4, rock excavation?

A. Why not take the third item?

Q. I am picking out the ones that you used from the Downs Report.

A. I beg your pardon, I am not conducting the case. The fourth item is rock excavation, and I took \$3.90, the equivalent of \$911.54, he took that, and I took the same.

Q. Take the fifth item, concrete mass?

A. Concrete mass, his unit price would be 59 cents, total \$30,174.46, and I took the same, rounding it out to \$30,170.

Q. And the next item, concrete reinforcing?

A. He took \$18.75, and that \$95.35, and I did the same.

Q. And the next item, embankment of earth?

A. He took \$1.01, total \$15,208, and I took the same. And the next item after he took seventy-seven and a half cents, and took a total of \$384, and I got the total of \$139; so, I didn't take his unit prices on that.

Q. You didn't take his unit prices on that?

A. No; I only got \$139, and he had \$384.

Q. After going over that, is it not true that you used the Downs unit prices in a large number of cases?

A. Well, I didn't use them in the majority of cases.

Q. I did not say you used them in the majority of cases, I said, a large number of cases.

A. I think I did, but they speak for themselves. You will probably find a large number of Mr. Downs' prices, too.

Q. I am not doubting that, but what I want to find out, in every case where you used the Downs prices, did you make sure they were in the record?

A. Well, it was in the Downs report.

Q. Yes; I understand that, and you have said that the Downs reports is not in the record, but you have been trying to give the Committee the impression that Mr. Downs' report got in the record through Mr. Downs' testimony.

A. After all, I am not trying to give the Committee that impression, I am trying to answer your questions truthfully.

Q. It is true, is it not, that the Downs unit prices were never used in the testimony in this case in any way?

A. Well, I heard Mr. Downs testify. Those were not the unit prices of his 1918 report. He was testifying as an expert in this case as to the reconstruction cost of 1927. I am talking about the Downs report of 1918. That is not my belief, Mr. Counsel. I think he was only brought up to testify as to his so-called Downs report, and that was what he was testifying on, if I recollect rightly, at the time I heard him testify.

Q. Will you make a further examination of the record and by Wednesday of next week produce to the Committee the record where the Downs prices, which you have used—unit prices—were introduced in the record? I think if you would be perfectly frank Dr. Snow, you would admit that you used Downs unit prices in his 1918 report, whether or not you found them in the record.

A. Wherein have I not been frank? I do not want to be coerced here. I am under oath here. I did not come up here with a bag of tricks.

Q. I think that is the situation, if you were frank enough to admit it.

A. You ask me the questions, and I will answer the questions, frankly, but I do not want to be coerced and I am not interfering with your conduct of the case either. I want a square deal, and I will give you one.

Q. And now, I will get you to go over, before next Wednesday your work sheets and make a statement to this Committee as to the number of Downs report prices that you used in your Springbrook valuation. According to the information I have, out of a total 338 unit prices used in that valuation, you used the Downs report in 193 of them, and if that is not correct, I would like to be advised.

A. Yes sir; I will do that willingly.

FATHER COX: I think it is more of an office report than a Downs report.

BY MR. EVANS:

Q. In December, 1928; you made a report to the Commission in regard to the temporary reduction of rates, did you not?

A. I can tell if you put it before me.

Q. I will be glad to do that. I show pamphlet, headed "Chief Snow's report, December 12, 1928, data for Commission hearing, rates, Scranton-Springbrook Water Service Company."

A. Yes sir; this is the report.

MR. EVANS: I offer a copy of this report in evidence as Exhibit Number 163.

(Paper in question so marked).

Q. Now, Dr. Snow, I want to read to you some of this letter to refresh your memory. This is dated December 18, 1928, addressed to the Public Service Commission of the Commonwealth of Pennsylvania:

"Mr. Chairmen and Gentlemen:

"On December 12th, 1928, the Commission referred the record in the above-entitled case to Commissioners Brown and Young with direction to the Bureau of Engineering and the Bureau of Rates and Tariffs to make analytical studies of the records and prepare memorandum reports for the information of the Commission, the Commission expressing the opinion that the rates for the domestic service should be restored to their prior level.

"Chief Fickenschner of the Bureau of Rates and Tariffs and the writer have conferred together and the following report is herewith submitted.

"The old rates in the City of Wilkes-Barre and vicinity where water was and is sold by fixture rates rather than metered rates ranged from \$8 to \$33 in domestic and commercial service; while in Scranton and vicinity where water is sold by meter the rates ranged from \$10 to \$12.50 for the same domestic and commercial consumer alike. Similarly the new rates have a range like the old ones did for flat service in Wilkes-Barre. The range is from \$11 to \$45 and in Scranton and vicinity for metered service \$11.60 to \$20.60. The total effect of the new rates for the entire property is an estimated increase of \$1,500,000. The old rates returned a gross revenue of about \$3,000,000; the new ones are estimated to return \$4,500,000.

"It is difficult under such conditions and wide range in class of service and charges therefore to equitably readjust the rates, but your bureaus have been engaged in studying the entire rate structure for the purpose of working out a basis for a temporary cut in rates applicable to domestic consumers, whereby the greatest benefit possible from such a cut would be shared by the largest single class of consumers.

"There is always a point beyond which rates cannot be reduced without becoming confiscatory:

"The Company fixed a rate base in round numbers at fifty-four million dollars and it is expected that this base will substantially sustain the new rates under contest. A rate base of thirty million dollars is sufficient to support the old rates."

Now, fifty-four million dollars, Dr. Snow, was substantially the amount claimed by the Springbrook Water Company, and the amount of the outstanding securities, was it not?

A. My recollection is that that summary was set up on their new books of the merged properties.

"A rate base of forty million dollars would be substantially a cut in value of thirty per cent."

Q. By that I assume you mean a cut in the value claimed by the respondent?

A. I think so.

"It would be understood that the bureaus have not studied the record as to a probably fair valuation base; nor do they assume to offer any information as to what a fair rate base may be; but it is within the bureau's knowledge that a cut as large as fourteen million dollars from the Company's rate base would be more than some of the complainants have expected or striven to obtain."

Q. I want to call your attention to that. "It is within the bureau's knowledge that a cut as large as fourteen million dollars from the Company's rate base would be more than some of the complainants have expected or striven to obtain." Where did you obtain that knowledge?

A. I don't know. I think Mr. Fickenschner gave it to me. I used the word "bureaus" I think.

Q. In other words, you made that statement without knowing what the source of your knowledge was?

A. No. I knew at the time. I cannot recollect now.

Q. Then, no one connected with the complainants gave you that information, did they?

A. No sir, I don't think so.

Q. So this statement was based entirely on hearsay information as far as you are concerned?

A. As far I can tell you. I don't remember; it might have come from Mr. Fickenschner's bureau.

Q. You were passing on to the Commission what the complainants were expecting in the way of a rate base reduction without any knowledge of your own in regard to it?

A. "Some of the complainants have expected," it says.

Q. Which one were you referring to?

A. I don't know.

Q. Did you know then?

A. I must have known then, and I would think it came wholly from the Bureau of Rates and Tariffs.

Q. Dr. Snow, what difference did it make what the complainants were expecting? Were you not trying to find out what was fair and not what any one was expecting?

A. Yes. That was what I was trying for in this particular case, and that it part of the way I do my work.

Q. Why did you put in anything as to what the parties were expecting?

A. I cannot tell you now. It is there.

BY MR. COOKE:

Q. Under what circumstances would a statement of that kind have been relevant?

A. This is pulling things out of the blue. People were running in and out of the Bureau of Rates and Tariffs and discussing things I suppose a great deal of that goes on in the Bureau of Rates and Tariffs. It does not occur in my bureau at all. We worked this thing out jointly, working together as we were instructed. I think most of it was done by myself or my bureau and it may be that it would occur in that way.

BY FATHER COX:

Q. This is a very, very serious proposition and when people are spending \$200,000 trying to win and you are waiting for someone to say whether or not it should be done, I think that is a serious proposition.

A. This is a temporary rate the Commission wanted to know.

Q. Who was that influence, could you tell that?

A. None that I know anything about.

BY MR. EVANS:

Q. Dr. Snow, as far as you know, that information must have come from the Commission themselves, might it not?

A. It didn't come to me.

Q. You are putting the burden of this on the Bureau of Rates and Tariffs?

A. I say I don't know it and I would not have any information about the statement. I cannot remember now where it came from.

Q. So as far as you are concerned it might just as well come from the Company as any other source?

A. Yes, but it didn't reach me from the Company.

BY MR. RHODES:

Q. Could it have come from the Chamber of Commerce at Wilkes-Barre?

A. No, I had no contact with anybody.

Q. You had no contact with any corporations or individuals in Wyoming Valley?

A. No sir.

Q. Didn't the coal companies receive a reduction in their rates?

A. I don't know.

Q. Were not the coal companies interested in eliminating this contest?

A. That I don't know.

Q. Did you ever hear anything to that effect?

A. No. I have heard that here in these hearings and I have heard elsewhere that the rates for the large consumers had been reduced, but I never followed it up to see if that was so and a fact or not. I would not do that unless I was instructed to.

Q. Did it come to your attention that the coal interests in the Wyoming Valley were desirous of stopping this contest?

A. The first case, yes sir. I knew of that.

Q. I mean this case?

A. No.

BY FATHER COX:

Q. Everything was all right if that influence you were waiting for had spoken. Then you could act. It must have been powerful.

BY MR. MEMOLO:

Q. In the beginning, Dr. Snow, the coal companies up there had joined in the protest?

A. I presume they had but I don't know. I would think that they would be very much interested.

Q. Afterwards they retired from the case, altogether, did they not?

A. I don't know that. That is a part of the proceedings before the Commission. That does not get into my bureau at all.

BY MR. HAGMAIER:

Q. What is meant by: "The bureaus have not studied the record as to fair valuation base nor do they assume to offer any suggestions as to what the fair rate base would be?"

MR. EVANS: Mr. Hagmaier—

MR. TURNER: Why don't you leave him answer the question?

DR. SNOW: I had some conversations once or twice with this committee of Messrs. Brown and Young on the preparation of this report and actually it was to be an interim rate schedule to tide over until the proceedings on the valuation could be concluded and the Commission reach a determination and you see my report on the work my Bureau did was June 30, 1930, and it would have been worse than useless to have attempted to make a report by the bureau on the valuation while the case was in progress of hearing before the Commission and made an estimate and they would have determined the fair value of the property by December 1, 1929. I am not familiar with the terms of the agreement the Commission reached with the lawyers up there to suspend everything until January 1, 1929, and the Bureau decided that they would adopt a temporary rate and they asked me and the Chief of the Bureau of Rates and Tariffs to study and make a suggestion to it about what that rate should be. I am quite sure along that line, in a talk with the Commission or Chairman, or all that I was given a range in which these temporary rates, within which they ought to fall. That is as far, gentlemen, as I can say from recollection, or best belief.

BY MR. HAGMAIER:

Q. What was the high and low marks of that range?

A. I would think it might be, from some of the paragraphs here, I used \$40,000,000, and I am not very sure that the high was not \$54,000,000.

BY MR. EVANS:

Q. It was \$54,000,000 plus \$4,000,000 of water rights, which made a total of \$58,000,000.

A. I think that is substantially correct.

BY MR. HAGMAIER:

Q. What was the temporary rate allowed at that time?

BY MR. EVANS:

Q. There was a reduction of \$245,000 in the temporary rate—  
A. I recommend to the Commission's consideration, or the two bureaus, that under Plan A that the first spigot be reduced from \$11 to \$10; and additional spigot be reduced from \$5.50 to \$5.00; the first bath tub from \$5.50 to \$5.00; the first closet from \$5.50 to \$5.00; hose connection from \$11 to \$10. In the next column I give the number of units, the consumers of that class, which made under Class A \$146,846, and then the motor service charge reduced from \$8.00 to \$5.00, which made \$98 or a total reduction of \$245 in round numbers—\$245,000 on that basis.

Q. Plan B the reduction was greater. The first spigot being reduced from \$11.00 to \$10; additional spigots from \$5.50 to \$4.50; first bath tub from \$5.50 to \$4.50; first closet from \$5.50 to \$5.00; stationery tub from \$4.00; to \$3.50; hose from \$1.00 to \$9.00. That would total \$177. Then the service charge,  $\frac{1}{2}$  pipe for meter, \$8.00 reduced to \$5.00. That all totals up to a reduction of \$276,848. I don't recall, but the records must show here what the Commission did do. I made a report to Commissioner Shelby later on. I think that is in the record. Attached to your letter are certain work sheets, are there not?

A. Yes sir.

Q. Among them is a sheet in which you have calculated the allowable gross revenue on various assumed fair value bases.

A. That is right. It starts from fifty-four and takes to thirty.

Q. You prepared that, did you, or had it prepared in your bureau?

A. Some of these figures are mine; some are one of my assistants. I told them to cast them up that way probably.

MR. EVANS: I offer this in evidence as Exhibit No. 164.

BY MR. EVANS:

Q. Dr. Snow, in this calculation, the first assumed fair value is \$54,000,000?

A. That is right.

Q. You say that is what the company claimed?

A. Yes sir, that is my recollection of how they started out their books under the merged properties.

Q. You take \$50,000,000 as an assumed rate base, make your conclusions—

A. Yes.

Q. Then to \$45,000,000?

A. Yes sir.

Q. Then to \$44,000,000.

A. Yes sir.

Q. Then to \$40,000,000.

A. Correct.

Q. Then to \$30,000,000.

A. That is the last.

Q. Will you explain to the Committee why it was that you picked on \$44,000,000, which seems to be an odd figure in the middle of that calculation. You were going down by \$5,000,000, until you got to \$44,000,000. Why did you pick on that figure?

A. I can come somewhere near telling why. I recall now, although I did not sit in the meetings, that there was a debate between members of the Commission as to what basis the temporary rates should be fixed on. Now then, \$44,000,000 was mentioned to me by some Commissioner, or group of Commissioners, and so I put it, computed it on the \$44,000,000. That is my best recollection of where I put the \$44,000,000 in.

Q. Well now will you tell the Committee as nearly as you can what was said by members of the Commission in this conference that you have referred to?

A. Well, I was not present at the conference, it was an Executive Meeting, and it was behind closed doors.

Q. What was said to you by any member of the Commission in regard to this \$44,000,000, as far as you remember?

A. I was asked to make, or intimated—I was asked to make a calculation, one on that \$44,000,000.

Q. Now, as a matter of fact the \$44,000,000 was exactly \$14,000,000 less than the total valuation claimed by the company, included this \$4,000,000 of water rights, was it not?

A. They claimed \$54,000,000.

Q. Yes, and \$4,000,000 water rights, making a total of \$58,000,000?

A. Yes.

Q. And \$44,000,000 is exactly \$14,000,000 less than that?

A. That is right.

Q. And you had known at that time, or had information that led you to believe that the complainants would be satisfied with a valuation of \$4,000,000 less than the company claimed?

A. Whatever the report says, Mr. Counsel.

Q. Well, what does it say, you have it there?

A. It has been quoted before, but I have already said I didn't have that information, so I want to qualify—"But it is within the Bureau's knowledge that a cut as large as \$14,000,000 from the company's rate base would be more than some of the complainants have expected or striven to obtain."

BY FATHER COX:

Q. Where did that information come from?

A. I am not able to say. I think would come from either the Bureau of Rates and Tariffs or from the Commission, or some Commissioner himself.

Q. We ought to find out who said it. I think it is this Committee's work to find out what that influence was.

BY MR. EVANS:

Q. Well now, Dr. Snow, in other words, as early as December, 1928, you had information from the Commission that they thought a rate base of \$44,000,000 was about right, and that the complainants would be satisfied with a rate base of about that amount?

A. I didn't say that. I said that I was asked to include in my calculation a \$44,000,000 base, and I did it.

Q. What was your understanding with regard to that; surely there must have been some reason for taking \$44,000,000 rather than some other figure?

A. My recollection is now that there was a debate among the Commissioners, and they had not settled it, and I was taking a range, in there \$5,000,000 apart, and I was asked to

figure on a \$44,000,000 basis, and I did it. That is my best recollection.

Q. And had you not gathered from the information that you had from the Commission that they had a \$44,000,000 rate base in mind at that time?

A. Some Commissioners did have.

Q. Which Commissioners do you say?

A. I don't remember.

Q. Do you remember which Commissioner gave you this information?

A. No, I cannot remember that.

Q. Dr. Snow, on this same Exhibit, No. 154—

A. But I think that the Committee—at least I think that the Committee would have, or the Chairman, or Commissioners Young or Brown.

Q. On this Exhibit 164 at the rate you have placed crosses opposite certain of the valuations. One cross opposite the \$54,000,000 valuation; two crosses opposite the \$44,000,000 valuation and three crosses opposite the \$40,000,000?

A. That is right.

Q. Does that indicate that those were the three rate bases that you were then seriously considering?

A. No, I wanted to tab them so that they would stick out. It shows there under the first mark that the company wants \$54,000,000 valuation, and a revenue of \$4,500,000, and I put operating costs in another column there, depreciation return, giving \$4,500,000, equal to 5.9 and that is just checking back. Now, I didn't follow out the calculations after the \$44,000,000— or after the \$40,000,000, I don't know why, but I didn't go any farther with the calculations on that page.

BY MR. HAGMAIER:

Q. Why should the company's figures be designated there more plainly than those of the respondent, as what the company wants?

A. That was their formal claim.

Q. I know,—

A. They complained about the justness—or the unjustness and the unreasonableness of this thing, and they put in a complaint, and no claim, and after many many months they continued the case, and this was a temporary rate.

Q. Was not their contest on at this time about these rates?

A. I have already said, your Honor, that the—

Q. Answer that, you can answer it yes or no.

A. Yes.

Q. Why should any other figures stand out, be marked simply as the companies want, and why should not the people want to be marked?

A. That was what was to be determined by the proceedings, and the proceedings had not gone very far.

Q. To determine what the company wanted?

A. I am speaking now of the complaints that you are talking about.

Q. But their figures are not marked. Why should not the people's figures be marked, so that they stand out as those the companies want?

A. Well, here, a company, your Honor, was making a complaint, and you cannot likely throw that off, and there were no other claims for it. There were complaints, and those companies were in process of hearing, and it took a year, or a year and a half before the proceedings provided by the law, made by the General Assembly, could be completed. Now then, in the interim it was decided that there must be a temporary rate fixed, and that was what we were trying to do, I do not see that you could get a temporary rate base in any other way.

Q. It says here that there was probably no reason for the valuation, and why should they figure such an enormous sum of \$54,000,000—

A. Where does it say there is no reason, not in my letter?

Q. Whoever—in the latter here—

A. In this report of the two Bureaus to the Commission?

Q. What were the other figures put down there for, what were they marked for; the \$44,000,000 and the \$40,000,000?

A. I had a range, and it seems to me from 54 to 30, and I was making calculations, as it is customary to make.

Q. The fact of the matter is that you had the answer and you were figuring backward to get the amount?

A. No, I didn't do anything of the kind, and there is nothing in this to show that?

Q. Almost all the stuff we have had is the same way, the answer was had first, and then you figured back to get the amount in some way or other?

BY MR. EVANS:

Q. Well, now, Dr. Snow the final fair value fixed by the Commission was \$43,650,000, was it not?

A. I guess so, I think you are right.

Q. And two years before, in December, 1928, certain members of the Commission, from what you have told us, had in mind a valuation of \$44,000,000.

A. Well, I can't say that. They gave me \$44,000, to make some calculations.

Q. \$44,000,000?

A. Or \$44,000,000, they gave me that figure to make some calculations on. And now, as far as I knew, that was for the moment, and my report was for the moment only a temporary thing.

Now, I can't go further. Of course the Committee is sitting here in judgment on the matter. I can't sit in judgment on my superiors, and I did what I was told to do to the best of my ability, and I have given you everything I did.

Q. And when that consideration entered into your deliberations, that a temporary sum of \$245,000 or \$250,000, which was the information you set forth that the bureaus had, that the complainants would be satisfied with a \$14,000,000 reduction in the rate base—

A. That is in the report.

Q. In your June 30th report you found \$50,648,000, rate base, did you not?

A. No sir; I did not and I testified here that I did not. That was an addition of a lot of assumptions that were made by the Public Service Commission functioning as required by law. I have said that time and time again.

Q. Suppose we put it this way: In your June 30th report, you set forth information on which you assumed a rate base of \$50,648,378.

A. That is right.

Q. That is one of the figures you thought of particularly in December, 1928, was it?

A. No; those totals in that tabulation were made at the last moment; I think late one night and the next day—on the day of June 29, 1929, and no one of us working on it knew what the answer was going to be until we used the tabulating machine and got it. That was the journey step by step and it is all explained in that 440 page report; just what we did; and in my note books, the dates are all there; step by step of that journey. It is true, but absolutely false that we knew what the answer was going to be until the night we tabulated it, and my bureau was not striving to do anything else than what we were instructed to do; and that was to check that report, and submit the result of our views pro and con to the Commission, for their aid in determining the valuation; to assist them on that basis, and their use of the overheads, all of which had had many million dollars; and the claim for water rights and so forth; they were all put in for what they were for the Commission's view. They were not my determinations, except where I have so stated in writing.

Q. But by a strange coincidence, the amount of the rate base, which you arrived at in your June 30th report was sufficient to sustain the rates filed by the Company effective on July 1, 1928.

A. Yes; but not, sir, with the word—unless the word "strange" is stricken out of your question. There was nothing strange about it. It was a coincidence, and a coincidence pure and simple, and I want to stand firmly and I want to feel that the members of this Committee believe me, that I never knew what the answer was going to be until the night when we made the report. If you will read that report, you will find that it was built up; there was not a page that did not require careful study and careful deliberation and consideration by the Commission.

Q. What instructions were given to you by the Commission, immediately after you filed that June 30th report?

A. I have a clear recollection. My report-copies were furnished to every member of the commission, and the Chairman called me in and said that that was not the kind of report that they wanted; that the Commission wanted it in the form of a Commission report, and I told him I couldn't write a Commission report in this great involved case, because on

almost every page of it the Commission must make determinations before a Commission report could be written for final consideration, but he told me to do the best I could; and therefore, if you please, on the 17th of July, I think it was, I submitted practically with a few corrections, that I will explain—I submit what is called a proposed Commission report which was nothing more or less than this (indicating). The first page or two or a few pages were phrased differently; a little introduction and so forth as is usual in the form of reports and some corrections. In the mean time the Committee, the Chairman, Messrs. Brown and Young had looked over my report, and had asked me to incorporate in the proposed Commission report those changes, because they were very firm in their minds as to what they wanted to do at that moment about it; and, therefore, I made those changes in the figures of that proposed Commission report, and I guess I am wrong about July 17th; whatever the early part of June, that date is. That is what happened as far as I was concerned immediately after submission of my June 30th report.

Q. Who told you what changes to make in your June 30th report?

A. Well, they had been several meetings between the Committee and the Chairman Ainey.

Q. What instructions did you get from the Committee and Chairman Ainey as to the changes that were to be made?

A. There was nothing of record—

Q. I am not saying of record.

A. No; I can't say. There were some changes in some of the overheads, on the item, I think of water rights, and such. There were a few changes, but not many, and at that time, it seems to me, as I recall it, but that would largely account for the difference between—you have it there—between my report that I made in that form myself and the proposed Commission report of early July.

Q. In the report of the Commission in July you reached a fair value of \$47,065,430?

A. No; I did not reach that; that is simply a tabulation made in my bureau.

Q. Your report states that the Commission finds that the fair value of the property for rate making purposes is \$47,065,430; does it not?

A. Yes. I have no doubt that is the language, but I was acting in the same capacity as a lead pencil; I was phrasing the determination of the Commission, as far as they had gone at that moment and I couldn't use any other language than that in the proposed Commission report. We write many of the Commission's reports.

Q. That rate determination sustained the temporary rates did it not?

A. I haven't it before me, but if you say so all right.

Q. No; I did not want to say anything for you Doctor.

A. I wish you would. I don't want to say this either (indicating).

Q. Would you just read from page 191 of your proposed Commission report, or page 190 and 191?

A. (Reading) "Adding to the Commission's fair value depreciated of physical property in the sum of \$32,762,000 (in round numbers) of construction overhead allowance herein before made to the total physical property depreciated with construction overhead amounts to \$38,724,965, and with other overhead allowances hereinbefore made the Commission finds a fair and reasonable rate base to be \$47,065,430."

Q. Then, Dr. Snow, immediately after this Dr. Weiss said you went to New Hampshire?

A. Yes, I think I left in July, 1927, and did not return until October 1st, except for three days in September. I wish to say in this connection through counsel that this report was referred to here as having been signed by me as of August 12, 1930. That could not have been August 12th. It must have been September 12th, but I was not in the State of Pennsylvania in August. It must have been a typographical error.

Q. Dr. Snow, in your reports you referred to the complainant's witness, J. A. Lantz, and used approximately this language: "While Mr. Lantz (referring to Mr. J. H. Lantz) denies that the items of inventory contained in the appraisal (referring to the Downs Appraisal) or his assistants, that that appraisal was not fair and reasonable when it was made."

A. I think that is correct.

Q. Is there any place in the record where you find that J. H. Lantz denied that the items of the Downs inventory came from him or his assistants or the company's foreman?

A. I cannot say now.

Q. You do not remember any such place?

A. No.

Q. Do you recall that the complainants pointed out some errors as to the quantities in the reservoir structures on the Downs report?

A. Yes sir.

Q. Did the respondent company question those corrections in any way?

A. I recall that they did not in some instances.

Q. Which ones can you remember that the company questioned?

A. I cannot remember.

Q. You did question some of them?

A. Yes sir, and wherever I questioned them I put the facts in in the January report to the Commission.

Q. Will you take the work sheet and tell us what price you applied for the masonry at the Coal Creek No. 3 Reservoir?

A. For cut stone masonry I used \$15.62 per cubic yard, and for rubble in cement I used \$9.38 per cubic yard.

Q. Those are the same prices used in the Downs appraisal.

A. They are.

Q. I show you the figure of the Coal Creek Dam No. 3 in the Downs appraisal, and ask you to show me where there is any cut stone in that dam.

A. If this is Coal Creek No. 3, the photograph does not show any cut stone. The photograph does not show any cut stone as far as I can see it.

Q. This is the Downs appraisal, page 109, the photograph of No. 3 reservoir.

A. I don't see any cut stone there in the photograph. The cut stone masonry,—Mr. Lantz allowed under that, including rubble in cement, he allowed \$7.50 or a total of \$5,636.00, and mine, my total including the both classes because he did not make a classification other than it is all masonry with him,—my total would be about \$10,500 or \$10,600.

Q. Dr. Snow, I show you Mr. Lantz' appraisal for Coal Creek No. 3, he shows dry masonry, does he not, \$7.50?

A. My notes—

Q. You got it before you.

A. My notes—

Q. This is the complainants Exhibit No. 210, Coal Creek No. 3, dry masonry, \$7.50, \$5,636.

A. Yes sir, that is the same as I have on my page here. I said he got a total of \$5,636 without making any class of masonry.

Q. But he calls it dry masonry.

A. Yes sir.

Q. Where is there any rubble in cement in that Coal Creek No. 3, as shown in the photograph in the Downs report?

A. Any rubble?

Q. You said you allowed for rubble in cement in this dam,—where does that appear?

A. I couldn't tell by looking at the photograph whether there was any cement in it or not.

Q. Is that dry masonry?

A. You cannot tell by looking at the photograph whether it is dry or not. I wouldn't think that there is any evidence that it was dry or that it was not dry. It looks as though it was rubble masonry. I would think that in a dam that they would use cement, high dam, I would think that they would use cement, but if somebody told me they did not, all right.

Q. So that as far as that was concerned you just took the Downs figures, and from what you see now they were inaccurate?

A. No, I wouldn't say that.

Q. Do you see any cut stone?

A. No sir, I don't see any cut stone.

Q. It is inaccurate?

A. Cut stone might be there in the spill way and not be shown in the photograph.

Q. Did you ever go and see it?

A. No sir, not during the pendency of this case. I would take Mr. Lantz' word for it. If he says it is dry masonry and no cut stone, I would certainly take his statement.

Q. That was all in the record, wasn't it, that you reviewed so carefully?

A. My notes are evidence of what we did.

Q. I mean it is all in the evidence that Mr. Lantz showed this as dry masonry, and the photograph in the Downs report indicates the same thing.

A. This is an exhibit, that is what it shows, Mr. Lantz' exhibit, yes sir.

Q. This was one of the corrections, was it not, that Mr. Lantz made in his testimony, correcting the company's valuation?

A. It may be, I cannot tell, if he says so, I will accept his word.

Q. Well, now let us turn to one other item, West Pittston Pump Station.

MR. RHODES: Mr. Evans, I have been in doubt as to whether that Downs appraisal was part of the evidence, was it or was it not?

MR. EVANS: It was not,—not in the record in any way.

MR. RHODES: However, as I understand, the figures of the different items of the Downs appraisal were utilized by the Engineering Department.

MR. EVANS: Dr. Snow has so stated. He is going to bring to the Committee a statement of the number of items in the Springbrook division, in which the downs prices were used.

THE WITNESS: I am perfectly willing to accept figures that I made a note of here somewhere,—out of 5,000 item,—

BY MR. EVANS:

Q. 338 items.

A. 198, whatever it is, that I used of the Downs I am perfectly willing to take that, if we can save all the work of going through all those thousands of pages.

Q. Turning to the West Pittston Pump Station, what does that indicate—

THE WITNESS: May I make a little statement on that point, your Honors. The reason that a certificate of valuation when put out by the Commission contains a savings clause it shall not be used as a basis for rate fixing, is largely on this account, or in the certificate of valuation, you include all the property owned by the company whether it is used or useful in the Public Service or not, because it is their property, and it is on that that bonds are issued.

BY MR. EVANS:

Q. Dr. Snow, are you testifying as an expert in valuation matters? I thought you were an engineer?

A. I am making a statement, and if the Committee does not want to hear it, I will sit down.

Q. I will be very glad to have you testify to the law in regard to the certificate of valuation, if you will qualify as an expert in it.

BY MR. RHODES:

Q. Just what relevancy does the certificate of valuation have at this particular time?

A. Because the Downs work was on this property, and included a lot of property that in this report was cut out as not used or useful.

Q. But the Downs Appraisal was not part of the evidence and could not logically be considered by you.

A. You have heard from Chairman Ainey, speaking with authority, that merely the summation of the certificate of valuation could not be used, but it did not preclude the Commission from using—

Q. Was the Downs Appraisal a part of the record?

A. It has been used by all parties.

Q. Was it ever made a part of the record?

A. I think that makes it a part of the record.

Q. Was it ever offered in evidence?

A. It was offered—

Q. That does not make any difference, if it was not offered in evidence.

BY MR. HAGMAIER:

Q. You said to Mr. Evans five or six different times that you could not use anything that was not a part of the record, and now this morning—

A. I have said this morning, your Honor, that I have used the Downs Report; I have told you what I did, and I told

you what I did not do on authority from my superior, and that is all right, if that is a fact.

BY MR. RHODES:

Q. We don't want to cut you off, if it is relevant to this particular proposition, we want to be perfectly fair, and even if it takes an unnecessary length of time to give everybody a perfect opportunity to get on the record with anything that is relevant, we will do so. Now, just where does this relevancy come in in connection with your testimony?

A. To me it is very relevant, but if it cannot be considered, that is all right.

Q. We are not trying to be technical, but I would like to know where its relevancy comes in with reference to your testimony?

A. Here is a piece of work that went over many months, done by the authority of the Commission itself, and Mr. Downs was an employee of the Commission, as a member of my staff, and it seems to me that it is competent to be used as a measure of economy, if rightfully used in a later proceeding, and it was used by the companies, and by all the rest of them, they used the Downs Reports, and I did the same thing, I used it for what it was worth, property by property and item by item.

Q. Is not this your position that you have utilized the Downs Report, construed as part of the record, because it has been utilized in connection with the certificate of valuation?

A. I think so.

MR. RHODES: I think we understand that then.

BY FATHER COX:

Q. You said you had no determined value to reach, Dr. Snow, now, if you followed the Downs Report, you did have a determined value, and you tried to make it gee with that?

A. I have said before that it was used for what it was worth, because he was employed by the Commission, and one of my own staff, working in 1917, and if it was relative, it was worth using.

Q. You had been using it very extensively, because you said you did not make a complete investigation of the plant, and then you tell us you have no determined figure, and yet you come so close to this Downs Report figure, so that you apparently used it, because you did not make an investigation yourself, and you had a determined figure, and it seems to me it all comes around again to the Downs Report, and I think we have gone over that so frequently, Dr. Snow, that I don't think we ought to interrupt the examination by Mr. Evans.

FATHER COX: It does no harm once in a while to bring these things to the attention of the Committee.

MR. RHODES: It has been gone over repeatedly time and again, it is in the record.

FATHER COX: But it seems to escape the attention of everybody, because one time they say they don't use the Downs Report, and the next time they say they do.

MR. RHODES: It does not escape the Committee.

THE WITNESS: I am not permitted to show how many times I have used Mr. Lantz's figures, and so forth, many, many times, and I have agreed with Mr. Lantz against the company time and again, and accepted his figures on hundreds and hundreds of acres.

BY MR. EVANS:

Q. Now, Dr. Snow, in order to save time, I show you the Downs Report, the valuation of the West Pittston Pumping Station, page 490. Mr. Downs there includes rubble masonry, 800 cubic yards, and \$18.50 a cubic yard, \$6,800, does he not?

A. Yes.

Q. Will you look at the figure of the West Pittston Pumping Station on page 167 of the Downs Report, and I call your attention to the fact that that is cut stone?

A. That is in the picture, and I should think it was, yes.

Q. So hat Mr. Downs used \$18.50 for cut stone in the West Pittston Pumping Station, and he used \$15.62 for uncut stone in the Coal Creek No. 3 Dam?

A. Yes.

Q. What does that indicate to you as to the accuracy of the Downs Report?

A. I see from this photograph here that a portion of that would be taken out by the fact that this is right on the street, right in the town, and the dam is way up, possibly in an inaccessible wilderness, where the cost of building materials would be very much greater—I don't know.

Q. Now, as a matter of fact this cut stone came from Campbell's Ledge, did it not, some three miles away, whereas the Coal Creek stone was found within 500 feet of the dam?

A. I don't know now. Maybe there is something in the June 30th report.

Q. Dr. Snow, isn't it perfectly evident to you that the Downs Report made without check in any contested case obviously would have errors that crept into it?

A. I would think there would be errors in any report made by anybody in a large property like this, yes.

Q. All right. Now, will you just turn to your Crystal Lake reservoir?

A. All right.

Q. Now, will you read from your June 30th report pages 95 and 96, commencing with "Witness Lantz in 1918"—referring the Crystal Lake storage reservoir?

A. "Witness Lantz in 1918 had knowledge that Mr. Downs used 424 acres of clearing and grubbing, for which the Commission made an allowance of \$58,000 in round numbers. Mr. Lantz now of record estimates \$6,153 only. In 1918 the Commission made an allowance for earth excavation of \$4,663 based on information obtained from witness Lantz. Mr. Lantz now testified of record that there are seven hundred fifty-two acres of earth and rock excavation—that is, cubic yards of earth and rock excavation—for which he makes an estimate of \$1,354. He discovered an error in the original estimate of 1918."

Q. Is that as far as you want to go?

(No answer).

Q. "He has failed, however, to prove this error in earth excavation. He makes a similar claim for mass concrete, and here the record presents what may be considered fairly reasonably proof."

So the bureau agrees with Witness Lantz on the concrete quantities, and makes an estimate of 27,086, for which Witness Lantz estimates 16,455.

Q. Now, then, will you look at your work sheets for this, and state how many cubic yards of earth excavation you allowed for?

A. Evidently 3,961 cubic yards, at \$1.17 a cubic yard, totaling \$4,663.

Q. How many yards of mass concrete did you allow here?

A. It seems to me here that I took the Lantz allowance of eighteen hundred eighty and used on that \$14.40.

Q. That was the Harrop price?

A. Which was the company price for that; yes.

Q. Now, how much back fill, did you allow for?

A. As near as I can tell now here, we used the Lantz quantity of 343 cubic yards, and applied 77½ cents to get \$267.

Q. Now, then, if you were building a dam, Dr. Snow, a dam breast must come up above the surface of the ground to do any good, must it not?

A. Yes sir.

Q. If you excavate 3960 yards of earth and had only 880.6 cubic yards mass concrete and 343.5 cubic yards of back fill, you would not have filled up the hole yet, would you?

A. Apparently from that way of figuring.

Q. Isn't that the correct way of figuring?

A. It might not be.

Q. Will you explain?

A. I have known such things to happen. I don't know that I can explain now.

Q. In other words, you have seen a dam constructed where the hole dug was to a greater size than the concrete dam breast and the back fill?

A. No; I don't mean that at all—of course not.

Q. Isn't that what you have here?

A. Apparently, but I would want to look into it and see.

Q. Those are your own figures, aren't they?

A. My figures are in red here—over here (indicating). There are a number of such situations as this all through these eighty odd dams, and I looked at them—some very thoroughly—and it is pretty hard work to account now, after the work was done, for these things, and in some instances, I think whatever my figure—this is \$267; we are just talking about now, and I notice I cut the company down from \$60,000 and Mr. Downs down from \$45,000 to \$27,000, and probably on some such basis as that.

Q. And now, Dr. Snow, in the quotation from your June 30th report, which you must have read into the record, you say there was sufficient evidence to substantiate Mr. Lantz in his

inventory of mass concrete and earth and rock fill; so, that is established?

A. Yes.

Q. But you say there was no sufficient evidence to substantiate his claim that the excavation was not approximately twice the amount of these two items?

A. That is what I thought when I dictated it.

Q. You know now that it was a mistake, don't you?

A. It might be, but I don't admit it now.

Q. Your later comments there in regard to Mr. J. H. Lantz as a witness were not warranted by any evidence you had?

A. I thought so at the time. I might revise it now or later on proof.

Q. You admit that this criticism was wrong?

A. Well, no.

Q. In various places in your report, Dr. Snow, you refer to the bias and what I think you designated as the unreliability of Mr. J. H. Lantz's testimony. Is that correct?

A. On some specific points, yes. I hope however that you will not really go on further with the phraseology. Please remember that my report was made, not for publication, it was made according, at the moment, to my judgment. We have such a thing in organized engineering as professional ethics, and I certainly would never have made a criticism publicly and if it is not necessary in this case I hope you will not do it.

Q. According to the information, you used complainant's unit prices in this case in only 61 out of 671 items, and if that is correct I want you later to correct it to this Committee and give them the correct figures. Now, why did you use those in so few cases?

A. Use what?

Q. These figures in 61 out of 671 cases?

A. This is on what items?

Q. All through the Springbrook division?

A. These are major items of the whole property and you have all of my records and explanations.

Q. You must have some reason to state to the Committee, have you not?

A. I cannot give an answer here; I have toiled and concentrated on each of these items. It is now like water over the dam with me. You have all of my notes, but if it is desired I will spend the time and faithfully go over them and then make such statements as are correct for me to make about it.

Q. Did you think Mr. J. H. Lantz was biased against the company?

A. I thought some of his conclusions showed bias. I don't want to say or to be understood to mean as criticising Mr. Lantz's character or integrity. I have known him and his father for many years and I have a high regard for him as a citizen and I would believe him and let him have my pocketbook and it would be returned to me. If there is any inference that I have tried to belittle Mr. Lantz as an engineer or a citizen, it is not true. I have differed with him it is my duty to sit in engineering conferences whenever associated and called on and I say that engineers quarrel as well as lawyers, but our quarrelling is done within closed doors.

Q. I understand you to say that you wish to go on record as saying that Mr. Lantz had no bias against the company?

A. I do not want to say that. I have said in my judgment he showed a bias in some of his conclusions.

Q. Do you mean in reference to the present company or the old Springbrook Water Company?

A. I was dealing wholly with the case in hand his testimony, and so forth, in the case—and now to carry further—what statements to me of the city commissioners during the progress of the case which I did not particularly ask for but which came through on the screen, and when I came to study the record I made the determination and the statements are in my report but that was not for publication and it is no more than engineer's sry around the table in conference with each other.

Q. Now Dr. Snow, in conclusion, I just want to read to you the letter of resignation of Mr. J. H. Lantz addressed to the President and Board of Directors of the Springbrook Water Supply Company in June, 1919, which reads as follows?

"Having concluded twenty-three years of active service with your company, I have concluded to establish an office in consulting engineering, and therefore tender my resignation as chief engineer, to take effect July 1st.

"It is not without sincere regret that I stop, for associations covering nearly a generation are not readily broken, nor is their effect forgotten.

"I trust that our business relations in the future may be as pleasant as they have in the past.

"Respectfully yours, (signed) J. H. Lantz."

I also wish to read the reply to that letter on the letterhead of the Springbrook Water Supply Company dated July 27, 1919, at Wilkes-Barre, Pa., and addressed to Mr. J. H. Lantz, as follows:

"Dear Mr. Lantz: Referring to your resignation as chief engineer effective July 1st, and in confirmation of our conversation concerning it, let me say:

"As you enter upon your new and broader field of engineering activities, the Spring Brook Water Supply Company desires to be entered as the first upon your list of clients, retaining you as consulting engineer at a fixed sum of \$250.00 per month to July 1st, 1920.

"Yours very truly,

(Signed) L. A. Wartes,  
President."

Q. Certainly so far as these letters are concerned they indicate no bias on the part of Mr. Lantz against the company?

A. My judgment fully warranted the statement that I made in my report.

BY MR. COOKE:

Q. May I ask, Dr. Snow, to what document or documents you can refer me that gives the standards of professional ethics under which you and your associates of the bureau operate and are guided?

A. There is one published by the American Association of Engineers, there is one published by the American Society of Civil Engineers, and I presume there may be one by the American Mechanical Engineers.

Q. I would gather from your testimony that there is nothing in engineering professional ethics to prevent public differences between engineers. You stated you always ironed them out behind closed doors. In your opinion, would it be unprofessional to differ with another engineer on a public matter in public?

A. Professionally, certainly not.

Q. I wanted to get that clear on the record. Your testimony indicated that any such differences in your opinion would be unprofessional?

A. I think I wrote the first one that was published in 1908 and so far as I know or was informed the first ethical pronouncement published in the Engineers News of 1906. It was at the time, if I am not wrong, adopted by the Engineers Society of Pennsylvania and has been adopted as the rule of my life and conduct in professional ethics. I have been and am now very careful about any statements I am making which are to have publicity.

BY MR. COOKE:

Q. The last time I saw the code of the American Society of Civil Engineers it precluded discussions in public before they were first submitted to meeting of the civil engineers. That has been changed in most other societies. Has it been changed with the civil engineers?

A. No, Mr. Cooke, this Society of Civil Engineers' Code is not very broad or long. I think the American Society of Engineers of Chicago have a much more elaborate one. I am a member of that also.

MR. EVANS: I also want to read into the record a letter on the letterhead of the Springbrook Water Supply Company, Wilkes-Barre, Pennsylvania, dated July 27, 1919, addressed to Mr. John A. Lantz, which is as follows:

"Your resignation dated the 27th, as Chief Engineer of the Springbrook Water Supply Company was duly received.

"At a meeting of our Board of Directors held today, it was considered and duly accepted, effective July 1st as requested by you.

"During the 23 years of your active service with us as Chief Engineer, we have expended a large sum of money in extending and developing our property, in all of which activities you have been an important factor.

"We cannot permit the close relationship which has existed between us to be severed without putting upon record our

full appreciation of the engineering skill and ability with which you have performed your duties and of assuring you of our keen interest in your future welfare.

"Sincerely yours,

(Signed) L. A. Wartes,  
President."

MR. EVANS: Dr. Snow would like to make a statement in regard to the determination by his bureau of going concern value, in view of Mr. Black's testimony in the Scranton Electric case.

THE WITNESS: I have copies here of this statement, Mr. Counsel, relative to the going concern value. That was first prepared with the help of the counsel of the Commission Berne Evans, at that time, deputy,—he was counsel of the Commission, and later on under Mr. Hunter it was brought up to date by me with his co-operation, and it is the basis for the determination of going concern value. So far as my bureau is concerned, in connection with the ruling of the courts of the different states on going concern value, you will see the familiarity between those rules and regulations and the determinations of the courts. I do not want to bother you with reading it. There are enough copies for each member of the Committee. I would like to have it go on the record.

MR. COOKE: In this Mr. Evans the counsel for the Pennsylvania Electric Company?

MR. EVANS: Berne H. Evans, formerly counsel for the Public Service Commission, now a member of the firm of Hause, Evans and Baker, counsel for the Scranton Spring Brook Water Supply Company. I don't think he is counsel for the Pennsylvania Company.

MR. COOKE: It has been testified he has been counsel for some—

MR. EVANS: For a number of the utilities.

MR. COOKE: Is he a partner of Ralph Baker.

MR. EVANS: He is. I would suggest that this be offered in evidence as an Exhibit of Dr. Snow, so that there will be copies in the hands of each member of the Committee.

THE WITNESS: I would like to say to the Committee that I started my rate work in 1893. In 1897, I was going strong, in this period I made the rates, for the Boston and Maine system. I have been in this game all of these years, and kept in touch with the development of the different systems, and the rulings of the court, as an engineer, not as a lawyer.

BY MR. COOKE:

Q. What engineering text can you refer me to that you used in your education to qualify you to define going concern value?

A. There is a definition that speaks for itself. I am making the text. I made a simile, I am not bragging, but the fact is that I made a new era in rate making in this country. That was passed thru the Supreme Court of Massachusetts and the Supreme Court of the United States. It was a new era in it, I am not ashamed to say. You ask me the question that I didn't go to a text book.—I might write a text book, this is my own, Dr. Cooke.

Q. How does going concern,—definition of going concern value become a part of the engineering technique I wanted to know how you figured out that the determination of the going concern value is a part of engineering.

A. It is all explained.

Q. You cannot give me any other engineering text?

A. I am going to stand on my own feet.

BY MR. EVANS:

Q. You will agree that it is a matter for the determination of the Commission, and that the Commissioners are supposed to know more about it than you.

A. No sir, they tell me that the Appellate Courts wished these matters to be determined.

BY MR. COOKE:

Q. You cannot refer to me a single engineering text on going concern value?

A. I said not for my own opinion, not the way I have worked it about. This is based upon the opinion of the court.

Q. Can you refer me to any engineering text, whether they express your views or not?

A. Not this minute. There are plenty of them.

Q. I thought I was familiar with the engineering literature. I have never seen any such book.

A. George B. Fuller, has testified in very large cases in the country in his construction,—

Q. Text books,—

A. I don't know about any text book.

MR. TURNER: Is it essential that it must be in a text book to be good.

MR. COOKE: I don't know of any other branch of engineering that is not covered by text book.

MR. TURNER: This is a new branch.

MR. EVANS: I offer this statement in evidence as Exhibit No. 165.

H. M. PARMLEY sworn

BY MR. EVANS:

Q. Mr. Parmley, you were the engineer of the Bureau of Engineering who heard the evidence in this case?

A. That is right.

Q. After the case was argued you assisted Dr. Snow in preparing the valuation of the property for the Bureau of Engineering, did you not?

A. I will have to answer that both yes and no.

Q. Will you explain what you did in this case, briefly?

A. I reviewed the testimony and the exhibits, and anything pertaining to the item under consideration which Dr. Snow dealt with, as those items came up. In other words, I was custodian of the record, you might say, and it was my job to know where to find the various witnesses' testimony bearing on the various points. Now, I did that job to the very best of my ability, and I would not testify that I showed Dr. Snow every last bit of testimony on every point, but I did it, as I say, to the best of my ability, and if there is any omission on my part, any errors, it is an error of omission rather than commission.

Q. I think we fully appreciate that, Mr. Parmley. Now, it has been shown here in one of your work sheets you made a memorandum that Dr. Snow and Mr. Curry and you agreed on a common labor wage of 40 cents an hour. Do you remember approximately when that agreement was reached?

A. Approximately, Mr. Evans, yes. This case was heard, or rather finished December 6th or 9th, and from then on Dr. Snow and I worked—

Q. What year?

A. I will have to think of that—

Q. 1929?

A. 1929, yes. Just when that note was made, what day of the month, I cannot say, but these are the facts: I discussed it with Mr. Curry, just since you have brought it out that that note was there, and my idea was this, we were to go over the record and find out the various labor rates that were in the record. Now, that particular job was given to a Mr. Heather, and bear in mind, Mr. Heather had access to the notes I had. I called his attention to where it might be found, just gathered it together, and I didn't take the time myself, I knew what was there in a general way, and these things are outlined in both the respondent's brief and in the complainant's brief, but to find them in the record is the job. Having done that, Mr. Curry and I and Dr. Snow discussed the matter, and bear in mind this was early in the proceeding, and it was our thought that a 40 cent labor rate was the evidence in the record. Now, that was an honest opinion as far as Dr. Snow had in mind at that time, but I dare say this, that I don't believe Dr. Snow has read all these notes. There was some testimony on that at that time, and after he had read them, he changed his opinion. Now, bear in mind this is Dr. Snow's report, not Mr. Curry's or not mine. Now, I think I have covered the point that you asked, but what date it was I really don't know.

Q. Well, it was made sometime after the conclusion of the hearing, was it not?

A. Yes, that is right.

Q. And you had heard all the testimony in regard to this matter?

A. Yes. Now, bear in mind, however, I am not responsible for this report.

Q. I appreciate that, Mr. Parmley. May I ask you this: Have you heard all of the testimony, and having sometime early in 1930 reached an agreement with Dr. Snow and Mr.

Curry that 40 cents was a fair common labor rate; have you changed your own personal opinion in regard to that?

A. Why, I don't know that I have in regard to the record, but with regard to Dr. Snow's judgment, I respect his judgment on that matter—

Q. I appreciate that you respect his judgment, but I think while Dr. Snow was away during the summer, Mr. Weiss testified that he had some conference with you, and you made it clear to him that the report was Dr. Snow's and not yours?

A. Yes, that is right.

Q. I take it from that, that while you have respect for Dr. Snow, you don't wish to go on record as agreeing with all his conclusions?

A. Absolutely not. If I want to make a report, I want to deal with the whole thing, I don't want to deal with this item or that item, I want it as a whole in order to draw my conclusions.

Q. Was it not true, Mr. Parmley, that in valuing the first 14 or 15 structures in this system, the 40 cent labor rate was used?

A. I don't think that is so. If you can show me my notes where you might think that that is so, I will try to answer it.

Q. I don't want to take much time with it.

BY MR. COOKE:

Q. Are you teaching now, Mr. Parmley?

A. No, I am not.

Q. Where did you teach?

A. I taught at Cornell eight years; I was an instructor, not a professor.

Q. Dr. Snow referred to you as professor?

A. That is a term which hung to me since my very first day in class, so pay no attention to it. If you want to amplify on why I am not, or why I was not, why, go ahead and dot it.

Q. A term of endearment?

A. It might be.

BY MR. EVANS:

Q. Now, Mr. Parmley, by looking at your work sheets, you can briefly tell us, for instance, in the Campbell Ledge Storage Reservoir, what labor rate you used for your computation there?

A. There are none of my computations here (indicating).

Q. I understand that Dr. Snow said these—

A. These (indicating) are merely copies of his work.

Q. All right, now, what labor rate was used in that computation?

A. I might say this, if you are referring to this (indicating), this has nothing to do with this up here (indicating) so far as that goes.

Q. I just wanted—

A. Let me see now. I don't see anything here.

Q. In other words, Mr. Parmley, do I understand you can't tell what labor rate you did use, in the Campbell Ledge valuation?

A. I would have to go to Dr. Snow's report to check over that. I don't think that that was a fact, that there was a forty cent labor rate used in any portion of this.

Q. Looking through your work sheets in the Harvey Creek Intake No. 2 sheet, does it not appear that you took Mr. Lantz's unit price for mass concrete of \$9.75, considered that sixty per cent. of that cost was a labor cost, and increased that labor cost by twenty-five per cent. in order to get a fifty cent common labor wage rate, instead of a forty cent used by Mr. Lantz?

A. That is right.

Q. Did you use that same method in any prior structure in your work sheets?

A. That would be a matter that I would have to check up. I really couldn't say.

MR. EVANS: You can't say that. I think that is all.

LYNN B. CURRY sworn

BY MR. EVANS:

Q. Mr. Curry, you are the water works engineer of the bureau of engineering of the Public Service Commission, are you not?

A. Yes

Q. What part did you take in the valuation of the Scranton-Spring Brook system by the bureau of engineering?

A. Nothing to reach a conclusion. I had a contact with case soon after the hearings closed, looking toward the handling of the review of the testimony. In a very short time the other work of the water works section developed in such a way that I was given instructions to carry out some specific assignments that came along, that needed to be attended to promptly, and the work came right along in such a manner that I didn't get a contact with it until after about the middle of February, 1930.

Q. In other words, you were pulled off the Spring Brook case in the middle of February, 1930, and took practically no further part in the valuation?

A. I can't say that I was pulled off, because there was nothing ever spoken to me that I was pulled off, but there were emergency situations that arose, and that continued for a time, and I never got back on the case again.

Q. In other rate cases that the Commission has had have you not had a large part in the work of valuing properties?

A. I would say that I had for the time I have been with the Commission.

BY MR. TURNER:

Q. How long was that?

A. Since August, 1925.

BY MR. EVANS:

Q. What has been your experience as a water works engineer, so that the Committee may know your qualifications a little bit? It has been testified, Mr. Curry, that you are the only water works engineer in the bureau, and I think it would be interesting to the Committee to have your experience.

A. Well, my water works experience begins with graduating with a civil engineering degree from the college of Civil Engineering, Cornell University; course completed in 1913.

In 1912, during the vacation season, I was working in the engineering, corps of the New York State Engineers on the barge canal.

In June, 1913, I was with the New York State Engineers on the water supply project of the barge canal at Hinckley, New York; and continued there for almost a year.

From 1914 to 1920, I was with the Eastern District of the Bureau of Valuation of the Inter-State Commerce Commission. That work included water works of railroads, but not of independent water works.

From 1920 to 1925, I was an engineer with the firm of Ganett, Seelye and Fleming, of Harrisburg.

In 1925—

BY MR. COOKE:

Q. What was their business?

A. Their business is a general engineering practice. My particular part in their business was largely with reference to water works.

Q. Operation, construction, valuation, or what?

A. Design, supervision of construction as resident engineer, superintendent of construction, operation and valuation.

Q. Will you just state briefly to the committee exactly what you did in connection with the Scranton-Spring Brook case?

A. Taking up my work somewhere near the first of January, 1930, on the case, I of course, got an intimate contact with Mr. Parmley, because he was familiar with the record. I immediately chose to look into certain parts of the record with reference to used and useful property and reviewed the record as to where in the record it treated on that subject and what it said. At the same time I had a list of places in the record made that showed the related subjects. I think about the middle of February that list was completed or possibly a little earlier, but by the middle of February anyhow, then that is as far as I got with the case.

Q. Now, did the report of Dr. Snow and later did the report of the Commission agree with your findings on used and useful property?

A. I do not know. I want to explain further there was no finding of mine on used and useful property. I went in and in an orderly manner listed the record's treatment of the subject on both sides.

Q. Then you also, I think, had something to do with fixing the forty-cent labor rate, did you not?

A. Yes, in the sense that forty cents was fixed.

Q. There is a memorandum in one of the work sheets by Mr. Parmley that you and he and Dr. Snow had agreed on a forty-cent common labor wage rate. That was later abandoned. It is correct, is it not, that Mr. Parmley—

A. This labor rate was discussed, and the last I knew of any question of labor rate, we had tentatively mentioned the figure forty cents.

Q. Did it strike you as in any way peculiar in view of the fact that this was the most important water rate case the Commission ever had and you were the only water engineer in the Commission, that you had no other part in the determination of the value of the property? Did it strike you in any way as strange or worthy of comment?

A. Not strange. It is worthy of comment in that this was a case in which there was a large increase in the amount of work, that the Bureau of Engineering and the Water Works section if it were to do it at all would have to enter upon. It was always a matter of concern to me how the regular or ordinary matters of water works regulation that were coming before the water works section could be carried on and handled along with a water rate case of that size at the same time, and I knew at the time when I gave consideration to the case at all which was about January 1st, 1930, that something would have to be done before very long to take care of the routine work. We had a lot of cases on hand and there were certain matters that had to be handled. When I was finally given instructions to take up these matters, others followed, and the routine work piled up so that it took all my time.

Q. Who gave you these instructions to take up these other matters, other than the Scranton-Spring Brook case?

A. The actual instructions of course were given to me by Dr. Snow. I should state that the Bureau was directed and he in turn directed me to do a certain piece of work. It was about that time I think the case of a certificate of public convenience that need be rendered, and I believe it was the Trucksville Gardens Water Company. That was the first thing that opened up the emergency.

Q. Can you explain to the Committee why it seemed necessary for you to take that up instead of the Scranton-Spring Brook case at that time?

A. Trucksville Garden Water Company, I think.

Q. That was a small proposed company, was it not?

A. I believe it was.

Q. How large a plant was that?

A. A small plant. Neither did that work take a very long time,—a day or two. That was the opener.

Q. After that, what other matters that you remember were you assigned to, which kept you from the Scranton-Spring Brook case?

A. I should have to refer to my records to get that information in an orderly fashion.

Q. I mean was there any matter that you remember of, of outstanding importance?

A. I remember one thing, that came up very soon, and that was the matter of assistance to the law department in one of their appeals to the Superior Court.

Q. Well now, Mr. Curry, from what you have heard relative to the hearings and the testimony in the Scranton-Spring Brook case, and your knowledge of water cases, did the valuation of the bureau of engineering appear to you to be in line with water works valuations that you were familiar with?

A. I could not answer that question from my contacts with the case.

Q. But you cannot explain any further to the Committee why it was that you were taken off this case and put on other assignments?

A. No; I can give you in considerable detail the work that I did, but I would have to refer to my records to do it, intelligently.

Q. I am sure you were kept busy, Mr. Curry. What I am interested in is to try to find out why the one man who was an expert in water works should have been taken off this case and put on other matters, which to the outsider at least, would have seemed to be less important, and I take it there is no further light you can throw upon that?

A. I am quite sure that the work of handling one case could have been more easily provided for from a staff outside than my routine work would. It was quite difficult to change the routine work to a special man at that time.

Q. I think you have already testified, have you not, that in the other water rate cases that have been before the Com-

mission since 1925, you have always had an active part, so far as you remember, in the valuation by the bureau of engineering?

A. Yes sir, but not always in the sense that I did the major part; I have had contact and the part in the determination,—by the bureau, I mean.

Q. Yes, you did not have any part in the determination of this case?

A. No sir.

THE CHAIRMAN: This hearing will stand adjourned until 2.30 o'clock this afternoon.

Pursuant to recess the Committee reconvened at 2.30 o'clock P. M.

MR. RICHARDS: Before we go into taking testimony, I would like to get some things cleared up in my own mind. I would like to ask Mr. Evans if it is the purpose of himself this afternoon and tomorrow to take up the question of propaganda by utilities in connection with this hearing now going on. Is that the schedule?

MR. EVANS: It is.

MR. RICHARDS: I don't know that there has been a request made to Mr. Richardson, I don't know the initials. I think they are J. S. S., he is not here. I would like to know something about Mr. Richardson, who he is, what he is, and why we want him.

MR. EVANS: I would suggest that you have a statement from Mr. A. B. Millar as to Mr. J. S. S. Richardson.

A. B. MILLAR sworn

BY MR. WALKER:

Q. What are your initials, Mr. Millar?

A. A. B.

Q. Where do you live?

A. Balla, Pa.

Q. What is your occupation?

A. Managing director of the Pennsylvania Electric Association.

Q. Are you acquainted with Major J. S. S. Richardson?

A. Yes.

Q. Who is he?

A. I cannot give you his exact title, but I know he is associated with the Joint Committee of Utilities, which has offices in New York and Washington.

Q. And in Pennsylvania?

A. No sir, not to my knowledge.

Q. What is his official title in this Committee of his?

A. I am sorry I cannot give you the official title, the nearest approach I can give to it is Joint Committee of Utilities, and that Committee is composed of representatives—

Q. They represent the National Electric Light Association, do they not?

A. That Committee, if I may proceed with my remarks, that Committee is composed of representatives of the National Electric Light Association, the American Gas Association, and I think the American Railway Association.

Q. And the Committee that you represent as managing director in Pennsylvania, the Pennsylvania Electric Association, is also connected with the National Electric Light Association, are they not?

A. That is a part of the National Electric Light Association.

Q. Then the Committee that you represent and the Committee that Mr. Richardson represents are both affiliated with the National Electric Light Association, is that right?

A. Yes.

Q. Prior to Mr. Richardson's appointment to this Committee of the National Electric Light Association, what were his connections?

A. I don't know.

Q. At one time he was connected with the Pennsylvania Electric Association, was he not?

A. I would say no to that, with this qualification, that at one time Mr. Richardson was, I don't know his exact title, I would just call him the director of the public utility or public service information bureau. That bureau was composed of representatives I think of all the utilities in Pennsylvania, however, representatives of the Electric Light and Power Company were members of that bureau.

Q. And do you know of your own knowledge whether Mr. Richardson was in Harrisburg yesterday?

A. Yes, he was.

Q. You saw him?

A. I did.

Q. Do you happen to know, Mr. Millar, whether he was registered at the Penn-Harris Hotel?

A. I don't.

Q. Do you know when he left Harrisburg?

A. I don't.

Q. Do you know that the Sergeant at Arms of the House was seeking Major Richardson?

A. I don't, excepting—let me qualify that, the Sergeant at Arms, I assume it was the Sergeant at Arms, he showed me his badge and called at my office and told me, or asked me rather, whether I knew Major Richardson and whether I knew where he was.

Q. And they called at your office yesterday seeking Major Richardson?

A. No sir, to my knowledge they didn't.

BY MR. EVANS:

Q. Mr. Millar, this public information committee, before it was called that, was the Educational Propaganda Committee of the public utilities industry in Pennsylvania, was it not?

A. I don't know, Mr. Evans. I was not associated with the bureau in any way at that time.

Q. I didn't ask you whether you were associated with it, you were familiar with its activities, were you not?

A. Not to a great extent, Mr. Evans, no sir.

Q. Did you ever hear of it before?

A. I did.

Q. What were its activities?

A. I cannot answer that, because I don't know.

BY MR. WALKER:

Q. Do you know any of the things that they did, Mr. Miller?

A. I will have to go back and try to see if I do.

BY MR. COOKE:

Q. What was the answer?

A. I will have to go back and search by memory, Mr. Cooke. I don't know, no.

BY MR. EVANS:

Q. You were called before the Federal Trade Commission to testify, were you not?

A. Yes.

Q. And you were there at the same time that Major Richardson testified?

A. I don't think so. I don't recall that he was there at the time I was there.

Q. Do you wish this Committee to understand that you have no knowledge, in spite of your connection with the utility industry over a period of the last ten or fifteen years of the activities on the Committee and of Major Richardson, which are common knowledge to the public?

A. I have no definite knowledge, Mr. Evans.

Q. Have you any indefinite knowledge?

A. My only recollection, Mr. Evans, was when this committee was formed, I was not connected with the Electric Light and Power Industry at what time.

BY MR. COOKE:

Q. What was your position at that time?

A. I was with the Philadelphia Rapid Transit Company at that time.

Q. In what capacity?

A. I had no title, Mr. Cooke.

Q. To whom were you attached?

A. I was reporting to Mr. Mitten.

Q. Mr. Thomas E. Mitten?

A. Thomas E. Mitten, yes.

Q. What kind of things did you do for him?

A. I was assigned to various duties, but the main thing I did at that time was in the conduct of matters for the Public Service Commission, such as hearing on various applications of the the company, as well as in protest of their applications before the Commission.

Q. You appeared at official hearings of the Commission?

A. Yes sir.

Q. Did you ever interview Commissioners individually and out of the hearing room?

A. At their request; yes sir.

MR. WALKER: That is all for the present, Mr. Millar. Please don't go away. We will call you back later.

SIDNEY N. BRINK sworn

BY MR. WALKER:

Q. Your full name is Sidney N. Brink, is it not?

A. Yes.

Q. What are your duties?

A. Sergeant-At-Arms.

Q. Of the House?

A. Of the House.

Q. I ask you whether or not you were given a subpoena for one J. S. S. Richardson?

A. Yes sir.

Q. When was this subpoena handed to you?

A. Yesterday, about ten o'clock, I believe.

Q. Did you search Harrisburg for Major Richardson?

A. Well, I appointed another Sergeant who did.

Q. Who was that man?

A. Mr. Nitchie.

Q. Is he here?

A. He left town this afternoon.

Q. Have you served any of these subpoenas

A. I went out this morning with that one that Mr. Nitchie had?

Q. Where did you go?

A. To the Penn-Harris.

Q. To the Penn-Harris Hotel?

A. Yes sir.

Q. Did you inquire at the desk for Major Richardson?

A. I did.

Q. What did they tell you?

A. They said he checked out at four o'clock last evening

Q. Yesterday afternoon?

A. Yesterday afternoon.

Q. Did you find out when he had registered there?

A. No; I didn't find out.

Q. But he had been registered yesterday at the Penn-Harris Hotel?

A. Yes sir.

MR. WALKER: I might say, in explanation, that the latter part of last week, a letter was written to Major Richardson, to his New York office inviting him to come down here and testify before the Committee. Mr. Evans received a letter from Major Richardson, dated April 22, 1931:

"Mr. Harold Evans,  
Special Counsel.

House Committee on Public Utilities,  
House of Representatives,  
The Capitol,  
Harrisburg, Pa.

Dear Mr. Evans:

With regret I find that pressure of business here makes it impossible for me to comply with your request to appear before the House Committee on Public Utilities tomorrow.

Very truly yours,

J. S. S. Richardson."

This is mailed, presumably, from the office of counsel in the Washington Building, Washington, D. C.

MR. RICHARDS: If Richardson could get in touch with somebody here in town, it would not have been too much for him to have got in touch with counsel or some member of this Committee.

MR. WALKER: I might also state that associate counsel saw Major Richardson in the Penn-Harris Hotel this morning, so that that clearly indicates that the Major was not so busy as he states.

MR. RICHARDS: I thought he checked out yesterday afternoon.

MR. WALKER: So the Sergeant said.

MR. RICHARDS: Did you see him this morning?

MR. TURNER: If he is going to testify, let him be sworn.

MR. RICHARDS: I am not asking him for testimony; but merely for information.

THE CHAIRMAN: When was this letter written?

MR. WALKER: This letter of Major Richardson's?

THE CHAIRMAN: Yes.

MR. WALKER: April 22 is the date and it is signed J. S. S. Richardson.

MR. RICHARDS: There is nothing here as to when he could possibly be here?

MR. WALKER: No sir. He says, "with regret I find that pressure of business here making it impossible for me to comply with your request."

MR. RICHARDS: Now, Mr. Chairman, I do not know whether it is the sense of my colleagues here or not, but it seems to me that if Major Richardson has been connected with the public information bureau or been connected in any way with the broadcasting or sending out of information or propaganda concerning those utilities, that his testimony would be rather vital, and it may be that he can get here within a day or so, the early part of next week, because we can't subpoena due to lack of jurisdiction, but we should ask him to be here, and find out why his business cannot be adjusted so that he can be here, because his testimony is rather vital to this Committee, and if he wishes to be viewed in the light of helping this Committee, then he will be here, but if he is not here, I think we can accept that as a fact that he is purposely avoiding any contact with this Committee in order to hide or refuse to disclose any information he has, and I think the Sergeant should be instructed to wire him as to whether he can come here or whether he has any intention of coming here, so that if possible we may get the benefit of what he might know.

MR. WALKER: I think if you will recall Mr. Millar's testimony in reference to the Pennsylvania Association of the National Association, both are affiliated with the Electric Association and the fact that some of these groups are coming here and asking to be heard by the Committee and then when we call them they are not here, it seems to me that they are blowing hot and cold.

MR. RICHARDS: Suppose we hold up their testimony until Major Richardson is here, if that is the sense of counsel; we are not going to call witnesses out of order, if we can help it.

CORA E. HICKS sworn

BY MR. WALKER:

Q. Your full name is Cora I. Hicks, is it not?

A. No; my name is Cora Eynon Hicks; E-y-n-o-n.

Q. Where do you live?

A. I live at Altoona, 1422 6th Avenue.

Q. You have lived in Altoona for some time?

A. All my life.

Q. Were you familiar with the political situation in Altoona, during the Primary and General Election of 1930?

A. Well, I participated in that as a speaker, and as a watcher at the polls in my own precinct; and also visited the polling place in the first precinct of the same ward.

MR. EVANS: May I interrupt just a moment? I am informed that a gentleman by the name of Mr. John B. Sauter of the Pennsylvania Railroad was subpoenaed last evening to bring certain records here today. He has come, but was not able to bring the records as they are not under his control, and he stated that Mr. C. R. Ross, Supervisor of Regional Expenditures at Harrisburg has the papers requested. As I understand, you will produce him here without the necessity of a subpoena?

MR. HURLOCK: I believe you had better subpoena him.

Q. I ask you, Miss Hicks, whether or not you are familiar with the officials of the light and power company who are serving Altoona; do you know them by sight?

A. I do.

Q. Are you acquainted by sight with any of their employees?

A. I am.

Q. First, tell us the company, it is the Penn Central Power and Light Company that serves Altoona, is it not?

A. Yes sir, but I know nothing about the Penn Central Power and Light Company's activities except by hearsay in the campaign. I do know something of the Pennsylvania Railroad Company's activities in the campaign.

Q. Will you give us the names of some of the people whom you know?

A. I know Mr. J. Emery Shupe, who is the next man after Mr. Harry Shearer, who is here I believe and was before this Committee, and is here today.

Q. Now what do you mean; you say you know of the activities of the Pennsylvania Railroad in the fall election?

A. Well, at the Spring primaries I know that they were interested in Mr. Brown and that Mr. Krick, a vice president, was in Altoona arranging prior to Mr. Brown's coming there and interest through the town and among the railroad officials. There was nothing wrongful I am sure but a program of broadcasting was arranged and I happened to be the first speaker with Mr. John Haberstraw, who was the second speaker on the broadcasting program.

Q. You were speaking for Mr. Brown?

A. Yes sir; he was a personal friend of my brothers. Mr. Peck was vice-chairman and asked me to speak as I had been for Mr. Pinchot always before. I had organized the county for him in his other gubernatorial campaigns and had worked at his headquarters when he was a candidate for the United States Senate; but I felt under obligation to be for Mr. Brown at that time and Mr. Peck told me that Mr. Krick was in the city and that they had had a meeting in Mr. Sinclair's office and that I had been selected to be the first speaker.

Q. Who is Mr. Sinclair?

A. Mr. Sinclair is the highest official of the railroad company in Altoona, he is the general superintendent.

Q. Do you know anything of the activities of the Pennsylvania Railroad Company in the fall campaign?

A. Well, only to this extent, that many of them who were lifelong Republicans and had Republican money in their pockets, I will give you their names, were at the polls and working for Mr. Hemphill. There was Mr. Cook, and he is one of the committeemen in my precinct. I was a watcher at the polls—

Q. What was Mr. Cooke's first name?

A. William Cook, and he lives at 1426 Seventh Avenue. He is a retired employe of the Pennsylvania Railroad Company and he was paid by the Republican County Committee to be there and work for the ticket. When I spoke to him, he said, "Why our properties won't be worth anything if we are not for Mr. Hemphill." I said that I owned just about as much property as he did and I am not for Mr. Hemphill. Then in the first precinct of the fourth ward two men who were the committeemen there, Mr. Milton Emeigh—about half past one I got a little discouraged in my own precinct. I noticed so many of the Republicans were working for the Democratic candidate and I thought I would get a little encouragement and so I went to the first precinct where the people are a little more conservative, and to my surprise two of our committeemen were standing out front and seemed to be working for Mr. Hemphill although I didn't know that definitely at that time. I said, "I have heard it rumored that the committeemen up here were working for the Democratic nominee," and I could scarcely believe it, and I said, "I heard it rumored that you were working for Mr. Hemphill," and they said, "Well, we are working for all of the Republican ticket but the Governor." "Well," I said, "Don't you know that when you are not working for the Governor you are weakening the whole ticket, and furthermore, you will be responsible for the turning out of any Republican employees in Harrisburg?"

BY MR. RHODES:

Q. That would not be a bad idea.

A. I know that it is not good politics, especially when you have Republican money in your pocket.

BY MR. TURNER:

Q. You are a good party woman?

A. Yes sir, I am.

BY MR. WALKER:

Q. Miss Hicks, do you know of your own information whether or not the Pennsylvania Railroad Company took an active part in the fall campaign?

A. I only know that their employees who were always Republicans before, those who were members of the Republican County Committee this time were Democrats, and it takes a great deal of courage for a man to go to the polls and be a member of the Republican County Committee and openly work for a Democratic candidate, because naturally he will lose standing in the community. Not because he is a Democrat; I respect a good Democrat, but I do not respect a Republican who is a Democrat.

BY MR. MOORE:

Q. You used the word "courage;" would not the word "nerve" be a better word to use. You said it required a good deal of courage for a Democratic nominee. I suggested that the word "nerve" would cover the situation better?

A. I think it is simply an American right except when you are a member of the committee and have received pay to do a certain duty and then it is dishonorable in my mind. They could just as well have resigned from the committee and then worked for Mr. Hemphill, but to go there and betray the party on election day is bad politics.

MR. TURNER: Down in Delaware County that didn't exist.

CHESTER B. WRAY sworn

BY MR. WALKER:

Q. Where do you live Mr. Wray?

A. Altoona, Pennsylvania.

Q. What is your business?

A. Lawyer.

Q. Mr. Wray, are you familiar with the political situation in and about Altoona? Were you familiar with situation in 1930?

A. Yes sir; I was rather in the center.

Q. Were you familiar with the activities of the utilities of Altoona in spring primary and fall campaign?

A. Only by hearsay. I was chairman of the Governor's committee for Blair County, and most of the information was brought to me,—a great deal in the manner as Miss Hicks told the Committee.

Q. Who brought this information to you?

A. From various workers. They came in the manner you would usually find as a campaign manager in a county; and the general knowledge of the people of Blair County, especially Altoona, more especially Altoona.

Q. Was it common knowledge in and about Altoona that the employes of the utilities were working for Mr. Hemphill during the fall campaign.

A. Yes it was.

Q. Do you from your personal knowledge know that they were?

A. I know that some of them were, but whether they were working because they were employes of the utilities or because they were in favor of the wet candidate, I cannot say.

Q. By the wet candidate, you mean Mr. Hemphill?

A. Yes sir; that was very candidly admitted in Altoona.

Q. Is there anything else that you can add to your testimony regarding the political activities?

A. If you will permit me, I will say that in Altoona there was a very peculiar situation. Altoona is largely supported by the work furnished by the Pennsylvania Railroad and the Penn Central Light, Heat and Power Company. The employes are rather a high type of men; they are very loyal to their companies. There was rather a state of hysteria in Altoona on account of the failure of business, unexpected failure of business, which has occurred in the last couple of months. The insidious propaganda that was instilled into the minds of the people was the thing we had to contend with, as chairman of the committee. I cannot say that the voters came from the Pennsylvania Railroad, but the propaganda was that it would be injurious to the Pennsylvania Railroad, and the issues in the campaign made the employes feel that their particular company would be affected, and, as I say, I was more concerned with meeting that propaganda. I feel that we were somewhat successful, although, due to the wet vote which existed, of some 3,000 votes we lost the city by a small majority, but we did succeed in landing the county. I am sure, I can say that a great many men who were really my good friends, felt that it was their duty to work in the interests of the Pennsylvania Railroad and the utilities, although there were many, quite a number who did not. To the best of my knowledge they were not given strict orders to vote for any particular person; it was left to their own judgment, but it was also explained that their good judgment should be in favor of the opponent to Governor Pinchot.

FRANK F. HENNAMAN sworn

BY MR. WALKER:

Q. Where do you live Mr. Hennaman?

A. In Altoona.

Q. What is your official position?  
 A. I am assistant to the president of the Penn Central Light and Power Company.  
 Q. How long have you been connected with that company?  
 A. Seventeen years.  
 Q. Have you ever taken any active part in politics?  
 A. Very minor.  
 Q. What do you call very minor?  
 A. I have been active with my friends.  
 Q. Were you active in the fall campaign of 1930 in behalf of the candidacy of John Hemphill?  
 A. I was.  
 Q. You were active in behalf of the candidacy of John Hemphill—  
 A. I was.  
 Q. Can you recall any employees of the Penn Central in Altoona who was not active for Hemphill?  
 A. Yes sir, I can name one, a man by the name of Zimmerman.  
 Q. Can you name another one.  
 A. No, I don't think I can.  
 Q. They were all Hemphill.  
 A. As far as I know.  
 Q. Who is the President of the Penn Central Company?  
 A. J. H. Shearer.  
 Q. Was Mr. Shearer active for Hemphill?  
 A. Mr. Shearer was not active in the campaign other than with his friends.  
 Q. By his friends, does that also include the officials and employees of that company and the other utilities in Altoona?  
 A. Mr. Shearer is here and he can answer that.  
 Q. You said that you were active with your friends? Who do you mean by your friends?  
 A. I was active in the fall campaign, very active.  
 Q. In the fall campaign you played more than a minor part.  
 A. Yes, sir.  
 Q. Prior to the fall campaign you played a minor part?  
 A. So to speak.  
 Q. The fall campaign of 1930 was the first time you became active?  
 A. No sir, I have been active for three or four years.  
 Q. You would like to change your answer, when you said you only took a minor part.  
 A. At that time.  
 Q. For the past four or five years you have been taking an active part?  
 A. Yes.  
 Q. Did you contribute any money to the Hemphill fund?  
 A. I did not.  
 Q. Do you know of any contributions that were made by any of the employees of the Penn Central?  
 A. I do not.  
 Q. Do you know whether or not the Penn Central contributed any money to the Hemphill campaign?  
 A. I know they did not.  
 Q. You know that yourself?  
 A. Yes, sir.  
 Q. The Penn Central sent out letters to all the employees and stockholders, urging them to vote for Mr. Hemphill?  
 A. Yes sir.  
 Q. Did they send out a letter—  
 A. To the stockholders, which covered the entire situation in Pennsylvania and in the United States.  
 Q. That was sent out to all the stockholders of the Penn Central?  
 A. All over the world.  
 Q. To all the consumers?  
 A. No sir.  
 Q. Just to the stockholders?  
 A. Just to the stockholders.  
 Q. Can you tell the Committee approximately the percentage of the stockholders who reside in Pennsylvania?  
 A. I don't know.  
 Q. Did you ever see this letter that was sent out?  
 A. Yes, sir.  
 Q. This letter also contained a statement by Mr. Reed, did it not?  
 A. That is correct.  
 Q. A letter and a statement.  
 A. Yes, sir.

Q. The letter was from the Penn Central and the statement from Mr. Reed?  
 A. Yes, sir.  
 Q. On election day last fall there were quite a number of employees of the Penn Central working at the polls?  
 A. I wouldn't say quite a number of employees. There were employees working at the polls, who were committeemen, that sort of thing,—watchers for the Liberal Party.  
 Q. They had watchers at every one of the polls in Altoona for the Labor Party, didn't they?  
 A. Not to my knowledge.  
 Q. As a matter of fact, isn't it true that there was at least one employee of the Penn Central at each polling place in Altoona on election day?  
 A. No, that is not true.  
 Q. And these men that were there, employees of the Penn Central, are they paid on salary or time?  
 A. They are paid salary and time.  
 Q. Do you happen to know whether or not they were paid for the day served at the polls by the Penn Central?  
 A. If they were paid a salary, I presume that their salary continued if they asked for a vacation.  
 Q. They were paid?  
 A. They were paid, and if they were on time they were not paid.  
 Q. They were not paid?  
 A. Yes.  
 Q. Would you know that of your own knowledge?  
 A. No, I was assuming that is the case.  
 Q. That is an assumption. Do you recall the luncheon that was given to Mr. Hemphill and his party at the Penn-Alto Hotel in Altoona?  
 A. I do.  
 Q. Were you present at that luncheon?  
 A. I was.  
 Q. Do you happen to know about how many were there?  
 A. I could not give you the figure, no.  
 Q. Could you approximate it?  
 A. Only as far as crowds, I would say there were 300 people there.  
 Q. Do you know who paid for the luncheon?  
 A. I don't.  
 Q. As a matter of fact, Mr. Hennaman, didn't you pay for that luncheon?  
 A. I didn't.  
 Q. As a matter of fact, didn't you or one of the officials of the Penn Central pay for that luncheon?  
 A. We didn't.  
 Q. You are positive of that?  
 A. Absolutely, sir.  
 Q. Do you recall the largely discussed walkout that was held in Altoona when Mr. Pinchot went there to speak?  
 A. Yes, I do.  
 Q. That was an organized walkout, was it not?  
 Q. Some of the employees of the Penn Central took part in it, didn't they?  
 A. Not to my knowledge. There was no Penn Central employee to my knowledge.  
 Q. You were there when Governor Pinchot spoke?  
 A. I was.  
 Q. And you observed the walkout?  
 A. I did.  
 Q. You had heard it discussed prior to that day?  
 A. I didn't.  
 Q. That was a surprise to you?  
 A. Entirely so.

BY MR. COOKE:

Q. Did you walk out?  
 A. No.

MR. TURNER: Don't you think that is going a little too far in this examination?

THE WITNESS: I listened to Governor Pinchot's speech out of curiosity.

BY MR. WALKER:

Q. Was your curiosity satisfied, Mr. Hennaman?  
 A. Pretty much so.

Q. As a matter of fact, this walkout that occurred had been rumored around Altoona several days prior to the time Governor Pinchot spoke?

A. If it had been, I hadn't heard it.  
 Q. Not a word about it?  
 A. Not a word about it.  
 Q. Mr. Hennaman, do you know Mr. Krick of the Pennsylvania Railroad?  
 A. Yes.  
 Q. Mr. Grimshaw?  
 A. Yes.  
 Q. Mr. St. Clair?  
 A. Very well.  
 Q. At one time shortly before the Fall Campaign they visited Altoona, did they not?  
 A. Yes.  
 Q. And you accompanied them on a visit among the business men of Altoona, didn't you?  
 A. I didn't.  
 Q. You were not in on that visit?  
 A. I was not.  
 Q. Do you know of the visit?  
 A. No, I don't.  
 Q. And you never accompanied those three men visiting certain business men of Altoona?  
 A. I didn't.  
 Q. And you say you didn't accompany them? And that you didn't visit the business men in Altoona and tell these business men if Pinchot was elected Governor of Pennsylvania, the Pennsylvania Railroad would move their shops from Altoona?  
 A. I didn't.  
 Q. And you say you were not present at that time?  
 A. I was not.  
 Q. You say Mr. Shearer is here?  
 MR. WALKER: Any questions the Committee would like to ask Mr. Hennaman?

J. H. SHEARER sworn

BY MR. EVANS:

Q. Mr. Shearer, will you please give the stenographer your address and occupation?  
 A. Altoona, Pa., president of the Pennsylvania Light and Power Company.  
 Q. How long have you been connected with the Penn Central?  
 A. 18 years.  
 Q. How long have you been president?  
 A. I have been president about two years.  
 Q. What was your occupation prior to the time you were president of the Penn Central?  
 A. Vice President.  
 Q. And you were also president of the Pennsylvania Electric Association, were you not?  
 A. Back in 1924.  
 Q. And for how many years were you president of the Pennsylvania Electric Association?  
 A. One year.  
 Q. Just one year?  
 A. Yes.  
 Q. Did you ever hold any other position with the Pennsylvania Electric Association?  
 A. I held a chairmanship on various committees.  
 Q. What committee, Mr. Shearer?  
 A. Safety particularly, and I served on various other committees.  
 Q. Did you ever serve on the Committee of Public Information?  
 A. I believe so, yes.  
 Q. When were you on the Committee of Public Information?  
 A. Sometime after I was president.  
 Q. That would be sometime after 1924?  
 A. I think the following year.  
 Q. 1925?  
 A. Yes, something like that.  
 Q. How long were you on that Committee?  
 A. I could not tell you exactly, probably a year.  
 Q. Mr. Shearer, can you briefly give the Committee some information regarding the Pennsylvania Electric Association? Tell them when it was organized?  
 A. I believe—to the best of my knowledge the Association was organized some 23 years ago.

Q. And what was the purpose of the organization?  
 A. For the advancement of the art—for the purpose of studying the question of generation, transmission, distribution, et cetera.  
 Q. And what is the purpose of this Committee of Public Information?  
 A. Well, the Pennsylvania Electric Association obtained its publicity from a committee that was organized for the dissemination of information and that committee was known as the Pennsylvania Public Information Bureau.  
 Q. What is their purpose?  
 A. Their purpose was to disseminate information to the public through a printed pamphlet.  
 Q. Are you acquainted with Major Richardson?  
 A. I am.  
 Q. Was he associated in any way with this Committee?  
 A. He was at one time, back in 1924 or '25, somewhere around there, I am not sure.  
 Q. He was chairman of the Committee prior to the time you held that office, was he not?  
 A. Possibly, I could not say.  
 Q. Were you not on the Committee at that time?  
 A. No, I was on the Committee later.  
 Q. About how many members does the Pennsylvania Electric Association have?  
 A. Well, there are several classes of members, Class A members, and the employees; at this time I could not just tell you the set-up.  
 Q. Now, what are Class A members?  
 A. Are company members.  
 Q. Those are the company members?  
 A. Yes.  
 Q. About how many members do you have?  
 A. You will have to get that information from the association, I don't know.  
 Q. Can you approximate it for us?  
 A. I cannot.  
 Q. Does the association levy any assessments on the Class A members?  
 A. The Pennsylvania Electric?  
 Q. Yes.  
 A. No—I won't say that, I want to qualify that. In other words, there have been assessments made.  
 Q. These assessments are they contributions, or are they regular assessments?  
 A. Contributions.  
 Q. How often are the Class A members requested to contribute to the Pennsylvania Electric Association's fund?  
 A. Not very often.  
 Q. Do they make an annual contribution?  
 A. No.  
 Q. Bi-annual?  
 A. No sir.  
 Q. In other words, would you fix approximately how often they make a contribution?  
 A. I can give you a statement, which I believe the subpoena specifies, as to what our contributions have been made to the Pennsylvania Electric Association.  
 Q. If you will, please.  
 A. And classified, and the descriptions and so forth.  
 (Paper in question marked exhibit 166).

BY MR. WALKER:

Q. I show you these statements marked Exhibit 166, entitled "Pennsylvania Central Light and Power Company, statement of contributions made to Pennsylvania Electric Association," and ask you if that is the statement that you submit to the Committee?  
 A. It is.  
 Q. And are the contributions set forth there, the only contributions which the Penn Central Light and Power Company made to the Pennsylvania Electric Association?  
 A. They are.  
 first one here is in the amount of \$300, and would you mind reading the account to which that is charged on the books of your company?  
 A. The account charged is 541. "Other General Expenses." Do you want the description?  
 Q. That is the description of the account?  
 A. No; that is—the account number is 541.  
 Q. What does that mean?

A. The description is "Subscription in connection with the Back to the Farm Movement."

Q. So that we can get it clear, this \$300, that was donated, was charged to the "Back to the Farm Movement."

A. Yes; that number 541 covers that particular charge.

Q. And what is the next one charged to?

(No answer).

BY MR. COOKE:

Q. Is that the number in the standard classification of accounts, or is it—

A. It is.

Q. Is there a number—

A. I think so. I would have to consult the accountant for that, because I asked the accountant last night, when I received my subpoena, to get out the information, and this is what he gave me.

Q. You will probably find that that is a sub-division of that number because the "Back to the Farm Movement" is rather a recent thing, is it not?

A. Oh, no; we have been working on the farm movement for seven or eight years.

BY MR. WALKER:

Q. Would you mind reading the next donation, and tell us to what account its is charged.

A. The next is \$1,065.70, charged to the same account. The description is "Proportionate share of series of advertising run in the Pennsylvania Farmer sponsored by various electric companies."

BY MR. COOKE:

Q. Where is the "Pennsylvania Farmer" published do you know?

A. I couldn't say.

Q. You don't know whether those were paid as reading notices?

A. Largely paid ads, prescribing different classes of appliances, motors, and things of that character.

Q. There have been a great many reading articles in the "Pennsylvania Farmer" in recent years about rural electrification, and I was just wondering whether that was compensation?

A. No; I think not, Mr. Cooke.

BY MR. WALKER:

Q. Then, I understand, that these constitute all of the payments made by the Pennsylvania Central Light and Power Company to the Pennsylvania Electric Association for January 27, 1925 until June 26, 1930; is that right?

A. Correct—June?

Q. March, April, May and June.

A. Yes; six months—correct.

Q. I show you an official copy of Exhibit No. 1114 of the Federal Trade Commission Investigation, and I call your attention to an item listed "1925 January, 28—it is a list of the donations of the Pennsylvania Central Light and Power Company, \$585," and ask you if you know anything about that donation?

A. That wasn't made to the Pennsylvania Electric Association.

Q. What was that made to?

A. I will have to consult with our accountant. I couldn't tell you.

Q. Do you know of any donations that were made by your company to the Public Policy Committee of the Pennsylvania Electric Association?

A. I think there were some, I couldn't tell you what they were.

Q. This exhibit number 166 differs from the payments you made to the Pennsylvania Electric Association from the payments made to the Public Policy Committee of the Pennsylvania Electric Association; is that my understanding?

A. Yes sir.

Q. And is that correct?

A. To the best of my knowledge.

Q. Then, in addition to the two payments you have set forth in Exhibit 166, your company made contributions to the Public Policy Committee of the Pennsylvania Electric Association?

A. I presume that is correct.

Q. Now, so that we can clarify that presumption in your mind, I show you this item dated the 28th of January, 1925, payment of \$585, and I show you here under date of January 21, 1926, a payment of \$225; is that correct?

A. I assume so. I can't tell you until I consult with our accountant. I have brought here exactly what the subpoena called for.

Q. I appreciate that, sir, I am just clarifying it so that we get the distinction.

A. That will have to be looked into. I can't tell you anything about it at the moment.

Q. I appreciate that. The fact is that here are some papers, and I am asking you whether you know anything about them.

A. I don't know anything about them on the moment.

Q. On March 16, 1927, this payment fixed here in the amount of \$200 by the Pennsylvania Power and Light Company?

A. The Pennsylvania Power and Light Company is not our company. That is the P L and ours is the P C L.

Q. What is the Pennsylvania Light, Heat and Power?

A. That is at Altoona, we don't have any "heat" it is light and power.

Q. That donation is \$500?

A. All right.

Q. That would be another company would it?

A. Presumably.

Q. And do you know whether there is a Pennsylvania Central Light, Heat and Power Company in Altoona?

A. Not to my knowledge.

Q. What is the purpose of the Public Policy Committee of the Pennsylvania Electric Association?

A. Well, that was a committee to disseminate information on the progress made by the utilities of Pennsylvania, to discuss policies that we should pursue in connection with the operation of the properties.

Q. Now as a matter of fact, Mr. Shearer, did you ever serve on this committee?

A. I did about one year.

Q. What year was that?

A. That was back when I was president of the association.

Q. In 1924?

A. Yes sir.

Q. As president of the association you were ex-officio a member of the committee?

A. Yes sir.

Q. During your tenure of office as president of the association, were you an active member of the public policy committee?

A. Only to sit in occasionally.

Q. The duties of that committee were to look after legislation?

A. Not to my knowledge.

Q. What specific duties did they have?

A. I just told you, to discuss the progress of the industry and things of that character.

Q. What was the purpose of the Pennsylvania Electric Association?

A. Committee work principally.

Q. This public policy committee then is for the general purpose of discussing the progress of the association?

A. Yes sir, things that necessarily would have to be approved by the committee before they became effective.

Q. The question of legislation that might be detrimental to the utility interests did not come under this committee?

A. That I could not tell you. I was ex-officio a member of that committee during the period I served as president of the association. Outside of that I had nothing to do with it.

Q. Who was the chairman of the public policy committee?

A. It seems to me Walter Johnson, then President of the Philadelphia Electric Company. I was never active in that connection.

Q. What committee of the Pennsylvania Electric Association had charge of the plan for revising the text books in the public schools of Pennsylvania?

A. I don't think that there ever was a committee for that purpose.

Q. Did the association ever contemplate and carry through a purpose of that kind?

A. Not to my knowledge.

Q. Did you personally ever carry forth a survey of the text books of the schools?

A. No sir.

Q. Were you ever connected with any committee that carried on a survey of the text books in the schools of Pennsylvania?

A. I was a member of Major Richardson's committee and I would like to qualify that statement by saying, I took no active part in it in any way, shape or form.

Q. I read from a report of the minutes of the Pennsylvania Electric Association for 1927. J. H. Shearer, vice-president of the Penn Central Light and Power Company, invited attention to the committee's survey of text books on economics and civics being used in the schools of Pennsylvania. He said he would take up the matter of the school books in his own city. He suggested that the committee might work out details later for further work. Copies of the survey have been mailed to all of the committee members.

A. That is true. I said that we had never taken any active part in it whatever. We quit right there.

BY FATHER COX:

Q. You are under oath, of course?

A. I am under oath, and I say we quit right there.

BY MR. WALKER:

Q. You say it stopped right there and went no further?

A. Not to my knowledge.

Q. Would you say that the copies were not mailed out to the members?

A. I presume they were.

Q. After you made this report as set forth and which I have just read to you, your activities along that line ceased?

A. Absolutely.

Q. Who had charge of that work?

A. Major Richardson.

Q. Did Major Richardson have charge of the work when you made this report?

A. He had.

Q. What committee was that assigned to?

A. That I could not say at this time, I do not recall.

Q. Mr. Shearer, just so we don't duplicate too much the Senate record, I show you here a letter that came presumably from Major Richardson. Was that the one that was read to you in the Senate?

A. Yes sir, that is right.

Q. Was that letter you received from Major Richardson regarding this textbook survey, was that before or after you withdrew from active participation?

A. I could not tell you.

MR. WALKER: I will read Exhibit No. 1189 of the Federal Trade Commission Investigation, which is headed:

**"PENNSYLVANIA PUBLIC SERVICE INFORMATION  
COMMITTEE**

Philadelphia, July 7, 1925.

Mr. J. H. Shearer,

Vice-president Penn Central Light & Power Co.,

Altoona, Pa.

My dear Harry: I have been thinking over our conversation the other day on the most effective method of taking corrective action relative to the misinforming textbooks used in the schools of Pennsylvania. After consideration I believe that while, directly, the Pennsylvania Public Service Information Committee can not very well employ the means of correcting the conditions in the schools, nevertheless it possesses the mechanism which, if employed properly and completely, might well accomplish our purpose.

I refer to the district or sub-committees of the main committee. By reason of their representative local standing, and, grouped as they are, exercising very considerable influence in their communities, they become potent weapons of defense when the industry is threatened.

I think we all agree that the textbook situation revealed in our survey presents a threat to the well-being of our public-service structure. If, then, each district committeeman will agree to utilize every channel to which he or his associates may have access, in order to direct the attention of the proper and responsible school authorities to the manifestly unfair and

untrue data contained in certain used textbooks, I am convinced the desired change will be effected.

Of course in explaining the situation to district superintendents and school principals it will be necessary to show that there are many excellent textbooks on economics and civics being used in the schools of the Commonwealth. That list we are prepared to furnish. As a matter of fact, the books which contain the misinformation relating to economics of the public-utility industry can very readily be corrected. Perhaps in some instances the school heads will be willing to communicate with the authors of those books with the object of obtaining the necessary editing of any new issues.

Some school superintendents, I am informed, are very partial toward the textbooks of certain authors and publishers. Consequently better results may be obtained through an endeavor to effect a proper change in misinforming books already in use than by urging the substitution of other textbooks.

Of course, all of the business must needs be transacted with exceeding tact and diplomacy. Local conditions and prejudices will have to be taken into account when the educators are approached. Also, it may be well to note what appropriations the school superintendent may have at his disposal for the purchase of textbooks. It may well be that avenues of proper assistance in a small way will present themselves. It may be well worth a utility's while to help in that regard. Such aid, unfortunately is subject to misinterpretation and would therefore have to be rendered in a manner well safeguarded from suspicion.

I am afraid it will be necessary in most districts for the local committees to rehabilitate themselves before undertaking a task requiring so much care as the matter aforementioned. The Altoona committee is in a class by itself largely due to the energy of its chairman. I would urge therefore that the Pennsylvania Electric Association approach the Pennsylvania Gas Association, the Pennsylvania Street Railways Association, the Pennsylvania Natural Gas Association, the Pennsylvania State Telephone and Traffic Association, and the Bell Telephone Company of Pennsylvania with the idea of taking concerted action through the district committees. Nothing will galvanize those committees into action quicker than the proper stimulation from headquarters.

Whatever further aid you may desire from this bureau or myself, Harry, you know you have only to ask it. Anyone who helps as much as you do can not ask too much.

Cordially yours,

—Director."

Q. That is Major Richardson, is it not?

A. Yes sir.

Q. Would you mind telling me what Major Richardson means when he says it might be well to note what appropriations the school superintendent may have at his disposal for the purchase of textbooks?

A. I don't know just what Major Richardson has in mind, or what he had in mind when he wrote the letter. I can this, however, when I received the letter the activities as far as I was concerned ceased.

Q. What was in your mind when you received the letter and read that statement?

A. Well, what would be in anybody's mind when they read a letter of character. It would look as though he desired some action.

Q. Did he get it, Mr. Shearer?

A. Not from me.

Q. Did he get from the Pennsylvania Electric Association?

A. Not to my knowledge.

Q. And I understand the whole matter collapsed?

A. The whole matter dropped there as far as I am concerned.

Q. I asked if it collapsed?

A. I could not tell you.

BY MR. MOORE:

Q. Who was chairman of the Altoona committee referred to in the letter?

A. I presume he referred to me as Chairman of the committee.

Q. Do you know Mr. A. W. Robertson.

A. Yes sir.

Q. I will read a quotation from a letter addressed to Mr. Richardson: "Mr. Shearer of Altoona advises us that the Electric Association had this matter in hand and was making an investigation of Pennsylvania text books. Everyone was very much interested. It would seem that here is something that our committee might take a real interest in and see where we could help." This letter is dated January 22, 1925.

A. That is the same letter that was written with this one.

Q. The other letter was written July 7th, 1925. I will ask you whether the Electric Association made the investigation of the Pennsylvania text books at that time.

A. Major Richardson did.

Q. Did you.

A. No sir.

Q. Did you have any active part in it.

A. Yes sir.

Q. Why would you advise then that the Electric Association had the matter in hand and was making an investigation.

A. I advised Mr. Robertson?

Q. Yes.

A. I presume I got the information from Major Richardson to the effect that his committee was making the investigation, gathering the statistics together.

BY MR. HAGAMIER:

Q. Were you a member of the committee.

A. I believe I was.

BY MR. WALKER:

Q. Was Major Richardson connected with the Pennsylvania Electric Association at that time.

A. No, I think he was simply a director of the Public Information Bureau.

Q. Was the Electric Association carrying on a separate survey?

A. Not to my knowledge.

Q. If they had been, would you know it.

A. I think I would.

Q. This survey that you mentioned here was carried on by Mr. Richardson, and not by the Pennsylvania Electric Association, are we to understand.

A. That is my inference.

Q. The Pennsylvania Electric Association never made a survey of text books in Pennsylvania?

A. Not to my knowledge.

Q. You are connected with that association.

A. As a member of the association.

Q. You take an active part in the association?

A. Not very. The members of the organization are working on the committees, various committees, for the purpose of gathering data together in connection with the operation, transmission and distribution of property.

Q. This money that was contributed by the members of the Pennsylvania Electric Association, for what was it used.

A. Which money.

Q. The money that was donated by the Class A members.

A. I cannot tell you.

Q. What was it used for when you were president,—Pennsylvania Electric Association?

A. There is a description as to what was done with the money that we turned over to the committee.

Q. Was all the money that was turned over to the association used for this same purpose?

A. That, you will have to get from the association. I don't know anything about their accounts.

Q. Did you know anything about the accounts when you were president?

A. No sir.

Q. Didn't have any idea what the money was used for.

A. I could not tell you about this—that is many years ago.

BY MR. HAGAMIER:

Q. Where did all this money come from that was to revamp all the text books in Pennsylvania?

A. I couldn't tell you.

Q. You seem to be very much interested, have you any idea?

A. I was, with gathering information.

Q. There was a statement made that you were very active?

A. You mean assuming—

Q. I am not assuming—the letters state you are active?

A. Letters are written, and if you take no action—

Q. You have gathered data?

A. I have never gathered any data at all. I told you a moment ago it ended when I received the letter.

BY MR. WALKER:

Q. I believe I asked you if you had ever made any survey of text books and you said no?

A. Yes sir.

Q. Did you ever attempt to do so?

A. No sir.

Q. I show you a copy of Federal Trade Commission's Exhibit No. 2526 and will read it, it is a letter addressed to Mr. Fred T. Jenkins, and is as follows:

(Federal Trade Commission Exhibit No. 2526)

Pennsylvania Electric Association,

Altoona, Pa., December 19, 1924,

Mr. Fred R. Jenkins,

Chicago, Ill.

Dear Mr. Jenkins:

Mr. George M. Gadsby, president of the Pennsylvania Electric Association, has requested me to take charge of the investigation and study of the character of political, social, and economical doctrines being promulgated at the present time by professors and teachers in the educational institutions of the State of Pennsylvania. I have been advised by Mr. Gadsby to communicate with you on this subject for additional available information on the socialistic tendencies in American educational institutions.

Your courtesy in forwarding me all available data and suggestions on this matter will be sincerely appreciated.

Yours very truly,

(Signed) J. H. Shearer,

Q. Do you recall that letter?

A. Yes sir.

Q. What was the purpose of that letter?

A. To find out from Mr. Jenkins what he had in mind.

Q. Who was Mr. Gadsby?

A. Vice-president—later president of the West Penn.

Q. He asked you to take charge of this work?

A. Yes sir.

Q. You took charge?

A. In a way.

Q. What do you mean?

A. They appoint the committees, it is up to the committees as to how active they are. As far as I am concerned, I was not active, outside of a few letters.

Q. You did, did you start to make a survey of the text books in Pennsylvania?

A. We understood it.

Q. Do you wish to correct your prior answer to that effect?

A. Personally I never did.

Q. What was the purpose of your letter, which is Exhibit No. 2526?

A. I presume I wrote to Mr. Jenkins, reporting to him just what had taken place, as regards our understanding between Gadsby and I.

Q. You asked for all available data.

A. I don't know that I ever received it.

Q. Did you not ask him for certain data regarding text books?

A. Yes sir.

Q. Then you did start to make a study of textbooks in Pennsylvania, did you not?

A. I asked him for the data.

Q. Yes?

A. But I made no start in the study of textbooks.

Q. Then I ask you, Mr. Shearer, whether or not you received that data?

A. I don't think I did. I could not tell you anything about it, it was so long ago, and I cannot recall it, that is all there is to it.

BY MR. COX:

Q. The gentleman who preceded you as a witness is on the school board, Mr. Shearer, at Altoona?

A. I believe so.

Q. It has been reported from a very reliable source that the reason he is on that board, the sole purpose is in furnishing textbooks, and is that the reason you and the other gentlemen of this power company are so anxious to have him on that Board, is that true or not?

A. I deny that emphatically.

Q. As a matter of fact don't you know of any work of that kind?

A. No sir.

Q. Conducted in any way at all?

A. None whatever.

BY MR. HAGMAIER:

Q. Don't you gentlemen think that the Education Department of the State is capable of providing textbooks on the subject matter, that they have before them?

MR. TURNER: Why don't we get the details from the Department of Public Instruction, it seems to me that there is a question that can be gotten from them, and why don't we find out from them what they know about these matters?

MR. WALKER: As a matter of fact, Mr. Turner, the Department of Public Instruction, and we will develop it later this afternoon, has no power over all that. The selection of textbooks is entirely in the hands of the school boards of the different communities.

MR. TURNER: That is right.

BY MR. WALKER:

Q. Mr. Shearer, just before we leave this Federal Trade Exhibit, No. 113, I ask you whether or not you know anything about any of the disbursements set forth in this exhibit?

A. I don't.

Q. Do you know anything of the disbursements set forth on page 860 of that exhibit?

A. No sir.

Q. Do you know anything about the disbursement set forth on page 861 of the exhibit?

A. No sir, I have no knowledge of those disbursements.

BY MR. COOKE:

Q. Were you with the Pennsylvania Electric Association at the time that the so-called Giant Power Legislation was before the Legislature?

A. Yes.

Q. What position did you occupy?

A. I was president in 1924, and Mr. Gadsby followed me in 1925.

Q. What committee or agency of the Association was represented in the handling of that legislation?

A. What agency?

Q. Yes. What committee of the Pennsylvania Electric Association?

A. I don't know of any Committee, Mr. Cooke.

Q. What committee was Mr. Johnson chairman of?

A. Public Policy Committee.

Q. Were you on that committee at that time?

A. I was ex-officio during the period that I was president, 1924.

Q. Now, you know that they were represented before the committees of the Legislature in the hearings by presumably able counsel, technical and legal?

A. I presume they were, yes.

Q. How were they compensated, out of the funds of the Association?

A. Not out of the Pennsylvania Electric Association funds.

Q. Well, such expenditures that you say you made here, they came out of the assessment that your company made to the Electric Association, and they were again disbursed by the Electric Association?

A. So far as made to the Pennsylvania Electric Association, they are listed here, and then the other ones there are to the Pennsylvania Policy Committee.

Q. Now, am I right that these expenditures of that kind are charged to operating expenses?

A. Well, I say that they go to the account number, and so on.

Q. That would be operating expense account?

A. I would have to ask my accountant.

Q. It would have to be either operating account or capital expense account?

A. It would not be capital?

Q. No.

A. It would not be the capital expense account.

Q. That would be an operating expense?

A. All right.

Q. Now, in the end then all these expenditures were paid by the rate payers, were they not?

A. Well, it might be from surplus.

Q. Well, all right.

A. I don't know; I cannot tell you until the accountant would verify that.

Q. Who provides the surplus for you; you have only one source of revenue, and that is the rate payer?

A. The rate payer, yes, that is correct.

Q. So there is no limit of money apparently that companies such as yours expend on propoganda and similar work, and they do all out of what is paid by the rate payer?

A. No, there is a limit.

A. No, there is a limit.

Q. There is a limit suggested by your own judgment?

A. It would be a very small limit, I can assure you of that, as far as we are concerned.

Q. That is not before us, but the Federal Trade Investigation shows that there was, I don't mean anything ignoble at all, but do you know of any money or any expenditure of this character that has ever been taken to reduce the dividend to stockholders?

A. I cannot answer that.

Q. Well, you don't know of any. In other words, the rate payers always pay?

A. Well, the income is from the rate payers, yes.

Q. And those expenditures are made out of that income?

A. They are.

BY MR. WALKER:

Q. Now, Mr. Shearer, the Public Policy Committee is a committee made up of the members of the Pennsylvania Electric Association, is it—

MR. EVANS: Just a minute, please.

BY MR. EVANS:

Q. Mr. Shearer, I show you a copy of the Penn Central Light & Power Company report to the Public Service Commission for the year 1925. You state in your Exhibit No. 166 that those contributions to the Pennsylvania Electric Association were charged to the account of other general expenses, and I call your attention to page 310 of this report, account 541, other general expenses, under the head of operating expenses, and ask you whether, refreshing your memory from that, you cannot now answer Mr. Cooke?

A. Yes, that is correct.

Q. The same thing would be true for the year 1930, wouldn't it?

A. I expect so.

Q. In your 1930 form, the account number "Other General Expense" seems to have been changed from 541 to 477. From your knowledge of the general situation, would you assume that this contribution to the Pennsylvania Electric Association is included in that item of "Other General Expense"?

A. I assume so but I can't say until I have checked it up with the accountant.

BY MR. TURNER:

Q. How large was the amount?

A. \$1,065.70.

Q. How large is your income from rates?

A. How large?

Q. How much is your income?

A. You mean the gross income?

Q. Yes, for the year.

A. About five and a half million.

BY MR. COOKE:

Q. What percentage of the gross income of the electrical industry in the State does your company represent, approximately?

A. Well, it is a very small percentage.

Q. Just a very small percentage?

A. Yes; our gross income is between—around—say—maybe five and one quarter million.

Q. It represents perhaps 4% of the gross income of the electric companies of the State?

A. Something like that.

Q. So that if this assessment is on the basis of income, the total contribution of the electrical industry in the State would be quite a sizeable income—quite a considerable amount?

A. The contribution is for the benefit of the advancement of the art to the farming industry in the State of Pennsylvania.

Q. If we had time to go into it, we might differ on that?

A. Well, possibly.

BY MR. WALKER:

Q. Now, all these other contributions that were made to the Public Policy Committee of the Pennsylvania Electric Association were charged up to operating expense in the same way, were they not?

A. I assume so; yes sir.

Q. Do you know Herman P. Miller?

A. Herman P. Miller?

Q. Yes sir.

A. No sir.

Q. Listed under the expenditures of March 22, 1926, "Herman P. Miller, advance copies of legislative bills, \$200." Do you know what that item was for?

A. No; I don't.

Q. Was it the practice of the Pennsylvania Electric Association or this Public Policy Committee of your Association to procure advance copies of legislative bills?

A. I presume so—yes.

Q. For what purpose?

A. To study the bills.

Q. Why was it necessary to procure advance copies?

A. Well, we are naturally interested to know what is going on.

Q. This \$200 was paid out, was charged to operating expenses, was it not?

A. I don't know who paid it; who paid the \$200.

Q. It was paid out of contributions received from members of the Pennsylvania Electric Association?

A. By whom?

Q. Presumably by your Public Policy Committee.

A. Well, I don't know anything about that.

Q. That is a part of the Pennsylvania Electric Association is it not?

A. Yes.

Q. And all of these contributions that were received by the Public Policy Committee and by the Pennsylvania Electric Association would naturally be charged to operating expense?

A. Yes sir.

Q. And then that \$200 that was paid out for advance copies of legislative bills would be paid out of money charged to operating expense?

A. I presume so.

Q. And why was it necessary to receive advance copies of legislative bills?

A. Because we are interested in knowing what is going on in a legislative way.

Q. You couldn't wait for the printed bills?

A. I don't know anything about those.

THE CHAIRMAN: Have you identified Herman P. Miller?

MR. WALKER: The witness can't, sir.

BY MR. WALKER:

Q. Under date of March 5, 1926, the exhibit shows a payment to Samuel Barker, "fee for service, \$1250," and I ask you if you know what that was for.

A. I do not.

Q. As a matter of fact, it was paid to Samuel Barker for testifying against the Giant Power Act.

A. I don't know.

Q. Do you know Mr. Barker?

A. I do not.

Q. Don't you know that he came down here and testified against the Giant Power Act? I show here, under the same exhibit under date of March 8, 1926, "Farley Osgood, Expert services \$339.18". Do you know what that was for?

A. I couldn't tell you.

Q. As a matter of fact, it was paid to Mr. Osgood for testifying against the Giant Power Act, was it not?

A. I don't know.

BY MR. COOKE:

Q. I heard that speech. Was there a man named Lincoln there; Professor Lincoln of Cornell University?

(No answer).

MR. WALKER: We haven't come to him yet, Mr. Cooke.

BY MR. COOKE:

Q. Are you acquainted with the present status of this "Back to the Farm Movement" or is that something you do not know about it?

A. No sir; there is regular committee of the Pennsylvania Electric Association that is handling that matter.

Q. Who represents your company on that committee.

A. I think—a man by the name of East, who is our rural lines man.

Q. Did you have something definite in mind when you told me that that expenditure was in the interest of the farmers—

A. No sir; I have not, that is the way they are disbursing this money in connection with the farm—

Q. You assume that it is in the interests of the farmers?

A. Yes, I do.

Q. Are you familiar with the literature that is being put out by that committee?

A. Occasionally I see the farm bulletin.

Q. Did you ever see a piece of literature put out by that committee in which the question of rates was mentioned?

A. Not to my knowledge; no sir.

Q. You would have noticed it if it had been?

A. Not altogether. I don't read those things very much. They are scrutinized by others and if there is anything of special interest it is brought to my attention.

Q. Do you know that they were sent out under a frank privilege by the State College?

A. That I couldn't say.

BY MR. WALKER:

Q. Do you know the Honorable James Francis Burke?

A. No sir; only by reputation.

Q. I show you here on the same exhibit, under date of April 20, 1926, "Reimbursement Dequesne Light Company for fee paid to James Francis Burke, \$1,000" and ask you if you know what that is for?

A. No sir.

Q. As a matter of fact, it was paid to the Honorable James Francis Burke for making a speech against the Giant Power Act, was it not?

A. I don't know a thing about it.

MR. WALKER: Did you hear that speech, Mr. Cooke.

MR. COOKE: No; I am sorry I did not.

MR. WALKER: You missed it.

BY MR. WALKER:

Q. I would like to read to you just two paragraphs from the speech of the Honorable James Francis Burke's one thousand dollar speech:

"Name, if you will, among the nine million people of Pennsylvania a single individual who is being victimized by the power companies of this Commonwealth today. Name, if you will, a single company that is exploiting the public from the Delaware to the Ohio. Name if you will, any state where a Public Service Commission does not command the admiration and confidence of the fair-minded people in every section of American, vigilantly protect the public against the burden of unjust rates and assures fair play to the companies on the one hand and the community on the other."

BY MR. COOKE:

Q. And now, I am going to ask Mr. Shearer again, do you know of any program issued by which the expense of that sort of thing is kept off the rate payers; so far as you know the rate payers pay for that; the satisfied rate payers?

A. I assume so.

BY MR. WALKER:

Q. Mr. Shearer, I show you here Exhibit No. 1150 of the Federal Trade Commission report on the survey of textbooks on economics and civics in Pennsylvania public schools, pre-

pared by the Public Service Information Bureau, pages 894, 895, 896, 897, and 899, and ask if you know anything about that exhibit?

A. Only that I saw it once.

Q. When was that?

A. That was back in 1924, 1925 or 1926.

Q. Where was that, Mr. Shearer?

A. I saw it in Philadelphia.

Q. In whose possession was it when you saw it?

A. Major Richardson's.

Q. Do you recall who prepared it?

A. It was prepared by his office force, I presume.

Q. Do I understand that the Pennsylvania Electric Association or the committee on public information of the Pennsylvania Electric Association, or its public policy committee, or in fact any committee of the Pennsylvania Electric Association had nothing to do with that exhibit?

A. I could not answer that; I don't know.

MR. COOKE: Are these all good books, or are they all bad books?

MR. WALKER: It depends from what side you look at it.

BY MR. HAGMAIER:

Q. Don't you think it is bad public policy for the public utilities to go into the school systems of this country with this kind of thing?

A. No sir, I don't think it is a bad thing for public utilities to disseminate information.

Q. You don't?

A. No. People want to know what is going on.

BY MR. MEMOLO:

Q. Mr. Shearer, what caused you to drop the whole question?

A. Simply because I didn't feel that I cared to go along with it.

Q. It didn't look so good to you?

A. No sir.

BY MR. HAGMAIER:

Q. You answered my question on that by saying it is a good thing?

A. This is another thing. I say that on information the public is entitled to it.

Q. I am asking about textbooks? And you say it is bad practice for the public utilities to go into the schools situation, a thing that is closer to the hearts of the people than any other institution we have outside of the church, to go in there and disorganize it?

A. I don't think that anything like that has been done.

BY MR. COOKE:

Q. You know it has been testified that school books were actually changed as the result of the activities of this committee?

A. No sir, I do not; I say that I was connected with this committee but after that I dropped it.

Q. In other words, you think the electric industry ought to keep out of the public schools?

A. I didn't think that they should go in in that particular way, but I think there is certain information that should be given to them.

Q. If the electric industry is justified in going into the schools, why should not Mr. Raskob and Mr. Rockefeller go in and have something there about oil and sugar?

A. Everybody wants to know about the electrical industry.

Q. Why don't you let the school people tell them about that?

A. They do. I would like you to investigate and come up to our place and see what we do. I have told you how far I went with the matter.

BY MR. WALKER:

Q. You are not in favor of this survey as set forth in Exhibit No. 1150?

A. Not after I had studied it.

Q. You thought that that was a bad move on the part of the public service information committee?

A. I thought that in gathering the information it was perfectly all right. As far as transmitting that and going out and taking it up with the schools, I didn't agree.

Q. This survey together with the exhibits of the text books referred to was sent out as confidential information I presume?

A. I think so.

Q. That is the way you received it?

A. I didn't receive that.

Q. Major Richardson showed you one? That survey also listed passages from different text books that in the opinion of the people who made the survey was harmful to the utilities?

A. I don't recall it. I recall the exhibit in general but that is all I recall for the moment.

Q. Continuing on page 903 of the Exhibit, there is a series of quotations from the text books or passages and these passages were included in that survey and these were the passages, were they not, that the compilers of this survey considered harmful to the utilities?

A. I don't remember that.

Q. I will read to you a passage from the book on Community Civics, by R. O. Hughes, Peabody High School, Pittsburgh:

"Franchises and their evils. \* \* \* The work undertaken under franchises like this has so often seemed of great service to the people that in their joy at getting the thing done they have overlooked the possibility that the company getting the franchise might make itself the master instead of the servant of the people. They have forgotten that since the company could not make money except from the people themselves, the people had a right to expect a reasonable return from the privileges which they gave to the company.

"Franchises have been granted for ridiculously long terms, such as 99 or even 999 years, and sometimes without a cent of recompense coming back to the city. Worse than all, these franchises have sometimes been obtained by outright bribery or by giving a city councilman stock in the concern which was to receive the franchise. Unless the company having a franchise openly violates some of its terms, the city must sit by helplessly and put up with poor service, realizing too late that it has been generous to its own disadvantage.

"To remedy such evils, cities are today seldom granting franchises for more than 25 years and are insisting that the city may have the right to buy up the business itself after a certain time if it wishes, paying the company which had the franchise a reasonable sum for its property and its work. Either a share in the profits or some other form of payment is often asked, besides."

Q. The City of Pittsburgh had a perfect right to permit Professor Hughes of Peabody High School to teach from his book on municipal civics?

A. Yes sir.

Q. Can you tell me whether or not through these activities the Peabody book was removed from the high school?

A. I could not tell you.

Q. The balance of these copies from different text books, cover a series of pages, were all furnished in this survey to the members for the same purpose?

A. I never received anything of that character.

Q. Do I understand that when Major Richardson showed to you your copy of this survey—

A. It was not my copy—it was a just a copy.

Q. A copy then?

A. I did not see these sheets that you refer to.

Q. Do I understand that this is the first time you ever knew such a recommendation was made?

A. The first time.

Q. You never knew it before?

A. No sir.

Q. You never knew that they were in existence?

A. No sir.

Q. You never knew that such a proposition had been carried on by the electrical industry of Pennsylvania?

A. No sir.

BY MR. HAGMAIER:

Q. Who could you ask that information?

A. Major Richardson.

BY MR. WALKER:

Q. Did you see Major Richardson yesterday?

A. No sir.

Q. Today.

A. No sir; I arrived in Harrisburg, at 9.30 this morning.

BY MR. HAGMAIER:

Q. Was Major Richardson the only man on the committee—

A. That committee does not exist.

Q. He exists—he is pretty much alive; he surely gets paid by somebody?

A. I don't know anything about his affairs.

Q. Do you know anything about the co-operation of the committee that was organized and called for the purpose of co-operating with the educational institutions' committee?

A. Here in Pennsylvania?

Q. Yes.

A. What year?

Q. 1928.

A. No sir.

Q. Do I understand that you are in entire ignorance of the facts that the Pennsylvania Electric Association in 1928 organized in co-operation with the educational institutions' committee.

A. I don't remember it.

Q. Composed of W. M. Baum, chairman of the Duquesne Light Company of Pittsburgh; R. L. Kerr, Duquesne Light Company, Pittsburgh; Kemp G. Fuller, West Penn Power Company, Pittsburgh; W. H. Donley, Philadelphia Electric Company, Philadelphia; C. E. Reinicker, United Gas and Improvement Company, Philadelphia.

A. I don't know anything about it.

Q. They are all members of your association?

A. Yes sir. Mr. Hennaman advised that that is a company, education of employees.

Q. Is that what the committee is for?

A. Yes sir.

Q. You do know the activities of that committee.

A. In that way, just what he told me. He handles that.

Q. In the minutes of the Pennsylvania Electric Association of October 20, 1927, occurs the following: I understand that this committee, according to the information you gave us, is for the education of employees?

A. That is what Mr. Henneman told me, just this moment.

Q. I will read the minutes to you:

"Mr. F. E. Shearer informed the section that Mr. Baum had ordered up quite an elaborate tie-in between the light and power industry and the universities, colleges, and schools of Pittsburgh in the way of educational courses."

Another record of the meeting is as follows:

"Mr. Kuhn mentioned that he believed it would be a good idea to check up on the trend of teaching as imported in the colleges and universities, especially in economics and liberal art in schools in relation to utilities.

"So many courses in these schools are in the form of lecture courses, and unless the professors have the right viewpoint immense damage will be to the industries."

Q. From these minutes of the Pennsylvania Electric Association, would you say that that committee was formed for the purpose of educating the employees.

A. I will have to refer that to him—I will have to refer that to the Pennsylvania Electric Association. I don't know anything about these activities.

Q. Your work, your interest in the association, ceased entirely when you left the office of president?

A. Yes sir.

Q. You know nothing about their activities since that time?

A. A year after I stepped out of the picture, because my duties are more in a general way looking towards the operation, distribution and transmission—

Q. You don't feel bound by anything that the Pennsylvania Electric Association might be doing at the present time, or since you have left the office of president.

A. Absolutely.

Q. You are still a member?

A. Yes sir.

Q. Let me ask you this, do you believe that the Pennsylvania Electric Association, an integral part of the electric industry, should interfere in any way whatsoever with the educational facilities or activities of any of the school of Pennsylvania?

A. Yes sir, with a qualification.

Q. Qualify it?

A. I think the utilities should have the privilege of giving to the schools such information as they request.

Q. I want to ask you, do you think that is an answer to my question?

A. It is the best answer I can give you.

Q. As a matter of fact, this survey demonstrates—demonstrates to me, and ask you does it not demonstrate to you that the utilities by that survey were not attempting to put true pictures in front of the public, through the schools—isn't that right?

A. I assume that the committee discussed these matters among themselves. That is as far as I know.

Q. I am asking your opinion—do you think if they were attempting to present the utilities in a fair and impartial light to the public, that they would have proceeded along these means, that they would have adopted a course such as this?

A. I don't know enough about it to answer the question.

Q. Due to the fact that you represent one of the largest power companies in Pennsylvania, don't you think, out of respect to the industry that if the Pennsylvania Electric Company, of which you are a member, was conducting such activities as that they should be investigated?

A. These are activities of the committee. I knew nothing—

Q. It is the activity of the committee of the Pennsylvania Electric Company?

A. I presume so.

Q. Don't you think if your association whether through acting on a committee in part or a committee in the whole, if they are conducting such propaganda as this, that you as a member was entitled to know about it.

A. Do you call that propaganda?

Q. Do you?

A. Not altogether.

Q. In what part is it propaganda.

A. It all depends on the way you look at it. I think we have as much right as anybody else to hand out information in connection with our business.

Q. I ask you this, if you were going to hand out information to the public you should hand out information that represents the utilities in their true light.

A. Yes sir.

Q. Do you think this is a proper course to pursue in order to accomplish that result?

A. It is a matter of opinion.

Q. I am asking for your opinion?

A. If I knew more about it I could give an opinion.

Q. Do you feel it should be investigated?

A. That is up to you.

Q. It is up to you, sir. Mr. Shearer, did you take an active part in politics?

A. I did.

Q. Did you take an active interest last fall?

A. I did.

Q. In behalf of Mr. Hemphill?

A. With my friends.

Q. In behalf of Mr. Hemphill?

A. Yes.

Q. Did you make any contributions to the Hemphill funds?

A. I did not.

Q. I believe Mr. Hennaman stated that about October 1, 1930 your company sent out a letter to stockholders, is that not so?

A. We sent out a bulletin which we always include with the dividend checks.

Q. Did you also include a bulletin with other dividend checks?

A. Yes.

Q. And the bulletin you sent out this time was written by Harry Reed?

A. Yes, Mr. Reed, New York.

Q. He is president of the National Electric Company, is he not?

A. National Electric Power Company.

Q. And he is chairman of the Public Relations Section of the National Electric Power Company?

A. That is correct.

Q. And the National Electric Light Association, as I understand it, is the National organization of which the Pennsylvania Electric Association is a subdivision, is that right?

A. Correct.

Q. Does Mr. Reed write other articles for the members of the association?

A. Occasionally he writes, probably one a month, something of that sort.

Q. Do you happen to know when Mr. Reed wrote this article that you sent out on October 1st?

A. I could not tell you the date.

Q. As a matter of fact, Mr. Shearer, Mr. Reed wrote this article at your request, didn't he?

A. He didn't.

Q. Where was the article first printed?

A. I think you will find it in the proceedings of the N. E. L. A., probably in the bulletin sent out monthly.

Q. Do you recall what month this article was in?

A. I don't.

Q. Do you recall the substance of the letter that you sent out in October of 1930, calling attention to the inner pages of the bulletin with reference to the situation throughout the United States?

A. Yes.

Q. You called that letter No. 19, didn't you?

A. I think so.

Q. And the letter in part contains the following: "At the present time this company and other companies in Pennsylvania are being subjected to many bitter attacks, and we ask your help in meeting these prejudiced attacks," is that what was in your letter No. 19?

A. It was.

Q. And you also call attention to Mr. Reed's article which was headed, "Meeting attack?"

A. Possibly. I just don't recall without I would read that letter over.

Q. In your letter which contains the clause I quoted, that was addressed specifically to the gubernatorial campaign, was it not?

A. No sir.

Q. What was it directed to?

A. It was directed—it was information given to our stockholders.

Q. Yes. And the request for help in meeting these prejudiced attacks, from where were those attacks coming?

A. From the candidates.

Q. What candidates?

A. Mr. Pinchot.

Q. Who else?

A. Other states.

Q. Other states?

A. Yes, it was sent out for the purpose of informing our customers who held our stock in all the states.

Q. Can you tell me the possible percentage of stockholders of your company residing in Pennsylvania?

MR. TURNER: Might it not be well, Mr. Walker, to ask how many stockholders they have?

THE WITNESS: I presume we have between 12 and 13 thousand.

BY MR. WALKER:

Q. Do you have any idea how many of them reside in Pennsylvania?

A. I could not give you that offhand. I would have to get that from the stock records, which I don't have.

Q. Can you approximate it for us, Mr. Shearer?

A. I could not undertake it, but there is a large number, I know that.

Q. Then it is to the stockholders that live in Pennsylvania that this letter was directed, was it not, asking them for aid in meeting the attacks of Governor Pinchot, is that correct?

A. Not only Governor Pinchot, but I said that the letter was sent to all owners of the stock throughout the United States, it was a general attack.

Q. In other words, the utilities were being attacked all over the United States, were they not?

A. Yes.

Q. Do you happen to know whether or not it is against the state law to use corporation funds in politics?

A. I don't, but I can say that the California—

Q. Let us confine ourselves to Pennsylvania?

A. All right. I don't know. I can't answer the question, because I am not familiar with the law.

Q. Assuming it is against the law to use company funds for campaign purposes, do you in your opinion feel in sending that letter out you were using company funds for campaign purposes?

A. No, I don't.

Q. Why not?

A. Because that is a bulletin that is printed every month, every three months, and goes out with the stockholders check.

Q. During the time that you have been connected with the Penn Central Power and Light Company—

A. Light and Power.

Q. Is it Light and Power?

A. Yes.

Q. Thank you. During the time that you have been connected with the Penn Central Light and Power Company, have they ever sent any other letters regarding politics?

A. I cannot say at the moment. I think I could furnish the Committee with a copy of the 19 bulletins that have been sent out.

Q. You have been president for the past three years, have you not?

A. Two and a half years, along there, two and a quarter.

Q. And prior to that you were vice president for how many years?

A. About three years.

Q. And during those seven and a half years can you recall at any other time of sending a letter out—

A. It is about five years.

Q. Five years. Can you recall any other time that they ever sent a bulletin or letter to their stockholders on the subject of politics in political campaigns?

A. I think there are one or two.

Q. Can you refer to them specifically?

A. No.

Q. You just recall that there are probably one or two, is that right?

A. Yes.

BY MR. RHODES:

Q. Isn't this the first campaign that the power question was ever involved?

A. I think not.

Q. You think there was another campaign in Pennsylvania when the power question was involved as it was in the last campaign?

A. No, I don't think so.

Q. As a matter of fact this was really the first campaign where the power issue was ever brought into the political atmosphere?

A. I think it was the first campaign generally, yes.

BY FATHER COX:

Q. Are you identified with any veteran's organizations in Altoona?

A. I am.

Q. You are past commander of one?

A. I am.

Q. It has been reported that the organization home in Altoona was used as the headquarters for the Hemphill forces, is that true?

A. Not to my knowledge.

Q. You don't know there were streamers outside of the building?

A. No sir.

Q. We like men and women to be in politics, and we feel that they ought to be in politics, but we do not believe in politics should come in and use veteran's organizations to further their own purposes. Now, it has been reported, just the same as the other statement about the man on the School Board, and you wish to correct that, since you deny that to be true; now they say that you used this veteran's organization to further the purpose of Hemphill, and you deny that?

A. I deny that.

Q. You deny that you used the veteran's as headquarters for that purpose?

A. Absolutely.

Q. Do you know anything about it at all?

A. No sir.

Q. You know there is a veteran's organization in Altoona, what is its name?

A. I think it is the Civic—the Civic League of Veteran Organizations.

Q. That is the manner in which the veteran's organizations enter into politics there, is that it?

A. I believe so.

Q. Did they use your place?  
 A. No sir.  
 Q. Are you a member of the American Legion?  
 A. No sir.  
 Q. The Veterans of Foreign Wars?  
 A. The Veterans of Foreign Wars.  
 Q. And you positively state that there was nothing of that kind?  
 A. Absolutely. They had their headquarters on 12th street.

BY MR. RHODES:

Q. Why were the utility companies so exercised about Pinchot's candidacy?  
 A. I can only give you my personal opinion.  
 Q. Well, what is that?  
 A. Well, I didn't think Mr. Pinchot is at all friendly to the utilities; that is all.  
 Q. What do you mean by "friendly"? Do you mean that the Governor has to lean backwards towards the utilities?  
 A. No; not a bit.  
 Q. Do you think that the only thing that the Governor should do or any other official did do would be to give the officials a square deal?  
 A. Absolutely.  
 Q. Did you infer from Mr. Pinchot's statements during the campaign that he would not give the utilities a fair deal.  
 A. I was lead to believe that.  
 Q. Then, what statement of Mr. Pinchot led you to believe that?  
 A. Because he attacked me personally in Altoona—the company.  
 Q. That is a personal matter?  
 A. The company, I will put it that way.  
 Q. Then, what did he say about your company that indicated he would not give the utilities generally a fair deal?  
 A. It was told to me that Mr. Pinchot said that when he was Governor he would show the company. That was brought to me by somebody who attended the meeting.  
 Q. I don't just gather what you mean by that; to show it up or show what?  
 A. You may draw your own conclusions.

BY FATHER COX:

Q. If there was nothing to show up, you need not have been afraid about that?  
 A. We are not afraid of anything.  
 Q. All right. What is the use of getting mad at the man for saying that.  
 A. I don't get mad. I have got more sense than to get mad.  
 Q. Only dogs, get mad?  
 A. That's right.  
 Q. In other words, you were for Hemphill?  
 A. That is my privilege, is it not?  
 Q. What we are getting at are the means.  
 A. Our means are clean.

BY MR. RHODES:

Q. What I was trying to get at was what was in Mr. Pinchot's attitude that made the public utility companies become so apprehensive of his candidacy?  
 A. I don't know.

BY MR. TURNER:

Q. Mr. Pinchot was in favor of a fair rate board, wasn't he?  
 A. I believe the Fair Rate Board was the idea.  
 Q. Were you in favor of that?  
 A. No sir.  
 Q. Did you believe that to be inimical to your interests?  
 A. I did.

BY MR. RHODES:

Q. A Fair Rate Board would be no different than a Public Service Commission. If they both function as the law provides, they would give the utilities a square deal and that is all they can do. Why should you have any more apprehension about a Fair Rate Board appointed by the Governor, than you would have about a Public Service Commission appointed by the Governor?  
 A. In my opinion, I don't think we could have the same treatment under a Fair Rate Board as we do under a Commission.

Q. What is the distinction?

A. Because there are many new things in the laws that are rather severe on the utilities.

Q. You mean in the proposed new laws?

A. Yes.

Q. Of course, at that time there were not any proposed acts before the legislature. I don't think the Governor had outlined what recommendations he was going to make in connection with changing the act of 1913; did he?

A. In some respects; the elective feature of the law.

Q. There just seems to be in my mind an uncertainty as to why the utilities were so scared of Pinchot's candidacy. I was in that campaign, but I have not yet found the exact answer for that apprehension. I am trying to find out whether it was substantial or imaginary?

A. Of course, everybody has their opinions in connection with elections, and they have their own ideas as to the candidates. I think that is the privilege we all have.

Q. But the utilities seemed to be quite unanimous in having that opinion relative to Mr. Pinchot's candidacy?

A. I Couldn't say. I know what my personal opinion is as I have expressed it.

Q. Was there any concerted action between the utilities relative to the opposition to Mr. Pinchot's candidacy?

A. Not to my knowledge.

Q. Was there any reason why they should favor Mr. Hemphill?

A. That I couldn't say.

Q. Was his policy relative to the utilities more liberal than that of Pinchot's?

A. I assume so.

Q. You assumed that?

A. Yes.

MR. TURNER: Mr. Rhodes, you are not trying to imply that the people should not have voted for Mr. Hemphill?

MR. RHODES: No; I am just trying to find out why so many Republicans decided to support him so quickly. I have not yet been able to ascertain why so many Republican hide-bound organizations throughout the state suddenly turned to Hemphill the Democrat.

THE WITNESS: He was a Liberal.

Q. You mean on the liquor question?

A. Yes.

Q. That did not govern the actions of the utilities, did it?

A. No; it governed a lot of voters, though.

Q. Did you think that is what determined the action of the Philadelphia Organization?

A. I know nothing about the Philadelphia Organization.

BY MR. EVANS:

Q. Mr. Shearer, the Committee has invited you to attend it's hearing next week as one of the leading interests of the electric industry in Pennsylvania. Do you intend to accept that invitation?

A. Mr. Evans, I am not a leader in the public utility industries. I am only—you might say, I am a president of a small company up here in the country. My association with the larger men in the industry is very limited.

Q. I appreciate your modesty, but what I am interested in at the moment is finding out as to whether you intend to accept the invitation, because I have some questions that I want to ask you. If you are going to be here then, I can ask you those questions then; otherwise I will ask you now?

A. I would prefer if you would ask them now. I have some important matters that are going to take me out of town.

Q. So, you do not intend to be present next week unless you need to?

A. That is the idea. Of course, whatever your pleasure is,—I would like to be excused, if possible; to be finished up today.

BY MR. COOKE:

Q. Mr. Shearer, your company is one of the first six or seven in the state; is it not?

A. We are a small company, Mr. Cooke.

Q. Yes; but there are not more than five or six bigger than you are.

A. Oh, there are several bigger than we are, they are all bigger than we are with the exception of a few small plants throughout the company.

Q. I always thought I saw your name appear in connection with the Penn Central Light and Power Company, as being fifth or sixth on the list?

A. Possibly we have capacity of 80,000 kilowatt hours if that is big as compared with other plants.

Q. The principal company in the state, the only company, considerable sized company, is yours and it comes under the Insull interests.

A. We come under the Mid-West Utilities.

Q. It is an Insull company?

A. Yes sir.

Q. I always have had a very high regard for the management of your company, and I hate to see you minimize it.

A. Thank you, sir. You compliment me.

Y MR. EVANS:

Q. Mr. Shearer, what was your official position with the Penn Central Light and Power Company at the time of the acquisition of that company by the United Lighting Company?

A. General superintendent I think at that time.

Q. That was in 1925, was it not?

A. Yes sir.

Q. Were you not vice president at that time?

A. I may have been vice president a few months before the acquisition by that company, but I could not tell you exactly. These things are hard to remember.

Q. Your report to the Public Service Commission as of October 1st, 1925, shows you were vice president?

A. I probably was made vice president a few months before that.

Q. What interest controlled the common stock of the Penn Central Light and Power Company at that time?

A. Day and Zimmerman.

Q. Who owned the United Lighting Company?

A. Albert Emanuel Company.

Q. As a matter of fact, the stock was owned by the National Electric Power Company, which was the Emanuel company?

A. The National Electric Power, yes sir, was the holding company.

Q. At the time of the acquisition of the Penn Central Light and Power Company by the United Lighting Company, the United Lighting Company had a total outstanding stock and bonds of \$50,000, did it not?

A. I could not say, Mr. Evans, without I went back into these reports.

Q. At the time the Penn Central Light and Power had the total stocks and bonds outstanding of about nineteen and a half million dollars, did it not?

A. I really could not check up on those figures. I could not carry the thing of that kind in my head.

Q. Were you not familiar with the financial set-up of the company?

A. Only in a way. You know how these things are. My end was the operating end, the financial end was all handled by Day and Zimmerman and with the United Electric Power.

Q. Do you know when the Insull interests acquired control of the National Electric Power Company and the Penn Central Light and Power Company?

A. My knowledge leads me to believe that the Insulls took over the Penn Central Light and Power Company on January 1st, 1928, as I recall it.

Q. Do you know whether the United Lighting Company changed its name after it purchased the Penn Central Light and Power Company?

A. Yes sir.

Q. To what did it change its name?

A. It changed its name to the Penn Central Light and Power Company.

Q. Now, after the sale, the capitalization of the new Penn Central Light and Power Company was increased from \$50,000 to something over \$19,600,000, was it not?

A. That was the United Lighting Company, not the Penn Central Light and Power.

Q. After you combined the old Penn Central Light and Power and the United Lighting Company capitalization, it amounted to \$19,620,000, and after the acquisition it was increased to \$30,876,000. Were you familiar with that?

A. No, not at that time.

Q. In other words, you didn't know anything about the financing or that purchase?

A. No sir.

Q. And you are not familiar with the fact that according to the original application to the Public Service Commission it was proposed to use the proceeds of \$5,500,000 bond issue to

pay the National Power Company for the stock which it acquired in the Penn Central?

A. I could not say that; I don't know anything about it. I say, these negotiations were handled by Mr. Zimmerman of the Penn Central Light and Power Company and the New York people for the National Electric Power.

Q. Are you familiar with the purchase of coal by the Penn Central?

A. Yes sir.

Q. Now let me ask you, the National Electric Power Company, in addition to controlling the Penn Central Light and Power, also controlled the Electrical Appliance Finance Corporation?

A. I think so.

Q. This is an inter-company established for financing installment sales?

A. Yes sir.

Q. Do you know how this corporation works?

A. That is a matter for the National Electric Power.

Q. Doesn't it co-operate with the Penn Central Light and Power for financing sales?

A. They loan us money for carrying on purchases and sales of electrical appliances.

Q. What do they charge you as interest for money they loan you?

A. I think six per cent.

Q. Do employees of the Penn Central sell the appliances?

A. Yes sir.

Q. And they sell them in competition with private dealers?

A. They do.

Q. Does the revenue from these sales exceed the cost?

A. It does not.

Q. Is any of the cost charged to operating expenses?

A. That is a matter of record on the books and I cannot answer that question.

Q. Is that not an operating matter?

A. Yes sir.

Q. Didn't you just say you are in charge of the operations of the company?

A. Yes sir, but I would like to give you a real answer to that. Personally I cannot give it now in the way you would like it. I assume that is an operating figure.

Q. Then, you are an officer of the York Railways Company?

A. Yes sir.

Q. What office do you hold?

A. President.

Q. What company owns the Edison Light and Power Company of York? This one does, does it not?

A. Yes sir.

Q. And the Edison Light and Power is managed by the Electrical Management and Engineering Corporation?

A. No, it is operated by an operating staff of the Penn Central Power and Light Company.

Q. What is the Electrical Management and Engineering Corporation?

A. It is a corporation in New York comprised of expert electrical engineers and accountants.

Q. What business does it engage in?

A. It is engaged in the furnishing of expert advice connected with the operation of the operating companies.

Q. In other words, it is a management company, and operates other companies in the system on a management fee basis?

A. No; there is no fee in it.

Q. Who owns the York Railways?

A. The York Railways is owned by the Municipal Service Company.

Q. And the Municipal Service Company is owned by the National Public Service Company?

A. Yes sir.

Q. When did the Insulls get control of this?

A. I think about two years ago, a little over two years ago.

Q. Now, the Penn Central sells power to certain of its customers with a coal clause in the contract?

A. I think we have one customer left probably. During the last three or four years we did have a number of such customers.

Q. From whom does the Penn Central buy its coal?

A. Partly from the Penna. Coal and Coke Company, partly from Taylor and McCoy, and various other mines. We divide it up among our customers.

Q. Don't you buy coal from the Peabody Coal Company?

A. Yes sir.  
 Q. And you buy a very large percentage of your coal from that company?  
 A. No sir, a very small percentage.  
 Q. Who owns the Peabody Coal Company?  
 A. I could not tell you that.  
 Q. Is that not also controlled by the Insull interests?  
 A. I think so.  
 Q. Then the Insull interests hold the Penn Central and they also own the coal company that you buy your coal from, or one of them.

A. Yes sir.  
 Q. How much more per ton do you pay for the coal purchased from Peabody Coal Company that you could get it for in the open market.

A. I think the coal is all contracted for from these mines.  
 Q. How much more do you pay the Peabody Coal Company than you could buy it for in the open market.

A. I don't think we pay them any more.  
 Q. Aren't you familiar with the facts that shortly after the Insull interests acquired control of the Penn Central, that certain companies from whom you were buying coal were required to sell their coal to the Peabody Coal Company, who in turn added 25c to the price and then sold to the Penn Central?

A. No sir.  
 Q. Don't you know the price of coal was increased at that time?

A. No sir, it was not increased. The fact of the matter is the price of coal was decreased.

Q. I am speaking of the coal that you then had under contract—

A. You mean the price was increased, that we were obliged to pay additional cost?

Q. I mean you had certain contracts with certain coal companies for coal, and after the Insull interests acquired control of your company, these coal companies were required to sell to the Peabody Coal Company, and the Peabody Coal Company sold that coal to the Penn Central?

A. Yes sir.  
 Q. And the Peabody Coal Company added something to the price which you had theretofore been paying.

A. No sir, I think not. If there was any commission, it was deducted from the people, it decreased.

Q. Have you made a comparison of the price to the Penn Central, compared with that paid by other companies, during the past three or four years.

A. A great majority of the coal is mined at our mine, in Hickory Hill.

Q. The coal which you purchased, you think you have gotten the same reduction in price during the past three or four years that other electric utilities have?

A. What do you mean?  
 Q. The price of coal has gone down since 1926.  
 A. Yes sir, it is dropping.

Q. Do you think you have gotten as much of a reduction in that price as other utilities have—a reduction from the 1926 prices?

A. Yes sir, I think we have.  
 Q. In 1926 you were paying \$3.00 for bituminous coal?  
 A. That I could not say. I would have to check that on the books.

Q. I show you your report to the Public Service Commission for the year 1926, which show that you purchased 170,025 net tons of coal of an average cost per unit of \$3.0039 per ton?  
 A. Yes sir.

BY MR. RHODES:

Q. Was that price delivered?  
 A. No sir. I couldn't say, this is average cost, where it was shipped to? I assume it is the total cost. That is delivered, yes sir.

BY MR. EVANS:

Q. I show you your 1930 report to the Public Service Commission. What price were you then paying?

A. It says—  
 Q. The report says that in 1930 you purchased 179,515 net tons at \$2.56 a ton?

A. That is produced largely at our own mines.

Q. Is that your total?

A. Yes sir, that is the total tonnage.  
 Q. This covers the purchases, doesn't it?  
 A. This is received during the year, at that cost.  
 Q. This includes the cost—the coal which you mined?  
 A. Yes sir, at the Saxton Plant.  
 Q. So that in these four years you only a reduction of 44c a ton in the cost of your coal?

A. Yes sir.  
 Q. Similar figures for the Duquesne Light Company show a reduction of \$1.05 in the cost of coal, and for the Philadelphia Electric Company \$0.94 in the cost of their coal. Have you any explanation of why your cost was only decreased 44c as compared with these?

A. What was the cost of their coal in 1926?  
 Q. The Duquesne Light Company in 1926, according to their report to the Public Service Commission, was paying \$2.89, and in 1930 they were paying \$1.84—

A. I think that is largely due to the difference in size of the mines and the production costs.

Q. You don't think this has anything to do with the fact that you are buying coal from the Peabody Coal Company?

A. We only buy a very small part of the coal from them—the Saxton plant being the biggest plant.

Q. How much coal do you get from the Saxton plant?  
 A. We mine about 140,000 tons a year.

Q. You purchase about 40,000 tons?  
 A. Somewhere about that—Williamsburg and Warrior Mark.

Q. Do you know how much of that you purchased from the Peabody Coal Company?

A. Somewhere in the neighborhood of 1500 tons maybe a month.

Q. The Penn Central has a contract with the Electric Management and Engineering Corporation, did it not?

A. At no time.

Q. I show you contract dated November 2nd, 1925 and ask you whether that is not the contract between the Penn Central and the Electrical Management and Engineering Corporation?

A. Yes.

Q. That contract ran for ten years, did it not?  
 A. No sir.

Q. Does it not so state?

A. No sir—well, it might state that, but the time the property was taken over by the Middle West Utilities, these management fees stopped.

Q. That contract remained in force from 1925 to the time the Insull interests took it over in 1928?

A. Yes.

Q. What management fees does that contract provide for?

A. I think it was probably 2%, something like that—2½%.

Q. 2½% of the gross total operating revenue?

A. Of the total gross operating revenue.

Q. And that was an item of management service?

A. Yes.

MR. COOKE: That was more than Thomas Mitten charged?

MR. EVANS: Thomas Mitten charged 2% for his services.

BY MR. EVANS:

Q. How much on construction expenditures?

A. I cannot answer that for the moment.

Q. It is right there?

A. Is it? (Referring to contract.) 10%.

Q. 10% of all construction expenditures for engineering service, and in addition they were to get special compensation for the sale of securities, were they not, which was to be agreed upon from time to time?

A. That is a matter for someone in the New York office, they would have to answer that.

Q. Well, the contract provides, does it not, for special service in connection with the sale of securities, their compensation therefore shall be subject to arrangement as occasion may arise, and in addition to all that the Penn Central was to reimburse them for all expenses incurred by the management company on its account, including expenses of members of the organization while away from New York City in the service of your company, and you are also to reimburse them for payments advanced by them in connection with purchases made by them for your company?

A. Correct.

BY MR. COOKE:

Q. When was this contract in force? Who owned this property?

A. The Emanuels—Albert Emanuel, an electric management and engineering corporation.

BY MR. EVANS:

Q. Mr. Shearer, in your opinion should not such management contracts be made subject to the control of the Public Service Commission?

A. I think so.

BY MR. COOKE:

Q. I understood Mr. Evans to say that he is calling next week representative heads of different companies in the State, presumably with the idea of getting their suggestions as to the work of this Committee. While we have you here, Mr. Shearer, would you mind giving us your idea about regulations now practiced in the State, and make any suggestions as to how they could be improved. We have already had on the stand Mr. Zimmerman and Mr. Taylor and one or two others?

A. Well, I heartily endorse what Mr. Zimmerman had to say. I think he is better qualified to cover the points than I am. I agree that the question of control of securities and contracts and things of that sort should be as he suggested.

Q. How about investment? The suggestion made by Mr. Zimmerman to the question that was asked him, he suggested, put the plug in right not and carry on future outlays on a prudent investment basis, and let the law of the land, whatever it may be, take care of practically all that has happened to date. What would your attitude be to that?

A. That is a debatable question—

Q. What is your picture?

A. Oh, I think—I would like to think a thing of that sort over a little bit before I would venture an opinion.

Mr. COOKE: It is a very unfortunate thing that the leaders in the industry, gentlemen who have all these things to think about, do not give us an opinion. How can you expect a committee of the Legislature, whom you always blame in this matter, how can we intelligently perform our responsibility if when we ask the leaders of the industry what their opinion is about such vital matters, that they tell us that they have not reached any conclusion, and I am not saying this as a criticism, but simply as expressing our own dilemma?

A. It would appear to me an expert opinion should be sought.

Q. What do you mean by expert opinion? I have assumed that the heads of these companies are experts?

A. I would not term myself an expert by any means. I am simply an operating man; followed the operating game.

Q. Whom do you report to, Mr. Shearer?

A. I report to Mr. Reed in New York.

Q. Mr. Reed?

A. Harry Reed, of the National Electric and Power Company.

Q. You are supreme so far as the Penn Central Light and Power goes in Pennsylvania?

A. Yes, as an operating man.

Q. Do you consider reproduction cost new and depreciation a satisfactory method to value property?

A. I do, yes.

BY MR. TURNER:

Q. May we ask him whether they have had a valuation case; have you had a rate case?

A. No sir, we have never had a rate case.

Q. Did you ever have a complaint filed against you with the Commission and a hearing?

A. Many years ago there were complaints.

Q. How many years ago?

A. Well—

Q. How many?

A. When I first came with the company, probably 12 or 13 years ago, I think Lewistown—

Q. When did you go with the company?

A. I went with the company in 1916, but nothing has passed in 10 or 12 years.

Q. You had no valuation within that time?

A. Yes, the Penn Central had a valuation.

Q. I mean with the Public Service Commission?

A. Not by the Public Service Commission, I did not know that they did that sort of work.

Q. Who made the valuation?

A. Stone and Webster of Boston.

Q. What year was that made?

A. I think it was in 1925.

Q. That is the valuation that was made the basis for the new financing of the Emanuel interests, when they took it over?

A. Yes, I think that was the time.

Q. Have you had any rate reductions in recent years?

A. Yes.

Q. How many?

A. Our rate reductions have been—well, in the last—something in the neighborhood of nearly a million dollars of rate reductions.

Q. When?

A. In the last few years.

Q. Were they voluntary reductions on your part?

A. Yes.

Q. Did the company give them to the small consumers, or were they to the power users?

A. The small consumers and power users as well.

Q. All along the line?

A. All along the line. Power is a competitive situation.

Q. Let us get that, because it has been said that it is not competitive.

A. Oh my, you have the oil engines, the Deisel oil engines to combat with; Fairbank-Morse Company are putting in engines, all that they possibly can.

Q. Just among power users?

A. Yes sir.

Q. Have you any competition in the domestic?

A. No.

BY MR. COOKE:

Q. How do you account for the fact that the Fairbanks people put in plants similar to these you mention, they sell their plants with a very low guarantee per kilowatt hour, how do you account for the fact that a company the size of yours cannot compete with the small Fairbanks engine?

A. We can compete.

Q. You say you can?

A. We can compete, but Fairbanks Morse Company has some very good salesmen and oftentimes they will land the Diesel power business and we will lose that business. They will install a small plant, operate for a few years, and possibly come back on our lines.

Q. You can serve large power consumers, charging the same rate of return, overheads, and all that. Couldn't you do that with the domestic consumer if it was not for these salesmen that you refer to? In other words, if everything was on its merits, you can sell power just as cheap as they can?

A. Well, that all depends on the type of plant that you have. We are a transmission company. We have pretty nearly five hundred miles of transmission lines over the mountains of Pennsylvania.

Q. Do you practice cost finding in determining domestic rates?

A. Our rate committee is always struggling with that question.

Q. Are your rates based upon cost, plus a fair profit?

A. Well, that is a question—it is a difficult one.

Q. Surely you can answer that. Does your company practice that. In other words, do you charge the domestic customer what it costs you plus what you consider a reasonable profit?

A. Our rates are worked out along similar lines of all other companies. We have a rate committee in the Pennsylvania Electric Association—

Q. In other words you don't consider it good rate making to charge the domestic consumer with what it costs you, plus a fair profit?

A. I didn't say. I don't know just exactly how we would approach that, but it would seem to me—

Q. It would seem to me that you can answer that yes or no.

A. Well, I don't know that I could, because when it comes down to a question of rates, it is a very deep study. You have got to take every customer, and you have to find out—

Q. You certainly would not say that you charge the domestic consumer a rate that was in excess of that?

A. No; that wouldn't be our purpose at all. Our purpose is to follow these things up as soon as it is possible, and reduce the rates voluntarily.

Q. Then, can't you answer me, do you base domestic rates on costs, plus a fair profit?

A. No.

Q. Do you practice cost finding in determining what domestic rates on costs, plus a fair profit?

A. We are constantly working along that line?

Q. Do you practice cost finding?

A. We do to a certain extent.

Q. You reported, with all the other electric companies in Pennsylvania four years ago that you did not base rates on costs.

A. As I said, we are trying to find our costs. It is a pretty difficult matter to do, but the rate committees are working to that end; at least our rate committee is.

Q. Do you recall making an answer to a questionnaire of the Giant Power Survey, in which you made the definite statement that you did not base the rates on cost?

A. Probably our rate man did.

Q. One question more, you use the value of certain parts of your system for operating purposes, didn't you? I mean, you take a transmission line, and you will have the cost of that transmission line?

A. Yes; more or less.

Q. Well, now, do you use reproduction cost new in that work?

A. I would have to go into that a little deeper before I would be able—

Q. I have not seen your records for some years, but I can see these cards, on which you have a certain piece of property, with the cost of that property, and based on that you did determine—

A. We have similar information.

Q. You don't move those prices up and down?

A. Oh, no.

Q. In other words, you can't use the reproduction costs new for operating purposes; that is, it is only used for valuation purposes; am I not right?

A. No, I won't say that. We work out our costs of operation.

Q. I know, and in working out your costs of operation; you also use a fixed value for the piece of property?

A. Well, I would rather have my accountant explain that to you.

Q. You are familiar with that?

A. Only in a general way.

Q. You are certainly familiar enough with it to know whether you use reproduction costs values or what you paid for your property?

A. We base it on reproduction costs.

Q. On costs. That is what I thought.

A. Yes—less depreciation.

Q. In other words, they use prudent investment in operating the property and they use reproduction cost new for valuation purposes.

(No answer).

BY MR. EVANS:

Q. You spoke of being President of the York Railways Company, which is owned by the Edison company of York?

A. Yes.

Q. Are you also an officer in the Edison Company of York?

A. Yes.

Q. What officer?

A. President.

Q. That company has had some difficulty with its consumers, has it not?

A. Not to my knowledge. I don't think there is any difficulty.

Q. There have been complaints on the rates of the Edison Company of York?

A. We just made a rate reduction of \$130,000 odd dollars.

Q. After an investigation by the Public Service Commission, commenced a year ago?

A. Yes sir.

Q. And that investigation was made because it was found that your earnings were excessive?

A. That matter is not settled yet. It was a question where the Commission on their own motion made an investigation.

We at that time—if they had probably waited four or five months, we would have had the rate reduction filed, because we started the investigation. We just had these properties, Mr. Evans, a couple of years, and the first thing we were up against was the physical situation. The entire property had to be rehabilitated, such as new poles, cross arms, insulators, in many cases, heavier wire; a general cleanup; and after we made the reductions; or started on the study, when the Commission on its own motion—

Q. Penn Central Company has outstanding 166,600 shares of common stock, does it not?

A. I believe so—yes sir.

Q. With a stated value of \$3,700,943.29?

A. Yes sir.

Q. During the year 1930, you paid dividends on that common stock, amounting to four dividends of \$1 a share, and one dividend of \$.90 a share; did you not?

A. Yes sir.

Q. And the total gross dividends amounted to \$1,149,540.

A. I assume that is correct.

Q. So, during the years 1930, the Penn Central paid 31% on its common stock.

A. Is this made up (indicating)—

Q. This is common stock (indicating)

A. What date is this, 12-26-29?

A. Yes.

A. That is last year. I don't know how these figures are arrived at.

(Discussion off the record.)

THE WITNESS: I would like to verify that by the accountant.

BY MR. EVANS:

Q. This is your sworn report to the Public Service Commission?

A. Yes. Here is the Treasurer, and Mr. Sparks is the auditor.

Q. It is right here?

A. I assume it is correct.

Q. And all that common stock is held by the holding company?

A. The National Electric Power holds it.

Q. So that the Penn Central Light and Power Company, an operating company in Pennsylvania, during the year 1930 paid 31% on its common stock to a foreign holding company?

A. I feel that I should ask permission to have our accountant make the statement. They are familiar with the figures and they are here.

Q. Are there any other matters that you wish to state to the committee while you are here as long as you will not be able to be here next week?

A. Nothing further in connection with that, Mr. Evans?

Q. In connection with the matter before the Committee for investigation?

BY MR. TURNER:

Q. Have you got into the rural electrification in your territory?

A. Very extensively, yes sir.

Q. What can you tell us about that? We have had some exhibits here on rural electrification and the order of the Commission, General Order No. 28?

A. We have complied with General Order No. 28 and extended our lines throughout the territory as fast as we could possibly take care of them.

Q. How do you operate; what is the cost to the consumer?

A. The rates are filed on the basis of General Order No. 28.

Q. Do you know how much per mile you charge them or do you figure it on the cost?

A. It depends, it runs around a thousand dollars, eight hundred dollars, nine hundred dollars, it all depends on the territory we serve and the territory we have to cover.

Q. You don't have one set price?

A. No sir.

Q. Does it depend on the construction?

A. No sir, it depends on the territory. You may get in soft ground in one section and another into limestone where you have to blow your holes.

BY MR. COOKE:

Q. What is the range in cost for building a mile of rural line?

A. It is around nine hundred to thirteen hundred dollars around there.

BY MR. TURNER:

Q. Do you believe it would be better to put in cheap lines, or do you put in lines that will carry further extensions?

A. We are obliged to put up a very rugged type of construction due to being right in the belt where we have a lot of sleet. On the 29th of April, 1928, we had a sleet storm that tore down every one of our transmission lines at several places. We were absolutely isolated from the outside world and over the local radio station we sent out a message to Pittsburgh and to Jersey Shore and to Williamsport and they sent us men, and we got about thirty-five men from the outside and it took us four days and nights steady work to restore service. We had over 10,000 services on the ground. That cost us about a quarter million dollars. It cost the telephone company in that same section a million dollars.

BY MR. COOKE:

Q. Can you build these rugged lines for from \$900 to \$1300?

A. No, they will cost more money.

Q. What do you get for \$900 to \$1300?

A. A single circuit.

Q. They are just as open to sleet?

A. Not right over the entire district. They are right on the Allegheny Mountains, down in some of the valleys we could build lighter lines.

Q. Then you don't fix these percentages on the part of the rate, do you, to the line cost at 2% or 1¾% on the thousand dollars?

A. One and three-quarter per cent.

Q. Do you base that 1¾% on the cost of the particular line as it cost you?

A. Yes sir.

Q. You would be surprised if in your district you found that they were using \$2000 a mile?

A. In the early days—

Q. No, at the moment? Bills coming in now seem to indicate that \$2000 is used throughout the State as the cost used by the companies in their building. You don't apply that?

A. I am assuming that covers the transformers, and so on; it must.

Q. You don't include your transformers in this price?

A. No, that is the bare construction.

BY MR. TURNER:

Q. But what does the consumer pay?

A. It all depends on the number of customers per mile.

Q. I mean on what basis does he pay; \$2000 or what?

A. On the cost of the line. We oftentimes go out and get the farmer to assist us in digging the holes and then any reduction that we can take off for that mile or three miles of line, he gets the benefit of it.

Q. You would consider it wrong to use \$2000 as an arbitrary price?

A. I would not care to make that statement. I have in mind only the figures that I have in mind on our property.

Q. Has your plan encouraged or discouraged them to take the service?

A. It encourages them.

Q. Is there any improvement that might be made in that?

A. You mean in the cost of construction?

Q. In the way of prices?

A. Well, I don't know just how we could.

Q. Is there any way to cut the cost down to the consumer so he would not have to pay so much and in that way he would be encouraged to use the service?

A. By encouraging them to use the current we can cut the price per kilowatt down.

BY MR. COOKE:

I think your company has been quite forward-looking compared with some. Do you know of any act taken by the Public Service Commission that has controlled either the cost of the line or of the rate paid or put in your territory?

A. No sir.

Q. In other words, you think you have acted as a benign influence in your neighborhood but you have done it as you wanted to do it instead of having it regulated?

A. We do the best job we can.

Q. You would have done the same thing if we had not had a Public Service Commission?

A. Yes sir.

BY MR. HAGMAIER:

Q. For the benefit of myself and perhaps the rest of the Committee, have you any suggestions that you could make to us that would make regulation more effective?

A. As far as I personally am concerned, we have always tried to carry on in accordance with the laws on the statute books right now.

Q. I mean, do you think the present statute could be changed to benefit anybody?

A. It probably could be some few things in the law, such as the governing of the issuance of securities and things of that sort. I am no lawyer, I could not suggest very well what to do.

MR. TURNER: Mr. Evans, we have had a lot of exhibits as to earnings of these companies and I notice this seems to be one not very much above the 7% return. I wondered if you had any of these exhibits if you could ask Mr. Shearer if he could give us any idea of the correctness of these figures as found.

BY MR. EVANS:

Q. Have you made any check of the evidence that has been introduced before this Committee as to the rate of over all returns on the fixed capital of the Penn Central.

A. I think it is about 7¼%.

Q. So far as you know the evidence introduced here before the Committee, regarding your company, is correct?

A. I feel that way. I would like Mr. Parkinson to check up on these figures. Mr. Parkinson is our auditor and he is familiar with the figures that I am not quite familiar with.

M. H. PARKINSON sworn

BY MR. EVANS:

Q. What position do you hold with the Penn Central?

A. I am the auditor.

Q. You signed the annual report for the year 1930 to the Public Service Commission?

A. Yes sir.

Q. According to that report, the company has outstanding 166,600 of common stock.

A. That is correct.

Q. Of a stated value of \$3,700,973.29.

A. These shares are no par value stock. The value placed on the shares is \$3,700,973.29. If you will let me look back here a moment. You are talking about common stock?

Yes sir, common stock.

A. In addition there is \$4,485,572.19, representing a capital surplus, which must be added to the value of the common stock for figuring any ratio of dividends to the capital invested in the business.

Q. That was obtained by a write up in your books after the Stone and Webster appraisal.

A. There was no write up on the books of the company.

Q. How is that surplus carried from appraisal.

A. That separation was made by order of the Bureau of Accounts of the Public Service Commission.

Q. In other words, it is a write up on your books.

A. No sir.

Q. Was it not written up on your books as a result of the appraisal.

A. No sir, the value placed on the books of the company is the past cost to the Penn Central Light and Power Company, the present Penn Central Light and Power Company, of the property received from the old Penn Central Light and Power Company.

Q. I don't think that answers the question.

A. That was merely a segregation for accounting purposes only, at the request of the bureau of accounts of the Public Service Commission.

Q. This surplus, which is marked created from appraisal, is the excess of the appraised value over the former book value.

A. The value is on the books of the company—

Q. Just answer the question.

A. That is what it is termed.

Q. That is what it is.

A. Will you please let me explain?

Q. Answer first and then you can explain—answer yes or no and then explain.

A. I cannot answer yes or no.

Q. Is this an earned surplus?

A. No sir.

Q. Is it a cash paid in surplus?

A. It is a paid in surplus.

Q. How was it paid in?

A. Through property.

Q. In other words, you had your property appraised, and then in that way increased the book value of the property and created a surplus.

A. The present Penn Central Light and Power Company, which was the former United Lighting Company, paid a price to the former Penn Central Light and Power Company for its facilities. That price was approved by the Public Service Commission. It is that price which is on the books of the company at the present time.

Q. Were you connected with the company at that time?

A. I have been in the company through Day and Zimmerman, Inc., since 1914.

Q. Then perhaps you can answer the questions in regard to the situation at the time the property was taken over by the Albert Emanuel interests?

A. I was with Day and Zimmerman up until the property was sold. Since that time I have been with Mr. Shearer in Altoona.

Q. It is true that the United Lighting Company took over the Penn Central Light and Power Company in 1925?

A. Yes sir.

Q. The United Lighting Company had a total capitalization of \$50,000?

A. I believe that is correct.

Q. The Penn Central Light and Power Company at that time had outstanding stock and bonds of \$19,570,310.52?

A. I presume that was taken from the October, 1925 reports, at the time the old company passed out of existence,—yes sir.

Q. A company capitalized at \$50,000 acquired a company of \$19,570,310?

A. That is correct.

Q. As Mr. Shearer has stated, this United Lighting Company was owned by the Emanuel interests?

A. That is correct.

Q. Under the original proposal set up, which the Public Service Commission was asked to approve, an issue of 5½% bonds, in the sum of \$5,500,000 was to go to the purchasing company was it not?

A. That was part of the consideration for the purchase of the property.

Q. The Public Service Commission at that time refused to allow that?

A. I believe that is correct, yes sir.

Q. Mr. Charles H. English represented the applicant at that time, did he not?

A. I believe he did.

Q. The United Lighting Company changed its name to the Penn Central Light and Power Company?

A. It changed its name to the Penn Central Light and Power Corporation, then acquired the old Penn Central Light and Power Company; then changed its name back to the Penn Central Light and Power Company.

Q. When the Public Service Commission refused to approve this financial set-up, it was agreed that the purchasing company should pay cash for the stock, and it should not receive \$5,500,000 of bonds?

A. Yes sir.

Q. Do you remember the capitalization of the new Penn Central Light and Power Company after the sale?

A. Yes sir.

Q. It had outstanding par common stock of \$5,319,619.62, did it not?

A. \$5,319,619.62.

Q. And preferred no par stock, \$6,247,740?

A. 780.

Q. Or a total of stocks, \$11,567,399.62?

A. That is correct.

Q. And then an increase from the combination of Penn Central Light and Power Company and the United Lighting Company in the outstanding capital stock of \$5,756,089.10?

A. That is correct. The principal increase there is in the preferred stock, which is calling in and retiring the preferred

stock of the old Penn Central Light and Power Company, was the price fixed for the stock that was called in.

Q. Now, the common stock increased \$3,785,474.62, did it not?

A. That is correct.

Q. And there was an increase of only \$2,020,614.48 in the preferred?

A. That is correct.

Q. So the principal increase was in the common stock, was it not?

A. That is correct.

Q. Now, take the bonded indebtedness, there remained an issue of 5% bonds in the amount of \$2,034,000?

A. That is correct.

Q. And the first 5½%, \$1,000,000?

A. That is correct.

Q. And the first 6% of \$10,300,000?

A. That is correct.

Q. And some underlying bonds of the Mifflin County Gas & Electric Company, 5%, \$175,000?

A. That is correct.

Q. And added to this were bonds in the amount of 5½ million dollars?

A. That is correct.

Q. So the bonded indebtedness of the company was increased 5 million dollars?

A. That is correct.

Q. And the total stocks and bonds were increased \$5,756,089.10?

A. The sum of the two, yes.

Q. Now, this increase of \$5,756,089.10 in the capital stock represented nothing but a writeup on the books of the fixed capital over the original book value.

A. The price was fixed for the total property, which was purchased from the United Light Company, and that is the price which is recorded in the books.

Q. Well now from this total increase of \$5,756,089.10, you should deduct the surplus of the old Penn Central Light and Power Company, should you not, in order to determine the writeup, and which resulted in a writeup of \$5,106,919.19?

A. That is not a writeup, that is the price which was fixed on the property at the time the property was sold to the present Penn Central Light and Power Company.

Q. Well, it was over and above the book value of the original Penn Central Light and Power Company, was it not?

A. The price was agreed upon, yes.

Q. There was no additional cash or property which had gone into the system?

A. You are talking about the common stock?

Q. I am talking about the common and preferred stock combined?

A. You are not talking about the bonds?

Q. No.

A. That is correct.

Q. If that is what you mean by writeup, there was a writeup of \$5,106,991.19?

A. The question is what you call a writeup I call it the price that was paid for the property.

Q. In other words, Mr. Parkinson, there was that much additional stock outstanding over and above the capital stock of the old company?

A. Well, the price was determined, and from that, of course, was deducted the value of the liabilities; the preferred stock was fixed at the value at which we had to call in the stock of the old company, and the balance was shown as common stock, which is accepted accounting practice in arriving at the value of the common stock.

Q. I am not criticizing the accounting, I am merely trying to get the facts, that without any additional cash or property going into the system, the outstanding common stock of the company has increased by over \$5,000,000?

A. Well, you must understand that in this old proceeding there is a matter of sale and purchase.

Q. We understand that I think.

BY MR. COOKE:

Q. There was an appraisal by Stone and Webster?

A. That was used in determining the purchase price.

Q. If I am not very much mistaken, they discovered water rights in that property that the former owners did not realize they had, amounting to in the millions?

A. There was a value placed as to water rights, which the company owns.

Q. Which they had not inventoried before?

BY MR. EVANS:

Q. The correct figure here shown is \$3,760,000 for water rights. Now, Mr. Parkinson, under this original agreement of September 30, 1925 for the sale of the Penn Central Light and Power Company to the United Electric Company, there was to be an exchange of preferred stock, share for share, was there not?

A. On that basis, yes.

Q. There were 89,279 shares of preferred stock outstanding?

A. Of the old capital stock?

Q. Yes.

A. 89,254.

Q. 89,254 you have?

A. Yes.

Q. And then the common stock which they accepted of 61,140 shares was also to be exchanged share for share, was it not?

A. That is correct.

Q. And the new common stockholders were to get 5½ million dollars in 5½% bonds?

A. You are talking about the original agreement?

Q. The original agreement?

A. I believe that is correct.

Q. And the Public Service Commission as it then existed refused to approve that?

A. I believe that is correct.

Q. Then there was a supplemental agreement dated October 27, 1925, and what was the change in this supplemental agreement?

A. The bonds were to be sold for cash.

Q. And the acquisition was then approved on that basis by the Public Service Commission?

A. Yes, I believe after that one change that you referred to.

Q. Now, as you understand it, was it the intention of the new owners of the stock, the National Electric Power Company, to reduce their investment in the new company by the amount of 5½ million dollars in bonds which they paid and agreed to be sold?

A. That is something I cannot tell you, that is the National Electric Power Company's affair.

Q. And after that the 5½ million of bonds were sold, were they not?

A. Yes.

Q. So the effect of it was to reduce their investment by that amount?

A. Well, now, they put up money for that; they paid money for the bonds.

Q. They didn't get the 5½ million dollars of bonds that they originally were to get as part of their gravy?

A. No the plan was changed, and the bonds were sold for cash.

Q. And who sold the issue, do you remember?

A. I believe it was a syndicate headed by A. C. Allen & Company.

BY MR. EVANS:

Q. Wasn't the Michigan holding company involved in that?

A. I believe they were concerned in connection with it—yes sir.

Q. Do you know who owns the Michigan holding company?

A. No; I do not.

MR. TURNER: Do I understand, then, that they took five and one half million more than they had expected under the first agreement?

MR. EVANS: Mr. Turner, they originally were going to put a five million and one half dollar bond issue on the company, and just take it over themselves; the common stockholders were going to take those, and the Commission refused to approve it, and then they said all right, "we will sell these to the public."

MR. TURNER: What became of the five million and a half dollars?

MR. EVANS: We were just coming to that.

MR. TURNER: Pardon me.

BY MR. EVANS:

Q. Do you remember at what price these bonds were sold?

A. I do not at this time.

Q. Will that appear in your reports there?

A. It will appear in the certificate of notification to the Public Service Commission. The price was 88½, plus accrued interest.

Q. And the cash received by the company, excluding interest was \$4,867,500; was it not?

A. That is correct.

Q. And what did the company do with the cash received from the sale of these bonds?

A. Placed it in the treasury of the company.

Q. Did they invest it in some six and one-half demand notes of the National Electric Power Company?

A. I believe that is correct.

Q. In the amount of four and one-half million dollars?

A. That is correct—yes sir.

Q. And used the balance for capital additions?

A. As needed.

Q. Was it needed then?

A. Maybe; not at that particular time.

Q. Now, then, did the new owners of this common stock of the company, Central Light and Power Company, ever attempt to reduce its investment in the new company; and if so, how?

A. What do you mean by that?

Q. Well, we will be very specific. On February 28, 1926, the company retired 28,640 shares of this common stock for a price of \$139 a share resulting in a total cash payment to the National Electric Power Company of \$3,980,960; did it not?

A. That is correct—yes sir.

Q. If you will look at your 1926 report to the Public Service Commission—what is the stated book value of your common stock as of January 1st, 1926?

A. \$5,319,619.62.

Q. Now, allowing that stated value, the 61,140 shares of common stock had a book value of \$87 a share did they not?

A. That I presume is correct. That is dividing it.

Q. Then, how do you account for the fact that 28,640 shares of this stock retired by the National Electric Power Company in February of 1926 at \$139 a share?

A. There was an agreement made covering that transaction.

Q. In other words, the company, having been prevented by the Public Service Commission from taking five and a half million dollars of bonds, it accomplished the same result by redeeming this stock at \$139 a share and getting \$3,950,000 for it.

A. That agreement was carried at \$139 a share and the stock retired at that figure.

Q. Was this agreement that you refer to, approved by the Public Service Commission?

A. I cannot recall at this time.

BY MR. RHODES:

Q. Doesn't the witness know whether the stock sale was an alternative of the bond issue?

A. This was a case of retiring the stock; and not selling the stock.

BY MR. EVANS:

Q. As long as all of the common stock was held by the National Electric Power Company, it did not make any difference to them whether they held 61,140 shares or 28,640 shares less than that, did it?

A. It didn't make a great deal of difference how many shares they had, as long as the total stock was owned by the same interests.

Q. Was not this, in your opinion, merely a method of getting around the refusal of the Public Service Commission to allow the first plan to go through and accomplish the same result in another way?

A. I wouldn't say that was—

BY MR. RHODES:

Q. What was it then?

A. Well, it was a different, separate and distinct transaction, which occurred some time later.

Q. This became treasury stock didn't it?

A. No; the stock was retired and cancelled.

Q. Well, I mean it was eliminated?

A. That is correct.

Q. And the interests of the parties in the company was not minimized one iota?

A. No.

Q. They still had one hundred per cent of the stock outstanding?

A. That is correct.

Q. In other words, they just took back out of the treasury that amount of money and cancelled so much money and it didn't affect the status of their holdings?

A. That is correct. The stock was bought back by the company.

Q. And they did that because they could not issue the bonds they had originally contemplated?

(No answer)

MR. COOKE: Mr. Evans, isn't this the same thing that took place in the Hanover-McSherrystown?

MR. EVANS: It is very much so, but to my mind, it is more flagrant. I happened to be a member of the Commission at the time that this first transaction came before us, and we refused to permit, and we allowed the sale to go through on the distinct understanding that the new owners would pay cash for the stock, and would not take it out of the company, and within—my remembrance, Commissioner Scattergood and I ceased to be members of the Commission on January 17, 1926, and on February 28, 1926, this same crowd accomplished the same result in another way, by redeeming this stock and getting \$3,500,000 in their treasury, and if it is not a perfectly plain case of thumbing your nose at regulations—if you can put it that vulgarly—I don't know what it is.

BY MR. EVANS:

Q. Have you any further explanation to make of it?

A. No sir; only the entries in connection with the transaction were recorded on the books in the proper manner for those particular transactions.

Q. Do not misunderstand me. Nobody is blaming you in the least for it. You have made the entries or audited the entries as they should have been made, and if there is any blame, it attaches to some body quite different than you.

MR. MEMOLO: I don't get that clearly in my mind. It is just the same as if they bought the stock from themselves, it was treasury stock, or did they have to go out in the open market and buy it?

MR. EVANS: What they did, they took out of the company the cash which they paid for securing the stock of the company.

BY MR. TURNER:

Q. I think that is clear. What effect has that had on the rate question?

A. The present rates of the company give a return on the book value of the capital invested in the business of slightly in excess of 7%.

Q. And the only valuation you have had is this Stone and Webster valuation upon which this whole financial structure was predicated?

A. Yes sir.

FATHER COX: Will this be another case for the attorney general?

MR. TURNER: I would like to ask Mr. Parkinson, we have found some difference between the returns made by the companies to the Department of Revenue for capital stock tax purposes and to the Public Service Commission. Can you give us any explanation of your company?

A. There are no differences between the report which we render to anybody. Our reports to the Department of Revenue and the ones to the Public Service Commission and the ones to the Department of Internal Affairs and to our stockholders and to everybody concerned with them have the same figures.

Q. Of course without the exhibit I cannot tell whether there were any differences or not.

MR. DIETRICH: I don't think there were any.

MR. MOORE: Just before we adjourn, from the trend of testimony advanced this afternoon, it appears that much of the information we are seeking can be supplied by Major J. S. S. Richardson, who has been asked to appear as a witness but who has declined on the grounds of pressure of business.

This Committee wishes to be fair to the utilities in this investigation. If the utilities have any testimony which con-

troverts or rebuts any previous testimony before the Committee, they have a right to be heard.

However, the experience of this afternoon indicates that answers to relevant questions can be evaded by passing responsibility to Major Richardson, who it appears is out of the jurisdiction of this Committee.

In order, therefore, that the Committee can proceed intelligently and expeditiously, it is advisable that Major Richardson appear as a witness before the utilities are heard. It is suggested to those desiring to appear that they use their offices in having Major Richardson before the Committee.

RECESS

MR. MOORE: This meeting will now take a recess until eight o'clock this evening.

AFTER RECESS

The Committee reconvened at 8.00 o'clock P. M.  
Chairman D. Glenn Moore, presiding.

MR. EVANS: I would like to have the following letter copied into the record from Mr. Louis Tevell, acting Secretary of the Public Service Commission:

THE PUBLIC SERVICE COMMISSION  
(seal)  
of the  
COMMONWEALTH OF PENNSYLVANIA

Harrisburg,  
April 23, 1931.

Harold Evans, Counsel,  
House Utilities Investigating Committee,  
Room 601 South Office Building,  
Harrisburg, Pennsylvania.

Dear Mr. Evans:

In compliance with your oral request made at the hearing yesterday, I am submitting herewith the draft of the proposed Commission report in the Scranton-Spring Brook Water Service Company case which was adopted December 9, 1930. This copy contains the corrections which were made at the executive session of the Commission on that date and the final official draft of the report and order was made from it.

You will note that it does not contain on the first page the usual pencil notation of adoption by the Secretary or check by counsel. At the time this proposed report was adopted by the Commission, John G. Hopwood, the Secretary, had been called out of the room and I was acting in his place. I did not have a copy of the proposed report. Immediately after adoption the Chairman, in the presence of the Commissioners and of Counsel Weiss, handed a copy of the report to Assistant Counsel Mather and directed him to note on the copy the changes adopted by the Commission and to ask Mr. Morgal, in whose bureau the mimeographing work is done to have the report prepared for distribution as promptly as possible, after checking the report to insure that arithmetical changes made in the body of the report were carried into the tabulations.

I have no personal knowledge of the handling of the report after the executive session, but after consulting Mr. Hopwood and others who assisted in the preparation of the final draft, I am advised that the corrections were made by Mr. Mather and the report prepared for signature and distribution in the usual manner, with the exception that, due to the size of the report and the desire for prompt release, the usual pencil notation by the Secretary and the Counsel or Assistant Counsel was not placed on the corrected copy.

Sincerely yours,  
(Signed) Louis Tevell,  
Acting Secretary.

Enclosure

J. B. GINDLESBERGER sworn.

BY MR. WALKER:

Q. Mr. Gindlesberger where do you live?

A. Johnstown.

Q. By whom are you employed Mr. Gindlesberger?

A. Pennsylvania Railroad.

Q. Mr. Gindlesberger it has come to the Committee that during the Fall campaign in 1930 you were working in behalf of the candidacy of Mr. Pinchot, is that correct?

A. Yes sir.

Q. And information further states that the officials of the Pennsylvania Railroad Company ordered you to work for Mr. Hemphill, is that correct?

A. Absolutely no.

Q. What happened, did they say anything to you?

A. Yes sir.

Q. Who?

A. Well, the committee.

Q. Who do you mean by the Committee?

A. The Republican Committee of Cambria County.

Q. Do you know who they are,—would you name them to the Committee?

A. Our county chairman, Mr. Gouchenour.

Q. Were they employed at that time by the Pennsylvania Railroad Company?

A. No sir.

Q. Did any of the officials of the Pennsylvania Railroad speak to you, about your political activities?

A. No sir.

Q. Did anybody connected with the Pennsylvania Railroad speak to you in any way?

A. Yes sir, some of the men in my own department, that I worked with, sure.

BY MR. TURNER:

Q. What is your position with the Pennsylvania Railroad?

A. I am a fireman.

Q. On a locomotive?

A. Yes sir.

Q. Where do you run,—out of Altoona?

A. No sir, out of Conemaugh,—Johnstown, rather.

Q. In Cambria County?

A. Yes sir.

Q. Do you hold any office in the Republican County Committee?

A. Yes sir.

Q. What are you,—local committeeman?

A. Yes sir.

Q. In what precinct?

A. In the Seventh Ward of the City of Johnstown.

MR. RICHARDS: Did you ask the witness what time it was that the man spoke to him,—was it in the Primary or in the General Election?

THE WITNESS: I didn't say when.

BY MR. RICHARDS:

Q. When was it?

A. At the general election.

Q. You say your Republican County Chairman spoke to you?

A. Yes sir.

Q. Was he for Pinchot or against him?

A. He surely wasn't interested in Mr. Hemphill's interests.

Q. That wasn't unusual. That is the reason I am trying to get it straightened out.

BY MR. EVANS:

Q. Did you work for Mr. Pinchot right up to the time of the election?

A. Yes sir.

Q. Were you out on election day working for him?

A. Yes sir.

Q. Where did you work?

A. In the Seventh Ward, in the City of Johnstown.

Q. Nothing was ever said to you at any time by anybody connected with the Pennsylvania Railroad Company in regard to your working?

A. Nothing, only just the employes that I worked with.

Q. Did your foreman say anything to you?

A. No sir.

Q. Nobody superior to you ever said anything to you?

A. No sir; they never asked me.

BY MR. TURNER:

Q. Who is your immediate superior?

A. In Pittsburgh.

Q. What is his name?

A. My superintendent's name is Dodson.

Q. Who is your immediate superior,—who is your boss?

A. Mr. Jeanness.

Q. Did he ask you?

A. No sir, he didn't say anything; he don't know me.

BY MR. RICHARDS:

Q. Your road foreman of engines knows you?

A. No sir; he is just new over there; personally he don't know me.

BY MR. TURNER:

Q. Was the Republican County Committee of Cambria County for Pinchot or Hemphill?

A. They were for Pinchot, surely I would imagine so.

Q. Don't you know,—you are one of the members of the county committee?

A. So far as I know they all were. Nobody told me anything to the contrary.

BY MR. EVANS:

Q. Was your classification in any way changed just prior to the election?

A. You mean my service?

Q. Yes sir.

A. No sir.

Q. What are your initials?

A. J. B.

Q. You say you are a fireman, and not an engineer?

A. No, not now.

Q. What are you now?

A. Fireman.

Q. What were you then?

A. Fireman.

Q. What do you mean by saying, no, not now?

A. There are a lot of fellows, us fellows, we are engineers by name, by title, but we are actually engaged in firing.

Q. Is that your situation?

A. Yes sir, that is my situation, right now.

Q. What was your situation last October and November?

A. The same as now.

Q. You were listed as an engineer, but you were engaged in firing?

A. Yes sir.

BY MR. RHODES:

Q. When were you last an engineer?

A. 1925, 1926.

SAMUEL S. WYER sworn

BY MR. WALKER:

Q. What is your occupation?

A. Independent consulting engineer.

Q. Several years ago you made a survey of textbooks in Pennsylvania pertaining to the public industries, did you not?

A. I didn't.

Q. Did you have any part in any investigation of textbooks in Pennsylvania?

A. I didn't. I can shorten that very quickly by telling you when I got the report of it from the Committee, I threw it in the wastebasket, because I thought it was nothing but nonsense, and all statements made heretofore in regard to my connection with regard to it are absolutely untrue.

BY MR. RICHARDS:

Q. What Committee Report do you refer to?

A. Some Pennsylvania Committee, Utility Committee, made a survey of Pennsylvania textbooks.

Q. The Committee referred to here this afternoon in the testimony?

A. Yes, I had nothing to do with it.

BY MR. TURNER:

Q. Are you an author or publisher?

A. I just told you I had nothing to do with it, and when I got this copy I threw it in the wastebasket, because it was silly.

BY MR. WALKER:

Q. Do you know why they sent you a copy, Mr. Wyr?

A. I originally suggested that such a survey should be made, but not along the lines that the Committee pursued.

Q. In what way do you feel that the lines the Committee pursued are wrong?

A. Many of the things in the report I felt were entirely beside the point, merely quibbling about words, and missed the real matter at stake.

Q. What was the real matter at stake?

A. Misleading information of various business relationship in typical textbooks in use in the schools. It was started, the suggestion was started by my 13-year-old boy, who used a textbook on science in the Columbus Public School that was prepared by a woman in Philadelphia, and the book was being used in Philadelphia. He brought the book home and threw it on the table with a bang, and in his slangy expression, he said, "That dame does not know her onions." He was referring to her misstatements about natural gas.

BY MR. COOKE:

Q. What was the dame's name?

A. Miss Dr. Clark.

BY MR. TURNER:

Q. What was the statement?

A. She made a statement that natural gas was occasionally used for cooking west of the Allegheny Mountains, and the fact of the matter was that at that time natural gas was the principal fuel in the United States.

BY MR. WALKER:

Q. And then did you suggest to this Committee that they make an investigation?

A. I suggested it because the textbooks in use were woefully defective in some of their engineering statements. For instance, at the present time, although I cannot check within the last 12 months, most of the textbooks that you will find on physics and chemistry and general science are not clear in their statements in regard to Boyles Law on natural gases. In fact there is many a high school instructor that has gone off and gotten himself into serious trouble because he did not appreciate that the Boyles Law applies not to gauge pressure, but to absolute pressure.

Q. Now, to whom did you make your suggestion, Mr. Wyer?

A. I cannot answer now as to that specifically, but I made it a number of times to different executives, and I might have made it to the Committee, and I cannot even tell you the personnel of the Committee.

Q. Do you recall the title of the Committee?

A. No.

Q. Do you know whether or not they were connected with the Pennsylvania Electric Association?

A. Undoubtedly.

BY THE CHAIRMAN:

Q. Undoubtedly, or do you know?

A. Undoubtedly, because I talked to a number of their executives at different times with regard to the desirability of making the investigation.

BY MR. TURNER:

Q. Do you remember the name of any of them?

A. I don't now.

BY MR. COOKE:

Q. Was it to Mr. Thompson?

A. Yes.

BY MR. TURNER:

Q. Pardon me, how long has it been?

A. I cannot answer that, probably eight or nine years ago since the thing was started.

BY MR. COOKE:

Q. And beside Mr. Thompson, to whom did you speak?

A. I am quite sure I discussed it with Mr. Richardson.

Q. That is Major J. S. S. Richardson?

A. Correct.

BY MR. WALKER:

Q. Mr. Wyer, in the hearing before the Federal Trade Commission, Major Richardson was testifying on page 161 of the record, and the question was asked him, "Do you recall that he (referring to you), was interested in the subject of a survey

that was being made of school books in Pennsylvania while acting as secretary of the Publicity Bureau of that city?"

"Answer. He probably was familiar with it, yes. He made a survey." Question: "Did your assistants correspond with Mr. Wyer on that subject?" Answer: "In all probability, yes." When Major Richardson stated that you had made such a survey, when he made that statement before the Federal Trade Commission, was he in error?

A. He was, just like a lot of other fiction, in the Federal Trade Commission Hearing.

Q. Do you remember sending a letter to Mr. J. S. S. Richardson, on December 3, 1925, which is exhibit number 697 in the Federal Trade Commission's report which read as follows:

"Columbus, Ohio, December 3, 1925.

Mr. J. S. S. Richardson,

Director Pennsylvania Public Service Information Committee, Philadelphia, Pa.

Dear Sir:

J. L. Barnhart, director of civics, state department of public instruction, has prepared a first draft of a manuscript of a text book on civics for use in public schools of Pennsylvania. This tentative manuscript is most objectionable from a public utility viewpoint and I wrote strongly to Mr. Barnhart, calling his attention to errors, misstatements and unwarranted conclusions. One of the most objectionable features was the flowery language used in boosting the work of Morris L. Cooke. I was told that the J. C. Winston Company of Philadelphia is to be the publishers.

Yours truly,

Samuel S. Wyer"

A. I wrote that letter, and did it on my own responsibility, without responsibility to any committee in Pennsylvania.

MR. COOKE: What did he say now?

MR. WALKER: Mr. Wyer says in his letter, Mr. Cooke, "one of the most objectionable features (he is referring to the features in Mr. Barnhart's book) was the flowery language used, boosting the works of Morris L. Cooke."

BY MR. WALKER:

Q. Now, do I understand from that letter that you objected to the flowery language used in boosting the work of Morris L. Cooke?

A. The language speaks for itself. It does not require any interpretation. You have had dirty linen here today, and you are not going to get any more of it from me.

Q. I do not propose to, I am merely asking you what you were objecting to in Mr. Barnhart's book.

A. That is one of the things.

Q. Can you recall at this time any of the objectionable features of that that you meant in your letter?

A. I cannot.

Q. Did you receive a reply from Mr. Richardson?

A. I cannot answer as to that; it is so long ago.

Q. I read you exhibit 951 of the Federal Trade Report, dated October 27, 1924:

"Dr. Samuel S. Wyer.

Consulting Engineer, Columbus, Ohio.

Dear Doctor Wyer: Major Richardson told me the other day that you are making a survey of the schoolbooks of Pennsylvania to examine in them material that may be construed as harmful to the public utility industry. I suppose that means biased and prejudicial statements about public ownership, the granting of franchise, the conduct of legislative bodies and so on.

This Committee is planning a survey along similar lines, like the surveys undertaken by the Missouri and Illinois committees, and the Major has asked me to get whatever information I can get. Have you made any progress in forming an opinion or getting any date about schoolbooks used in Pennsylvania?

Whatever you can do to help us would be most sincerely appreciated.

Very truly yours,  
Assistant Director."

Q. Do you recall whether or not you received such a letter?

A. Undoubtedly I did.

Q. Do you recall replying to it?

A. Undoubtedly I did. I have no distinct recollection now. If that letter was mailed it undoubtedly came in. But I am

testifying to, I didn't go ahead with the report regardless of any preliminary discussion. That fact is absolutely closed. I have told you frankly, we discussed it, and I had told you likewise, frankly, to go ahead with it.

BY MR. EVANS:

Q. If you were interested in the text books used in the schools, and it was a purely scientific, why didn't you take the matter up with scientific societies, rather than with the public utilities?

A. I have had this matter up three or four times with the American Society of Mechanical Engineers.

Q. You are referring to the Boyles'—

A. I am answering the question.

Q. You are referring to—

A. I am answering the question.

BY THE CHAIRMAN:

Q. Now, Mr. Wyer—

A. Let me answer the question.

Q. You answered the question.

A. All right. I haven't finished the answer to the question.

BY MR. EVANS:

Q. I will give you plenty of time to answer it.

A. I have had the matter up several times with the American Society of Mechanical Engineers.

Q. And you said—

A. I am answering the question put; once with the Institute of Electrical Engineers; once with the Institute of Mining Engineers; of the desirability of appointing a committee of independent engineers to cooperate with authors dealing with engineering subjects in text books. I have never had a particular of cooperation from them on that.

Q. Except the utilities? You had some cooperation from the utilities, didn't you?

A. I certainly did, and other business groups.

Q. So, none of the scientific societies would pay any attention to your suggestions, but the utilities took them up? (No answer).

BY THE CHAIRMAN:

Q. I understood you to say that you were an independent consulting engineer?

A. Yes sir.

Q. Will you state your qualifications?

A. Graduate of the Engineering College, Ohio State University, 1903.

Q. Of what University?

A. Ohio State University; had two years shop work, three and one half engineering experience before graduation; have done nothing but engineering work since that time; since 1906, maintaining my own office at Columbus, Ohio, dealing largely in public utility problems—almost entirely in fuel, power and transportation during that time.

By Independent Consulting Engineer, I mean that I am entirely independent of any corporations, and I have repeatedly refused to do what I have been asked to do by various public utilities corporations.

BY MR. EVANS:

Q. What have you been asked to do that you refused to do?

A. Things that I have objected to. For instance in my home town, in Columbus, Ohio, what is now the Columbus Gas and Electric Company, after I made an appraisal of the plant at \$60 a consumer, they asked me to come in and raise my appraisal to \$120 a consumer;

Second in that particular case, after I had made a report on their West Virginia holdings, that they had the largest gas reserve in the world—six weeks after that time the management asked me to go on the witness stand and swear that it was necessary to shut the plant down.

Third, after a great deal of natural gas research work, they asked me to go on the stand and swear that natural gas mixed with artificial gas would be better, which was untruthful;

Fourth, they asked me to go on the witness stand and swear that old manufacturing gas plant there where I had made a recommendation about ten years before was in such a rotten condition it should be discontinued; that is the mains, the old mains which I regarded obsolete and of no value they wanted me to give them a value and I refused in all these

cases to testify, and their answer was that they could get another engineer to do it. I left them do it.

BY MR. COOKE:

Q. What is the name of the company?

A. The Columbus Gas and Fuel Company, which is a part of the Columbia Gas and Electric System. Incidentally you have in Columbus, Ohio, the most stupid natural gas rate situation anywhere on the globe.

Q. Was this matter before the West Virginia Public Service Commission?

A. No, the Public Service Commission of Ohio. First it was before city council, then the Federal court, and then to the court of public appeals and now it is back to the Public Service Commission.

BY FATHER COX:

Q. Do you have any of those things in writing?

A. Certainly not; they don't put such things in writing.

BY MR. EVANS:

Q. Are we to infer from the statement you made just now that it is the practice of the utilities to ask engineers to boost prices for rate making purposes?

A. Not generally; that is an exception rather than the rule.

Q. You seem to have had a great deal of experience?

A. I have.

BY MR. COOKE:

Q. Have you been connected with any rate cases in this State?

A. I testified here in the Potter Gas case. I was ready to testify and as I recall, I won't say positively whether I did or not, in some litigation of the Fayette County Gas Company. I was ready to go on the stand but did not go on for the People's Gas Company. I was ready to go on for the Pennsylvania Gas Company and was kept off until the last minute and then put on in that particular case clashed with the company's lawyers and made a lifelong enemy because the lawyers insisted that I should testify to certain things which I refused to testify to in that particular case. I was ready to go on for the village of Johnsonburg and on my recommendation that litigation was settled out of court.

Q. Did you ever have any work to do for the city of Erie?

A. I did considerable work for the Erie Chamber of Commerce, not for the municipality.

Q. That was a case against the municipality in any way?

A. There was a case between the municipality and the gas company, but when I did the work for the Chamber of Commerce, it was not in any way a matter of litigation. It was an effort to get the situation ironed out behind the scenes, and I got everybody together and I got them to meet on a common ground, but when we got the city together and I got the Chamber of Commerce together, the gas company refused to cooperate and it fell through.

Q. Did you have any work to do for the city solicitor in Erie?

A. My compensation came from the Chamber of Commerce in Erie, but at this time the whole program was to prevent litigation and try to get the city and the Chamber of Commerce and the gas company together, and to get them to meet on a common ground. I did have a great deal to do with the city solicitor, but my compensation came from the Chamber of Commerce. If the gas company had co-operated with the then city solicitor and the Chamber of Commerce that litigation would have been settled out of court. After having a complete agreement as to the general common meeting ground, the higher officials of the gas company repudiated the whole thing.

Q. At the time we had the giant power case here, I spoke in a small town in Chester County one night and somebody came in and distributed pamphlets that were written by you.

A. I don't recall which one you refer to. I gave an address at Pittsburgh that was reprinted by A. W. Thompson and another at the Lehigh University that was also printed by A. W. Thompson.

BY MR. RICHARDS:

Q. Doctor—

A. Mister, if you please.

Q. Mr. Wyer, do you recall it L. B. Denning ever talking to you about coming to Pennsylvania to testify to the Pennsylvania Fuel Gas and Supply Company—

A. Yes sir.

Q. You didn't come, I believe.

A. I did not, for some reason the company was not willing to go ahead.

BY MR. COOKE:

Q. Did Mr. Thompson superintend the printing of that giant power pamphlet or did you have it printed for him, I mean the actual printing?

A. That was all printed in my own office.

Q. So Mr. Thompson bought them from you?

A. Correct. He paid the printing bill himself.

Q. Do you recall how much Mr. Thompson paid you during that period for literature?

A. I cannot answer, I have no record, I did a great deal of work for Mr. Thompson.

Q. I recall seeing a mail bag carried into the Engineers club in Philadelphia crammed full of your pamphlets for distribution among the members?

A. I probably sent them to all the members in the Philadelphia Engineers Club. I remember distinctly we made some arrangement with the Secretary or whoever is in charge of the list of the members for the names to get a mailing list.

BY MR. TURNER:

Q. How does regulation work out in Ohio, is it successful?

A. In a general way.

Q. I understand the commission has not the broad powers that the Pennsylvania Commission has?

A. They not only do not have the broad powers, but they never have had the high personnel you have in Pennsylvania. One of the reasons for that was that we had a pin-headed Governor who cut the salaries down so that the only people he could get to serve on the commission were country lawyers. That salary was put back eventually but you do not get the high type of men of the Ohio Commission that you do have in Pennsylvania.

BY MR. RHODES:

Q. Do you think it takes a city lawyer to serve on these commissions?

A. My observation has been when you put the salary down to a small amount you get a smaller type of man to fill the position.

Q. Physically or mentally?

A. Mentally. One of the outstanding needs in all Public Service Commissions is long tenure of office accompanied by a large enough salary that a man can feel that he is independent without looking after a future office. I will add one other condition. I would anytime prefer to put a case before a commission entirely made up of lawyers than a commission having on it an engineer or a business man because lawyers are trained to weigh evidence and you would have a better chance to get justice.

MR. TURNER: I think you have solved the problem. Evidently all of the troubles have been with the engineers and I think we should try to remedy that by legislation.

BY MR. COOKE:

Q. What other publicity work have you done for utility companies in addition to the work you did for the Duquesne Company in connection with the giant power legislation?

A. I prepared a study of the Philadelphia Electric Company which was afterwards printed. There was a number of things for A. W. Thompson.

Q. What was the character of that study?

A. It was a reprint that is, a print of the manuscript of an address I gave in Pittsburgh before the Engineers Society of Western Pennsylvania. And that address was based on, first, a first-hand study I made on the property. You understand I did not do the actual work; I merely formulated the program. Their own engineers and accountants went ahead and worked up a very elaborate and detailed study of gas allocations.

BY MR. COOKE:

Q. You printed the report in your own printing shop?

A. I have no printing shop.

Q. Aren't you interested in the printing plant?

A. I am not.

Q. I understood you to say that you had done this printing for Mr. Thompson,—I understood you to say, in your own plant.

A. I did not. There are plenty of printers in Columbus, Ohio. I have an arrangement with one that handles all of the work in my office on a non-competitive basis. It goes to that one printing shop,—it has been going there for twenty-one years. A great many people have things reprinted and pay the printer. I don't operate a printing plant.

Q. What other literature have you prepared for Pennsylvania utilities?

A. I made a very elaborate study of the whole natural gas situation of the Philadelphia Company. That was printed. They had only a small surplus. I cannot now testify as to the exact number, but it was relatively small. It discussed everything from the field clear thru to the ultimate consumer's meter. They had so many requests for them from Pennsylvania school teachers it was rather expensive,—the school teachers were not interested in the companies materially that was in, but merely in the general discussion,—with some of those fundamental facts put in,—they were put in the Pennsylvania Gas Primer,—containing the same fundamental facts of the gas situation in Pennsylvania.

Q. Who paid for that?

A. A. W. Thompson.

BY MR. EVANS:

Q. Were those mailed out to the schools?

A. They were not. They were sent merely to the people who asked for them. They were mailed if some school teacher asked for it.

BY MR. COOKE:

Q. I seem to recall further some other piece of literature.

A. There is still another report.

MR. TURNER: On Giant Power?

MR. COOKE: This has nothing to do with Giant Power.

THE WITNESS: There is still another report. When the Public Service Commission started to make a study of the natural gas situation in Western Pennsylvania, they arranged for a hearing at Pittsburgh in January 1919. For the Commission at that time I prepared a series of charts showing various physical relations, various natural gas companies in Pennsylvania. To this we added, so as to save time, a reprint of my Smithsonian Bulletin on natural gas, its production and conservation. This was first printed by the State Printery at Harrisburg, according to the imprint. There was added the transcript of the hearing in Pittsburgh, that put out by the Public Service Commission.

BY MR. COOKE:

Q. By the Public Service Commission? Of Pennsylvania?

A. Yes sir. Later on a number of gas companies reprinted, not the report as a whole, but merely my part of this, beginning after page 85 of the Commission report.

Q. Before you get off that,—that is the first time that I ever heard of the Commission putting out anything of that kind.

A. It is out of print, you cannot get it any place. This copy that I have here is the only copy that I have. They have all gotten out of my office.

BY MR. RHODES:

Q. What year was that that it was published by the Public Service Commission of Pennsylvania?

A. The file number is File C 2572, 1918. The hearing was on January 8, 1919, in the William Penn Hotel in Pittsburgh. It is a combination of three things. One Mr. Rilling was on the Commission he had taken a great deal of interest in natural gas conservation, and because of the imminent crisis in western Pennsylvania and the enormous waste in natural gas, he suggested that we get the various interests together and see if we could work out, in a friendly way, a common meeting ground, in order to prolong the life of natural gas. This is the first step in the natural gas conservation program. Secretary Lane about a year later started the natural gas conservation committee program. At that time I became the consulting engineer for the United States government, and remained there until I received a telegram during the Teapot

Dome mess that my resignation has been accepted the day before. Unfortunately I had to return all of the pencil memorandums relative to the whole oil controversy at that time, and was kept out of the whole Teapot Dome mess.

BY MR. RHODES:

Q. Who accepted your resignation?

A. Bane, director of the Bureau of Mines.

BY MR. COOKE:

Q. Are you still associated with the Smithsonian Institute?

A. No sir.

Q. When was your resignation accepted there?

A. As I recall, in 1925.

Q. Was that just subsequent to your report on Ontario-Hydro-Electric?

A. Afterwards.

BY MR. TURNER:

Q. We have been studying the question of introducing in Pennsylvania the prudent investment theory, can you tell us whether you believe that that—

A. Define it.

Q. I will have to submit to Mr. Cooke to do that.

A. Remember that Aristotle said that definition was the basis of systematic reasoning. What do you mean by prudent investment? It is a legal question and you can discuss it from now on until doom's day.

BY MR. COOKE:

Q. Have you used it in your valuation?

A. No sir.

Q. Have you used the reproduction cost new?

A. No sir.

Q. What have you used?

A. It is what would be called a compromise. I have repeatedly refused to use reproduction cost new because I think it is asinine, in a literal application, and I have advised a number of my clients in the last five years that it was a two edged sword, and when you got on a toboggan, that the other fellow could use it with a vengeance. What I mean by that is that you are in a period now where we will have a declining price. For illustration, I am buying farm produce today in my home for just exactly one-half of what I paid for it a year ago. I had a fence painted for two-thirds of what it cost three years ago.

BY MR. TURNER:

Q. Did the labor cost come down?

A. Both the labor and material. You are in a period when you are going to have a declining price, and incidentally the most serious social readjustment that the world has ever known. Prosperity is now around the corner.

BY MR. COOKE:

Q. Have you always had this idea about reproduction cost new?

A. Yes sir.

Q. The other day when we were cheering about guessing that was inherent in the reproduction cost new method, my memory carried me back to a case in West Virginia. Will you refresh my mind,—what the judge said to you at that time, about the valuation,—do you remember the case.

A. No sir, I do not, because I have been in so many cases in West Virginia.

Q. You don't remember any in which the court took exception to the indefiniteness of the data,—valuation data.

A. They took direct and vigorous exception to the whole program that we had up there, that is not a criticism of the position I took of reproduction cost. I took in that case a very decided stand against an application of the reproduction theory, because it would have given an absurd answer. There are a lot of things about a natural gas plant, you simply cannot reproduce it, therefore, you cannot follow that through literally, as you can some other type of public utility plant like an electric plant.

BY MR. RHODES:

Q. What is the method that you utilized in determining fair value?

A. It is a compromise of the various methods, and harking back to the idea that what you are getting at is not cost, not investment, but present fair value of property.

Q. What kind of formula do you use?

A. You don't have any formula, you have nothing you can reduce—you can never reduce valuation routine precisely, as Chief Justice Hughes has stated, you can never reduce it to a matter of formula, it is always a matter of judgment.

Q. Pure judgment?

A. Absolutely.

BY MR. TURNER:

Q. When you say valuation, do you mean under any system?

A. Under any system.

Q. Even under prudent investment?

A. Yes, you are—in the last analysis it is a man's judgment, you can put in all the arithmetical calculations you want, but they all rest on judgment, and there is no better illustration of that than unit price, and unit price is judgment.

BY MR. RHODES:

Q. What elements do you take into consideration in considering fair value?

A. Fair value is what the property can do in making a fair return to its owners.

BY MR. MEMOLO:

Q. Mr. Wyer, do you know what going concern value is?

A. Going concern value has just as many different concepts as the general property value. My understanding of going concern value is precisely as Justice Brewer had when he made the expression, there is a difference between the bare bones of a physical plant and a live going business. In other words, when you fix a rate, or establish a rate basis, there are two distinct aspects, one is physical plant, that is, as plant, the other is the business as a whole which makes up the property. In other words, the property value is the combination of the physical plant and something else, they are involving the bare bones constant, and you cannot figure it on any definite arithmetical basis.

BY MR. RHODES:

Q. Do you know Dr. Snow of the Pennsylvania Commission?

A. I do.

Q. Have you and he ever discussed this sound value proposition, going value?

A. Yes, years ago, not recently. Just as an illustration of that, let me warn you that this so-called cost of developing business, which was so very generally used in the early days of regulation, and I was forced to use it in the Kansas Natural Gas Case, where I represented the Court, that you very quickly get an absurd answer. In other words, the more money that they lose the more valuable the business is, which of course, on the face of it is absurd. Therefore, the idea was developed that going value was in terms of compensation for loss, I think is unsound.

BY MR. COOKE:

Q. Going back to the Pennsylvania literature that you have prepared, is there anything further that you have gotten up for the benefit of our people in this field?

A. Well, the Smithsonian's study of Pennsylvania resources is the largest single contribution.

Q. Just tell us about that?

A. For a number of years prior to that—

Q. Are you—

A. Let me finish this question. Prior to 1922 there were numerous requests coming in for information on various developments in Pennsylvania, and I was doing a great deal of engineering work here—

Q. They were coming in from where?

A. Coming in to me.

Q. In Columbus, Ohio?

A. In Columbus, Ohio.

Q. Originating in Pennsylvania?

A. Yes, because I have studied quite a number of independent resource situations here, and these were discussed with Dr. Walcott, secretary of the Smithsonian Institution, for the simple reason that we had worked together on a program that was planned—

Q. If there are any other of your publications, summarize them if you can?

A. Let me finish this in detail. If you summarize it, you lose it. Dr. Walcott had the plan, or the idea of a series of studies for the various states. That plan was very broad, so broad as to require an enormous amount of time, so finally it narrowed down, after discussion with him, and after discussion with Mr. A. W. Thompson, who agreed to arrange to get the money from various businesses in Pennsylvania, to limit the study to one state. In other words, the school people here were very anxious to have such a study made, because you have here the most diversified industrial situation—

Q. How did you get that, from the teachers of the public schools?

A. Discussed the matter with Dr. Finnegan, and the various teachers.

Q. Did you go to him, or did he come to you?

A. I went to him. I was in Harrisburg and discussed the matter with Mr. Ashley,—and I want you to appreciate that the school teachers are different now than when we went to school.

MR. COOKE: That is not so long ago.

THE WITNESS: They are teaching generally out of obsolete text books, therefore the underpaid teacher is always looking for collateral matter, and therefore it is most natural and the most normal thing in the world for them to look for this additional material. As a result of that, there was a great interest in Pennsylvania in this idea.

Q. That is, after you had talked to Dr. Finnegan and to the other school teachers, you found that there was a need for this?

A. Yes.

Q. Did you talk that idea over with Dr. Walcott?

A. Yes.

Q. And with A. W. Thompson?

A. Yes.

Q. In other words, you were the salesman?

A. If you want to put it that way, yes.

Q. If I want to put it that way?

A. Yes.

Q. Have you got a copy of the book there?

A. Yes, as well as the letter of approval from an individual that I am quite sure all of you will be very much interested in hearing, and which I will read, dated December 9, 1922. "Thanks for the copy of the book of the Smithsonian Institute study of natural resources applying to Pennsylvania resources. It contains a great deal of exceedingly interesting information and I am greatly indebted to you for sending me a copy. After the inauguration I should be very glad to have you drop in sometime when you are in Harrisburg. Signed, Governor Pinchot."

Another letter of December 15th, 1922, "Thanks for your letter of December 13, and for the copy of the newspaper story which is being sent out on the Smithsonian new publication. It should do a lot of good throughout the state. I am looking forward to seeing you in Harrisburg. Signed, Gifford Pinchot."

And another letter that I am quite sure the entire Commission will subscribe to, dated January 4, 1923. "My dear Mr. Wyer, through the courtesy of Mr. Walcott, I have received a copy of the Smithsonian Study of Natural Resources applying to Pennsylvania resources, of which you are the author.

"You are certainly to be congratulated on having brought together by illustrated chart and otherwise an exceedingly interesting lot of material. It seems to me that if we are ever to educate our people to the point where they can take an intelligent interest in industrial development, it will be because we have learned the technique of presenting the facts in such a way as to actually carry their full and true import.

"I have only had a chance to glance at the text. As you have advised me that the book is to be used in the public schools and libraries of Pennsylvania, you certainly had an adequate inspiration for putting in the book the best you had in your locker.

(Signed) Morris Lewellyn Cooke."

and which, Mr. Cooke, proves that Senator Norris lied when he wrote that piece in the Congressional record wherein he stated that Pinchot opposed the use of this book.

BY MR. COOKE:

Q. I have just opened this book—this book as I understand was sent to all libraries and schools am I right?

A. Well, not all the schools. It went automatically to the libraries that are on the Smithsonian mailing list. It likewise went automatically to a large number of schools immediately who had requested to have it because a large number of school people were in consultation in the preparation of the book. Every page of the proofs was examined by various Pennsylvania school teachers. Time and time again they would make requests. All of this accumulated requests were kept and they immediately got this first edition.

Q. I turn to the first page I opened, which reads: "Part one, Pennsylvania Natural Gas Resources, creation of value in a natural resource. In the last analysis a man has not made or created anything. He has merely used what nature has made available by its natural processes. Many of the resources now in use required millions of years for their formation. Man took no part whatsoever in their production or creation nor has he added to them in any way. A natural resource is valueless until someone has spent money or arranged to do five to six things; one to discover the location; two to get it under control; third hauling it to market; fourth holding the market; prepared for the proper handling and use of it; the creation of value and property right in resources constituted in making the resources available; not in the resource itself;" I am just wondering whether that material formed the text for that volume.

A. That is the text, and I will add one supplementary thing, namely that there is no inherent right for any firm, individual or corporation to waste any of our God given resources and there is a moral responsibility for the use of it to benefit the public.

Q. You probably would not agree with the valuation shown here, where water rights on a new valuation are listed at three and one half million, where they had not been listed at anything before, they were revalued.

A. Well, I don't know any of the facts; so I can't answer.

Q. Nothing has been done on them.

A. It would require very much more than the one or two statements you have made to enable me to give an opinion as to whether I would or would not. A water right is a property right. The difficulty is in the use of the yard stick to measure the monetary value by water.

Q. Can you tell me about when; just the date you did your first work for Mr. Thompson of the Philadelphia Company in Pittsburgh?

A. It started early in 1920.

Q. And—

A. Let me finish. I will give you just exactly how it came about, so you will have the background.

Q. Now, please, Mr. Wyer the information asked you for was just the date and you have answered the question.

A. All right.

Q. Will you tell me the last date, approximately, when you did your work for Mr. Thompson of the Philadelphia Company at Pittsburgh?

A. It would be in 1925 when he left Pittsburgh.

Q. Have you done any work for the Philadelphia Company in Pittsburgh since 1925?

A. No.

Q. As I understand it, Mr. Thompson made a contribution to this Smithsonian Institute Research on natural resources, did he not?

A. He no doubt did from his group. He was the instrumentality of raising the money, it was not from any one business group, but from a large number. You must remember that this Pennsylvania Resource Study is largely a study from a general business viewpoint and the business interests, outside of the utilities, are by far the most important. For instance out of one hundred and eighty-two pages there are ten pages on gas; ten pages on electrical power; three pages on transportation. The balance is generally resource information.

Q. Can you tell us approximately the number of volumes of this work that went out to the schools of Pennsylvania?

A. 37000—

Q. And—

A. I will qualify that answer, 37000 copies were printed. A few of those were sent into other states; a number of state geologists, a number of State Superintendents of public in-

struction in a number of states, a number of libraries in other states asked immediately and got copies; so that not all of the thirty-seven thousand came into Pennsylvania.

Q. Can you tell me how much Mr. Thompson's group contributed to this work?

A. I couldn't now from memory; this long period afterwards. I can give you it approximately.

Q. If you will.

A. The first five thousand copies cost around \$25,000.

BY MR. COOKE:

Q. What is the date of that issue? It is not shown in the book?

A. It came out in 1922; just at the end; because Governor Pinchot got his copy; he was in such a hurry that we sent him a copy between boards, before the binding was dry and I had to send him another one because the binding buckled. His letter is dated in December.

BY MR. WALKER:

Q. Now, as to how much Mr. Thompson's group contributed to that fund.

A. I don't know. I dealt with Mr. Thompson not as an individual. He got from various business groups, manufacturing, transportation and public utilities groups in Pennsylvania, to make up this fund to pay for the entire cost of the book.

Q. In order to refresh your memory, I read from your testimony before the Federal Trade Commission:

"Q. I have some correspondence between yourself and Mr. Gadson. Did you make a study of the Pennsylvania resources?

A. I did. Q. Did somebody pay you for making the study? A. They did. Q. Who paid you? A. A. W. Thompson was the chairman of the committee that controlled the finances. Q. And that was printed as a study of the natural resources as applied to Pennsylvania resources?

A. Yes sir; worked out in the Smithsonian Institute."

With that in mind Dr. Wyer—

Q. Mr. Wyer. I have been calling you doctor because that is how you are referred to here. (indicating).

BY MR. WALKER:

Q. Would you mind explaining to me the Federal Trade Commission's exhibit No. 962, which is a letter presumably signed by you and sent to Major Richardson: "Dear Mr. Richardson:"

A. I don't know what the details were. It is evident that he wanted to quote me and I objected to having the Smithsonian Institution brought into the case.

Q. That does not refer to the Smithsonian study but refers to the Niagara Falls report which the Smithsonian Institution published later?

BY MR. COOKE:

Q. Is their Niagara Falls report the same as the report on Ontario?

A. No, it is a report of the power situation at Niagara Falls and makes a comparison between the private ownership in the United States and the public ownership in Canada without drawing any conclusions or recommendations as to the desirability of either.

Q. You say this letter did not refer to this work here?

A. Evidently the thing he wanted was to refer in some way as to who I was and I told him to keep the Institution out of it. He refers to Samuel S. Wyer, author of "Smithsonian Study of Pennsylvania Resources," and this was for the reason that I wanted to keep the institution out of the fight.

Q. Then your reference there as being the author of this study does not indicate that Mr. Richardson was quoting you on that fact?

A. No, he merely wanted evidently some additional identification, and I was warning him not to bring the Institution in as it had nothing to do with it.

Q. Were there two reports on Niagara Falls?

A. No.

Q. It was after the Niagara Report that you ceased to have any relation with Smithsonian Institute?

A. Yes. Also let me give you something that you are apparently groping after that people do not understand.

MR. COOKE: I am not groping.

THE WITNESS: Well, this is something that does not seem to be generally understood. The Smithsonian Institution did not send me into Ontario to make that study. I went in there and all along the eastern part of the United States for a group of bankers who paid me for my services. I have mentioned that time and again. All of that elaborate study was paid for by A. W. Thompson's group of bankers, and they paid me, not \$3,000, but considerably over \$15,000. Some of those facts were taken and a professional paper was prepared, and I am perfectly willing to disclose my letters on that subject with Mr. Thompson. That is the Smithsonian Institution study and Niagara Falls which they published as a professional paper. That is entirely apart from this.

Q. Are they still using it?

A. It is out of print. I recommended it to the National Electric Light Association and suggested that they have 25,000 copies printed at their expense, but they thought so little of it that they refused to have it reprinted and the result was that there were no funds for the purpose of its reprint.

Q. Mr. Wyer, in addition to the contributions which A. W. Thompson's group made, were they any other utilities that contributed to this study in Pennsylvania's natural resources.

A. The United Gas Improvement Company I understand made a contribution through Mr. Thompson.

Q. Did you ever have any direct communication with the U. G. I.?

A. I did. I tried to get them to raise some additional money because we had more requests than we could fill. After this book became out of print the accumulated requests from teachers in and out of Pennsylvania was something over 5,000 who wanted this particular study.

Q. Do I understand these books are furnished free to schools?

A. Yes sir.

Q. And the cost was paid entirely by contributions from utilities?

A. Yes sir, not only furnished free, but delivered free, and addressed either to some individual or a larger quantity delivered.

Q. To be used by them in their regular courses?

A. Yes sir.

Q. And did the U. G. I. ever make any contribution to you on this work?

A. I did a great deal of work during this period for the U. G. I. not only during this time but before and afterwards.

Q. Was this work preparing pamphlets such as this?

A. No sir. I did prepare another one that was never used, namely, a study of the advisability of the coking and transit and the shipping situation so as to take the by-products out in transit as you do with wheat and then ship the resulting product as you do coal. That was paid for as straight engineering work.

Q. This work that you did for Mr. Thompson in 1920 to 1925, can you tell us about how much you received from him for his company for your literary studies, the studies from which these reports were published?

A. In the first place, except for this Pennsylvania resources book, your use of the term literary is misleading. I was doing various pieces of engineering research work and developing data, and from this later usually in an abbreviated form, reproduce that afterwards in a printed report. The Pennsylvania Gas Primer represents an immense amount of work in the study of natural gas resources which was done for a group of bankers.

Q. Do you know the individual banks making up that group?

A. Ladenthal and Weirman, were the individual bankers of Mr. Thompson. In this Smithsonian report I used a lot of material that I had in my office, collected in various studies, and all of that was thrown into the pot. Just as an illustration: I made a study for Mr. Thompson of the Clarion River Power project. He often kidded me because I lost a large fee through it. In my preliminary study of five days I found what was perfectly obvious a joker, and I made a verbal report to him and he decided that that being the case, he didn't want to go ahead with a detailed study. One of the stories that he told at Washington off the record was that he had on his desk a check for a half million dollars written out and signed to go to the promoters, but that it did not go on account of this report.

BY MR. WALKER:

Q. You said you shortly discovered the joker that was in it; is that right?

A. Yes sir.

Q. Was that joker that you discovered very obvious after five days study?

A. Perfectly obvious if you looked at it, and it is in the Pennsylvania resources book. A Pennsylvania teacher had his life savings ready to invest in the bonds of this company and he was using one of these Pennsylvania resources books which has the illustration on page 65, and he didn't make the investment, mainly on the graph of the stream's flow.

Q. If this joker was so obvious in the plan and river project, then should not the Public Service Commission have noticed it?

A. I don't know whether it was up to them. I made this comment at the time. When the Clarion River project was open, they had the chairman of this Commission go up there and make a speech. I wrote a caustic comment at the time that the Chairman of the Commission and the other members of the party passed a steam plant on the way up that was running so smoothly and so quietly that they didn't know what it was—and this was a steam plant that was turning out a very much larger amount of electric power than what would be generated at Clarion River. That is one of the reasons you have such an enormous amount of misinformation on water power. The public has been obsessed with the idea that when you have water power you have a bonanza. Many water power companies are white elephants, and the exploitation of the Clarion River project, in its inception, in its formal opening, had almost the elements of a fraud, in it. Understand, I am not stating that it is fraudulent, I say it had almost the elements of a fraud.

Q. Would you say it was a white elephant now?

A. I don't know what the situation is now.

BY MR. RHODES:

Q. Still our Public Service Commission passed on that proposition?

A. I don't know what they did to it.

Q. You say they went up there to the opening, and did not see these things that you saw?

BY MR. COOKE:

Q. What Commissioners were there?

A. As my memory serves me, I would not be positive about this. It is a long time ago, but I think Chairman Aimev went there to deliver an address in the power station. You must remember this, that a part of this water program was part of the urge of some of the utilities to get water power, and is in the last analysis a stock selling inducement. A utility that has a number of salesmen out, selling their stocks, bonds, had found that about ninety-five per cent of the sales resistance is removed, if that salesman can state, "My company has a water power," because the prospective purchaser has the usual idea that when you have water power you are getting something for nothing.

BY MR. COOKE:

Q. You spoke about these companies selling—

A. Selling securities.

Q. That is quite incidental.

A. Selling securities is very necessary, to get the necessary money to run the company, to get the enormous amount of capital that must be brought in, and some of the stock selling methods pursued by some of the utilities have been very undesirable.

Q. Have you noticed anything of that kind in the State of Pennsylvania.

A. I do not live here and I do not come in contact with it here, I do know this, at the time that the Clarion River project was opened that I had quite a number of rather regular and sometimes caustic letters from school people that read the picture in here and compared this picture with what they saw up in Clarion County. For instance, when I was speaking one time at the normal school at Clarion, arrangements were made for me to meet at the local luncheon club.—I am not sure whether it was the Rotary or Kiwanis.—and at that time Clarion was carrying on a slogan "the dam city." I poked fun at that slogan and referred to it as a little insignificant water power—like that as being of any value to the city. The local luncheon club refused to allow me to

speak because I was going to say something that would hurt that community. If I had stated it, so I was told afterwards, some money would have been saved.

BY MR. RHODES:

Q. How much was the Clarion proposition capitalized?

A. I could not answer that.

Q. Why was the Public Service Commission there at the time?

A. It was a formal opening.

Q. Did they have anything to do with the approval of the project.

A. I don't know.

Q. What was the joker in the Clarion—

A. Why,—the fluctuation in the stream flow—

Q. What caustic comment did you make at the time of the opening?

A. That group of business men, public utility officials, and state officials should become so excited over a little insignificant water power, when they passed a huge steam plant, and I was told that somebody asked when they were passing, what they were passing, when they passed Colfax Station.

Q. When you speak of the state officials becoming excited who do you mean.—the Public Service Commissioners.

A. My own feeling is that it was giving too much importance to a little insignificant water power project to go up there and address, deliver an address. I think that gave it the idea of importance, that was entirely at variance with the facts.

Q. Do you think the Public Service Commission of Ohio would become excited over that?

A. There are no water powers in Ohio to get excited about.

BY MR. RICHARDS:

Q. There is no storage at Clarion?

A. There is a dam. The engineer has two definite and distinct expressions for storage. There may be storage referring to water that you can hold back and bale out for several days or weeks, and sometimes months. Pondage refers to fluctuation from hour to hour. There is no storage back of the dam except the pondage, which gives you a fluctuation, or leeway.

Q. The pondage as I recall is something like 84,000,000 millions.

A. I could not figure that. It is a fact, and it was so misused by various promoters, mainly that Pennsylvania has a water fall that is higher than Niagara Falls. That is a perfectly true statement,—in short space. In other words, they had everything there except the one thing they needed,—water.

BY MR. WALKER:

Q. When you mentioned Mr. Thompson, A. W. Thompson you mean the Duquesne Light Company,—

A. Mr. Arthur W. Thompson, who was president of the Philadelphia Company, which in turn operated the Duquesne Light Company, the Equitable Company, the Pittsburgh Railways Company, and a number of other corporations.

Q. Can you approximate now the amount that was paid to you by Mr. Thompson and his associates during the five year period?

A. No sir, I have no record of that at all. The fee on the study of the eastern power situation, I can give you one, was \$10,000. This was a study of the eastern power situation, throughout the eastern part of the United States, which included the range from Muscle Shoals, to Montreal, Canada. For this piece of work I was paid \$10,000 of a fee, plus expenses, and the expenses were over \$5,000.

Q. Paid by Mr. Thompson?

A. Yes sir, and not by the National Electric Association, any statement by the Federal Trade Commission or by publishers to the contrary notwithstanding,—including one publisher of a text book who has settled a libel action out of court.

Q. Did you get a pamphlet out on that study?

A. Yes sir.

Q. Was that pamphlet distributed in the schools?

Q. Was it a pure scientific study?

A. So that you get the record straight, Governor Pinchot—

Q. Pardon me.

A. I am answering this, just a minute—

Q. You can make any explanation you want, just please answer my question, was this pamphlet distributed in the schools of Pennsylvania?

A. Not by myself nor by Mr. Thompson. Governor Pinchot got my getting a \$10,000 fee.

BY FATHER COX:

Q. Maybe that is the reason why Governor Pinchot let Mr. Finnegan go shortly afterwards, when he found out it was sort of a mistake.

A. When Governor Pinchot wrote the letter to Smith, asking or inquiring, when all Pennsylvania gets its fair share of Niagara Falls power, he threw the fear of the Lord into a great many of the New York bankers—

BY MR. RICHARDS:

Q. What Smith did he write to?

A. Al Smith, Governor of New York. The net result was a number of bankers who had put up many millions of dollars in this new program by Mr. Thompson in Western Pennsylvania—

BY MR. TURNER:

Q. Was that the Giant Power Project?

A. No sir, and as so often happens, the bankers are the biggest moral cowards in the whole business group, they become panicky.

MR. COOKE: Go as far as you like, there are no bankers here.

MR. TURNER: It is all right, nine to one, so go ahead.

THE WITNESS: They became panicky and they criticized Mr. Thompson for putting these millions in the investment in steam plants, and he made the practical suggestion that he could get a rather complete picture of this whole power situation in advance of any future program, and at the same time one of these bull artists that goes around to luncheon clubs had spoken in Pittsburgh, and he referred to Muscle Shoals, that the power from there would shortly come up and live the smoke business in Pittsburgh, that his claim, and that is the first background that Mr. Thompson put up to me, to make this study. Arrangements were made during the summer of 1925 and in the Fall of that year we went ahead and started that work, to make this general study. The only report that was written, because it was the only report that was needed, was a letter which gave the summary of the facts. If you want those three letters, I will read them into the record for you.

THE CHAIRMAN: We will take your word for it.

THE WITNESS: Muscle Shoals as a project is not large enough to supply Columbus, Ohio. If you had Muscle Shoals outside of Columbus for three months out of the year, you could still have to operate an auxiliary steam plant. It would take about six Muscle Shoals furnishing power to give you the amount that you now have in Philadelphia County. That gives you some sort of yardstick for measuring the distance between the fiction in the Congressional Record and what the engineering facts on the most discussed power project on the face of the globe are.

BY MR. RICHARDS:

Q. You are referring to Senator Norris' statement in the Congressional Record?

A. The Congressional Record on that as well as the Congressional Record in general on the whole Muscle Shoals question, it certainly labels it as America's premier fiction sheet.

MR. TURNER: I thought it was a joke book.

THE WITNESS: Very little humor in it.

BY MR. RICHARDS:

Q. I take it you are not a supporter of Senator Norris?

A. I am not.

BY MR. TURNER:

Q. You read a couple letters, one from Mr. Pinchot and one from Mr. Cooke here, and I was just interested to know when those letters were written. I don't know whether that is in the record or not, and I was going to ask you for copies of those, because I thought we might ask Mr. Evans if he could start an investigation of propaganda on that matter?

A. The first letter from Mr. Pinchot is dated December 9, 1922, and the second is on December 15, 1922. The latter from Mr. Cooke is on January 7, 1923. While we are speaking of

letters, I might also remind you that within four weeks after Governor Pinchot wrote this letter, that he wrote another letter to Mr. Wolcott in which he condemned this book from A to A, and sent it on to Washington. Senator Cousins likewise sent a letter in which he used precisely the same English. They also received a letter from Mr. Cooke, so that we know that Mr. Cooke furnished the information for the Pinchot letter, because the English in the Pinchot letter, in the Cousins letter and in the Cooke letter, which Mr. Cooke has signed, so far as the body of the letter was concerned, was identical, even to the position of commas.

BY MR. TURNER:

Q. Perhaps that is the reason why the Governor is cutting out commas.

BY MR. RHODES:

Q. Have you got those letters too?

A. I don't. One of those is in the Congressional Record.

Q. You only kept the complimentary ones?

A. No, the Congressional Record has the others, the others didn't come to me.

BY MR. EVANS:

Q. This letter, was it written before it was publicly known that you received money from the utilities for the matter for which you were publishing under the name of the Smithsonian Institute?

A. It was not coming from utilities, it was coming from a Pennsylvania business group, of which the utilities were a very small part.

Q. Did not the Duquesne Light Company pay you the sum of \$15,000 for your Niagara study?

A. Not for the Niagara study, they paid me 15,800—

Q. And that was disclosed after you had gotten that money, you had the Smithsonian Institute publish a great deal of it under its label—

A. Let me answer fully—

Q. Well, answer yes or no?

A. I cannot.

Q. Answer the question yes or no?

A. I cannot answer it yes or no.

Q. You can answer it yes or no, and then you can make any explanation that you want to afterwards.

A. I will answer fully.

Q. Did you or did you not receive the sum of \$15,000 from the Duquesne Light Company for preparing a study of Niagara Falls?

A. I didn't.

Q. From whom did you receive the money?

A. I didn't receive the money for preparing that study, I received the money for preparing a power study of the entire eastern part of the United States, ranging from Muscle Shoals in Alabama to Montreal, and part of non-confidential material collected in that way, was used in preparing a professional paper, and that professional paper was published by the Smithsonian Institute with the full knowledge that I had obviously been paid for doing the engineering work that was in the document, in getting the information.

Q. In your testimony before the Federal Trade Commission you referred to the Duquesne Light Company as your Santa Claus didn't you?

A. I may have used that expression.

Q. And they paid you \$10,000 for your services?

A. Yes.

Q. And your total bill was \$15,800?

A. Correct.

Q. And \$5,790 of this was for cash outlay and expenses, and \$9,700 for your services?

A. Well, you are splitting it up.

Q. That is your testimony before the Federal Trade Commission?

A. I am doing the testifying.

Q. And I am asking you, is that true?

A. And when I was on the witness stand—

Q. Answer that question.

A. I will answer the question fully—

Q. Here is your testimony, I will show it to you.

A. I don't have to see it.

O. And you testified that \$5,790 of that was paid for cash outlay, expenses, and \$9,700 was for services, was that true or was it not true?

A. That was true.

Q. All right sir.

A. But that was—

Q. And you also—

A. I am answering the question.

Q. That is all right, I am asking you the questions. And you also testified that Mr. Thompson arbitrarily added \$400 for interest?

A. Yes.

Q. Because you had carried the account?

A. Yes.

Q. And without disclosing any of this to the Smithsonian Institute, you had substantially all of this published by the Smithsonian Institute and put out under its name?

A. That is a lie.

Q. Is it not—

A. That is the only term to apply to that sort of a charge, because I disclosed fully and freely and frankly to Chester Walcott, just exactly how the report was prepared. He knew exactly that all of these facts came in as part of a huge study and he knew that I was not working for nothing.

Q. Was there any of the money of the Smithsonian Institute paid for the printing of this?

A. It developed afterwards there was not. They thought there was not, but they found that the fund had been earmarked, and couldn't use it.

Q. How much did the printing cost?

A. I couldn't answer you now.

Q. Here is your answer (indicating)

A. I would prefer to use what are the facts here (indicating)

Q. Here is your sworn testimony. Are you going back of that?

A. My sworn testimony might not be the printed report. The Federal Trade Commission did some deleting. One whole sentence that I used there went out.

Q. All right, can you tell us what you paid for it?

A. All right I will give it to you.

MR. COOKE: Is the witness doing any work in Pennsylvania now?

(No response)

FATHER COX: To me this seems to be a high class manner of doing educational work. The Smithsonian Institute is so highly regarded everywhere and their word would certainly be accepted without question.

THE WITNESS: I don't have the figure in my memorandum.

BY MR. EVANS:

Q. There it is (indicating)

A. That is probably correct.

Q. So, the printing cost, was \$489.50.

A. Yes.

Q. Who paid it?

A. I did with a personal check.

Q. Who reimbursed you?

A. Mr. Thompson.

Q. So, the actual printing of this Smithsonian pamphlet was paid by the Duquesne Light and Power Company?

A. Yes sir.

Q. How many copies were printed?

A. I couldn't answer that, because I have no record.

Q. You testified that the first edition was \$5,000?

A. I didn't testify to that at all. That has not any bearing on the Smithsonian.

Q. You were asked how many copies were printed, and your answer was I am not sure, but my recollection would be the first edition would be five thousand.

A. But not dollars five thousand.

Q. I said "dollars," that is my mistake.

A. All right. That is probably a correct statement.

Q. Who distributed it?

A. The Smithsonian. Some people wanted some reprints.

Q. How many copies were distributed at a subsequent time?

A. I couldn't answer that. I asked that twenty-five thousand copies be printed.

Q. There was a later edition?

A. A few days after the first edition the whole thing was rushed, because a government,—a cabinet officer wanted it rushed through the government printing office.

BY MR. COOKE:

Q. Who was the cabinet Officer?

A. Lansing.

Q. Who paid for the first edition?

A. I am perfectly willing to answer that question if the Chairman will assume the responsibility.

Q. Who was the cabinet officer?

A. I must decline to answer that, unless you assume the responsibility.

Q. I will assume it.

A. All right; Mr. Hoover.

BY MR. RICHARDS:

Q. There was nothing particularly wrong about that, was there?

A. There was nothing wrong under the sun.

Q. Then why should there be any hesitancy in answering that question, if it was a legitimate outlay of money or a legitimate printing?

A. For the simple reason that there are a lot of people who are trying to make political capital out of what was a perfectly normal thing. Since the slam was made by my friend, the priest here, I am going to answer that question of his. The manuscript for this report was changed into the Smithsonian Institution. I had previously written a letter, stating that it would probably be ninety days before any thing would be done. Very much to my surprise we rushed the manuscript out at eleven o'clock on Monday morning. Dr. Walcott stated that because of the very live and vital interest in Washington at that time in the St. Lawrence Water Way Project, and all of its implications on the coal situation, because it has a very direct relationship, and you build the St. Lawrence Water Way Project, and fifty-eight thousand coal miners would be out of work; that the cabinet officer wanted to see the manuscript. Arrangements were made at five o'clock that afternoon, I met Mr. Hoover. He was then the Secretary of Commerce. He said because of his vital interest in the St. Lawrence Water Way Project and because of all the things in this (indicating) that give quick easy readable picture including the water resources in Chicago, which at that time was a very acute question, the thing was rushed through the printing office. Arrangements were made, and it was rushed through the printing at the request of the cabinet officer. That is how the thing happened to come out prematurely, because ordinarily it would have taken its routine place and come out in about ninety days. Contrary to what the Catholic priest here has said, the Smithsonian was as clean as a hound's tooth in that transaction.

MR. RICHARDS: I think he would agree with that and I resent the implication that there was anything that was off color in the Smithsonian Institution transaction.

THE WITNESS: There was a very good reason why the Secretary of Interior, Mr. Hoover, wanted it, and there was a very good reason why it should be rushed through, and it was rushed.

FATHER COX: We do not cast any aspersions upon any body. I believe that we all feel that there was a system of propaganda on behalf of the public utilities to educate school children here. We do not think it is right and we object to it.

MR. RICHARDS: And further than that, if the Smithsonian Institute had any part in it it was not exactly ethical, they can withhold just as can somebody else. They might have been fooled.

FATHER COX: It might be a good thing to write to the Smithsonian Institution and get their angle on this.

BY MR. EVANS:

Q. At the time that you received a telegram from Mr. Lane or your immediate superior, Mr. Bain, to the effect that your resignation had been accepted the day before—

A. Yes sir.

Q. When was it?

A. Well, it was way back about 1921 or 1922.

Q. And had you resigned the day before?

A. I had not.

Q. Then, in other words, you were dismissed?

A. I was.

Q. And for what reasons?

A. Because I wouldn't agree to certain things that certain politicians in Washington wanted.

Q. What did they want you to do?

A. I don't want to enter into that Teapot Dome case, because it is closed.

Q. I think we are entitled to know why you were dismissed from the government department?

A. I am not going to discuss that here.

Q. You are unwilling to discuss the reasons why you were dismissed from the government department?

A. The Teapot Dome case is closed.

Q. Will you just answer the question? Are you unwilling to state why you were dismissed from the government department at Washington? Are you or are you not?

A. If the Chairman wants me to answer I will answer.

THE CHAIRMAN: Go ahead and answer.

THE WITNESS: At that particular time a group of public utilities, as I viewed the situation were using the bureau of mines as a rubber stamp and I thought that it was a very unfair situation, and I resented it.

BY MR. EVANS:

Q. What utilities?

A. A number of natural gas companies.

Q. What particular group?

A. It was the Natural Gas Association of America.

Q. And why did you feel that they were using the Bureau of Mines unfairly?

A. They wanted the advantage of governmental control of the natural gas without responsibility of company co-operation.

Q. What did the government ask you to do that you refused to do?

A. To O. K. a number of things that I felt were certainly not in accordance with public interests.

Q. What was this information?

A. Information in regard to the natural gas waste situation.

Q. What was that information you had?

A. The natural gas waste at that time was from a public viewpoint simply damnable because of leakage in pipelines, which the companies denied and because of the immense waste in the field.

Q. Who told you to suppress it?

A. Various people I was in contact with in the Bureau of Mines.

Q. Who told you?

A. Largely from the Natural Gas Association crowd.

Q. Who in the Department of Mines told you to suppress this information?

A. No one in particular. It was a situation that was developed where the Director of the Bureau of Mines at that time arranged for a secret conference with a group of natural gas operators after Secretary Lane had started up the whole thing for confirmation.

Q. When you stated you resigned because you were asked to suppress information, that was not the case?

A. It was the case to this extent, because they had wanted a larger program and the Bureau of Mines and was opposing it.

Q. Who asked you to do anything that you refused to do?

A. Bain asked me to do a number of things I refused to do.

Q. Along what line? You stated to this Committee that the reason you resigned was that Mr. Bain asked you to suppress information?

A. Not in the sense that Bain was responsible. He was simply carrying out what this natural gas group wanted done which I felt was not fair because the whole thing had been started with the cards on the table face up and no joker in the deck.

Q. You testified you were dismissed from the Bureau of Mines?

A. It amounted to that in effect.

Q. Because you refused to suppress information which they wanted suppressed?

A. That is one scope. I did not approve of the program that they wanted to put through.

Q. Who asked you to suppress any information in the Bureau of Mines?

A. I have already answered that.

Q. Answer it again.

A. I will answer it again as often as necessary. Your question is not in the proper form. What happened was, they had

that program due to a group of natural gas operators who were trying to get all the credit they could from conversations and trying to tell the Bureau of Mines not to carry out some of the recommendations I had made in regard to natural gas uses.

Q. In fact, no one in the Bureau of Mines asked you to suppress any information?

A. They did to this extent, that when the situation came up in what I thought was the public interest, I stood on one side and the group of officials stood with the utilities, which I did not.

Q. Which ones stood with them?

A. Bain, who is the director of the Bureau of Mines, and them that were with him.

Q. Who were with him?

A. I could not name them now, but men who were there knew the details.

Q. That is the only explanation you can make why you were dismissed by the Bureau of Mines?

A. Yes sir.

Q. Why was your connection with the Smithsonian Institution terminated?

A. Because it terminated. I never received a dollar from them.

Q. You were using their name to put out your publications?

A. I was doing some work at the Institution because I was developing some models.

Q. After you published these various public utility pamphlets in the name of the Smithsonian and the fact that that was brought out, your connection with the Smithsonian was severed?

A. Yes, and was not renewed but terminated automatically at that time.

BY MR. CRAWFORD:

Q. Do you know why you didn't make a report for the Pennsylvania Fuel Supply Company?

A. No I do not; I was called off.

MR. CRAWFORD: I hauled you off. As soon as I heard you were coming, I hauled you off.

H. S. RAUSHENBUSH, recalled

BY MR. EVANS:

Q. Mr. Raushenbush, the committee requested from the Public Service Commission on March 4th information in regard to all cases started by the Commission since January 1st, 1926, which were instituted more than one year before the date of decision. That information has been furnished, and have you made any study of it?

A. Yes, sir, I have made a very brief compilation of those cases, of the rate cases involved in this document presented here. There were altogether about 360 rate cases of various kinds involved. I have here about the average length of time between the time the complaint was filed and the final decision. The average was two years, eleven months, twenty-four days. I also prepared a few copies of this compilation of the cases, which took over four years. There were a good many cases running to seven years, several into eight, a good many into six and five. There was altogether about seventy-four cases running over four years length of time.

Q. There were 74 cases that you have listed running for over four years?

A. Yes, sir.

MR. EVANS: I offer this in evidence as Exhibit No. 167. Probably it will be convenient to have the Commission's tabulation immediately adjoining this, rather than put it in with the answers to the letter of March 4th. So, I will offer the Commission's reply as Exhibit No. 168. Exhibit No. 167 is merely a list of the 74 cases that have been before the Commission more than four years, during the period from January 1, 1926, on.

BY MR. EVANS:

Q. Have you prepared,—have you anything more to say in regards to that?

A. Not in regard to that.

Q. Have you prepared an Exhibit, showing the interstate movement of electric energy, as it effects the Pennsylvania?

A. Yes, sir, when I was on the stand before, I was asked about that. It is a very simple exhibit of one page, taken from the figures compiled by the Federal Trade Commission, show-

ing the exports from Pennsylvania, and the imports into it. The exports being about 14% of the amount generated and the imports being 25.88% of the amount consumed. The exhibit also shows the net movements each way between various pairs of states such as Delaware and Pennsylvania, Maryland and Pennsylvania, and so on.

BY MR. COOKE:

Q. You spoke about the average being 15%.

A. I said a little over 14% of the amount generated is exported, and the amount of imports is reckoned in relation to the amount consumed. It is almost 26%.

MR. EVANS: I offer this in evidence as Exhibit No. 169.

MR. COOKE: I think it is worth while to put on the record the fact that 15% of outgoing—or rather the 25% of incoming—was absolutely beyond the scope of regulation.

MR. TURNER: How do you mean, Mr. Cooke?

MR. COOKE: That is 25% of our problem, as far as electricity is concerned.

MR. TURNER: Why is it absolutely beyond the scope?

MR. COOKE: Because it is interstate flow of current, over which there is no present regulation.

MR. TURNER: Doesn't it come in for distribution?

MR. COOKE: You cannot control the rates at which it is sold, because you cannot ascertain the cost of its production.

MR. TURNER: Doesn't that come in under a contract with a local company or distribution?

MR. COOKE: No, because a great deal of this, Mr. Turner, is exchanged.

MR. TURNER: That gets back to the question, it has to be exchanged for a light commodity, which would come under regulation.

MR. COOKE: You would be surprised to know how loose those exchanges are.

MR. TURNER: That may be in the broad principle. I just was trying to find out.

MR. EVANS: I think the difficulty is that the price at which the foreign company sells to the Pennsylvania companies is not subject to regulation, because that is interstate commerce.

MR. TURNER: That is true, but as I recall the testimony here, that cost is so small a part of the rate that it doesn't enter very largely into the question.

MR. COOKE: In the case of Milford, Pennsylvania, a very distinguished community,—

MR. TURNER: Is that in this state?

MR. COOKE: Milford, Pennsylvania, the home of the present executive,—the selling price is 15c and the price of the current coming across the border is 4c. I suppose that our Commission could regulate the 11 cents, but they cannot regulate the four cents.

MR. TURNER: It would regulate itself, if it were put down.

MR. EVANS: The question is whether they can refuse to allow as an operating expense to the distributing companies the price which is paid to the foreign generating company.

Q. Have you also prepared a statement in regard to domestic water in Pennsylvania cities?

A. Yes.

Q. And you prepared such an exhibit?

A. Yes, for both private and municipal plants, according to the size of the city.

Domestic water rates in Pennsylvania municipalities, 1930, produced and marked Exhibit No. 170.

MR. EVANS: I offer this in evidence as Exhibit No. 170.

THE WITNESS: May I say in this connection that it is somewhat difficult to make comparisons here; very difficult to make comparisons between cities that are served by gravity systems, and cities being served by pumping systems, and also difficult to make comparisons between private companies and municipalities, except in a very general way. The first table on the first page, for instance, Philadelphia shows a figure of \$12 for the annual use of 20,000 gallons, and for that sum of \$12 those consumers get as much as 60,000 gallons. So, taking the 20,000 all the way through, it would show some very high figures in some cases, and in other cases where there is an "M," the minimum charge exceeds that consumption of 20,000 gallons. On the next sheet, private companies, we have taken both the metered rates at the right hand column for 20,000 gallons, and the flat rate, which is not supposed particularly to amount to 20,000 gallons. We don't know how much it amounts to. The consumer usually has a first tap, a bath tub, a wash basin, a water closet, and they are paying in

Scranton \$32.50, and so on down the line. I think it is important perhaps to point out in passing that most of the people, the consumers of that Scranton-Springbrook company that we have heard so much about, is something like 72% get a flat rate rather than the metered rate, which is quite a good deal lower.

Q. Why do you take a consumption of 20,000 gallons?

A. Because that is generally accepted and used by the Commission to be about the average family use. One other rough comparison can be made here, if you will notice on the third page of this exhibit, the averages are put at the bottom, and they show that the flat rates run from \$20 to \$24.50, and the metered rates run from about \$11 to about \$15. The municipal rates are only metered, and they show a good deal lower, so I say the comparison is not absolutely 100% because of the difference in pumping systems.

Q. Have you explained the last page?

A. The last page shows that the various companies, the various classes of consumers, both metered and unmetered, and shows which of the rates is metered for most of the people in the community.

Q. Now, have you prepared any exhibits in regard to household appliances?

A. Yes, I have prepared two exhibits on that to show the amount of usage of household appliances that can be paid for at various rates throughout Pennsylvania, and these tables are not inclusive. They compare a city that is just a little way beyond the borders of our state, Jamestown, with a good many, but not all of the Pennsylvania cities, and it shows here—

BY MR. COOKE:

Q. What is that system at Jamestown, New York, is that public or private?

A. That is a municipal plant, but it is pretty close to our border, and it is rather a larger plant than most of the plants of Pennsylvania, and it compares reasonably in the cost of coal, and so on, with a good many of the Pennsylvania companies. I mean it gets coal from West Virginia and pays \$3.80 a ton, which is about the price the Metropolitan Edison pays, which is \$3.90. That is a little less than what the Philadelphia Electric pays for coal, \$4.20, but it is about just twice as much as the company around here, the Pennsylvania Power and Light Companies pay for their coal, these tonnage figures, of course, have to be checked again in the sense that while the Pennsylvania Power and Light reports \$1.64 for its coal, Jamestown reports over twice as much, \$3.84, still it may be a different kind of coal, that is not separated in the reports.

MR. EVANS: I offer this in evidence as Exhibit No. 171.

BY MR. COOKE:

Q. Do I understand that the \$3.81, the Jamestown people get 25 kilowatt hours and the Pennsylvania towns get this number of kilowatt hours in the left hand column?

A. This sheet—this appliance sheet is furnished to show how much about it would cost the people in Pennsylvania to have some of these appliances. Now, in Jamestown at the present time, 1931, the woman is able to use all of these things in her home, every one of them, and in 1931, the rates in these Pennsylvania cities, they simply are not able to use more than an electric light and a flat iron. In some of those towns, in Jamestown, that woman can use four more things; New Castle, they can use three more things; Norristown and Erie, one more, and in Scranton, two more, but most of them cannot use all of them, or use as much as Jamestown for the money that they pay, \$3.81, which they would if these squares would be filled up. This is just a story of showing that there is a possibility of comparing the appliances. I have also worked out a similar chart for smaller cities.

BY MR. COOKE:

Q. You have good authority for the use of power by the refrigerator?

A. Yes, that is from the Electrical World studies that were made some time ago.

Chart, "Pennsylvania Housewives can buy much less electricity for \$3.81 than housewives in other places, Jamestown, N. Y., for example, produced and marked Exhibit No. 172.

MR. EVANS: I offer this in evidence as Exhibit No. 172.

MR. COOKE: This last one that is being distributed?

MR. EVANS: Yes.

THE WITNESS: The same thing shows here that shows on the rate figures, and it shows that some of the smaller cities got much more power for their money than some of the bigger places. The bigger places are here on the first sheet, and the smaller ones are on the second. We tried to group together most of the cities.

BY MR. RHODES:

Q. Where is Old Forge?

A. Old Forge is down here. (Indicating on exhibit.)

MR. COOKE: He means what part of the state.

THE WITNESS: Up near Scranton.

MR. TURNER: There would be no use of putting in a washing machine in Old Forge.

THE WITNESS: This is not a complete picture. There are some companies that have promotion rates that drop quite a lot, that we talked about before, but in the western part of the state, and the Philadelphia Electric drops off if a lot of current is used.

BY MR. HAGMAIER:

Q. Where does Bradford get their power?

A. Bradford, I think, comes across the border, from the Niagara outfit. It is very close to Jamestown. If I remember correctly. That is one of the notable things about Jamestown, that there is a private company competing with it; it has forced the Niagara-Hudson to bring down rates in the surrounding territory and the Niagara-Hudson has taken these people into court for keeping the rates so low.

MR. EVANS: The Tri-State Power Company, Mr. Hagmaier, map shows that Bradford is in the territory of the Niagara-Hudson.

(Discussion off the record.)

BY MR. EVANS:

Q. Have you anything else you want to say about the Jamestown plant?

A. Well, I could say a whole lot, but it is late.

MR. TURNER: Thank you very much, Mr. Rausenbush. We have enjoyed your frankness, and hope you will come again next week.

BY MR. EVANS:

Q. Is that all?

A. Mr. Cooke usually asks what the generating costs are and what—

MR. TURNER: You tell him that privately.

THE CHAIRMAN: The hearing will stand adjourned until ten o'clock tomorrow morning.

(Adjourned until Friday, April 24th, 1931, at 10 o'clock A. M.)

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Friday, April 24th, 1931, at 10.00 o'clock P. M.

There were present:

Messrs. D. Glenn Moore, Chairman,  
Chester H. Rhodes,  
Martin Memolo,  
Ellwood J. Turner,  
Louis W. Hagmaier,  
Harry J. Crawford,  
Morris L. Cooke,  
Rev. James R. Cox,  
Harold Evans, Esq.,  
John M. Walker, Esq.

A. B. MILLAR recalled.

BY MR. EVANS:

Q. Mr. Millar, will you please explain to the Committee the connection between the Pennsylvania Electric Association and the Public Policy Committee of the Pennsylvania Electric Association?

A. There is no Public Policy Committee of the Pennsylvania Electric Association at this time. There was prior to my connection with the Pennsylvania Electric Association a committee that was known as the Public Policy Committee.

Q. When was that Committee dispensed with?

A. To my recollection some time in 1929—yes, in 1929.

Q. After the Legislature had adjourned?

A. I cannot fix the time, because so far as I was concerned there was no connection between the Legislature and the Public Policy Committee.

A. Oh, there was no connection between the Legislature and the Public Policy Committee?

A. So far as I know.

Q. Now, what was the function of the Public Policy Committee?

A. The Public Policy Committee, as I understood it—

Q. Just a minute, Mr. Millar. Do you know what the purpose of the Public Policy Committee was?

A. I would say no, definitely—let me put it this way. I went with the Pennsylvania Electric Association, I think it was in December of 1928, and the Public Policy Committee was discontinued shortly after that, and therefore I had no connection with the Public Policy Committee, although I knew there had been such a committee.

Q. Now, did you have any connection with the Public Policy Committee prior to December, 1928?

A. I am trying to fix the date, Mr. Walker, in my own mind, when I went with this electric association. Of course, prior to my connection with the Pennsylvania Electric Association, I had no connection whatever with the Public Policy Committee.

Q. Now, are you certain in your own mind that your connection with the Pennsylvania Electric Association commenced in December of 1928?

A. I am trying to get back to it. Yes, I would say approximately December 1, 1928.

Q. And your connection with the Public Policy Committee commenced at the same time, is that right?

A. Yes.

Q. Had you ever received any money from the Pennsylvania Electric Association prior to December, 1928?

A. Prior to my connection with the Pennsylvania Electric Association, I had received no money from the Public Policy Committee. Let me say this, if I am wrong in saying December 1, 1928, I wish you would—

Q. The point is this, Mr. Millar. I want to find out when you came with the Pennsylvania Electric Association. I don't want to charge you up with any of their sins that predated your association?

A. I cannot fix that in my mind.

Q. Do you have anything with you that would show that?

A. No sir.

Q. Do you have any in the office, in your office, that would show that?

A. Oh, yes, and I will be glad to give you the exact date on that.

Q. All right. Now, in order to refresh your memory just a little bit, Mr. Miller. I show you here Federal Trade Exhibit No. 1113, on page 861 of the Federal Trade Exhibit, under date of January 18, 1923: W. E. Long, expenses to A. B. Millar, \$250. Will you tell the Committee what that was for, Mr. Millar?

A. I am assuming that is exactly what it says. To and from Harrisburg.

Q. To where from where?

A. Philadelphia and Harrisburg.

Q. From Philadelphia to Harrisburg. Now, on January 18, 1928, by whom were you employed?

A. I wish you would let me check from my records exactly, from the office. I want to be perfectly fair, and open with you, and I am not positive.

Q. I don't want to take any undue advantage of you, Mr. Millar, but that is only a couple years ago, that you should know by whom you were employed?

A. My recollection is December 1, 1928, that I was employed by the Pennsylvania Electric Association.

Q. And in January, 1928, by whom were you employed?

A. If I am correct on the first date, I was employed by the Philadelphia Rapid Transit Company.

Q. If that is true, and you were not employed by the Pennsylvania Electric Association until December, 1928, can you explain why you were receiving \$250 from this Public Policy Committee in January of 1928?

A. I didn't receive—let me put it this way, Mr. Walker, I didn't receive any money from the Pennsylvania Electric

Association or any of its affiliations prior to my connection with the Pennsylvania Electric Association.

Q. Just explain to me, so I understand, why was Mr. W. E. Long receiving \$250 which he had charged up against Mr. A. B. Millar?

A. I don't know, if those dates are correct, and if it was prior to my connection with the Pennsylvania Electric Association. I did not receive the money. I did receive \$250 from Mr. Long, and I did receive a subsequent check from Mr. Long, subsequent to my association with the Pennsylvania Electric Association, there is no question about it, Mr. Walker.

Q. All I am trying to do, Mr. Millar, is to get it straightened out.

A. If you will let me get on the phone for about a minute, I will give you the exact date.

MR. WALKER: Go ahead.

(The witness was excused in order to obtain the information requested.)

Q. And now, Mr. Millar, do you devote all of your time to the Pennsylvania Electric Association?

A. Yes sir.

Q. Are you employed by any other firm or corporation?

A. I am.

Q. By whom?

A. The Pennsylvania Gas Association, and on a retaining basis with the Philadelphia Rapid Transit Company.

Q. You are on a retaining basis with the Philadelphia Rapid Transit Company?

A. Yes sir.

Q. And what is your official title with the Philadelphia Rapid Transit Company.

A. I have no official title with the Philadelphia Rapid Transit Company.

Q. What are your duties?

A. I am consulted, asked for advice whenever they deem it necessary.

Q. Along what lines?

A. Oh, I would say in connection with matters affecting bus operation; generally along the line of bus operation.

Q. And what is your annual retainer?

A. \$6,000.

Q. Can you approximate how often during 1930, they consulted you on bus operation?

A. That would be rather difficult, because I am called on the telephone many times and usually on Saturday, when I am in Philadelphia. I am consulted on those matters.

Q. Then, your association with the P. R. T. is an active one, is it?

A. Fairly so. I wouldn't say it was active in the sense that I participate in all matters down there—no; but whenever they think I have the information or may be able to advise them on matters they consult me.

Q. The Pennsylvania Gas Association, as I understand it, is an organization similar to the Pennsylvania Electric Association, only that the Pennsylvania Gas Association protects the gas industries; is that right?

A. I don't know about protecting the gas industries.

Q. They do not harm them, do they?

A. The Pennsylvania Gas Association is a organization similar to the Pennsylvania Electric Association; one affecting gas and the other electricity.

Q. And they are organized for the purpose of advancing the art of the industry; is that right?

A. That's right, sir.

Q. Do they have Constitution and By-laws?

A. They do.

Q. Is that phrase Mr. Shearer used yesterday, incorporated to advance the art of the industry—is that in the Constitution and By-laws?

A. Of which are you speaking now?

Q. Either one.

A. Yes sir.

Q. It is?

A. Yes sir.

Q. Do they have any other purposes besides advancing the art of the industry?

A. Let me put it this way,—

Q. Wait a minute.

A. Will you let me read the purpose?

Q. Will you just please answer my question: Do they have any other purpose beside the advancing the art of the industry?

A. No; that is the purpose.

Q. And now, included in the art of the industry is also a committee known as the Public Policy Committee; is that right?

A. Yes sir.

Q. And the Public Policy Committee has gone out of existence; is that right?

A. That's right, sir.

Q. And what new committee was incorporated to take its place?

A. No new committee.

Q. What committee or what group of members of your Pennsylvania Electric Association are carrying on the duties that were formerly performed by this Public Policy Committee?

A. You asked me about the Public Policy Committee before, and I told you that I was not familiar with the functioning, coming so shortly. Now I will say this, that the Pennsylvania Electric Association, like all associations, has its offices and executive committee. The direction of the association is lodged, of course, in the hands of the officers and the executive committee, and they direct, in the main the activities of the other committees of the association.

Q. You are thoroughly familiar with the personnel of this executive committee, are you not?

A. Yes sir.

Q. Now, Mr. Millar, will you please tell me who does the job that Mr. Johnson used to do?

MR. TURNER: What job is that, Mr. Walker?

MR. WALKER: Mr. Millar, knows.

THE WITNESS: No; I don't.

BY MR. WALKER:

Q. He used to be a member of this Public Policy Committee.

A. I believe he was.

Q. Chairman; as chairman of the Public Policy Committee, he performed certain functions for the Pennsylvania Electric Association, didn't he?

A. I assume he did.

Q. Now, did he or did he not?

A. I assume he did, because as I told you before—

Q. All right. Who is performing those functions now?

A. Again, it is an assumption. I assume that he did perform certain functions for the Pennsylvania Electric Association. The Direction of the Pennsylvania Electric Association is under the officers and executive committee of the association.

Q. You heard the testimony in Washington before the Federal Trade Commission, did you not?

A. Some of it; yes sir.

Q. You heard the testimony regarding the expenditures of the Public Policy Committee of the Pennsylvania Electric Association, did you not?

A. Yes sir.

Q. Then, you are familiar with the fact that this Public Policy Committee of the Pennsylvania Electric Association did receive contributions from members, are you not?

A. Yes sir.

Q. And you are familiar with the fact that they did make expenditures to certain individuals, are you not?

A. Yes sir.

Q. Now, who takes care of those expenditures now?

A. I do.

BY MR. TURNER:

Q. I am still at sea. You may have gotten into some of this examination before I came in and I am apologizing for any delay I may occasion, but I am still at sea as to what these particular things are that are being done?

BY MR. WALKER: We are just coming to that.

Q. One of the items that is listed in this Federal Trade Exhibit No. 1113 under date of March 22, 1926, is, Herman P. Miller, advance copies legislative bills, \$200.00. Who pays Herman P. Miller now?

A. I do.

Q. How much did you pay Herman P. Miller from January 1st, 1931, to date?

A. Nothing.

Q. Am I to understand you have not received any advance copies of legislative bills this year?

A. No.

Q. You did receive advance copies?

A. I did. When you speak of advance copies, let me qualify that to this extent. Bills are introduced as I understand the procedure in the Legislature, bills are introduced by a member of either branch and then are referred by the presiding officer to a committee. When that is done the bills are printed. Then they are taken and what is termed "picked" in order to be distributed, and everyone gets them. In order that we may be sure that I get all of the bills the system is for me to get the bills sent at the same time that they are sent to everyone else, members of the Legislature and other persons.

BY MR. TURNER:

Q. I never heard before of the term "advanced copies of bills." We speak of pink and white bills, but advance copies is a new term to me.

BY MR. WALKER:

Q. Mr. Millar, do you mean by advance copies, pink bills?  
A. Yes sir.

BY MR. TURNER:

Q. Are they bills before they are printed or copies of bills as they are introduced?

A. It is what is known as a pink bill in the Legislature after they are printed.

Q. They mail them direct to you?

A. Yes sir.

BY MR. WALKER:

Q. How much are you to pay Mr. H. P. Miller for furnishing you with these advances?

A. I presume I will pay him.

Q. How much?

A. I asked him to let me have the courtesy of letting me have the bills as soon as they are printed.

Q. Do you happen to know of any other of your associates that are on Mr. Miller's mailing list?

A. No sir, I do not.

Q. Do you also obtain these bills for the Pennsylvania Gas Association?

A. No sir. I get these bills for the purpose of informing myself and keeping the member companies informed as to what is introduced in the Legislature. I use the pink bills for myself and thereby be in a position to answer any questions that may come to me regarding pending legislation.

Q. Mr. Millar, perhaps this will shorten the thing a little, if I read to you from the testimony before the Federal Trade Commission on page 343:

"Q. What is your connection with the N. E. L. A.?

"A. I am managing director of the Pennsylvania Electric Association which is a part of one of the divisions of the N. E. L. A.

"Q. And is the N. E. L. A. the National Electric Light Association?

"A. Yes sir.

"Q. How long have you held that position?

"A. Since December 1st, 1927.

"Q. Before that you were connected with some utility company?

"A. I was connected with the Philadelphia Rapid Transit Company."

Q. Were you secretary of the Pennsylvania Public Utilities Commission at one time?

A. I was secretary of the Public Service Commission from the time of its beginning and creation in July, 1913, down to the time that I went to Philadelphia with the Philadelphia Rapid Transit Company. I think there is one change that might be made. I am not sure that November 1st, 1920, is the correct date.

Q. You are still affiliated with the Phila. Rapid Transit Company?

A. As an advisor and consultant when they desire my information.

Q. Now, do you have a list of the companies that we requested in your subpoena?

A. Yes sir.

Q. Can you tell me how many Class A members are in the Pennsylvania Electric Association?

A. Forty-two.

Q. Can you tell me how much was contributed by all of your members of the Penna. Electric Association in 1928?

A. I wonder. Mr. Walker, in order that you may be advised and that the Committee may be advised, if you would permit me to digress and explain just how we get our money. You are putting a date that I cannot specifically answer, because our fiscal year starts on June 1st.

Q. How much did you collect from June 1st, 1927, to 1928?

A. We collected no money from members of the Penna. Electric Association in the year from June 1st, 1927, to June 1st, 1928, but we did receive \$40,000.

Q. From whom did you receive that?

A. The National Electric Light Association.

Q. That was a contribution of the National Association to the State organization?

A. Correct.

Q. How much money did the Penna. Electric Association get from June 1st, 1928, to June 1st, 1929?

A. Practically the same amount.

Q. And from the same source?

A. Yes sir.

Q. Did it receive any contributions or assessments from its members?

A. I think it was about that time, Mr. Walker, that the need for additional information to be given to the rural communities in the State of Pennsylvania was found to be very advisable, therefore as I say I am not sure of my date, but the member companies of the Penna. Electric Association directly contributed for the purpose of putting advertisements in the Pennsylvania Farmer and the Pennsylvania Grange News as to the use, utility and utilization of electric energy on the farm. That sum was approximately \$12,000.

BY MR. COOKE:

Q. Was that in the year 1928 or 1929?

A. If Mr. Walker got me up to twenty-nine—I would be glad to give that to you and I would be glad to give you the amount and all of the information concerning it including the companies by whom the contributions were sent, but I hesitate to give you dates and amounts from memory. I will be glad to send it to you.

BY MR. WALKER:

Q. Will you tell me how much money the Penna. Electric Association received from June 1st, 1928, to June 1st, 1930?

A. Subject to only that \$12,000, as far as when it was received, whether it was in 1928, 1929 or 1930, practically the same amount was received from the National Electric Light Association as in previous years.

Q. Then am I to understand that from June 1st, 1927, to June 1st, 1928, you received \$30,000 from the National Electric Light Association?

A. Approximately so.

Q. And from June 1st, 1928, to June 1st, 1929, you received approximately \$40,000 from the National Electric Light Association?

A. Yes sir.

Q. And from June 1st, 1929, to June 1st, 1930, you received approximately \$40,000 from the National Electric Light Association?

A. Correct.

Q. Now, you say your public policy committee is no longer functioning?

BY MR. COOKE:

Q. May I ask where that \$12,000 came from?

A. It came from direct contributions from member companies in the State of Pennsylvania exclusively. The reason for collecting it from them rather than going back to the National Electric Light Association was that that money was to be used for the advertisement of rural electrification exclusively in Pennsylvania and therefore these companies deemed that they were the ones to pay for this advertisement which appeared in those two papers.

BY MR. WALKER:

Q. And the contributors were put in the treasury funds, were they not?

A. They were.

Q. \$12,000 was put in back to the form fund.

A. No sir.

Q. Carry it in the general fund.

A. My recollection it is was put in the funds, but that separate checks, a separate for that \$12,000 has been kept and the money expended that way.

Q. Approximately the \$40,000 that has been received each year, was that put in the general fund.

A. Absolutely.

Q. Were there any other funds?

A. No sir.

Q. This money that was formerly contributed by members of the Pennsylvania Electric Association to the public policy committee, in what fund do you carry that?

A. I have no such fund.

Q. You mean that fund has been dispensed with?

A. Absolutely.

Q. There are no more contributions or assessments or donations?

A. Except those that I have thus far explained.

Q. All of the members of the Pennsylvania Electric Association are also members of the National Electric Light Association.

A. Necessarily so.

Q. They all make contributions or assessments or payments to the national association,—the national association, the National Electric Light Association?

A. Yes sir.

Q. Instead of receiving your dues from your state direct, from your state membership, you receive them from the national organization?

A. Yes sir.

Q. Can you tell me off hand what is the average annual payment or assessment from the members in Pennsylvania?

A. I would rather refresh my memory if you will permit me. There are Classes A, B, C, D, E, F, and G, of the N. E. L. A. Let me go back a minute so that you will have the whole picture. The N. E. L. A. as you inferred a little while ago, is an association of companies and individuals who are interested in the advancement and progress of the generation, distribution, transmission and use of electricity. To become a member of the N. E. L. A., you must become a member, first rather to become a member of the association, you must become a member of the N. E. L. A. The N. E. L. A. receives dues from member companies, based upon the classification in which they are entered, and then makes an appropriation thru either geographic divisions, where there are such, or state organizations. Class A members are those members companies engaged in the generation, production and distribution of electricity. Their dues are approximately 50 cents on \$1,000 of operating revenue. Class B members are the employees of the Class A companies. Their dues are \$3.00 a year.

BY MR. COOKE:

Q. Are these dues paid by the members companies? For their employees?

A. Not always.

Q. Quite frequently.

A. I would say about fifty-fifty, from what I can understand. I am not familiar with all of these details, because that doesn't come under me at all. The Class C are practitioners of engineering or related sciences or of other professions who are interested in the use of applied electricity. Class D are members, member companies of firms, engaged in the manufacture of apparatus, machinery, equipment, supplies or material for the production or use of electricity. Class E,—they are officers or employees of Class D members. The dues of Class D members are 1/50 of 1% of sales. Class E members are officers or employees of Class D. They pay according to my recollection, \$3.00 a year to the N. E. L. A. Class F companies or firms of electric wholesalers, contractors, dealers whose dues are 1/100 of 1%. Class G, they are officers or employees of Class F members.

Q. You do not mean that the association of Class members pay \$50 out of every \$1,000.

A. 50c; I think it amounts to 1/50 of 1%.

BY MR. TURNER:

Q. This money is paid in, is it, to the national association, and then in turn it supports the State association.

A. Yes sir. At the first of each fiscal year we make up a budget of what we deem will be our expenses for the following. That budget is submitted to the national association,—the

executive committee. That committee lets us know in a few days how much of that budget they are going to let us have. They then send us that money. With the exception of the \$12,000, that is the only income of the Pennsylvania Electric Association.

Q. The Pennsylvania Electric Association is the representative of the electrical industry in Pennsylvania?

A. Yes sir.

Q. Representative of the companies, that sell, manufacture and distribute?

A. Yes sir, the generating companies in Pennsylvania.

Q. All of them?

A. I think I am safe in saying all of them. Let me put it this way, I would say 90% of all power generated in the State of Pennsylvania is represented by the Pennsylvania Electric Association.

Q. Would you say that the Pennsylvania Electric Association is comparable to the Pennsylvania Manufacturers Association?

A. Yes sir, I would say so.

Q. The same idea.

A. Yes sir, or any other association, with a particular line of work, who come together for their advancement.

Q. You have local groups, like they have in the Pennsylvania Manufacturers Association? For instance, down in Delaware County we have—

A. No sir, we have committees, similar in name and form to the national association: These committee may be composed of members from any part of the State, generally limited to seven members to the community.

Q. Is the Pennsylvania Electric Association an incorporated body?

A. I think not.

Q. Just an association?

A. Just an association.

Q. Does it have by-laws.

A. A constitution and by-laws.

Q. That is published.

A. Yes sir.

Q. Is it in the record here?

A. It is not, I don't think.

MR. TURNER: I would like to ask Mr. Walker if that could not be put on the record. You may put it in as an exhibit, if you want to.

MR. WALKER: I do not want to spread it on the record of the committee.

BY MR. TURNER:

Q. Was it the Pennsylvania Electric Association that sent representatives here a week or ten days ago to asked to be heard?

A. Yes sir.

Q. By this Committee?

A. Yes sir.

Q. It was that association?

A. Yes sir.

BY MR. HAGMAIER:

Q. What were some of the items included in that budget to make up the \$40,000, a year?

A. Administrative,—expenses, maintenance of the office, printing. When I say printing, I mean printing reports, general, annual proceedings, yearly reports of the committee. Let me suggest this, Mr. Hagmaier,—let me send you a copy of our financial statement, showing you exactly how every penny of that money was spent.

MR. TURNER: I think it would be well to have that done, because there seems to be a feeling that these associations are created for some sort of an improper or sinister purpose, and I think that we ought to relieve the situation of all suspicion if we can. The thing I am particularly interested in in this investigation is to get the facts. Generalities do not mean a thing to me. You may put all of them you please on the record, but they do not mean a thing to me, I have been trained too long in the law to not want to have some kind of specific testimony along that line. If you people can come here, if you can give us something specific, if you can give us something that will show that this atmosphere of suspicion should be dispelled, I would appreciate it. I think that is the thing that should be done, both for the benefit of the Pennsylvania and for the electric industry.

A. That is our entire purpose, Mr. Turner. If there is any information from the Association that you want or have in mind, I will be glad to furnish it.

Q. It is not a question, Mr. Millar, of what we particularly want, as I see it. The difficulty that we are up against is this: That we have had presented a long record of some 4000 pages, and it is impossible to remember every bit of the detail of this testimony; it has not been possible to present it in a logical sequence as in the trial of a case, because of the necessity of putting in testimony at different times. Now, it is impossible for me to take 4000 pages of a book and review every bit of it, but there must have been in your organization, you must have seen the newspaper accounts, and you have people who have read this testimony, I have no doubt, and I think you would have been darn fools if you didn't, you must have had places where you saw certain things that were or were not as you thought they ought to be. Now, if there are such places in the testimony, I think you owe it to the Committee to come and tell us, if there are any, and then if we are right in taking the testimony, if the testimony is correct, I think you would have to be judged on the testimony.

THE WITNESS: When this investigation started, in fact when the Senate Investigation started, and the testimony came in, we arranged to get a copy of the daily testimony, and then when it was indicated that we were going to be given an opportunity to be heard, our expert studies the testimony, analyzed it, not only for themselves, but for the enlightenment of the Committee, and that has been done and is being done, but we understand now that we are not going to be permitted to put that in.

MR. TURNER: What do you mean by that, Mr. Millar, that you understand now that you are not going to be permitted to put that in.

THE WITNESS: By the letter we received, for instance, last Saturday we discovered, our special counsel discovered that one of our most important witnesses who had been studying the record—

BY MR. COOKE:

Q. What was that?

A. Mr. Jacobs.

Q. Who is Mr. Jacobs—

BY MR. WALKER:

Q. Nathan Jacobs?

A. Yes.

BY MR. COOKE:

Q. Who is he?

A. I understand he is an expert on taxation and valuation matters.

Q. He operates independently?

A. Oh, absolutely, he is not connected with any independent company.

BY MR. WALKER:

Q. He is connected with Morris Knowles?

A. I think he is.

Q. Valuation engineer from Morris Knowles?

A. I assume that that is his title. They learned that he was going to go abroad, to leave the country on Monday.

Q. With Major Richardson?

A. And they therefore requested an opportunity to have him present it this week, and we were not given any time to put that in this week, and I cannot—

MR. TURNER: What do you mean by that, I have been here at these meetings, and I have been here at the Executive Sessions, and I have never heard any question raised as to any request by you as to time. I don't quite understand.

THE WITNESS: Wednesday a week, I think it was, Mr. Chas. H. English of Erie—

MR. TURNER: Yes, I was present at that time when they came in here.

THE WITNESS: And Colonel Holding, their statement was that they desired to be heard, and subsequent to that— I think it was on Friday, Mr. English got in touch with me and said that he had learned that Mr. Jacobs had been called to Europe on a governmental mission, so he wrote a letter to counsel for the Committee and asked an opportunity to be afforded us to present Mr. Jacobs this week. In response to that we were told that the Committee's time was filled up,

and that Mr. Jacobs could not be given an opportunity this week to put any of his testimony in. Therefore unless we can arrange, or if he finds it possible to wait over until such time as the Committee desires, we lose the value, whatever value there is, of Mr. Jacobs' testimony.

BY MR. EVANS:

Q. When is he sailing, Mr. Millar?

A. My understanding, Mr. Evans, is on Monday, the 27th.

BY MR. TURNER:

Q. That is this Monday?

A. Yes.

BY MR. EVANS:

Q. Is he in town today?

A. I think not.

BY MR. COOKE:

Q. Has he been here at these hearings?

A. He may have been at one, but I am not sure.

MR. EVANS: In order to clear the situation up, it is not correct, as Mr. Millar states—

THE WITNESS: I am sorry if I made a mistake.

MR. EVANS: Mr. English did write me a letter, which I got in Philadelphia the first of this week, if I remember correctly, perhaps on Saturday, when I got back to the office, and stated that the Electric Association had presented its request to be heard at the hearings, and they had been told they would be given an opportunity, and that they demanded an opportunity to be heard this week and that they had a witness, unnamed, who would be present to present testimony on a date unnamed, and they demanded an opportunity to have him heard this Friday. I replied to Mr. English, that as he had been told by the Chairman of the Committee, an opportunity was going to be given to the Electric Association to be heard, that invitations had been issued to the responsible heads of the industry, that insofar as this week was concerned, I thought our schedule was full, and I did not believe that we could hear them.

MR. TURNER: That is a different interpretation than I got from the newspapers, Mr. Evans, and if it had not been for other things in the earlier part of the week, I would have taken it up with you before, but I would like to clear this up. I am sorry you were not in the room, because I asked Mr. Millar some questions, and I have not been very clear in my mind as to the relationship of the Pennsylvania Electric Association and just what has been done. Now, I have heard you say in the meeting, that you were going to call the responsible heads, and then I understood that Mr. English and Mr. Holding represented the Pennsylvania Electric Association, and I wondered why they were not asked to be heard, why we were not calling them to come before the Committee to be heard.

MR. EVANS: Mr. Turner, that is a matter entirely for the Committee.

MR. TURNER: I had felt you had assumed the responsibility for determining what should or should not be heard, and just wondered—

MR. EVANS: I didn't in any way assume the responsibility of who should be heard, except to the extent that I took the responsibility of feeling that this Committee would want to notify the responsible heads of the industry, whether or not we also heard the Electric Association was another matter.

MR. TURNER: I think you are perfectly right, in wanting to invite these men to come here who are the responsible heads.

MR. COOKE: Mr. Turner, we got more out of Mr. Zimmerman than we have got out of almost any other witness before the Committee.

MR. TURNER: I appreciate that that was particularly true in one way, and I don't doubt from your standpoint there was a lot in what Mr. Zimmerman said was of value, and I don't want to prolong this thing by setting forth my technical views on some things, but I think I stated to counsel and the other members of the Committee before, that there are some things in this testimony that I would like to see the Electric Association come in here and say that they have a defense, or if they have not, of course, they will have to keep quiet, but I did want to have certain things on the record in order to clear up my mind.

MR. RHODES: It seems to me this kind of discussion had better take place in Executive Session, more properly, than in the Committee.

BY MR. COOKE:

Q. How many of these classes of members that you mentioned have a vote?

A. One.

Q. Class "A" members.

A. I think that is the only—Class "A" and Class "B" members have a right to vote.

Q. Who are the Class "B" members?

A. The Class "B" members are the officers and employees of Class "A" members; Class "A" members being the operating companies.

Q. You are sure that Class "B" members have a vote?

A. Have the same privileges as Class "A" members, except the right to vote at executive sessions of the association.

Q. In other words, they can vote on technical matters?

A. Yes.

Q. But the real stuff done at executive sessions, they don't—

A. Of course, Mr. Cooke, the members of the executive committee are also Class "B" members.

BY MR. WALKER:

Q. Representing Class "A" members?

A. Yes, sir.

BY MR. COOKE:

Q. At secret meetings?

A. No, sir; I wouldn't say secret meeting.

Q. Let us call them executive meetings?

A. Executive; sir.

Q. They both mean the same thing?

A. No; I don't think so.

Q. But meetings at which the public is barred only Class "A" members vote at those meetings?

A. At the meetings of the executive committee, only the members of the executive committee attend, of course.

Q. Is the revenue of the National and Electric Light Association—we are interested in the National Electric Association really more than we are in the Pennsylvania Electric Association, because they provide the funds and presumably control the Pennsylvania Electric Association; is that right?

A. They provide the funds. I won't go any further than that.

Q. They provide the funds?

A. Yes, sir.

Q. You said they raised their funds by an assessment of fifty cents per thousand—one-fifth of the gross receipts—gross income?

A. Let me say "yes," subject to checking that with the National Association.

Q. Yes. They never make any assessments?

A. Not to my knowledge; no, sir.

Q. Any special assessments?

A. Not to my knowledge, no, sir; excepting special—you are referring now entirely in your remarks to the National Association?

Q. Yes.

A. I don't know.

Q. You would not say positively that the National Association did not make a special assessment?

A. I don't know, Mr. Cooke.

Q. But you would not be surprised to know that the President of the Philadelphia Electric Company at one time did raise \$100,000.00, in addition to the dues?

A. I have no knowledge of it, Mr. Cooke.

Q. In answer to a question of Mr. Turner's you said that the National Electric Light Association was like all other trade associations?

A. Generally, yes.

Q. You do not want to be too specific about that, do you?

A. No; I do not, of course.

Q. It has some characteristics that are special to that particular association?

A. Not knowing the other associations, Mr. Cooke, I can't say.

Q. If I was a resident of Newark, N. J., and wrote to the President of the Philadelphia Electric Company, and asked him

what the smallest meter was that he had in use, you would expect him to answer that inquiry?

A. Why, certainly.

Q. Would you be surprised to know that he is prohibited from answering that kind of an inquiry?

A. Of course, I don't know.

Q. I know, but I suppose that you would not know, because you are only two years on this job, and no electrical company can answer an inquiry addressed to it, except it gets permission from the New York office of the National Electric Light Association?

A. I never heard of that.

Q. You never heard of that?

A. No, sir.

Q. You get some friend to write the simplest question that you can think of to a Pennsylvania Electric Company, and see whether he gets a reply, and then check up and find out what the rule of the N. E. L. A. is. In that respect would you say it would be different from other trade associations?

A. I don't know what the other trade associations are.

Q. If a man, sir, in the grocery business, the sugar business—a man wrote from another state and asked him what he sold sugar for, or some similar simple question, you would expect him to get a reply, wouldn't you?

A. Sure. I get many letters out of the state, and I always make a reply without asking anybody.

MR. TURNER: Mr. Cooke, I thought after you heard Mr. Wyers' testimony last night, you did not write any letters.

MR. COOKE: I was rather proud of that letter.

FATHER COX: That letter was not only courtesy but he said in there that they favored that sort of thing; as long as he told the truth—

MR. COOKE: Frankly, I thought at the time it was a letter of Gifford Pinchot's.

BY MR. HAGMAIER:

Q. After all this discussion, I understand you said you would mail me that pamphlet?

A. Yes; just for the year?

Q. Yes?

A. Yes, sir.

Q. Thank you.

A. Let me suggest this, we are now approximately three-quarters of the way through for one year. Let me send it to you for the previous year, up to June 1st, 1930, and for this year if you want it.

MR. HAGMAIER: We want to cover this as Mr. Turner has suggested here.

BY MR. WALKER:

Q. Will you send me a copy of it so far as you have gone, which would cover from June 1st, to date; also from June 1st, 1929, to June 1st, 1930, and also from June 1st, 1928, to June 1st, 1929?

A. Would you mind sending me a letter to that effect.

Q. I would be glad to.

A. I would be glad to send it to you.

MR. WALKER: On the condition that you do not read the last letter back into the record some day.

BY MR. COOKE:

Q. There was a joint committee in the House and Senate that considered the Giant Power legislation, do you recall that?

A. I don't know anything about that. It was prior to my time.

Q. You were not familiar with that?

A. No, sir; not at all.

Q. This joint committee asked the American Engineers Council to give them special advice, and they sent up here selected engineers. I was going to ask you how you account for the fact that the bill for one of these engineers, Farley Osgood, was paid by the Pennsylvania Electric Association?

A. I have no knowledge of that at all, Mr. Cooke.

BY MR. WALKER:

Q. You were present in the Federal Trade Commission when Walter Johnson testified, were you not?

A. Yes, sir.

Q. And you heard him testify about the \$25,000 cash fund that was spent, he knew not how?

A. I am not sure about that.

Q. You recall his testimony to that effect?

A. I recall his testimony to the effect of collecting and spending that fund, but the amount I don't know.

Q. By the Public Policy Committee of the Pennsylvania Electric Association?

A. Yes, sir.

Q. And they received that money through contributions from members of your Pennsylvania Electric Association, didn't they?

A. I am testifying now to something I don't know anything about, you know, Mr. Walker.

Q. You heard Mr. Johnson's testimony?

A. I am willing to rely on Mr. Johnson's testimony.

Q. And the payments that were put in there, as exhibits before the Federal Trade Commission indicate that this Public Policy Committee of the Pennsylvania Electric Association did pay it to experts who came down and testified before the Giant Power Commission.

A. I am assuming that is correct.

Q. And the exhibits also show that they paid to the Honorable Francis Burke money for coming down and testifying before the Giant Power Commission?

A. Again, if that is in the testimony that is correct.

Q. And again, they paid for advance copies of bills?

A. With the exception of the word "advance" being correct.

Q. I am only reading from the exhibit.

A. I explained to you what I understood by "advance."

Q. W. E. Long, these expenses, attorneys and agents for services, \$2,500. Have you any idea what these agents—

A. Not in the slightest.

Q. Who is Mr. Long?

A. Mr. Walter Edward Long, I understand, again from that testimony, here, was treasurer of the National Electric Light Association.

Q. He is the man who turned the \$25,000 over to Mr. Johnson?

A. If it was \$25,000.

Q. I am taking from the testimony, I don't know whether it was \$25,000 or not?

A. Well I don't know, I can only refer you to the testimony.

Q. Do I understand that none of the work that was done by this public policy committee is being done by the Penna. Electric Association?

A. Again I say I don't know what the duties of the policy committee were.

Q. Do you mean to say that you assumed the position as managing director and that there were no files or reports that were turned over to you as to what has been done in the past?

A. No sir.

Q. That you went in there without knowing what the duties were or what your predecessor had done?

A. Exactly.

Q. And with no knowledge whatever as to how the committee had functioned in the past?

A. No sir.

Q. And they didn't tell you what to do in the future?

A. No sir.

Q. As a matter of fact, all this material that we have been discussing here this morning and which I discussed with Mr. Shearer yesterday, relating to the Penna. Electric Association, that was produced before the Federal Trade Commission, and that was taken from your files?

A. No sir.

Q. Are you positive of that?

A. When you say oral, I say no.

Q. What was it?

A. As I understand it, that which was taken from the files of the Penna. Electric Association was what I testified to at Washington.

Q. That is with regard to rates prior to 1914?

A. I don't recall the testimony, but I shall corroborate it if you will let me have the testimony.

Q. The point I am getting is this, do I understand that all this work done by the Public Policy Committee has been abandoned?

A. There is no such payment now.

Q. I asked you about the work?

A. Again I say I don't know what the work was.

Q. What do you do with the advance copies of these bills?

A. I read them.

Q. After you read them?

A. I read them for the purpose of trying to inform myself as to what is going on and then I am in a position if a question is asked me to be able to answer it.

Q. Suppose you found a bill that you thought is detrimental to the association, what is your procedure?

A. The chances are I would notify the companies.

Q. Is that all?

A. That is all I do.

Q. Do they communicate with you again?

A. Sometimes, in corroborating and correcting my impression as to what the bill may mean.

Q. The same is true of your Penna. Gas Association?

A. Yes, but not to the same extent as the Penna. Electric Association, but I would say yes; was generally.

Q. These payments made to all these attorneys and agents, as are listed on here by Mr. Johnson, for instance, the Daniel C. McKelvey, are now paid by you?

A. I don't know what they were for, but any payment made by the Penna. Electric Association is made over my signature.

Q. Is Daniel C. McKelvey still on the payroll?

A. He is not.

Q. Was he?

A. Not so far as I know.

Q. You heard Mr. Johnson testify in Washington?

A. Part of it.

Q. He was on the payroll then, was he not?

A. My understanding was that he was not on the payroll of the Penna. Electric Association.

Q. Whose payroll was he on?

A. From my understanding and from Mr. Johnson's testimony, he was paid by the policy committee.

Q. In other words, whatever the policy committee did, the Penna. Electric Association is responsible for?

A. I don't want to equivocate with you, Mr. Walker, but I have repeatedly said that I did not know what the duties of the policy committee were.

BY MR. RHODES:

Q. When you speak of the public policy committee hiring Mr. McKelvey, the public policy committee is a part of the Electrical Association?

A. There is no such thing, Mr. Rhodes.

Q. There was?

A. Yes, sir.

Q. Did they function independently of the association?

A. It functioned as a committee, and it might have been functioning independent of the association.

Q. From what source did it get its money?

A. I understood that it came from direct contributions from the member companies.

Q. How does the association get the money?

A. Except the \$12,000, it gets its money from a budget appropriation from the National Electric Light Association.

Q. And you think the public policy committee got its money direct from the utilities of the State?

A. I think so because that is what the testimony says.

Q. How long has that been out of existence?

A. I think in 1928 or 1929.

Q. As I understand it, the policy committee was recognized as part of the Association?

A. Yes, sir.

Q. If that is the case, you had an organization functioning within an organization and having its own budget?

A. I don't know about the budget, but it apparently spent money it received from the member companies.

BY MR. WALKER:

Q. Is that your theory, that this Penna. Electric Association is not accountable for something that one of its committees says?

A. You are getting too broad.

Q. Don't you think they are bound by what this policy committee did?

A. Now listen, you are getting me on a subject I don't know anything about, when you talk about the public policy committee.

Q. This was a committee of the Penna. Electric Association? And I say to you, that the association naturally is bound by something the committee does?

A. That is your testimony, not mine.

Q. I asked you, is it not?

A. I would say no.

Q. This public policy committee went out of existence shortly after Mr. Johnson's testimony before the Federal Trade Commission?

A. I would be glad to give you the exact date.

Q. Is it not functioning now?

A. It is not.

Q. It was functioning prior to the investigation?

A. From the testimony I would say it was.

Q. After the publicity it got down there it ceased to function, is that not a fact?

A. I would be glad to supply to you the information as to when it went out of existence.

BY MR. RHODES:

Q. I understand that you had no connection and no knowledge of the situation at that time, and no knowledge of how it functioned only from hearsay?

A. No sir.

BY MR. WALKER:

Q. Your testimony before the Federal Trade Commission says, "You became affiliated with the Penna. Electric Association December 1st, 1927."

A. I think that is right.

Q. And you received money from the public policy committee in 1928?

A. I am assuming that is right. May I say this with regard to my connection with the Penna. Electric Association. It was December 1st, 1927, when I went with them.

Q. When you came into the Phila. Electric Association, this public policy committee was there and was functioning?

A. Yes, I think it was.

Q. And you received money from the public policy committee in 1928?

A. I received a check from Walter G. Long in 1928.

Q. He was the treasurer?

A. Yes sir.

Q. And Mr. Johnson was the chairman?

A. I think that is correct.

Q. You don't know how long after that this committee continued to function?

A. I said I have no definite date in mind, but I will be glad to let you know.

Q. Before the Federal Trade Commission you testified as to the removing of some of the papers from your files to the Public Service Commission files. Will you just briefly explain that to the Committee?

A. As I recall it, the Commission had sent for me to gather some data, I think it was in connection with the ten-cent flat rate, I am not certain about that. If that was the incident, we were to collect data in connection with about ninety-four companies which were charging more than ten cents which the committee said should be reduced to a ten-cent flat, and in order to do that it was necessary to get some tariffs in order to check up our records and start this attempt to get the companies to reduce to the ten-cent flat.

Q. These files were gathered together by you, they were in your files, in your office in Harrisburg?

A. All of the records I was using were in my office.

Q. You removed them from your files to the files of the Public Service Commission.

A. Those which had been loaned to me in my checking, I returned.

Q. I will read to you part of your testimony before the Federal Trade Commission. I am reading from volume 3, page 347. The testimony is as follows:

"Question. Were you present in your office when Mr. Wooden came there?

"Answer. The first day he came I was not.

"Question. Were you there some time?

"Answer. I was there the next morning.

"Question. Were some of your files removed from that office to some other office?

"Answer. No files; no sir.

"Question. Were some papers?

"Answer. Yes sir.

"Question. Did you have some correspondence in February and March with Mr. Charles Oakes of the Pennsylvania Power & Light Co.?

"Answer. I did.

"Question. In regard to this investigation?

"Answer. Yes.

"Question. And the probable needs that the Commission would have for certain data relating to Mr. Oake's company?

"Answer. Yes.

"Question. Where was that data put; what become of it?

"Answer. May I explain that in my own way?

"Question. After you have answered my question.

"Answer. The Public Service Commission of Pennsylvania.

"Question. It was sent to the Public Service Commission?

"Answer. Yes sir.

"Question. Data referred to in this correspondence, originally it was sent there?

"Answer. Yes.

"Question. The original part of it, when these letters were written, the data referred to was in your office, wasn't it?

"Answer. Judge, I can not recall whether it was in that office or in the office of the Public Service Commission.

"Question. Didn't you have copies of certain data in the office of the association?

"Answer. At one time, yes.

"Question. And that it was removed at somebody's suggestion?

"Answer. No.

"Question. At whose suggestion?

"Answer. I removed it at my own suggestion.

"Question. Where did you remove it to?

"Answer. The Public Service Commission files.

"Question. What did it relate to?

"Answer. It related to the tariffs of the various smaller companies making up the other companies as of January 1, 1914, and prior thereto."

Q. Do you wish to corroborate that?

A. That is correct, I think.

Q. Can you explain to me this hook-up between your files and the Public Service Commission files?

A. As I recall that study, Mr. Walker, it was necessary for us to go back and examine many of the papers of the companies, which made up the then operating companies. In the early day of the industry—smaller companies were dotted all over the State of Pennsylvania. They did not use the efficient methods which are being used today. Tariffs meant nothing to some of the smaller companies. Many of the papers and books of account were kept in a rather haphazard fashion. In writing to the companies to check up on the date in order to bring it up to date, we could not find many of the tariffs. Many of the smaller companies in the early days, and by early days I mean 1914, 1915 and 1916, merely typewritten copies of tariffs were sent to the Commission. In order to make our data start back to the beginning it was necessary for us to consult the files of the Public Service Commission.

Q. And these papers, these files, and this data that you had in your files were removed at your own suggestion during the Federal Trade Commission over to the files of the Pennsylvania Public Service Commission?

A. No sir.

Q. Some of this data, some of this stuff, that you had prepared, was moved during the Federal Trade Commission, from your files to the Public Service Commission files?

A. Yes sir. I said before, Mr. Walker, it was necessary to go to the Public Service Commission files in order to obtain the data which was deemed necessary to make a complete study, and the files or data, which I received from the Public Service Commission were returned to the Public Service Commission.

Q. As a matter of fact, Mr. Millar, the stuff that you took over to the Public Service Commission was data that you had compiled from statistics furnished to you by those companies of rates prior to January 1, 1914.

A. No sir, not necessarily.

Q. I don't want to take any undue advantage of you. Are you positive about that?

A. We may have given the Commission the result of our study.

Q. You had this study of this stuff prior to the time the Public Service Commission documents went into effect?

A. We may have.

Q. It was the data and the study that you were making?

A. We were studying that.

Q. You were compiling this data from the statistics furnished to you by the different electric companies all over the State?

A. Yes sir.

Q. That was the data that was transferred from your files during the Federal Trade Commission investigation over to the files of the Public Service Commission?

A. Copies of it may have been.

Q. As a matter of fact, the originals were turned over there?

A. The originals that I received from the Public Service Commission were.

Q. How about the originals you received from the companies?

A. Some of it may have gone over there.

Q. When you were before the Federal Trade Commission did you not testify the reason you got rid of it was because they were the only copies in existence, and you did not want the responsibility placed on your shoulders?

A. No sir.

Q. I will read to you beginning on page 348 of the testimony before the Federal Trade Commission, as follows:

"Question. What was the recent investigation?

"Answer. Approximately the middle of December I was asked by the Public Service Commission to make an investigation of the companies in Pennsylvania to ascertain what data, if any, they had of the smaller companies making up the larger companies, showing the tariffs in effect June 1, 1914, and whether or not those tariffs subdivided so as to show the residential and commercial lighting features.

"Question. Did you furnish that to the Public Service Commission?

"Answer. I immediately sent to the various companies and found it an enormous task, but I got the information. Each time the company would send me its original tariff it would do so either by telephone or otherwise, and so do not forget this is an original document, the only one we have in our files. We are holding you responsible for it that it be returned to us."

Q. Is that correct.

A. Yes, sir.

Q. I will continue reading from the testimony: "All the information shown in these papers is contained in the report you made to the Public Service Commission?"

A. You skipped something there. What do you mean by these papers?

Q. I did not skip anything. I started reading from the question at the top of the page. I will continue your testimony:

"Question. All the information shown in these papers is contained in the report you made to the Public Service Commission?"

"Answer. I made no report to them.

"Question. What was done with the material you compiled in that manner?"

"Answer. What I did was to take those tariffs and an information furnished in those tariffs to the Public Service Commission and turned over to them for the matter on which they were working.

"Question. So it was not compiled by you and turned over by you?

"Answer. Yes.

"Question. And should be in the hands of the Public Service Commission?"

"Answer. No sir.

"Question. Why not?"

"Answer. These tariffs should not. I requested that the tariffs be retained in the office of the Public Service Commission. Let me say this, Judge, in explanation, the Public Service Commission Law in Pennsylvania was passed in July, 1913. It did not become fully effective, however, until January, 1, 1914. The various bureaus in that commission did not begin to function until approximately the middle or end of 1914. Therefore the Commission had not in its files the information which it desired as of January 1, 1914.

"Question. That is all interesting, but the only thing we want to find out is where this material you sent out from your office is.

"Answer. It was sent to the Commission.

"Question. What was done with it?

"Answer. I returned it then to the various companies."

Q. Is that correct?

A. Yes, sir.

Q. So this data was handled by these companies, were original tariff schedules, were they?

A. Some of them, yes.

Q. You sent them back to the companies because you didn't want the responsibility for them?

A. Yes.

Q. And others you had copies of you turned over to the Public Service Commission?

A. Yes.

Q. It was not done for the purpose of getting rid of the files, of the tariffs, these papers, so that the Federal Trade Commission could not get their hands on them?

A. Of course not.

BY MR. COX:

Q. From what you have said, and earlier witnesses have said, it seems to me that the Electric Association would be glad to come here and give information before this Committee?

A. Yes.

Q. Is Mr. Richardson a member of this Pennsylvania Association?

A. He is not.

Q. He has nothing to do with any Pennsylvania Companies?

A. He has not.

Q. Not concerned with any Pennsylvania company?

A. No, sir.

Q. Would it help you if he came here, would it help the Association, does he not know a lot about the companies?

A. I really don't know what Mr. Richardson knows.

Q. Would it not help and be a good idea if he came here and gave us some of this interesting information?

A. If the Committee wants me to—

Q. Will you have him come here?

A. I cannot answer for him, because I have no affiliation whatever with him, except very remote affiliation with Mr. Richardson and his activities.

BY MR. EVANS:

Q. You were conferring with him Wednesday?

A. I was not conferring with him Wednesday.

Q. You saw him Wednesday?

A. I saw him Wednesday.

Q. You talked to him on Wednesday?

A. Yes.

Q. What did you talk to him about?

A. I saw Major Richardson twice—was it Wednesday—he was not here yesterday.

Q. I think he came Tuesday.

A. I left my office about a quarter of twelve on Tuesday, and I am assuming it was Tuesday, it was not last night nor the night before—Tuesday night, and I bumped into Major Richardson in the hotel, and I just shook hands with him for three or four minutes, and the next morning he came into my office merely to pay his respects, as he said, and that was all, and he left. I was busy, and I had not conversation with him.

Q. You knew that Mr. Gadsby of the U. G. I. was also here in Harrisburg on Wednesday, do you not?

A. Oh, yes.

Q. And he and Major Richardson conferred?

A. I don't know.

Q. You don't have any idea of why any of these men were here on Wednesday?

A. No sir, except what I read in the papers.

FATHER COX: There has been the impression gone out that we don't want them to come here and present their side, and we don't like that feeling to go out among the people, and if we could get Major Richardson, I don't see what he needs to be afraid of—

THE WITNESS. I don't either.

FATHER COX: I think he should voluntarily come here even without an invitation, and I think that you ought to use your influence to see that he comes.

MR. TURNER: I was just going to ask that of Mr. Millar, whether there is any way to get Mr. Richardson?

THE WITNESS: If the Committee wants me to, I shall be glad to immediately get in touch with his office. Will you fix the time for him, that I may transmit it to him?

MR. TURNER: That is up to Mr. Evans.

MR. EVANS: My only hesitation is, I don't want to interfere with the schedule which we have already fixed for the heads of these companies, because I don't think it is fair to keep them waiting.

MR. TURNER: You did not get Mr. Richardson the other day when he was subpoenaed, and now your testimony must be advanced that much farther.

MR. EVANS: I want to look at my schedule and make sure. These gentlemen have been asked to come here on Wednesday and Thursday, and I think we can have Mr. Richardson in all right on one of those days.

THE WITNESS: You give me the time, and I will be glad to do that, Mr. Turner.

BY MR. COOKE:

Q. Mr. Millar, are you familiar with the rural electrification work?

A. Generally, yes, Mr. Cooke.

Q. Do you know what literature has been sent out? You referred to these advertisements that were put in the agricultural papers; have you any recollection of what you sent out?

A. I think, Mr. Cooke, we have one—the Joint Committee has issued two pamphlets in connection with that, and I will be glad to furnish that.

Q. Do you know who prepared those pamphlets?

A. The Joint Committee. When I say Joint Committee, may I explain what that is, so that you understand?

Q. Yes.

A. The Joint Committee, following or immediately preceding General Order No. 28, was formed. I cannot give you the exact number, but 50% were representatives of farm organizations, and 50% representatives of electric light and power companies. Now, these two aggregations which represented their own interests, got together at stated times, and they are the ones who formulate the policy of rural electrification in Pennsylvania.

Q. It is a fifty-fifty arrangement?

A. Exactly.

Q. Now, have you personally seen this literature that you sent out?

A. Yes.

Q. Is there any mention of rates in that literature?

A. Oh, they are pamphlets, and I would not like to say from memory. Would it be all right for me to submit both of those to you?

Q. Yes.

A. I will send you copies of them.

Q. Do you happen to know how they were distributed?

A. No, I don't. That was done under the Joint Committee, and not under me, Mr. Cooke.

Q. Were they sent out under the franking privileges?

A. I don't know about that, no.

Q. Would you be surprised to know that I think there have been literally hundreds of such pieces of literature issued in the United States, and that there has not been one in which the rates were mentioned?

A. That would surprise me, yes.

Q. If I was able to demonstrate that to you, you would be interested in finding it out, and would you consider that a mistake?

A. I would be very much interested in seeing such literature.

Q. Would you consider it a mistake on the part of the industry?

A. Why, surely.

Q. You have testified, and it had been testified before that this Committee is constituted on a fifty-fifty basis of the industry and the farmers?

A. Yes.

Q. And the implication in that is that the fifty-fifty result was not a fact, would not you say so?

A. No, I would not, Mr. Cooke.

Q. I think there are 23 such State Committees, and in no instance had the question of rates been included in the literature?

A. I know that the question of rates has been discussed in these Joint Committee meetings.

Q. But nothing said in those advertisements about the effective rates and the use of current?

A. I don't know about that; I know this, that if these advertisements that we issued, the question of rates was gone into in those advertisements.

Q. Yes, I would like to see those?

A. I will be glad to let you have copies of them. There are three more yet to come—I think three or four.

BY MR. HAGMAIER:

Q. I would like to clear my own mind, you became associated with the Pennsylvania Electric Association in 1927, did you not?

A. December, 1927, yes.

Q. And the Public Policy Committee did not go out of existence until 1928?

A. That was 1927 or 1928. I had nothing whatever to do with the Committee at any time.

Q. But during that time you got some money from that Committee?

A. From that Committee, yes.

Q. You would know something about some of their workings then, would you not?

A. They gave me that money purely for expenses. Now, I was then, and indeed still am, as a matter of fact, living in Philadelphia, and when I started in, they asked me, for instance, to go to Pittsburgh to interview companies, or to Erie, or some other place, and that was the purpose of the advance of that money at that time.

Q. You know that it was in existence and that it was doing some work?

A. Yes sir.

Q. But outside of that, you had nothing to do with it?

A. No sir.

BY MR. WALKER:

Q. Is the association still making surveys of text books?

A. To my knowledge it has not, nor does it now make any reference to text books.

Q. They are not making any more surveys of text books in Pennsylvania, are they?

A. To my knowledge, since I have been with the association, it has not made any survey of text books.

Q. Are you familiar with the fact that very shortly prior to your affiliation with the association they did make a survey of text books?

A. Only by testimony and newspapers, sir.

Q. And that practice has been discontinued, has it?

A. I again say, Mr. Walker, that since I have been associated with them, we have not made any reference to text books.

Q. Do you have a committee on education?

A. I think not.

Q. When was that abandoned?

A. I don't know.

Q. Was there a committee on education when you became affiliated with the association?

A. I think there was.

Q. And what were the duties of that committee?

A. My understanding of the duties of that committee were to arrange courses in various places for the purpose of permitting employees of the various electric light companies to receive that particular technical education.

Q. Was there any effort made by this committee to educate the public?

A. Any information that we sent out is for the purpose of enlightening the public.

Q. Was any of it sent into the schools to educate the school children?

A. To my knowledge, no sir.

Q. I will show you these minutes from your meeting of the Pennsylvania Electric Association, at the time that Mr. Kuhn—

A. That date of that, is what?

Q. —Was chairman. The date is October 20, 1927. Mr. Kuhn was the chairman of that committee.

A. Before you read that, I want to say I know nothing about it, because it was prior, again to my affiliation with the association.

Q. Two months prior thereto?

A. Well, whatever it was.

"Mr. Kuhn mentioned that he believed it would be a good idea to check up on the trend of teaching as imparted in the colleges and universities, especially in economics and liberal arts schools in relation to the utilities. So many courses in these schools are in the form of lecture courses and unless the professors have the right viewpoint immense damage will be done to the industry. Most of these lecturers are not based on textbooks, consequently the textbooks, will not disclose the main source of trouble.

"Mr. Kuhn stated that the needs of the educational institutions should be called to the member companies' attention and every effort be made to assist the institutions. He also stated that the leading instructors in the engineering, economics, and liberal arts schools should be placed on a mailing list for the releases of leaflets and literature relating to the electric light and power industry and that the libraries of educational institutions and other libraries in the State should not be overlooked. It was suggested that Mr. Baumm arrange to carry out the recommendations of Mr. Kuhn to the highest practicable degree."

Q. And I ask if that was done?

A. To my knowledge it was not.

Q. Do you know when the matter was abandoned?

A. No I do not. Again, I say, since I became connected with the Pennsylvania Electric Association there has been no reference made to school books or text books.

BY MR. TURNER:

Q. There has been no reference, but has there been propaganda?

A. No sir.

BY MR. WALKER:

Q. So, these recommendations of Mr. Kuhn or Mr. Baumm just two short months before you became affiliated with it were entirely abandoned?

A. I don't know.

Q. Could they have carried on this work without your knowing it?

A. No sir.

Q. They could not?

A. No sir.

Q. And you say now that they were not carrying it on?

A. They were not.

Q. Can you tell me what prevented Mr. Kuhn and Mr. Baumm from carrying on this work when you came in? Did it fly out of the window?

A. I don't know.

BY MR. TURNER:

Q. Who was Mr. Kuhn?

MR. WALKER: He was chairman of the committee on education.

MR. TURNER: All right. Does the executive committee have meetings?

A. Yes sir.

Q. Do these committees like this committee on education, have meetings?

A. Yes.

Q. Is Mr. Kuhn still chairman of the committee on education?

A. He is not. There is no such committee.

Q. There is no such committee?

A. No sir.

Q. When did it go out of existence?

A. I can't give you the exact date. I will be glad to furnish it.

Q. Let us get that and get it on the record, as to the date when it went out of existence. And now, after you came into this association, was Mr. Kuhn still a member of the executive committee?

A. I think not.

Q. Can you get that for us, can you get that fixed?

A. I don't think he ever was on the executive committee.

Q. All right. Was he the chairman of this education committee? After you came in?

A. I would say no, with this correction coming from the record.

Q. Did he ever attend any executive meetings that you attended?

A. I think not

Q. Do you attend the executive committee meetings?

A. I do.

Q. Has this subject ever been brought up in the executive committee meetings?

A. No; not once.

Q. Since you have been a member?

A. No sir.

BY FATHER COX:

Q. Has there been any such thing as insidious propaganda being put out?

A. To my knowledge there is no propaganda being done by the electric association. They do have committee meetings, they do issue a serial report with these advertisements, as I said before.

BY MR. TURNER:

Q. Do you put out a bulletin?

A. Yes sir.

Q. To whom does that go?

A. All our member companies.

Q. Only the companies?

A. Only the members of the association.

Q. It is not distributed to the public in any way?

A. It is not.

BY FATHER COX:

Q. Now what the committee, I think, has in mind, is that they do not think propaganda should go out that is building up a sort of power for the corporations and hurting the people. And now, there is nothing more wonderful in the world to read than the magazines and stories and your little circulars, and all that kind of thing, but at the same time if it is done to hurt the people, then there is an objection to it, and that was the objection to this—

A. Any time that the electric light and power industry hurts the people, they are hurting themselves; and, therefore, it is incomprehensible that they would do that.

Q. I think that you said prior to your association with the company, Mr. Baumm was not connected with the executive committee; is that right?

A. My recollection is that he was not; I am not positive of that. It is two years ago. Our records will show it. We have printed lists, and I will be glad to submit them.

Q. As a matter of fact, this propaganda was being carried on prior to your affiliation with the Pennsylvania Electric Association. Has it ever been brought up, if it was brought up, since your connection?

A. No.

Q. This is the first time it ever come up?

A. I don't know.

MR. RHODES: To get the record straight, what do you mean by propaganda?

MR. WALKER: Propaganda in these schools.

MR. TURNER: Mr. Walker, I don't recall any propaganda in the schools.

MR. WALKER: Mr. Turner, I will read out of yesterday's record.

MR. TURNER: You call my attention to it.

MR. WALKER: I will be glad to and I will be glad to submit all of these submits that were brought up before the Federal Trade Commission.

MR. RHODES: I just wanted your question to be specific, when you referred to propaganda.

FATHER COX: Mr. Shearer denied that anything of that kind happened during his time; is that not true?

MR. WALKER: Nothing happened during anybody's time.

FATHER COX: That is the thing to do, to pin the responsibility somewhere, because these very men seem to know all about the organization since the beginning.

MR. RHODES: I think that when we speak about propaganda, there are two kinds of propaganda: one may be improper and one may be proper, and I think we want to make some distinction. I don't see that there is any objection to utilize disseminating information any more than a baseball club tried to get open Sundays.

FATHER COX: I think you are right. That there is a right way and a wrong way of doing it.

MR. TURNER: I don't think we would like to see propaganda go into the schools, whether it is put out by the best kind of an organization or the poorest kind of an organization.

I think there is a tremendous amount of radicalism socialism that runs through our school system today, and I don't think that is the proper way of combatting it.

MR. RHODES: And there are some in the Legislature.

FATHER COX: There is propaganda and "proper-panda."

BY MR. WALKER:

Q. There is one thing more, you said when you found bills that were inimical to your association that you notified the companies to that effect?

A. Yes sir.

Q. And that is all you have to do with it?

A. Yes sir.

Q. Part of your duties here in Harrisburg is not to discuss legislation with members of the Legislature?

A. No sir.

Q. You never talk to members of the Legislature regarding legislation?

A. Rarely.

Q. I say, never?

A. I may have.

Q. In what way?

A. In regard to what the bills mean. Very often many of these so-called picked bills, there will be amendments, and cut-outs, and strike-outs, and to endeavor to read them and ascertain the definite purpose of the same, requires more time than you can get in one day.

BY MR. RHODES:

Q. Can you tell what they do mean?

A. No sir.

Q. I thought if you could we needed you up in the Legislature?

BY MR. TURNER:

Q. Anytime you read a bill and can tell me what is in it, I hope you will come right to me and tell me?

MR. RHODES: Yes, and me too.

BY MR. WALKER:

Q. You and your association never attempt to interfere with legislation?

BY MR. EVANS:

Q. Is it not true that the individual members try to influence legislation?

A. No sir.

Q. Was there not a bill introduced in the 1929 Legislature in regard to printing appeals for the Public Service Commission?

A. I had nothing to do with the introduction.

Q. A bill providing that in case of appeals from the Commission the applicant need not print any more of the record than was necessary for his appeal and allowing the Public Service Commission what was necessary?

A. I believe there was such a bill.

Q. And it passed the House?

A. I am not sure about that.

Q. And went to the Senate and passed two readings in the Senate and then was killed. I have discussed the bill with you, have I not?

A. My recollection is that you have.

Q. Was not the reason for that bill being killed, because certain utilities in the western part of the State had matters pending before the Public Service Commission and did not want to have the cost of the appeals lessened?

A. To my knowledge, no.

Q. You never heard of that?

A. No. You are taking me back two years on bills, and in this session there are close to three thousand bills already and that session was close to three thousand.

Q. You have no recollection of that?

A. Not of your last statement.

Q. Have you any reason or any knowledge of why that bill was finally killed?

A. No sir.

Q. And you don't know that the utilities used any influence at all in regard to it?

A. I do not.

BY MR. TURNER:

Q. Did you have anything to do with killing my aeronautic bills in 1929?

A. No sir, I am up in the air far enough.

BY MR. WALKER:

Q. Mr. Millar, I call attention to a letter directed to your office on April 20, 1931, and ask you when that material and data will be submitted?

A. We are working on that now. I might also say it is a stupendous task to get all of the data together which is asked for in this letter. And in so far as we are able, we will be very glad to supply it.

BY MR. EVANS:

Q. Mr. Millar, has your association had any representative keeping in touch with these hearings?

A. I endeavor to get copies of the testimony, I do get copies of the testimony, and we have been studying the testimony.

Q. Has anyone been delegated to have anything to do with these hearings?

A. No sir.

BY MR. WALKER:

Q. Doesn't your association have an observer here at every one of our hearings?

A. No sir.

BY MR. MOORE:

Q. Mr. Millar, this man Jenkins you refer to is he an employee of the Penna. Electric Association?

A. He is not, except that he is specially retained for this occasion.

Q. The day Mr. English and the other gentleman were here, the statement was made at that time by the chairman and a fuller statement was made the next day to the effect that we had a program made out which included an opportunity for persons to appear, and that invitations had gone out or would be sent out to the executives of the large utilities or anyone who felt they had been misrepresented. It seems to me, speaking for myself, that that gave about two weeks notice?

A. Excepting, Mr. Chairman, as I understand it, this is all done under direction of our counsel. As I understand, he has made a special study of certain portions of the testimony that has been introduced before your committee and to put another expert on the same thing would consume as much time as he has already consumed.

BY MR. EVANS:

Q. Who designated him to make a special study of this testimony? You just testified no one was designated to keep in touch with these hearings or do anything except yourself?

A. I didn't intend to say that if I did, I was asked about observers. I said we had not. I was asked about other matters, and I said I got a copy of the testimony each day and it was being studied.

Q. I asked you whether anybody had been delegated by your association to attend or keep in touch with the progress of these meetings?

A. I misunderstood that entirely.

Q. Who is?

A. Who is what?

Q. Delegated by your association to keep in touch with the hearings before the investigating committee? Who is that special counsel?

A. Mr. Charles H. English, of Erie, and Colonel A. M. Holding of West Chester.

Q. Have they got authority experts for your association?

A. Yes sir.

Q. What appropriation has been made to them.

A. None as yet.

Q. Who have they employed?

A. To my knowledge they have employed Mr. Jacobs and the committee of experts from the various member companies who have been and are studying the testimony.

Q. Who are the members of that committee?

A. President, Mr. Reininger.

Q. What company is he with?

A. Pennsylvania Power and Light Company, William H. Wade, of the Penn Central Light and Power Company; A. J.

Althouse, of the Metropolitan Edison Company; Ira L. Craig, of the Philadelphia Electric Company; H. P. Smith, of the Duquesne Light Company. There may be others in connection with that particular work, whose names I just cannot recall off hand.

BY FATHER COX:

Q. If Mr. Jacobs has been delegated to study this work, don't you think it is a poor time for him to go away?

A. He is going away, as I understand it, on a governmental mission or matter, which he cannot afford. We think it is a poor time for him to go away. Of course, he cannot afford it,—he tells us.

BY MR. WALKER:

Q. You have no further information as to the nature of this governmental mission of Mr. Jacobs?

A. No, I don't think so.

BY FATHER COX:

Q. Is he going abroad to study electrical systems of any of the foreign countries?

A. I don't know his mission,—what his mission is Father Cox.

BY MR. WALKER:

Q. Will you please now let me have the balance of what we asked you for,—

A. I am sorry to have to give it to you in this form. Our membership is taken, contained on a card record. This is a take off of all the cards. I have tried to arrange them so that you will get them as simply as possible, into Class A, Class B, Class C, Class D, Class E, Class F and Class G.

BY MR. COOKE:

Q. Which is the college professor class?

A. Class C, the member are teachers or practitioners of engineering and related sciences, or of any other professions who are interested in the art of applied electricity.

Q. Are they still elected year by year?

A. It is purely voluntary.

Q. They were formerly elected for the year at a time,—they must pay their dues each year.

A. Yes sir.

Q. Do you know of any other organization in the world that elects members a year at a time?

A. I assume all other organizations.

Q. Do you belong to any clubs?

A. Yes sir.

Q. Would you resent having to be re-elected every year?

A. If I want to belong to a club for a year and pay my dues all right. If I want to stop at the end of that year, it is my privilege to stop. It is the same way with these people. I do not think they are elected each year, in the sense that they must come before the membership and be elected.

Q. Their tenure is for a year at a time?

A. Their tenure is as long as they want to stay there.

Q. Unless you want to change it, that is not what you have said,—they were elected for a year at a time and allowed to remain on good behavior?

A. You mean I said that?

Q. In the by-laws of the National Electric Light Association.

A. I don't know about that. I know they are elected. Class E.

Q. Class E. are elected, according to by-laws for a year at a time?

A. That may be the wording, but in practice that doesn't hold.

BY MR. WALKER:

Q. Do you know if the National Electric Light Association have any other representatives in Harrisburg?

A. To my knowledge, no sir.

Q. You would know, if there were?

A. Yes sir. I would say, no sir.

BY THE CHAIRMAN:

Q. Is this membership list simply an addressograph?

A. Yes, sir. There are two thousand six hundred sixty-two members.

BY MR. WALKER:

Q. 42 Class A.

A. Yes sir. They are operating companies.

Q. They do the voting in the executive session?

A. I am rather confused with Mr. Cooke's statement rather than with yours, with regard to the executive session. There is no such executive session, except the session of the executive committee.

BY MR. COOKE:

Q. You have testified here that your knowledge doesn't go back but a couple of years?

A. Three years.

Q. It is a matter of record that the National Electric Light Association not only holds executive sessions, but that they have held sessions where the representatives of company members were admitted on cards, signed, good for this day only?

A. I don't know about that.

Q. I might further add that at these sessions the matter of rates was discussed?

A. I don't know.

BY MR. WALKER:

Q. It is at the executive sessions, the executive session meetings, where the policies of the association are determined?

A. I don't know about being determined, of course they are discussed here.

Q. Your policies are not submitted to all the rest of these classes for a vote.

A. They are usually submitted,—the policies adopted by an executive committee is usually submitted at a convention, at a meeting of the entire organization.

BY MR. COOKE:

Q. What policy is there that you know of that has ever been adopted other than in executive session?

A. I cannot recall off hand, Mr. Cooke.

BY MR. EVANS:

Q. You do not want to leave the Committee with the impression that you do not think that the utility companies attempt to influence the legislation at Harrisburg, do you?

A. I don't know what the utility companies do, Mr. Evans.

Q. Let us be a little frank about it. What was your position before you were secretary of the Public Service Commission?

A. I was secretary to Governor Stuart.

Q. From there you went and became secretary to the Public Service Commission?

A. I first went as secretary to the predecessor, the State Railroad Commission,—

Q. How long were you secretary of the Public Service Commission?

A. About eight years.

Q. So, from what period to what period were you in Harrisburg, as either Secretary to Governor Stuart, Secretary to the Railroad Commission, or Secretary to the Public Service Commission?

A. From 1907 to 1920.

Q. In 1920 you went with the Philadelphia Rapid Transit Company, did you not?

A. Yes sir.

Q. In 1927 you came back to Harrisburg as managing director of the Pennsylvania Electric Association?

A. Yes sir.

Q. You have been in close touch with matters in Harrisburg, legislative and otherwise, ever since 1907.

A. I don't know about close touch; I have been in touch.

Q. You do not want to leave this Committee with the impression that you are such a woolly lamb, that you have been in Harrisburg for that number of years, and don't know anything about the influences that are brought to bear on legislation?

A. I don't know whether you are testifying or not—I don't know what the question means.

Q. Do you want to leave this Committee with the impression that after all these years of contact with affairs at Harrisburg, over a period of twenty-four years, you know nothing about any influence brought to bear on legislation here by utility companies?

A. That is correct.

1. You are not as frank as Mr. Johnson, Mr. Millar.

R. D. COBLE sworn

BY MR. EVANS:

Q. Mr. Coble, where do you live?

A. Camp Hill, Pennsylvania.

Q. What position do you hold in the organizations in Harrisburg?

A. Secretary of the Commercial and Industrial League.

Q. And you were one of the complainants against the rates of the Clarks Ferry Bridge Company, were you not?

A. One of the three original complainants, yes.

Q. Will you tell the Committee the circumstances back of that case and leading up to it?

A. The chief source of dissatisfaction with the schedules thus far in effect on the Clarks Ferry Bridge in 1925 was the 25-cent charge for passenger automobiles, which in view of the traffic over the bridge we considered excessive. The 25-cent charge really kept us off the concrete road leading on the eastern side of the Susquehanna River, and obliging a number of us to drive the old macadam highway that was laid on the West Shore, and we felt that since as taxpayers we had contributed to the cost of the concrete road, that keeping us off of the highway by means of a 25-cent toll was rather unnecessary, and we filed a complaint with the Public Service Commission against the existing schedule.

Q. When was this new bridge built approximately?

A. It was thrown open to the public, as I recall, on June 1 of 1925.

Q. And prior to that time there had been an old wooden bridge in the same locality?

A. Yes.

Q. This old wooden bridge was sold at public sale, was it not?

A. It originally was the property of the Pennsylvania Canal Company, and was sold at public sale in, I believe, probably 1915, to Christian W. Lynch, in a public sale at Philadelphia.

Q. And then Mr. Lynch proceeded to form a corporation, did he not?

A. With three other persons, William W. Jennings, P. F. Duncan, and William Wills.

Q. And at what price did Mr. Lynch sell the bridge which he had bought for \$4,500 to the new company?

A. \$45,000.

Q. And what was the capitalization of the company?

A. The consideration that was paid for the bridge, which was what I presume you mean by that was \$3,000 in cash, \$20,000 first mortgage 6% bonds, and \$22,000 of common stock in the Clarks Ferry Bridge Company.

BY MR. EVANS:

Q. What was the capitalization of the company in 1925, when you filed your complaint?

A. Capitalization of the company then was \$450,000 of first mortgage bonds; \$175,000 of preferred stock and \$250,000 common stock.

Q. And how much of this represented new money, which had gone into the company?

A. \$450,000 of bonds, that had been sold to the public; \$175,000 of preferred stock that also had been sold to the public—the most of it.

Q. What did the \$250,000 common stock represent?

A. That was an increase in the number of common shares that were outstanding and as mentioned in the report of the Commission, represented a 900% stock dividend.

Q. As a result of your complaint, what order did the Public Service Commission issue on its Complaint Docket No. 6611, effective as of July 1, 1926?

A. The Commission ordered that the bridge company fix a schedule of tolls designed to yield not in excess of \$85,905 a year.

BY MR. COOKE:

Q. On a bridge that had cost what?

A. The new concrete structure was valued by the Commission, in its report and order, \$767,000 and some few odd hundreds of dollars.

BY MR. EVANS:

Q. The Clarks Ferry Bridge Company took an appeal to the Superior Court, in this case, didn't they?

A. Yes sir.

Q. And that appeal was finally withdrawn, wasn't it?

A. Yes sir.

Q. What reduction in its rates did the company make as a result of this order?

A. The company put into effect a new tariff, that reduced the schedule of tolls on the type of vehicle that had been the chief source of the complainant from twenty-five cents to fifteen cents; that type of passenger motor vehicle representing 68.6% of the traffic from the bridge.

Q. What was the gross revenue of the bridge company for the year 1926 as shown by its report to the Public Service Commission?

A. \$118,718.71.

Q. As compared with the \$85,905, which the Commission ordered?

A. Yes sir.

Q. What was the revenue for 1927?

A. I would like to call your attention, Mr. Evans, to the fact that the order became effective as of July 1, 1926, and this report of the company for 1926 of course, includes a half a year previous to that.

Q. Under the old rates?

A. Yes sir.

Q. Just let me ask you in connection with that; Did the Commission make any order with regard to rebates that should be paid by the company, or refunds of over-charges?

A. There never has been any order issued by the Commission, which I have been able to gain any knowledge concerning the refund of over-charges. I have brought to the attention of the Commission in a subsequent complaint that was filed in April of 1929, the fact that the Public Service Company Law provides a penalty of \$50 a day for every day which continues to be a violation of the order of the Commission.

Q. Now, just before we get to that, Mr. Coble, what I would like to find out is this, the company during the pendency of the first rate case, continued to charge the twenty-five cents?

A. Yes sir.

Q. And it took an appeal?

A. Yes sir.

Q. And still continued to charge the twenty-five-cent rate?

A. Yes sir.

Q. Up to what date?

A. Up to March 1, 1926, and in the meantime—or about March 1, 1927, but in the meantime had been issuing rebate certificates that were to be redeemed if and when the appeal to the Superior Court was not sustained.

Q. So, really, the 1926 revenues were all on the basis of twenty-five cents, were they not?

A. Yes sir.

Q. And the people who used the bridge had rebate slips which the company redeemed later as they were presented?

A. Yes sir.

Q. I would like to say, enlarging on that, answer, that the yearly reports of the Clarks Ferry Bridge Company show that they still have the sum of \$22,730 in unredeemed rebate slips.

Q. What were the total revenues of the company for the year 1927?

A. \$122,808.95.

Q. And what for the year 1928?

A. \$135,499.76.

Q. All as compared with the \$85,905, which the Commission had ordered?

A. Yes sir.

Q. And that you filed a second complaint in April, 1929; did you not?

A. Yes sir.

Q. Have you got the Docket number of that?

A. Yes sir; it was docketed under File number C8002.

Q. A preliminary hearing was had on this complaint, was it not?

A. Yes sir.

Q. Then, what happened?

A. Nothing happened that I was able to discover until the end of the calendar year 1929, and on January 4th, 1930, I petitioned the Public Service Commission for an order on the bridge company to furnish us with the figures representing the gross income for the year 1929.

Q. Had there not been a still further reduction in the toll rate?

A. There had. After we had filed the complaint on April, 1929, I was invited to come into the office of George Ross Hull, who was the counsel for the bridge company for the purpose of discussing a proposed reduction in the rates of toll. I went with another member of the Commercial and Industrial League. Mr. Hull has a proposed new tariff prepared which he said his clients had told him would yield eighty-five or eighty-six thousand dollars a year, and he wanted us to withdraw the complaint, if they would put the schedule of tolls into effect. I told him that I would take the figures, that I gathered from our discussion about the proposed new tariff, and think them over and study them, and if I found they were to yield the approximate amount ordered by the Commission, we would withdraw the complaint, but after I had studied the tariff, and had given what I thought was due consideration to the yearly increases in motor traffic and the economic fact that the reduction and the cost of the commodities would increase its use, I reached the conclusion that the new schedule would not yield eighty-five or eighty-six thousand dollars a year but approximately \$130,000. So, I called Mr. Hull on the telephone and told him that as a result of my study what we had said with reference to withdrawing the complaint was void; that we would continue on with the complaint. They had a new tariff—

Q. That was a reduction, was it not?

A. Yes sir; that was a reduction on toll on passenger automobiles from fifteen to ten cents.

Q. When you asked the Commission for an order on the company to produce its figures on the 1929 revenue, what was that revenue as you later found out?

A. \$141,538.92.

BY MR. RICHARDS:

Q. Was that under the new rates?

MR. HAGMAIER: Under the ten-cent rate?

A. That included a half year under the fifteen-cent rate, and a half year under the ten-cent rate.

BY THE CHAIRMAN:

Q. That is about \$10,000, more than you estimated?

A. That is correct.

BY MR. EVANS:

Q. But that was partly due to the fact that half of this year was at the fifteen rate?

A. Yes sir.

Q. Then in 1930 while your complaint was still pending, what action if any did the Commission take?

A. In an interim report the Commission on complaint Docket B-802 and on the January 14, 1930, the Commission retained its jurisdiction under our complaint and instituted an investigation on its own motion.

Q. And this is one of the cases which the Committee will recall the Commission states was instituted on its own motion. It was instituted while a complaint was pending. Now, under this new proceeding, have you had any conversations with any members of the legal staff of the Commission?

A. Yes sir. A gentleman by the name of Mather, who I believe is assistant counsel of the Public Service Commission and was assigned to handle the Commission's investigation of the schedule of rates at the Clarks' Ferry Bridge. I kept in touch with Mr. Mather as closely as I considered necessary. I didn't burden him I don't believe but I did indicate to him that we wanted to and insisted on getting some decision on our complaint. In the course of one of our discussions which we had, he pointed to a pile of papers that had accumulated in the Clarks' Ferry Bridge case which were resting on a supplementary desk in his office, and he said, "There they are, accumulating dust," which confirmed to me the conclusion of what was happening to our appeal in this case.

Q. The company had put in a new valuation on its property?

A. In the course of hearings held in the investigation conducted by the Public Service Commission, technicians for the bridge company introduced a mass of testimony that tended or attempted to establish a new valuation on the bridge. I really didn't see that we were particularly interested in any such attempt on the part of the bridge company for the reason that for all practical economical purposes the value of that bridge had been fixed; the Commission had determined on the

basis of a contract for reconstruction new, to determine on a value of \$767,800, and the unit prices for what had been used in the bridge had had a tendency to move downward since the original valuation had been determined. The Commission, after it had submitted the introduction of this mass of testimony that had to do with delivered prices of bar steel and all that kind of thing, sat back in what I considered a rather helpless way and said we don't have a technician with which to combat this testimony. I felt that our cause probably would have been advanced if the Commission had made some serious effort to enforce the Commission's order issued effective as of July 1, 1926.

Q. Mr. Curry, one of the waterworks engineers of the Commission, however, did make a report on the value of the bridge which was introduced as evidence?

A. Yes, sir.

Q. As I understand, both your complaint and the complaint of the Commission on its own motion are still pending?

A. Yes, sir.

Q. What was the gross revenue of the company for the year 1930 as shown by its report to the Commission?

A. \$130,304.20.

BY MR. HAGMAIER:

Q. That is at the ten-cent rate?

A. Yes, sir.

Q. How much did this water works engineer set the figure at?

A. I don't have that information available here. I can get it readily for you, I believe.

BY MR. EVANS:

Q. You will remember that Mr. Curry was the engineer who did not take a valuation of the Scranton-Spring Brook Water Company case. Just going back a moment to this question of your suggestion of a penalty of \$50 a day. Will you explain that to the Committee?

A. I took up with the assistant counsel of the Public Service Commission who is handling this case, several times the matter of a refund of the overcharge that was being collected by the Clarks Ferry Bridge Company, and I was advised that they didn't know of any way in which that overcharge could be refunded. There is a provision in the Public Service Company Law that states that the company who violates the order of the Commission shall be fined \$50 for every day of a continuation of the violation, and that was the only feasible means that I was able to discover whereby the public could recover a portion of the overcharge that had been collected. The penalty of \$50 a day since July 1st, 1926, would amount to something approximating between \$80,000 and \$85,000. There is no likelihood of their being able to recover all the overcharge that has been made, but the eighty to eighty-five thousand dollars could be paid into the Treasury of the State of Pennsylvania in which we all have an interest.

BY MR. RHODES:

Q. Did the Public Service Commission ever tell you at any time why they permitted this overcharge?

A. No sir.

Q. Did you ever discuss it with anyone?

A. I have discussed it in the hearings we have had and I have discussed it with the attorney assigned by the Commission to handle the case.

Q. What was said in the hearings when this was discussed?

A. You mean now with reference to the overcharge?

Q. I mean with reference to permitting the company to go on collecting from thirty to fifty thousand dollars a year more than was permitted under the order?

A. No sir.

Q. What excuse did they give?

A. No excuse was ever offered.

Q. Was it never discussed in the hearings?

A. I drew their attention to the fact that these overcharges were going on but there was no action taken by the Commission, and so far as I recall nothing was said.

Q. After 1926 they have received from thirty thousand to fifty thousand dollars a year more than the \$85,000 which was authorized by the Commission; do you mean that the Commission never gave either a reason or an excuse for permitting that condition to exist?

A. No sir.

Q. Did you call that to their attention?

A. Yes sir, in the complaint of April 2, 1929, I drew their attention to the order that had been made under the previous complaint docket and said, "That the annual reports filed by the respondent with the Public Service Commission since the said date all have shown gross earnings very considerably in excess of the limit set by the Commission as aforesaid; that the disregard of the respondent for the said order of the Commission is resulting in the collection of a schedule of tolls that is exorbitant and imposes an unnecessary burden on the users of the State-improved highways; and that the petitioner respectfully requests a renewal and strict enforcement of the aforesaid order of June 8, 1926."

Q. What response did you get to that?

A. We held a preliminary hearing in which I set forth the information that we have already given you here available from information of the Company and drew the attention then to the general condition that existed.

Q. Do you happen to remember what value the company is claiming in the present case?

A. I have just an impression that I obtained from different hearings that were held that they are striving to fix the valuation and appoint one that is slightly in excess of the one already fixed by the Commission, and when I say slightly I have in mind there may be a difference of possibly \$25,000; I don't think more than that.

BY MR. HAGMAIER:

Q. When you were consulting with Mr. Mather who was the attorney, did the question ever come up of this \$50 a day penalty with him?

A. I have raised that question at practically every hearing we had, because as I said and as I see it is the only prospect that we have of obtaining this revenue.

BY MR. RHODES:

Q. What is the status of that case now?

A. It is held in abeyance.

Q. And has been how long?

A. I don't know that; from time to time I have had to spur the Public Service Commission to get action.

Q. Did you accomplish that result?

A. Yes sir. On January 4, 1930, I petitioned the Commission for an order on the bridge company to furnish us figures that resulted in some more hearings in 1931, but finally we were driven to the extreme of sending a man over the Clarks Ferry Bridge and having him pay five cents, and after sending that man over in that manner, they did go ahead and we had some more hearings.

Q. But each time it relapsed into a condition of repose?

A. Yes sir.

BY MR. EVANS:

Q. Your complaint has been pending since April, 1929?

A. Yes sir. One thing I would like to add. Christian Lynch paid \$4,500 for the bridge. It was resold to the Clarks Ferry Bridge Company for \$45,000, and the \$45,000 was paid in the way I have mentioned. The common stockholders subscribed to \$10,000 of bonds in 1917 and \$20,000 of bonds in 1918, making a total bond holding of \$50,000, first mortgage bonds against the wooden structure. They traded the \$50,000 of bonds 6%, for \$60,000 of 7% preferred stock at the time of the refinancing of the company. No 7, the common stock that the four common stockholders in the Clarks Ferry Bridge Company hold and own, has not cost them anything, but in 1930 they paid \$42,500 of dividends on that common stock, and they listed it in their reports as being a 12% regular dividend and 5% extra dividend. The \$42,500 represents the 17% on the outstanding \$215,000.

BY MR. RHODES:

Q. You say there are only four stockholders?

A. Four common stockholders. Two of them have since died, and I presume their estates are holding it. The others are P. F. Duncan, John Wills who has since died, William Jennings, Harrisburg, and Christian Lynch of Harrisburg. One other thing, the total over-charge approximate \$230,000, which is sufficient to prepay our tolls on the Clarks Ferry Bridge for a period of in excess of two and one half years. They could run absolutely free,—the traffic could run absolutely free on the Clarks Ferry bridge for a period slightly in excess

of two and one-half years, and they would still have everything that the order of the Public Service Commission says they should have. One thing more the average percentage of increase,—taken from reports that are submitted by the company to the Public Service Commission—the average per cent. of increase in the traffic year from July 1, 1930, on eight months is 19% over the same periods in the preceding traffic year, from July 1, 1929. The January receipts for 1931 were the largest receipts for any January, regardless of the schedule of tolls that was in effect, which showed an increase of 44% over January of 1930, notwithstanding the fact that there had been a reduction in the tolls.

Q. The day that you sent a fellow over there with a nickel and one of these rebate slips, what happened?

A. They arrested him. There was criminal prosecution brought us. He was hauled before an alderman, and was fined, notwithstanding the fact that the rebate slip was guaranteed by a board of the United States Fidelity and Guaranty Company, and there could not have been any question as to the payment of it. The 5c toll is entirely justified. They have got \$230,000 of our money to guarantee them against any possibility of loss. Incidentally we appealed to the Dauphin County Court in that prosecution, and the criminal prosecution against the man was thrown out of court.

W. M. DIETRICK recalled

BY MR. EVANS:

Q. Mr. Dietrich, you have prepared an exhibit showing the earnings of the Clarks Ferry Bridge from 7-1-26 to February, 1930?

A. Yes sir.

MR. EVANS: I offer this in evidence as Exhibit No. 173.

BY MR. EVANS:

Q. You have prepared this exhibit on the basis of tariff years, which commence on July 1st?

A. Yes sir.

Q. What is the over-charge above the tariff rate for the period from July 1, 1926 to February 28th, 1931?

A. \$209,380.41.

Q. Mr. Dietrich, you also made some examination of the report of this company to the Public Service Commission, did you not?

A. Yes sir.

Q. The Company in its report shows a deficit, does it not, in its surplus?

A. Yes sir, it does.

Q. Will you explain to the Committee briefly how, with such a profitable business, it shows a deficit?

A. The deficit as shown by the Clarks Ferry Bridge Company under balance sheets submitted to the Public Service Commission at December 31, 1930, is somewhat misleading, due to the fact that there are a number of rather intricate entries in this surplus, which if adjusted to show the true surplus of the company, would not show a deficit, but would in reality show a surplus of practically \$80,000.

Q. What deficit does the balance sheet actually show?

A. The balance sheet on the page which I gave shows a deficit of \$63,662.54.

Q. This should be, you say, a credit balance of \$80,000 and something?

A. Yes sir. Every year since the year 1925, this company had charged its surplus with an amount of \$27,155.78, which they call amortization of old bridge.

Q. That was that wooden bridge which they bought for \$4,500, was it?

A. Yes. To the end of 1921 the total amortization was \$162,934.68. In 1927 this company debited their surplus with \$82,407.36, which they termed credit of old bridge, and adding these two together, we have a total debited to surplus of this old bridge of \$245,342.04. The Commission in its valuation of the property of the Clarks Ferry Bridge Company, in which rate case Mr. Coble testified to, allowed approximately \$70,000 on this bridge, but they have already added the surplus of \$245,342.04 for this bridge. They have another intricate entry that is impossible for me to explain, I don't know how they arrived at it, they credit their surplus account yearly with an amount which they call interest on balance in old bridge, and to the end of 1930, this amount was \$57,163.45. Another thing which they charge is debit from surplus of an excess depreciation

tion. The Commission allowed depreciation yearly of \$7,678 on this bridge. To date, or to the end of 1930—

Q. That is on the new bridge you are speaking of now?

A. Yes sir. There was excess depreciation over this order of \$42,543.32, and this added to the debits for the old bridge gives us \$145,630.27, and if we throw the deficiency of \$63,662.54 against this, we have surplus left of \$81,967.73, which in reality would be the surplus of the company if it was handled in the manner set out by the Commission.

Q. Those figures are all taken from their reports to the Public Service Commission?

A. Yes.

The Chairman declared a recess until 1.30 o'clock P. M.

Harrisburg, Pa.,  
Friday, April 24, 1931.  
1.30 o'clock P. M.

#### AFTER RECESS

W. M. DIETRICK recalled.

BY MR. EVANS:

Q. Do you want to make a correction in your testimony you gave before lunch?

A. Yes, sir.

Q. Will you please state what correction you wish to make?

A. In my testimony, given just prior to the recess, I stated that if the surplus of the Clarks Ferry Bridge Company, as set out in their report to the Public Service Commission of December 31, 1930—if this surplus was adjusted to eliminate the entries for the old bridge and for the excess depreciation, that the company would have a surplus of \$81,967.73, instead of a deficit of \$63,662.54.

I wish to correct this testimony to the effect that if these adjustments were made to their surplus, they would have a surplus of \$167,064.37 instead of \$81,967.73, to which I testified before.

MR. EVANS: Mr. Chairman, before we start with Mr. Attwill, perhaps I had better read into the record a telegram which has just been received, addressed to me, dated, 1.05 P. M. today:

"Am prepared to appear before Pennsylvania House of Representatives Public Utility Committee at any time that is mutually convenient, after Tuesday next week.

J. S. S. Richardson."

I also have received a telegram from Mr. J. T. Hopson, vice-president of the Associated Gas and Electric Company, New York, dated today, stating that it will be impossible for either him or Mr. Manges the president of the company to appear before the Committee next week.

MR. RHODES: Do they say that they can appear at any time?

MR. EVANS: Mr. Hopson says neither he nor Mr. Manges feel that it would be possible for them to appear at any time, sir. And I also have a letter dated April 7th, from him, stating that the press of his duties is such that he cannot spare the time to come.

HENRY C. ATTWILL sworn.

#### REGULATION UTILITIES IN MASSACHUSETTS.

BY MR. EVANS:

Q. You are the Chairman of the Massachusetts Department of Electricity and Gas, is that right?

A. Department of Public Utilities is the technical name.

Q. That is the Department which is charged with the regulation of public utilities in Massachusetts?

A. Yes; largely.

Q. How long have you been chairman of the department?

A. Since December 1, I think, 1919.

Q. And you were a member of the department prior to that time?

A. In a sense, and then, again, no. I resigned as Attorney General in August 1919, with the understanding or the intimation to me that when the new consolidation took place in December, became effective, I would be made chairman, and

temporarily I filled a vacancy on the Public Service Commission, to December 1, 1919; a vacancy on it which occurred by reason of Mr. Eastman being appointed to the Inter-State Commerce Commission, but didn't do much work, because everything was sort of at a stand still because this other act had been passed in July to become effective December 1.

Q. The Committee, I think, is very much interested to hear how utilities are regulated in Massachusetts, and the methods which you have found effective, as they will have before them legislation on this subject; have before them at the present time here in Pennsylvania. Would you be good enough to give a general picture of the situation.

A. I think one to understand the situation in Massachusetts has to understand somewhat the traditions of the state and how they developed.

Now, Massachusetts, in a sense began regulating utilities as far back as 1804, when they proceeded to make provisions for turn pike companies, requiring them to furnish to the Governing Council their original costs and their expenses of operations, and originally in the acts of the legislatures they used to fix the rates, and in those acts there were provisions that after twenty years, or whenever the turn pike company had earned, had got the cost back, plus, I think 12% on the cost, then the turnpike should automatically become the property of the Commonwealth. Later, when we started having railroads in Massachusetts, we had what is known as a recapture clause, which provided that the Commonwealth at any time could take over the railroads at the original cost of the enterprise, plus an annual earning of 10%. Now, you see, those, in their nature were sorta limitations, upon the earnings of the corporations, and as time went on with gas companies and electric companies it was natural that the legislature of Massachusetts and the people should visualize rather differently than I think the rest of the country—we sort of visualize that what we were doing in a sense, was borrowing investors' money; that the public utility property was really a sort of trust property held for the benefit, not only of the stockholders, but the public, and so, we have traveled along on that sort of an idea; that when we come to regulate a utility, we seldom give any consideration to what is known as the value of the property either present, past or in the future. We deal with the proposition largely from the investment, what has been put in the property, and what the people, who put the money in the property, should really have as a return.

And now, if I can explain what I mean, how that works—I might put it another way: to my mind the regulation of public utilities is an economic one rather than a legal one. So long as the utilities are growing and the community is growing there never will be any difficulty or ought not to be, because there is no legislative power to cut down the rates so that an adequate return will not be paid upon the investment. The public want extensions and improvements, and under the way we issue stock in Massachusetts, it can't be issued for less than par, and it is obvious, in order that the public may have additions and improvements, that the company must get additional capital, and that can only be obtained if the public are paying rates sufficient to keep the stock at par. This is only—

BY MR. TURNER:

Q. Pardon me, you said that the legislature could not. Did you mean—

A. I mean as a practical matter.

Q. But legally could they make less than what we term a fair return under that law, and get by with the Constitutional inhibition?

A. Well, I am going to approach that. We never paid much attention to the Federal Constitution in Massachusetts. What I am trying to arrive at is the economics of the situation; that is, we never arrive very close to the point of saturation, that in justice may be done to the company, and as I say, as the public are not seeking additions and extensions, the public may, in a sense, deal and rob from the public utilities unless there is some provision to prevent it.

I can see the public utilities' end of it, also.

Now, in reply to your question, all that I can say is that we had a gas and electric commission created in 1885 in Massachusetts, and it was given the power to fix rates, and that power has gone along unto the present time, and they served 45—46 years; and in that period of time, there have only been

three cases where appeals have been made to the Federal Courts, and in those three we were fortunate enough in Massachusetts to have the cases dismissed before they got out of the district. And so, we have never been bothered by cases going to the Federal Court or down to Washington. We have, as I say, for over half a century, we have been working on our theory of effective regulation, and we have been very fortunate until two or three years ago, when there seemed to be a real assault against our method of doing business. And we were successful in getting that out of the way. We have since got a little legislation which I think will be helpful to move the possibility of its return.

Now there is another feature as I think I ought to speak of here, we have what the people refer to in connection with Massachusetts as regulating utilities on the prudent investment theory or a fair return on the prudent investment. I don't think that that exactly expresses it, in this sense, Massachusetts I think—it is seldom that the Commission has ever talked about rate bases, or seldom have the Commissioners talked in the technical language that has grown up in the utilities. We look upon the situation that if the company is fairly managed and prudently managed we ought not to regulate its rates so as to deprive the company of a fair return upon the investment. Now the limit below which we ought not to go is considered, and as a matter of fact we give them considerable more. Otherwise, you have a higher efficiency, and if one is better than another you have to take that into account. Furthermore, we have a peculiar situation in Massachusetts. I never have liked it altogether although I think it has worked pretty well, which came into effect in 1893 as to railroads and street railways, and in 1894 as to gas and electric companies, and that provides that whenever there is any increased issue of stock it shall not be offered to the stockholders at a price less than the department feels is not so low as to be consistent with the public interest. What that means I really don't know. The courts have attempted to define it, but not very successfully. Practically what that means is that it shall not be issued so low as to be inconsistent, consequently if we think it ought to be sold at a higher price we raise the price. Now, in connection with a company whose stock is being issued at a par of \$100, and we say to the company in this increase of stock, "You have to sell that at \$150," I am speaking for myself. Regardless of what the other members of the Commission may feel, I have always felt that it is not equitable and fair where the company is conducted in a successful and intelligent manner, if the State by stamping its valuation in a sense on the stock at \$150, through our regulating the company, that it would deprive it of earning a fair return or a return which would maintain that stock in the market of 150, if it prudently and successfully managed its property.

BY MR. TURNER:

Q. Mr. Attwill, if it does not break in, if it is not too cumbersome, what would be the process by which, the reason by which, you would increase that, and what would be the circumstances?

A. Well, I will give you an illustration. We have what we know as the Edison Electric Illuminating Company, which is our biggest company in Boston. That is selling on the open market on the stock exchange at places it is sold at, at around \$280 a share, and we don't feel we ought to allow them to sell that increase of stock to the stockholders at \$100 a share. As a matter of fact, the price we put on the Edison Electric Illuminating Company, the highest price is \$215 a share, although its par is 100.

BY MR. EVANS:

Q. What effect does this have on stock dividends?

A. There can be no stock dividends in Massachusetts, the law prohibits any stock dividends of any kind or nature.

BY MR. TURNER:

Q. That is where you have some gauge?

A. We get gauges pretty well; although they may not be listed on the stock market, they are sold and auctioned in unlisted sales. We have some places that sell stock in Massachusetts and unlisted securities.

Q. In other words, you find out what the market is for it?

A. Yes; and when it has no market, which you are apt to get nowadays, the fashion is to have holding companies and

they try to get all the stock of the operating company, then we have to deal with it from the standpoint of its earning power, and what it is earning. We say this stock, if they are paying 6% dividend, an electric company, we are quite likely to say that is about par. If it is paying up between six and ten per cent., then it appears to us that it ought to be up to about 150.

Q. What would you do with no par value stock?

A. We have no such thing in Massachusetts. The utility companies did endeavor to have bills passed for no-par stock, but I, and my associates on the Commission, have always opposed no-par value stock, so we have nothing of that sort.

BY MR. EVANS:

Q. What do you do with a company when it wants to split up its stock?

A. Sometimes we let them and sometimes we don't. Now I think we do let them split it up. There was a statute which provided they could split it. You mean to reduce the par value so that if it is \$100 they can make it \$25 and call in the stock and do issue four instead of one? We did that pretty generally until we were confronted in 1929, October 1929, with an application from the Edison company which we denied for reasons which were set forth in the opinion. I have a copy here if you should like it.

BY MR. RHODES:

Q. Do you remember what effect that had on the stock market when you made that order?

A. Some people accused us of causing the financial panic throughout the country. I have always felt the financial situation was on pretty thin ice if our activities with relation to the Edison Company—it did make the Edison stock go down ninety points for the day. I will leave a copy of our order here and I think that that will explain in it much better that I can explain it.

BY MR. COOKE:

Q. Could you not tell us in a few words?

A. There had been a good deal of speculation. We had allowed them to issue 1000 shares and that had sold in the market at auction for some unheard of and unknown reason for \$411 a share. Now we felt convinced that the people would likely be buying that stock on that high rate on the theory that by reason of the splitup they were going to get—we were going to permit higher rates of dividends by the Edison Company and we felt it was undesirable in that high market to have the stock split up and give it an additional boom, and we thought that at that time it was ridiculously high and that they had better wait until it got down to some reasonable level.

BY MR. TURNER:

Q. You must have very great powers over the issuance of securities under the Massachusetts law?

A. And no public utility in Massachusetts, can make any increase in its stock without the department approving of it. The statute I recall, says "without the approval of the department," that the increase is necessary for the purpose for which it is proposed to be issued. That is rather a wide latitude.

Q. Does that give you control in these holding companies?

A. No, because no holding company is an operating company. I personally am rather indifferent about the holding companies. I simply visualize them as a large stockholder,—not particularly interested in them.

Q. Don't you feel that it has,—they have some aspects upon the operating of costs in these companies.

A. Personally no, so far as our State is concerned, up to date,—what it will be in the future, that is another thing. Of course, there may be danger of having a wide political influence; there may be danger because their securities are so thoroughly broad cast,—their trust certificates,—that they would have political advocate in every hamlet and village, because when I used to be in politics, I found that a fellow who owned a few shares, he was rather an eager fellow for something to be done in the Legislature. So, if they have thousands of holders of those securities, they have got quite a strong political body to get something that they might want in the Legislature. There may be dangers from that standpoint, but up to the present time personally I have not been bothered with them.

BY MR. COOKE:

Q. We had a good deal of testimony in these hearings on the subject of the method of valuation, known as reproduction cost new, less depreciation. Now, that is a legal approach. You said that you used the economic approach in Massachusetts. You are familiar with the reproduction cost new?

A. Yes sir, I have heard a great deal of it.

Q. Will you tell us what you think about it?

A. Personally I think it absurd and ridiculous. My own view is, if we are to regulate under this doctrine that has been enunciated by the United States Supreme Court, we cannot regulate, we are through, because it give such a high return or guarantees to the utilities such a high return that there is nothing for the regulatory body to do except to remove discriminations. If I might illustrate what I mean,—we have an electric company in my state. There are in my state some electric companies which sell as high as 75% of their output for power, and power is largely in a competitive position. Large manufacturers are in a position to argue and debate on what they are going to pay. They threaten the electric company, if you do not make the rate so and so, I will put in a plant of my own, or I will put in a Deisel Engine. So that any large manufacturer is in a position to force the company to sell electricity at about twelve or thirteen mills, if it is a big and substantial industry and powerful and assertive enough. It is obvious, if they are going to be allowed a fair return of the fair value of the whole property, 25% in non-competitive part of the business has got to furnish this fair return, for the 100%, and the matter of fact, I do not think that the 25% can do it.

BY MR. RHODES:

Q. That is usually the domestic consumer?

A. Yes sir; he has no protection except the regulatory body, and if the regulatory is confronted with that situation, I do not think it can do much for the domestic consumer; I think the regulatory body is practically stopped. We got over that in the Worcester case somewhat. It never went to the United States Supreme Court. We do not know what might have happened, but we made a finding that we were only dealing with the higher rates namely the commercial rate and the domestic, and counsel asked for findings of facts and rulings of law, which they had a right to make, and we finally stated that we found this,—what we allowed them would give them a fair return under the decisions of the United States Supreme Court on that proposition of the property devoted to commercial and domestic purposes. The Master found that on that proportion of business, the rate was not consistory, but that has not been determined by the nited States Supreme Court, as to whether it can split it up in that way, or whether or not the company can say, we are entitled to make up in the profitable part of the business what we cannot be in the fair return in the unprofitable part of the business.

BY MR. COOKE:

Q. Why didn't that case go to the Supreme Court?

A. Largely because of tumult. That has a great deal to do with influencing opinion, on this earth. These companies started in to the Federal Courts, and we had a statute in our Commonwealth, which said that a municipality, if it wanted to go into business and voted to go into business two successive votes, then the company should tender a deed of its property in the community. Then it was referred to the department acting as a Master—

Q. You said the company,—didn't you mean the municipality?

A. No, the companies tendered the deed to the municipalities of all the property it has within the limits of the municipality. Then they apply to the court for a determination of the value of that property. Then under the old statute it was referred to the department, which acted as Masters of the court, or subject to review of the court, and the result was the company was entitled to a fair value of the property within the municipality before the municipality would go into business. So, as a result our department, because of the activity of these two companies, resorting to the Federal Court, we subjected to the Legislature that they pass a bill providing for a contract between the gas and electric companies and the Commonwealth by which the electric companies and gas companies after a valuation of their propertites by the department, and recapitalization, would agree that there after

they would submit to whatever regulation the state might see fit to impose upon them, provided that the regulation did not so reduce income of the utility to such an extent as to prevent the utility from paying dividends, which would mention the stock at par, and we suggested that in that bill they should provide that those companies assented to this arrangement, the state would contract with them, that any time the state went into business, it would pay the value of their property, the value of the company's property, and those companies that did not assent would be left in the cold, and would get what they could in the future from their property, after the state went into competition with them. We were met that year by the assertion of the lawyers representing the utilities that our proposition was unconstitutional because of, and I think they based it on the case of the Frost Trucking Company against the Railroad Commissioners of California, 271 U. S. 583, because they said that act would be coercive; it would act in the way of forcing the companies to go into this contract. The Commissioners of the Department, we went out, and we made speeches—

MR. TURNER: You mean the Commissioners went out and advocated the passage of legislation?

THE WITNESS: Yes, in trying to bring home to the public that under this Washingtonian idea there was no such thing as regulation. The next year we suggested, if they said it was unconstitutional, we would repeal all its provision that were provided for in the act for the municipality to go into business and to buy out the company, and after that was repealed then we could propose our original act and there could be nothing coercive about that. As a result, after a good deal of agitation, a bill was passed in 1929 modifying the original statute, so that now the act provides that when a municipality wants to go into the electric business and votes to go in, if they cannot agree with the utility as to what shall be paid for the utility's property, then either side can apply to the department to determine the price that shall be paid; the department's decision is final. If then the utility does not want to pay that price, it don't have to, or if the municipality does not want to pay that price, it can withdraw the proposition of going into this business. If it wants to go in and it offers the money to the utility and the utility does not take it, then it is free to go in without paying anything.

BY MR. TURNER:

Q. Have you ever had any cases under that?

A. No, and I doubt if we will have in a hurry. I think the sentiment in Massachusetts, I don't think is very strong for public ownership, but I think it is very strong for the feature that it should not pay for electricity any more than is reasonably necessary to encourage people to furnish it. I think the sentiment in Massachusetts is very strong and very pronounced that the United States theory, that the 14th amendment, entitled utilities fair return upon cost of reproduction of the present property acts in such a way that we will have to pay them under that theory more than we reasonably need to pay in order to get the electricity.

MR. TURNER: Now, Mr. Attwill do you have many complaints? I mean, what we call complaints here, cases brought before the Commission?

MR. ATTWILL: Oh, we have them all the time; all the while.

MR. TURNER: You have?

MR. ATTWILL: Oh, yes. I have never known anyone yet that was satisfied with the price of anything.

MR. TURNER: Well, in these cases you don't find any valuation then for the property?

MR. ATTWILL: None whatever, unless the company forces us to do it. Now, I will give you an illustration of that, how ridiculous it is that we should have any valuation inquiry. In 1923 the New England Telephone Company was in bad shape; in got in such shape that they could not get their dividend requirement, and they brought proceedings in order to increase the rates by about 19 or 20 per cent., and they started in to lay the scenery, or the indications of the scenery for a Federal case in court. I brought the lawyers in, I got the corporation counsel of the City of Boston, and I said, "You don't contend for a moment, do you, that the property of the New England Telephone Company is not worth the par value of its stock, plus its indebtedness." And they said, "Absolutely not." I said, "It is obvious that you cannot, because you are contending here that the depreciation reserve is too much,

and so, of course, you could not go both ways." They said, "Absolutely not." Then said, "Gentlemen, why should we be bothering around about the fair value of the property. You gentlemen who represent the telephone company, all you say is that you want enough income to maintain the financial integrity of your company, in order that you can pay dividends, to keep stock up to something near par. Now, why do you want to go and make a valuation?" Well, they made no satisfactory answer. They said, "You would not take the responsibility, would you, if you were representing the telephone company?" "Why," I said, "Of course, I would, anybody would here in Massachusetts, but I can see your trouble. You are controlled largely from New York, and New York does not understand Massachusetts, and they have been so in the habit of taking valuations that they think a case is not running properly unless you do. So they persisted in it, and it cost very nearly \$2,000,000 to the telephone company; it didn't amount to a hurrah. As a matter of fact the public has got to pay that \$2,000,000, because the only thing the New England Telephone Company gets anything from is from the ratepayer. Why, every time you have these valuations, engineers running around and making a guess at it, the ratepayer in the last analysis has got to pay for the useless work, which in my judgment is absolutely useless, and it protracts the hearings listed, delays, and regulation is not worth anything unless it is prompt and efficient. You have got to wait two years before you decide anything—

BY MR. RHODES:

Q. How long?

A. Two years before you get a decision. Why, that is ridiculous.

Q. We consider that expeditious.

A. Well, I don't think you can find any in Massachusetts, the last ten years has taken two years. I doubt if you can find any that take a year. Usually I think you will find it don't take much more than three or four months.

MR. TURNER: I don't see why it should take very much time, if all you have to do is to compute the amount of stocks and bonds they have out.

THE WITNESS: You have to do a little more than that. You always have to inquire concerning the operating expenses?

MR. TURNER: Yes, that is true.

THE WITNESS: Whether they are sufficient, and then you have got the arguments of counsel, they have got to earn their money, and sometimes they want to earn profits, and in Massachusetts we run the thing as a Legislature Committee would, sort of a free-for-all, anybody can come in, it is like an Irish fight, so that we hear everybody before we get through.

BY MR. TURNER:

Q. How many Commissioners do you have?

A. Five.

Q. How many companies come under your jurisdiction?

A. Well, I came prepared for that, because I didn't know, and I could not say off hand, and I was afraid you would think I was rather dumb if I didn't know. We have apparently at the present time, what are known as gas companies, 53; electric companies, 56; I am now talking about gas and electric.

When I speak of gas companies, most of those gas companies are combined companies; that is, they manufacture both gas and electricity. So, I should judge at the present time, or as of January of this year, we had one hundred and nine. I think that has been reduced by two, because I think we permitted two consolidations since that time, which would bring it down to 107.

Now, in addition to that we have forty-three municipal plants in Massachusetts?

Q. Do they come under your regulation?

A. Well somewhat, but not much. In other words, a citizen who can't get the local managers to supply him with electricity can come to us, and if he can show he ought to be supplied we can order it.

Q. Do you have water companies under your jurisdiction?

A. Yes; we have some of those in Massachusetts, not many because our water is furnished largely by the public. I am astonished. There are fifty-two water companies.

Q. So you possibly only have a couple hundred companies?

A. I was looking at it here. This total is 412, but if we take out of that 70 motor bus lines—we also have the regulation of motor busses, carrying passengers; and if we take out what

are known as voluntary associations—that is rather meaningless, because we have little or no regulation over them, but certain ones have to make a certain type of return—that would be one hundred. You take those out, and we have 312 public utilities companies, from that statement, under our regulation.

BY MR. EVANS:

Q. And do you have jurisdiction of railroad rates.

A. Oh yes.

Q. Do those come under—

A. Oh yes.

Q. Do you have jurisdiction over taxi cabs?

A. No; but it looks as if we would. We have a bill now pending in the legislature to wish taxi cabs on us. We are rather the waste basket of Massachusetts. When they don't know to whom it goes they give it to us. Our department also administers what is known as the sale of securities of security acts, which is known as a blue sky act, and we also administer a smoke act, by which we try to reduce the emission of smoke in the metropolitan district in Boston. So we are rather, as I say, when the legislature don't know where to put it, they generally give it to us. We are long suffering in that respect.

MR. TURNER: Mr. Evans, here in Pennsylvania, as I recall the testimony, we get about 3500 reports, don't we, in the Commission in a year?

MR. EVANS: I think so.

MR. TURNER: Now, that might not be entirely 3500 companies a great deal of them might be separate companies that are reporting to one company?

MR. EVANS: Yes, I think that includes all the taxi cabs.

MR. TURNER: I am trying to get some comparison of the operations.

THE WITNESS: You know, we are a small state.

BY MR. HAGMAIER:

Q. You did not say anything about the railroads, did you?

A. We have many of those. You see, railways we call street railways, and railroads, railroads. We have steam railroad companies, 26. How we can have so many, I don't know. I suppose there are some of them that have technical existence, although they have been leased by other companies. As a matter of fact we really have in Massachusetts only four real railroads that come under our jurisdiction.

The street railway companies are 37, but of course, two of our street railways companies are largely operated apart from us—the elevated and the eastern Massachusetts because public trustees have been appointed to operate them.

BY MR. TURNER:

Q. How much do they pay the Commissioners in Massachusetts in salaries? I do not want to be personal, but as a general thing?

A. They pay the Commissioners \$7,000, and the Chairman \$8,000; very inadequate.

Q. I should think so. How long a term do you Commissioners serve?

A. Each of the Commissioners under the act is appointed for a term of five years.

BY MR. RHODES:

Q. By whom?

A. By the governor.

Q. Removal by the governor at any time.

A. Really, I don't know. We are appointed I know by and with the advice and consent of the council, and now, I doubt if he can remove, except with the advice and consent of council.

Q. What do you mean by "the council"?

A. We have a governor's council in Massachusetts; eight councilors and the lieutenant governor constitute the council.

BY MR. RHODES:

Q. And the legislature has nothing to do with your appointment?

A. No; but it can legislate us out at any time.

BY MR. EVANS:

Q. Going back to the Worcester case, what was the rate you fixed there for domestic consumers?

A. Five cents a kilowatt hour—five cents a kilowatt hour for the domestic consumers.

Q. And on the subject of control of operating expenses do you attempt to control operating expenses, pretty generally?

A. No; except indirectly. In other words, in determining what we think the company ought to have, if we think they are spending more money in operating expenses than they ought to, we only allow them what we think they ought to have, in coming to our conclusion.

BY MR. RHODES:

Q. You would not permit them to attach to their operating expenses, \$40,000 pension for a superannuated employee, would you?

A. No; I couldn't say. I think we have got to deal with each individual situation. I wouldn't want to say.

Q. You have control over the situation?

A. In a sense, yes, because if we thought that the operating expenses as they calculate them for the next year and the years to come—if we thought we ought to knock off the pensions, we would knock them off, and have the stockholders take care of them, but I wouldn't say right off that the pension system is justified, or not I would want to know more.

BY MR. TURNER:

Q. \$40,000 for an individual?

A. I expect what you are talking about is that some holding company—the old president or the old manager—

MR. TURNER: That is bull's eye.

MR. RHODES: You did not happen to know anything about the incident to which I referred?

A. Oh, no; we have them there. That is nothing unusual, but sometimes you might feel gracious, it was a God-send even to get rid of him.

BY THE CHAIRMAN:

Q. How about if one of the elements of that was to keep his mouth shut?

A. Well, perhaps so.

BY MR. EVANS:

Q. On this subject of holding companies, do you run into management contracts?

A. Oh, yes.

Q. Do you regulate those?

A. We haven't much up to date. And now, they are rather a new thing in Massachusetts, but management contracts are rather old things. For instance when I first went on the board ten years ago, I ran across the fact that Stone and Webster were managing several companies in Massachusetts, although they didn't control them. They are management contracts, and there are two other concerns that had management contracts. I was just speaking on that yesterday afternoon before a legislative committee. I was troubled about this Stone and Webster management contract. It seems to me in certain phases too high; it seems to me one could argue very strongly against it, but much of the trouble was that the Stone and Webster companies, on the whole, were doing better than the others. In other words, proof of the pudding is in the eating thereof; and so, it may be very difficult, it may be that three or four companies may have better management, better engineers foresight, by reason of a management contract may get better engineers. I don't know. I know that it is the the thing you can't pass upon in any general way. I think you have to take them up individually and fight it out.

Q. In all events it would be within your jurisdiction to regulate the managing company, for instance, where there is a company operating another subsidiary of a holding company?

A. I don't think we could. That involves management. I think we could say to them, we don't like such things and you have to change it, and if you don't change it we won't allow you so much as we otherwise would in rates. That would have a moral effect, perhaps an economical effect, to change it.

Q. Did you not say you would not allow that as an operating expense?

A. Absolutely.

BY MR. TURNER:

Q. You could not measure it by any amount; it would depend on what you found in each case?

A. I don't like these managing companies' contracts; they have an element of a fellow contracting with himself, of being on both sides of the bargain, and I think it was Grover Cleve-

land who said, "That constituted a badge of fraud," but in the southwest telephone case, the United States Supreme Court said they didn't want any evidence of fraud where the American Telephone Company and a local telephone company were contracting together although the American Telephone Company dominated the operating company.

BY MR. EVANS:

Q. Has that decision not been somewhat modified?

A. Yes sir, recently by the Chicago case, but I don't know what the law really is.

BY MR. COOKE:

Q. You certainly feel that there ought to be a relation between the value of the service and the charge therefor?

A. Absolutely, absolutely, and I fancy our department is going to take the thing up some day and tell them that they ought to limit their exercises, but just how to do it I have not yet formulated in my mind what is the wise thing to do, but undoubtedly I think something has got to be done about it and in some way limit these contracts.

BY MR. RHODES:

Q. Do you find any tendency to have applications made for increase of rates when a holding company acquires an operating company?

A. No, all of our rates are downward and not upward now. I am talking about electric rates. Now for the last seven or eight years the tendency in electric rates has been uniformly downward in Massachusetts. I won't say that in the case of gas rates.

Q. What about water rates?

A. Those poor fellows don't amount to much anyway. I think we have had to raise more than reduce in the water rates. It has generally been a matter rather of getting more income for them instead of less. For one thing, labor costs have gone up.

Q. Are many of your water companies owned by holding companies outside of the state?

A. I never heard of it until a few years ago when I heard that someone came in and bought some of our water companies, and I thought that they had courage. I could not see what anyone wanted with any of our water companies in Massachusetts. You see they are very small. There is not a city in the whole state but what has its own water supply or is a part of some system that is operated by a public district, and so they relate to towns and small communities.

BY MR. COOKE:

Q. Did these people who had the temerity to come in and buy them, did they make anything out of this transaction?

A. Really I don't know. I think we have one now on there for an allowance where they want some small increase, and I think we probably will have to give it to them. Down at Scituate there was a company called the Scituate, and then there was one at Cohasset, and there was another one at Hingham, all down on the shore there and they are all private companies. I don't think it will be many years until we have no such thing as private water companies in Massachusetts.

BY MR. RHODES:

Q. Municipal operation is acceptable and proves satisfactory in Massachusetts?

A. In so far as water companies are controlled, absolutely.

BY MR. TURNER:

Q. You mentioned a while ago in the early days you had a recapture clause. You meant by that the ability to take the property itself and not the earnings?

A. Take the property over, paying the cost of investment plus a certain per cent. for each year they operated.

Q. You have no recapture of earnings?

A. Yes, we had everything up there. It really doesn't work out now. In 1898 there was a commission appointed to study the street railways situation and my recollection of that is that Charles Francis Adams was chairman, and as the result of their report, we have a street railway law which provides that a street railway that pays anything over 7% dividend has to pay an amount equal to the excess over 7%

into the treasury of the Commonwealth, but I don't know of any of it that ever went into the Commonwealth.

Q. They always find some way to keep it down to 7%.

A. That was the object of it. It was to induce them to create proper reserves for depreciation and pile back their earnings into capital improvements. That is all to the advantage of the public so long as the public doesn't have to pay a return on it. But this theory, the court theory, that we have now compels us to pay on what we put in ourselves. That is one of the troubles in the reproduction theory. We put in the amount and put up a handsome reserve for depreciation and surpluses to be plowed back into the company and then they come along and say you have to pay for that cost. I don't wonder that the public says, "Not by a jugful." "If we have to do that, we will give them the poorest earnings we can." If they have some sense about it the public gets the benefits of that surplus and large reserves for depreciation, and get something like this state house or a city hall. In Massachusetts I think they say you have to pay for it in twenty years, and we have a ridiculous situation up there. The city of Boston builds the subway and the law compels these subways to be paid for in fifty years, and right in the subways we have tracks of the street railways company and outside tracks and yards, and the law in effect says they never shall be paid for. Something must be wrong somewhere. They are both utilities, and are both public utilities.

Q. There has been a suggestion made that we institute in Pennsylvania the prudent investment theory.

A. I think you will be going in the right direction. You will be going in the direction of Massachusetts—the Premium Law which I never liked. I have reported successfully to the legislature, in my judgment it ought to be repealed, because it acts in such a way that the boys raise their dividends and that raises the price of the stock, and then after you have raised the price of stock, they say it is outrageous, you have put this stock at this price, that you could reduce our dividends so that we cannot maintain it there. There is a good deal of justice in that. But curiously, the figures work pretty good. We blunder along, but they worked pretty good. You look over the companies in Massachusetts. Most all of them have splendid reserves for depreciation, and splendid surpluses, and I think the reason we have got those surpluses—well it might be New England thrift, but I think that more than likely that were a little fearful if they tried to increase the dividends much, they would have a rate case on their hands. In a sense it has worked pretty well. But if you went on with the prudent investment theory—and you could find some way that you could do it, without the intervention of the Federal courts. I think it would be a fine thing for the people of Pennsylvania. But the question is, how can it be accomplished.

Q. We have in Pennsylvania the thing that these stock issues and so forth may have no relation to the value, because they have been made throughout the years when there was not control?

A. Start controlling them now. After all, most things come out in the wash. Property which you have had in the past years and the new at least will be controlled by somebody. I think we can say so far as Massachusetts is concerned there is no stock watering in our public utilities. I feel very confident of that. I think that all of our companies, with the exception of street railways, which have been dying out, petering out, their properties are worth in excess of the par value of their stock and bonds. I think that is a pretty safe thing to say.

BY MR. RHODES:

Q. I presume you have never heard in Massachusetts where they put out a bond issue and utilized the proceeds to declare a dividend on stock.

A. They cannot do it. Our statute specifically provides it. It says that you cannot use the proceeds of the sale of stock or the proceeds of the sale of bonds for the purpose of declaring dividends.

Q. We thought that there was such a law here, but they do it anyway.

A. I think we have got a penalty attached to ours. I rather think it applies to the directors. A statute is no good unless it puts somebody in jail. Don't simply have one of these statutes that fines the corporation, because all that does is to fine the public. In order to make the statute effective, somebody should be appointed to go to jail.

BY MR. EVANS:

Q. You speak of there begin thirty to forty municipal gas or electric plants.

A. Yes sir.

Q. Have you found the existence of those municipal plants in any way helpful in regulation.

A. Yes sir, in a way, they are very helpful. For instance, we have got the only real municipal plant that I know of in the East—it is in Massachusetts, the Holyoke Municipal Plant—it has steam generation, all of the fixings of a private company. I think it generates some by water and buys some. That company, I think, is selling electricity at about 4 cents to the domestic consumer. It used to be 4½ cents. I think it has gone down to 4 cents per kilowatt hour. It is very helpful because a private company says, we cannot sell around five cents, and you naturally are able to turn to them and say, you ought to be ashamed of yourself.

BY MR. RHODES:

Q. When you speak of 4½ cents, you mean the top step?

A. The maximum—you ought to be ashamed of yourself, you have been telling me that a municipal plant was inefficient, filled up with politics, and you with all your experience and with an absence of politics, cleanliness, elaboration, cannot make five cents, we cannot understand it. Of course, it is helpful; it makes the private owner ashamed that he cannot approach the public owner.

Q. You say that your private companies have a maximum rate of about 5 cents to the domestic consumer?

A. I am happy to say we are getting most of them right around in that vicinity. The Worcester Company is five cents. The Cambridge Company about 5½ cents, but they have also got an optional rate which, if one uses 45 or 50 kilowatts, they get it a trifle lower. New Bedford has got a rate, which I think is 8 cents an hour for the first fifteen kilowatts—8 cents less discount; then 5 cents less discount; up to 45 or 50; then it goes on to 2½ cents rate. Fall River, I think it is 8 cents or 8 cents for the first 25; then it goes on to 5 cents. Lynn my home town the other day started filing a rate at 7 cents for the first 25—for 6½— for the first 25; then 5 cents and that subject to a discount. Our trouble has been curiously the Edison Company. We got them down with a room rate arrangement for the domestic consumers about 6 cents. There is going to be danger in this thing. There is a place where you ought to hesitate about going too low, because you are going to run into the commercial fellow. You probably have an office somewhere, and you only run lights in the winter time, and then you don't run them any more than twenty minutes. You are simply a nuisance, coming in on the peak. They come in for a certain length of time on the peak. They are a nuisance. I don't think there is any profit in them.

BY MR. TURNER:

Q. There are a few places in Pennsylvania where the lighting customer comes on the peak?

THE WITNESS: Now, don't the stores come in on the peak?

MR. COOKE: Not in Pennsylvania, you see—

THE WITNESS: When do your stores keep open here in Pennsylvania?

MR. COOKE: Our peak is an industrial peak about 9 o'clock.

THE WITNESS: Is that so? Most of our places have their peak about 4.30. We do have some other peaks during the day, as you say, but the high peak is about 4.30.

MR. COOKE: Our high peak here is in the morning.

THE WITNESS: So when you get down to the domestic rate, get it down about 5 cents, I think we begin to think about the small power user, and some of them ought to have our solicitude, because he has no protection except what the regulatory body can give.

BY MR. RHODES:

Q. Are those plants principally steam generated?

A. Yes.

Q. What kind of coal do you use?

A. Really, I don't know. New River, I guess, and Pocahontas.

Q. That is soft coal?

A. That is soft coal entirely used in steam generating plants. Yes, I was looking at some figures the other day, and I was astounded that the Mountain Top Company, which

is largely using oil, which is down in Fall River, was generating electricity at a production cost, and by that I mean the labor and the fuel and the maintenance, not taking into account the interest on the plant, around 3 mills a kilowatt. Now, a hydro-electric plant cannot do much better than that, and I don't know that it can do as well.

BY MR. HAGMAIER:

Q. Do most of these companies have a discount?

A. Yes, most of them have a discount for prompt payment in ten days from the time of the bill.

Q. In this state they put a penalty on instead of a discount.

A. It means the same thing.

Q. They don't get anything off, they charge seven or eight cents, and they don't have a discount.

A. I think it results in the same thing. If I say to somebody that the price is five cents, but if you don't pay in ten days it is five and a half. It is about the same thing as if I say the price is five and half cents, but if you pay in ten days it is five cents.

Q. Don't you think it is better for the average public to have a discount instead of a penalty?

A. Well, it may be. I think there is something in what you say, because I have some people come in and say that this company this company is charging a penalty, because they had arranged it the other way, but so long as the penalty is reasonable, personally I see no objection to it.

BY MR. MEMOLO:

Q. What would you call a reasonable penalty?

A. Well, I think about half a cent a kilowatt is alright.

Q. Here in Pennsylvania if a person don't pay his bill within ten days, in some sections, and he pays it on the eleventh day, he is charged a penalty of 10%, and he just misses it by a day?

A. In other words, you have to have a line somewhere. I don't know how you are going to deal with it otherwise, you have got to be practical about this thing, you cannot have to do too much bookkeeping, or you had better eliminate the penalty altogether. Now, some companies don't have any penalties at all in Massachusetts, and some don't have any discounts. We have got companies that do it on that basis, but that is the sort of company that is more vigorous in shutting off the supply.

BY MR. COOKE:

Q. Mr. Attwill, our Commission has gotten into the attitude of looking upon itself pretty conclusively as a court, a quasi judicial body, and it seems to interfere with the administrative feature of their work. Do you have that difficulty?

A. I don't look much like a judicial fellow, do I? Personally, I think it is a mistake to deal with the thing as if you are a court. I don't think you are a court, I think we are an agency of the legislature, we are sort of a committee of the legislature, and anybody up in our state comes in and calls me anything that he wants to, we don't have anybody in the hearing—

MR. TURNER: They call ours a lot of names too.

THE WITNESS: We don't have anybody in the hearing room with a stick to eject anybody. We are often insulted and called all sorts of things, but that is our job, to listen to them and keep our temper. I think the formality of court procedure, personally I don't think it is as effective in regulating utilities as a more liberal policy, such as you have in a legislative committee, informal method of dealing with it.

BY MR. COOKE:

Q. The suggestion has been made to us that we adopt in this state the Maryland idea of a public defender, somebody to represent the consumer. Do you feel the necessity for that in Massachusetts?

A. No, I think it is inadvisable, because again the more fellows you have to ask questions, the more protracted your hearings are, and if you have proper returns and proper supervision of the expenditures, capital expenditures, if your accounting department is strong and effective, as a matter of fact you are about as able to deal with it by looking at the report, as you are to have a hearing for six weeks, as a practical matter.

Q. What use do you make of the annual reports that come in?

A. Why, we have—are a little gun shy, of some court saying we acted without evidence, and I always suggest to a complainant that he had better introduce the return of this company for the last five years in evidence, and that furnishes a basis to make an investigation.

BY MR. EVANS:

Q. Has the Commission in Massachusetts ever acted on its own initiative, or does it always wait for a complaint to be filed?

A. Oh, we have once in a while, we have the power, but I doubt the wisdom of doing it much, because both the prosecutor and the judge cannot very well be the same fellow, he is apt to get himself in a wrong attitude being the prosecutor. We use it in various ways, because somebody may come in and have an individual complaint, and we say that the only way to reach this is that we start a proceeding on our own initiative, but the beauty of it largely is that with the power you may talk to the company's official at times, and say: "It looks to me as though you fellows ought to reduce some rates; you are doing pretty well up there, and I am inclined to think we ought to start some proceeding here unless you do reduce some rates."

BY MR. TURNER:

Q. Do you ever do that by private conference?

A. Oh yes, certainly. When the occasion arises, they come in, and they may want to have an issue of stock, a new issue of stock, and you are dealing with them, and it may be involved in the question of the price at which we are going to put out the stock. We say, "Here, we don't want to put this stock too high, and yet the earnings are such, but we will be compelled to do so, unless they are reduced somewhat." You send for a fellow now and then and say, "Here, we think you ought to reduce those rates somewhat. If you reduce those rates, we will put this stock out at 105, otherwise we will have to put them out at 150." We are apt to get some reaction when they think the rates will go down.

BY MR. TURNER:

Q. Do some Yankee horse trading?

A. Well, I don't know that we do what you call Yankee horse trading, we accept the situation as we visualize it.

Q. Of course, in Massachusetts, your rate cases as you have said, are no where near as expensive as they would be in a jurisdiction where you were trying to find the valuation. Now, one of the difficulties in Pennsylvania seems to have been the great amount of costs to these municipalities or to complainants; and, therefore, that has been claimed to have been a deterrent?

A. I think you are bound to have it, and you are bound to have it, judicial proceeding and formalities, just so long as you are required to test rates upon the cost of reproducing that property.

Q. All right, but if you go into—

A. Prudent investment?

Q. The Prudent investment theory?

A. You eliminate that.

Q. But don't you still have a valuation?

A. Well, you probably have the valuation, but you have it once and that largely will eliminate it. After that once it is largely a sliding of the index figure up and down.

Q. Yes; but until we get to that, there will be a large number of valuation cases?

A. True, but how are you going to get out of it?

Q. I don't know how you are going to get out of it.

A. You are in the mess, and you have to climb out in some way, don't you?

Q. Yes; but what I am getting at is that I think we need some assistance to the municipalities and to the individual consumers.

A. You might, in order to get proper valuations.

Q. That is, without putting a great burden upon your municipalities?

A. That is true. The state ought to have some interest in the inventories.

Q. Or a public counsel that would help them to prepare their cases?

(No answer).

MR. RHODES: The people's counsel would only aggravate it.

MR. TURNER: I think that is more or less fiction.

MR. EVANS: You would not think so if you practiced before the Commission.

MR. RHODES: There is a great comparison between the way in which Mr. Attwill is describing functions of his Commission—

THE WITNESS: Oh, we have the lawyers; don't misunderstand me; we take evidence, and we have lawyers, and some times the petitioners are represented by lawyers also, but if we can get away from this interminable discussion of inventories, that would shorten up the proceedings very quickly.

BY MR. COOKE:

Q. In other words, you look rather with suspicion upon valuation engineers.

A. We are bound to, aren't we, sir?

BY MR. HAGMAIER:

Q. Isn't a great deal of the trouble eliminated by your conferences you have with your people without sitting up on a high bench somewhere, and have them come prepared to try?

A. Oh, no; we are up as high as you are here.

Q. I know, but you have somewhat more of a democratic system?

A. Well, we have hearings, and we have arguments, and sometimes briefs, we discourage the briefs, a good deal, because they delay things, but we do have conferences. It is true that many hearings are apt to result in conferences and in the adjustment of rates, both sides concurring that they will try them for a while. We try to expedite things as well as we can; that is true. In other words, I am not a theorist; I am a practical administrator. I reckon it is better to be practical and do the best you can.

BY THE CHAIRMAN:

Q. You referred to the fact a moment ago, that you do not initiate many cases on your own motion?

A. No; we have plenty of them coming in without initiating them.

Q. I appreciate that, but does it not follow as a result of your democratic attitude that you get the information, and that it is not necessary for you to initiate them?

A. Well, for instance, we instituted an Edison rate case a while ago. It came in this way. Somebody brought a petition in relation to certain rates, that would have been confined to certain classes. We immediately said if we are going to deal with this, we ought to deal with it as a whole, and so we immediately issued an order initiating a proceeding in relation to the whole schedule. And now, it works in that way. It conveniences the administration, I think, by having this initiative power. We have had the initiative power so far as street railways, telephones and railroads are concerned ever since 1913, but we are not using it all the while, simply because we have got away from it; but it is a handy thing to have around.

BY MR. EVANS:

Q. Have you any information at all as to the approximate rate costs of an ordinary rate case to the complainant in Massachusetts? We have had evidence here that one water case which is now pending in the appellate courts, has cost the complainants between one hundred and fifty and two hundred thousand dollars to present.

A. Who were complainants; the consumers?

Q. The consumers.

A. Well, I should think it extraordinary if a case cost \$500 in Massachusetts.

Q. And so, the complainant in Massachusetts has comparatively little expense to go through in a proceeding before your Commission.

A. In my judgment, a man can get about as good a decision by not spending any more than his car fare. As I said, if he would come down and be satisfied to introduce those returns for five years, running we can come pretty nearly to making as intelligent a decision as if we were to spend five months listening to testimony. That is what the returns are made up for, but I can't tell the petitioners and lawyers that, because, gracious, we can't destroy lawyers.

BY THE CHAIRMAN:

Q. It has been brought out in the testimony here that in the case of any number of boroughs—we heard from about

300—that many of them complain and apparently with justification, that the cost is too much and they just simply grin and bear it, because they can't afford to go before the Public Service Commission. Does any situation such as that obtain in Massachusetts?

A. No, our state is small. Originally the old gas and electric commission used to travel around to the local communities and have hearings there. When we were consolidating we found that we couldn't do it; we didn't have the time to do it; it was physically impossible; so we now hold all our hearings in Boston, but you see it is only one hundred and fifty miles the whole length of Massachusetts and most of them come in an automobile. It is no great difficulty in coming down and I think they rather welcome it, particularly in the fall season if there is a ball game that day, I think they rather welcome coming to the hearing. So I don't think there is much difficulty. I think the question of expense is greatly magnified.

THE CHAIRMAN: It is not magnified in this state.

MR. EVANS: Mr. Cooke had a case some years ago. How much did that cost, Mr. Cooke?

MR. COOKE: The City of Philadelphia gave me \$43,000 at the end of it.

MR. EVANS: To cover your expenses?

MR. COOKE: To cover my out-of-pocket expenses.

MR. EVANS: As complainant.

THE WITNESS: Of course the time is coming and I think I ought to qualify a little what I have said here about the expenses. Largely up to 1927 or 1928 our department could only deal with maximum rates. But now under a statute passed in 1927 or 1928 we deal with the classification of rates, the whole rate structure, and the time is coming when we have got to go into some probably intricate study as to the apportionment of costs and all that sort of thing. Now, that may well call for intelligent engineering and study and advice, if you can find good engineers to do the studying for you, of course we have some engineers and we put them to work on things of that sort but it may be that the public may want their own engineers, so with relation to that phase of it I can well see that when dealing with the various classes of rates, that one might have to go to considerable expense unless the department itself is well fortified with engineering ability.

BY MR. TURNER:

Q. I was going to ask you what appropriation you get and whether it is for one or for two years?

A. I think every year. It is very small. I am one of those who believe that the smaller the personnel generally the better efficiency you get. We spent last year in the administration of the public utilities in all our activities, \$201,567.27. The total we spent was \$251,699.99. That took in the securities division and the smoke abatement. That compares with 1929, for the public utility end of our activities \$182,423.19. That was an increase of about \$19,000 in the nine or ten years.

Q. Do you have bureaus like engineering and accounting? And a bureau of law?

A. No sir.

Q. Are all of your commissioners required to be lawyers?

A. No, but in fact four of them are, and one is an engineer. We have some engineers and railroad inspectors and telephone inspectors, and we have some gas engineers, but we don't confine them to the stalls that they are appointed to. Wherever we can utilize them to help out in things we want done, they all help out with their other activities. Of course as I say we are a small state and we can get along with much less money, of course, than a state like Pennsylvania could.

BY MR. COOKE:

Q. One of the bills passed by the New York State Legislature last year provided for a research bureau. Do you have an activity corresponding to that?

A. We never knew what research was. I once saw that someone in our department was hired for research work and I inquired just what it was and I never could get a really satisfactory answer. I don't know just what you mean by research work.

Q. One of the problems I know they have attacked is an attempt to get uniform rate structure for electric companies so that presumably in the course of years they can approach a system where each company will not have exactly the same rate but their rates will be based on a similar classification?

A. That may be a good thing, I don't know. I don't know that I am very much enamored with standardization. We learn a good deal by someone experimenting, experimenting here with one thing and there with another, so the time may come when you can standardize pretty effectively, but we have not got to that place yet in our state. We have very difficult situations at times. You see along the coast we have got places which have very high summer populations and then the population shrinks violently during the wintertime. That involves oftentimes quite a problem how to arrange the rates in those communities; and the arrangement of rates in those communities would not work at all in our industrial cities, nor would our industrial structure work at all in these seashore communities. I doubt if we could if we would. In any event we would have to have two or three formulas for rates in our state, I think.

Then we have other situations. We have residential communities which are an entirely different problem from the industrial communities. I rather doubt the wisdom of having a standardized system of rates at the present time anyway. Perhaps it can be worked out sometime, but I don't think we could do it.

MR. EVANS: Mr. Attwill, I don't think it would be fair to keep you much longer. We appreciate very much your coming here.

MR. MOORE: The Chairman, speaking for himself and for the committee, and I know I voice the sentiment of the entire committee, I know we appreciate very much your coming down here and we have found your testimony exceeding illuminating.

THE WITNESS: Do you have the Massachusetts Supreme Court reports. I happened to run across a little note I have here which gives some thought back of regulation in Massachusetts. It was a case of Worcester versus the Western Railroad and is No. 4, Metcalf 464, decided in 1842. That is by Chief Justice Shaw, a man of a great reputation in the East, in which he discussed railroads and whether the property belongs to the stockholders or to the public. It is very interesting where he discusses that in a short paragraph.

#### ADJOURNMENT

MR. MOORE: This hearing will now stand adjourned until next Wednesday, April 29th, 1931, at 2.00 o'clock P. M.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION No. 10

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Wednesday, April 29th, 1931, at 2.00 o'clock P. M.

There were present:

Messrs. D. Glenn Moore, Chairman,  
Chester H. Rhodes,  
Martin Memolo,  
Ellwood J. Turner,  
Louis W. Hagmaier,  
Harry J. Crawford,  
Rev. James R. Cox,  
Harold Evans, Esq.,  
John M. Walker, Esq.,

GEORGE W. WOODRUFF sworn.

BY MR. EVANS:

Q. Judge Woodruff, you were formerly Attorney General of Pennsylvania and are now special counsel to the Governor on utility matters?

A. Yes.

Q. In his testimony before the Committee, on page 3194 and following, of the record, Chairman Ainey in discussing the Commission's power over security issues, testified as follows: "That matter was referred by Governor Pinchot to me, and a suggestion that the Attorney General's opinion be obtained," referring to you as Attorney General. "In connection therewith, however, there was the opinion of Mr. Wells, then Deputy Attorney General, in which he stated in his opinion that the Public Service Commission had no authority whatever over security issues." He then introduced as Exhibit 157 certain correspondence pertaining to the Conowingo matter and including an opinion from you and an opinion from Deputy Attorney General Wells. Would you be good enough to state to

the Committee the facts in regard to that opinion and what was covered by it?

A. In 1925 there was a project under foot to establish a very large hydro electric plant on the Susquehanna River just below Conowingo. It was complicated by the fact that it would involve both the states of Maryland and Pennsylvania, as well as the United States, through the Federal Power Commission. This led to considerable correspondence and negotiations between the three governmental powers involved. Deputy Attorney General Wells, who had mostly to do with water questions at that time carried on practically all of this negotiation, consulting with me, however, continually.

The Public Service Commission finally, as Mr. Ainey stated, asked me definitely for the opinion of the Attorney General concerning eight questions, the first of which was just mentioned, namely, the request for an opinion "What authority has your Commission, (Public Service Commission) over the securities of public utilities, electric corporations organized within the State?"

You will note that the question is directly addressed to the issuance of securities, not to the control over utility securities—

Q. After they have been issued?

A. After they have been issued. Or the protection of the public as far as possible, after issuance of the securities; in various ways, of which I will speak of in a moment.

There was only one answer that could be given to the question, and that was that the requirement of the law is met in a certificate of notification, fully responsive to all the questions contained in the Commission's form is tendered for filing accompanied by the statutory filing fee.

Immediately after the filing of this certificate of notification, it might be by immediate telephone conversation with the financial institution underwriting the securities, they could be issued, you might say, without the passing of more than a few minutes of time. You can visualize how that could easily happen, by the use of a phone and the filing of a certificate, calling up Drexel & Company, who happened to be the ones underwriting this issue that is now under consideration.

There is only one possible answer to the question, and that is the answer that is given. There was no thought at the time of going on to discuss the further question of what are the powers and the duties of the Public Service Commission with regard to the very many provisions concerning security issues which are contained in the Public Service Company law. According to the practice, with no intent to dodge answering questions, it has been deemed wise, I think from time immemorial, for the Attorney General to confine himself as a rule to the answering of a question asked. Therefore this question was answered, that they have no direct regulatory power over the issuance of securities.

Q. Now, if may interrupt you a moment, the question then before the Commission was whether or not it had power to prevent or control a proposed issue of securities, was it not?

A. That was what was before the Commission.

Q. And it was that question which you were answering in your opinion?

A. That question, and that question only. Now, if the Commission would permit, this matter having come up, and it bearing, as it seemed to do, very much upon the question of this investigation, as far as I can see it, namely, as to whether the Public Service Commission has performed fully and zealously its duties in the protection of the public under the law, which gives it its rights and its powers, I would like to go a little further and speak about the later phases of the very same question which was not before me at the time the opinion was given. I will take only a very few minutes, but I would like to be allowed to do that, because otherwise it might leave a wrong impression as to the fact, as I would state it, that the Public Service Commission has a great both legal and practical power in the way of regulation of utility security issues after at least they have been issued.

I would like to say further that from my observation of the conduct of financial transactions, action of that kind would very soon and very fully reach backward and make it practically impossible for any great corporation which also is a utility to obtain the underwriting and the co-operation of the financial institutions, if they knew that the wrongful action of the corporation in the issuance of its securities would result almost surely in subsequent discovery and even punishment for the illegal issuance of securities.

First of all, the Commission is deprived of this power to control the issuance of securities in the beginning. The Public Service Company law itself takes away this power, in Section 4 of Article 3, where it states specifically that it shall be lawful for any public service company to issue securities, and it goes on to state a little later that the precedent requirement is the filing of a certificate of notification, which shall give a very extensive and complete list of items of information. The Act also, in enumerating some of the powers definitely of the Public Service Commission, states that its power to regulate securities shall be as specifically provided in this Act. There being therefore no specific provision with regard to the issuance of securities, I must conclude as I did, that in the beginning the power does not exist. But that question and the answer to the question were very wide of the gist of what is sought to be found out in this investigation.

There is great legal and practical power over security issues after once they have been issued. In the beginning, at the very time that this power to issue is granted to the public service companies, it provides, "That they may be issued for and only for money, labor done, or money or property actually received." I apprehend that nobody will claim for a moment that the words, "labor done and property actually received" mean fictitious prices for the labor done and the property actually received. Therefore I would say that there is understood at that point that the labor and the property must both be counted in the issuance of the securities at their actual values. It also provides—

BY MR. TURNER:

Q. What would you call actual value, Mr. Woodruff?

A. Actual value as determined with some reasonable degree of prudence, as to what a number, or even one—a number of good business men who do not desire to do anything but get labor done and get property into possession at reasonably near the lowest figures at which they can be obtained at the time, would have exercised it.

Q. Well, that would be going back to the start then. Suppose, just take for example one of the cases that we had here—suppose Stone and Webster made an appraisal of a property—I don't remember what the exact figures are—but suppose they made an appraisal that increased the property, we will say, from \$500,000 to \$1,000,000—that is, I won't say increase the value; suppose when they valued it, they said it was worth \$1,000,000. Now, if there were \$500,000 worth of outstanding securities, if the property were sold to somebody else for \$1,000,000; would that be the value?

A. It would, if that was a reasonably prudent investment of the money, of \$1,000,000. I take it for granted that there is always a leeway, but it must not be so ridiculous that it condemns the whole transaction just, merely by the fact that it is known what anything is worth, and they pay more for it, that would not mean the payment of money for property actually received. If pipe is worth \$30.00 a ton and they pay \$50.00 a ton for it, that would not be—and stock was issued to pay for it, that would not be the payment for property actually received. That is all—I take it for granted that we will all—

Now, the law immediately goes on to provide that all fictitious issues shall be void. Now, fictitious perhaps comes nearer expressing what I used with the word prudent. The word prudent means something to me, and some day I do really believe, to almost everybody, it will be an acceptable word, but fictitious certainly is known.

BY MR. TURNER:

Q. The only difficulty with that is,—I think we all understand what the definition of prudent is, but has it ever been legally determined what prudent is?

A. I don't think it is necessary that it shall be legally—you mean by the Courts?

Q. Yes.

A. Because when the Courts do finally pass upon that word as they probably will some day, with regard at least to the Federal Water Power Act, which was in consideration at the time this case we are talking of, when this opinion of the Attorney General was given, which uses that very expression. It says, it uses the expression, actual, legitimate, prudent cost—and I would say that by actual it meant, was it paid? By legitimate, was it paid like to Stone and Webster, who were not affiliated, or was it paid to ourselves, having formed a construction company with the intention of doing the public.

That would not be legitimate. And was it prudent, namely, with good business people, with a full knowledge of the transaction, have been willing to have paid that much when their own interests were at stake?

Q. In other words, it is like in a negligent case, it is a question of whether a man would have reasonably done that under the circumstances?

A. Yes, Mr. Turner, I have just said that the Public Service Commission has great power over security issues. I want to draw attention very briefly, and we will then be through with this question. Not only do these provisions with regard to money, labor or property, at, say, their actual value as nearly as can be determined—and the provision that fictitious issues shall be void, and a provision for the Public Service Commission to receive a very full and detailed certificate of notification of what the issues are to be, and the purposes of the issue—

Q. Mr. Woodruff, I don't want to interrupt you or annoy you in any way in making your statement, but is the certificate of notification that exists in the State of Pennsylvania today in compliance with the Act?

A. I would think that it is reasonably near in compliance. I haven't given it special study, but as I understand it, the difficulty is not so much that the certificate of notification is not reasonable, but the other powers which I am about to mention have not been exercised subsequent to the filing of the certificate, and to the issue of the securities.

Q. I understand your point.

A. The Public Service Commission is given, first of all, general power to supervise and regulate public service companies. That, of course, is just the general grant, but they also provide power to inquire and investigate security issues. You will notice that that begins to bring us right to the very subject at hand. They have powers granted them almost a nauseum in this law, which many people have written and said they consider it the best law in the United States, as public service company laws go, and I do not gainsay that, although I said that it can be made so much better and so much stronger that the public can be protected as they are not at present.

Q. Would you mind telling me what section you are referring to?

A. First of all I will give you by sections, if you would like it.

Q. I mean the one you just referred to.

A. You mean the general power to supervise and regulate?

Q. Yes.

A. That is Section 1 of Article 5, on page 33 of the book you have in your hand. Having given the general power, the law provides to give examples of what it means, amongst those examples, it provides the power to regulate the issuance of stocks, and so forth, which is a long definition of securities. Later, on page 46 of the same pamphlet issued by the Public Service Commission, Section 14, you will note, that not being satisfied with this grant of the general power, the law provides that the Commission shall have the power, on its own motion or upon complaint, to institute any inquiry or investigation, and to determine, upon hearing or rehearing had for that purpose, whether any public service company has, at the time this Act shall become effective, issued securities in violation of any of the provisions or requirements of this act, and so forth.

Then, not being satisfied yet, the law seems to want to drive home this power to regulate security issues, if not to control the issuance of security issues, they on page 12, a sub-section "L", it is really a section, of Section 1, at the bottom of that page,—

MR. EVANS: This is all Article 2?

A. That is Article 2, Section 1, sub-section "L", at the bottom of page 12, it provides that the companies are to account or report to the Commission when required so to do, for the disposition and application of the proceeds of all sales or pledges of all securities. They do not leave anything to the imagination here—and I am only going into this to show you that I was not foolish enough in 1925 to think, when I said they had no control over the issuance of securities at that time, to think that therefore they have no control over the security issuance after once the issue has been made.

BY MR. TURNER:

Q. I think we understand that clearly, that you were referring to the issuance and not the control afterwards.

A. Yes. I don't know but what the matter may be almost a special privilege which I don't think exists for me, at least at this time, but I wanted to make that plain. Now, since we have got this far, I would like to draw attention to page 52, section 22, of the same pamphlet. You will not there that they were not satisfied with having told the company that they must account for the use of the monies secured from their security issues. It in Section 22 gives the Commission full power and authority—

MR. EVANS: This is Article 5?

THE WITNESS: This is Article 5, Section 22, on page 52. The Commission shall have full power and authority to require public service companies to report or account to the Commission for the disposition and application of the proceeds of all sales or pledges of securities.

On page 47 the law provides, in order to make this complete—this is in Article 5 as yet—

MR. EVANS: Section 14?

THE WITNESS: Section 14 of Article 5 on page 46, beginning, "The Commission is given the power on its own motion to institute any inquiry or investigation," and so forth, almost ad nauseum, it gives the power to look into all these questions, undoubtedly by direct reference to the securities.

On page 47, in Section 15, immediately following, it provides for requiring a system of accounts, and so forth, by which it can find out all things with reference to securities or anything else it wants to know with regard to it.

BY MR. EVANS:

Q. Does not Section 14 also give the Commission power to certify to the Attorney General any violations of the Act in regard to security issues?

A. It does. On the top of page 14 it gives it that power, when, as it says, as shall be necessary or proper to enforce the provisions of this Act, and to restrain and prevent such public service company from consummating or continuing any act or acts alleged to have been done or to be contemplated in violation of the provisions or requirements of this Act or of the laws or constitution of the Commonwealth.

I don't believe that I need take up the 10 or 15 other sections, occupy the space of your record and your time with them; but I will merely say that this is only beginning to touch upon the multitude of provisions in here for the protection of the public. I would like to emphasize the protection of the public.

BY FATHER COX:

Q. In other words, the law was very good, but the enforcement of the law was very bad by the Public Service Commission?

A. The law as it stands could have protected the public. It can be strengthened and made into a law that can be said without hesitation, I think, by anybody in the United States, that it is the best public service company law in the United States, as Attorney Generals who are thinking of a new law, like Iowa, have written saying, "I don't see why you find fault with this law; it is very good."

BY MR. TURNER:

Q. In what ways could the public have been protected? I think that is important to us?

A. Now, I am going right on to that.

Q. Of course, they could refer to the Attorney General; you have mentioned that as one?

A. If you turn to page 56—we already had a section in which it provides for utilizing the Law Department of the Commonwealth. On page 66, you will find that beginning—that is Article 6, Section 33—you will find that there was an attempt made to almost exhaust methods of tending to enforce this law by criminal and civil action. Article 6, Section 33, provides that in case there is either violation of the law or the public service company is about to violate the law, or if they have failed to obey any lawful requirement or any final order of the Commission, that then the Commission may proceed in the Court of Common Pleas of Dauphin County, by injunction, mandamus, or other appropriate legal proceedings, to restrain such violation of the provisions of this Act, or of the orders of the Commission. Rather a strong power granted directly in Section 33. In Section 34 the Attorney General is, besides the other powers and duties now conferred upon him by law, which are very great, he shall also, upon

request of the Commission, or of his own motion—and there, as a former Attorney General, I blush somewhat myself—proceed in the name of the Commonwealth by mandamus, injunction or quo warranto or other appropriate remedy at law or in equity, to restrain violations of the provisions of this act.

Section 35, still on page 67, provides further for a penalty of \$50 per day to be exacted from a public service company in case it shall fail, omit, neglect or refuse to obey the orders and requirements of the Commission or the Courts.

Then it proceeds in Section 36, on page 68, to make every day's continuance of this violation a separate offense, with a penalty of \$50 a day.

Section 37 brings very heavy penalties upon the officers and directors of a public service company if they allow securities; that is, if they sign their names to securities or allow the securities to be issued contrary to the provisions of this act, which I take it means for anything except actual legitimate money or service or property. Section 38 goes on, well, the penalty, by the by, there, is a fine not exceeding five thousand dollars and imprisonment not exceeding five years, either or both. Rather drastic. Section 38 goes ahead and provides with regard to the same securities, that if they shall assent to the application or disposition of any of the securities or the proceeds of the sale thereof in violation of any statement, or contrary to any purpose in relation thereto set forth or contained in any certificate or notification, they shall be liable to a fine not exceeding five thousand dollars or imprisonment not exceeding five years or either or both.

Notice that we talk about the certificate of notification, and here they say that if the proceeds of the sale are used contrary to the purpose set forth in the certificate of notification, they shall be liable to this extreme penalty.

BY MR. EVANS:

Q. By that you mean the directors or officers?

A. The officers or directors, any of them.

MR. RHODES: In connection with these certificates of notification, so many of them have in them "or for other corporate purposes."

BY MR. EVANS:

Q. Giving the purpose of the securities, they state the purposes, and then, as Mr. Rhodes says, they say "and for other corporate purposes."

A. Yes, but there is ample provision here, after it is once filed, for the Public Service Commission to immediately start investigations and hearings, and require reports of the use to which it was put, and follow it up.

BY MR. RHODES:

Q. Yes, but so many of these certificates are vague in that connection; they don't give the Commission any information as to what those corporate purposes are?

A. There was a question asked me as to whether I thought that they complied with the law, and I said as far as I know they were reasonably good. I haven't them. If they don't give the full information required by the law, of course they fall short; but even if they fall short, it does not cut off the right of the Public Service Commission to proceed.

Q. But when a certificate is filed to that effect, that the proceeds are to be utilized for other corporate purposes, it does not mean a thing to the Commission. Now, if the Commission wants to know for what the proceeds are to be applied, they should inquire what the other corporate purposes are?

A. I should say if that is incorporated in one of these certificates of notification the Public Service Commission might say "Hold on we don't think this is a compliance with the rule that the certification of notification must be filed before the issuance of the securities, and we require that you shall give us in detail the purposes for which this is to be used."

Q. That clause has not been in only one case, but in many that have been brought to our attention?

A. I would say that it was up to the Public Service Commission to find out reasonably soon after the certificate was filed; but note, as I said in the beginning, that you can easily imagine the certificate being in the one hand and the telephone being held in the other, and they telephone, "Is this Mr. Jones of Drexel and Company? Everything is all right. The certificate has been issued." Whereupon, I suppose Drexel and Company would have the faith to have handed out millions of dollars of securities, among which probably the mes-

sengers were all waiting to receive, upon the receipt of this notice. It is up to the Public Service Commission, that is the answer, and up to their conscience and up to their good executive policies.

This section 39 that has just been read goes on to provide for punishment for any person, whether an officer, agent or employe of any public service company or not, who shall fail to comply with any order of the Commission, or with any order of the Superior or the Supreme Court, to be punished by a sum of not more than five hundred dollars and not more than twelve months, either or both.

Now, I have failed in what I intended to do, if I have not drawn your attention to ample law whereby there is control of—a kind of control of utilities securities after they have once been issued. I myself believe there should be some opportunity for control before they are issued.

MR. TURNER: I think are all in concurrence with you.

THE WITNESS: And there is a provision which does not cut off the chance for them to at least reach the time when they may issue them, but does give the Public Service Commission ample time,—that is, by ample time I mean a very considerable time to look into the certificate of notification and call them up and determine, and finally, if they deem it wise, to disapprove these; and if they issue them after disapproval, then in that same amendment the provision about their being void is brought over to the issuance after disapproval.

MR. TURNER: Well, that is locking the stable after the horse is out.

THE WITNESS: Yes sir.

MR. TURNER: The present law, I wonder if you will give me one minute more, to call your attention to how clearly the position which I am now explaining, which I do not claim to be anything original at all, was in the mind of the Deputy Attorney General who had most to do with the drawing of that act, back when Honorable John C. Bell was Attorney General, Mr. William N. Trinkle, who was then Deputy Attorney General, and in 1914, about the time that this act took effect, but not as an opinion, he merely, as a statement, you might say, of his view, wrote this:

"There are respectable authorities who still maintain that the sole function of a public utilities commission should be to regulate service and rates to the end that the service shall be reasonably adequate and the rates of compensation just and reasonable, and that the regulation of the subject of capitalization for the issuance of stocks, bonds and other securities of public service corporations has no proper place in a public utility statute."

He is advancing one school of thought, that is, there should be no control of these; but he goes on to say: "But it cannot, I think, be successfully contended that overcapitalization, say of a gas or an electric light or power company, does not have a direct tendency either to stint the adequacy of service or the justness of the rates to the consuming public and thereby greatly increase the occasion for the regulation of such service and rates by the Commission. If this be true, then the regulation of the issue of stocks and bonds becomes in effect a regulation pro tanto of the service and rates, and moreover it gets rid of many embarrassing moral obligations having a tendency to confuse what should be the real issues in rate and service regulation. The bona fide investing public, who owns the securities, are entitled to some measure of protection against what might be the effect of regulation by the government in the interests of the consuming public."

"The Attorney General devised the plan of dealing with this matter which is the distinguishing feature of the Pennsylvania statute. This plan is an adaptation and modification of the certificate of notification or publicity plan, which the railroad securities commission (of which President Hadley of Yale University was chairman) after much study and solemn deliberation had recommended to Congress for the regulation of issues of stocks and securities by the Interstate railroads of the country."

By the by, the United States did not accept Hadley's recommendation, did they? I think not.

Now it goes on to say, "The Commission may then, upon complaint or its own motion, investigate and determine whether any such issue has been made for other than money, labor done or money or property actually received, in violation of the constitution and the law of the Commonwealth. In the event of such violation, it may take the appropriate

steps prescribed by the act for the drastic punishment of the individual and the corporate offenders and the restraint of the consummation of the unlawful purpose. These provisions are supplemented by the requirements that the company shall report and account to the Commission for the proper disposition of the proceeds of such issues in accordance with the purpose set forth in the published certificate of notification which remains on file with the Commission."

I want to say that this was written, mark you, within a very few months after the passage of this law, and was written, it clearly shows that the man who really wrote this law did not consider that they had control over the issuance, but that he considered they had control and should exercise it afterwards.

BY MR. TURNER:

Q. Now, in the time since the Commission was formed, or since the act of 1913, have there ever been any proceedings by the Commission under any of the provisions of this act in reference to securities, except that I have cognizance of the fact that Mr. Evans has mentioned a number of times a proceeding during the time when he was on the Commission—I don't know whether you would call it exactly a proceeding—it was merely an action on the part of the Commission—not a proceeding—but has there ever been any proceeding, either to refer these matters to the Attorney General, or have there been any proceedings by the Attorney General at any time under the provisions, or has the Commission, in your search of this question, ever of its own volition started any proceedings?

A. I can't find that the Attorney General was ever called upon, except for opinions now and then. It may possibly be that there is some instance which has escaped my attention. As Attorney General myself for four years, I was not called upon, and not having been called upon, failed to note that upon its own motion—which I said caused me to blush a while ago, the Attorney General naturally would not know much about what was happening in the Public Service Commission, unless he received the information either by a report from the Commission itself or in some similar way. I have heard, but I have not been able to run it down, of one or two instances where they attempted to enforce this \$50 per day, but when I heard about that—I haven't been able to run it down.

Q. Security issues we are talking about?

A. Oh, security issues.

Q. I am not talking about the penalty.

A. The \$50 was for a failure to obey the orders of the Commission, and as I understood it, although they could have assessed a great many days at \$50 each, it was closed at by compromise for practically one \$50 and the promise that they would proceed to obey the order; but I cannot find that there has been any use of this tremendous power which Mr. Trinkle, back in 1914, called particular attention to, as his excuse, as the draftsman of the law, for having failed to provide for control of the issuance of the securities.

Q. The amazing fact to me is that every one of the members of the Commission that we have had here before us,—I think they have all been asked a question on this—at least in the beginning, before this question was mooted quite as much as it has been,—they all answered that they had no control over the issuance of securities.

A. Well, of course, that is true in one sense.

Q. And then, when we had Mr. Weiss here the other day—and I understand Mr. Weiss has been with the Commission since 1913 in one capacity or another, as chief counsel—he said until the hearing before the Senate, he had never viewed this act from that standpoint. Now, that is rather an amazing statement, when you compile all of the different provisions that you have here, as to the provisions in this act that would give a Commission control.

FATHER COX: After listening to the Commissioners, there is nothing amazing about it. They didn't seem to know very much about anything in reference to their department.

MR. EVANS: I think, Mr. Turner, there is one case in the Pennsylvania Water Service Company, which, as I remember it, was in September, 1927, or 1928—I will not be sure about the exact date—when the Commission refused to receive a certificate of notification from the company; but my remembrance of that situation is that the company went right ahead—

MR. TURNER: Well, they had no power under the act, as I would interpret it, to refuse to receive a certificate.

MR. EVANS: Well, they attempted to do it then and then did not press the matter after that.

PAUL W. LEITCH recalled

BY MR. EVANS:

Q. You are Chairman of the Securities Commission, are you not?

A. Yes sir.

Q. How long have you been connected with the Securities Commission?

A. Since the Commission was established, May 16, 1927.

Q. Did you have any connection with the Securities Bureau that proceeded it?

A. No, I did not.

Q. The attention of this Committee has been called at various times to what appeared to be improper issues of securities by certain utilities. Will you state briefly to the Committee the extent of the authority of Securities Commission over Security issues.

A. In brief, the securities act, the title is a misnomer. It is a registration act of dealers and salesmen, as defined by the act. It has control of the securities which the dealers offer under sections 14 and 15. The term dealer includes those corporations selling their own securities—today, if a public utility or a hardware company or a mining company or oil company is engaged in the sale of its own securities, it would be a dealer in the same sense as the term security dealers is ordinarily implied. We have no jurisdiction over any special business. The Supreme Court in the Insurance shares decision stated that—which defined the powers of the Commission, said that it was not a regulatory of business, that apply to regulator of any business, and it also said at that time, that we did not have any power over the issuance of securities, but our purpose was merely to institute an investigation to find if the securities offered by a dealer or salesmen were made honestly and in good faith.

Q. So that your power over the registration of dealers, the powers of the Securities Commission are limited to cases in which the securities are not honestly and in good faith offered to the public?

A. Yes.

BY MR. TURNER:

Q. By honestly and in good faith, do you mean the honesty and good faith of the person offering them or as to the security itself?

A. No, the securities were not offered—if there was any misrepresentation in the sale of the securities, they could not be deemed offered honestly and in good faith by the persons offering those securities.

BY MR. EVANS:

Q. What has been your practice in regard to securities of public utilities? Have you dealt with them in any way differently from the securities of other corporations.

A. No different than any other. Most of the securities of public utilities are sold by dealers. In other words, when they underwrite the securities, they pay for them, have committed for them, and then sell them themselves. We have had a few cases of utilities selling their own securities. In that way we can regulate the sale of their securities to the public. That is, if they make any misrepresentations in the sale of those securities to the public.

Q. Do you check up at all the Public Service Commission to see whether certificates of notification have been filed with the Public Service Commission?

A. In case a public utility applies for registration as a dealer, that is to engage in the sale of its own securities, it has been the practice to find out if the certificate of notification has been filed, merely by a call to the Secretary of the Commission from his office. So far as making any further investigations we haven't done it.

BY MR. TURNER:

Q. Why not, Mr. Leitch?

A. There was no occasion in my mind to go further in the matter, as I was under the impression that the Public Service Company Law fully covered the situation.

Q. Well, did you ever go into the question? Did you ever ask for an opinion?

A. No, I never asked for an opinion. Public Service issues are just one of the number of things we have to deal with.

Q. Well, I appreciate that. The issuance of stock is one of a number of things that the Public Service Commission has to do with. In other words, if you had the power to determine whether there is any misrepresentation, it becomes your duty to find out whether or not it is lawfully issued, is it not?

A. Right.

Q. Now, as I understand it, you went no further to inquire whether there was a certificate of notification filed with the Public Service Commission. That wouldn't mean anything to you?

A. I have now found out that it doesn't mean anything.

Q. Did you ever inquire what they said in the certificate of notification?

A. No; I haven't. I am not an attorney and I have never—

Q. The Bureau has access to the Attorney General, does it not?

A. Right.

BY MR. EVANS:

Q. Mr. Leitch, have there been any court decisions on the power of the Securities Commission to look into the value lying back of the securities, that are being issued?

A. Every time we have taken that in one of our decisions refusing an application as to the valuation the establishment of values, the court has ruled that it is a matter of business expediency over which we have no authority, that pertains to the issuance of securities, and they maintain while securities might be issued for anything, so long as they tell the public that they are being issued for those things, it is perfectly all right.

BY MR. TURNER:

Q. Yes, but the contention here is that a great number of the securities have been illegally issued; that is, they were not issued for things that were required under the Constitution, therefore, that would not be going into a question of value; it would be going into the purpose for which they were issued.

A. Well, we would have no access, unless we kept a man in the office of the Public Service Commission, day in and day out, to determine what has been filed there. The results of their findings could be certified to us at any time.

MR. TURNER: If we are holding that is no excuse for the Public Service Commission, I don't see how we can hold that is any excuse for you.

BY MR. EVANS:

Q. Mr. Leitch, there have been called to the attention of the Committee several cases where the proceeds of securities issued by operating utilities in Pennsylvania, have been used either to pay dividends to the holding company, controlling that operating company, or, in some other way to reimburse the holding company, for the price it has paid for the stock of the operating company. If in such a case those securities were marketed without an adequate disclosure of the purpose for the security issue, would you not then have power to go into that question?

A. Certainly. If in their representation to the public they did not make a complete statement or they made a false statement of the application of the proceeds we have every right to go into the issues.

BY MR. TURNER:

Q. How could you do that then without inquiry in these public utility issues, without going into the question of the Public Service Commission?

A. As I said before, the act itself applies to the registration of those people who are determined dealers within the meaning of the act.

Q. Well, people who come under your registration sell these securities, don't they?

A. Right. Under section 14, a dealer is required to file circulars. If these circulars in our mind contain no statements to deceive and defraud the reader, that is all. We merely file them. Now, if we know nothing about the financing of the utilities, it would mean a question that we would go into each utility separately, as well as each issue of any other company, no matter whether it was a utility or not. But the law does not make it mandatory for us to make an investigation in each separate case.

BY MR. EVANS:

Q. Well, Mr. Leitch, has the Securities Commission as it is now constituted, sufficient personnel to go into the questions of the purpose of security issues and so on and make a detailed inquiry?

A. It has sufficient personnel to carry on, but if we went into every issue, we would have to have additional employees. We could not give the quick action to dealers in the matter of the securities and all securities, when a circular is filed they will be sold tomorrow, it means we have about twenty-four hours to go into the offering of these securities.

BY MR. TURNER:

Q. How much more would it take? Have you ever figured out?

A. It would all depend on the quality of the employe and if we were allowed—

Q. I know that, of course, but you never made an estimated budget of what you would—

A. No.

Q. What is the budget of your department for the next biennium?

A. About \$90,000 a year.

BY MR. HAGMAIER:

Q. You said that when a statement or circular is filed it is a question of judgment, then only with you, whether you can issue a certificate?

A. Yes, it is assumed that a security dealer when he is registered, that he is of good repute, and that his plan of business is fair, just and equitable; in other words that a dealer himself is not engaging in illegal practices.

Q. Or that his statement is correct? You haven't gone into the matter to verify the statement? You take it as a matter of judgment, that it is all right?

A. Yes.

BY MR. TURNER:

Q. If the assumption as taken from the evidence here is correct, then your assumption of that fact is not right, is it?

A. I fail to understand you on that point.

MR. EVANS: I think that Mr. Turner means is that if your dealers have handled securities which are certainly open to question as disclosed by the testimony before this Committee.

THE WITNESS: Well, any of those—if there is any dealers we have registered, I would be glad to have any evidence of their dealings, where their securities have not been offered honestly and in good faith.

MR. TURNER: After this proceeding, perhaps some member will send to you his copy of the testimony.

BY MR. MEMOLO:

Q. In your opinion, Mr. Leitch, there would be some better results; if there were a little more cooperation between your department and the Public Service Commission?

A. Certainly. They govern the regulation of public utilities, just the utility companies, just the same as the Banking Department regulates the banks and the Insurance Department the insurance companies. We have no more power to go into banks and insurance companies than we do public utilities.

FATHER COX: In other words, you respected their authority and accepted their decisions without question?

A. Yes sir.

BY MR. EVANS:

Q. In the case of an ordinary issue, if there is nothing on the face of the circular to make you suspicious, you do not make any further inquiry as to the purpose for which the security is being floated, do you?

A. No.

MR. CRAWFORD: I cannot see where that gives the security buyer any protection at all. It is just a matter of form.

BY MR. RHODES:

Q. The bureau relies primarily upon getting a good grade of securities dealers?

A. Certainly; that is the basis on which the law was passed. It was passed to remove the situation with the bucketshops and the fly-by-night dealers.

Q. You cannot analyze and pass upon every security that every security dealer offers the public?

A. I think it would be a giant sized job.

BY FATHER COX:

Q. You never called the attention of the Public Service Commission to any case, did you?

A. No.

Q. Did you ever think of it?

A. No.

Q. I suppose, too you thought it would be of no use calling their attention to it, after they had decided.

A. I can't well answer that.

HENRY L. MITCHELL sworn

BY MR. EVANS:

Q. You are president of the West Penn Power Company, are you not?

A. Yes sir.

Q. And you are also vice president of the West Penn Electric Company, are you not?

A. Yes.

Q. The West Penn Electric Company controls the West Penn Power Company?

A. Yes sir.

Q. Does it own all of the floating stock or only part of it?

A. Just part.

Q. How much?

A. I cannot give you the exact percentage right now in my mind, but the voting stock is represented by approximately 2,750,000 shares of no par common stock, of which the Western Railways Company, up to December 1930, owned 1,200,000 shares, and that is all the outstanding stock owned by the West Penn Electric or the West Penn Railways.

Q. Then am I correct in understanding that they do not own fifty per cent. of the stock.

A. They own more than fifty per cent.

Q. Then all of the common stock is held either by the West Penn Railways or by the West Penn Electric?

A. Yes sir.

Q. What is the relationship between the West Penn Railways and the West Penn Electric?

A. The West Penn Railways is owned by the West Penn Electric Company.

Q. So that directly or indirectly the West Penn Electric has complete control of the West Penn Power Company?

A. That is correct.

Q. Are you an officer of the American Water Works and Electric Company?

A. No sir.

Q. This company controls the West Penn Electric, does it not?

A. Yes.

Q. What is the extend of that control?

A. I think the American Water Works and Electric owns all of the common stock of the West Penn Electric.

Q. And how much of that stock is there outstanding, if you remember?

A. I just can't tell you off hand.

Q. Do you know approximately?

A. I have the American Water Works corporate manual. I can read from that, if you wish to have it. The common stock of the West Penn Electric consists of 1,070,105 shares of no par value.

Q. All owned by the American Water Works?

A. Yes.

Q. Are you an officer of any other company connected in any way with the public utilities?

A. Yes sir.

Q. What other companies?

A. I am President of the West Penn Railways Company.

Q. And any others?

A. I am President of every subsidiary of the West Penn Power Company.

Q. How many of these subsidiaries are there?

A. I think there is about nine.

Q. Are they operating utilities, all of them?

A. No sir.

Q. What are those companies?

A. One company is the West Virginia Power and Transmission Company.

Q. Briefly, what business is that engaged in?

A. That company operates the hydro electric property of the West Penn Power Company located in West Virginia, known as Lake Lynn. It also has made application to the state of West Virginia for the right to develop water power on the Cheat River and owns considerable land, but its only operation consists at the moment of leasing of the Lake Lynn Electric Plant to the West Penn Power. Another subsidiary is the West Penn-West Virginia Water Power Company, that is a corporation of the state of Pennsylvania for the purpose of owning that portion of the hydro electric development that is north of the West Virginia line and located in Fayette County, Pennsylvania. It is a nonoperating company. It is merely a paper company, until some construction follows.

The Beach Bottom Power Company. It is the operating company of a power house located at Windsor, West Virginia, owned jointly by the West Penn Power Company and the Ohio Power Company. The Windsor Power House Coal Company, Windsor, which owns some coal lands adjacent to the Windsor plant, and is the operating mining company of that coal.

Also the Windsor Coal Company, which owns coal land. The Windsor Coal Company, by the way is a direct subsidiary of the Windsor Power House Coal Company.

Then there is the West Penn Appliance Company. The Allegheny Pittsburgh Coal Company.

Q. What does the West Penn Appliance Company do?

A. That is a corporation, that is engaged in the selling of appliances to customers of the West Penn Power Company. The Allegheny-Pittsburgh Coal Company, the Ohio County Fuel Company and the Potomac Transmission Company.

Now, I would like to check to make absolutely certain that I am president of each of those companies. I doubt it in so far as the Potomac Transmission Company is concerned.

Q. Now, Mr. Mitchell, the American Water Works and Electric Company is a corporation of what state?

A. I think it is Delaware.

Q. With headquarters in New York?

A. Yes.

Q. Are you an officer of the West Penn Securities Department?

A. I am not.

Q. The West Penn Securities Department is owned by the West Penn Electric Company, is it not?

A. Yes.

Q. What does the West Penn Securities Department do?

A. The West Penn Securities Department may hold or may own securities which are intended, if and when to be sold to the public.

Q. In other words, does it purchase securities of the West Penn system?

A. Only for that purpose.

Q. Does it market securities of the West Penn System?

A. No sir.

Q. Well, for that purpose does it hold the securities?

A. The West Penn Securities Department is not an active company. A number of years ago we sold preferred stock to employees, to customers. That company was the selling agent of whatever company was selling the stock.

Q. Then, to that extend it does market securities?

A. Only to that limited extend. It does not market securities of a company as a regular function.

Q. On what terms does it market these securities? To the customers and to the employees? Does it receive a fee for that service?

A. At, I would say, about cost to it. No particular fee. At a cost, whatever that service is.

Q. Now, the West Penn Electric Company also owns the West Penn Construction Company, does it not?

A. Yes sir.

Q. Are you an officer of that company?

A. Yes sir; vice president.

Q. What business is the West Penn System Construction Company engaged in?

A. Practically none. A paper company, without any particular function.

Q. Has it never engaged in business?

A. I think it has never engaged in business. It at one time was the thought of our interests to use that as an agency for the holding of the stores and supplies of the properties, but it never did function.

Q. It is not used as an agent to construct properties for the system?

A. No sir.

Q. Now, the American Water Works and Electric Company also owns the water works and the electrical securities corporation, does it not?

A. I don't know that.

Q. You are not familiar with that?

A. I am not familiar with it.

Q. Would not your chart of the American Water Works and Electric Companies show you that?

A. There is such a company in the bracket here showing the underlying companies of the American Water Works, but I never heard of it, and I don't know how it functions.

Q. Who owns the South Penn Power Company?

A. I think the South Penn Power Company is owned by the Potomac Edison Company.

Q. And who owns the Potomac Edison Company?

A. West Penn Electric Company.

Q. So it in turn is indirectly controlled by the West Penn Electric Company?

A. Yes.

Q. Now, in 1927, you bought control of the Keystone Power and Light Corporation, did you not?

A. I can't speak very much with regard to that. I know, as being identified with the interests, that the West Penn Power Company did acquire that company, but at that time I was not an official of West Penn Power Company.

Q. How long have you been an official of the West Penn Power Company?

A. Since January, 1929.

Q. So that anything prior to January 1, 1929, you have no knowledge of in the West Penn Power set up?

A. No, no direct knowledge of it; no sir. I couldn't speak authoritatively.

Q. In 1930, you did acquire a little company called the Center Electric Company, did you not?

A. Yes.

Q. How much did you pay for that company?

A. My recollection is about seventy-five thousand dollars.

Q. Was there any write up of the property of that company on its books or on the books of the West Penn Power?

A. I think not. I think there was an appraisal of the property made and we put it in at whatever the property was appraised at.

Q. Well, if that appraisal was higher than the book value, isn't that what you call a write up?

A. Well, I presume so, but the cost of that property represented what we considered the value of the property to us.

Q. Well, now, suppose you must give us,—it is a small transaction, and it might be illuminating—just how did you buy that property. Did you buy the stock?

A. I am not quite certain about that, but it runs in my mind that we bought the physical property. I doubt if we acquired the corporation. I am not clear on that at the moment. I can find that out and tell you.

Q. And then you had it appraised?

A. I think that was the manner in which we acquired it.

Q. And then regardless of what you paid for it, you entered it on your books at the amount at which it was appraised?

A. I think that is price we paid for it. The property was appraised, and in our judgment was worth seventy-five thousand dollars, and we paid that much for it, and added it to the West Penn Power property.

Q. So you think it was a purchase of property entered on your books at the price you paid for it?

A. Yes sir.

Q. Will you check up on that and let us know?

A. Yes.

Q. Mr. Mitchell, were you familiar with the books of the Center Electric Company at the time you purchased it?

A. No. I didn't see the books of the Center Electric Company at the time.

Q. So you have no knowledge as to how they dealt with their property on their books?

A. No sir.

Q. Are you familiar at all with that company and its controlling interests at the time you purchased it?

A. No, I had no knowledge whatever of its corporate affairs.

Q. With whom did you deal in purchasing it?

A. Well, personally I didn't handle the negotiations myself. It was done by some of our subordinates in contact with the local officials of that company.

Q. So that your knowledge is only a general knowledge of the situation?

A. Yes, a general knowledge of the situation.

Q. Does the West Penn Power Company pay any management fees?

A. No sir.

Q. Does it pay any purchasing fees to any affiliated corporations?

A. I think I possibly better explain quite fully the corporate relationship between the West Penn Electric and the West Penn Power. The executive officers of both are located in the same building.

A good many of its officers are common to each. The expenses and costs of the joint operation are borne directly and indirectly by the subsidiary companies, and the costs are borne, or rather, its expenses are charged to those subsidiary companies without profit.

Q. So, all of these services are performed at actual cost to the West Penn Electric Company?

A. There is a co-ordination of management between those companies, and no company makes any profit at the expense of the other. Their costs are apportioned.

Q. In this case you are president of the West Penn Power Company and vice president of the West Penn Electric Company?

A. Yes, sir.

Q. Do you receive a salary from each?

A. No sir; I receive one salary, and for the convenience of our pool operation, I am paid on a check of the West Penn Electric Company. My salary is divided directly to the various functioning subsidiary companies. There is a direct charge for that. Then, those charges, which are not directly apportioned, go into what we call joint subsidiary expenses and then these are pro rated to those companies after the West Penn Electric has paid or assumed its share of those expenses as its own corporate expense.

BY MR. TURNER:

Q. Apportioned on what basis?

A. It is apportioned on the basis of the gross earnings.

BY MR. EVANS:

Q. What dividends has the West Penn Power Company paid from 1925 on? I am referring to the dividends paid on the common stock.

A. From 1925?

Q. Yes?

A. On the then number of outstanding shares—141,000 shares of a par value of \$100—there was a dividend of 16% declared.

Q. Amounting to \$2,256,000?

A. I haven't that here (indicating), but it is 16% on 141,000 shares of the par value of \$100, whatever that may be.

Q. And now then, 1926, what dividend did it pay?

A. 17.13%.

Q. In 1927?

A. 13.93%.

Q. 1928?

A. In 1928 the common stock was changed from \$100 par value to a no par value, and dividends were paid on two bases. There was an outstanding 277,500 shares of \$100 par value, or which a dividend of 9.37% was paid and on 2,775,000 shares of no par, there was a dividend of 7.25.

Q. What was the stated value of that no par stock?

A. I can't give you the stated value.

Q. Was there an increase in the amount of stock outstanding when it was changed from par to no par?

A. No sir. The number of shares outstanding at the beginning of 1928 was 277,500 of \$100 par value. Now, that stock was changed from \$100 to \$10 par value, making 2,750,000 shares, and then after it was reduced to \$10 par value, it was changed to no par value, and the same number of shares existed. So, it is just two times the number of shares they had before.

Q. So, on this old stock, there was between 16 and 17 per cent. paid in dividends in 1928?

A. I presume that is correct, I haven't checked it.

Q. Didn't you say there was 9% on the old stock?

A. Yes.

Q. And then 7 and some per cent—?

A. That would be correct, I would say.

Q. In 1929 it was paid on the basis of the old stock?

A. On the basis of the old stock, that would be one-tenth of the number of outstanding shares, and that would be \$2 on the no par value stock.

Q. And in 1930?

A. \$2 per share on no par value stock.

BY MR. TURNER:

Q. Is all of this common stock held by the public or by the company?

A. There is on common stock held by the public.

BY MR. EVANS:

Q. I think you mentioned, earlier in your testimony, that you owned the Windsor Coal Company and the Windsor Power House Coal Company, did you not; if I have the names correct?

A. These companies are owned jointly by the Ohio Power Company.

Q. And that you also owned two other coal companies directly; Allegheny Pittsburgh Coal Company and the Allegheny County Fuel Company?

A. That is correct.

Q. Have you got your coal costs from 1926 on?

A. Yes sir.

Q. What was the cost of your coal in 1926 as shown by your report to the Commission?

A. \$2.43 a net ton.

Q. And in 1927?

A. \$2.23.

Q. And in 1928 it was \$2.13?

A. Yes sir.

Q. And in 1930?

A. \$2.08.

Q. So that it cost \$2.43 in 1926 and \$2.08 in 1930? There has been a drop of 35c in the cost of the coal consumed. It has been testified before the committee that during the same period the cost of coal to the Duquesne Light Company dropped from \$2.89 a ton in 1926 to \$1.84 in 1930, a decrease of \$1.05 a ton, or approximately three times the decrease that the West Penn has experienced. Have you any explanation of why that should be?

A. I have no knowledge of the operations of the Duquesne Light Company in its coal properties; so I cannot explain that or reconcile it.

BY MR. TURNER:

Q. Do you operate in the same territory?

A. Yes sir; not competitively—

Q. I understand that, but I mean, in the same section of the State? What counties do you operate in?

A. We operate in Butler, Armstrong, Westmoreland, Greene, and the border lines in Allegheny county.

BY MR. EVANS:

Q. From whom do you purchase most of your coal?

A. The coal for the Springdale plant in Pennsylvania is all purchased from the Allegheny Pittsburgh Coal Company; a direct subsidiary. We purchase no coal on the open market—well, I will correct that later.

Q. Is the Allegheny Pittsburgh Coal Company a subsidiary of the West Penn Power or the West Penn Electric?

A. The West Penn Power.

Q. And so that is a wholly owned subsidiary?

A. Yes sir.

Q. And from what other company do you purchase your coal?

A. The only coal which we purchase is a very small amount which is delivered at the Connellsville, Pennsylvania, plant, and that plant is generally standing idly on the line, and steam is kept up there for emergency purposes. That coal is bought in the open market.

Q. Do any of the profits that are made by the Allegheny Pittsburgh Coal Company come back into the treasury of West Penn Company?

A. There are no profits. The coal from the Allegheny Pittsburgh Coal Company to the West Penn Company is at exact cost.

Q. And sold at cost?

A. Yes sir.

BY MR. TURNER:

C. Could you buy cheaper than that on the market?

A. We might buy spot coal from time to time cheaper than the prices, but I don't think it would be good business judgment to do it. We are assured there of a continuity of service. It is a mine mouth plant. We are not depending on railroads, or freight, or any form of transportation, except that of the mine cars, which deliver the coal to the tipple of the company.

Q. That is, your power plants are near your coal?

A. The power plant is directly at the mouth of the mine.

BY MR. EVANS:

Q. I think you mentioned another company: West Penn Appliance Company, did you not?

A. Yes sir.

Q. And it is wholly owned by the West Penn Power Company?

A. Yes sir.

Q. Does it finance the appliance sales of the West Penn Power Company in any way?

A. It makes the sales for the West Penn Power Company. The West Penn Power Company does not engage directly in the appliance business. The business goes through a subsidiary, the West Penn Appliance.

Q. How does the West Penn Appliance Company obtain its funds?

A. Advanced by West Penn Power.

Q. Does the appliance business pay?

A. It does not. In direct return to the power company, there is no profit from this business. It does not pay.

Q. Have you any idea at all as to how far it comes from paying?

A. The West Penn Appliance, over a number of years, has a deficit of approximately \$100,000 a year.

Q. Which is absorbed by the West Penn Power Company?

A. Yes sir.

Q. And charged as an operating expense?

A. Charged as a deduction from non-operating revenue.

Q. In other words, in one way or another, it is a loss which is absorbed by the rate payers of the West Penn Power Company, is it not?

A. Well, that depends entirely on what that would be in a rate case, whether that would be excluded or included. We don't know. We follow the classification of the state, and wherever that falls would be the answer to your question. We don't know, I don't know.

Q. Is the property of the West Penn Power Company used for stores and so on for the sale of these appliances?

A. Where the property is owned directly by the West Penn Power Company, the appliance company makes use of that property and is charged about, I think one per cent. of its gross sales as rent. Where the West Penn occupies other office property, it in turn rents, the portion of that rent is charged to the West Penn Appliance Company.

Q. Do you think it is an advisable thing for utilities, such as the West Penn Power Company to engage directly and indirectly in the sale of appliances?

A. It is a very necessary thing for a utility company to afford its customers some means or some outlet for the purchase of appliances. It is the most effective way we know of for load building.

Q. And you sell your appliances at the same prices that the other independent electric stores sell?

A. We sell our appliances at the list prices, which I presume are the same.

Q. Do you offer credit terms to customers?

A. We do.

Q. Then, in conducting this business at loss of \$100,000 a year, are you not to that extent subsidizing the customers to buy appliances and charging it against all your customers?

A. I think not. I think it is a perfectly fair way to do it, and I see no injustice to any customer through that method.

Q. Well, it is a matter that has been up before this Committee at various times and I was interested in getting your views in regard to that.

(No answer.)

BY MR. HAGMAIER:

Q. It is put on the light or water bill, whatever it may be, and collected every month, and it is made a preferred creditor bill over the other bill, is it not?

A. In that connection it has not been our practice to include the appliance bill with the electric light bill. On one division of our property there was a decided demand on the part of the consumers to have it included, because they didn't want to make two trips to the office or make two separate payments. So, it was included we have since adopted that, within the last month. That is a policy affecting all of our property, and it came at the request of the customers. We have agreed with them that there is no more satisfactory way to do it.

The West Penn System also serves in the following counties: McKean county, Elk county, Clinton county, and Potter county and Center county.

Q. You say you put it all on one bill. Supposing in times just like this, a man could pay his light bill and cannot pay for the stove, or the iron, or something else he bought, what would be his standing?

A. His standing, he just simply is a debtor to the company for that portion of his debt to the company. It does not affect him as a customer. For instance, if he is delinquent in his payments for an appliance, his service would not be disconnected, it would only be disconnected for non-payment of his electric bill. If he continues to refuse to pay for the appliances of course, that would be covered in the usual manner of any chattel.

Q. The same as a lease; the same as anybody else?

A. Yes.

Q. If these subsidiary companies are losing \$100,000 as you say you fellows do, how do you expect the small merchant to get along? Now, a lot of you have come in here and say that you are losing money, and you fellows buy in a large quantity and ought to be able to sell at much less than the little fellow.

(No answer.)

BY MR. EVANS:

Q. The reports of the West Penn Power Company to the Public Service Commission show a rather large growth in the item of "other general expenses." For instance, in 1923, "other general expenses," amounted to \$95,676 in round figures out of a total operating expense of about \$8,498,000 or approximately 1%; 1930, "Other General Expenses" had jumped from \$95,000 to \$306,715, out of a total operating expense of \$12,073,000, or about 2½% of the total operating expense. Have you any explanation as to why that increase should have taken place?

A. I can't explain that over a period of eight years. I would want to see the account broken down into its component parts. I imagine that it is the growth of doing business eight years.

Q. Is there any reason why when the total operating expenses increase less than 50%, that "other general expenses" should have increased 250%?

A. I don't see that they would have any particular bearing to each other. Some accounts might have had practically no charges in 1923, and considerable charges in 1930.

Q. Well, the "other general expense" according to your reports to the Public Service Commission, have shown a rather steady growth. In 1923 they were \$115,000 in round figures; 1925, \$159,000; 1926, \$233,000; 1927, \$231,000; '29, \$272,000; 1929 it dropped to \$235,000, and in 1930 they jumped to \$306,000?

A. I would have to see the various items going into that account before I could answer that question.

Q. That is the account into which a good many odds and ends of expenses are put, is it not?

A. Yes.

Q. The Public Service Commission has submitted to the Committee as Exhibit 5, a statement that it had the earnings of the South Penn Power Company under review in March, 1931. Have the Commission ever taken this matter up with you?

A. I would not know in the case of the South Penn Power Company. I have no direct connection with that company.

Q. Who is president of the South Penn Power Company?

A. Mr. Riley, Hagerstown, Md.

Q. So, you are not familiar with any negotiations that may have taken place affecting the rates of the South Penn Power Company?

A. I am not. I am not familiar with the rates of that company.

Q. Has the Commission ever taken up with you the rates of the West Penn Power Company, which, as has been testified here, in 1929 amounted to, I think, something like 12½% on the depreciated book value of the property?

A. We have never had—

MR. TURNER: Page 83, on this Exhibit No. 4.

MR. EVANS: For 1929?

MR. TURNER: 1929, according to the reports of the Public Service Commission.

BY MR. EVANS:

Q. I have my figure wrong there. 1033 Mr. Turner says.

A. What is your question?

Q. As to whether or not the Commission has ever taken up with you the question of any reduction in your rates?

A. The Commission has never taken up with us the question of any reduction in our rates. We are usually before the Commission with proposed reductions.

BY MR. TURNER:

Q. How many reductions have you had since 1925?

A. Well, we have had in that time, I should say, approximately six or eight different reductions in rates in different classes.

Q. Has it been general or just a specific class?

A. Practically every rate has been reduced during that time, although all rates were not reduced at that particular time. I can give you the information—I have it here—if you desire it.

Q. Let us have it.

A. Beginning with 1925?

Q. Yes.

A. There were 21 separate rate reductions since 1925; from 1925 to 1930, inclusive.

Q. I did not get that. You said the last was quite low?

A. There have been 21 separate rate reductions from 1925 to 1930, inclusive.

Q. Are they among domestic consumers or power?

A. They were residential and power.

Q. How many of each?

A. Nine reductions in power rates; four reductions in domestic; six commercial; one street lighting, and one rural, making a total of 21.

BY MR. EVANS:

Q. There were 21 different—

A. 21 different rate reductions from 1925 to 1930, inclusive.

BY MR. COOKE:

Q. Have there been any increases since that time?

A. No sir, not during that time.

Q. When five rates are reduced at a time, you call it five rate reductions?

A. Yes; that is, our various schedules of rates each reduced, each would be counted as one.

Q. Suppose you just give us, for instance, what the reductions were in domestic rates on a kilowatt hour basis?

A. I can't give you the reductions in the domestic rates on a kilowatt hour basis. I can give it to you in dollars and cents, reductions to consumers; total.

Q. How can you calculate the reductions to the customers unless you know the number of kilowatt hours?

A. We would apply that to a customer, the average, and then base it on per kilowatt hours.

Q. That is, you mean the average to the customer?

A. I can't give you that now, because the information I have before me does not give those domestic rates. We simply take the date of the change in the rate, and the annual savings to the customer.

Q. How can you calculate the average annual savings to the customer unless you know the rate paid and the number of kilowatt hours consumed?

A. We know at the time, but it is not now before me in enough detail to give you that. I can give it to you simply summarized. For example—

Q. I can't see how the gross reduction, which you claim amounts to anything unless you are prepared to substantiate it by showing the number of kilowatt hours sold and the reduction in rates?

A. That can be done. In other words, if it is desired to have it, I can have this summation here broken down into

its various parts, if you wish, but that would take a long, long time to give it to you.

Q. The reason I ask is because that question has come up before the committee at various times as to the basis on which companies advertise that there is a million dollars saving to consumers by a given rate reduction, and the committee is desirous of getting that information, as to just how those calculations were arrived at and whether or not they could be substantiated, or whether it was good advertising?

A. I think we can do that. I don't think my company would make a statement to that effect unless it had its own records to show that at the moment the reduction was made, that that rate brought a revenue on so many kilowatt hours sales, and the new rates on the same number of kilowatt hours sales, and that the difference would be the amount saved to the customer.

Q. Has it been your experience that a rate reduction, particularly in domestic rates, is pretty apt to produce an actual increase in operating revenue?

A. It will ultimately. There is an immediate valley that is finally built up; that is, the number of customers has never remained the same; it is constantly growing. Now, if in one year we made a rate reduction and if we maintained exactly the same number of customers, that rate reduction would stand there, and it would be what it indicated, but all of our customers are using four kilowatt hours and there are more customers coming in, so that that valley quickly builds up, with an increased consumption to the consumers.

Q. Has it not been your experience that decreases in rates are very quickly made up in increased consumption, especially in the case of domestic consumers?

A. Yes; that is true.

Q. I know that is the case with some companies?

A. It is the case, and I think it is good judgment for the company when they feel that they can make these rate reductions, to pass on to the consumers the efficiencies which have been developed and these economies. Now, the economy, the direct economy comes from a direct increase in production. That should be passed on to the domestic consumer, and is consistently being done by us, and I think it is good business judgment to do it.

Q. What is your present domestic rate?

A. Our present domestic rate starts out with a top of 8, 5, 3 and 1½ cents, in four blocks.

Q. How many kilowatt hours per month are covered by the 8 cent rate?

A. That is based on a room rating. Take the average residence on our lines, we will assume it probably to be a seven room house, and I think it takes probably 15 kilowatt hours as the first step and then on down. It varies with the size of the house. The minimum is a 5 room house, and the maximum is a 15 room house. Just what these steps are—I can't tell you just now what the first step is without reference to the schedules. There are a good many of them to bear in mind.

Q. How many hours of consumption at the five cent rate?

A. I would say that the proportion is something like this: for the first hour, 50, and for the second it would probably be 25 or 30, and then to the 3 cent rate.

Q. Do you know what the average rate for your domestic customers now is, approximately.

A. The average rate paid to us, I think, is very close to 5 cents—slightly under; a little less than 5 cents.

BY MR. HAGMAIER:

Q. How much do you have to consume to get a 5 cent rate?

A. We arrive at it in this way: the average domestic consumption on our lines is about 52 or 53 per kilowatt hours per month, and that averages about 5 cents. In other words, 50 kilowatt hours brings us down to an average of 5 cents. Anything in excess of that is going below 5 cents.

BY MR. EVANS:

Q. Do you have a minimum charge?

A. Yes; \$1.00 per month.

Q. Is that service rate or—

A. It is a direct minimum. We have no service charge. Mr. Evans, I started to give you these figures. Do you still want them?

Q. The totals do you mean?

A. The totals.

MR. HAGMAIER: I don't think we want them unless you have a schedule prepared at a certain time, and then show

what the average family pays for the same amount. The kilowatt hours is the only thing we are interested in, unless you have those schedules.

THE WITNESS: I haven't the detail of those at all now. I simply have the dates and the amount saved to the customers at his different rates of consumption.

Q. Do you have schedules in your business, which you could file with the Committee?

A. Yes.

Q. What did you charge in 1925? Could you furnish that? That is the information we would like to have.

A. I would be very glad to give that.

MR. HAGMAIER: Mr. Evans, I think we should have that information showing the amount of consumption.

MR. EVANS: As to domestic consumption?

MR. HAGMAIER: Yes.

BY MR. EVANS:

Q. Would you be good enough to furnish that to the Committee?

A. I would be glad to.

BY MR. COOK:

Q. Do you have a department of public relations?

A. We don't have any department so named. We have a department termed a department of public information.

Q. What is the purpose of that?

A. To inform the public, through some form of advertising, the direct nature of the business.

Q. Is it for the purpose of disseminating information to the public?

A. Yes.

Q. How does it function?

A. Well, for instance, we maintain a very close contact with our customers, either directly with the customer or through local official representatives of the city. Very, very frequently we are asked if we would not send a man, well, rarely to a council meeting, but ordinarily to the various civic clubs, and this department will select a man to go there and speak.

Q. To talk on utility matters?

A. Not always; on any matter of public interest to that particular body.

BY MR. TURNER:

Q. Have you been engaged in putting out propaganda and getting your data into schools?

A. Not at all. I can recall the matter, text matter which was given to schools a number of years ago. I wasn't then identified with that work in connection with our power company, but I can explain that if you wish.

Q. Yes; we are interested in that.

A. I don't know that I could just recall at the moment the name of the committee, but a committee was formed in Pennsylvania, and I think—well, to answer it this way, call it the public information bureau. In the minds of a number of people of this state it was apparent that there seemed to be an attempt to write into the text books of schools what you might call propaganda; anyhow, we knew of the activity of an association which I might term were advocates of municipal ownership. There seemed to be at that time—I can't recollect whether it was 1925 or 1926—a desire on the part of school teachers to be informed on this subject, with the result that I think four small pamphlets were prepared, one covering the railway industry, one the telephone; I think the gas; and the electric light. Now, there was nothing of a nature that would pervert the mind of any one reading it. It was perfectly good information which any one should have, and it set forth how these companies were created, how they secured their franchises, how they were operated. It was simply—you would not call it a textbook; it formed no part of textbooks used anywhere in the ordinary school curriculum. It was there, and the principal of each school was asked if he cared to have it.

BY MR. EVANS:

Q. Were you a member of this committee?

A. I wasn't a member of this committee. I didn't prepare the text matter at all, but I was instrumental in negotiating with some of the principals of the various schools and asked them if they cared to have them, and after looking them over, they thought they would be very informative, and we furnished

a number of copies, and they requested in some instances that additional copies be furnished.

Q. This was the committee of which Major Richardson was the head?

A. Yes; he was on that committee.

Q. And after its activities were made public, the public information committee ceased to exist?

A. Well, it didn't function but for a very short time, and so far as I know, all it did was to prepare this pamphlet. I never heard of it again in any connection.

Q. You could not have been very closely connected with it, because it carried on its activities for several years, and, as I understand it, was engaged in other activities than putting text books into schools.

A. That's the only connection I ever had with it. Just when it ceased and how long it existed, I can't say.

Q. What position did you hold in the industry at that time?

A. I was vice president of the West Penn Railways Company.

Q. And you were asked to take the matter up with the school principals in your territory?

A. Yes sir.

BY MR. HAGMAIER:

Q. Do you remember any efforts being made where it was to be added to the textbook used by the Peabody High School of Pittsburgh?

A. I am not familiar with that. I never heard of it.

BY MR. EVANS:

Q. What was the organization that you spoke of that was trying to get municipal ownership into public schools?

A. I can't identify that as an organization. There were those who were opposed to private ownership of utilities, and who very firmly believed that the utilities should be owned and operated by the municipalities.

Q. What evidence do you have that any organization was trying to put that propaganda across in the public schools?

A. I never saw that particular—any textbook that had that particular reference in it. I simply went along and accepted the opinion at that time that it was to the best interests of the utility companies to tell their story, and to tell it in a manner that would be plainly written, so that any one could read it and have an understanding of what this whole public utility idea is. A great many times there is too much mystery surrounding it.

Q. In other words, your only knowledge of the situation is that you were asked to get this pamphlet into the public schools of your territory?

A. Yes. In the schools in the territory which we served, I never saw anything particularly damaging in text books. I think this probably came from some other cities. I have heard a great deal about Chicago having foreign matter getting into its text books; I don't know that, but that seemed to be the impression at that time.

BY MR. TURNER:

Q. That was about King George, wasn't it?

A. That's part of it.

BY MR. RICHARDS:

Q. A man named Thompson was mixed up in it?

A. I don't know. I don't know him. You mean Mayor Thompson?

Q. Ex-mayor Thompson?

A. I have heard of him; yes.

BY MR. WALKER:

Q. Did you see these four pamphlets that you spoke of?

A. Yes sir.

Q. And you read them?

A. Yes.

Q. And in your opinion, did they represent the true utility situation in Pennsylvania?

A. Yes.

Q. Do you recall who were the authors of these four pamphlets?

A. No; I don't know that they were accredited to any particular author. I think they were written by men in the utility business, with various ideas put in, and if I recall I think they were checked by probably some college professors

with the idea to see that they were in proper form; what the text should be.

Q. You don't know whether or not that was done?

A. That's my impression. I didn't sit in the actual functioning of this thing. That's the idea I had at the time.

BY MR. COOKE:

Q. Have you any copies of those?

A. I have none. I haven't seen any for years.

BY MR. TURNER:

Q. Were they handled as coming from the utilities or were they handled quietly on the side?

A. They were handled by the utility man going to the principal and asking him if he wanted them. "These will tell you the story of the utility business. If you want them, you may have them. If you don't want them, you don't need to take them."

Q. Did you read the one in reference to the electric utilities?

A. I probably did.

Q. Was it an argument or a statement of fact?

A. A statement of fact; no argument to it.

Q. Was it an argument that municipal ownership—

A. No.

THE CHAIRMAN: The chairman is familiar with those pamphlets. He has had copies of them. They are purely harmless. They were sent out to the newspapers as well.

BY THE CHAIRMAN:

Q. Are you familiar with a book entitled "Aladdin U. S. A." I don't know the author of it?

A. I don't think I ever saw it. I never heard of it.

Q. I happen to know that it has been put into some of the colleges and some of the schools, and it is absolutely propaganda.

A. I don't know that book.

BY MR. WALKER:

Q. Have you ever received a copy of this survey of these text books that Major Richardson's committee prepared?

A. No; I don't recall it.

Q. Are you a member of the National Electric Light Association?

A. Our company is, and I am an individual member. I think it takes the classification of "Associate" or something of that character.

Q. Is your company also a member of the Pennsylvania Electric Association?

A. Yes sir.

Q. Can you recall what your contribution was to the National Electric Light Association in 1929?

A. It was probably about \$16,000.

Q. And that would be charged to operating expense wouldn't it?

A. Yes sir.

Q. Do you recall what your contribution was to the Pennsylvania Electric Association in 1929?

A. We paid dues to the National Electric Light Association and no dues to the Pennsylvania Electric Association. The Pennsylvania Electric gets those funds by yearly appropriation from the National Electric Light Association, and the Pennsylvania Electric might assess its members for some expense probably not covered by the appropriation from the National.

Q. Do you recall any assessment that the Pennsylvania Electric Company made against your company in 1930?

A. I think we paid to the Pennsylvania Electric Association in 1930 about \$1,700, which was our pro rata share of defraying the expense of advertising in one or more farm journals on rural electrification.

Q. That was charged in your "Back to the Farm" account, was it?

A. Well, I don't have in mind any farm account.

Q. Was it charged to operating expense?

A. It was charged to operating expense, yes.

Q. Do you recall any assessments that were made or any contributions that your company paid to any committee of the Pennsylvania Electric Association?

A. No.

Q. You never made any contributions to any committee of the Pennsylvania Electric Association?

A. No.

Q. Did you ever take any active part in the Pennsylvania Electric Association?

A. No; I have not been an official in it or a committee member of it.

Q. You never served on any of the committees?

A. No sir.

Q. Do you recall any other information that was disseminated through your company to the public schools, in addition to the four pamphlets that you have mentioned?

A. No.

Q. Do you recall whether you or any of the officials of your company or of your affiliated companies received this survey of text books prepared by Major Richardson's committee?

A. I never heard of it.

A. I never heard of that. How long ago is that alleged to have taken place?

A. It took place about 1925 or 1926, Mr. Mitchell.

A. I don't recall it. Of course if there was any function between—there must have been Penn Power in that but I don't recall to what you refer.

BY MR. EVANS:

Q. You were not connected with West Penn Power?

A. I was with the West Penn Railways, which was an affiliated company but I don't recall that. My interest was only in introducing these pamphlets, you cannot call them text-books, in the schools.

Q. The West Penn Power, were they active in the preparation of these pamphlets?

A. I can't answer that; I don't know.

Q. Mr. Mitchell, a statement prepared by the Public Service Commission which has been offered here I think as Exhibit No. 9, indicated that you in 1928, or that the West Penn Power Company in 1928, earned about \$2,950,000 over the seven per cent. return on its depreciated book value of its property. This excess on the seven per cent. basis would add some \$42,000,000 to your book value as a fair value. Are you justified in such a return?

Q. What was the amount you said that would be?

A. About \$42,000,000.00. You don't claim any such fair valuation of your property do you?

A. I would say that the fair valuation of our property would be close to that amount.

Q. \$42,000,000.00 over its depreciated book value?

A. Let us start with a figure and build up.

Q. It showed \$83,359,000.00 as your depreciated book value in 1928 and after operating expenses and depreciation that you had a return of \$8,783,000.00, or 10.54 per cent. Now this on a seven per cent. return would have been \$5,833,000. So the excess earnings were, as I stated, about \$2,950,000.00. Do I understand you that to your depreciated book value you added that \$42,000,000.00 you would arrive at a value then of say \$125,000,000.00?

A. I would say that the fair value of our property would be more than that.

BY MR. TURNER:

Q. Is that on the reproduction cost new basis?

A. That would be on the accepted basis of fair value of property less possibly observed depreciation.

BY MR. RHODES:

Q. That would not mean your prudent investment?

A. I don't know what prudent investment is.

Q. What you have already put into the property? Cut out the word "prudent" and call it investment account?

A. Our plant, property and equipment account does not show that large an item.

BY MR. EVANS:

Q. You speak about "observed depreciation." What do you mean by that?

A. I would say that part of the property which would, by sight, indicate that it has possibly seen its useful life and needs replacement.

Q. So it takes into account the property of which fifty per cent. of its life has been used?

A. Oh yes, that is exactly what it means.

Q. How can you go into a power house and look at a generator and by looking at it say how much of the useful life of that generator has passed?

A. My idea of all this depreciation—

Q. Will you answer that question first?

A. You could probably not tell on any particular piece of apparatus whether it had fifty per cent. of its useful life remaining. These things are guided more by obsolescence than by actual depreciation.

Q. On what basis do you charge depreciation as an operating expense?

A. Do you mean as a straight line depreciation?

Q. Where you file accounts every year with the Public Service Commission, on what basis do you charge depreciation in those reports?

A. It is arrived at by a different factor applied to the different types of depreciable property.

Q. In other words, you apply a certain percentage of depreciation to different classes of property?

A. Yes sir.

Q. Wont you agree with me, Mr. Mitchell, that whatever method you use for calculating annual depreciation must also be used in determining the depreciation to be considered in determining the fair value of your property?

A. May I have that question again?

Q. (Read by reporter) "Wont you agree with me, Mr. Mitchell, that whatever method you use for calculating annual depreciation must also be used in determining the depreciation to be considered in determining the fair value of your property?"

A. Yes, in general I agree with that.

Q. But you don't use the observed depreciation in making your annual reports?

A. No.

Q. Then, when you use the word "observed depreciation" in fixing the fair value of your property that is not a method you can justify it?

A. That would depend on what ever authority was passing on it. At least it is our opinion.

Q. You at least feel the same method should be used in determining accrued depreciation as in determining annual depreciation?

A. Of course, any depreciation that has accrued is a deductible item from the property.

Q. And you still feel on that basis as you answered to Mr. Turner's question, that your property is worth, or was worth in 1928 \$42,000.00 or approximately fifty per cent. more than the book value?

MR. TURNER: That is in answer to your question, Mr. Evans, and not to mine.

BY MR. EVANS:

Q. All right, I ask the question?

A. I firmly feel that our property at that time was worth that much money.

Q. Are you an advocate of the reproduction cost new method of determining the value of property?

A. I am hardly what you might say an advocate. I am trying to obtain from those in our organization who are best informed on that—I am not a believer of any of these so-called schools and I would like myself to have a lot of these questions answered, and, without having any fixed opinions myself I would naturally follow those in our organization who are competent and experienced to deal with these questions.

Q. In other words, do I understand that you are primarily an operating man and these questions of policy are not determined by you?

A. You understand that my experience with the West Penn Power has been limited to a period of about two years. I took office without any knowledge of a lot of these much mooted questions.

Q. Doesn't the same thing apply to electric railways?

A. Nothing applies to electric railways any more.

Q. Don't they have values?

A. They have values, but what for.

Q. They still have one in Philadelphia valued at \$100,000.00 and upwards. What are your rates for rural electric service; you spoke of a reduction in rates for rural electric service?

A. The rate we use is that fixed by the Public Service Commission in its general order No. 28.

Q. Now Mr. Mitchell, I think I am correct in saying there is no rate fixed by that order.

A. Your ordinary rates apply to a point, which I mean is where that rate would not give a sufficient return to justify

construction, and then I think General Order No. 28 requires the customer to pay what used to be twenty-four per cent. of the cost. The reduction which I had in mind here is where the rate is twenty-one per cent. and three per cent. is required in the way of a guarantee.

Q. In other words you now only charge 1% instead of 2.00 per cent. a month?

A. That is correct; that has to do with the guarantee. There is a rural rate which we apply to rural customers that was reduced at this time and that rate has been modified—I can't tell you now the details of it—but it was quite a considerable reduction from the rate formerly applying. It would be, the way we calculated it when the reduction was made, which was November 1st, 1930, it amounted to a reduction in the cost of power to rural customers, of about \$20,000.00 a year.

Q. How many rural customers do you have, taking a rural customers those that don't average more than six to the mile?

A. We have a great number but I could not give you the number of them; a great many. They are plenty through the section of the state we serve.

Q. What I was trying to get at, Mr. Mitchell, was whether or not these rates were used primarily by suburban dwellers or whether they are really used by dirt farmers, and to what extent?

A. They are what you might call a rural rate. If they are in a built up territory they enjoy whatever rate prevails in the immediate vicinity.

Q. What are your average costs of construction of rural lines?

A. I can't give you that. They vary according to the topography and the nature of the land, whether wooded or cleared, but I cannot give you the unit cost per mile of construction. It depends on the type of a line we use to reach the customers. Some are flimsy, some are built on any pole lines that may be there, such as telephone company lines.

Q. Could you give us the maximum and the minimum, approximately?

A. I would say that the cost of a rural line might run anywhere from \$1,600.00 to \$3,000.00 a mile.

Q. You never get down under \$1,600.00 a mile?

A. I would say yes, some times, for we make the cost as cheap as we possibly can and use various other facilities and property we can to build lines on; if they are telephone lines we would use them.

Q. As a matter of fact quite frequently the cost is \$1,000.00 or less?

A. I am speaking of standard construction. We will do everything in our power to get the line to the customers as cheaply as we possibly can. We have cases where the customer says "I will dig the holes" and that comes off the cost and others will say they will furnish the poles and of course that reduces the cost by that much.

Q. You base your charges on the actual cost?

A. Whatever it costs us to reach that customer. A standard construction, where we have to acquire a definite right of way and the labor and material it will cost anywhere up to \$3,000.00.

Q. The Pennsylvania Electric Association has asked for an opportunity to be heard before this committee and as you are the head of one of the large operating companies in that association, we would be glad to have any criticisms or suggestions you might have to make as to the regulation or as to the data that has been furnished to this committee.

A. You are asking me if I have any criticisms to make now of these tremendous matters—

Q. Any comments you want to make as the head of this West Penn Power Company?

A. I don't think I care to make any remarks.

BY MR. RHODES:

Q. Don't you have any suggestions in mind that you might care to make that might result in more satisfaction in the regulation of public utilities both from the standpoint of the utilities as well as the standpoint of the citizens and consumers. Don't you have some suggestions to make that you think might result in something beneficial both to the people and to the utilities?

A. In my experience I have not found that the citizens and residents of our community have any particular complaint. There have been no complaints before the Commission except of an informal nature and character and they are usually referred to us and usually adjusted without the intervention

of the Commission; we satisfy that customer as soon as the complaint is made. I don't know of any dissatisfaction from the utilities' standpoint or of that of the communities. We seem to live in peace and harmony with our customers.

Q. You never had any rate cases?

A. There was one many years ago. It is very hazy, something about the adoption of some coal clause, but we have not been before the Commission on any complaint.

Q. Don't you think the Commission should have larger control over the issuance of securities?

A. I see no objections.

Q. And over management fees and contracts between inter-related companies?

A. I don't know that the Public Service Commission don't have that power at the moment.

Q. Assuming that they have not?

A. I would see no objections to it.

BY MR. MOORE:

Q. You have no objections to them exercising it?

A. No sir.

Q. They have not exercised it even if they have it?

BY MR. MEMOLO:

Q. What do you charge for street lighting, Mr. Mitchell?

A. I am sorry I don't have the schedule of rates with me. It is on a sliding scale. I know last year we reduced our street lighting rate and immediately we got more business from the communities at the lower rate than we had before. I find that the municipalities are very rapidly changing from the lower unit of lights, 40, 60 and 100, to the 200 and the 400. That is coming on us and shows the progressiveness of the cities in that part of the state. Rates have been materially reduced. I am sorry I do not have a schedule with me.

BY MR. MOORE:

Q. That was very general throughout Washington county I recall just recently. Was it true all over the system?

A. Yes sir. As I understand it, each company negotiates its municipal contracts with the municipality but does not file a rate. In other words, it is left more or less to the community and the utility what that will be but the contract is submitted to the Public Service Commission for its approval.

BY MR. HAGMAIER:

Q. Your street railways run up through that country to Kittanning?

A. Yes sir, one division.

Q. I know you never had any trouble there.

A. That is true.

BY MR. MOORE:

Q. My next door neighbor is one of your division engineers and we get along very admirably?

A. I appreciate your kind words.

BY MR. TURNER:

Q. Mr. Mitchell, there has been a lot of testimony given here with reference to the electric industry in Pennsylvania, a lot of exhibits showing the earnings and the valuations; have you had anyone go over the testimony given to this committee?

A. You mean anyone in our organization?

Q. Have you had anyone in your behalf?

A. Well, I imagine there is someone who has read all of it; I have not.

Q. Have you any comment to make on that or have you any person you desire to bring here to say anything in connection with that testimony?

A. I do not; I feel a great deal of the testimony was of a rather general character and I don't feel it applied to us and I don't think it hurt us in our balliwick and anything of such a general character I cannot accept as a fact, and I don't know as anyone else does.

Q. In an exhibit shows that the rates are higher in your territory than the average would that be something that would concern your company?

A. It might be if that is the fact.

BY MR. RHODES:

Q. I think the exhibits show the rates in his territory one of the lowest in the state.

A. That was my understanding.

BY MR. EVANS:

Q. It is true that for a time at least in the history of the West Penn Power Company there was considerable dissension with the manner in which the company exercised its power of eminent domain?

A. That will always be the story as long as we have to exercise it. You will find that our company will—

Q. Does that condition still exist. I remember that some years ago, I think perhaps it was more aggravated in your territory than in most sections of the State.

A. I don't recall any particular trouble. Once in a while you will have a rather stubborn individual that doesn't want you there at any cost and will make it hard for you to get through.

Q. It is your policy to exercise the power of eminent domain only when absolutely necessary?

A. Certainly. It takes too much time of the legal and the engineering staffs to get mixed up in condemnation cases.

BY MR. MEMOLO:

Q. These several rate reductions you speak of; were they voluntarily put into effect by the company?

A. Every one. We have never been by any action of the Commission forced to reduce a rate.

BY MR. EVANS:

Q. Mr. Mitchell, is not the Solar Electric Company a subsidiary of your system?

A. No sir.

Q. Is it not of the Keystone?

A. No sir.

BY MR. HAGMAIER:

Q. At the present time you are reducing your street car fares in order to build up business?

A. As far as the street cars are concerned we are making every effort we can in order to attract traffic and provide service and everything else, but practically to no avail.

BY MR. TURNER:

Q. I think you said, Mr. Mitchell, that you had no charge, no ready to serve charge; do you make such a charge or a meter charge?

A. We make nothing except our regular charges.

Q. Then do you have a penalty for failure to pay within a certain time or do you give a discount?

A. We give a discount for prompt payment.

BY MR. RHODES:

Q. What is that discount?

A. Our rate is ten cents top and the discount is two cents per K. W. hour and is allowed if paid on the discount date.

BY CHAIRMAN MOORE:

This hearing will now stand adjourned until tomorrow morning, Thursday, April 30th, at 9:00 o'clock, Eastern Standard Time.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10.

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Thursday, April 30, 1931.

There were present:

Messrs. D. Glenn Moore, Chairman

Bart Richards

Chester H. Rhodes

Martin Memolo

Ellwood J. Turner

Louis W. Hagmaier

Harry J. Crawford

Rev. James R. Cox

Harold Evans, Esq.

John M. Walker, Esq.

IN RE DUQUESNE LIGHT CO.

F. R. PHILLIPS sworn

BY MR. EVANS:

Q. You are President of the Duquesne Light Company, are you not?

A. Yes sir.

Q. The Duquesne Light Company is controlled by the Philadelphia Company?

A. It is.

Q. Does the Philadelphia Company own all of the voting stock of the Duquesne Light Company?

A. It owns all the common stock; voting stock.

Q. How much common stock is there outstanding?

A. Approximately two million shares, I believe. I am not sure. I think it is on the report.

Q. Is this par value or no par value stock?

A. It is no par value.

Q. Do you happen to remember what the stated value of that is?

A. I think the stated value is fifty-one or fifty-two million dollars; you can find it in the reports—\$55,750,000.

Q. And what is the total capitalization of the Duquesne Light Company, approximately?

A. I will have to look it up. I don't know. Do you mean the fixed capital?

Q. I meant the bonds and the preferred stock?

A. There is twenty-seven and one-half million preferred stock, and sixty-five million bonds in the stated capital.

Q. What company controls the Philadelphia Company?

A. The Standard Gas and Electric Company.

Q. What company controls the Standard Gas and Electric Company?

A. I don't think there is any one particular company that controls the Standard Gas and Electric Company. I think there are groups of owners that control the Standard Gas and Electric Company. I am merely speculating now; I don't know.

Q. It is true, is it not, that the system is controlled by H. M. Byllesby?

A. It is controlled in so far as the management is concerned, the management and operation.

Q. And they have, directly or indirectly, a controlling interest in the stock of the company, do they not?

A. I don't know. I am not connected with it.

Q. Aren't you aware of the fact, as president of the company that within the last six years, the control of the Philadelphia Company changed hands?

A. Yes.

Q. And who had control previous to that time?

A. There was a group of bankers in New York who controlled the Philadelphia Company. I don't know who they were.

Q. And at that time the Standard Gas and Electric gained control, did it not?

A. Purchased control; yes.

Q. And the Standard Gas and Electric is a Byllesby corporation, is it not?

A. I don't know that they are. The operations of the Standard Gas and Electric Company are controlled by H. M. Byllesby & Company. Now, whether they control it financially or not, I don't know.

Q. How long have you been president of the Duquesne Light Company?

A. Since May of 1928.

Q. And you were vice-president before that time?

A. Right.

Q. How long had you been vice-president?

A. Since September 1, 1926.

Q. And before that you were general manager, were you not?

A. No; I was general manager of the Pittsburgh Railways.

Q. How long were you general manager of the Pittsburgh Railways?

A. Well, for several years; I can't remember; along about 1923.

Q. And the Pittsburgh Railways is also a subsidiary of the Philadelphia Company, is it?

A. Its common stock is owned by the Philadelphia Company.

BY MR. TURNER:

Q. Let me ask you this, is the Byllesby Company an investment banking concern or an engineering concern?

A. It is both. The H. M. Byllesby Company is an investment banking house and the Byllesby Engineering and Managing Company is a management and engineering and construction company.

BY FATHER COX:

Q. But they could not very well control you, unless they had a real financial interest in it?

A. There is no question about that. They must have a very substantial interest in it, but just what their interest is, has never been disclosed to me. I don't know, but they must have a very substantial interest in the Standard Gas and Electric Company.

Q. Would that be shown by the books of the company?

A. Not our books.

Q. No; in their books?

A. The Standard Gas and Electric books?

Q. Yes.

A. I presume it would be.

Q. That is not a Pennsylvania Corporation is it?

A. No; it is not.

BY MR. EVANS:

Q. You are also president of a number of other companies affiliated with the Philadelphia Company, are you not?

A. Yes.

Q. Would you state, briefly, to the Committee what these companies are, and what they do?

A. Well, there is the Duquesne Light Company, first, engaged in electric light and power and steam heating service, through its subsidiary the Allegheny County Steam Heating Company, and there is the Equitable Gas Company, which furnishes natural gas service to Pittsburgh and suburbs, partly; the Pittsburgh Railway Company, which furnishes transportation for street railway transportation for Pittsburgh and vicinity, and the Pittsburgh Motor Coach Company, which furnishes motor coach service in Pittsburgh and vicinity, the Beaver Valley Traction Company, which furnishes traction service in several of the towns of Beaver Valley; the Beaver Valley Motor Coach Company, which is a subsidiary of that company; and the Equitable Auto Company, which furnishes fast car and truck service to all of this group of companies; and then there are several coal companies.

BY MR. RHODES:

Q. Do I understand that you are president of all these companies?

A. Yes; the Harwick Coal and Coke Company, the Warwick Coal Company, and the Ohio River Coal Company, then there is a lot of minor subsidiaries I am also president of, made up principally in the transportation group.

BY MR. EVANS:

Q. What is the Equitable Real Estate Company?

A. The Equitable Real Estate Company is a company which deals in real estate for the group of companies and independently.

Q. And what is the Equitable Sales Company?

A. That is an independent company which merchandises electrical and gas appliances.

Q. When you say "independent" you do not mean that it is not controlled by the Philadelphia Company?

A. No; it is owned by the Philadelphia Company. It is independent of the others.

Q. What is the Philadelphia Oil Company?

A. The Philadelphia Oil Company is an institution that produces oil.

Q. Did you mention the Pittsburgh and Beaver Street Railway Company?

A. We call it the Beaver Valley Traction Company. That is made up of—it has a subsidiary known as the Pittsburgh and Beaver Street Railway Company. I presume you are speaking of the Philadelphia Company. We have other companies, but in other states.

Q. You are president of all these companies that we mentioned?

A. Yes; I am president of the Philadelphia Company.

Q. So that the Philadelphia Company through these various subsidiaries, controls what utility services in the city of Pittsburgh and vicinity?

A. Well, not all. There are other gas companies and other electric companies—

Q. In Pittsburgh?

A. Not in the city, the corporate limits of the city, but very close to it. The Duquesne Light is a very compact system, serving a part of Allegheny county and is a part of Beaver county.

Q. Taking the city of Pittsburgh, what other utilities except bus companies and taxicab companies, furnish service within the limits of the city of Pittsburgh?

A. There is the Manufacturers Light and Heat Company.

Q. That is a natural gas company?

A. That is a natural gas company, and the Peoples Gas Company.

Q. Another natural gas company?

A. Another natural gas company.

Q. And with those exceptions, all the utility services in the city of Pittsburgh are controlled by the Philadelphia Company.

A. With the exception of quite a few independent bus companies and taxicab companies.

BY FATHER COX:

Q. Have you no control over the Peoples?

A. No connection at all.

BY THE CHAIRMAN:

Q. That is the Columbia System?

A. The Peoples, I think, is Standard Oil of New Jersey

Q. The Manufacturers?

A. That is Columbia Gas.

BY MR. TURNER:

Q. What is the Peoples Gas Company?

A. That is a natural gas company.

BY MR. EVANS:

Q. There has been testimony before the Committee that in 1927 the Duquesne Light Company wrote up its fixed capital on its books in the amount of \$14,532,579 net. That is correct, is it?

A. I am not sure about that. I was vice president at that time, and I don't know the details of any such transaction as that.

Q. I show you the report of the Duquesne Light Company to the Public Service Commission for the year 1927, on page 202 of which in the comparative balance sheet appears an item under Capital Account No. 102, "Fixed Capital Arising from revaluation of properties \$24,315,326.95." Now, Mr. Phillips, there is also an increase, as shown in your 1928 report to the Commission under the account "Reserve," item 180 "Reserve and Renewals arising from revaluation \$9,782,747.89."

A. Yes.

Q. The difference between those two items would represent a net write up due to the revaluation, would it not?

A. I couldn't answer that question without I analyze it. The mere fact that he has written a figure as appears on one report, and another appeared on another report, it does not necessarily follow that the difference between the two is a write-up.

Q. Well, then look at the 1928 report, page 202, Account No. 102, under the column "Balance of beginning of year, fixed capital arising from revaluation of property \$24,315,326.95."

A. The balance, at the close of the year is \$23,300,000, with a decrease of \$1,014,000. Is that what you are trying to get at?

Q. No, I am trying to get at, what was the new write up due to revaluation, at the beginning of the year 1928, as shown by this report?

A. Maybe we can get it off of here (indicating).

Q. No; it is here (indicating). It is the gross write up, less the increase in the reserve.

A. Perhaps, Mr. Evans, we can put our controller on here and he can explain these details better than I can. There may be other questions raised.

MR. TURNER: Mr. Phillips, I want to thank you for having someone here that can answer questions. That has been our trouble right along.

THE WITNESS: I will answer any questions that I can as to general policy, but I brought our controller who will be glad to answer such questions as he can.

BY MR. EVANS:

Q. Let me ask you this, Mr. Phillips; according to this report the fixed capital installed prior to January 1st, 1919, was at the beginning of the year 1920, \$11,975,680.87, was it not?

A. You had better ask Mr. Mitchell that question. I will say that is probably right.

Q. Against that there would be certain reserves for renewals and replacements. For the purpose of my question I am going to ask you to assume that the net investment in fixed capital as shown by your 1928 report prior to January 1st, 1919, was \$9,856,475, and assuming that to be the case, that the entire balance of your plant was constructed since 1919, will you explain how you think the write-up of \$14,500,000 in 1927 would have been justified?

A. Probably on an inventory and reappraisal of the property on the valuation at that time when the appraisal was made.

Q. What was the trend of construction costs of properties such as yours from 1919 to 1927?

A. Upward.

Q. Continuously upward?

A. Probably not up to 1927. It began to slope off about that time.

Q. Was not the actual peak of construction costs reached in 1922 or 1923?

A. Yes, but there has not been much of a reduction since that time. Material has fallen off, but labor has gone up.

Q. So you think that with \$100,000,000 of construction since January 1st, 1919, less that \$9,000,000 prior to 1919, that a revaluation of your property in 1927 would justify a write-up of \$14,500,000?

A. I have no doubt of it. Otherwise it would not be there.

Q. Do you know on what basis that valuation was made on which your write-up was based?

A. I do not; Mr. Mitchell will.

Q. Do you know who made the valuation?

A. I expect the valuation experts of our engineering department.

Q. I take from this you are a believer in writing up the valuation of your property to the full reproduction cost new less depreciation in a period of rising prices?

A. That is a question of law. That has been determined by the Supreme Court.

Q. I am talking about the methods of bookkeeping.

A. We try to keep our methods of bookkeeping in line with the orders of the authorities.

Q. You have testified that since 1923 perhaps there has been a decline in prices, but certainly since 1927 there has been a decline in prices?

A. There has been to some degree but not to any marked degree.

Q. Mr. Phillips, do you want this committee to understand that your testimony is that construction costs were the same in 1931 as in 1923?

A. No, in 1931 they were considerably less.

Q. Is it your intention and the intention of your company in 1931 to revalue your property again in order to give to the public the benefit of the decline in prices?

A. I do not know.

Q. Has that been discussed?

A. No, not with me.

Q. It was true in 1930 also that there was a very marked recession in prices?

A. No.

Q. It has all occurred in 1931?

A. I would say there has been a very decided decrease in 1931. In so far as our property is concerned, in 1930—I will give you an example: Before the war (I have these figures in my hand) the approximate cost per kilowatt of capacity was \$80 per kilowatt, and in 1930 the cost was \$163 a kilowatt of capacity. It was higher in 1930 in so far as that particular job was concerned than any station we ever constructed.

Q. Was that the same type of construction?

A. No, bless you no. You must understand that there have been tremendous improvements. We are not talking about type of construction but unit cost of construction.

Q. What would have been the unit cost in 1931 as compared with 1923?

A. I do not know. We have made no estimates and we have no construction of that character to carry on in 1931.

Q. You don't make any attempt to keep in touch costs on a comparative basis?

A. Not unless we contemplate some work.

BY MR. TURNER:

Q. What year does this report speak of construction work?

A. In 1927.

BY MR. EVANS:

Q. Are you familiar with the facts in regard to this write-up? That is, what has been determined on by the Company?

A. No.

Q. Although you were the vice-president at the time, you didn't know?

A. I was vice-president in charge of operations and general manager.

Q. So you cannot give the committee any information as to the reason which prompted the write-up?

A. No.

BY MR. TURNER:

Q. Did you have a rate case on at that time?

A. No.

Q. Had you applied for a n increase in the rates at that time?

A. No. As a matter of fact, I think there was a decrease, I think, in that year.

Q. Have you any record of any increases and decreases in your rates during the last six years?

A. I think I have. There were no increases, but there were several decreases.

BY MR. MOORE:

Q. Did you hear Mr. Mitchell's testimony yesterday?

A. A part of it.

Q. Was that comparable with your decreases?

A. Just about.

BY MR. TURNER:

Q. So that as far as this write-up is concerned, it has no relation to rates?

A. No.

BY MR. EVANS:

Q. Mr. Phillips, you just testified a few moments ago it was done so as to bring your book values in line with what you conceived to be the decision of the courts?

A. I didn't say book value; I said fair value.

Q. I asked you why this revaluation was made and I understand you to say it was done so as to comply with what you understood to be the decision of the court?

A. That is not what I meant. You asked me a few minutes ago if I knew why it was made, and I told you no.

BY FATHER COX:

Q. Why was it necessary to have a write-up if it had no bearing on rates? Why could they not have left the valuation just as it was?

A. May I repeat my answer to Mr. Evans; I don't know what the purpose of the write-up, if it was a write-up, was at the time. I was vice-president in charge of operation and was not consulted with respect to the fiduciary and financial operations of the company. My job was to operate the company.

BY MR. RHODES:

Q. They did not do it to keep your valuation in proportion to your income?

A. Not necessarily.

Q. It would have some relation to your income?

A. No sir.

Q. It would have some relation to your income?

A. No sir.

Q. You are entitled to have a seven per cent return?

A. We may be entitled to have a great deal more than that. Who fixed the rate at seven per cent?

Q. The Public Service Commission?

A. I think not. There is no restriction as far as seven per cent is concerned.

BY MR. EVANS:

Q. The law does not restrict you to seven per cent, but it has been the universal custom of the Public Service Commission to fix it at that figure?

A. May I have that question again?

Q. (Read by reporter). The law does not restrict you to seven per cent, but it has been the universal custom of the Public Service Commission to fix it at that figure?

A. I don't know I don't know that it has been the custom. Q. Then you are not informed in regard to it?

A. I am informed perhaps as much as anybody else on that particular question.

Q. I ask you to produce to this committee where the Public Service Commission in the last ten years has allowed a greater return than seven per cent?

BY MR. RHODES:

Q. Is it correct for us to assume that your theory is, that as the untility head of all of these companies, you think you can get any return you desired?

A. No, you are going to extremes.

Q. What is your conception of a proper return?

A. First, to maintain the property in the highest possible physical condition, to insure the very best quality of service that can be rendered, and second, rates that will be attractive in order to maintain the integrity of the property and to protect the investment of the investors and produce a high credit rating, whatever it is, whether one per cent or fifteen per cent or twenty per cent. Economic law will determine that, not civil law.

BY MR. EVANS:

Q. The Public Service Commission has always held seven per cent was a fair return?

A. Not to my knowledge. Mr. Evans, will you please show me where the Public Service Commission at any time has declared that seven per cent is a fair return?

Q. In every case in which they make an order.

A. Will you give me a case?

Q. Philadelphia Rapid Transit, Philadelphia Electric, Luzerne Gas Metropolitan Electric and Gas.

A. Is that the limit, seven per cent? Is the order limited to seven per cent?

Q. It is.

A. That is news to me.

BY FATHER COX:

Q. This write-up value might keep you to a fair return on your investment. If you had a higher valuation, then the returns would not show up so bad in the public eye?

A. No, I would say the determination of a fair rate must be determined at the time the question is raised; not now, not ten years ago, not fifteen years hence. It is to be determined when the question is raised. You should find the value of the property as determined at that time, not what it was ten years ago, but all those factors are involved; historical value, the average prices of property and materials of construction, the actual construction, the reproduction cost new less depreciation, they are all factors to be considered in the determination of the valuation of the property; not any particular one of them but all of them, in accordance with a decision of the Supreme Court.

Q. If you write up your valuation, and your earnings are great then the earnings do not look to be so high?

A. I think you can draw any assumption you want to, but to draw a fact from them is another thing.

BY MR. TURNER:

Q. I have had great difficulty to determine the difference between a return on fair value and a return on capital?

A. They are two different things. The fixed capital as shown in these reports has no relation whatever to the value of the property.

BY MR. HAGMIER:

Q. You would not go on the theory of what things cost at that time, and you would not want to go into a proposition to have your plants valued at the cost of labor now?

A. Let me repeat, that is a part of the determination of value, what the prices are now, what they were a few years ago, reproduction cost new less depreciation, historical cost and all the various bases on which they are made; the Supreme Court and the Commission say they shall make an estimate of fair value on these bases. It doesn't say anything about fixed capital.

Q. You would not want to have some of your plant valued at what they cost?

A. We are in the hands of the Supreme Court as the court of last resort.

## BY FATHER COX:

Q. If you are making money according to your investment, would it not be a good thing and make it look much better in the eye of the Public Service Commission and to the public, to raise the valuation, and by raising it, it would not look like such an out of reason earning for any given company?

A. May I answer you rather categorically. See if we can get on a proper sort of understanding and basis in reply to that question. In the first place, I am one of those younger groups of executives, there are a few of them coming up, and we have learned throughout our years of school training and our experiences as time goes on, to pay more attention to economic law in the determination of economic values than to civil law. May I explain the reason why? In public utilities, for example, the popular estimation is that the public utility company is a monopoly. Let us see how much of a monopoly it is. It is a monopoly in so far and only in so far as it has a contract with various municipalities to occupy the streets, and there its monopoly ends, for this reason, that perhaps there is no more competitive business right now than the street railway and the electric light and power, and the gas business. Why is it so? Pass over the street railways; the advent of the automobile and the radio and the rest of the modern inventions have all brought a decrease in the earnings of street railways. That is competition, and the modern executive tries as nearly as he can to adopt means that will offset that competition in order to save his property. Now let us take up the electric light and power situation, central stations as we call them. In the first place, the central station again is in competition with the private-owned plant. If the central station expects to get that business, you must do two things, first to give a service to care for the business of that particular customer, and second, he must render that service for less than the customer himself could do or he does not get the business. Is that right? Let us go into the commercial end of the business. The merchant in his store has to watch his expenses closely. Now, if the central station finds it ought to be the one to render service in that particular point, if he is smart and follows economic law, he will first produce a service which is attractive to that merchant and to his customer, and increase his trade by the right sort of illumination and get his rates as low as they can be made. What about the domestic consumer? They are in competition in the case of the domestic consumer with coal and coke for heat and hot water and various other factors. Is that right? If the electric company is managed wisely, it will go after that business on a competitive basis; the central station is in competition with the customer and should be if he wants to live. What percentage do you suppose the electric power and light company gets out of the consumer's dollar? One and one-half per cent. of the family budget.

## BY MR. EVANS:

Q. Your philosophy of rate-making, then, is to charge what the traffic will bear?

A. It is not, and that is not a fair question. I said that we were in competition and we must charge prices to attract business.

Q. What competition is there in domestic lighting?

A. The cost of improper illumination—

Q. You consider that is sufficient to keep your rates down? And do you think there is no need of regulation at all?

A. In my own opinion, the greatest regulator is economic law and not civil law.

Q. By that you mean the Public Service Commission?

A. Any form of civil law.

## BY MR. WALKER:

Q. Mr. Phillips, in cases where the company controls both the gas and the electric light, they would be in competition with themselves?

A. Surely.

Q. If you are competing with yourself, where is there any competition?

A. You are asking that question on the assumption that everyone connected with a public service or or the public utilities is dishonest?

Q. Where is there any competition if you are competing with yourself?

A. Our effort is to please our customers, because if we please a customer we get both his business and his good will.

This business is not carried on for a year or for a few years. This business will be here long after you and I are gone.

Q. Let us hope so. Is there any competition under economic law when you are competing with yourself?

A. I don't try to explain that, you don't believe and you don't want to.

## BY MR. EVANS:

Q. I am sure that it would be very interesting if you could successfully develop the theory that there exists effective competition where both of the competitors are controlled by the same person?

A. Do you want me to submit a brief of that?

Q. Yes; I would be very glad if you would.

A. I would be glad to write you a paper. It is futile to attempt to discuss it here.

Q. I think it is very futile, but we would be glad to have a paper on it.

## BY MR. RHODES:

Q. Mr. Phillips, I do not think you are correct in assuming that we think the management of all or any of these companies is dishonest. They are human.

A. Just how can anyone escape the thought that there are certain elements who are proceeding on the assumption that the utilities are dishonest.

MR. HAGMAIER: I hate to have you feel that way about it.

THE WITNESS: I am not pointing out any particular individual.

## BY FATHER COX:

Q. We think that you are so efficient at making so much money, that if you paid a little attention to the other side of it, the people's side and give them good, fair rates, and think of them occasionally—make money if you will, but don't forget us on the other side entirely.

A. Doctor, I would like to discuss that with you, but I dislike taking up your time with academic discussion, but remember this—this is fundamental that the up-to-date, modern executive of the utility, the interests of the customers are paramount to anything else, in his limitations. That is a very fundamental thing, and it is based on good economic law and merchandising practices.

## BY MR. EVANS:

Q. In other words, am I correct in understanding that your theory of the proper rate practice is to charge all that the traffic will bear consistent with maintaining the good will of your customers?

A. Oh, no; I see how futile it is to talk. Maybe I don't know how to talk.

Q. Isn't it exactly what it comes to.

A. No; it is not.

Q. You admit that there are two bases, both controlled by the same interests, there is no effective competition, and then you say that the interests of the consumers determine the rates, and causes the competition as you call it. Now, isn't that the same as saying that the companies' rate policy should be to charge such rates as will yield all these returns that you have spoken of here while satisfying your customers?

A. No. Now, let me ask you something, if that were the policy of the company, to charge all that the traffic would bear, why did we voluntarily reduce rates?

Q. Because you wanted to avoid the rate case.

A. We were never threatened with a rate case until just a few weeks ago, at any time. Now, let us get away from that.

Q. Your report to the Public Service Commission in 1927 showed, if this write up had not been made, you were earning over ten per cent on the depreciated book value of your fixed capital. We have had here before us, members of the Public Service Commission and evidence that they have made a study of these exhibits, and in cases of that sort they have at certain times ordered reductions of rates or negotiated reduction of rates. By making this write up, your return was reduced on the basis of your fixed capital to 8.97%. Do you not think that that has anything to do with your making that write up in your return to the Public Service Commission?

A. No.

Q. And now, assuming that you are entitled to a seven per cent return, even including this write up, your company has been earning, according to the evidence introduced before this

Committee, 10.13% in 1928; 9.66% in 1929; and 10.08% in 1930 on the depreciated book value of your fixed capital, including the fourteen and one-half million dollar write up.

A. What has that to do with it?

Q. Do you consider that it is essential to maintain that rate of return in order to keep the financial integrity of the Duquesne Light Company?

A. What has that got to do with it?

Q. I am asking you a question now, you are not asking me.

A. Well, now, Mr. Evans—

Q. Will you answer the question, and then make any explanation you wish?

A. All right. I would like to hear that question.

(Question read)

A. We consider it necessary to charge the rates we are now charging, dependent upon the amount of business we do, in order to maintain the integrity of the property; is that the question?

Q. Do you consider it—

MR. EVANS: Just read the question.

(Question read)

THE WITNESS: I can't answer that question without a valuation of the property.

BY MR. EVANS:

Q. In other words, you say you don't know?

A. I don't know.

Q. Very good. Now, then, on this same assumption it has been introduced in evidence before this Committee that during these four years the amount which you have collected from the consumers in excess of a 7% return on the value of your fixed capital, including this 14½ million dollar writeup, has amounted to \$15,880,000. You have had this report examined, I imagine, have you not?

A. I don't recall that particular item. I have read a good deal of it myself.

Q. Yes. So far as the examination has gone, there is nothing wrong with these figures, is there?

A. I don't know whether there is or not.

Q. Well, you have been reading the evidence?

A. You are asking me whether—

Q. Didn't you have your accounting department check these figures?

A. Are you asking me whether I agree with those figures or whether I don't?

Q. I am asking you whether you found any errors in them.

A. I haven't examined them.

Q. Have you not had anyone in your company examine these figures that have been introduced before this Committee?

A. They have checked some of them. Whether they have checked all of them I don't know.

Q. So far as that check has gone, you have not found any errors in the figures I have just given you?

A. I don't know anything about those figures.

Q. Assuming these facts, which have been introduced in evidence before this Committee, and which you have not found any errors in so far, do you wonder that the public are dissatisfied with regulation as it is practiced today, in that way?

A. Who said that the public was dissatisfied? You are assuming that?

Q. Yes; I am assuming that.

A. I haven't heard they were dissatisfied.

MR. TURNER: The jury, five to two, found that they were dissatisfied.

MR. RICHARDS: We had plenty of reasons to do it.

MR. TURNER: In your view.

MR. RICHARDS: Whatever our views, it will be found in the testimony from some 938 boroughs.

MR. TURNER: I heard you make that statement on the floor of the House the other night, but I haven't found any such number of boroughs.

MR. MEMOLO: Is the Committee going to enter into a cross examination of its members?

MR. TURNER: If we care to, Mr. Memolo, and I always discuss everything on your end.

MR. MEMOLO: Whom, me?

MR. TURNER: Yes, everyone of you. I exclude none of you.

MR. MEMOLO: It applies all around?

MR. TURNER: Yes, sure. I have said right along that you can't muzzle me.

BY MR. EVANS:

Q. You have stated that these figures don't signify, because the company was entitled to a fair return on the fair value of this property; that was correct, was it not?

A. These figures are what?

Q. Were not significant?

A. No; I testified on the question of value or of the book value as not significant nor has any part in determining the fair return on a fair value.

Q. You have testified that there has been a decline in prices since 1927, and in 1927 your property was revalued by your own engineers?

A. It was. I don't know whether they were all.

Q. You just testified—

A. All right. Then they were. What difference does it make?

Q. Therefore at the present time excluding additions to the property, since 1927, the fair value would be, anything not less than your appraisal of 1927, would it not?

A. No; I wouldn't say that. I just repeated to you that the fair value is not based on reproduction cost, less depreciation, is it? Is that your construction of that? The United States Supreme Court says it shall be made up of various factors.

Q. Reproduction cost, less depreciation, is the maximum, but it may be considerably less than that, but that is the maximum.

A. That is a question of law.

Q. That is just what I am telling you.

A. Oh, you are telling me?

Q. Assuming that to be a fact, wouldn't the maximum fair value of your plant be less or greater than your valuation in 1927?

A. You are asking me to give you a reply on questionable assumptions.

Q. No; I am not. Here you had this valuation in 1927. You have testified that prices have receded since 1927. Isn't it obvious that a valuation made in 1931 for the same property would show a less valuation than 1927?

A. Not necessarily, Mr. Evans, because there is more than than one factor involved than the one you are making an assumption of.

Q. Wasn't your valuation of 1927 made on the basis of reproduction cost new?

A. Yes.

Q. And prices have receded since that time?

A. Yes.

Q. And, therefore, a valuation made on the basis of reproduction new in 1931 would be a less valuation than—

A. Yes, but that isn't the question you asked me. You asked me on the basis of assumption of reproduction cost new less depreciation.

Q. Therefore, by giving you the benefit of your 1927 valuation, we are certainly giving you the benefit of the doubt, in regard to the value of your property, aren't we?

A. On that one particular item.

Q. That includes \$100,000,000 out of \$112,000,000 of property?

A. That I don't know. I haven't checked that.

FATHER COX: You forget the historical value of four years, 1927 to 1931; then make up the difference.

MR. EVANS: Additions and extensions of all included.

THE WITNESS: Now, what do you want me to tell you?

BY MR. EVANS:

Q. Just state roughly what proportion of your property was installed since 1929?

A. I can't tell you off this report (indicating). I wouldn't attempt to do that.

MR. EVANS: Perhaps the Committee can arrive at those figures.

BY MR. EVANS:

Q. It is shown by your 1928 report to the Public Service Commission, your fixed capital installed prior to January 1, 1919, at the close of the year was \$11,975,680.87; was it not?

A. Right.

Q. And your fixed capital installed since December 31, 1918, was \$106,283,971.84?

A. Right.

Q. So that approximately ninety per cent of your fixed capital was installed subsequent to December 31, 1918?

A. Yes; fixed capital; not value. That is another thing.

Q. And now, let us have a look at the dividends that your company has been paying. What dividend did you pay in 1923, and at what rate?

A. I don't know. Mr. Mitchell can answer that.

Q. It is all in your report.

A. I see, but I don't remember.

Q. You will have to do a little arithmetic Mr. Phillips. Suppose, in order to save time, we do this, give you the calculations of these dividends that we have made and ask you to notify the Committee next week if there are any errors in these figures.

A. All right.

Q. The testimony introduced before the Committee shows that in 1923 the company paid 9% dividends, amounting to \$1,640,340 on common stock—I am only dealing with common stock—in 1924 you declared a stock dividend, amounting to \$1,774,000, and a cash dividend of \$1,793,560, or a total dividend of 19.2% on your common stock. Now then, 1925, '26, '27, you declared dividends, including a stock dividend in 1924 of 10%, amounting to \$2,000,000. In 1928, you declared a dividend of 16%, amounting to \$2,666,666. 1929, 16%, amounting to \$3,000,000, and in 1930 15.8%, which was \$3,800,000 in cash and \$1,850,000 was in stock?

(No answer)

BY FATHER COX:

Q. The company owns and controls all the common stock?

A. The Philadelphia Company owns all the common stock.

Q. And all the profits have gone back to the company itself, whoever the company may be?

A. Well no—approximately so. You see, the public owns a very large share of the Philadelphia Electric common stock.

Q. Of the common stock?

A. The Philadelphia Company's common stock, yes.

Q. What I was thinking of is that there have been statements made time and time again, if too much regulation of these companies was made, the widows and the orphans and the innocent stockholders would suffer. Now, I think the stock, being held by the company and by people who are fairly well off, will not very much affect any widows and orphans. That has been used against those of the Committee who are fighting for a little regulation; not fighting to hurt anyone?

A. You understand, Doctor, that there is a tremendous amount of securities held by insurance companies and trust estates and all that sort of thing.

BY MR. TURNER:

Q. Do your employees hold any of your stock?

A. I really don't know. I imagine some of them do.

Q. You have no system of selling to your employees like a great many of the utilities have?

A. We have one we call an investment bureau, where a great many employees who say, "I have a little money; what will I do with it?" "How will I invest it?" and so forth. We advise them, but we don't confine our advice to our own securities. We pick out a list of securities which are recommended by bankers and those who should know about investment. It is not confined to our own securities, and they buy as they see fit or not.

BY FATHER COX:

Q. Now, another thing which has been mentioned here, which it might be well to explain.

MR. TURNER: Now, we have an economic law and a civil law. Economic law is recognized by business men, but it does not have any recognition on the law books of the country.

A. Unfortunately not.

MR. TURNER: I can't let that pass, if you are correct in assuming that.

BY FATHER COX:

Q. Just a minute. Your economic laws are furnished by your business men?

A. No; they are natural laws.

Q. All right, and recognized by business men?

A. Yes; when they learn about them.

Q. All right; wouldn't it be well if these laws were made to cover all situations, everywhere, and not to just a little group? Wouldn't it be well to incorporate them into the laws of our country, the same as our civil laws?

A. The difficulty is that your economic law is like physical law. It is natural to try and control it, but you can't always do it. We learn more and more every day about natural law—physical law. And now I will explain a little farther and perhaps it will help you. Let us take engineers for example—probably Mr. Cooke will verify this; one of the fundamental laws of physics is that every action—

MR. MEMOLO: Please don't call me "Mr. Cooke."

THE WITNESS: Pardon me. I know there are literally thousands of scientists, men trained in physics, who have spent their lives and fortunes trying to controvert that fundamental law. And now, there are business men who have spent their lives and their fortunes, and a lot of other people's fortunes—

MR. TURNER: Politicians, too.

THE WITNESS: Trying to controvert that fundamental law of economics. They are immutable. We may make different interpretations of the economic law, but the law is immutable, and those who have a false interpretation will suffer. That is all there is to it.

BY FATHER COX:

Q. You say that they are immutable. Are they like the ten commandments?

A. No.

Q. You said they are immutable?

A. They are like the law of physics.

Q. It would be well to read them over.

A. You can get a lot of information if you will read them over.

MR. TURNER: One of them is "Love thy neighbor as thyself."

FATHER COX: We love our neighbor better than ourselves.

BY MR. EVANS:

Q. It has been introduced here that the Pennsylvania Public Service Commission, through its accounting bureau made an analysis of the reports of electric companies in Pennsylvania for the year 1928, and from your report arrived at a depreciated book value of your fixed capital, as of December 31, 1928, \$137,123,528. This report, which is exhibit 9 in this record shows that you were earning a return of 9.99% on that basis.

A. On the book value basis?

Q. Yes.

Has the Commission so far as you are aware, ever taken up with you or your company, the question of a reduction of your rates?

A. No.

Q. Have you ever discussed with them the possibility of a reduction of rates?

A. We have notified them of reductions in rates.

Q. But merely by filing rate schedules?

A. Yes.

Q. And no one on behalf of your company has ever taken up with the Commission any possibility of reduction of rates before the schedule was filed?

A. Not to my knowledge. We have filed a number of rate reductions, voluntarily on one day's notice.

Q. And now, as exhibit 10 in this record, there has been introduced a calculation made by the accounting bureau of the Public Service Commission for the year 1929, in which they found the depreciated book value of the fixed capital of the Duquesne Light Company to be \$136,958,096, to which in this report is added ten percent. of that figure, or \$14,695,860, going concern value. That was done by the Commission entirely on its own initiative, without consultation or conference with your company in any way?

A. Not so far as I know.

MR. TURNER: There was a rate case on which the Commission—

MR. EVANS: This, Mr. Turner, was set up by the Accounting Bureau of the Commission, on which they subsequently took action against the companies.

MR. TURNER: I was going to look for that exhibit. It was one of those companies in 1930 or 1931 against which complaints were issued on its own motion?

MR. EVANS: No. This is a tabulation on the basis of which, in 1930, the Commission took action against certain companies.

MR. TURNER: How much did they allow as going concern value, Mr. Evans?

MR. EVANS: \$14,695,880; an estimated working capital of \$1,619,019, and they arrived at a tentative rate basis of \$103, 233, 575, and on the basis of that base showed that the Duquesne Light Company was earning 9.45%.

Q. On a 7%—suppose we take a 7% return, Mr. Phillips, would a 7% return on the value, not of the fair value of your property, but upon your capital—would that allow you sufficient money to operate and carry on your extensions, and do all the things you say you feel a company should be able to do?

A. I don't think so.

Q. Why not?

A. Because the book value of this company is very considerably less than the fair value.

Q. That might be, but that would not be an answer to my question.

A. You are asking me if 7% on the book value of the property would be sufficient to maintain the high credit rating?

Q. Yes.

A. I don't think it would. That is merely an opinion.

BY MR. RICHARDS:

Q. Wouldn't it reduce the dividends?

A. It wouldn't reduce the dividends, but it would reduce the ability to earn.

Q. Have you any figures there to indicate what the difference would be?

A. No; I do not. I haven't made calculations on that basis.

BY MR. TURNER:

Q. Has your company ever made a study of those figures to determine what it might be? In other words, have you ever studied this question, because it has been agitated now for a number of months, and here it has been agitated for a couple of months? There is an Act that has passed the House that will have a direct relation to that. Has your company made any study of that, and what its possible effect will be?

A. No; not yet.

BY MR. RICHARDS:

Q. If you had a 7% income—

A. Is that satisfactory, Mr. Turner?

MR. TURNER: That is satisfactory one way.

THE WITNESS: We haven't made any study of this thing.

BY MR. RICHARDS:

Q. Why wouldn't it be worked out if you had a 7% income on your investment in capital, after taking care of all the operating expenses? Where would that effect the credit of your company? It would not impair the credit of your company?

A. You are in competition in selling securities and maintaining their values with a great many other businesses?

Q. Yes; but this is a monopolistic business?

A. Not entirely a monopolistic business.

Q. And, therefore, the securities are issued, they are certainly beyond any other securities?

A. To meet the demands of the public we have to invest large sums of money every year, and we have to borrow a good part of it, and we have to secure that money in the money market. And now, if the earning capacity and the earning ability of these companies impaired them the price at which you are selling the securities is impaired.

Q. But you have a guaranteed return; you are allowed a seven per cent return, which the Commission allows you—

A. That is not guaranteed.

Q. It is a guarantee to a certain degree. You are allowed to charge a rate that will bring that income?

A. That is not a guarantee. I would be delighted to have a guaranteed income of seven per cent on railways securities, for instance.

Q. I have not seen any utilities not having a fair income on their capital from all that I have examined here; and not in one have I seen any deficit.

A. Have you looked into the street railway business?

Q. Yes.

A. Do you know of any street railway business that is earning seven per cent?

Q. No; but there is no reason for anyone having money in the street railway business, if it was properly depreciated and amortized over a period of years?

(No answer)

BY FATHER COX:

Q. At one time the railroad companies made a lot of money.

A. There was a time when the railroad companies were making money, years ago.

Q. Just like old stage coach. I don't think they have a right to weep over that fact and talk over their losses. You can make money by your busses and your other means of transportation, like other companies are doing, and the sooner you get your cars off the streets and use automobiles the better.

A. I would be glad to answer that. If this property has amortized throughout the years, if the earnings have been sufficient to do that, there would be no objection to it.

BY MR. RICHARDS:

Q. Proper regulation would bring that about?

A. Proper regulation, which would give a minimum of seven per cent would be a fine thing, but there is no such regulation, and there can be no such regulation.

BY MR. MOORE:

Q. Mr. Evans, I would like to have Mr. Phillips comment on Dr. Bauer's statement on the street railways situation, do you recall it?

A. I was not here, Mr. Moore.

Q. Mr. Bauer qualified as an expert connected with the New York Public Service Commission and in response to a question of Mr. Turner relative to street railways stations, stated that we all know that they were sick. The quotation, I will read it in part, "They had a monopoly; they invested their money in something that was protected, but it was not protected when the automobile came along, and they went busted, and in the same way some of the present utilities may go busted with the use of the air."

"By Dr. Bauer: That is one of the indictments against our system, that the investors in street railways securities lost so much money. The street railway system should have been so regulated as a public utility that investors would not have lost their money. If back in 1890 we had had a prudent investment theory on our books and regulated in a sane, sensible, efficient way, there would not have been the very obvious and conscienceless disregard of public rights over the two decades that followed."

"Second, all the retirements and obsolescence and super-sessions would not have been thrown into securities outstanding. There would have been proper, systematic depreciation of the property as they took place, and second, there would have been proper amortization of the investment as time goes on, and it appears that another agency is going to crowd in. The automobile and the bus didn't come over night. There was ample time for depreciation and amortization. The greatest indictment I think against our present system of non-regulation is that investors can and will lose their money millions and billions of it have been lost by investors because of the idiotic way we have of dealing with an industry which is a utility upon which the public interest, both as investors and as consumers, depend. We think that is the answer. We have got here an industry that is a utility. It is an industry that is fundamental in our social and industrial life, and it is a monopoly. Dealing with that kind of a public proposition, I don't believe really that your standards of normal competitive business apply. You have different forms that you have to apply and then there comes the question (a) what are we going to do about it, and (b) how can we get this accomplished?"

A. I should say that Doctor Bauer's observations as to what should have been done at the time are very pertinent, but the primary fact is that it was not done. Furthermore, to have done it would have incurred larger earnings than were secured by the Street Railways. I am talking about conditions twenty-five years to thirty years ago. With the amortizing of property and in order to follow the changes in the type of property requires money, and the money was not in the business. There was no depreciation reserve set off on the yearly basis. They didn't know what the factor of depreciation and obsolescence was. We don't know all there is to know about it now. We

know more about it now than we did then. The thought of amortizing and the proper anticipating of these changes or the final discarding of property never entered into the heads of any business man in those days. If it had, it would have been necessary, I repeat, it would have been necessary to secure larger earnings in order to write off this property. They did not take into consideration anything for depreciation or obsolescence, and they had no picture in the future of the business being eliminated or being superceded as the street railway business in many places now is. They didn't think of that. Consequently it was not done. The same picture may be true with reference to the electric light and power business now. Who can say that twenty-five years from now we will still be doing business as we are now? Who can say that our investments will be intact and maintained? We don't know. That is one of the hazards of business. That is true in the natural gas business. You will remember three or four or five years ago it was anticipated that the natural gas reserves of this country were disappearing; then in our own case, with our own companies, we advised the domestic users of gas to use other means, such as coal and coke; then the picture changed suddenly and great reserves of natural gas were discovered. As the picture is now, the gas business may come to life again. I don't know. Of course this is going into academic discussion again. This much-talked-of discovery of Prof. Graudahl of Germany where by the use of certain vacuum tubes he proposes to use the energy from the sun and through various processes generate electric power. Of course we have had a good many propositions of that kind of various types; possibly someday we will have it. Then what is going to become of the tremendous investment in this electric light and power business? Are we going to ignore these things and say they will never come? That is what the street railway business did. I remember very well when the electric light and power industry first came into being, from reading, about fifty years ago, it started when Mr. Edison made his discovery and they started out with electric light plants; it took away most of the business of the manufactured gas companies and in our district of the natural gas business, both of street lighting and of home lighting. That was a terrible blow to the natural gas business.

BY MR. MOORE:

Q. You mean, residential?

A. Naturally. But the electric light companies took the business away from the gas companies and I hope my friend at the other end of the table is listening to all of this. As the result of all this the business of the gas companies was depressed. They had huge investments, and those who had invested in them were facing tremendous loss, and some could ill afford to take this loss. We don't know but what the same conditions are facing this wonderful new baby electric light and power.

BY MR. RHODES:

Q. Is that not all the more reason why we should have proper regulation to set up reserves to take care of these possibilities?

A. I think the utilities will get along with what they have.

Q. Are you satisfied with the regulation in Pennsylvania at the present time?

A. This comes from a lay mind, but under the Public Service Law I agree with Attorney General Woodruff, I agree with him in my limited knowledge of law, that the Public Service Law of Pennsylvania is a model for this entire country. I might also say this, that there are certain things about that Public Service Law which I think could be improved on, the one you named, for example, a provision that will give more power and stricter supervision over the issue of securities. As far as my company is concerned, we think it should be done. Another thing too, I don't think our company, certainly, has any objection in the case of an increase in rates to extending the time more than thirty days. We have no objection to that as long as the company doesn't die in the meantime while the operation is going on, in three, four, five or six months. In my own humble opinion, the principle difficulty with your Public Service Commission here is that this Legislature has not provided them with sufficient funds to carry on their duties and responsibilities. I will give you an example. There is an engineer employed by the Public Service

Commission, and he is the only one, whose duty it is to examine all the steam railroads' physical properties, the street railways with their physical properties with respect to all their equipment. One man—why he could not examine even by a reasonably cursory examination all the physical equipment of all of these companies in a hundred years. That one man is all they are allowed. They have not sufficient appropriation.

BY MR. EVANS:

Q. You don't mean to suggest to the committee that the Public Service Commission undertakes in any way to inspect the equipment from the standpoint of safety?

A. I would say that if you require public safety under the law and ask a body to assume the responsibility as to that aspect, you certainly ought to give tools to carry out that responsibility.

Q. I don't think that has ever been suggested.

A. If you place the responsibility on a man you must give him authority.

Q. Going back to the financial needs of your company. In 1928 it put out an issue of 5% cumulative first preferred stock of \$20,000,000 par?

A. No, we didn't put it out at par. It was at \$100 par value.

Q. I show you your 1928 report to the Public Service Commission at page 243, issued first preferred 1927, total par value, \$20,000,000, cash received in consideration \$20,000,000. Does that not mean that the company got \$20,000,000?

A. That is not the net amount they received, because in calling this requirement of the common stock, 8% cumulative stock, they paid considerably more than par.

Q. That is not the price at which they issued the new stock?

A. No, they issued the new stock at \$20,000,000.

Q. Therefore as far as credit was concerned in 1928 they could issue 5% preferred stock at par?

A. Yes sir.

Q. And the bonds were only 4½% bonds, were they not?

A. Yes sir.

Q. If this rate of return was reduced, do you not think they could get the funds they need without the increase in dividends on the preferred stock of 6% and an increase in the interest rate on their bonds of 5%?

A. It is questionable. I would not undertake to give an opinion on that now.

Q. In other words, you don't think the credit of your company is sufficiently good that if it were allowed a 7% return on book value of its property, it could borrow the necessary funds to meet its requirements?

A. Certainly not the book value.

Q. On what basis does your company calculate depreciation in its report?

A. The real setup is 8% on the gross revenue.

Q. As an operating man do you think that the percentage of the gross revenue is the best way to calculate depreciation?

A. I think that method could be improved on, yet we arrive at that 8% of the gross revenue as being based on experience of the money actually expended over a period of years for replacements and renewals. As a matter of experience totally.

Q. Depreciation is not a function of gross revenue at all?

A. No, that is correct.

Q. And in your present practice, out of every hundred dollars your customers pay in, you take from your customers, you set aside \$8.

A. Yes, with the further explanation that that \$8 is arrived at on an actual basis of experience over a period of eight years, but it actually is at the present time between 8 and 9 percent.

BY MR. TURNER:

Q. Mr. Phillips, does that represent only replacements and renewals?

A. That is all.

Q. Where do extensions and betterments come in?

A. That is new capital, new money from whatever source you may get it.

Q. It doesn't go into operating cost?

A. No sir.

Q. And is not an item on your depreciation?

A. No sir.

Q. Renewals and replacements are functions of so-called depreciation reserve; extensions and improvements are functions of new money and new capital.

BY MR. EVANS:

Q. There has been introduced in evidence before the Committee the capital stock tax report for the year 1929, and your report is in the papers stating after that evidence was introduced, that your return to the Public Service Commission and to the tax authorities state they have been made strictly in accordance with the law. Is that a correct quotation?

A. That is right.

Q. Are you familiar with these returns?

A. I am familiar to the extent of the general information in them.

Q. Did you make that statement on your own knowledge, or has Mr. Mitchell told you so?

A. On Mr. Mitchell's statement.

Q. I think you stated that the Duquesne Light Company was affiliated with the Harwick Coal Company?

A. I don't think I stated so, but it is.

Q. Who owns the capital stock of the Harwick Coal Company?

A. The Philadelphia Company.

Q. From whom does the Duquesne Light Company buy its coal?

A. The Harwick Coal and Coke Company, that is, a part of it, not all of its supply.

BY MR. MOORE:

Q. Do you buy any of your coal in the open market?

A. We have not for some time.

Q. Did you buy any from the Frederickstown Coal Company?

A. I am sure we have not for some time. We did have a contract with them.

Q. When was the Frederickstown Coal contract terminated?

A. December 1, 1930. We occasionally buy lots of coal in the open market, if we can get it at a bargain.

Q. At what price per ton, approximately?

A. We have paid recently for soft coal as low as one dollar and a half a ton.

Q. Do you recall the maximum figure that it was in 1927? or 1928 in the open market?

A. Back in 1927 there was a strike on and prices in the open market were up. We didn't buy any at that time on the open market, but was up around four dollars and a half, or five dollars a ton.

BY MR. EVANS:

Q. From whom do you now purchase your coal in addition to the Harvester Coal Company?

A. At the present time we have acquired other coal property.

Q. Are the companies owned by the Duquesne Light Company or the Philadelphia Company?

A. The companies are leased but they are leased by the Philadelphia company.

Q. In other words the Duquesne Light Company attempts to buy its coal from companies controlled by the Philadelphia Company?

A. At this time.

BY MR. TURNER:

Q. Are you familiar with the figures on coal prices?

A. Only in a general way.

BY MR. EVANS:

Q. I was interested, Mr. Phillips, from your report to the Public Service Commission, in getting some information in regard to the cost of coal to your company. Can you or Mr. Mitchell just give us that?

A. He would possibly give you the detailed figured, but I can tell you something about the basis on which the costs are made.

Q. Tell us what you can.

A. The policy is to charge the Duquesne Light Company for its coal at cost after the cost of coal received is determined, with further additional charges.

Q. After the cost of coal received is determined, what further additional charges are there made against it?

A. There are no charges except charges for estimated cost. There is no intention to make any profit out of the coal used by the Duquesne Light Company.

Q. For instance in 1924 your report shows that the cost of coal received was \$3.39 a ton and the cost of coal consumed by the company was \$3.43 a ton. What would account for that difference?

A. Handling charges to the bunkers, and the crushing and the like.

Q. On what basis are those charges arrived at?

A. They are the actual costs of the Duquesne Light Company. When the coal company delivers the coal by car or boat, that is the charge on car or boat, then you have to transfer to the crusher and the bunkers.

Q. Has there been any material change in that cost of handling since 1924?

A. Oh, yes.

Q. What has that change been?

A. You mean for handling charges. The cost of improved machinery, for reducing the cost in a general way. There were periods when we were storing coal where it became necessary to have two or three extra handlings, such as the handling from the cars to the bunkers and from there to the storage place and then from the storage place back to the crusher.

Q. When did you first commence to crush your coal?

A. We began to crush the coal at Colfax, back in 1920 or '21, and at Brunots Island, some time before that, we crushed the coal for the stoker equipped furnaces.

BY FATHER COX:

Q. There is no profit, Mr. Phillips, made on that coal?

A. No.

Q. The company furnishes it to you at cost?

A. Yes.

Q. That is because of your belonging to the Philadelphia Company?

A. Yes sir.

Q. There is an idea in Pittsburgh at the present time that you do make a profit on your supply of power to the Street Railway and the reason for that profit that you are making, that they have to come back on the city on an old contract and pay a lot of money for work the railways company is supposed to do. Do you really make money on this electricity you supply to the street railways?

A. No sir, that is service-at-cost contract.

BY MR. EVANS:

I don't want to interrupt you, but I think if we can finish with the coal first you will have an easier record to follow.

Q. What was the period, Mr. Phillips, that you refer to when the storage costs were increased?

A. That occurs from time to time. Sometimes the Allegheny River freezes up and some years it doesn't freeze up at all, but other years it is stopped for three or four months, and there are times when you get difficulty in the mines. It is a mine mouth proposition, our coal mine is about a mile from the Colfax power station and it is necessary to carry large reserves of coal in anticipation of trouble. In 1927 there was a coal strike and we stored large quantities of coal in anticipation of a strike. We usually carry or try to carry about 60,000 tone supply of coal in our reserve at Colfax, and about the same at Brunots Island.

Q. Were there any such unusual conditions prevailing since 1927?

A. Last year because of the drought we faced the possibility of the shutting down of the Monongahela River, but between the United States engineers and the West Penna. Power Company and ourselves, we kept the river open, but in anticipation of the possibility of the river being shut down, we stored large quantities of coal at Brunots Island.

Q. How about 1928 and 1929?

A. We were then recovering from the effect of the strike. I think the strike lasted, as far as it affected us, for nearly a year, ten or twelve months anyway. In 1927 at Colfax we had 250,000 tons of coal, and now we are carrying about 100,000 tons.

Q. Would you be able to state approximately what the additional cost per ton would be for this storage which you refer to?

A. If it was important, I would rather be certain about it. We have it as a matter of record, and it runs in my mind it

is about 23 cents a ton to take it from the dumping in the bunkers and put it in storage and trim it and pick it up and put it in the car and back to the crushing bunkers and deliver it. It is more economical to store the coal from the railroad car than it is from the river. It costs more to store it from the river because it has to go through an additional process. We add as little to that as we possibly can.

Q. The reason I asked, Mr. Phillips, is because the reports to the Commission indicate that whereas in 1924 the excess of the cost of the coal consumed over the cost of the coal received was four cents a ton, and in 1925 it was seven cents a ton, and in 1926 it was four cents a ton, and in 1927 it was about sixteen cents a ton, and in 1928, thirty-one cents a ton, and in 1929, forty cents a ton, and in 1930 it went back again to eighteen cents a ton. How would you explain the 1929 as being forty cents?

A. The possibility is that in 1929 we put in new handling apparatus entirely at Brontos Island. Whether it was all charged in in that year I don't know.

Q. These are operating costs?

A. It probably took more labor and we were building the James H. Reed station in 1929 and 1930, and we had to change the coal storage at Brontos Island to get it out of the way of the new power station and get it to another part of the island, and that may be part of it. That was done by labor at the plant largely. We installed some additional and new coal handling apparatus at Colfax, and naturally there might have been more or less of an advance as the years went on in the handling of coal from the storage. These costs are actual costs. There is no overhead on them.

Q. They are actual out-of-pocket costs?

A. Yes sir.

Q. I think you will find that the cost of coal as mined is reduced very considerably, as a part of the whole problem. The cost of coal and the cost of handling are pretty hard to draw a line in.

Q. Your cost of coal received has dropped from \$3.39 to \$1.34 in 1930, and the cost of coal consumed has dropped from \$3.43 in 1924 to \$2.02 in 1930?

A. Yes sir, and I think it is still going down, due to these new leases. In fairness to all, I would like to tell you. During that period ending December 31, 1930, there were two coal contracts that we were working under that were made during the war or shortly after. They were made I think in 1919 or 1920, just subsequent to the war. Now, these contracts are over, and we are doing our own mining of coal, and that accounts for some of the change in cost.

Q. They were not in effect in 1926?

A. Yes sir, they were in effect for ten years. One was made in 1919 and another in 1920. One was on the time basis, it was a minimum quantity per month, and the other was on a quantity basis.

Q. So really until 1930 you were not wholly free from these war costs?

A. No, of course, we were reducing the cost after the strike, when the costs began to go down, due to mechanization and closer supervision.

Q. Does the Duquesne Light Company merchandise electrical appliances?

A. No, we have a separate company for that purpose.

Q. What is it?

A. The Equipment Sales Company.

Q. From whom does it get its funds?

A. You mean to carry on its business? It is a self contained Company.

Q. Does the Duquesne Light Company lease its space or have any connection with it?

A. We have joint headquarters. We have stores where the Equipment Sales Company have their sales stores, and you will find them the same stores in the station, our information desk and collection desk.

Q. In your 1930 report to the Public Service Commission, you show merchandise sales at \$75,746.68. What did that cover?

A. To the Duquesne Light Company?

Q. Yes.

A. I don't understand that, unless it is sales to employees, because all electric and gas appliances is done by the Equipment Sales Company.

MR. MITCHELL: That was major items of installations for customers. It is not appliance sales at all.

BY MR. EVANS:

Q. Does the Duquesne Light Company pay any fees of any kind to any other concern for any management construction, engineering or financing?

A. Yes sir.

Q. To whom?

A. We have a contract with the Byllesby Engineering and Management Corporation for management and financial service and consultation, of 1% of the gross revenue. Then it has a contract with the same company for handling the construction supervision.

Q. On what basis is that contract?

A. On work actually performed and constructed, it is 7½%, and on the engineering work performed, but that is not carried into construction; I mean to say engineering work that is being done on the project is not carried through, we pay flat costs plus 100%, and they pay 2% for construction.

Q. That started in 1930?

A. Yes sir, about the first of June or July so it would not be one percent. of the total gross for 1930.

Q. Mr. Phillips, what reduction in the general and miscellaneous expenses of the Duquesne Light Company have been made by which you agreed to pay the Byllesby company one per cent of your gross income for management.

A. I cannot answer that exactly, with the exact figures, but the operating and maintenance expenses have been very considerably reduced since we made the arrangement with Byllesby Engineering and Management Corporation.

Q. Up to June 1930 you had a full set of officers to manage your own company, did you not?

A. We did not have a full set of officers since 1927.

Q. Were you not managing the company efficiently until the last year?

A. We were beginning the latter part of September 1926.

Q. You were managing the company efficiently?

A. Beginning at that time and subsequent to that time, I think we were.

Q. This arrangement with the Byllesby Engineering and Management Corporation was not in effect until 1930?

A. No.

Q. So since 1926 and to 1930 the company was being efficiently operated by your own staff?

A. No, the Byllesby Engineering and Management Corporation were giving management service since September 1, 1926, but we did not pay a management fee until June, 1930.

Q. What fees did they pay to the Byllesby company for managements?

A. None.

Q. Up to 1930, they were performing the services without charging?

A. Excepting their out of pocket expense. We agreed in 1930 to make it desirable from the standpoint of the Duquesne Light Company to make an arrangement to pay them one per cent of the gross revenues.

Q. For past services rendered and for current services being rendered?

A. Yes sir.

Q. In other words, one per cent, is not only to cover present services, but it is also to pay them for services rendered since 1926?

A. It seems reasonable that we should pay them something for their services during that interim from September, 1926 to June 1, 1930, when they were paid nothing for their services.

FATHER COX: I thought we had sufficient brains and men of knowledge in Pittsburgh to take care of anything. It seems strange that we had to go to Chicago for men.

A. Even before the Byllesby people got into the picture, we were paying sums of money half the time for consulting services and expenses and we carried a much larger staff then than we do now.

Q. I thought that they were coming to Pittsburgh to ask us about these things.

A. They used to do that, but we have a smaller staff now, than we had before.

BY MR. EVANS:

Q. Do you pay this management fee out of gross operating revenue, or on the gross revenue including non-operating?

A. I think it is on the gross operating revenue.

Q. What approximately was your gross operating revenue in 1930?

A. Around 28½ million. I don't remember what the gross operating revenue was, \$28,675,000.

Q. So you, on that basis, would pay the Byllesby Company approximately \$286,000 a year?

A. Well, Mr. Mitchell informs me, and I recall now, that the intercompany items are eliminated, and that would reduce the sum somewhat how much, I don't know. We have got that figure exactly for you. That is, you want to know the total amount of management fee paid to them for the year 1930?

Q. 1930, and if you would also give the total amount of fees paid for construction and the other items you mentioned, just divide it up.

A. Wouldn't you like to have the total value of the construction too?

Q. Yes, I would.

A. I don't want to upset your game, but—

Q. No indeed, Mr. Phillips; I would like to have a full picture of it.

A. I just want to say this, that prior to the Byllesby Engineering and Management Corporation arrangement that we had with them, we employed engineers to do the same service, by another engineering concern entirely. We made a study first of all of what it had cost us for those services and the amount of money paid for engineering services and construction supervision, and operation of construction, and for three years, I think—I am trying to remember the year, that is the reason I am hesitating, I can't recall it—it was about 9½%, and prior to that it cost us not quite 10½%, 10-47, or something like that. So that we are really getting our engineering and construction services now for less than we did before, when we had independent engineers and construction supervision.

Q. From your knowledge of the industry, you are aware, are you not, that in some companies there has been some abuse of this matter of management fees as between affiliated companies?

A. Yes, and we have studiously tried to avoid any such thing as that.

Q. In view of that thing, Mr. Phillips would it not in your opinion be advisable to have such contracts between affiliated companies subject to Commission control?

A. I would see no objection to that at all. Has there been explained to this Committee just what services are secured for this management fee? That is, whether you are getting your money's worth or not. I mean from the standpoint of that to the ratepayer, the consumer, whether you are really getting your money's worth or not. I don't know whether it would be of any value to them or not.

Q. I think the only question that the Committee is interested in at the moment is the amounts that are paid for these services, and whether or not it is not advisable to have them subject to Commission control, so that abuses which have been apparently existing in certain quarters can be corrected?

A. Well, of course, then we are assuming that there are some instances of that sort that are justifiable and expedient and economical.

Q. That would be my assumption, Mr. Phillips. I think it is only to prevent the possible abuse of it. Now, Mr. Phillips, you said, I think, you were also president of the Equitable Gas Company?

A. I did.

Q. The city of Pittsburgh, I think filed a rate complaint against the Equitable Gas, did it not, that was pending before the Public Service Commission for some eight years, and finally decided in February, 1928?

A. Yes.

Q. And you have already stated that the Philadelphia Company controls the Equitable Gas?

A. Yes.

Q. Does it own all of the common stock?

A. I am not sure. It owns provisional control of it anyway. I am not sure of that, but I will have it checked for you, if you want me to, either directly or indirectly it owns it.

Q. Who owns the distributing system used by the Equitable Gas Company?

A. It is owned principally by the Philadelphia Company.

MR. TURNER: Mr. Evans, you asked a question about a rate case that lasted eight years, is that right?

MR. EVANS: That is correct.

MR. TURNER: Well, could we just have some explanation of what, if Mr. Phillips knows, causes the eight year delay in that rate case?

THE WITNESS: Well, I am afraid, I could not explain it, but there is a lawyer in here that can explain it. He was the principal factor in it, Mr. Robinson. If that is objectionable to your plan or form—I take it that this is more or less informal?

MR. EVANS: I don't know whether this is going to embarrass Mr. Robinson or not, because at that time he was attorney for the complainants, and now he is attorney for the company.

MR. TURNER: Well, I think that we all, of course, dislike to embarrass anybody, but what we are after here, are the facts, and one of the indictments of the Public Service Commission is the length of time which is taken to decide some cases. Now, I think that if they are true we ought to have some understanding of just what causes those delays.

THE WITNESS: Well, I didn't want you to get the impression that I didn't want to answer the question. I cannot answer it, because I am not sufficiently familiar with it. Mr. Robinson, I am sure, would be glad to answer any questions that you want, if he can.

MR. TURNER: Well, we will wait until Mr. Evans gets through with you.

MR. EVANS: As a matter of fact, Mr. Turner, I think I should correct the eight years, because, according to their report, the report of the Commission, the complaint was filed on October 31, 1921 and decided in November, 1928; so it was just a little over seven years.

MR. TURNER: Well, in that length of time why quibble about a few months.

BY MR. EVANS:

Q. Who owns the gas lands and wells from which the Equitable Gas Company gets its supply of gas?

A. The gas lands and wells are not all owned, a good many of them are leased, and furthermore,—

Q. Well, they are owned by someone?

A. Yes, but a large number of them are owned by lessees, a tremendous number besides the fact that the Philadelphia Company of course owns a lot of them, and the Pittsburgh, West Virginia Gas Company owns a lot of them.

Q. That is another affiliated company, is it not?

A. That is another owned company of the Philadelphia Company, operated in West Virginia. And then we purchase a good deal of course from the Kentucky and West Virginia Gas company and then there is a large number of small wells that are owned by farmers and groups of farmers and there is a tremendous number of them.

Q. Well, confining our attention to the gas which the Equitable Company produces itself, is it not true to say that practically all of that gas is produced from wells owned by the Philadelphia Company or some subsidiary of the Philadelphia Company?

A. No sir; the gas lands of the Philadelphia Company are principally in West Virginia and Western Pennsylvania, Washington and Greene Counties. Those reserves are becoming rapidly depleted and we have got to buy gas where ever we can, and but it away ahead of time. We purchased an interest in the Kentucky and West Virginia Gas Company a few years ago. I don't remember just what year. So that we could get control of the reserves or have a large influence upon the reserves in that district, in order to insure a supply of gas for our customers.

Q. Well, what I am trying to get at is the gas which the Equitable Company produces itself.

A. I see. I couldn't tell you the percentage off hand. We have a record of that, if you want me to look it up for you.

Q. Well, now, your 1929 report to the Public Service Commission shows that you produced during the year 3,403,793 cubic feet.

A. Thousand cubic feet.

Q. Thousand cubic feet.

A. That is three billion.

Q. Yes; three billion. And purchased twenty-two million six hundred and forty-four thousand cubic feet?

A. Yes, that is about right.

Q. Now, of the three million four hundred three thousand seven hundred and ninety-three thousand cubic feet I am anxious to find out, roughly, whether most of that was not produced from wells owned or controlled by the Philadelphia Company?

A. I imagine they were. That is merely assumption. I don't know, but I think they were.

Q. Now, in 1923, when the Equitable made a lease with the Philadelphia Company, taking over all of the Philadelphia Company's gas lands and wells for twenty-four hours, did they not?

A. Yes.

Q. And the rental was fixed at eight per cent of the value of the property, which was around two and a half million dollars in 1923? And has been around two million three hundred thousand dollars in 1929 and 1930?

A. I think I have something prepared for you. I rather anticipated this question. During the year 1929 the Equitable Gas Company produced from the property of the Philadelphia Company covered by the lease of January 1st, 1923,—is that what you are talking about?

Q. Yes sir.

A. 3,403,793,000 cubic feet of gas, at a cost of 21.26 cents per thousand cubic feet, and that cost included the rental payable under the lease of January 1st, 1923, including the cost of operation, maintenance and depreciation of the production system.

Q. Well, what was the total rental paid to the Philadelphia Company in 1929?

A. In the year 1929 the Equitable Gas paid for the lease of gas properties \$2,327,911.39. Do you want the comparison of 1926 and 1925?

Q. Yes, if you have it.

A. In 1926 they paid \$2,574,806.39. In 1925 they paid \$2,726,503.99. Now, I have a table here that shows the thing in detail, and if you want, I will give it to you.

Q. Now, this lease between the Philadelphia Company and the Equitable Company made in 1923, was before the Public Service Commission for approval, was it not?

A. Well, I presume so, I was not connected with the company at that time. They are pretty careful about that, you know.

MR. TURNER: I didn't catch what he said.

MR. EVANS: He said he presumed so but he did not know.

THE WITNESS: I assume that they did. I was not connected with the company at that time. But they are pretty careful to follow the rules of the Commission.

BY MR. EVANS:

Q. And the Philadelphia Company in that case was contracting with itself, was it not, as long as it controlled the Equitable Gas Company?

A. I suspect that the purpose of that lease was for economic reasons; that is, to concentrate operation of the production system and the transmission system and the distribution system into one group, for economic reasons. I am merely speculating. That is what I would do if I had been with them at that time, or simplification of the relationships and the methods of operation, in order to reduce costs.

Q. In your 1929 report to the Public Service Commission, it appears that you purchased 22,644,600 thousand cubic feet for which you paid \$7,746,599, or an average of 34.2 cents per thousand cubic feet?

A. Yes, 34 and something.

Q. Now, in the same year, according to your report to the Commission you produced 3,403,793 thousand cubic feet, and your production expense was \$361,345. Have you any figures to check that?

A. I cannot check those figures.

(Discussion off the record)

MR. EVANS: I think perhaps we can save some time, if I will allow time during the recess just to go over this with Mr. Mitchell, without taking the time to bring out all this.

BY MR. MOORE:

Q. May I ask Mr. Phillips, in buying gas, is there any discrimination? I know in Washington and Greene Counties there are a lot of companies that have, some of them, less than a ten acre lease, and have the old eighth royalty clause, and some of them complain that they cannot get rid of those properties?

A. Well, of course, fundamentally the securing of leases is largely a question of barter and sale, to begin with.

Q. I appreciate that.

A. But as a matter of actual fact, the price paid for gas and for oil privileges is pretty much the same, it depends somewhat on the estimate of the geologist and practical driller as to what it is going to cost to drill the well. There are factors of that character in determining the lease price, but within a reasonable range they are pretty much the same.

Q. Well, is there any difficulty in a man disposing of a lease that he cannot operate with financial success himself, to one of these larger corporations?

A. Well, there is at this time, because of the fields coming in which are tapped far away, there is a surplus of gas, and then usually the small lessor, prospective lessor, insists upon taking the gas during the summertime, when you really have your own wells shut in, and sometimes some of these wells are offset wells. You see what I mean?

Q. Yes, I understand.

A. And difficulties of that kind.

BY MR. HAGMAIER:

Q. There is a good bit of gas now all around Pennsylvania, isn't there, that has not been used up?

A. Not so much in Pennsylvania. Not so much in West Virginia either anymore. We are going further away for it.

Q. But you have a surplus of gas right now, haven't you?

A. We have, due to a supply, a field in Kentucky, about 400 miles from Pittsburgh.

Q. There is a lot of complaints from these fellows that have wells in and around Pennsylvania, that they are not able to get rid of their gas?

A. That is due, I think, Mr. Hagmaier, to what I tried to explain to Mr. Moore, that contracts are necessary to be made with large fields, and they have such an excess from there that it is difficult to handle the gas of the small ones around Pennsylvania, particularly because of the terms that they try to exact, and furthermore the rock pressures of the Pennsylvania wells are going down pretty badly, and the expense of pumping increases as the rock pressure does down; and then they insist upon the wells being—the gas being purchased in the summertime, when the demand for gas is way down.

BY MR. CRAWFORD:

Q. Well, there is a decline in the amount of gas that is being sold now too? The industrial gas is practically all shut off?

A. Well, during this particular depression?

Q. Yes.

A. Yes.

Q. That is one cause for an excess supply of gas; you don't have the consumption that you had here a while ago?

A. That is true. That is a contributing factor.

BY MR. HAGMAIER:

Q. The mills around Pittsburgh took it out a few years ago when you fellows were all afraid you would not have any gas?

A. Yes, and now we are trying to get them to put it back again.

BY MR. MOORE:

Q. Do you produce any gas or use all natural gas?

A. We haven't for several years. We can, of course, but with such a supply of natural gas, it is not necessary. We have a plant of rather large capacity—I was trying to think of the amount of it,—but we haven't used it in four years. It is 30,000,000 a day, but practically this gas comes from a great distance now. They are piping it not up into us; but to other places from as far away as Louisiana and the Panhandle of Texas and Oklahoma and Kansas.

BY MR. EVANS:

Q. Mr. Phillips, so far as your companies are concerned, do you see any objection from the standpoint of regulation to allowing you a return on monies invested in your properties from now on the basis of the actual assessment, rather than the basis of the reproduction cost of the property, which may in the next ten years considerably decline.

MR. TURNER: You mean prudent investment?

MR. EVANS: Well, I said the actual investment.

THE WITNESS: Well, I presume that is closely related to the prudent investment?

MR. EVANS: Yes; I didn't want to use prudent investment, because I think it so often creates the impression that there is a demand say in ten years from now to say that an investment with today was perfectly reasonable and proper, in the light of developments, was not a prudent investment, and I think there is no such intention on the part of the advocates.

MR. TURNER: Bill No. 1632 uses the word prudent.

MR. EVANS: Yes, Mr. Turner, it does; but the question of the prudent of the investment is to be determined as I take it, by the facts as they existed at the time the investment was made, and that any years which may exist as to hind-sight being better than foresight, and penalties being inflicted on that account are entirely groundless; there is no such thought; and I just want to get Mr. Phillip's reaction to that general plan.

THE WITNESS: Well, my reaction is this. Frankly I haven't made up my mind. If I could answer it in a general way, that is, as far as I have gone in my study of the question of the proper valuation, the proper method of arriving at a value for a rate base, I would say generally this, that a rate base and consequently a rate of return should be sufficient to maintain the integrity of the property, to maintain the physical condition of the property, so that it can render a high class of service sufficient to give a high credit rating so that you can attract capital to the industry or to the business at reasonable rates, because your rates for capital are a part of your rate base. Now whether that be the prudent investment theory on the basis of the prudent investment theory,—the prudent investment theory is rather enigmatic there is not any fixed opinion as to just what a prudent investment theory is, to begin with, you cannot find two engineers that will agree on what the prudent investment theory is.

MR. EVANS: We have had a number of definitions introduced before this Committee, which very closely check with each other.

THE WITNESS: Well, they are not satisfied. I haven't been able to find unanimity of opinion to any great extent among engineers as to just what prudent investment theory is. Your statement probably comes closer to a simple explanation of what the prudent investment theory is; that is, actual investment. I am not ready to say that I agree with that, although I am not violently opposed to it. I really think it is a moot question. I think it is a question that must be considered very carefully as to whether it is the proper basis. Surely, the owner of property should have some right with respect to the intangible features of property, that is the enhancement of its value. He contributes something towards that enhancement.

BY MR. RHODES:

Q. Do you think the present method of valuation has permitted of any reasonable regulation.

A. You mean with the basis as laid down by the Supreme Court?

Q. The present method of valuation in Pennsylvania. Do you think that that has resulted in reasonable regulation?

A. I should say it has.

MR. RHODES: I wanted to get his theory in connection with Mr. Attwill of Massachusetts.

THE WITNESS: I am of an open mind on the question of this determination of a rate base. I am perfectly willing to consider all phases of the problem, and I haven't by any means in my own mind closed the door.

BY MR. RHODES:

Q. Well, there is a great difference of opinion. For example, the Chairman of the Commission of Massachusetts, Mr. Attwill, stated the other day that in his opinion the present method of valuation as laid down by the United States Supreme Court made regulation absolutely impossible. Do you agree with that?

A. No.

BY MR. HAGMAIER:

Q. The same statement has been made by other people.

A. I cannot see why.

BY MR. TURNER:

Q. That is the statement that has been made by almost all of the experts,—that is, will say experts to define them, engineers and economists that have been here, that you cannot regulate effectively under the rules as laid down in the Supreme Court decisions, which gives the greatest weight in these cases to reproduction cost new.

A. Well, is that the only reason that they express? That was the reason, just because they give consideration to reproduction new?

MR. TURNER: No.

THE WITNESS: What were the reasons?

MR. TURNER: Well, reproduction cost new had become the dominant factor, and under reproduction cost new you could not have effective regulation.

MR. CRAWFORD: It is all going one way.

THE WITNESS: I don't understand that any rates have been fixed by the United States Supreme Court on purely the reproduction cost new less depreciation. Their ruling, as I understand it—and I am not a lawyer, get that—is on the basis that they shall take into consideration all of these various theories, historical cost, actual investment, reproduction new less depreciation, and all of these factors to be taken into consideration by the Commission in the determination of a rate case.

MR. TURNER: Well, the claim has been made that while that is true, the Supreme Court has laid down that rule, that reproduction new has become the dominant factor, and that it has, within the last few years reached the point where reproduction new is practically the controlling factor in the determination of valuation. I am saying that is the testimony here. We have nothing else to go by.

THE WITNESS: Well, I would not be prepared to say that I would agree to the statement that that is the dominant factor, I think that is a question of law, a question of opinion, and a question of the analysis of the basis upon which these valuations have been made.

BY MR. EVANS:

Q. Well, take your own company, Mr. Phillips, the Duquesne Light Company, and assuming roughly, as I think is the fact, that some ninety per cent of your company has been constructed since January 1, 1919, in a period of high prices, after the War, I take it that it was necessary for your company, in order to progress, to make that large investment at that period of high prices?

A. No; there are other factors. That may not be so terribly important. One is that we are attempting to improve the quality and continuity of service, in order to increase our sales.

Q. Yes, but what I mean is that that investment was made in the exercise of sound business judgment, as being for the best interest of your consumers, as well as your company?

A. Yes.

Q. Now, it does not seem clear to me that stockholders who have put their money into your property on that high plateau of prices, should ten years from now, when we may be on a very much lower average of prices, be deprived of a fair return on the money they put in, merely because the price level has changed. Now, do you agree with that theory?

A. I think that is an element in the problem. On the other hand, I would go this far, as to say that if the conditions were reversed, that is if it was put in during a period of low prices and then suddenly prices in the next increment of ten years would go way up, the rate payer should not stand all that burden either. I think there is a reasonable adjustment somewhere in that in order to accomplish these rates.

BY MR. RHODES:

Q. I don't think we have ever had an example in Pennsylvania, though, where it has been true, where there has been a reduction below the amount of investment, or in fact where there has been any reduction after it has been made; it has stayed at that peak level.

A. Yes, but there is no assurance that you won't have that situation.

Q. Possibly not, but we have never seen any indication that we were going to have any change from frozen peak levels that we already have. Of course, there may be some of the companies like yours, that will take the initiative and start in to reduce, now that the price levels are down.

A. Well, we have found that is true, in our Duquesne Light Company, that an improvement in the service in the quality of the service first, and, or in combination with it, or strictly a reduction in rate, expands our business.

Q. I think that is true.

A. Therefore we ought to be eager to do those things which will reduce the rates, and, strange as it may seem, we are.

Q. Down to the greatest minimum?

A. Yes. Strange as it may seem, nothing would suite us better right at this present time, if it were in the wood, to reduce the rates, because we will stimulate business, and that is what somebody has got to do, stimulate business. We would do it in a minute, if we thought we dared, and protect all of the various interests who look to us for protection. There is no tendency, I think, in the modern executive's mind, it is a short-sighted policy, in my opinion, to arbitrarily hold up rates, which good business judgment dictates the reverse, a man is foolish to do that, in my humble opinion.

BY MR. TURNER:

Q. Then, Mr. Phillips, it comes back to this, does it not? As I recall it, you were paying 17 to 18 per cent dividends on your common stock. Now, is that an excessive return upon that common stock?

A. Well, if it were actually a 17 or 18 per cent on it, that is plenty, but it is not. Here is the situation. If you study the thing very carefully, you will find that out of the surplus fund the company has been, we have been plowing those surplus funds back into the property. We don't pay out all of the earnings to the common stock in dividends. That is not good business. We set aside surplus, and we reinvest that money in the company itself. Consequently the value of that stock, the actual value of it, keeps increasing and increasing each year that we do that. Take any business institution. It flashes in my mind, say, the United States Steel Corporation. Its stock today, I presume, you will see from the picture there, it will probably be around 125, the quoted value. Its par value was 100. There is probably \$400 of value behind that stock. See what I mean? Now then, if it is \$400, and you pay 16 per cent, you are actually paying 4 per cent, see what I mean?

BY MR. RHODES:

Q. But the rate payer is the one that is creating those reserves that increase the valuation of the common stockholders' interests?

A. Yes; but how do we know but that within a very few years, as has happened in the steel business, the methods of production will completely scrap—or not completely, but it will scrap all of their investment, largely? That is what happened to them. Take the advent of the continuous mill, in the tin plate business. Maybe Mr. Hagmaier knows something about it. What will it mean to the steel companies? The scrapping of a lot of equipment.

Q. You mean in the creation of reserves, and the amortization, are the companies operating on that theory, that eventually they are going to be superseded by some other business?

A. You were just complaining a little while ago because the street railways did not do that very thing.

Q. But are the companies today operating upon that theory in the creation of reserves?

A. Well, we are creating reserves to take care of reasonable setbacks in the business.

Q. Hasn't it usually been true though that as these reserves have increased, the valuation of your company becomes greater and that is again capitalized?

A. Well, it has not been in our case.

Q. Well, is that true of the utilities generally though?

A. I don't think so. It may be in some.

Q. Isn't that just one of the things that we complain about, the fact that these reserves are created by the ratepayer and then ultimately that is recapitalized and goes out in the form of new securities to the public?

A. Well, we haven't been doing that.

Q. What is that?

A. We haven't been doing that. He got away from me. I didn't quite get his line of thought.

Q. Well, it is true, isn't it, that on the basis of a valuation of your company made in 1927, your company has been earning nine to ten per cent?

A. On the value of the property?

Q. On the value as determined by your own engineers in 1927?

A. No. You are not taking into consideration other investments.

Q. Other investments?

A. You are just merely taking the fixed capital as the value of the property.

Q. You mean investments of stocks in other companies?

A. All investments.

Q. That has nothing to do with the operation of your company; that is non-operating income?

A. Well, that is a part of the rate, isn't it?

Q. You mean to say you are taking your excess earnings and investing them in other stocks, in other companies, and then expecting that to be included in the consideration of your rates?

A. No, that is not what I said, Mr. Evans. We have other investments. For example, the Duquesne Light Company has about \$7,000,000 invested in the Allegheny County Steam-Heating Company.

Q. Well, that has nothing to do with the rates of the Duquesne Light Company?

A. It certainly has, hasn't it?

Q. I think Mr. Robinson will bear me out, that that very question was brought up, that the rates of the Allegheny County Steam-Heating Company and of the Duquesne Light Company have got to be treated entirely separately, and the Supreme Court of Pennsylvania has so decided, it just happens in your own case?

A. Well, if we take the earnings from that \$7,000,000 investment and include them as a part of the earnings of the Duquesne Light Company—

Q. But they are not included. These are the operating revenues that we are dealing with we are not dealing with your non-operating incomes. Your operating revenues of the Duquesne Light Company show a return of 9 and 10 percent on the value made yourself, which you yourselves put on your own property in 1927?

A. Well, even so, is that the value of the property in 1927?

Q. It is the value you put on it, and you testified that there has been a decline in value since that time, a decline in prices, I should say; it seems to me perfectly clear that your company, if it has been plowing back, as you say, earnings, has not done that at the expense of the stockholders, but it has been doing it as the expense of the ratepayer, as Mr. Rhodes suggests?

A. Suppose we take seven percent, on one hundred millions of dollars, which is \$7,000,000, and we pay out the interest on, say fifty per cent—four and one half per cent, which is about \$225,000—\$2,225,000 for bonds; and we pay out on thirty millions more, which is three million and a half, or three million seven hundred and fifty thousand, then there is twenty million of the common stock left and on that—who does that belong to on the basis of seven percent, as you say, the fixed value of the property?

Q. That belongs to the stockholders.

A. All right.

Q. But anything over seven percent doesn't belong to that.

A. Wait a minute, all right. Now then, suppose the common stock holder doesn't take all of that difference in dividends, but he invests it in the property, who does it belong to?

Q. It belong to him.

A. Of course, that is what we are talking about.

Q. Do you mean to say that in this case the stockholders have not been receiving the full benefit of the seven percent, as they have been receiving?

A. No; I am not saying that.

Q. All of the earnings are plowed back into the company, and are the contributions of the rate payers?

A. But you are asking me if seven percent, is a fair return.

Q. You made that assumption yourself.

A. No; I just made that statement as an example. The Supreme Court of the United States has said 8.91 was not an unreasonable return.

Q. It said that in the Baltimore Street Railway Company, but it never said that in the electric companies.

A. It said it wasn't an unreasonable return.

Q. It seems to me that we are going around in circles.

A. Sure, you do.

Q. You started out with a seven percent return and when you found that that it doesn't work the way—

A. I might have used ten percent, as an example. Let us take ten per cent, if you want to follow that through. It makes it worse than seven per cent, doesn't it?

Q. You assume, then, that a company such as the Duquesne Light Company, is entitled to ten per cent. on the fair value of its property?

A. No; I am not assuming anything of the sort.

BY MR. RHODES:

Q. What are you assuming then?

A. I am trying to work out an example here to meet the statement of Mr. Evans to the effect that the earnings on the common stock not paid out in dividends belongs to the rate payers.

BY MR. EVANS:

Q. Belongs to the rate payers? If the common stockholders have been receiving a fair return on their investment?

A. We have to go all through this again. You see, the common stock holders—and now, there are probably others interested in the property besides the common stock holders and yet the common stock holders take all the risk.

Q. In the example you gave us, you took a plant with a value of \$100,000,000, entitled to a seven per cent return, which is seven million and you took the amount of bonds outstanding—

A. Yes; fifty per cent, thirty in preferred and twenty in common.

Q. \$15,000,000 in bonds at four and one half gives you?

A. Two and a quarter million.

Q. And thirty million of five per cent preferred, and gave you a million and a half and added together gives you \$3,750,000?

A. Yes.

Q. And you have left, \$3,250,000 for twenty million of common stock, which is roughly eighteen and one half percent; is it not?

A. Well, it is two into thirty-two, sixteen and one half per cent.

Q. No; thirty-seven percent.

A. Thirty-seven per cent. All right,—eighteen and one-half percent.

Q. And is 18.75%?

A. Yes sir.

Q. And you do not consider that that is a fair return to the stock holders?

A. Because a fair return is based on the value of the property; not on the common stockholdings by any means. The trouble is that you jump from one assumption to another. Let us stay put in one place.

Q. I am taking your own example.

A. No; you are not.

Q. You said, we will take a company which has a value of \$100,000,000, and is entitled to a seven per cent return, and then you took all these bonds, preferred stock, and common stock and that is the result you reached; is it not?

A. Now, let us go on with the rest of it, who does that belong to?

Q. I say that belongs to the common stock holders.

A. Then, we are agreed on that, that it belongs to the common stock holders.

Q. And it is earning eleven per cent, who does the rest belong to?

A. That belongs to the common stock holders.

Q. You say that belongs to the common stock holders?

A. Who takes the risk?

MR. TURNER: Does it not come back to the question as to the fair value of the property, and isn't that seven per cent on the capital investment of the stockholders?

MR. EVANS: Yes, but here you have a case where the company itself, in 1927, valued this property and said it had a value of \$100,000,000 in 1927.

MR. TURNER: Yes.

MR. EVANS: That, obviously, is the maximum of the present fair value of that property, and yet it is the result that is achieved by applying 7%.

MR. TURNER: No it is not, because the common stockholder is limited to 7% of the amount of his investment. His

return is based upon 7% of the fair value of the property, and you have got two different equations.

MR. EVANS: But, Mr. Turner, we have in evidence in this case the fact that this company has been earning 9 and 10 percent on its own valuation in 1927.

MR. TURNER: That is a different question. That is the question and the example he gave you. This is a different question. If you can show that they earned 9 or 10 percent on the fair value of the property, then it is too high.

MR. EVANS: It is its own valuation in this case. Mr. Phillips takes the position—

MR. TURNER: It goes back to what you and Mr. Rhodes were talking about. You say it belongs to the ratepayer. If that return is more than 7% on the fair value of the property, then it is too much.

MR. EVANS: What I am trying to point out is that the Duquesne Light Company put that valuation on its own property in 1927, and that contribution was made by the ratepayers, it should belong to the ratepayers.

MR. TURNER: If \$100,000,000 is the fair value of the property, I agree with you.

BY FATHER COX:

Q. That question of the fair value of the property is based on academic reasons; it is not a matter of fact?

A. It has been determined by the Supreme Court of the United States.

Q. But these other values are academic values?

A. No; I don't think so, Doctor.

Q. Your historical value less depreciation, that is not a matter of fact; that has only been according to your so-called economic law; it does not exist anywhere but in the minds of those who want to get a certain return on a certain amount of money; that is the way it seems to me.

A. I am sorry. I miss the point entirely. That has nothing to do with the matter.

MR. EVANS: Mr. Chairman, Mr. Griffiths, an attorney for the Philadelphia Company, has asked me to state on the record my view as to whether 7% should be a perfectly inflexible rate of return that is to be allowed under all conditions. I want to say, very emphatically, that I don't think so. I think the rate of return should be varied in accordance with the conditions existing at the time.

(Discussion off the record)

BY MR. EVANS:

Q. Let me ask you this question, Mr. Phillips; What is the maximum domestic rate of the Duquesne Light Company?

A. Not a cent.

Q. Do you mean there is a penalty added to that?

A. No, there is a reduction of one cent per kilowatt hour for prompt payment in 10 days.

Q. In other words, it is a rate of 9 cents per kilowatt for prompt payment in ten days?

A. Prompt payment.

Q. Can you explain to this Committee any reason why Washington should have a maximum rate of 4.2 cents to the domestic consumers, and cities like Cleveland, Worcester, and so on, have domestic rates of 5 cents, and Pittsburgh, a domestic rate of 9 cents and a one cent discount?

A. Because the maximum rate has very little to do with the actual rate paid.

Q. What is the average rate for domestic consumers on the Duquesne System?

A. It is 4.8 mills.

Q. And the maximum in Washington is 4.2?

A. Is it? I don't know. There may be a great many reasons for that.

Q. What reasons have you to say for that?

A. Well, the cost of production, investment charges—

Q. Wait a minute. Why should the cost of production be any less in Washington than in Pittsburgh?

A. I don't know their system. I don't know what the costs of production are.

Q. But your costs are higher than they are in Washington?

A. Don't they get hydro-electric?

Q. What is the cost of producing in Pittsburgh?

A. You mean the flat cost?

Q. Per kilowatt hour, including investment charges.

A. About 2.89 mills.

Q. What are they including in investment charges?  
 A. I can't tell you.  
 Q. Oh, you must know that?  
 A. No; I couldn't tell you. I don't know. I haven't broken it down in my mind. I will get it for you if you want it, but I can't carry all these figures in my mind. It is a little too much.  
 Q. I think it would be very enlightening to this Committee to have your actual overall generation costs?  
 A. Including the investment charges?  
 Q. Yes, including the investment charges?  
 A. That is at the bus bar of the station?  
 Q. At the bus bar?  
 A. I will get it for you.

MR. TURNER: Has it not been very well demonstrated here that the production cost per kilowatt hour is not very uniform? Where does the difference come in?

MR. EVANS: I am only doing this because Mr. Phillips has suggested that one possible reason for the Washington low rates, is a less cost of generation.

BY MR. EVANS:

Q. Now, you say—  
 A. I don't know.  
 Q. Supposing, it is hydro, what is the saving of hydro over the modern steam generating plant?  
 A. In some places it is higher, in some places it is lower.  
 Q. There is practically no saving, is there?  
 A. I wouldn't undertake to say that, Mr. Evans. Some of the hydro electric plants were designed by the Almighty.  
 Q. Take distribution costs, isn't it true that in Washington the distribution lines have to be nearly all under ground?

A. A good part of it is.  
 Q. Therefore, do you see any reason why their distribution cost should be lower?

A. We have a tremendous amount of our distribution system under ground; a good deal more than Washington probably.

Q. I larger percentage than Washington?  
 A. I don't know, but we have a tremendous amount. I haven't made any comparisons between Washington rates and our own.

And now, let me ask you, what is the average amount of money received per kilowatt hour,—that is the Potomac Washington Edison Electric—what is their average per kilowatt hour sold?

Q. I can't answer that.  
 A. Isn't that the answer, answer all?  
 Q. But we are dealing with domestic rates.  
 A. We are dealing with industrial users and commercial users, too.

Q. What we are trying to get at is whether the domestic consumer is paying more than his fair share of the burden.

A. When we reduced the rates at the expense of industrial and commercial users,—that is what we have done.

Q. Is it not true that each class of service should bear its own cost, plus a fair return on the investment in the service?  
 A. Inter-related; no sir.

Q. I don't know what you mean by "Inter-related."  
 A. For example the cost of production of the electrical energy probably depends as much on the load factor as any other single object.

Q. We have taken that into account.  
 A. If you decrease the output, you increase the cost of production for domestic service don't you? The wise operator will plan his load between industrial, commercial and domestic, in order to improve his load factor, in order to reduce costs. Now, in you arbitrarily reduced the cost of the domestic service at the expense of the industrial user, you are going to lower your load factor and increase costs.

Q. Hasn't it been your experience that where the rate has been reduced the actual rate of that return has been increased?

A. My dear boy, that is not an average rate.  
 Q. You said that an average rate—  
 A. 4.8 cents. And now, then, you brought up a situation. Can you show me any company in the United States with as high a use factor as the Duquesne Light Company. Can you show me one in the United States that has increased its

use factor for the domestic consumer, such as the Duquesne Light Company, in the last five years? You bet you can't.

Q. I am dealing with the matter of rates.  
 A. You just made the assumption that rates were the controlling factor in the use of energy.

Q. Don't you know that if your rates decrease that you are going to increase your domestic consumers?

A. Sure you can, but there is a limit to it.

Q. In your opinion, have your domestic rates been reduced to a point where the domestic consumers are not bearing more than their fair share of the cost of the service?

A. I can't answer that question.  
 Q. Why can't you answer that question. You can answer it as an opinion.

A. You mean domestic consumers are bearing their fair share of the cost; is that your question?

(Question read.)  
 THE WITNESS: I thought that is what you wanted to ask me. This is what you wanted me—

BY MR. EVANS:

Q. I want to ask you just exactly what that questions says.  
 A. Nobody can answer it.  
 Q. All right.  
 A. If you meant to ask me—

MR. EVANS: You just read the question. He will understand it after while.

(Question read.)  
 THE WITNESS: Domestic consumers are not paying their full share of the cost of the domestic service.

Q. That is your opinion?

BY MR. WALKER:

Q. Is your company a member of the National Electric Light Association?

A. Yes.

Q. What is your annual contribution to the N. E. L. A.?

A. I don't know the exact figures. It is around \$20,000.

Q. Do you make any other contributions to the N. E. L. A.?

A. No.

Q. Do you make any contributions to the Pennsylvania Electric Association?

A. Only on personal assessments for special work.

Q. What is your average annual assessments or donation to the Pennsylvania Electric Association?

A. I don't know, but my judgment is that it is a relatively small amount; around \$1,000.

Q. Per annum.

A. It would run that high. I doubt if it runs that high.

Q. Do you make any other contributions to any committees or sub-committees?

A. No.

Q. Since your connection with the Duquesne Company have you made contributions to any such committees?

A. Not in my recollection. It is usually paid out of the budget of the electric association.

Q. At one time you were one of the officers of Pennsylvania Electric Association, were you not?

A. I was president, yes.

Q. What year were you president?

A. Year of '28-'29; Fall of 1928 to the Fall of 1929.

Q. Were you connected with the Pennsylvania Electric Association in 1926?

A. No.

Q. Were you connected with the Duquesne Light Company in 1926?

A. In September of 1926.

BY MR. WALKER:

Q. These contributions that you made to the N. E. L. A. and to the P. E. Association, to what account are they charged?

A. General expenses.

Q. So that you would not know anything about the contributions made by Duquesne Lighting Company in 1921?

A. No.

Q. You were not connected with the company at that time?

A. No.

Q. Would you know anything about the contributions made by the company prior to December, 1926?

A. No.

Q. Then any contributions made by the Duquesne Lighting Company to James Francis Burke as a fee for his services in coming here and testifying against the Giant Power Plan, you would not know anything about?

A. No, I never heard of paying a fee for that?

Q. And the contributions the Duquesne Lighting Company made to the P. E. Association prior to 1926, you would not be familiar with those, would you?

A. No, I have never heard of them doing any such thing as that.

Q. Would you?

A. I don't know, but I never heard of that.

Q. If they were still making contributions of that nature, you would know of that fact, would you not?

A. I would.

Q. Can you state whether or not they are still making contributions?

A. Not to my knowledge and understanding.

Q. Aside from the contributions to the N. E. L. A.?

A. That is not a contribution, it is dues paid on a fixed basis.

Q. What is the basis?

A. It is based on gross revenues and changes from year to year.

Q. And this runs around \$20,000 a year?

A. Around \$20,000.

Q. And that is charged to general expenses?

A. Yes sir.

Q. Do you know anything about the campaign for revising textbooks that was conducted by the P. E. Association?

A. Only by hearsay.

Q. When you were president that activity had been abandoned?

A. There was no activity of that kind when I was president or connected with it.

Q. Was the public policy committee still in existence?

A. No.

Q. That had been abandoned?

A. Yes sir, and I helped to abandon it.

Q. Why was it abandoned?

A. It was not serving any useful purpose.

Q. And spending a lot of money?

A. I don't know anything about its expenses.

Q. What was the reason for abandoning it?

A. It seemed to me the elected officers of the association were capable of carrying on the business themselves without someone else butting in.

Q. Can you tell me about when this public policy committee was abandoned?

A. I think it was in 1928.

Q. Just prior to the time you were president?

A. Just before or just after I took office.

Q. And the duties that were formerly carried on by the public policy committee, were they carried on afterwards by the officers of the association?

A. I don't quite get what you mean.

Q. The committee performed certain functions?

A. I think the matter of their functioning was to advise the officers on certain questions that were referred to them by the officers of the association.

Q. And who does that now?

A. The officers of the association.

Q. Are you familiar with Mr. Johnson's testimony before the Federal Trade Commission?

A. No. You mean Mr. Walter Johnson?

Q. Yes.

A. I read part of his testimony in a Philadelphia paper.

Q. He was chairman of that committee, was he not?

A. I don't know. I suppose so although I was not connected with the association at that time.

Q. He testified that the duty of the public policy committee was to look after legislation that was inimical to members of the association, here in Harrisburg. Are those duties being conducted by the officers of the Penna. Electric Association?

A. Looking after legislative matters?

Q. Yes.

A. I suppose they are.

Q. Were they when you were president?

A. Yes sir.

Q. And the officers looked after legislative matters?

A. Looked after only bills that were being introduced and those which in their judgment they thought were inimical to the utilities, and they were then communicated with the various members of the association.

Q. What was the policy of the Duquesne Light Company when they were notified by the association there were certain measures before the Legislature that were inimical to their interests?

A. We would have a conference and determine among ourselves whether the legislation would be inimical, and if we thought it of sufficient importance we would ask for a hearing before the committee to whom it had been referred, the same as we are doing now.

Q. That was the only activity of the Duquesne Lighting Company regarding legislation?

A. Yes sir.

Q. There was no effort on the part of the electric association to bring any influence to bear on legislation as testified to by Mr. Johnson?

A. There might have been, but that was not a function of any of the officers to influence legislation in that way, and we didn't participate in any of that practice. I know that I never asked a legislator to vote for anything.

Q. And you never attempted directly or indirectly to influence legislation or bills affecting your company?

A. Not me, sir.

Q. Do you approve of such practices?

A. I think if there is legislation before the Legislature or any legislative body that is inimical to the proper interests of the company, that we have a right to use all lawful and ethical means to oppose that legislation.

Q. Will you state whether or not hearings conducted by the Federal Trade Commission had anything to do with the abandoning of the public policy committee?

A. I don't think so. I didn't think it served any useful purpose. Here was a set of elective officers elected by the members, and here was another set and I can see no reason for having two sets.

BY FATHER COX:

Q. A great question in Pittsburgh is about your supply of electricity to the railways company. I think possibly if you make a statement here and tell us something about that, it might have a good effect back home. They accuse you of various things, but I don't need to remind you about that?

MR. TURNER: I looked up the testimony to find out, I thought this was the company that Father Cox wanted us to put in jail.

FATHER COX: I think you are mistaken about that. There was a question about this company having a valuation of a hundred and forty-nine million dollars and a report that they were paying taxes only on forty-nine million. That raised a question; we wanted to know if that was true or not; nobody wants to put anyone in jail; if they got there I would be the first to get them out. We wanted to know the truth and we are doing just now what you said you wanted done all along, to have these men come here and explain their case. We wanted the same as you do, and maybe more than you do.

MR. TURNER: That is a matter of opinion.

FATHER COX: I think my opinion is worth as much as yours.

MR. TURNER: I think mine is worth more than yours.

THE WITNESS: I would welcome an opportunity to say something about the power contract. It so happened that I was engineer for the Pittsburgh Railways Company in 1912 and 1913 when this power contract was under negotiation between the Duquesne Lighting Company and the Pittsburgh Street Railways Company. The power contract is rather a voluminous affair but I think I can explain briefly the proposition upon which it is built.

First, it is a service-at-cost contract. The purpose is to deliver to the Pittsburgh Railways Company energy at cost without profit. This is the basis roughly. There were certain considerations, in the first place the Duquesne Lighting Company purchased from the Pittsburgh Railways Company all of its generating stations at a very liberal price. Then it produces the power and sells power to the Pittsburgh Railways Company on the flat cost of power at the bus bar, plus 12½ per cent for services, that is the cost of engineering, for jurisdiction over the plant, of engineers and supervisors and janitors and clerks, that is what the 12½ per cent is for,

The salaries or part of the salaries of the general officers all the way down the line. And interest is charged for investment purposes on the investment in the power stations of ten dollars per kilowatt on demand. That is, you have to set aside for the Pittsburgh Railway service so much of the equipment in the power stations, to meet their demand which may come at any time. To carry the investment charges on that equipment amounts to something. It was estimated at that time that it was ten dollars per kilowatt of demand and at that time your investment in power stations would run \$80 per kilowatt, or about 12½% for carrying charges, including interest, cost of money, depreciation, insurance and taxes. Now then, we have a flat cost of the bus bar at the generating station. Now we have to transmit it through various steps to the railway company's substations. Using the lines jointly to do that, that is, for the purposes of the Duquesne Lighting Company, the Pittsburgh Railways and all the rest of the customers, which lowers the unit cost from the standpoint of investment and of operation charges and of maintenance charges. Here is a transmission line that carries ten thousand kilowatts of electricity. The Duquesne Lighting Company and its substations take off six thousand, and the Pittsburgh Railway at their substation takes off 4,000 kilowatts, and the Pittsburgh Railways pays 40 per cent in transmission line renewal and cost of operation and maintenance of these lines. Now that is the total cost. The actual cost to the Pittsburgh Railways Company, by dividing the number of kilowatt hours, the sum and the amount of money paid for this kilowatt hours, gives you the result of six and one-quarter mills per kilowatt hour. I think that is one of the lowest rates for any street railway company anywhere. As a matter of fact in my opinion now it is less than cost because from natural things that have happened the cost at power stations per kilowatt capacity is more than double, and instead of it being ten dollars per kilowatt on demand, it costs around eighteen dollars per kilowatt on demand.

As to the charge of 12½ per cent for supervision, it is nearer 22, because the cost of all these things is increased, labor and material, and everything that goes into the production of power has increased. Wages have increased, salaries have increased, but there has been no increase in this percentage. Furthermore, due to the fact of improved machinery and increased cost which has been introduced into the system, such as the building at Colfax and at the Reed plant which was done for the purpose of reducing the cost at the bus bar. So the overhead charge has been increased at no increase to the railways company, and the railways company has enjoyed the advantages of these improvements and of this investment and have not shared any in the investment. Do I make myself clear?

FATHER COX: I am glad to understand it. It will give an understanding back home.

THE WITNESS: We try to have no secrets, but this is extremely involved technically and it is difficult to get the public to understand it.

BY MR. EVANS:

Q. What is the cost per kilowatt hour to the Pittsburgh Railways?

A. About six and a quarter mills at their bus bar and they have to distribute it. I think that it is within a very narrow percentage of that amount.

MR. HAGMAIER: The unfortunate part you fellows paid too much for the property you took over.

THE WITNESS: What we are trying to do there is to hold this railways proposition together and to be honest about it, we try to help the railways company we give them the breaks anyway in order to hold them together, because if that system disintegrates and is liquidated, Pittsburgh is going to suffer more than anybody else.

BY FATHER COX:

Q. On this matter of valuation and tax payment, what is the explanation of that?

A. Mr. Mitchell knows the details better than I do.

BY MR. MOORE:

Q. Did the Duquesne Lighting Company ever take an active part in campaigns in the elimination of candidates rather than the supporting of candidates?

A. We have enough trouble without getting into politics.

Q. There was a rumor you took a part in the Washington-Greene district in defeating a senator?

A. I have no doubt but what some of our men take a part in politics. As a matter of fact one of our officers was quite prominent in Mr. Pinchot's campaign and he is still an officer. That makes no difference to us. We take the position that the question of our employee's politics and religion is for them to settle as long as it doesn't interfere with their business.

BY MR. WALKER:

Q. Mr. Phillips, is your bus company making any money?

A. We had a deficit last year of \$100,000 and I think we had a surplus of about \$30,000 in 1929 and the chances are that we will have a deficit of in the neighborhood of \$200,000 this year.

RECESS

MR. MOORE: This hearing will now stand adjourned until 2:00 o'clock this afternoon, Eastern Standard Time.

AFTER RECESS

Harrisburg, Pa.  
Thursday, April 30, 1931  
2 O'Clock, P. M.

Present:

Parties before noted.

C. S. MITCHELL sworn

BY MR. EVANS:

Q. What position do you hold with the Duquesne Light Company?

A. Controller.

Q. Do you hold the same position with the Equitable Gas Company?

A. Yes.

Q. And what position do you hold with Philadelphia Company?

A. Vice-President of the Philadelphia Company.

Q. Now, according to the report of the Duquesne Light Company to the Public Service Commission for the year 1927, there was a write up of the capital assets of the company in the amounting \$24,315,326.95 (indicating)

A. Yes sir.

Q. On what basis was that write up made?

A. I am not familiar with the basis. There were only certain portions of the property of the Duquesne Light Company, which were reappraised at that time.

Q. Was it really a reappraisal at all, or was it adding of a lot of intangibles?

A. It was a reappraisal.

Q. According to your 1929 report to the Public Service Commission, the balance of this write up at the close of the year 1929, was \$22,428,146.21; was it not? (indicating)

A. Yes sir.

Q. I show you your capital stock report to the Commonwealth of Pennsylvania for the year 1929, which, under the general balance sheet as of December 31, 1929, is this item: intangibles arising from restatement of the book value of the property, \$22,428,146.21. Is not that the same item?

A. The same item; yes sir.

Q. Then it was an intangible item of \$22,000,000 that was added on to the book value of your property?

A. No sir.

Q. Explain to the Committee what this means in your capital stock report then.

A. Well, the same item.

Q. Then, it was not true when you put into your capital stock report, which you swore to, that this item of \$22,428,146.21 was intangibles arising from the restatement of the book value of the property?

That was a false statement, was it?

A. I don't think it was.

Q. Well, if that is true, the twenty-two million is an intangible item is it not?

A. Well possibly it has been—the word "intangible" should not have been used there.

Q. You swore to this report, didn't you, Mr. Mitchell?

A. Yes, I guess I did.

Q. (Showing witness the report.)

A. Yes.

Q. Have you any explanation to make why you should have sworn to the report and said that this was an intangible item and now say that it is not an intangible item?

A. No; I sign those things and swear to them.

Q. Who prepared this? Was it not prepared under your direction?

A. Yes.

Q. And now you state to the Committee that when you say in your capital stock report that that was an intangible item, it is false?

A. Incorrect.

Q. All right, we will call it "incorrect." What was the purpose of stating it was an intangible item in your capital stock report?

A. No particular purpose.

MR. TURNER: Mr. Evans, would that statement affect the return?

MR. EVANS: Yes.

MR. TURNER: As an intangible, it is a deductible item?

MR. EVANS: Mr. Turner, in capital stock report they deducted from the book value of their assets all intangibles, including this \$22,000,000 and arrived at a fair value of property for tax purposes.

MR. TURNER: That is what I wanted to know; whether that reduced the amount upon which they paid taxes.

MR. EVANS: Correct.

THE WITNESS: But the capital stock was not appraised on that basis.

BY MR. EVANS:

Q. I asked you what you swore to and not what the State did. We are dealing with your return. It isn't what the State did, but it is what the officers did with the capital stock. If you will look at your 1928 report to the Public Service Commission, on page 223, you show a reserve; that stands for renewals and replacements; does it not?

A. Yes.

Q. Arising from revaluation, \$9,782,734.89; did you not?

A. Yes.

Q. And you also show on line 27, surplus arising from a revaluation of property, \$9,600,948.86?

A. Yes sir.

Q. The sum of those two items is what?

A. \$18,000,000 in round figures; eighteen or nineteen million?

Q. It is \$19,391,696.75.

A. Yes.

Q. If you will take my figures, I think this is correct (indicating).

A. All right.

Q. If you take the total amount of the write-up of your fixed capital, line 4 on page 202, of \$24,315,326.95, and deduct these credits consisting of the reserves and the surplus, totaling \$19,391,699.75, you have a difference of \$4,923,630.20?

A. Yes.

Q. Will you explain where that difference has been accounted for in your 1928 report to the Commission?

A. There were charges made against this account; surplus arising from revaluation of property, due to the expense of certain refinancing.

Q. That was taken out in the following year too, wasn't it? That figure that I am giving you is the balance at the beginning of the year of 1928?

A. What is your question?

Q. I asked you how in this report—

A. I have explained before; that is I have accounted for it.

Q. It should be accounted for then in your 1928 should it? What was your balance at the beginning of the year 1928?

A. Now, as to when it was actually written off, I don't know. I can't tell without referring to the books, but it was charged against surplus arising from revaluation of the property.

Q. What items? Suppose you give us the items that went to make that up?

A. Items charged to surplus arising from revaluation:

Premium on first mortgage and collateral Trust Gold Bonds, \$2,085,975;

Premium on United Electric Light Company First Mortgage Bonds, \$23,652.50.

Amortized debt, discount and expenses First Mortgage and Collateral Gold Bonds, series "A," retired, \$2,206,485.89;

Amortized debt, discount expenses on first Mortgage and Collateral Trust Gold Bonds, series "B," \$558,519.69;

Premium on United Electric Light Company First Mortgage Bonds, retired, \$38,997.42;

Total: \$4,913,630.20.

Q. And that accounts for all of it?

A. That accounts for all of it to a cent.

Q. Can you show me where in your report to the Commission for the years 1927 or 1928, that information which you have just given us is stated?

A. I don't know whether their reports show it or not. If they do, it is in here (indicating).

(Discussion off the record).

THE WITNESS: Here is your 1927, the close of 1927, \$9-, 608,000.

BY MR. EVANS:

Q. And here is your beginning of 1928?

A. Yes, \$9,608,000. And here is your close of 1928, after it has been applied.

Q. But I am talking about the figures at the beginning of 1928, which are the ones we are dealing with.

A. \$9,608,000, the same as here.

Q. Yes, and you add that to the reserve for renewals and replacements and deduct those two items from your write-up at the beginning of the year, \$24,315,326.95 and you find you have this discrepancy of \$4,923,000.

A. I don't understand it that way at all.

(Discussion off the record).

THE WITNESS: Well, in 1927, evidently the reserve for which was set up for renewals and replacements is included in this other reserve. I will look and see, though.

(Discussion off the record).

BY MR. EVANS:

Q. In your 1927 report to the Public Service Commission, is there any explanation of the charges of premiums which you have just read into the record being made against this surplus?

A. I don't find any.

Q. In 1928 you made further charges against the surplus due to reappraisals, did you not?

A. Yes.

Q. And what were these figures that you charged in 1928?

A. Premium on \$30,000,000 First Mortgaged Stock 7% Cumulative Series A, retired March 15, 1928, at 115% of par, \$4,500,000. Dividend accrued from January 4, to March 15, 1928, on the same stock \$420,000. Commission of 6½% paid for services in selling \$20,000,000 of First Preferred 5% Cumulative Stock issued January 4, 1928, \$1,300,000. Premium collected on \$15,000,000 of First Preferred Stock 7% Cumulative Series A, sold October 17, 1924, which was redeemed March 15, 1928, a credit item of \$150,000.

Q. Leaving a balance of—

A. Leaving a balance of \$3,538,943.86, in the account.

Q. Now, Mr. Mitchell, do you consider that it is proper to charge to surplus by appraisal all the premiums and dividends on preferred stock and commissions on preferred stock?

A. Yes.

Q. So, against the surplus here of something like \$15,000,000, due to the write-up of \$24,000,000 you have charged something like \$12,000,000 for premiums on securities retired and dividends and so forth, the items you have read, for the two years?

A. Yes.

MR. RHODES: You mean, Mr. Evans, that that \$15,000,000 surplus carried on the books as such merely represents commissions for the return of bonds and so forth?

MR. EVANS: No; I think, as I understand it, Mr. Rhodes, they first get a surplus by their reappraisal of the property in 1927, and then in 1927 and 1928 they charge against that surplus the premiums on the securities which they were retiring and the dividends on those securities.

THE WITNESS: Set it up as a capital surplus and then charge the premiums paid on the retirement of securities

against the capital surplus and the commission which was paid.

MR. RHODES: It is a premium above par?

MR. EVANS: Yes.

MR. RHODES: I thought there were some commissions in there for banking charges?

MR. EVANS: Their rate is on their issue of common stock, do you remember?

THE WITNESS: Preferred stock.

MR. EVANS: Excuse me. The issue of their preferred stock. They have charged a commission of 6½% amounting to \$1,300,000, to this account, which they call surplus by appraisalment.

BY MR. EVANS:

Q. Now, in your 1929 report, you consolidated the balance of this surplus by appraisalment amounting to \$3,538,948.86 with your general appropriated surplus did you not?

A. I don't know whether it was or not. There is no particular reason for consolidating it at all.

Q. Well, just answer the question, as to whether you did or not. You will find it, I think, on page 203 and 301.

A. Yes.

Q. So that at the end of 1929, after charging the dividends against this surplus, you have an unappropriated surplus of \$19,354,328.39?

A. Yes, on the books of the company it is separate.

Q. But in your report to the Public Service Commission your earned surplus and your surplus due to this reappraisalment are all mingled?

A. Yes, because there is no provision made in the blank for separation as between capital surplus and earned surplus.

Q. Now, at the end of 1929, the total reserve as shown to the Public Service Commission amounted to \$12,913,664.20 did they not?

A. Yes.

Q. And what items compose that?

A. Reserve for renewals and replacements arriving from revaluation, \$7,901,908.66; reserve for renewals and replacements, \$2,609,350.82; amortization of other capital reserves, \$2,404.80; other reserves, \$2,400,000, totaling \$12,913,664.20.

Q. Now, then, on your 1929 capital stock reports which you swore to, you have shown in your general balance sheet of December 31, 1929, a depreciation reserve of \$20,302,082.74, have you not?

A. Yes.

Q. In other words, when you came to make your capital stock return, you increased the reserves shown on your reports to the Public Service Commission from \$12,913,664.20 to \$20,302,082.74.

A. Yes, and reduced the surplus a corresponding amount.

Q. Where does the reduction of the surplus appear in this capital stock report by that corresponding amount?

A. The surplus is \$3,503,330.79.

Q. So what you did then was to take \$7,388,418.54 from your surplus as shown in your Public Service Commission report and use this to reduce the value of your fixed assets for your capital stock purposes.

A. Yes.

BY MR. RHODES:

Q. Is that legal?

A. That is based upon the depreciation reserve which we took in our income tax return for Federal Income taxes, where we have been allowed a certain rate of depreciation by the department, the excess of what was taken on the books.

BY MR. EVANS:

Q. It however is true that in reporting to two agencies of the State government as of the same date, you, in the case of the report to the Public Service Commission, which affects your rates, show a reserve for depreciation of only twelve million and something, when you want to get your capital down for capital stock purposes, you show a reserve for depreciation of \$20,000,000.

A. They didn't assess our capital stock on this basis.

Q. You are required in your capital stock reports to show a balance sheet as shown by your books are you not?

A. I don't know whether the blank shows that or not, to show a balance sheet,—

Q. In other words, it is your idea that you can make up any balance sheet you please.

A. No, it is not.

Q. Well, now, Mr. Mitchell, what does it mean when you put at the head of this column "book value" is it not taken from your books.

A. Well, that may be true, but at the time we had our conference with the Department of Revenue, in the Auditor General's office, it was explained to them what we had done.

Q. I am not dealing with that; I am dealing with fact that you have made two foreign reports, one to one agency of the government, which differs from the other, and both are supposed to be taken from your books. You may say that the one filed with the Public Service Commission was taken from the books.

A. Yes.

Q. And the other was not taken from your books?

A. Just with that one adjustment.

Q. Well now, a five mill tax on \$7,388,000 amounts to pretty nearly \$37,000, does it not?

A. Yes.

BY MR. RHODES:

Q. Is that the amount you saved by this method of accounting?

A. No, we appraised the stock at \$77,000,000.

Q. How much money did you save by this method of accounting?

A. Didn't save a nickel.

Q. Didn't you answer no sir, because we—

BY MR. EVANS:

Q. Well now, let us get this straight, Mr. Mitchell, you filed your capital stock reports with the Department of Revenue, and you are required to give free basis of valuation of your stock, are you not?

A. Yes.

Q. And one of those basis is the book value of the stock?

A. I believe so, yes.

Q. And by this increase of \$7,000,000 in your reserve in depreciation, you decreased the value of your stock proportionately on the basis of book value?

A. The report—

Q. Just answer that question, and make any explanation you want.

A. Well, you said I was required to report—

Q. Just answer the question.

(Question repeated by stenographer).

"And by this increase of \$7,000,000 in your reserve for depreciation, you decreased the value of your stock proportionately on the basis of book value?"

A. I don't understand that from this blank, (indicating) I am required to show the book value.

Q. Didn't you show your book value in your sworn capital stock tax report?

A. In this one. (Indicating).

Q. Yes.

A. You say I didn't. You say I adjusted it.

Q. Didn't you purport to show it?

A. Yes.

Q. And what was your purpose in increasing your reserve for depreciation of \$7,000,000 above that shown in your books?

A. No particular purpose.

Q. Now, Mr. Mitchell, the purpose was to use that as one reason for a lower value on your capital stock than might otherwise be assessed, was it not?

A. I don't think it would have made a lower value; that is obvious if you take the balance sheet. It isn't lower than what we appraised it at.

Q. It decreased your assets by \$7,000,000, did it not?

A. Yes; but the net on this blank (indicating) is \$49,000,000, and you add the \$7,000,000 to it, is 56, and we had appraised it at \$77,000,000.

Q. I am not getting at the basis at which you had your stock appraised. You also had to include the market value of your stock, and you also had to include the earnings, the capitalized earnings, didn't you, to arrive at the value of your stock?

A. No, we didn't.

Q. You had to give the information?

A. We had to give the information.

Q. And you have to give the information on which the book value of your stock can be obtained?

A. We give the balance sheet.

Q. Yes, and the purpose of giving the balance sheet is in order to enable the Department of Revenue to determine the book value of your stock, is it not, and you have decreased the book value of your stock by some seven million by this change in your books?

A. Yes.

MR. TURNER: Where does the 7 million come from?

MR. EVANS: Transferred it from surplus and put it over as a reserve for depreciation.

BY MR. EVANS:

Q. Now, looking also at your capital stock report, your balance sheet, you put in first a book value of your fixed capital, real estate, buildings, equipment and fixtures, \$112,574,947.23?

A. Yes.

Q. And to that you add intangibles to plant items which bring the total book value up to \$152,000,000?

A. Yes.

Q. And from this you deduct depreciation reserve?

A. Yes.

Q. Bringing down the total book value according to the report, to \$132,133,248.40?

A. Yes.

Q. Now, in the second column you give the fair value of your property, as distinguished from the book value?

A. Yes.

Q. What do you mean by "fair value"?

A. Well, we have eliminated—

Q. Just tell me first what you consider to be fair value, as distinguished from book value?

A. I don't know that I can answer that question.

Q. Well, fair value is somewhat difficult to define, at any rate. At all events this report for capital stock purposes, you took the fixed capital value as being the book value, did you not?

A. Yes.

Q. And in arriving at the fair value of your property, you eliminated all of the intangible items, including the intangibles arising from the restatement of the book value of your property, which, as you have said, was over \$22,000,000?

A. Yes.

Q. So that you say that the fair value of your property, excluding depreciation, is \$112,000,000?

A. Yes.

Q. Or approximately \$40,000,000 less than the book value?

A. Yes.

Q. And when you deduct depreciation, there is a difference between the fair value depreciated and the book value depreciated of slightly under \$32,000,000?

A. Yes.

Q. Now, these intangibles, therefore, amounting to approximately \$32,000,000, have, in your opinion, no place in determining the fair value of your property?

A. We considered they had no place in determining the fair value of the capital stock.

Q. As though that when you came to make a capital stock report, the intangibles, amounting to \$32,000,000, have no place in fair value, but when you come to send into the Public Service Commission your report of the valuation, these same intangibles must be included, is that your position?

A. I don't know whether we have asked the Public Service Commission—

Q. Let me ask you: Is that the position in a valuation by the Public Service Commission, that these intangible items should be taken into account?

A. Yes.

Q. So, you think there is one fair value for tax purposes, and another fair value for rate making purposes?

A. Yes.

Q. And some testimony was introduced at a prior hearing, in regard to the Equitable Gas Company, and a comparison was made between the amount paid by the Equitable Gas Company for gas purchased from others, which have averaged, I think, something like 34.2 cents thousand feet in 1929, with the cost of production to the company, assuming that all the

rentals paid to the Philadelphia Company were included in the cost of produced gas?

A. Yes.

Q. I understand from you that the rental paid to the Philadelphia Company includes not only the rentals paid for gas wells, but also includes the rental of the entire distribution system or—

A. The entire gas system in Pennsylvania.

Q. Under the terms of your agreement with the Philadelphia Company, the Equitable Gas Company pays a rental of 8% on the value of the property, and in addition pays depreciation, does it not?

A. Yes.

Q. On what basis is depreciation calculated?

A. According to the rule of the company, the depreciation rule, it is at different rates for different classes of property. I don't know whether it is set out in this report or not—no; this is the Duquesne (Indicating). That rule is led with the Public Service Commission, and reference is made to it in this report. There were certain rates on distribution property, certain rates on transmission property, and different rates on production property.

Q. Taking the year 1930, for instance, will you state to the Committee what rental you paid to the Philadelphia Company, being the 8%, and also what depreciation was charged?

A. The rent of the leases or actual gas system properties was \$2,308,000. Now, I cannot give you from this return the amount of depreciation paid to the Philadelphia Company for the reason that the depreciation on the Equitable's own property is included in the item of depreciation—\$779,573.64.

Q. So that the total paid by the Equitable Company to the Philadelphia Company, including depreciation on this property, was somewhere in the neighborhood of \$3,000,087?

Q. Now, in order to complete the record, will you state what the actual cost of gas produced by the Equitable is for the year 1929, explaining how much of the rental is included in that set-up?

A. There is \$248,997.75 of the rental.

Q. On what amount of property of the Philadelphia Company was that based?

A. \$3,112,471.84.

Q. And that is the value of the gas well property of the Philadelphia Company leased to the Equitable?

A. Yes, sir.

Q. To that rental you add operating expense, maintenance and depreciation in what amount?

A. \$474,800.27.

Q. Making a total cost of?

A. \$727,798.02.

Q. And this gives a cost per thousand cubic feet of?

A. Of 21.26 cents, as compared with 70 cents heretofore testified to by other parties.

Q. Well, I think, Mr. Mitchell, if you will examine the report, you will see it was stated tentatively that if these rentals were being properly apportioned to this, and they were evidently not. Does the Philadelphia Company have any operating expenses so far as gas well properties are concerned; I will say so far as gas property is concerned?

A. No operating expense; no.

Q. So the Equitable is paying the Philadelphia an 8% return on the value of its property plus depreciation?

A. On a depreciated value, the amount of depreciation paid from year to year is deducted from the base, and they pay the rental on the net.

Q. All the depreciation is paid over the Philadelphia Company?

A. Yes.

Q. Going back, Mr. Mitchell, you referred in 1930 to a refund in your Federal income taxes, did you not?

A. Yes.

Q. In what amount?

A. \$1,137,322.05.

FATHER COX: Pittsburghers must stick together.

THE WITNESS: We worked hard for it, however, over a period of seven or eight years.

BY MR. EVANS:

Q. And what years did that cover?

A. 1917 to 1923 inclusive.

Q. These taxes had been charged as an operating expense in those years?

A. What?

Q. This tax had been added as one of your expenses of those years?

A. Yes, but understand this item also included interest on the refund.

Q. How much of it was interest and how much was principal?

A. I think about fifty per cent.

BY MR. RHODES:

Q. What would be the difference whether it was tax or interest; when you speak of interest, where does that make any difference?

A. I say about sixty per cent. of this refund was interest that we received on the refund.

BY MR. EVANS:

Q. Just let us look at this, Mr. Mitchell, you charged this as one of your expenses?

A. Charged the tax as one of the expenses.

Q. And the funds for these taxes were furnished by your consumers, were they not?

A. Yes, they were taken as an operating expense from year to year.

Q. And having received a fair return, which these taxes included, as one of your expenses, when those taxes are later refunded, don't you consider that they are really the property of your consumers rather than your stockholders?

A. Well, the rules and regulations of the Commission provides that deferred items such as that shall be credited to the surplus account. There is no account in operating revenue—

Q. That is, no operating surplus?

FATHER COX: It is worth working for them?

BY MR. EVANS:

Q. Well, during these years, there is now in your surplus this item of taxes, which has been refunded as an operating expense.

A. During the years 1917 to 1923.

BY MR. RHODES:

Q. Then equitably that should be credited to the rate payer, should it not?

A. I don't see how we could do it.

Q. Why are the stockholders entitled to it?

A. Well, there is no other provision for accounting for it.

Q. You mean there is no other place, so you gave it to the stockholders?

A. Well they got it.

Q. And they benefited in the increased valuation of their stock when you applied it to surplus?

Q. That may be true, but looking at it from an equitable standpoint, rather than a standpoint of rules and regulations, this money was furnished by the payments of the ratepayers, for the purpose of your operating expenses, is that correct?

A. Yes.

Q. Now, you have gotten that back?

A. Yes.

Q. And therefore both of the tax and interest are not equitably due to the stockholders, isn't that right?

A. Possibly the ratepayer should have some benefit from the tax.

Q. Yes, because the ratepayer pays that tax in the form of operating expenses?

A. Yes, but the Federal government paid by tax.

Q. But your company would benefit from the payments they paid by the ratepayer that paid the tax.

A. Yes.

BY FATHER COX: If you had taken the interest and given the people that money back there would have been something there.

MR. RHODES: If they are not entitled to the one they are not entitled to the other.

FATHER COX: He says the Federal government paid the interest.

BY MR. EVANS:

Q. Mr. Mitchell, I understand from Mr. Robinson, that there are one or two matters which were referred to somewhat

indefinitely by Mr. Phillips, in his examination this morning, and which you wish to amplify. What are those points?

A. In your reference to the fixed capital installed as requested in our returns, there has not included the value of the coal land owned by the Duquesne Light, which in return to the Public Service Commission we are required to report under the head of investments. That property is owned by the Duquesne Light Company, held solely for its use, and the value of the coal land is over \$4,000,000, which should be charged to the fixed capital.

Q. What was the cost of the coal land?

A. Originally \$3,500,000, and since then there were additions made to it.

Q. When were they purchased?

A. I don't know, about 1922 or 1925, I think something like that.

Q. And are coal lands today worth as much as they were in 1922 or 1925?

A. Well, that one is to us.

Q. We are talking about market values, Mr. Mitchell.

A. No, it is an operating coal mine, where we get all our coal for Colfax Plant.

Q. You don't operate it, though?

A. We do.

Q. I thought they were leased to another company?

A. No, it is operated by the Harwood Coal Company.

Q. Which is a separate company from the Duquesne?

A. Yes.

BY MR. MOORE:

Q. What is the coal acreage?

A. Between 2,800 and 3,000 acres. It is one mile from the Colfax Plant.

MR. EVANS: Well, I think we have enough experts on the value of coal on the Committee to leave that matter just as it stands.

THE WITNESS: The cost on the Booksville is \$4,497,000.

BY MR. RHODES:

Q. Mr. Mitchell, you have charge of the accounting department, I believe, of your company?

A. Yes.

Q. Who dictates the accounting methods used, your company, or the holding company?

A. Our accounts are kept in accordance with the rules and regulations of the Public Service Commission.

Q. Aren't your accounting methods more or less dictated by the company that owns your company?

A. No sir.

Q. By the Management Organization?

A. No sir.

Q. You determine within yourself, do you, without any interference?

A. There has been no interference. I have consulted with them at times on major subjects.

Q. Well, your holding company determines your engineering policies?

A. Yes.

Q. It determines your financing policy, does it not?

A. Yes.

Q. Therefore why doesn't your holding company determine your accounting policy?

A. Because it is well kept, and we have the classifications as prescribed by the Public Service Commission, and we follow those.

Q. Isn't that one characteristic of a holding company, the fact that they dictate the financial policy the engineering policy and the accounting policy and every other policy of the operating company?

A. I don't know. That hasn't been my experience, in the accounting.

Q. You admit, however, that the holding company does dictate your engineering and financial policy?

A. I don't know whether you would say it is dictation or not.

Q. Well, isn't it true that these holding companies have a uniform system which they apply to all the operating companies, which they own? Isn't that largely true?

A. We make reports to our managing company on their forms, but our books are kept strictly in accordance with the Public Service Commission's requirements.

Q. Well, isn't that one of the great troubles with the utility situation today, the fact that the people who operate these utilities, have your instruction from the holding companies?

A. I haven't had any trouble from an accounting standpoint.

Q. Well, from your connection with the utility business, don't you think that one of the troubles, today is the fact that the utility companies fail to realize that they are public utility company, due to the fact that their policies are dictated by the holding company which has its offices outside of the state, and is not in contact with the people?

A. That has not been our experience.

Q. Hasn't it?

A. No sir.

Q. Don't you agree with me that one of the great troubles with the utility field today is the holding company?

A. No sir.

Q. Don't you think so?

A. No. It has been very beneficial to our company

BY MR. CRAWFORD:

Q. Mr. Mitchell, how many acres of this coal is worked out?

A. That twenty-eight hundred acres is not.

Q. You still have coal on it?

A. Yes.

Q. What thickness of seam do you have there?

A. Thickness of vein?

Q. Yes.

A. It is a Free Port vein, whatever that is.

Q. No: Pittsburgh coal?

A. No. It is Free Port, it is on the north side of the Allegheny River.

Q. I was just figuring that out. It figures to \$1,464 and acre. That is pretty high for Free Port coal.

A. Of course, you understand that figure which I gave, which I quoted here includes all of the improvements around the mine. It is not just coal itself.

Q. I thought it was the coal acreage?

A. No, it is a developed mine.

MR. CRAWFORD: That makes some difference of course.

MR. EVANS: Can you break down the—

MR. CRAWFORD: I thought from the testimony it was the coal acreage.

THE CHAIRMAN: That is the impression I got.

THE WITNESS: Twenty-eight hundred acres of developed coal mines.

Q. Well, that wouldn't make any difference whether it is developed or not?

A. That includes the tippie and everything in a modern mine, both above and below the ground.

BY MR. EVANS:

Q. How much of that is equipment? You have it all broken down there?

A. No, I don't have it here.

Q. I thought you had a statement showing—

A. No, I just had the total \$4,197,000.

Q. From whom did you buy it, Mr. Mitchell?

A. The Equitable Coke Company.

Q. Is that an affiliated company?

A. It was. But the mine only was developed by outside parties. It was originally the Allegheny Coal Company, and operating mine.

Q. You don't know what profit the Equitable Coke Company made out of it, do you, selling it to you?

A. No, I can't say now.

Q. Is there anything else you wanted to cover, Mr. Mitchell, I have nothing.

BY MR. RHODES:

Q. How long have you been connected with the utility business?

A. Since 1897.

MR. EVANS: Mr. Robinson, this morning a question arose in regard to the length of time that the Equitable Gas case was before the Public Service Commission. Would you just take the stand and explain to the Committee the reasons for that?

CHARLES K. ROBINSON sworn

THE WITNESS: You understand off the record, I am not testifying to my present connection with the Philadelphia Company, but merely as counsel in this particular case.

BY MR. EVANS:

Q. You were then counsel for one of the complainants against the Equitable Gas Company, were you not?

A. I was special counsel for the city of Pittsburgh during the Magee administration, which, as I recall, started in January of 1922 and was concluded in December of 1925.

Q. And this case was started prior to your connection with it, was it?

A. It was started during the last year of E. B. Babcock administration by the counsel that held the position at that time, a special counsel for the city in utility matters.

Q. And was this a complaint against existing rates or a complaint against a rate increase?

A. As I recall—shall I tell the story?

Q. Yes, if you will.

A. As I recall, the gas companies raised their rates during 1921, as I have stated, was the last year of the Babcock administration, and complaints were then filed against these rate increases. As I recall all three natural gas companies during that year increased their rates. That is the Equitable, the Peoples Gas Company and the Manufacturers Light and Light Company. Not all at the same time, but the increases were made, and they were on the same basis, so far as domestic users were concerned. When the new administration went in, I had previously been acting as special counsel for the city in public utility matters, since 1917, except for part of 1921, and when the Magee administration went in, I was appointed special counsel. One of the matters that first came up was the question of the proceedings involved in these complaints, and there were numerous conferences held with the chief executive and with engineers and others with respect to the matter, and it was at that time felt that the increase, as I recall it, was not a substantial increase in the sense that the latter increase was, that those particular complaints would not be pushed at that time. At any rate, so far as any delay is concerned, in dealing with the first complaint it was due entirely to a fallacy on the part of the new administration in dealing with the problem, and no attempt was made to have those cases set down for hearing before the Commission, although there was an independent investigation made by the city.

When in 1924 other increases were made by the same company, the complaints were filed against these increases within the 30 days, so as to place the burden upon the company, and those increases were quite substantial. I don't recall the exact figures, but my recollection is that the increase at that time was from a 50 cent net rate to a 60 cent net rate per thousand cubic feet. There were a number of complaints filed against these three companies. The rate increases being made at different times, and in December, 1924, the pleadings being completed, the matter reached the Commission for its first hearing, and that really constituted the beginning of the natural gas case, so that so far as any delay prior to that time is concerned, it was entirely due to the matters that I have mentioned, which were connected with the local questions. The hearings were commenced in December of 1924, and at which time there were a number of other complaints filed by other municipalities, smaller municipalities, which to a large extent looked to the city of Pittsburgh to take the leadership in handling the complaints, and the matter of procedure was taken up.

The matter of appropriation on the part of the city to take care of the necessary expenses was considered and taken up with the 1925 budget of the city of Pittsburgh, and appropriations were made to deal with the question. It was considered at the time to have an engineers conference on the questions that might be disposed of between the representatives of both sides, preliminary to having a formal hearing before the Commission. The engineers therefore appointed by the city and the Equitable Gas case and the Peoples, met with engineers appointed by the companies, and did arrive at certain of the fundamental elements necessary in determining a rate base, but the estimated reproduction cost of the property under the practice prevailing at that time, and over a five and ten year range, and also under other ranges, that was—would

consume a considerable part of 1925, and resulted in rather substantial agreements in 1925 on most of these important questions, leaving open, however, a good many questions such as the determination of the intangibles, some of the overheads, and a number of items that were claimed by the company as proper items in valuation, which were resisted both on the question of their right to be included and on the complainants.

Sometime, I don't recall the date, but sometime either late in '25 or the beginning of '26, matters were ripe for a hearing and the points still in disagreement, but the Commission itself didn't begin to function on the matter until sometime in '25. After that the cases proceeded, I would say, with the ordinary dispatch that cases of this kind would be disposed of, because at that time there were two cases running simultaneously, namely, the Equitable Gas and the Peoples. It was felt that the Manufactures Gas would not be pushed, because the city of Pittsburgh only received a small proportion of its gas from this particular company, and these other two cases were selected to be tried. The cases proceeded more or less alternately, and the matter was finally concluded, and in 1929, as I recall it. After that the cases were brief; argued before the Commission, and then the Commission took a certain amount of time to reach its decision. Now, I might say that during this period of time, there were a number of contributing elements that tended to delay the disposal of the cases with which the Commission has little or nothing to do. One was that my connection with the city terminated with the ending of the Magee administration, and my successor took up the cases. It was rather a difficult thing for him to set into the cases at that time, and in order to pick the Commission practices, and I was requested at that time by a number of boroughs, surrounding Pittsburgh, to continue with the cases, and they raised a certain additional fund with which to help me complete that part of the work, which I did, and argue the cases before the Commission. There was some delay, as I say, incident to a plotting of council while the cases were in progress.

There was also another factor that had some part in the element of time, but I don't recall just where in the cases it played its part, and that was there was a very important natural gas case pending before the Commission, and the courts in the Pennsylvania Natural Gas case hearing, and there had been a long line of litigation over the question which had gone to the Commission. The Superior and Supreme Court, and there was also pending in the United States Supreme Court a natural case, coming up from West Virginia, which would throw a great deal of light upon the question of the determination of how you would embrace natural gas leaseholds, and being conversant with what was going on in that litigation we were naturally anxious to see which way the determination would go, before we finally brought this case to a final determination. Now, all these things were more or less moving all together. I might say that one other element that to some extent contributed to the delay was that Chairman Ainey, who started hearings in the cases, as you know, became quite sick, and there was a gap of a few months between the time that he ceased to sit on the cases, and every time that Commissioner Shelby took them up, but outside of that gap, I would frequently arise in litigation of this kind, and were not unusual in the disposal of cases involved in the records that this did. The record in both of these cases was very voluminous, involving a great many exhibits, and naturally extended over a long period of time, involved the calling of experts on both sides, both from Pittsburgh and some other places, and I would say, that taking the cases as a whole, the delay outside of the factors which I have mentioned was not abnormal in the disposal of cases of this character. This is an unusual case, but at least three years of it were not in any way involved in hearings before the Commission.

Q. Chairman Attwill, of the Massachusetts Commission testified before us last week, that rate cases before the Massachusetts Commissions never took more than four months to decide, and generally not nearly that long. Are you in agreement with him in the feeling that in the interest of effective legislation it is very desirable that some way be found to expedite the decision of cases?

A. I think that is a very important point, and one that should be given special weight under the prevailing periods of valuation, because, of course, our evidence is put in, calculated as near as we can, up to the times of the hearings,

upon the assumption of the prices prevailing at the time, and if a long gap intervenes at the time,—and between that and the time of the decision, it would frequently happen that substantial changes in price ranges have taken place, and under our theory as laid down by the Courts, of valuation, it seems to me that cases should be expedited. I am frank to say, having had considerable experience and practice before the Commission, that I suspect that we to some extent contribute to the delay, because we are doing so many different things, and as you probably know, in the engagement of these persons who are qualified to testify, they are engaged in many other activities, and frequently in other cases, and it is not always possible to synchronize all these things in such a way that you get the greatest expedition. The courtesy of counsel and the courtesy of the parties involved in these cases unduly contribute to an unreasonable time, and some plan ought to be devised by which things could be expedited approximating the Massachusetts procedure. I think that is right.

Q. And it is true, is it not, that under our law in Pennsylvania, the delays of this sort work out to the benefit of the utility, in that they are allowed during the period the case is in progress to file rates, even though those rates may ultimately be decided to be too high?

A. If it works out that way, that the rate is held to be too high, of course, there are opportunities given to get reparation.

Q. We had a case here the other day, Mr. Robinson, of the Clarks Ferry Bridge, where there was theoretically a rate of reparation in the sense that you got rebate slips, but practically those rebate slips so often are uncollectable, are they not?

A. You mean because of financial insolvency, or something?

Q. I mean in a great many cases because the amount involved by the individual consumer is so small that they don't take the trouble to collect them, and in other cases, like a bridge case, because so much of the traffic is transient, that you get a rebate slip, and you will say, "I will never be back there in order to get the rebate," and you throw it away?

A. Well, that may be true. Are you particularly referring to the present provisions of the act in regard to reparations and the machinery necessary to put in motion?

Q. All the difficulties of it; yes.

A. That, of course, is a rather cumbersome affair, and in cases involving large immunity interstate is not a fair method of arriving at the answer. There should be a simpler cross cut method by which all the parties would be protected in a case of a rate reduction. I think there is no question about that.

Q. When did you become counsel for the Philadelphia Company?

A. Well, I have been consulting counsel for them, I would say two years. I have not tried any cases for them, before the Pennsylvania Commission until just recently. I tried one case for them in West Virginia about two years ago.

Q. Mr. Phillips this morning did not seem to be very well informed as to the rate of return allowed by the Pennsylvania Commission. What is your experience as to the rate allowed?

A. I have discussed, with other attorneys, before the Commission on what was the fair return. In arguing one case, which involved the York Water Company, I argued for the assumption of a lower rate than seven per cent., was in order because of special features of the York Water case and I argued that question again before the Superior Court on appeal.

Q. I mean under the Commission's practice.

A. The unbroken, uniform practice of the Commission is to automatically dispose of it on the seven per cent. basis. I did not assume thereby that they had closed the door on the question of what the proper rate of return was, but rather that they had arrived at it as an assumption of a fair return in Pennsylvania, and I assumed as you stated, that that is in the sense of the presumption of justice to these companies under the assumption to give them time, perhaps for a lower or a higher rate of return which would be in order because of the rates prevailing at the time, but that they have established that as, in their minds, constituting and taking the thing as a whole as a fair rate of return. Of course, we know that other states have fixed other rates of return. We know that the question of interest rates and rates on money are variable in different sections of the country, but I do not understand it, and as I understand your understanding over the matter,

that the Commission has made seven per cent. a matter of law in the State of Pennsylvania.

Q. It has been a matter of practice?

A. Yes; exactly.

BY MR. RHODES:

Q. Do you know of any case where the Commission has allowed more than seven per cent.?

A. You mean in general?

Q. No; in Pennsylvania?

A. When Mr. Rilling was on the Commission he filed a dissenting opinion, I think, in the Pennsylvania Gas Company case in which he suggested eight per cent., and as far as I can recall that is the only case in which any suggestion of a variance from that rule has been handed down by the Commission, and that, of course, was due to the fact that he realized that natural gas elements were very uncertain, and the ultimate life of the fields, and things like that, and that to his mind the rate of return to natural gas companies should be on some different basis than those to be established for absolutely permanent utilities.

BY MR. TURNER:

Q. Would it be fair to ask your opinion on this question of valuation between the prudent investment theory and the theory as laid down by the Supreme Court?

A. Well, you can readily appreciate that in the last seventeen years I have argued that question from every conceivable angle, and in every conceivable case that I could bring to bear on that question, mostly from arguing the people's point of view. I am frank to say, as a lawyer, I think the Bureau on the question has long since been closed by the decisions of the Supreme Court of the United States and the Supreme Court of this State, and that we are really going into an academic question when we are dealing with it.

BY MR. EVANS:

Q. There is no difficulty in using the prudent investment basis for all investments made from now on, if the companies are willing to accept that basis?

A. Oh, if they will voluntarily accept that basis, which is not in accord with the Supreme law of the land, that is another story, but when you are dealing with the view which the Courts now hold, in their interpretation of the Federal and the State Constitutions, it seems to me we are talking beside the point.

Q. Assuming that it can be constitutionally achieved, do you think it is desirable to have a fixed rate base fixed on the investment with a variable rate of return as conditions change, or to follow the practice of the Pennsylvania Commission and have a fixed rate of return with a fluctuating rate base, determined on the period in which the case arises?

A. I don't want to seem to evade an answer to your question, as I appreciate that anything that I would say would, after all, only reflect my personal judgment in the matter. I have read the various decisions that have been handed down in which the prudent investment theory had been supported, and the dissenting opinions of the judges of the United States Supreme Court on that point. As far as I am personally concerned, I would say that the decision of the United States Supreme Court, in determining that the thing that the utility is furnishing service is property and not investment, is undoubtedly a sound position so far as the subject matter of service is concerned. That is to say, when I invest my money in a certain thing, I do not automatically take that value of property in another activity of life. If I buy a house, and I pay so much for it, if I am so lucky to have a bargain, I am not expected to give it to somebody else because I did have a bargain. In other words, you are suggesting a conception of the theory of value as to utilities which would not apply to another line of business in this country. It undoubtedly presents very serious questions in connection with matters of finances, of matters of valuation, and matters of interest to investors going into the thing.

BY MR. RHODES:

Q. Isn't the relationship of the utility to the public entirely different from that of an ordinary merchant or manufacturing concern?

A. Up to a certain point, that is true.

Q. And there is the element of public interest in disposing of that, but the question of rates undoubtedly writes into the

law that utilities, as we now have them written into our public statutes, don't apply to ordinary business, but when you take the public utility from inside of an institution to serve the public, as I pointed out, it has to go into the money markets of the country and ask for support, which must be presented to the investor; the elements on which he is willing to make his investment, and you can never escape, as Mr. Phillips said, the results of these economic laws, and escape the fact that that money which you put into a property is in fact the index of value, nor can you escape the fact that money, in terms of buying power, has never condemned, that is to say, if I had to go out and make a purchase, it may be a fifty cent, dollar or it may be a one hundred and fifty cent dollar. In other words, you are dealing with a field in which values are fluctuating and the buying power of money is fluctuating.

Q. That is not quite accurate, because what the utility is interested in is the return which it is allowed and that return can be regulated just as well as by shifting the allowed rate from seven to eight to nine per cent. as it can be by shifting the base on which the rate is applied.

A. That is, you may apply through the allowed rate of return a corrective factor against the changing buying power of money, but I take it, you are not going to make any corrective as far as the question of the value of the investment is concerned.

Q. What the utility is interested in and what the public is interested in is the amount collected by the utility from the public through the rates.

A. From that point of view it is entitled to a fair rate or whatever is the proper basis of return.

I am not here to say that in my opinion, because I don't know of anybody that fought more vigorously than I did in the early stages for the idea that investment should be the controlling factor, because from a practical point of view it is the only way you could have constant base of valuation. However, we know that the picture changes, and we know it changes every day; it is constantly changing, and it is impossible to arrive in face of the terrific changes at it. From that point of view, and taking into consideration these other elements, of course, I can see that having once established a base you can go by that base, but with the addition of investment, it is not a simple answer from that point of view as was said by the Massachusetts Commission. You can prove a perfect case for prudent theory.

BY MR. TURNER:

Q. The Massachusetts theory, as I saw it from a discussion by Mr. Attwill, they practically guarantee the return upon the value they have set; that is, the value they have set for a stock.

A. Well, in a sense, it is perhaps guaranteed but after all the word "guaranteed"—

Q. I mean, to let them try to make the return.

A. To let them try to make a return, but the difficulty is that the "try" doesn't always succeed; street railways are far short of the ability to learn, and that is due to their inability to set up some surplus which will cushion against the impossibility of their making a return, and I think perhaps that is what Mr. Phillips had in mind this morning, because the picture changes so, the art changes so, and competition from now sources developing in such a manner that you can't protect the institution, so that they should have a reasonable assurance of return. That is the point that he was trying to emphasize and I want to emphasize it now.

BY MR. RHODES:

Q. From your observation and experience, do you not think that valuation has been abused by the financial interests, who have come into Pennsylvania, for example and purchased operating companies, and have gone in and had a valuation, which increased the value to way beyond the actual investment and then asked for rates which would produce a return on the new valuation?

A. I think there have been a number of abuses of that power, as there always is. In other words under this theory laid down by the Supreme Court of the United States and our Supreme Court, the values are in terms primarily of the prices prevailing. There is undoubtedly a considerable lag in the rates charged by companies, and what they would theoretically charge under this situation, and undoubtedly some of the financial wizards, you might say, have been that gap or lag

and have acquired properties which to their mind reflected to some extent that situation, and then have turned around and have put the rates back to make good. Now, that is a most unfortunate situation, but there is no reason why the whole utility field should be condemned because of a number of abuses of that kind.

Q. That method of the holding companies has really resulted in a bitter reaction against the utilities.

A. It has to a considerable extent, but there are just as good utility companies as there are bad companies, just as in other fields.

Q. Is it not true that about ninety per cent. of all the operating utilities in the country are owned by holding companies?

A. That statement I am not prepared to answer, but with my experience, and with contact with the problem, I would say if you take all utilities into consideration, it is not probably as high as that.

Q. I am speaking of the electricals?

A. Of course, they are pretty generally owned because of the buying of the systems interlocking in such a way as to guarantee a permanent service and to guarantee all of the elements that go with the situation, and then of course, they have been attracted by the tremendous possibilities of the future growth of electric service.

BY MR. RHODES:

Q. Then I guess that we agree that some of the attitude toward the utilities on the part of the public has been caused by these abuses by holding companies?

A. Oh, I suppose there is no question.

Q. And isn't that particularly true in Pennsylvania?

A. But I would say, just speaking generally on the subject, that while the electric utilities have been charged with abuses in that line, general abuses in my experience have come more from water companies than they have from electric companies.

BY FATHER COX:

Q. Water is quite a staple necessity, and we need it all the time, and it has never changed in the history of the world, and look how they have changed their valuations?

A. It is absolutely vital, but under the Supreme Court of the United States, the attorneys were entitled to do it, and the Commission was powerless to do very much with many of those cases, in view of the valuation that the Supreme Court said they would have to put on those properties.

BY MR. RHODES:

Q. But isn't it a fact also that these valuations have always gone up and never came down?

A. They have gone up, because we have been in an era of rising prices. Now, if this present theory of rising prices prevails, then it is only reasonable to assume that as the course of costs go down, the valuation will go with it; it seems to me that the two must follow each other inevitably, as the law is now set up.

Q. Yes; all those valuation cases have been upward, and now it is time that we had some going downward?

A. I might say, just for a matter of information, in 1920 I tried a number of cases against the Bell Telephone Company. In fact I was general counsel at that time for all the complainants in Pennsylvania, and I found that the Bell Telephone Company at that time did not ask for a return upon—that was in 1920, upon the reproduction cost, but set up their figures on the assumption of their investment, and Mr. Marve at that time said to me, "The day will come when the scale will turn, and we are not asking for a return on present reproduction cost. We could not collect on that, if we tried. And I think that the intelligence, the far seeing executives of these companies have been conscious of the fact that if they press this reproduction theory too far, it would some day come back to bother them."

Q. What we are looking for is a basis or method that will be more or less satisfactory to the utilities and the public and the state?

A. Yes, because you must have some sound financial, well supported utilities, because our utilities, after all, are the things on which an American city is distinguished from European cities. It is the point of progress between us.

MR. MEMOLO: We have had a general period of stocks, valuations, and everything else, and now we have got up to

the peak, of course, it is going to be very hard to go down in fixing valuations, isn't it?

THE WITNESS: I don't know; if the cases are prepared and presented before the Commission, on the theories under which we live now, there should be no reason why the values should not follow the course just as I have indicated. I think it is inevitable.

BY MR. HAGMAIER:

Q. It will be pretty dangerous, however?

A. It is a constant change and flux, just as Mr. Evans told us, which is not particularly attractive to investors, and those constantly recurring valuations. Of course, the so-called period of repose of three years operates to prevent further valuations during the three-year period. But we all know that is not conclusive, you can attack a valuation within a month, if you want, if you can show a change. But not in the very expensive process, it is expensive to arrive at the answer in this case, and on this theory, and that is a tremendously strong argument against the theory, in my opinion.

BY MR. RHODES:

Q. That is what makes it objectionable, the expense of arriving at the conclusion?

A. Yes, in other words, it costs so much to get the answer.

Q. And from the observations we have had and the testimony presented to us, even by Commissioners of our own Public Service Commission, it is more or less a matter of guesswork, of pure judgment in the end?

A. It is a matter of pure judgment, because nobody yet has agreed on how you arrive at exactly going value, which is a tremendously important item in many cases.

Q. That is one of the greatest flaws in it, in my opinion, the fact that it is so indefinite, there is no even remote semblance of logic or order in coming to the conclusion?

A. Well, I am not so much—

Q. There is too much allowed to the individual judgment?

A. I am not so much inclined to criticize the Commission for that situation as I am the Courts for having put us in the position that we are in as a result of their decisions, in which the Commission is to a certain extent powerless to find the exact answer.

MR. TURNER: The same thing applies, Mr. Rhodes, as is applied in the trial of cases. Nobody has yet found a better way than to have twelve men to decide what the verdict shall be.

BY MR. TURNER:

Q. Mr. Robinson, I don't want to take advantage of the position you are in, but I would like you to, because I think you have contributed something to us, to tell us something at to your opinion on this question of the contract between the state and the corporation. I presume you have read this Act that we have had before us, that suggests a way of getting around the constitutional problem?

A. Well, I don't see how you can compel a corporation to make a contract which would—

Q. For instance, you cannot have a change in your charter or an extension in your charter and certain other rights which you might ask for, unless you agreed?

A. Well, those questions, as you know as a lawyer, look a long way ahead, to the ultimate decisions of the Court of last resort, of the United States and States, to determine what are the real intrinsic elements of the constitutional guarantees, and I think it would be rather presumptuous on my part to now say how far the Courts would go in sustaining contracts which might in some ways have elements of coercion about them. I feel this, that the principle on which valuations are now determined by the Supreme Court of the United States are so definitely set and fixed by their decisions, and they are so much embodied into the theories of constitutional guarantees, that nothing will ever disturb those. Now, how far they may be willing to say that the parties have voluntarily contracted, that they would receive a return on another basis, how far that will be sustained in the presence of those guarantees is a question of law with respect to the elements entering into the contract, if it was a contract made at arm's length, between the parties free to contract, and was a fair contract, I suppose they will sustain it. If they say they are elements of duress or coercion about it, they may say that the contract is not effective in law; no one can decide those questions. No

one could decide these questions and I would not want to give the answer.

MR. TURNER: I appreciate that, although it was very enlightening, especially for those members of the Legislature who are interested in this question of regulations.

BY MR. EVANS:

Q. Mr. Robinson, in favor of the constitutional provision you are familiar with law in Pennsylvania which requires the acceptance of the Constitution by the incorporated prior to a certain time to gain further benefits under the statutes.

A. Of course, they are afraid to choose as to whether they will stand by their old charters or accept the new ones.

That would be because those corporations refused to contract, and they would not have certain privileges which are granted to others which do.

A. That has been worked out, but in many cases where the right to condemn did not exist but has been provided for where the right of competition has been given, it has been held in some cases, and I think one case in Massachusetts, that that did not take away the right of contracting of the parties, that is, they were still free to contract, and I say the theory on which they may proceed may be sound. I am not here to say that the courts will or will not sustain the theory of it.

MR. RHODES: It will give the lawyers some work to determine.

THE WITNESS: We will have lots of work everytime you pass any laws. We have lots of work.

MR. TURNER: You will have if we pass this one.

PAUL B. SAWYER sworn.

BY MR. EVANS:

Q. Mr. Sawyer, where do you live?

A. I live in Bethlehem, Pennsylvania.

Q. And you are chairman of the board of Pennsylvania Power and Light Company?

A. Yes.

Q. And you are also president of the Lehigh Power Securities Corporation?

A. Yes.

Q. And an officer or director in any other company, affiliated with those?

A. Yes, as president of the Lehigh Power Securities Corporation, I am either director, or an officer of the subsidiaries. There may be some smaller ones that I am not a director of, but most of them I am.

Q. As far as Pennsylvania is concerned, what subsidiaries in the Lehigh Power Securities Corporation operating in Pennsylvania?

A. Its principal one in Pennsylvania is the Pennsylvania Power and Light Company. The next property in order is the Lehigh Valley Transit, and then the Williamsport Railways Company, The East Penn Traction, and the one across the river, the trolley across the river—the Valley Railways (I am not very anxious to be connected with that one just now in Harrisburg) and there are some smaller ones.

Q. Are there any construction or management companies affiliated with the system?

A. Well, now, by affiliated I don't know just what you mean—but yes, the Electric Bond and Share Company exercises supervision over the Pennsylvania Power and Light and other subsidiaries of the Pennsylvania Power Securities Corporations.

Q. Is all of the common stock of the Lehigh Power Securities Corporation owned by other holding companies?

A. No, not all, but substantially all. I think that 99% is owned by the National Power and Light Company.

Q. And who in turn controls the stock, the voting stock of the National Power and Light Company?

A. Well, that is not to my knowledge controlled by any one stockholder.

Q. Is it not however controlled in general by the Electric Bond and Share Company?

A. The Electric Bond and Share Company, as near as I recall owns somewhere over 40% and less than 50% of the common stock of the National Power and Light Company.

Q. Is there any holding company on top of the Electric Bond and Share?

A. Not to my knowledge. I think the largest individual stockholder of Electric Bond and Share holds about 4%, and that I recall from having read the report.

Q. Does the Lehigh Power Securities Corporation have a subsidiary known as the Phoenix Utility Company?

A. No sir.

Q. Is that not affiliated with the Pennsylvania Power and Light Company, in some way?

A. Not direct. It is a subsidiary, I presume that you would call it, of the Electric Bond and Share Company.

Q. And for what purpose does that company exist?

A. It is a company that does construction work, and some engineering. Its province if I may just go right ahead—I will try and tell you and then you ask me any thing you may wish. The Phoenix, does a large part of the construction work, and now I say a large part of it, I don't believe it does the major portion by any means of the construction work of the various companies that are supervised by the Electric Bond and Share Company. The theory upon which the Phoenix is existing is that there is a certain amount of construction work of a particular nature going on at all times, and through its supervision of the companies and properties the supervision by having an organization of experts in these particular lines can move the expert say on transmission line work from one place to another and keep him employed continuously at a salary which would be less than if he was employed by each company for a short period of time, and in that way he is kept in touch with the needs of all of these companies, and his work is most efficient, and the costs of his services complete are less than if the companies should go out and employ an expert say for transmission line building purposes for the period of one season, and then dropped, and that will hold good for practically every other class of work that Phoenix does, powerhouse, both steam and hydro-electric, substation work, and so forth.

Q. Is it the practice of the Pennsylvania Power and Light Company and other operating subsidiaries of the Electric Bond and Share Company, to let construction contracts on competitive bidding, or are they regularly awarded to the Phoenix Utility Company without competitive bidding?

A. That varies, Mr. Evans. It depends largely on the work. The Phoenix I think has done most of our major new construction work, "our" meaning the Pennsylvania Power and Light Company. Smaller pieces of construction work which the Pennsylvania Power and Light Company by previous estimates can do at less cost itself, are done direct by the company. The Phoenix does only such work as the Pennsylvania Power and Light orders it to do from time to time in writing.

Q. And these major construction items are given to the Phoenix Utility Company on what basis?

A. On a contractual basis, the base being four per cent. for the Phoenix Utility Company, the Pennsylvania Power and Light Company paying bills as they go along.

Q. Cost plus four per cent?

A. Well, the Phoenix does the work and bills the Pennsylvania Power and Light Company four per cent. of the total cost of the work that it did.

Q. And it is not usual for such contracts to be let out on competitive bidding?

A. We have kept check on the Phoenix Utility Company—one I remember particularly was the dam at Wallenpaupack. I don't remember what that cost. We felt that if any company could come in and do the piece of work at less cost than the Phoenix Utility Company, that there was the best place to make the comparison, because that was a compact piece of work and we found there were several bids from contractors though none of them were as low as our own estimate and the Phoenix Utility Company estimates, which were met in construction.

Q. The Phoenix Utility Company got it because they were the lowest?

A. Their estimates were the lowest, and of course we had the right under the contract to watch them closely and make changes even during the construction at intervals at any time that we wish.

Q. Did they do it on contract?

A. Yes, sir.

Q. Their prices were lower?

A. Their estimates.

Q. What was the difference between their estimates and the contract price?

A. The Phoenix people did not bid. The Phoenix Utility Company being associated with us, there was no object in having a formal bid, but as it turned out they met the estimates.

Q. They did it for a less amount than the other bidders?

A. Considerably less than the other companies offered to do it for us. Of course you understand too, Mr. Evans, there is a certain class of work that would be very difficult to get a contractor to do. At Wallenpaupack there is the wood stave pipe line three or four miles in length which of course could be built by any contractor who would want to undertake it, but whether or not he has had experience to do a first-class job that would stand up is another matter. The Phoenix Construction Company through its experts has built any number of these pipe lines throughout the west where water lines are more in evidence than they are here.

Q. Can you give us an approximate amount that the Pennsylvania Light and Power Company has paid to the Phoenix Utility Company in fees for construction during the past two or three years?

A. I am sorry, Mr. Evans, but I don't carry those figures in my head. I can get them if you are interested, and I will be glad to do so.

Q. Mr. Sawyer, there has been introduced in evidence before this Committee a contract or a series of contracts made by Lewis F. Lantz for the Pennsylvania Power and Light Company. Who is Lewis F. Lantz?

A. Lewis F. Lantz, in fact I have met the gentleman once, Lewis F. Lantz is an employee in the office of a law firm in New York whom we retained for consulting purposes.

Q. In other words, when you say "we" do you refer—

A. The whole group of companies that I have been talking about. I use "we" rather than mention all the names.

Q. These contracts call for the expenditure of a considerable amount of money by Mr. Lantz. Who furnished him the funds to make these payments?

A. If I may, I would like to just briefly outline what we did and it may help to clear up the atmosphere. Mr. Lantz has been on more than one occasion—but the one I think in question was in 1928 and was the Harrisburg and other company mergers with the Pennsylvania Power and Light Company. Am I not correct?

Q. Involving some thirty-five companies?

A. Yes, and most of these companies were owned by stock ownership by the Lehigh Power Securities Corporation, which of course owns all the common stock of the Pennsylvania Power and Light Company. Some of this common stock I think was owned by the Pennsylvania Power and Light itself, so that it is rather an involved method or a rather involved method was needed to get this proposition together. The use of Mr. Lantz was to get a clearinghouse scheme into this merger. I suppose most any kind of a method could be used that we might have wanted to devise, but we thought that was the best of the lot. The use of Mr. Lantz as a clearing house necessitated Mr. Lantz making a contract with each one of the participants. All of these companies, however, were tied together and the authority must be exercised concurrently because in order to fulfill his obligations he must receive what was coming to him from the other sources through the clearing house scheme. Mr. Lantz got absolutely nothing out of it. Each of the participating companies got nothing out of it that they didn't have a right to, except that they got what they had before in a different form. The Pennsylvania Power and Light Company received the physical property from the participants of this group of thirty-five, the Lehigh Power Securities Corporation receiving another kind of securities for the control of the securities of these companies that it had, and the ones of course that were owned by the Pennsylvania Power and Light Company were liquidated back to the Pennsylvania Power and Light Company, just washed on its own records. I can appreciate the involving nature of this and the feeling that there was something of some kind in there, but we did absolutely the best we could to do it as simply as we could, and nobody got anything out of it that they should not have had. I think at the time of the merger proceedings somebody at a hearing before the Public Service Commission requested a statement of the Lehigh Power Securities Corporation which was given to the effect that the Lehigh Power Securities Corporation made no profit in the transaction. That of course nobody else did either. Now the papers—that of course is but a skimpy outline—now the papers are all on file in Harrisburg

with the proper bureaus and anyone who wishes to delve there, I am sure, can come out just where I told you we came out.

BY MR. EVANS:

Q. We have tried to do some delving and I am not sure where we came out. According to the reports of the Pennsylvania Power and Light Company to the Public Service Commission, it appears that it put the fixed capital assets of these companies on its books at a net value of \$54,293,903.53, which is composed of an increase in the assets in the gross amount of \$59,036,626.32, against which there is an offset in an increase in reserves for renewals and reproductions and replacements amounting to \$4,742,722.78, giving you a net value of fifty-four odd million dollars. Can you state to the Committee what was the net book value of the fixed capital assets purchased?

A. Well, your figures I won't attempt to substantiate but what we did was to have the properties valued by an outside disinterested source so as to obtain as nearly as we could the value of the property at the time, and that was the amount that we put on the Pennsylvania Power and Light Company books, the idea being to get on there as early as possible the true values. As a matter of fact, as I recall it now, the properties were purchased at less than their value. The valuation was such that this cost price was less than the total value, that is, the value was increased as much as we paid. Now if there are any differences in the sum of the figures of the company going into the merger and the resulting figure on books, why the figures of the smaller companies were just wrong.

BY MR. EVANS:

Q. What I want to get at is this. You said that the Lehigh Power Securities Company owned the stock of most of these companies and the Penna. Power & Light owned the stocks of some others?

A. Right.

Q. Were these properties placed on the books of the Penna. Power and Light after they had been carried out at the exact price for which the Lehigh Power Securities and the Penna. Power and Light Company had paid the stocks?

A. As near as I can remember, what they paid for the properties, which was less than the value of them.

Q. Now, according to the information which our accountants have taken from the files of the Public Service Commission, the fixed capital of these companies acquired amounted to roughly twenty-four and a half million dollars, and, as I understand it, from your testimony, the Lehigh Power Securities Corporation and the Penna. Power and Light, in acquiring the stocks of these companies, paid in the neighborhood of fifty-four million dollars for them?

A. Well, that would follow, because in the transfer the original owning companies, before the merger, turned over at their costs whatever properties they had that entered into it, and in the aggregate the value as so found by the appraisers was in excess of that amount. Does that answer your question?

BY MR. TURNER:

Q. By that you mean to say if you had a company, bought a company for a million dollars, that is what you paid for it, but when this merger took place, it was turned in at a million dollars?

A. Well, they were turned in in a group.

Q. I understand, but that was one of the component parts that made up that group?

A. Well, may I just go a little further? The reason for Lehigh Power Securities acquiring these companies was one of convenience. The thirty-five would have required thirty-five appearances before the Public Service Commission, if the Penna. Power & Light Company had purchased those properties one at a time, in order to obtain the consent, of course, to do so. Lehigh bought those as a whole and turned them over as a whole, the total being the total paid for the whole. Now, you might have marked A company at a million dollars, and B company at something else, but we didn't do that, we put them all in the basket. They were acquired at different times, probably over a period of several years.

Q. That is what I meant, you acquired them at different times, and you put them down the amount that you paid for them on your books?

A. Yes.

Q. Then when you went to turn them over, you added that total?

A. We added that total, and that was the figure. As a matter of fact, if my memory proves correct, the earnings in some cases,—not all,—hardly paid the carrying charges of the holding company during that period, but there was no effort made to take into account any of those things. The holding company turned them over at as nearly as it could the cost that it had on the books.

BY MR. RHODES:

Q. Then do we understand that there was no reappraisal, that the amount—

A. There was no reappraisal, of the cost prices; there was an appraisal of the property.

Q. Well, I don't quite have it straight in my mind. Were they turned over for the cost price or were they turned over at a new appraisal price?

A. They were turned over at the cost price, put on the Pennsylvania Power and Light books at the cost price, although the appraisal price was greater.

Q. Well, what was done with the appraisal price?

A. Nothing. I just testified that the record, from the appraisal, it was higher than the cost price.

Q. That didn't enter into your bookkeeping at all?

A. No sir, it didn't enter into our bookkeeping at all.

Q. And didn't have anything to do with the issuing of your securities?

A. Not a thing.

Q. So that was all done on the basis of actual cost?

A. Well, I wouldn't say that, Mr. Rhodes. The securities, of course, must be and are backed up by full value in the property.

Q. Were they issued in this case on the basis of cost or on the basis of appraisal?

A. Well, I cannot say on actual appraisal, but I would say on a spot check, such as bankers take on certain parts of the properties. From examination of the records, they felt quite sure that we had at least, in so far as the securities you probably refer to are concerned, sufficient property to warrant that issue.

Q. Regardless of the cost.

A. Oh, yes.

Q. I mean, they were not interested in the cost in so far as securities were concerned, they were interested in what they figured was the fair value of the property.

A. Yes.

BY MR. EVANS:

Q. Mr. Sawyer what was the purpose of having an appraisal made at the time of this transfer to the P. P. and L.?

A. We felt it was time to get the value of the physical properties in order to determine what to put on the books, if we did not get the value of the property to support the price we would have been in a quandary.

Q. Who made the appraisal?

A. Mr. Theodore Stebbins.

Q. Who is Mr. Stebbins?

A. A very able and learned gentleman whom I have known for many years, and I think he qualified when he testified, but I was not present, and I really cannot tell you. He has been in the business for many years, I would say for thirty or forty years, in all phases of it, and we felt quite confident to have him pass judgment on the values of the properties.

Q. Did he have any connection with the Electric Bond and Share or any of its subsidiaries?

A. No. At one time, when I first knew him, he was employed by the General Electric Company, but that was probably twenty-five years ago. What he did for the next four or five years, I don't know, I was out of touch with him for a long time, but he has had no connection with us except doing work of this kind, to my knowledge, and I mean, these properties that we are speaking of now, such work as that, he was doing that kind of work for many years.

Q. Now, did he make a detail inventory and appraisal of the properties and—

A. Well, he spent a large amount of time, Mr. Evans. I didn't see his papers, but he asked for a great volume of data of all kinds, and spent a great deal of time in visual examination of the property, record, et cetera.

Q. And did he value the properties on the basis of their reproduction cost?

A. I don't believe he stated whether it was reproduction cost new less depreciation, but I am inclined to believe that he based his figures on what he thought the Supreme Court would say we were entitled to earn on, because that is what we wanted.

Q. The difficulty that we have had with this appraisal, Mr. Sawyer, is that as far back as the record shows Mr. Stebbins did nothing more than say that he determined the fair value to be not less than \$3,000,000, he testified before the Public Service Commission that "I have sought to consider all these elements that it is customary to consider as well as such as are particular to this situation. I have considered the reproduction costs of each of the properties based upon the fair average price of materials, property and labor bearing in mind that the actual construction extended over a period of years, piece meal, job by job, having considered the developmental and growing value—," I don't know whether he didn't mean going value, but it says growing value—and revenues as yielded by the rates now authorized by the Commission, and have given each element such weight and interpretation and seems fair under the circumstances.

Q. That looks to me as if he attempted to find fair value.

Q. He does not mention any depreciation, does he?

A. I didn't hear you read it.

Q. I could not find it. At all events this valuation, whatever it amounted to was \$63,000,000 approximately.

A. I cannot say, because I don't have the figures, Mr. Evans, but if you say so, I am sure it is so.

Q. He says not less than \$63,000,000, and that is the only figure we have.

A. Well, that was my impression, that he more than justified the price, we felt it to be conservative, and the thing we did was to put the property in at what we paid for it.

BY MR. TURNER:

Q. What was that price, I have forgotten—\$54,000,000?

A. Well, not less than \$65,000,000—

Q. What was the price that you paid?

MR. EVANS: It appears to be \$54,000,000 and something.

BY MR. EVANS:

Q. Under this man's agreement the Pennsylvania Power and Light Company was to deliver to Mentz \$100,000,000 in 50-year 4½% bonds.

A. Yes, as I remember.

Q. And 12,500 shares of 6% preferred Stock, or a total of \$1,250,000?

A. Well, I think you are right—my memory checks you.

Q. And cash to the extent of \$500,000, making a total of \$1,750,000. Now Mentz, on the other hand, agreed to cancel bonds of the underlying companies, amounting to \$66,966,550.00, leaving a total in Mentz's hands of \$34,783,450. Now can you state either from memory or from the reports to the Public Service Commission, which I can show you, what was the approximate amount left to the Pennsylvania Power and Light Company after the issuance of securities under this Mentz agreement as of December 31, 1928. I think this figure here Mr. Sawyer, (referring to annual report of company).

A. Now, let me do as I did before on this; it might simplify matters somewhat.

Q. I wish you would.

A. In the first place you will find that Mentz had other agreements which he must fulfill that took care of the balance between what the contract reported that he received, but leaving that for a moment, I want to take the situation as it exists now, and what happened within the last few weeks—

Q. I thought maybe we would understand it better if we took it step by step?

A. If you take it step by step you will have to get somebody besides me up here. I will give you the over-all and tell you what happened and then if you want to get the details—

Q. Mr. Wise, says he doesn't know anything about it?

A. Well, all the papers are on file with the proper bureaus here in Harrisburg, and I am sure your able self and your able assistants, with somebody to guide you, can find all the details if you will let me do as I did before and I think I can clear up most of that in your mind.

MR. EVANS: I am much obliged to you

**THE WITNESS:** In getting these properties together, of course.—I don't want to bore you with a lot of plans, and so on, but of course you naturally want to get your house in the best order you can. The various securities including the last one of the last year to be taken in, No. 95 separate and distinct operating companies here in the eastern part of Pennsylvania, that now make up the Pennsylvania Power and Light Company. Some thirty-nine or forty, I don't just remember how many, had a separate and distinct mortgage on them. The mortgages had different conditions, different rates of interest, different sinking funds, different interests et cetera, et cetera. It was difficult and has been for some time to get new money with all of this crazy quilt work of underlying mortgages underneath.

**BY MR. RHODES:**

**Q.** I don't want to interrupt you, but I would just like to get the proper background?

**A.** Interrupt me any time you wish.

**Q.** Did I understand that this \$100,000,000 bond issue was just placed upon these properties appraised at \$63,000,000?

**A.** No sir.

**Q.** That was what I wanted to get straight?

**A.** There was more than 100 million dollars, and I want to tell you about that. The difficult thing to get money at the lowest rate, of course, is apparent because of these underlying preference bonds.

So, several years ago, as a matter of fact, before the merger of the Harrisburg properties,—we hit upon the idea of collecting the property as a whole, of all of these old mortgages, getting one clean cut first mortgage on all of the property, on a mortgage having the most modern terms and conditions that we could get in it, with the idea of getting our bond money in the future at the lowest possible price, because we could give the highest grade of public utility security for it.

So, having that in mind, we have made our plans in working for all of this period of time to do this, and finally got these companies merged, including those last year, and came to a market for bonds when we could sell the entire issue at a good price. We did that in the early part of this month. The bonds were sold for delivery, as I remember now, on the 22nd of this month, but dated the first of the month. The work involved was very great, required continuous work, even as great as this Committee has gone through, as I understand from Mr. Moore, in the last month. We filed our necessary papers here in Harrisburg as quickly as it was physically possible for us to do so. In the meantime, or prior thereto rather, the bankers advertised the issue and distributed it only as to obligation, insofar as they could, subject of course to our delivery on this 22nd date. The certificate, which was very voluminous, was filed, including the mortgage, which had to be completed, which was not in its final form, the details of all these issues that you mentioned are there, Mr. Evans, showing the amount of each mortgage, the call price, the interest due to the date of the call price in some cases several months hence, and so on. Now, the Mentz obligation required him to retire the bonds on the property, as I recall it, after the Harrisburg merger. That is listed at some \$66,000,000, as I remember it, being the safe value, not the call price of the bonds; and of course, during that interval of two or three years, there have been sinking funds working, and so on, so the prices changed slightly one way or the other, so that to make a long story short, we sold \$100,000,000—I say we again, meaning the group—Mentz selling his and the Pennsylvania Power and Light the balance of the issue, which was a total of \$121,000,000. But 100 went to the bankers, and the 21 was sold to pay off the securities given in payment for these properties which came into the merger.

You see, the power company had to give its short term securities for those properties in part that came in. To put it another way, the power company put the new date of both of its debts off until 1931. Instead of a certain amount being due on demand, and as other due dates in these various mortgages. There was some cash left in the hands of the Pennsylvania Power and Light, and its records will show it. Now, as to the money itself, if I may go right ahead and give you approximately what happened, the bonds retired, including of course, the call price interest of that date, et cetera, in round numbers, took \$75,000,000. There were seven and a half million dollars of demand notes for construction, et cetera, accumulated beyond ability to pay over this period of three

or four years, when we issued our bonds, because we had this plan in mind, and if we had sold them, we would have had to take them back at the call price, and of course, absorb the discount, which we thought was a very bad business feature.

That is 82½. There was two and one half million in round numbers in cash left with the company, that is 85. There is 27½ million that went to pay the equities in part for which other securities were given, including the charge that you were talking of in the mergers. That make a total 112½ million dollars. That is what we got for the face value of 121 million dollars of bonds.

**BY MR. RHODES:**

**Q.** What does the balance represent?

**A.** The 100 million went to the public at 96½ and the bankers paid the power companies, through Mentz, 93. Consequently the power company felt that if it sold the extra 21 to the holding company at the same price, it was negotiated at arm's length with an upright person, that it was doing the proper thing.

**Q.** In other words, your financing cost you 8½ million?

**A.** It cost us 7½. No; 8½; you are right. We, of course, checked through every source that we had, and our advice was that we had made a very good trade.

The bonds were fifty year bonds, and I think on the bond table basis will give us a yield of about 4.78%

And, now, I have also given you a rather sketchy account of what happened, but I wanted to try to get the whole picture before you so I would not appear to be evading.

In reference to all these various, sundry and interlocking contracts.

**Q.** This was a blanket mortgage, wasn't it?

**A.** Yes. The mortgage has in it the most up-to-date conditions that we have been able to work out, and when I say "We" this time meaning the supervising people the electric bond and share company who are taking mortgages, continually for various purposes, and they say it is the best that they have been able to trade out on the bankers during the various years that they have been in business. So, we feel we have a very high class up-to-date mortgage for use in the future to obtain bond money at as low a rate as we could hope to get.

**Q.** Is this a first mortgage on the entire P P and L property?

**A.** Yes sir. When I say "yes sir," there is about—well I don't remember the exact figures, but there are two mortgages that have no call provisions, aggregating in the total \$500,000 but over this period that we have been planning this, I have been buying in such distressed bonds of those mortgages that I could get. I think there are about \$250,000 of them still in the hands of the public. Now those bonds, of course, will stay there until we can either buy them or they mature, but the proceeds will—and we are still working on this; it is a very voluminous piece of work—the trustees of those two have agreed that if we put up the proper security for them to take that security as security and in turn for these bonds and clear the record on the county books, so that we will have no debt underlying this first mortgage I wanted to get in that comparatively small amount, but other than that little speck, I think it is absolutely a clean first mortgage on the property.

**Q.** What bankers have underwritten this issue?

**A.** Do you mean the group that took the bonds?

**Q.** Yes.

**A.** The Guarantee Trust Company, Harris Forbes & Co., Hornsby Company, Halsey Stuart & Company, and Brown Brothers and Harriman Company. The Guarantee acted as the manager of the group that took the bonds. Of course, they took them wholesale, and distributed them all over the United States.

**Q.** I am not sure that I have this clear Mr. Sawyer—

**A.** If I can be of help to you just ask me.

**Q.** As I understood you, approximately \$75,000,000 went to satisfy the underlying mortgages of the companies acquired.

**A.** Well, to satisfy all of the mortgages, the bonds issued under mortgages then on the property. And now, I make that little distinction, because the Penn Power and Light Company did sell back, I think, about 1921 or 22, put a first refunding mortgage on, which covered new additions to the then properties which would be the first on it now, but it was second so far as it would apply and the ones that would underly it. So, these were not what you might call all strictly underlying

mortgages, but every mortgage on that property today, except that first mortgage which is recorded. If that answers your question—I think it does.

Q. I think it does. Then, seven and a half million were used for what purpose?

A. That was to retire the demand debt of the company "The company" pardon me if I used it "company" "and we" but they are all in the same group and I get into that habit; I am sorry.

Q. Was that indebtedness incurred for extensions and betterments to this property?

A. I should judge so, Mr. Evans. It is pretty hard to earmark just how the thing accrued. If our income is not sufficient to meet the outgo, and, of course, you never can build a property out of income any way, but over short periods, you can work your case through. We found it necessary to make cash loans from time to time, and then, as we could we reduced our cash loans. The net amount so used from this amount, the amount from the proceeds of the sale of the bonds was used to retire a demand debt to that amount.

Q. Then, two and half million of dollars goes in cash to the P. P. & L?

A. That is substantially so. These figures I have given you, you understand are round figures that I have in my head. And now, they may vary somewhat, but you will find them in quite some detail in the papers filed as I say, in the bureaus in Harrisburg.

Q. Then, the remainder of the twenty-seven and a half millions went to Mentz and through him to the Lehigh Securities Corporation?

A. I think that was in payment for debentures and contractual debt through these at cost; that is, through these contracts.

Q. In other words, the twenty-seven million and a half, would represent approximately the cost of the stock of these underlying companies, which were acquired?

A. No; I wouldn't say that. You see the balance of the securities with the Lehigh still had to be exchanged to the extent that they went out. There are still ten million of debentures on the power books held by Lehigh, which were given as part payment for these properties. We couldn't get enough money to pay off all these debts, or, rather pass these debts at 81. Have you seen recently the balance sheet, Mr. Evans?

Q. I presume that some of these properties were purchased subject to mortgages, which are reflected in the seventy-five million?

A. Yes sir; all those on which a mortgage existed were purchased subject to that mortgage, and the mortgage note retired. I think the balance sheet which was put out at the time the sale of these bonds will give you an up-to-date balance sheet.

Q. I still am not quite clear, Mr. Sawyer, as to how this fits in with the original agreement under which Mentz was to get \$100,000,000 of bonds and 12,500 shares of preferred stock. Were those bonds delivered to him?

A. Yes, in accordance with agreement. The \$100,000,000 bonds were delivered to Mentz and Mentz sold them.

Q. To whom did Mentz sell them?

A. To this group of bankers and they carried out his contract.

Q. What has happened to the preferred stock that Mentz got?

A. I cannot tell you now, but it is somewhere in the picture. I can tell you that.

Q. May I ask you, Mr. Sawyer, in order to satisfy the committee if they desire it, are you willing to allow the accountants of the committee to examine the books and records of the Pennsylvania Power and Light Company, and the Lehigh Power Securities Corporation in order that they can make a report to us?

A. Well, I would say this. I would be glad to do what I can to get assistance for you, to get information that you need in this case. Of course, in the matter of the Pennsylvania Power and Light Company, I presume you have that right if you want to do it, but with the Lehigh, which is a foreign company to Pennsylvania, I have not the authority to give you the right. I will be very glad to ask the board if they will give you the right, but I sort of feel that such information that you may need to check this would be gladly supplied.

Q. The reason I asked that, Mr. Sawyer, is that it is my recollection that when the Federal Trade Commission asked

for permission to examine the books of the Lehigh Power Securities Corporation, they were refused on the grounds that the Lehigh Power Securities Corporation was engaged solely in intra-state business and therefore not subject to Federal inspection?

A. I signed that letter on advice of counsel.

Q. I want to find out what will happen if the committee of the Pennsylvania Legislature makes a similar request?

A. I said that I think you have the right. I have offered to assist you in any way to help you get this, I want to be helpful. I think the real way to check this up is to take the data that is on file here in Harrisburg and let me see if I can find a guide or guides to help you work it out. That information if I remember correctly is filed in detail.

Q. Are you speaking of the certificate of notification?

A. Yes sir, and I know there is data in the office of the Securities Commission, but whether that is filed under affidavit or not I cannot say. The first information I referred to is.

Q. I have just been informed indirectly through the Secretary of the Public Service Commission that the certificate of notification is not actually filed, that it has been lodged with the Commission, but Mr. Morgal, the Chief of the Bureau of Accounts, has not accepted it; I don't know anything about that, that is my information?

A. The information I have is that it was filed. It was stamped and given a file number and the Pennsylvania Power and Light Company holds the receipt from the proper officials of the Public Service Commission for the certificate of notification.

Q. Mr. Tevell, the acting secretary of the Commission, says he has not got the information up to date, and that may account for it.

A. The reason I feel quite sure about it is because I had to follow the thing in detail because of the short time in which we had to act, and I wanted to be sure it was filed before we permitted the bonds to be delivered.

BY FATHER COX:

Q. Don't you think it would be a great satisfaction to the public to be allowed access to your books for accounting purposes?

A. My thought, Father, was not to impede anybody. I thought I could help them get it instead of delving through the books of a company that does the volume of business that the power company does just to find this one thing, it having once been done, and it might be done right here in Harrisburg. You understand I am at your service and want to do everything that is right and reasonable to help you find out what you want to know.

BY MR. RHODES:

Q. The matter of filing your certificate of notification was of vital importance to you as far as your bondage was concerned, was it not?

A. It certainly was. The certificate as I understand it must be filed before or concurrently with the issue of securities so that it was quite important.

Q. Did the Commission notify you that there was any question about its acceptance?

A. No, we had notification. I think, and this is just hearsay, that they asked for some additional data which we either have supplied or are preparing at the present time.

Q. And you are under the impression it was marked filed, and given a number?

A. I think I have a photostatic copy.

(Witness exhibits paper to the committee.)

BY MR. EVANS:

Q. Mr. Sawyer, I think one of the reasons for asking for permission to go into the books of the Lehigh Power Securities Corporation is that these books as far as I understand would be the only place where the exact price paid by the Lehigh Power Securities Corporation for these various companies will be found. Is that correct?

A. They will show the price paid for the ones which the Lehigh Power Securities Corporation purchased.

Q. And it is the only way that that price could be ascertained?

A. Well, we have already given you an affidavit from the Public Service Commission, that is to the effect that the Lehigh

made no profit on the Harrisburg merger, and in the Lancaster so called merger.

Q. I have not checked the records, but I am informed, that that is true of the 1930 merger but is not true of the 1928 merger, and there is no affidavit in evidence that could be found now.

A. It is my recollection that we gave one because there was quite some discussion about it, and there was no reason why we should not put it in, and we might as well swear to it, it was all right; there was nothing wrong.

BY FATHER COX:

Q. It would not make any difference then if they did look into your books, it would be the same thing?

A. Yes, they will find the Lehigh made no profit on the transaction.

Q. That would be very satisfactory to everybody if they could feel that way. If there is any doubt in any minds, that is the reason for the insistence in looking into the books.

A. However, I personally, have not the authority to permit such a thing, but I will be glad to submit the request to the directors. I am sure in so far as giving you help is concerned, they want to do it, but after opening the books for an audit now after having taken this position with the Federal Trade Commission, we might have some hesitancy.

Q. You might feel differently after a few years.

A. Well, that may be, I quite agree with you that conditions and times change and that may be.

BY MR. EVANS:

Q. The reason given to the Federal Trade Commission would not apply to this Commission would it?

A. No, certainly not. Of course, I think the condition also applies to this Committee with respect to those books, unless possibly you have some little bit of a way to get something that might apply in Pennsylvania, I don't know about that, but any way we will do what is reasonable. Don't let me give you the impression that I am trying in any way to block the Committee from getting the facts and the proper picture of the atmosphere of this thing.

Q. Has it been the practice of the Pennsylvania Power and Light Company the Lehigh Power Securities Company to sell stock to its employees and customers?

A. It has been the practice of the Pennsylvania Power and Light Company to do so, but not the Lehigh Power Securities. The Lehigh Power Securities sold an issue of preferred stock to the public some years ago, but it did so through the usual banking channels.

Q. Has it been your custom, so far as you are informed, in issuing securities on your Pennsylvania properties for which notification has to be filed with the Pennsylvania Public Service Commission, not to file that certificate until after the securities are being sold by the bankers?

A. I think the bankers contracted to sell the bonds, when and if they were received.

Q. I appreciate that.

A. And that was many days after the filing of the certificate.

Q. Well, the funds were to be delivered as I remember it on April 22.

A. The twenty-second.

Q. And the certificate was filed on April 18th, is that right?

A. I am not really sure, but it was about that date.

Q. And that is the usual practice as far as you are informed?

A. Well, the practice is to comply with the law which requires that the certificate be filed before the bonds are issued. Now, if I may go into that transaction a little bit, as I remember it, the trade with the bankers, they had calculated on getting a good deal, any way the trade with the bankers was not consummated until one Monday morning which was after the first of April—and the first of April was on a Wednesday, and it was the sixth of April before we were able to sign the contract. The trade was negotiated worthily and the contract signed that date and I think the bankers put out their circular about the 7th as I remember it. I know they put it out very quickly. The bonds were sold for delivery when they got them, and they got them. Now, the date at which we were to settle, as I recall it was the 22nd day of April. Now, the 6th of April was the first opportunity we had to start to prepare the certificate of notification, which as I said before

was a very voluminous thing. Moreover, they asked us to abstract some thirty odd mortgages and attach the abstract to the certificate. There were also several tables, as I remember it, and so on and so on, without going into a lot of details, that had to be prepared, and by the time that was passed on by the auditors and the treasurer and the legal department, down here in Harrisburg, I think we made pretty good time if we got it in on the 17th.

Q. Well, it was quite possible, was it not, Mr. Sawyer, to prepare a very large part of that certificate of notification before the bonds were actually sold to the banks?

A. Well, if we had known that we were going to sell them, that would be true, but two years ago we thought we would be able to sell them, but a legal technicality developed at the last moment which required a sixty day stockholders notice, and while we were waiting for the sixty days, the bond market slipped away and we didn't sell the bonds. This time the bankers, being very good traders, talked about the condition of the mortgage that they thought ought to be modified in view of the possibility of their selling these bonds, and we sort of expected that they might make us an offer which they did finally, and after considering for, I guess, about forty-eight hours, if I remember correctly, in checking up, we decided that it was a very good trade. Now, we had no real idea that those bonds would be sold until that acceptance, so that about all the preparation that we had that was useful in this certificate was the mortgage, which had not been entirely completed and we had several things to thresh out with the bankers and the proposed trustee before it could be approved, printed and attached to this certificate so that due diligence and speed included night and Sunday work—I guess there was a Sunday in this period because I worked both of them including Easter, personally, and I should say that we got it in as quickly as it was possible to do so, and of course, within plenty of time. I don't know why stress the time. If you will tell me what you have in your mind, probably I can help you.

BY MR. EVANS:

Q. I think, Mr. Sawyer, that one of the reasons why there was some uncertainty about this issue was the fact that at the time the bonds were being sold by the bankers, neither the Securities Commission nor the Public Service Commission here had any knowledge of the situation at all?

A. Well, I am sorry if they feel that they were in the least bit slighted, but we did the best we could, and we complied with the law and the rules. As far as the securities commission was concerned, their notification comes from the sellers, I believe, from the sellers to the public.

Q. The dealers?

A. The dealers, yes, and not from us. Presumably waited until our certificate was filed before they proceeded, because there would be no object on their part in filing unless we had gone through with our formalities.

Q. Well, I think the Securities Commission requested them for some information which they gave?

A. Well, I think your question is quite in order, Mr. Evans, but we just did the best we could, and it was not humanly possible to get it in any sooner.

BY FATHER COX:

Q. Are the banks that took care of your issue in any way associated?

A. No, Father, there is no—we have always dealt at arms length, and of course—I am just trying to picture—I think probably the only tie that you could possibly get would be that the president of Guaranty Trust Company was a director of National Power and Light. That is the only thing you can probably tie anywhere, and that is very remote.

BY MR. RHODES:

Q. Well, the Electric Bond and Share is more or less owned by the Morgan interests, is it not?

A. Of course, I am not able to answer that, but I can tell you this, from reports of the Electric Bond and Share Company, which have been put out this year, there is no stockholder, as I recall it, no single stockholder, that holds over four per cent. So, of course, the Morgan interests would not—

Q. Yes, of course, but the Electric Bond and Share is more or less recognized as affiliated with the Morgan interests, and

so is the Guaranty Trust Company? I am not insinuating anything by that. I am merely just—

A. I am glad you mentioned that. I don't know whether you want to put all of this into the record or not—

MR. TURNER: I think the stockholdership question is an important question, because it arises in the minds of a great many people.

THE WITNESS: Well, I would say definitely, no, that the banking house of Morgans does not control the Electric Bond and Share Company.

BY MR. RHODES:

Q. I was under the impression that the Morgan interests though had quite something to do with the operations of the Electric Bond and Share and were affiliated with its financing. They may not own the company, but I understood they were more or less the bankers of the company?

A. No. (Remainder of the statement of the witness off the record, by direction of Mr. Evans).

BY MR. TURNER:

Q. The Electric Bond and Share is a holding company. Is that stock held in Pennsylvania or is it scattered outside?

A. The stock of the Electric Bond and Share?

Q. Yes?

A. I don't know, except what is in their report, I think I have it here, and I think I can show it to you. There is a very interesting table in there as to its ownership, and it was put in there, I am sure, to clear up this very question that you have asked.

(Discussion off the record.)

MR. TURNER: Mr. Sawyer, won't you just read into the record, the amount of common and the amount of preferred stock? Not in dollars, but the number of shares; and then the statement there which appears on the bottom of that page?

THE WITNESS: Mr. Turner asked me to read this into the record:

"Only four stockholders held as much as 1% each of the total common stock and of these only one held in excess of 2%. This one stockholder was Electric Bond and Share Securities, Inc., holding approximately 4% for sale to officers and employees under the stock-purchase plan approved by the stockholders in 1929."

BY MR. RHODES:

Q. May I make just one other suggestion, that the names of the board of directors be incorporated in the record, as set forth in your statement.

A. Of the Bond and Share?

Q. Of the Bond and Share Company?

A. Yes sir. They are as follows:

S. Z. Mitchell, Chairman,

Frederick A. Fennell

E. K. Hall

Lewis E. Pierson

Frederick Strauss

George H. Howard

C. E. Groesbeck

Edwin G. Merrill

William C. Potter

MR. MOORE: We will take a recess until 6.30 this evening

#### AFTER RECESS

MR. WALKER: I would like to introduce in evidence a letter from the University of Pittsburgh and ask that it be spread upon the record.

#### "THE UNIVERSITY OF PITTSBURGH

University Extension Division

April 1, 1931.

Dr. John G. Bowman,

Chancellor of the University.

My dear Dr. Bowman:

I am replying to Miss Smith's request for information about the question raised by Mr. Walker.

At a recent meeting before a Public Service Commission meeting at Harrisburg, Mr. Eddie McCloskey of Johnstown, appearing as a taxpayer, was quoted by a staff correspondent of the Pittsburgh Sun Telegraph as saying that the teachers in the Johnstown Center of the University of Pittsburgh were teaching "utilities" and doing it from the corporation view-

point. So far as I know, this statement did not get either on the Associated Press or the United Press wires and it did not appear in any Johnstown paper. Upon Mr. McCloskey's return from Harrisburg the next day, he was faced by Mr. James Killius with a request for an explanation of this statement. Mr. Killius reports Mr. McCloskey as replying that he had made a mistake and that the teacher in question represented the Pennsylvania State College rather than the University of Pittsburgh. It appears that Pennsylvania State College is teaching a course in Corporation Accounting which we had previously declined to handle for the Associated Gas and Electric System. This is doubtless the course in question. We teach no course at Johnstown in which this issue could possibly be raised.

Very truly yours,

(Signed) Stanton C. Crawford.

PAUL B. SAWYER recalled

BY MR. EVANS:

Q. Mr. Sawyer, according to the testimony before this Committee, the transaction in 1928 resulted in the assets of the companies acquired being entered on the books of the Pennsylvania Light and Power Company at \$54,293,903.53, as compared with the net book value of these assets on the books of the individual companies of \$24,543,612.43. If this transaction had taken the form of a direct merger of all these companies, without any intermediation of the Lehigh Power Securities Company, or of Mentz, that change would have meant a write-up in the valuation of those assets of between 29 and 30 million dollars, and in the same way in the 1930 transaction, the assets of the companies acquired were entered up on the books of the Pennsylvania Power and Light Company at a net value of \$25,549,628.18, as shown by their 1930 report to the Commission, as compared with a net book value on the books of the companies acquired of \$11,833,467.65, or a write-up in this case of \$13,716,260.53. Now, these two combined make a total write-up on the books of the Pennsylvania Power and Light Company over the value at which these companies were carried by the merging companies of \$43,466,451.63. As I understand your testimony, you feel that that was a perfectly proper charge, owing to the fact that the Lehigh Power Securities Company had actually paid this increased price for the various companies acquired?

A. That is not the reason, Mr. Evans, in toto. The appraisal of the properties by Mr. Stebbins, indicated, and he so testified, that the values of the properties exceeded that amount, so to be conservative, we put the cost price over all on the record.

Q. Well, in general, do you think it is good utility practice to enter on the books of an operating utility a write-up of its fixed capital, which is arrived at by a valuation of its property?

A. I don't subscribe to the word that you use in calling it a write-up. It is the entry on the books of a value which we felt was a conservative one, and not the full value.

Q. What I want to get at, Mr. Sawyer—

A. Excuse me—I don't want to quibble about words, I just want to give you the impression that it was something the Pennsylvania Power and Light Company acquired, and wishing to have its record as near as it could have it correct, put it on at this value, and the best way to find the value was, we felt, to employ a disinterested outside competent engineer who would value, as near as he could, the property, or would get the value to which we would be entitled. Now, he told us the value he reached was greater than the amount paid, so wishing to be conservative, I say again, that we put on the amount we paid.

Q. What I want to get at, Mr. Sawyer, in the first instance, is your opinion, as one of the leaders in the electric industry, of the practice of operating utilities—book values of their fixed capital, by having an appraisal made, which showed a reproduction cost greater than that on their books.

A. I would like to answer in two ways. The first answer to your question, as to not agree with my position in the utility field. I don't agree with you in my position in the utility field. I think, Mr. Evans, the proper way to proceed is to arrive as fairly as you can at the value, or something under the value and have your books correct as nearly as you possibly can get them. As I understand the value ques-

tion, it is a fair value of the property, by taking into consideration all of the elements that you must take into consideration in arriving at that value, the reproduction new, the piece meal construction, the time in which you did it, the location, whether it is all compact, or whether it is scattered, and all of the thousand and one factors that come into it. Now, of course, values change from day to day, and you cannot change your value on your books from day to day. You fix it when the opportunity comes in the best way you know how.

Q. But should not your books reflect the cost of the property?

A. Well, when you enter the value of something that you acquire, it seems to me you should enter its value and of course, in this case, we put the cost on—

Q. I am getting away entirely, if, I can, from this case.

A. But I want to make it clear that I am not tying this cost and the value together.

Q. I want, if I can, to get your opinion. Take for instance the situation that we had this morning, and perhaps it puts you in an unfair position to ask you to criticize another utility's practice, but the reports of the Duquesne Light Company to the Public Service Commission show that in the year 1927, without the acquisition of new property, they revalued, or they valued—had a valuation made, I will put it that way, of their property of some sort, and on the basis of that they wrote-up their book value of that plant some \$24,000,000. Now, from the standpoint of effective regulation and sound utility practice, do you feel that that is a desirable practice.

A. Well, Mr. Evans, this is going to be difficult thing to answer without stepping on somebody's toes. Can I do it in a general way? If at any time you find that you are not on the right path, you better just quit and get there, get over on the right path.

Q. Mr. Sawyer, did you ever hear of any industry, other than a public utility, that did this sort of thing on their books?

A. Well, would that be of any—well, I won't say anything that looks like evasive. No; I have not.

Q. In other words, then, the reason, as I take it, for doing it among utilities is because it is desired to keep the books on a satisfactory basis for ratemaking purposes?

A. That may be one of the reasons; I think—I know we at least try to keep a true record of what exists, and whether we had a rate case pending or in practice, I think, if we found such a state of affairs we probably would correct it.

Q. I am told, from the standpoint of effective cost accounting, which has been practiced by one or more of the electric utilities in Pennsylvania, and which Mr. Zimmerman stated they contemplated putting into effect in Philadelphia Electric system, it is impossible to establish such a system unless you keep your books on the basis of costs, without write-ups of viewed valuations. And now, does the Penn Power and Light attempt to keep any current cost accounting?

A. Of what; current cost accounting of what?

Q. I am thinking, for instance, of the system, which has been brought to the attention of this committee, which the Penn Central put into effect under the Day and Zimmerman management, which attempted a great deal of detail to ascertain the costs of servicing the various classes of consumers, and even went further than that?

A. I can't tell you right now, Mr. Evans, what the Penn Central has done, but, of course, the Penn Power & Light Company from time to time, and I might say probably almost continuously attempts to determine the cost of attempting to serve its various classes of customers. Now, is that what you mean?

Q. Is that current day to day cost keeping or is it\* from so-called cost studies made from time to time?

A. I am not so familiar with that phase of the work as I might be, but my impression is that it is done from time to time.

Q. If a company does write-up its property on its books through valuations made at a period of peak prices, has it not got a corresponding responsibility to write down its books in a period of low prices?

A. I think that would naturally follow with a company that is making an effort to keep its records parallel with its values.

Q. Did you ever know of any utility that wrote down its property on the basis of a valuation?

A. No. The probable reason is that the electric utilities, of which you are now speaking, have been on the make right

along; they have been increasing their values continually, and been expanding in business; and there has been no occasion to write it down; they have not shrunk.

Q. It is not a question so much of the expansion of their plants as it is of the trend of prices?

A. Isn't this the point, Mr. Evans: The amount that is on your books represents the fair value of property, irrespective of what it may have cost you. It is determined at such intervals as this merger in the case of the Pennsylvania Power & Light Company. It is added to and deducted from as additions are made to the property and the equipment is retired.

When the question of whether you are earning a fair return upon a fair value comes up, you don't take the amount on your books as a fair value, you make a valuation at the time, take the fair value at that date, taking into consideration all of these things that we have been talking about; the cost of piecemeal construction, the purchasing power of the dollar at the time, whether it has gone up or gone down, and arrive at a value of the property as of that time. Then, I presume you must arrive also at what is a fair return on that fair value at that time; taking into consideration the cost of money, the general prosperity or not prosperity of the country at the time, et cetera.

Now, what is there that you want to know about the book value and the fair value for a return basis?

BY MR. RICHARDS:

Q. Doesn't the labor cost enter into that; would not the labor cost be a large factor in deciding fair value?

A. Oh, my yes. Of course, practically every thing that has to do with it from its crude state to its finished product is largely labor; eight-five or ninety percent. I should say. So, the labor market fluctuating, will have a great deal to do with the fair value. I presume there are other factors that would be taken into consideration. If the labor market went off and you were determining a fair return of what you had to do, when your labor market was high, that would be one factor in determining what the fair value of this piece of property happened to be at the time.

BY MR. EVANS:

Q. I am afraid I have not made myself very clear. What I want to get at, if you can advise me is what useful purpose is served by a write-up of the value of fixed capital on the books of a utility due to a valuation other than first getting the books in line with a rate base which will be satisfactory to the utilities, and second for the purpose of issuing securities?

A. I am not so sure that I follow you, Mr. Evans, and I will refer to what I said before. The intent is to have your records as accurate as you can make them. Now, of course, you cannot follow—

Q. Don't book records represent costs? Have you ever seen a business which attempted to keep its books from year to year on the basis of reproduction value, rather than the actual cost of plant?

A. This is the only business I have ever been in, Mr. Evans. I would answer you if I felt competent to do so, but I don't. What is it you are trying to find out?

Q. We have a great many cases of these write-ups of property of utilities on the basis of ex parte valuations made by someone connected with the company which produces fixed capital far in excess of the actual cost of that fixed capital. I am trying to find out—you are a utility man—what is the philosophy back of doing that?

A. I don't know that we have done that. I don't feel we have done it. Why should I answer it? We have not done it, and why should I know what the cost is. We do what we think is right. If we have not done it correctly, will you tell us what is wrong with it?

BY MR. HAGMAIER:

Q. You think you got a bargain when you bought those properties?

A. I certainly do.

BY MR. EVANS:

Q. Mr. Sawyer, evidence was introduced before the Federal Trade Commission in connection with the Electric Bond and Share Company, that the Lehigh Power Securities group of companies in 1927 paid fees on their services to the Electric Bond and Share Company. Among them were engineering

charges amounting to \$398,441, auditing fees \$11,378, commissions paid by the P. P. & L. for supervising sales of preferred stock in customer ownership campaign, \$76,656, supervision of these, \$699,067, all of which went to make up part of the total fees collected by the Electric Bond and Share Company in 1927 amounting to \$6,819,609. Is the contract which was in force in 1927 with the Electric Bond and Share Company covering these services still in force?

A. No, it is not. Of course I have just followed along with these figures, you have mentioned. I have no recollection as to just what they are. But what is this figure \$6,900,000?

Q. These were the total fees from all sources?

A. Well, I can tell you about the service contract if you would like to have me do so, and that might save you some of these questions. The Electric Bond and Share Company has a supervision contract in existence now which can be cancelled by either party—I am speaking of the Pennsylvania Power & Light Company, and there are others with the other subsidiaries which I mentioned a while ago—can be cancelled by either party to it I think on sixty days notice, for a percentage of the gross earnings of the operating company on a sliding scale basis. The applicable one to the Pennsylvania Power & Light Company I believe is about 1.1 per cent.; it may be 1.2, for which the Electric Bond and Share Company renders expert advice and supervision on all phases of the operating company's assistance—that is, the Bond and Share, being made up in addition to certain clerical and other forces, of a group of highly trained experts in engineering, accounting, operation of various classes of utility business, planning for the future as the finances for expansion to territory, or engineering looking to this expansion, and consultation looking to this expansion, and so on, and so on. Also, the Bond and Share Company does a large amount of group purchasing for all of the companies supervised by it in which it is able to obtain very much higher and extra discounts because of quantity purchases. All of these extra amounts over and above what the utility could get through his smaller purchases are turned over to the utility. The supervision puts an officer, if it is so wished by the operating company, who consults with the management and with the board of directors and acts more or less as a clearing house again, if you please, between these experts of the Bond and Share Company and the operating company. In that way the operating company can obtain a price, for instance, as we did in this sale of first mortgage bonds of the Pennsylvania Power & Light Company, something that the power company has done once in the period of its existence and probably will never do again; the entire work is supervised by the Electric Bond and Share Company as the terms of the mortgage, the negotiations for the sale of the bonds, and so on, that is, waiting on the call of the operating company, are these expert advisers of the Bond and Share Company and has this to do with all companies that it supervises, something that we are doing continually, sometimes twice a week, or maybe once a month, so that the best expert advice available is there on call by the operating company all the time, and you can see it is used and the operating company is not required to go out and employ some professional to obtain this advice and assistance who of course under the conditions of employment would expect to get stand-by pay.

The provision is subject to the Board of Directors of the operating companies, which, in the case of the Pennsylvania Power & Light, is all local people, who decide the policies of the company, and on all questions of importance, of course, they obtain advice from the members of the Bond and Share, who may have had experience elsewhere. Take for instance the steam power house efficiency engineer of the Bond and Share. He has his staff, he is in constant touch with the efficiency of the steam power houses of all of the companies that are supervised by the Electric Bond and Share, their plants in many states of the Union, and in a number of foreign countries. Those statistics are collected and made available to the people here in Pennsylvania for comparative purposes, and also to see how they can better their own operations, and if they are unable to interpret the report, the efficiency man will come out and explain and help them to adopt some method that may have been developed by some one in the some distant part of the country that has turned out to be a very efficient thing.

That, in general, is the way it works in all of the phases of the management, and the prospects for the future, and the

planning for the prosperity of the company and planning to get a sound, safe country, that can use a good service at continuous rates, at as low a price as it can to maintain its credit and standing.

BY MR. EVANS:

Q. I understand that Mr. Wise will be able to give us the amount of those fees paid by the P. P. & L. in 1930?

A. If I gave them to you, it would be because I received the information from him, so it would be better if he gave you the continuous figures, rather than for me to repeat something that has been told.

Q. Now, does the Phoenix Utility Company pay fees to the Electric Bond and Share Company?

A. I don't believe so, Mr. Evans. I am not an officer of the Phoenix; I believe if the Phoenix has anything left after taking care of its own overheads, pays dividends, but to what extent, if and when, I cannot tell you. I don't know.

Q. The reason I asked is that Exhibit No. 12 on page 654 of the Federal Trade Commission Volumes 23 and 24, indicates that during the year 1927 the Phoenix Utility Company paid fees to the Electric Bond and Share Company totaling \$147,138.58, marked Harrisburg; \$192,339.43, marked Pennsylvania; and \$14,143.74, marked United. Do you know at all what those fees would be?

A. No, I don't, Mr. Evans. I recognize the name, of course, of the Harrisburg Company and the United, which was the old company across the river in Lemoyne, and no doubt the Phoenix did some work, construction work, for those companies at that time; when they were operating under their old corporate structures; but I can't imagine how Phoenix could have paid any such amount to the Electric Bond and Share for anything it did for those companies.

The Phoenix is a contracting company, an engineering company, an engineering company, that does work for a fee. It has its overhead expenses, just as any other contracting and engineering company has. It gets 4% on the construction, but a large part of that 4%, of course, is made up of the cost to keep its own offices and its own forces, and to look after such other things as it may have.

The only outcome the Phoenix, that I could imagine, would have there, would be possibly a dividend on its stock, if it earned any.

Q. Well, are you able to say of your own knowledge whether the Phoenix Company in determining the cost of work which it does, for instance, for the P. P. & L., includes in that cost any fees paid to the Electric Bond and Share Company?

A. Oh, no, because everything that the Phoenix receives its fee on is open to inspection of the Pennsylvania Power and Light Company, it is a part of the cost of construction work. I am not familiar with the Phoenix, I have no connection with it, Mr. Evans, and I don't believe my testimony is of any particular value on it. I am just giving you my impression; my impression is that the Phoenix is a struggling construction company.

Q. Well, this exhibit divides up the fee, for instance, paid for Harrisburg by the Phoenix Utility Company as follows: First, salaries, divided among engineers, \$20,992.06; draftsman, \$47,049.89; purchasing and traffic, \$3,030.75; inspectors, \$2,748.48, or a total salary of \$73,821.18. Second, in direct charges, \$73,317.40, which together make up together the total of direct and indirect charges of \$147,138.58?

A. Well, Mr. Evans, as I have said before, I have no connection with the Phoenix, and I am sorry I cannot clear that, because it has the name of the Harrisburg company and the United connected with it. Is it possible that through the Federal Trade Commission's investigation—and you understand that I have not been in it in any respect whatsoever, because they had no jurisdiction over our Lehigh records—it is possible that in working into this record, that they have got something like this first record you have on Mentz' agreement, they left it wide open on one end, without the proper data to support the statements? If you are interested in what the Phoenix did for those two companies on those dates. I think that we can get the data for you or show you where you can get it, because I would like to clear your mind and clear this record on it.

Q. I think the thing we are perhaps interested in, Mr. Sawyer, is whether in any cases there are indirect fees, if I may so call them, paid by the Pennsylvania Power and Light

Company, through any of its affiliated companies, which in turn pay fees to the Electric Bond and Share.

A. Well, what you want to get at then, as I understand it, is there any other channel where fees are paid other than the supervision agreement and the Phoenix Construction agreement.

Q. Directly or indirectly.

A. Not that I know of. All of the charges that are paid are covered by these two contracts.

Q. Now, it has been suggested to this Committee that management contracts and other similar contracts, between operating companies and their affiliated companies, should be made subject to Commission jurisdiction, and should be filed with the Commission. What are your views as regard to that.

A. Well, our contract is filed with the Public Service Commission, and that answers your question as to whether or not they should do it. In fact I think we filed one this week in the Valley Railways case. They are all typed, and they are all the same except as to the name and date.

Q. And so far as you are concerned you see no objection to suggesting this Commission regulation.

A. I think the Commission, if I understand its powers, has the authority now to pass on whether or not that charge is a just one to enter into the operating regulations.

Q. When a rate case is actually pending?

A. Yes. Is that what you want me to say?

Q. I had in mind going a little further than that, Mr. Sawyer. It seems too undesirable to have to bring a rate case every time you wish to have a determination of whether or not the charges are fair.

A. Oh, well, of course, that would be an impracticable thing to do, but I should not think that would be necessary. You naturally, and everybody wants to give a public utility the right to prosper, and give those who work with it opportunity to make a little something out of it. Of course the utility must give good service at a good rate. Now, if the rate is too high, for the services rendered, why, of course, the utility cannot grow, your people won't use the service. If that service is not high class, there is a large amount of business that you cannot get. On the other hand if you permit them leeway to extend the business, lower the rates as rapidly as good business judgment will warrant, permit the company to have a good sound credit, rating, why, everybody, will be happy, and you will not—and this is just my opinion, from my own experience with it, if you stifle the utility company so that it either cannot give good, equitable service, decent credit, it cannot stand. It will hurt your community. All communities will prosper and grow with the public utilities. Now—

Q. Well, the only thing so far as—

A. Now, the proper authorities of course, should keep in touch with what the utilities are doing, and if there is tendency on the part of any utility to do something that is not right and proper, of course, they should be disciplined.

BY MR. RHODES:

Q. There are other charges, management contracts which the Commission would not have control over, these things which you have just enumerated?

A. Well, if the Commission had not approved such payment by the utility, then the utility would have to pay it out of its fair return, and it would have something to do with the rates, as I understand it.

Q. I understand that, and what objection would there be in having the Commission scrutinize these contracts and approving them, providing they felt that they were fair and proper?

A. I don't think there would be any objection as far as supervision of the contract of the Pennsylvania Power and Light with the Electric Bond and Share goes. That has been before the Commission years ago, and there are copies on file now. We think it is an excellent contract from both sides.

Q. In the event that the Commission should refuse to approve one of these contracts, it would have no particularly adverse effect, would it?

A. Well, I think it would do this to the utility, if the utility had to, if it could, and I say that advisedly, if could get this service elsewhere, piece meal, it would have to pay a great deal more than it does. I say if it could get it. I don't want to throw bouquets at anybody, but there is no other organization except this type of organization—

Q. But the utilities were able to function before they were taken over by holding companies?

A. True. But they didn't have the advantage of the experience that they now are able to take advantage of. I think I get your point all right, and I think it is well taken, and the natural inference is that a utility having a full quota of offices and employees, is equipped to do all and everything and sundry things that has to do with its business. Well now, the Pennsylvania Power and Light Company as an example, of course, has had this piece of financing that we have spoken of, just once. The power company's actual life now is about eleven years, and the chances are it will not, at least not for a generation I would say, have another piece of work of this kind to do. Now, generally, personally, if I were the president of the Pennsylvania Power and Light Company, could not trade at any such figure as that, nor could the legal staff of the Pennsylvania Power and Light Company, giving it due credit for being an excellent one, work out a mortgage with all of the modern things in it that we now have, nor could, if I were the head of the Pennsylvania Power and Light Company make a trade with the bankers on as good a price for the bonds as they did.

Q. Then you think the holding company is primarily interested in the financial land?

A. No, I would not just say that, I said that because we have been talking about that particular feature of it.

Q. Is that the logical difficulty that most of us have, that holding companies are creatures of the banking interests, and that they are interested in the financial aspects of the company only?

A. That is a wrong impression. A holding company deals in diversity just like a department store, they sell all and various sundries kinds of things. A holding company would invest in the speculative end if you please, perhaps in Pennsylvania, perhaps in Texas, perhaps in Carolina, perhaps in Tennessee, and if you have hard times in Pennsylvania, and the speculative end of their investment here did not pan out, why, the chances are that something down south, the cotton crop or the oil in Texas may turn out all right, and vice versa. The holding company thereby diversifying its investment, naturally is interested in having its investments so that it is possible for them to operate in the most efficient way.

Now, that holding company is a company that has to do with the diversity of risks. It is not as I see it, a creature of the banking interest at all. Of course, another function of the holding company, that might give you an idea is, a great many times a local company is unable to raise money; there may be a stringency of some kind; it needs a loan of small amount of money for short period of time; the holding company is in a position with its diversified investment, diversified risk to always have securities or at least nearly always, to go out and borrow money for the local company for its needs on those securities.

Q. And these holding companies, which control the operating companies and dictate their policies, are usually beyond the control of the state?

A. None of the holding companies, the Lehigh, have attempted to dictate a policy in an operating company.

Q. Do you take the position that the Electric Bond and Share Company does not dictate the policy of its subsidiaries.

A. No; it gives advice.

Q. Advice may mean dictation too?

A. Well, the advice has been pretty good up to date.

Q. Don't you think that these holding companies should be detached from the operating companies functions which they control?

A. I am not sure that I follow you.

MR. TURNER: A sort of absentee landlordship, do you mean, Mr. Rhodes?

MR. RHODES: Yes.

THE WITNESS: Well, I won't say that. The Company, we are discussing, the Pennsylvania Power and Light Company is owned by a holding company but its preferred stock, I would say is practically entirely sold right here in Pennsylvania.

BY MR. TURNER:

Q. Where is the voting power?

A. The voting power is in the common stock.

MR. TURNER: I think there is a great deal of sense in what Mr. Rhodes has said, that there is a danger in this fact, if this controlling power is away off, and perhaps ad-

quate local people to look after it, is it not rather a new proposition in this field, and won't we have to wait to see whether it provides better management, reduction in cost; something like the trusts of twenty or twenty-five years ago; we were hollering about, and now we have got piles of them and nobody says anything about them.

MR. RHODES: Then we had Theodore Roosevelt and now we have Gifford Pinchot.

MR. TURNER: No; there is a vast difference.

BY MR. EVANS:

Q. Getting back to these fees, as I understand it, the one point one per cent. or 1.2% you mentioned as the percentage of these fees payable by the P. P. & L., that percentage is based on the gross revenue, is it not?

A. Well, the total gross of the company it includes the net. You see, I have to ask Mr. Wise.

Q. It has been brought to the attention of the Committee that in one group of companies, I think the Commonwealth and Southern, the plan has been adopted of having the company, which renders these services, substantially the operating company, its stock being held in proportion to their gross revenues, so that if any money is made out of these service contracts, it goes back again into the operating company approximately in proportion to their business. Have you got anything to say in regard to that?

A. I know nothing about the plan whatever. It is entirely new to me.

MR. TURNER: It seems to me, Mr. Evans—I would just like to supplement what has been said—it seems to me if you control the management fees and the issuance of stocks and securities, I don't think you need to worry about the holding company. That is what Mr. Attwill from Massachusetts said the other day. He said you didn't have to worry.

THE WITNESS: I am awfully glad you said that, Mr. Turner, because I have been trying to think and say something at the same time. I think you said if the local utility is not performing properly under the regulations that govern it, it can be taken care of right at home without bothering about the holding company. Well, I think that it is best put in the hands of the regulatory bodies here.

BY MR. EVANS:

Q. From what you have said, am I correct in saying that you think the Commission should also have control over security issues?

A. I do not see any objection to it. The only thing that occurs to me at the moment, Mr. Evans, is that in case the Commission does have control, it should be given in such a way that the operating company is not cramped by delays due to investigations, hearings, etc. You take this case again of the Penn Power and Light bond issue, that all came up and it was over in seven days' time, and it is common knowledge that there was no bond issue of any size preceding it for quite some time nor following it for quite some time. In other words, it probably sold the bonds at just the peak of the market and now, if the company had been required to take ten days or two weeks or a month, the opportunity may have gone by them. Now, I see no reason why the Commission should not regulate the issuance of securities of the utility holding company, providing some way is found to permit the operating company to take advantage of these opportunities as they come, all of which revert ultimately back to the users of the service in the form of good service and a right charge for it.

Q. Now, you spoke about your certificate of notification filed without our Commission as having given very complete information in regard to this issue of bonds, which you are now floating. What additional information has the Commission requested of you?

A. Well, some information, but I am sorry that I don't know just what it is, Mr. Evans. It is probably something to further explain the data accompanying the certificate.

Q. What is your feeling in regard to the present methods of valuations for rate making purposes? Have they been satisfactory or should changes be made?

A. A method of valuation?

Q. Yes; in other words, do you believe that the reproduction new is a satisfactory method of regulation?

A. Mr. Evans, I am a public utility man. The Supreme Court, as I understand, has ruled on that question, and if

I am correct the ruling is to the effect that utilities shall have a fair return on a fair valuation, taking into account all these various and sundry items. Now, Mr. Roberts—is that his name—who proceeded me; gave me a very able and learned discussion on that subject. I couldn't hope to use such descriptive and beautiful words, as he did, but I will subscribe to what he said.

Q. Mr. Zimmerman, when he was before the Committee, said that as far as he was concerned, he would be entirely willing to take out the prudent theory adopted as far as the value of construction is concerned. Would that be your attitude?

A. I am sorry, Mr. Evans, I don't know what you mean by prudent investment to start with.

Q. Using as the rate basis the actual investment of the company, assuming that that investment has been made in the exercise of ordinary business prudence.

A. Well, why try to better the Supreme Court of the United States in their decision.

Q. There has been a good deal of testimony before this committee that the reproduction cost new system has been one of the causes why regulation has so largely failed, and that a system can be devised which will obviate the necessity of constant valuations at reproduction cost, regulation will be made much more effective.

A. Mr. Evans, I don't know if your committee is going to better the present set up. We are dealing with variables on both ends. Your values change, and after you have once acquired something, the value of it will change as well. We put out these bonds to mature in 1981 and every bond that matures in 1981 has to be paid for in dollars in 1981. Maybe the dollars in 1981 will be worth twice what they are worth now and buy twice what they will buy now, or they may be only worth half as much and only buy half of they will now.

BY MR. RHODES:

Q. Suppose everything goes down until 1981, your bonds may not be worth half what they are?

A. Surely; when you come to the time of reckoning, and that is when the people say you are to be checked up, I think when the decision of the Supreme Court will come into effect.

Q. Suppose the reproduction cost of your property at that time was not equal to the amount of the bonds. Would that be fair to your investors?

A. No, but that is their risk. The bond man gets a preferred risk, and he takes his chances first at your property if anything happens. Under the conditions that are needed in this mortgage that I speak of, we have to do certain things to keep that property intact as best we can. The preferred stock man doesn't get quite as much security as the bond man does, and the common stock fellow gets all the risk, and he has to have more for his chances.

Q. Under present regulation there is not much risk to the common stockholder either?

A. I would not just say that. Suppose this industrial depression that is on us now, for some reason would cut ten or fifteen per cent. right off the top of our business, the common stock man would not get anything. We had to do that with the Williamsport Railways just this year. I think the rate was 8 cents, and we didn't want to raise it, but we were just dying, so we talked it over with a local group of businessmen and they wanted to maintain the trolley service so did we; so they came along with us to the Commission and we all asked, all of the parties, and we raised it to ten cents, but we didn't get a nickel more, not a cent. There was just enough quit to make up the difference. You cannot do it that way. If you raise the rate you are going to lose the business. On the other hand, if you cut it too much, you will lose all your income, and when it is going against you the way it is now with the trolley companies, you are just out of luck.

FATHER COX: Trolley cars are something that you can do without, but we cannot get along without water and light.

MR. TURNER: There are lots of poor people in the country who do not have cars and have to ride on the trolleys.

FATHER COX: I think the statistics show that there is an automobile for every four people.

THE WITNESS: I agree with you, Father Cox, that the standards of living which we have educated ourselves up to enjoy, requires an automobile for everybody, but the trolley car is the most economical system of transportation in town today that can be devised. Of course you don't want to burn

candles in your home, and you don't want to burn kerosene, but you do want electric light, and you want the company to prosper and you are willing to pay them what it costs.

BY MR. RHODES:

Q. Of course if there is a better method than reproduction cost new, I presume you utility men are willing to have it adopted?

A. Certainly. We are for progress absolutely.

MR. RHODES: The Supreme Court changes its opinion once in a while, too.

BY MR. EVANS:

Q. Mr. Sawyer, can you state approximately what percentage of the fixed capital of the Penna. Power and Light Company has been constructed at post-war prices?

A. No, Mr. Evans, I cannot tell you that.

Q. Your 1930 report to the Public Service Commission shows that \$17,778,807.84 represents the balance of your fixed capital installed prior to January 1st, 1919, as at the close of 1930 for your electric department. What would be your total fixed capital in your electric department?

A. You ask me, what would be the total fixed capital? I don't have that figure in my head. Are you looking at the balance sheet of those years? You have a balance sheet that I gave you this afternoon.

Q. Is that not all mixed up with gas and electric?

A. I am not familiar with these reports.

Q. This report for 1930 would seem to indicate that more than 80 per cent. of the electric property of the Penna. Power and Light Company has been installed since 1919. You don't think that the decline in prices of the last few years makes it of any advantage to you to get off the reproduction cost basis?

A. My dear man, when the time comes to reckon with us, let us get what the Supreme Court says, a fair value of the property.

BY MR. RHODES:

Q. I see you are going to stand on the Supreme Court's idea?

A. I think it is a pretty good, safe thing to stand on.

MR. RHODES: Until we overrule it.

MR. EVANS: All right, Mr. Sawyer, I think that is, all we have to ask you.

THE WITNESS: Thank you, gentlemen.

JOHN S. WISE, JR. sworn

BY MR. EVANS:

Q. Mr. Wise, where do you live?

A. Allentown, Pennsylvania.

Q. And you are president of the Pennsylvania Power and Light Company?

A. Yes sir.

Q. How long have you been president?

A. A little over two years.

Q. What office did you hold in the company prior to that time?

A. That of operating manager.

Q. How long did you hold that office?

A. For about ten years, I should say.

Q. Have you a statement of the fees paid by the Pennsylvania Power and Light in 1930 to affiliated companies for services of various kinds?

A. I have a statement of the fees paid to the Electric Bond and Share Company under the supervising agreement. The average supervision and general services averaged 1.2% of the gross revenue of the company and amounted to \$458,318.

Q. And did you not pay any fees to the Phoenix Utility Company?

A. The construction fees to the Phoenix Utility Company, at the rate of 4%, as provided in the agreement, on construction work, approximating \$3,650,000, amounted to \$145,000, in round numbers.

Q. And did you pay any other fees to any other subsidiary of the Electric Bond and Share Company?

A. No sir.

Q. Do you have any knowledge as to whether the Phoenix Utility Company pays any fees to the Electric Bond and Share Company?

A. No sir, I don't.

Q. Mr. Wise, about 1926 you and certain of your associates purchased the capital stock of the Panther Valley Electric Company, did you not?

A. Why, the Pennsylvania Power and Light Company, or rather Lehigh Power Securities Corporation through a Mr. Robert Jakes, made that purchase of the stock of the Panther Valley Company.

Q. Were you not involved in it?

A. I was not involved in it in any way, other than the night that sale was closed I went to Lansford, and assisted him in closing it up. They had a meeting then of about 58 stockholders, and I went up with him to help close the transaction.

Q. Do you know how much he paid for it?

A. Why, there was about, I think, 14,000 shares, in round numbers, and we paid \$100 a share in cash for those who desired cash, and traded a share of preferred stock on the basis of 105 for a share of common stock.

Q. So that the total consideration was somewhere around \$1,450,000?

A. About, yes sir.

Q. And the Lehigh Power Securities Corporation furnished the money for this, did it?

A. The money and the stock, yes sir.

Q. Did you know at that time that the property of this company had been appraised by Gannett, Seelye and Fleming in 1919 at \$362,000?

A. I did not.

Q. Did you know that in 1923 the fixed capital assets of this company had been written up from \$459,371.31 to \$725,219.27?

A. No, I did not.

Q. Did you know anything about the books of the company at the time?

A. No sir.

Q. Who on behalf of the purchasers did make the investigation?

A. Why, at that time there was considerable competition for a number of the companies, smaller companies, in what is now Pennsylvania Power and Light territory, and Mr. Jakes was employed by the Lehigh Power Securities Company to acquire the stocks of some of the small companies.

Q. Who was competing with you for the control of these small companies?

A. Well, I don't know, I think one of the companies was the Baker-Young Company, they had just purchased the stock of the Mauch Chunk Company several days before.

Q. And for whom were they acting?

A. I don't know.

Q. In other words, the prices that were paid—

A. They are still apparently running the Mauch Chunk property.

Q. In other words, the prices that they paid for these companies were determined on a competitive basis between purchasers?

A. Well, it made us pay a pretty stiff price for that stock, a higher price than I believe we would have had to pay for it if it had not been for that competition. However, I was familiar with the property, because it adjoins our Hauto Power House, which was about two or three miles away on the other side of the mountain, and for perhaps 20 years I had been observing the growth of this Panther Valley Company, and in fact it was a customer of ours. We sold them all their power. We did a good bit of their engineering work. We did a good bit of work for them for which we made no charges. And I knew that for many years they had plowed the earnings back into that company, and I also knew that up until the time that the Public Service Commission put in their uniform system of accounting, that company practically had no bookkeeping or accounting system, and I think in my opinion, while the price was pretty stiff, we were looking forward into the future and were paying for something that was of value to us and to our system, when tied in the whole thing, and that also the physical value, perhaps was somewhat less than the purchase price, nevertheless it was a sound purchase for us to make. At the same time, I think we were purchasing some other companies that we bought at prices lower than the physical value, so that the thing was more or less evened up.

Q. When was the Panther Valley Electric Company taken into the P. P. & L.?

A. I think in 1928. I am not sure. I think I could tell you that.

Q. Was it one of the 35 companies covered by the Mentz agreement?

A. I can tell you in a minute. That came in the 1928 merger, along with the East Penn Electric Company.

Q. During the time that you held the Panther Valley Electric Company stock, prior to 1928, did the Public Service Commission ever take up with you the question of rates?

A. No sir, not to my knowledge.

Q. According to the testimony introduced in 1926 and 1927, the company earned in each year over 21% on the depreciated book value, less construction in progress at the end of the year on its fixed capital?

A. No, we never had any rate cases. We think, of course, its fixed capital was very much below the physical value of the property of the company.

Q. But it was taken into the Pennsylvania Power and Light System at the price you paid for it, at \$1,450,000?

A. The cost, I understand.

Q. Now, it is true, is it not, Mr. Wise, at this time there was a good deal of competition among various holding companies for the companies which the P. P. & L. later acquired?

A. No, I think the only competition we had was just in that valley, the Mauch Chunk and the Panther Valley Company. We found it at no other place.

Q. Was not the Metropolitan Edison System and its owners a competitor of yours in acquiring some of these companies?

A. No, not in this territory.

Q. I mean in the territory of the companies acquired by you in 1928 and '30?

A. No sir, not in this territory. There was no place near most of them, and I am looking at the companies that came in in 1928.

Q. How about 1930?

A. In 1930, I don't know of any competition with the Metropolitan Edison Company with reference to the 1930 merged companies.

Q. You don't know of any competition with any other system for any of these companies?

A. No sir, not to my knowledge.

Q. Then what did you mean by saying there was a good deal of competition in the Panther Valley?

A. In this particular valley.

Q. That was the only one?

A. That was the competition that I ran into, because that came to my attention, yes. In the rest of these territories I think we made some very good buys.

BY MR. WALKER:

Q. Mr. Wise, is your company a member of the National Electric Light Association?

A. Yes.

Q. A member of the Pennsylvania Electric Association?

A. Yes.

Q. And I believe you were president of the Pennsylvania Electric Association at one time, were you not?

A. In 1928.

Q. When did you take office as president?

A. Well, the president takes office some time early in September, so I was president from about September, 1927 to September, 1928.

Q. And during the time you were president, did you take an active interest in the Pennsylvania Electric Association?

A. I have always been interested in the Association, almost from its inception.

Q. Did you ever serve on the Public Policy Committee?

A. I did at one time, yes.

Q. When were you on the Public Policy Committee?

A. I was on the Public Policy Committee for several years, up and during the time I was president.

Q. How many years prior to that?

A. Perhaps three or four.

Q. Was Mr. Walter Johnson chairman of the Committee?

A. Yes.

Q. And you served on that committee while he was chairman?

A. Yes.

Q. Do you recall when that Committee was disbanded?

A. I think it was disbanded about the time I was president. In fact I think I was one of the men who is responsible for the disbandment.

Q. Why was it disbanded, Mr. Wise?

A. Well, because it was a useless committee. It was in my opinion a misnamed committee. It never did anything of any moment. Its chief job seemed to be to hold a meeting at each convention, before the next president was elected, and pick the officers for the following year, and everybody felt that that was putting the control of the officers and executive committee too much in the hands of three or four men, and some of the younger fellows, including myself, we disbanded them.

Q. When did you determine that this committee was a useless committee?

A. Well, I always thought it was.

Q. Well, it received contributions from members of the Pennsylvania Electric Association, did it not?

A. It did at one time.

Q. Do you recall offhand for how long?

A. Well, I don't know just for how long, but I know that there was one period here during the Giant Power legislation, that the Pennsylvania Electric Association needed some extra funds to employ additional legal talent and to employ some experts and some other people to help working up a defense for the industry against that plan, and I think each of the companies paid some contribution to a committee which was supposed to pay it, the money, for these people who were employed.

Q. Was that the only time that you can recollect money was donated to this Public Policy Committee?

A. That is the only time that I ever knew about it.

Q. Now, may I refresh your memory just a little. I show you here Federal Trade Exhibit No. 1114, which is a record of the receipts of the Public Policy Committee of the Pennsylvania Electric Association. It shows that on February 15, 1923, the Pennsylvania Power and Light Company donated \$2,099.51 to that Public Policy Committee. On the same exhibit, January 23, 1925, the Pennsylvania Power and Light Company donated \$3,000 to the Public Policy Committee, is that correct?

A. Correct.

Q. In 1926, the Pennsylvania Power and Light Company donated \$4,200 to the Public Policy Committee?

A. Correct.

MR. RHODES: What years were those?

MR. WALKER: 1923-25 and 26, Mr. Rhodes.

BY MR. WALKER:

Q. February 11, 1927, the Pennsylvania Power and Light donated \$2,500 to the Public Policy Committee; is that correct?

A. Right.

Q. Was all of that money used for the Giant Power Bill?

A. No.

Q. You were serving on the committee at that time, were you?

A. Yes; I was on the committee.

Q. What was that money used for?

A. Well, I didn't disburse the money it was done through Mr. Johnson. All I know about it is that it was paid for experts, attorneys, experts along certain lines for services of people to assist us in working up literature, and plans and other things of that kind. I think we had to employ some speakers before committees for hearing and various things of that character.

Q. In 1923, according to the evidence, exhibit 1114, there was \$19,203.41, contributed to this committee, is that correct?

A. I presume it is; yes sir.

Q. In 1925, there was \$26,900.43; is that correct?

A. Yes.

Q. In 1926, there was \$2,335.44 contributed to that committee; in 1927 there was \$26,277.69, contributed to it, and then, after that, do I understand that this committee was abandoned?

A. The Committee was abandoned, I think, in 1927 and 1928.

Q. And all of this money, that was contributed each year, was disbursed for legal services and experts.

A. As far as I know.

BY MR. RHODES:

Q. Do I understand that Mr. Johnson, former president of the Philadelphia Electric, had charge of the distribution of the money?

A. Well, he did for a while. I think Mr. McCall was president for a while when he was alive, of the Public Policy committee. In fact as near as I can remember, I think I did not attend more than one or two meetings of the Public Policy Committee, and just all that committee did I don't know; but from my point of view I never thought they did anything; that is was a useless committee.

Q. I notice here that you had contributions in 1923 and 1925 and that you skipped 1924. 1923 and 1924 were the session when the Giant Power legislation was before the legislature?

A. Yes sir.

Q. Well there were three sessions, if you will remember, the special session of 1926.

A. There were three sessions; yes sir; and there were a great many bills in that were detrimental to the industry, and I know our association employed quite a few people to assist us in hearings before committees and working up data and in making speeches before committees and matters of that character.

Q. I think Mr. Johnson testified, when he was on the stand that he had hired quite a number of attorneys to represent the association before the legislature at that time.

A. I think so; yes sir.

BY MR. WALKER:

Q. I will read from page 311 of Mr. Johnson's testimony:

"Q. And you have been chairman of this Public Policy Committee of the Pennsylvania Electric Association for several years, past?

"A. Yes.

"Q. It is correct to say that the principal expenditures of the committee had been in connection with legislative matters in Pennsylvania?

"A. That is correct."

Q. Is that your understanding of the functioning of the committee?

A. I think most of the money was spent in just what I have recited; in fact all of it was spent in that way, as far as I know. I know of no money that was spent illegitimately in any way, shape or form by the Pennsylvania Electric Association.

Q. You say the committee was a part of the electric association?

A. It was a committee that functioned under the association.

Q. And, naturally the association would be bound by anything the Committee did?

A. Yes sir.

Q. Do you recall that most of this money Mr. Johnson expended as cash items?

A. I don't know how he spent it.

Q. He was the only one that had charge of disbursing the funds?

A. As far as I know, I never saw any of the money or saw the accounts of it, other than what I read in the newspapers, at the time of these hearings which were held before the Federal Trade Commission.

Q. Are you familiar with the fact that he expended all of this money as cash items, and that there was no accounting?

A. Only what I have read in the newspapers. I have never seen any accounting myself. During those days, too, I don't think the Pennsylvania Electric Association had very much of a budget. The budget was quite small, and whenever matters like this came up it was the general practice that time to ask companies for donations, worked out in some proportion to their gross revenues, to assist in getting additional funds to help out in the work I have described.

Q. Do I understand, that during these years that you were making donations to the public policy committee, your company was also making contributions to the National Electric Light Association?

A. Yes sir; we pay our regular dues, to the National Electric Light Association.

Q. And you also made contributions to the committee on public information, did you not?

A. Yes sir.

Q. And this money?

BY THE CHAIRMAN:

Q. Didn't Mr. Johnson in the 1925 session send out an S. O. S. call for more money.

A. Not to my knowledge, I never got any.

Q. My recollection of his testimony was to the effect that he ran short and had to make a second assessment?

A. I don't know.

BY MR. WALKER:

Q. Your contributions to the committee on public information in 1924, according to Federal Trade Commission exhibit 1039, was \$2413, is that correct?

A. That is about correct.

Q. In 1925, \$2500?

A. Right.

Q. Then, in the same year you also made an additional donation of \$1,000.

A. Well, I don't remember that. I know that we paid about \$2500 a year to that as long as the thing lasted.

Q. In 1926, your donation was \$2500.

A. Yes sir.

Q. And in 1927, your donation was \$2500.

A. Correct.

Q. And in 1928, your donation was \$2500.

A. Yes sir.

Q. And you final donation according to the exhibit, for the fiscal year which ended April 30, 1929 was \$2500.

A. That is correct.

Q. To what account were all these items charged.

A. Why, I don't believe I can tell you where they were charged, but I would say, according to the Public Service Commission accounting system, they describe where you will charge various items, that they were charged according to that.

Q. They would be charged as operating expense, would they not?

A. I would say that they would be in some operating expense; yes sir.

Q. And do you know anything about the text-book survey that was made?

A. No sir, I never knew of any schoolbook survey being made for the State of Pennsylvania or by the Pennsylvania public information committee. There was one made by somebody at one time that went around. I saw it, but like a good many of these other things, I didn't pay any attention to it.

Q. You were a member of the Pennsylvania public information committee in 1925?

A. Yes sir.

Q. And you filed a report in 1925 for that committee?

A. I did not.

Q. The committee filed a report?

A. They may have.

Q. In that report they described the textbook survey which they made in Pennsylvania, did they not?

A. I don't remember, sir.

Q. To refresh your memory, I show you the report of the testimony before the Federal Trade Commission and show you Exhibit No. 1140?

A. Well, I presume that is all right, I don't remember the report. I probably read it at the time and probably filed it. I attended very few meetings of that committee.

Q. You were still a member of this committee in 1926?

A. Yes sir.

Q. And the committee filed a report in 1926?

A. If you say so, I guess they did. I don't remember whether they filed a report or not.

MR. RHODES: With whom did they file a report?

MR. WALKER: With the Pennsylvania Electric Association. In this report they filed in 1926 I show you Exhibit No. 1142 before the Federal Trade Commission, they also refer to the school book survey which the committee was making?

THE WITNESS: Was it the schoolbook survey or was it the publishing of some books on the industry?

Q. You were on the committee that made the report?

A. No I was not on a committee that made a report that I know of.

Q. You were on the committee?

A. Maybe a committee I was on made a report, but I didn't have anything to do with it.

Q. You were not an active member of the committee?

A. Not at all. The committee was really operated in Philadelphia, and I think a representative of the Bell Telephone Company and of the street railways and of the gas companies and of the electric light companies, four or five did practically all the work; but I was an up-state man and I very seldom went there. I don't think I attended more than two or three meetings and I don't believe I saw most of these reports. I remember when the committee got out three or four books describing the electric industry and gas industry and the street railway industry and the telephone industry, but as far as I remember, I read those books and the books appeared to be purely a matter of description of the way these companies operated. I remember that the committee wanted us to take the matter up with our schools in the territory in which we operate, and I discussed the matter with Mr. Sawyer, and we decided that we were not interested in that and never did anything about it.

Q. Are you familiar with the survey which was filed with the Pennsylvania Electric Association by this public service information committee?

A. I don't think that I ever saw it, not that I remember.

Q. During the time you were a member of the Public Service Information Bureau?

MR. RHODES: Did they file such a report?

MR. WALKER: Yes sir, and it is a very comprehensive and complete survey which covers about ten or twelve pages of the Federal exhibit.

MR. RHODES: What does it find? I thought maybe you could give it to us in twenty-five words?

BY MR. MOORE:

Q. Mr. Wise, Mr. Johnson was practically the whole works?

A. Yes sir. I was one of the younger men coming along in the industry and we rather left things to the older men who had more experience.

Q. He testified at length to that and the things he testified led me to believe that he ran the whole thing?

A. That is a fact. We sat in once in a while and looked on.

MR. RHODES: I think he stated it was ethical if you didn't spend too much?

BY MR. WALKER:

Q. Did Mr. Johnson have anything to do with the committee on public information?

A. Yes sir, he was on that committee.

Q. As a matter of fact, all his activities were devoted to the public policy committee, is that not right?

A. I could not tell you about his activities. He seemed to be active in almost every committee; he was quite an active man at that time.

Q. When you were on the public policy committee of the Pennsylvania Electric Association, were you familiar with the practices and policies of that committee?

A. I was to a certain extent, but as I told you before, I never found out that they had any practices or policies.

Q. The expenditures of money and the methods employed?

A. Perhaps I can explain that. In every session of the Legislature there are always of course bills that are detrimental to our interests. And it is always necessary to follow these bills up and to follow the Legislature. Now the Pennsylvania Electric Association does not carry through a large organization and does not carry any lobbyists, and does not carry anybody of that character; we only have a secretary and a stenographer to run the thing, and in these legislative sessions we always have to get quite a number of additional employees to follow this legislation through. Now as the Legislature progresses, some of our men come down here, we all sort of chip in and help out in any way we can, and we follow up the bills. We have to employ attorneys and scrutinize the bills to tell us what the bills mean, and things of that character. Different ones of us who are acquainted with the chairmen of the committees or some of the members of the House and Senate, we go to them and ask hearings on these bills. Now, when afforded a hearing we always have to do considerable preparation and we usually get some outside people in addition to our own men in, to talk at these hearings. Now all of that causes expenses and it is for expenses of that sort of thing that the companies have been contributing, and

that is really as far as I know where all of that money went; in services of that character.

Q. And when you employ these attorneys and experts to appear before the committees, you let the committees know that these experts and attorneys are representing the Pennsylvania Electric Association?

A. They so announce themselves.

Q. Would it surprise you to know that Mr. Johnson testified to the contrary before the Federal Trade Commission?

A. All I know is what I have seen here in Harrisburg at the meetings I have attended, and the people who appeared for us always stated that they appeared for the Pennsylvania Electric Association.

BY MR. WALKER:

Q. And why was it necessary for Mr. Johnson to pay all of these attorneys and experts in cash?

A. I don't know.

Q. And these bills which you believe are detrimental to the industry and against what the Pennsylvania Electric Association wants, does it make any difference whether or not they are detrimental to the public interests?

A. Why, certainly it does. We are only interested in a fair deal. Our industry is only interested in a fair deal to the customer, the public and to the company. Many of these bills are unfair to the customer. For instance, I perhaps might recite one instance, of where we had planned a large program of rural electrification, where many thousands of poles would have to be erected along the highways in the State. The Department of Highways presented a bill at the last Legislature, a tree planting bill, which contemplated planting of trees along all the highways under these pole lines that were built for rural electrification. We worked the whole plan out, and the total rural electrification plan meant an expenditure of about \$80,000,000 in the State of Pennsylvania. If these trees had been planted along all of these highways, the type of construction would have had to be changed, we would have been forced off of the highways to a great extent, where we would have had to buy private right of ways, and we would have had to erected much higher poles. The total increase in cost of that program raised the 80 million to 100 million dollars. Prior to that we had agreed with all of the farmers in the farm group through the Pennsylvania Committee for Rural Electrification, that all these lines would be built as fast as possible, and that the minimum guarantee would be at that time 2% per month on the cost of the line. Consequently legislation of that character, if it had gone through, would have been very expensive to the farmer, and in the legislation the farm group also joined with us, to go up to the Secretary of the Highways, and we finally discussed the matter with him, and that portion of the bill was withdrawn. Now, that is just a sample of some of the work that is being done.

Q. Let me read to you from Volume 3 of the Federal Trade Commission during Mr. Johnson's testimony: "Q. Would a person paid by your association go to the Legislature and oppose a bill without disclosing the fact that he was being paid? A. Of course. Q. That would be perfectly honorable and lawful? A. Yes. Q. Do you agree with that? A. That he went—" I will let you read it.

MR. RHODES: I think you asked Mr. Wise whether they disclosed their identity

MR. WALKER: Yes sir.

MR. RHODES: As a matter of fact, they did not disclose that they were paid.

THE WITNESS: Well, I don't know of anybody who would go out and announce that, I am here representing the Pennsylvania Electric Association, and I am not paid or I am paid. As a matter of fact, today a great deal of the work being done is all voluntary service on the part of the employees of the utilities.

BY MR. WALKER:

Q. You were on this Committee in 1925 and 1926, were you not, the Public Policy Committee?

A. The Public Policy Committee? I believe I was. I will take your word for it, if it is there in the record.

Q. And these experts and attorneys that came down to speak on the Giant Power Project, was it disclosed to that Committee that these men were representing the Pennsylvania Electric Association?

A. Yes sir.

Q. You are positive about that, are you, Mr. Wise?

A. Well, I was there and helped arrange the meeting, and talked to all of these men who came in. There were two or three of them that came there, that I don't believe were paid, but some of them were paid.

Q. As a matter of fact, for example, Mr. James Burke, from Pittsburgh, came down representing the Pittsburgh Chamber of Commerce, did he not?

A. Well, that is representing our industry. If I remember rightly, Mr. Burke spent about four days with us here before he made that speech, and we went over it with him.

Q. Did you have to listen to it for four days?

A. Well, I want to tell you I certainly did enjoy listening to it.

MR. TURNER: Mr. Walker, there are six members of the Legislature here, all of whom have been here for some time. I think we know what happens at hearings.

MR. WALKER: Then you are of the opinion that at the Giant Power Project Mr. Burke was primarily representing the Pennsylvania Electric Association?

A. That is my understanding, yes sir.

BY MR. RICHARDS:

Q. Mr. Wise, Mr. Johnson said something of pinch bills down here, that there was some effort made in pinch bills. Do you know anything about those.

A. I don't know what they are.

Q. We don't up here either, and we are just wondering what he meant.

A. I never heard of them; no sir.

BY MR. WALKER:

Q. Mr. Wise, did you take any part, any active part in the political campaigns last year?

A. Why, I was very much interested in the political campaign, yes sir. I saw that my family voted, and I talked to some of my neighbors about it, and I tried to do what I think every citizen should do, to get out and vote.

Q. Did you make any contributions to any party?

A. No sir, I didn't.

BY MR. TURNER:

Q. How did you escape?

A. Well, I was invited by the three parties to contribute, and I thought that perhaps the safest way was not to contribute to any.

Q. You didn't know which one was going to win, did you?

A. I certainly didn't.

BY MR. WALKER:

Q. When you speak of the three parties, just enumerate them?

A. Well, the Republican, Democratic and the Liberal Party. I would like to say, Mr. Walker, that I have been down at the Legislative Sessions, and I feel that it is part of my duty as president of a company that has about 7,500 employees that is operating in 28 counties, that has 45,000 stockholders, that I would be derelict in my duty if I were not interested in legislation in Pennsylvania, and that I feel that I should do whatever I can openly and above board and honestly to take care of the interests of those people.

Q. I agree with you entirely when you say that, and will you agree with me, will you, to the effect that all that are interested in legislation should be with the Legislatures, openly and above board, and honest isn't that so.

A. Absolutely. And I think the gentlemen sitting here on the Committee that have seen me perhaps during the last four or five Legislatures know, and I think they can all say, I have dealt openly and honestly with them.

MR. TURNER: If you were here at the Legislature you would know that every member of the Legislature knows these men. There could be no secrecy, Mr. Walker.

MR. WALKER: I didn't want to take advantage of anyone.

MR. RHODES: The only thing he ever talked with me about is fish.

MR. TURNER: The only time he talks to me is when he is fighting my bills.

BY MR. EVANS:

Q. Mr. Wise have you followed the testimony that has been presented to this Committee in anyway.

A. Yes, I try to follow it.

Q. So far as your company is concerned, do you want to make any corrections in any of the testimony that you have followed.

A. Why, yes, I would like to call your attention to Raushenbush's testimony in regard to rates in Pennsylvania on the basis of fifteen kilowatt hours, forty kilowatt hours and eighty kilowatt hours, as we check up these figures, he used the rates in effect in 1930, and didn't give us the benefit of the reduction in rates that were put through in 1931.

Q. He has so testified, Mr. Wise.

A. In other words, he didn't give us the benefit of our rates, and apparently in Pike County where we are supplying, I should say, about ninety per cent. of the use in Pike County, he had a rate established there of 15.2 when the rate should of been 9.2.

Q. He testified that his rates were on the 1930 basis.

THE WITNESS: That as far as Pike County area is concerned it is not very determind. the population of Pike County is rather scattered in one or two small towns. We are supplying Monesdale, Hawley, in Pike and Monroe Counties. It is a mountainous region, and we are pretty well serving nearly all of that territory. There are many summer camps up there, many summer residents that we are serving and that is rural electrification.

Q. You are not serving Milford?

A. No sir, but Milford is a part of Pike County.

Q. Do you know what the rates are in Milford?

A. Yes, I think Mr. Raushenbush quoted the Milford rate for all of Pike County, when he gave them he only gave them for Milford.

BY MR. RHODES:

Q. What about Matamoras?

A. That is in the same category.

Q. You don't serve Matamoras?

A. No sir.

Q. What company serves that—a New York company

A. I believe so.

Q. Do you know anything about their rates?

A. Their rates are much higher then ours.

BY MR. MOORE:

Q. Do you serve Gray Gables?

A. No sir. Another point that I would like to bring out, is that I noticed the question was asked here whether or not fifty per cent. of the customers in Pennsylvania did not use fifteen kilowatt hours. Now, you asked for some information, I believe on the Panther Valley Company, and we checked that up for that company alone, and we find that that company, that there are only about five per cent. of the customers of that company that—

BY MR. EVANS:

Q. You are speaking now of domestic consumers.

A. That use fifteen kilowatt hours or under. In a survey that we just recently made in the State of Pennsylvania it shows that there are only about 4.2% customers who use fifteen kilowatt hours or under.

Q. You understand again that that testimony, Mr. Wise, was not that that was not the situation in Pennsylvania, but Mr. Raushenbush was asked that question by a member of the Committee and he said that he had no information as to Pennsylvania, but that a check up in New York City made by the Commission, I think, has shown that in that particular locality the percentage he gave was correct.

Well, that is a very important matter, because apparently the fifteen kilowatt hour customer and under is what is generally known as the little fellow, and that is the customer that apparently this drive on rates is being made for, that they are fifty per cent. of all of the consumers so effected by these rates, and that is not true.

Q. Mr. Wise, have you the tabulation that you referred to in the entire territory of Pennsylvania, in form, so that it can be used this hearing as an exhibit?

A. I haven't any form, I am just talking about my own company, and the facts that I found in respect to this.

Q. You said a check up of the territory, of the entire territory of Pennsylvania shows that four and a fraction per cent. use fifteen kilowatt hours or under?

A. We checked that up just as a matter of information to see where it would land.

Q. In what form did you check that up; we would like to see the statistics?

A. I think each company was asked to make a check and I can produce that—I think I can get that data, if you would like to have it.

Q. I think it would be very helpful if we could, because we have no information along that line now for Pennsylvania?

A. Then in the Raushenbush setup, as far as our company is concerned, he had Harrisburg at a very high rate, I think 10.1 cents a kilowatt hour for fifteen kilowatt hours, when it ought to be about 8 cents. Also at Wilkes-Barre—

Q. Was that on the basis of your 1930 or 1931 rates?

A. 1931 rates.

Q. Let us make it perfectly clear, Mr. Wise, Mr. Raushenbush testified that his study was made on 1930 rates, and that is the case of the Pennsylvania Power and Light Company, there has been a reduction in rates on January 1, 1931, which he had not taken into account. There was no misunderstanding I think on that point. Now what were your 1930 rates in Harrisburg?

A. For instance, in Harrisburg, a consumer using fifteen kilowatts—

Q. In 1930?

A. In 1930, would pay  $8\frac{1}{2}$  cents a kilowatt hour, he has the figure of 10.1 cents. The customer who used forty kilowatt hours in Harrisburg, he had 6.7 per kilowatt hour, and the actual rate is 5.7 cents. On the eighty kilowatt hours he had 5.8 when the actual figure was 4.98. In Wilkes-Barre, forty kilowatt hours he had 9.2 per kilowatt hour, when it should of been 5.7. On the eighty kilowatt hours he had  $8\frac{1}{2}$  cents a kilowatt hour, when it should of been 4.28. They are very wide differences, and I just wanted to call attention to them.

Q. They were your 1931 rates?

A. Those are the 1930 rates.

Q. Mr. Wise, don't try to get this issue fogged. His testimony was as to the 1930 rates, and he made that perfectly clear to everyone.

A. Yes, but he had the 1930 rates—

Q. What were the 1930 rates; can you give them to us? Just give us those rates and let us get that straightened out.

A. This 1930 rate, I will take the forty kilowatt hour—

Q. Take it at fifteen, forty, right straight down, the Harrisburg rate.

A. The 1930 rates in Harrisburg for fifteen kilowatt hours, where he had 10.1, it was actually 8.55. For forty kilowatt hours he had 6.7, it was actually 6.3.

BY MR. RICHARDS:

Q. What do you mean by actually?

A. A bill calculated at the rate.

Q. That is using the ordinary bills?

A. Using the ordinary bill.

BY MR. RHODES:

Q. That may have been without the discount?

A. There is no discount.

Q. Is there a penalty or something? How do you work it?

A. There is a deferred payment. With our company the customer after the bill is due has fifteen days to pay it in; then, after that, there is a deferred payment.

BY FATHER COX:

Q. What does the deferred payment amount to?

A. Ten per cent. That is the cost of running after this fellow to collect his bill, and we think it is a fair proposition, because the man who pays his bill ought not to be burdened with that extra expense.

BY MR. RHODES:

Q. When were these rates change?

A. January 21, 1931.

BY MR. EVANS:

Q. Harrisburg in 1930, was on a room rate basis, was it not?

A. Yes sir.

Q. How many base rooms, did you calculate in your rate?

A. It is still on a room basis.

Q. I asked you, in your calculation that you have given us, how many rooms did you calculate for fifteen kilowatt hours?

A. It worked out on a six room house; what we call a standard house.

Q. So Mr. Raushenbush worked his out on a different number of rooms, that would change the result, would it not?

A. That would make some difference.

Q. And his figures would be just as correct as yours?

A. Except that we would take a six room house as the average house in Harrisburg?

Q. Have you made a housing survey in Harrisburg?

A. Yes, the rooms have all been counted.

Q. You say you have made a survey of the rooms in Harrisburg?

A. I didn't, but our people did; surveyed the whole thing; yes sir.

Q. And the average number of rooms per house in Harrisburg, is six?

A. I mean the counted rooms, in other words.

Q. Is this what you mean, take the total number of rooms in Harrisburg and divide it by the total number of houses, and you will get what?

A. The counted rooms that you use under the rate schedule. For instance there are certain rooms that are eliminated, that under the rate schedule we didn't count, and a six room house is what I call six counted rooms under the rate schedule.

Q. What rooms are eliminated in your rate schedule?

A. Oh, we eliminated a hall perhaps—

Q. Do not let us have "perhaps". You are president of the company.

A. I would have to get the schedule to give you exactly what they are.

Q. Then, you don't know that?

A. It is definitely stated on the schedule, I just had these figures calculated for me.

Q. So far as the figures are concerned then, Mr. Raushenbush is entirely correct for 1930?

A. On, other rooms; the fifteen kilowatt hours he would not be correct at 10.1 cents for our Harrisburg rate?

Q. Were any different number of rooms?

A. Under the 1930 rate?

Q. Under the 1930 rate? That was impossible.

A. I think so.

Q. Are you prepared to state that that is a fact?

A. I think so; yes sir.

Q. All right. Now, the 40 kilowatt hours, what you have got to say about the number of rooms there?

A. It is all calculated on a six room house.

Q. And so, Mr. Raushenbush's figures may have been entirely correct on 40 kilowatt basis?

A. If he had another room basis he would get some other figure.

Q. What was the figure he used?

A. But certainly on a 40 kilowatt hours there couldn't be a discrepancy amounting to nearly four cents a kilowatt hour.

Q. What figure did he use?

A. 6.7 cents per kilowatt hour.

Q. What was your 1930 figure?

A. 6.3.

Q. What did you mean by saying that there was a discrepancy of four cents?

A. I mean .4 of a cent.

Q. Wouldn't that be correct per kilowatt hour depending on the number of rooms used?

A. Well not if you calculate the rate properly.

Q. Will you just calculate that rate on an eight room house, and tell me what it cost a kilowatt hour?

A. I don't believe I have the rate here to do that.

Q. Have you got somebody here that can do it for you?

A. I believe I have.

Q. Suppose you present it the first thing in the morning.

Q. I will get it for you. I will be glad to.

Q. How about the 80 kilowatt hours?

A. The 80 kilowatt hours, Harrisburg, is figured at 5.8, and it should have been 4.9.

Q. 4.9 was the 1930 rate?

A. The 1930. The 1930 rate was 5.6.

Q. Just try to be straight forward in this thing. We are dealing with 1930 rates, and you say that Mr. Raushenbush's testimony was incorrect in his rates of 80 kilowatt hours, because he has 5.8 and you have a rate of 5.6?

A. Yes.

Q. And now, do you admit that the discrepancy between them may have been due to the fact that you used six rooms and he used eight?

A. Possibly; yes.

Q. You do not want to give this committee the impression that those calculations of Mr. Raushenbush were incorrect; do you?

A. Possibly; yes.

Q. You do not want to give this committee the impression that those calculations of Mr. Raushenbush were incorrect; do you?

A. No.

Q. Be fair about it?

A. No; I want to make the statement that he did not go at this time, when he made this exhibit, which was alone in April, that the new rates had been effective.

Q. That was not in April. That is just as inaccurate as many other statements you are making?

A. In March, and it was three months after we made this rate change.

Q. And he so explained, and said the study was based on 1930 rates?

A. The 1930 are not the rates that were in effect at that time.

MR. TURNER: On what basis did Mr. Raushenbush calculate?

MR. EVANS: In 1930.

MR. TURNER: And what basis of rooms in a house?

MR. EVANS: I am not certain. Mr. Turner.

MR. RAUSHENBUSH: It has been so long, I don't remember this moment.

MR. EVANS: We will have it for you in the morning.

MR. RAUSHENBUSH: I remember distinctly marking them down on these charts especially showing the difference being marked down; in a rate reduction in Wilkes-Barre.

BY MR. EVANS:

Q. Have you any other corrections?

A. I haven't anything else that occurs to me at this time, sir.

Q. Have you any other corrections that you want to make?

A. Not at this time. That is all I have.

BY MR. TURNER:

Q. Have you had any rate cases?

A. The only rate case that our company had was about nine years ago, with one of the cement companies, the Lehigh Valley filed a rate case.

Q. That is the only rate case you have had?

A. That is the only rate case we have had.

Q. What cement company?

A. Alpha Portland.

C. S. MacCALLA sworn

BY MR. EVANS:

Q. Mr. MacCalla, you are vice-president of the Pennsylvania Power Company?

A. Yes sir.

Q. You live in Youngstown, Ohio?

A. Yes sir.

Q. Mr. T. A. Kenney, President, was unable to come from New York City and you came in his place?

A. Yes sir.

Q. The Pennsylvania Power is controlled by the Commonwealth and Southern, a Delaware corporation, is it not?

A. Yes sir.

Q. Does the Commonwealth and Southern own all of the common stock of the Pennsylvania Power Company?

A. I think so, practically all of it.

Q. Is the Commonwealth and Southern one of the Electric Bond and Share group of utility companies?

A. No sir.

Q. Mr. S. D. Mitchell is a member of the board?

A. I think so.

Q. It is closely associated with the Bond and Share?

A. There are some thirty-four million shares of stock out. I don't know what the Bond and Share owns of it, but it is a very small minority of it.

Q. What do you mean, say five or ten per cent.?

A. Yes sir. I would say that.

Q. Are you an officer or director of the Commonwealth and Southern?

A. No sir.

Q. Mr. Kenney is Vice-President, is he not?

A. Yes sir. Mr. Kenney, incidentally, draws no salary from the Pennsylvania Power Company as president.

Q. What is the Allied Engineers Incorporated?

A. It is an engineering and construction company.

Q. And it was organized in 1930 to take over the business of Stevens & Wood Engineering and Construction Company? The Dixie Construction Company, and the Empire Construction Company, was it not?

A. Yes sir.

Q. Does the Allied Engineers Incorporated render any service to the Pennsylvania Power Company?

A. They do, sir.

A. On what basis?

A. The Pennsylvania Power Company does all the construction which it can with its regular organization. The other construction which it can contract to advantage, it does so with the Allied Engineers.

Q. Who controls the Allied Engineers Incorporated?

A. It is a wholly owned subsidiary of the Commonwealth and Southern.

Q. It is not then owned by the operating company?

A. No sir. I can explain that a little more fully, I think, by giving the amounts of construction. For instance, last year, 1930, the total construction of the Pennsylvania Power Company was \$1,234,472, and of that amount, \$1,042,410 was done by the company's own forces, and only \$192,062 was done by Allied Engineers.

Q. On what basis are they compensated?

A. The fees vary in amount, but it has run about 7 per cent.; in some small jobs it reaches 10 per cent. The total fees paid the Allied Engineers Incorporated in 1930 was \$15,223.

Q. What were the total fees of all kinds paid by the Pennsylvania Power Company to affiliated companies in 1930?

A. We paid \$15,223 to Allied Engineers, and we paid \$67,914 in fees to the Service and Management Company of the Commonwealth and Southern Corporation of New York, and the Commonwealth and Southern Corporation of New York is a company organized and owned by the operating companies of the Commonwealth and Southern group. The Pennsylvania Power Company, for instance, owns its pro rata stock in that company.

Q. And that pro rata share is based on gross earnings?

A. Yes sir, and last year the Pennsylvania Power Company received \$2,187 dividend for its ownership in that stock.

Q. And do you know approximately what percentage of the stock of that company the Pennsylvania Power Company owns?

A. It owns 2,734 shares, and I think there are 90,000 shares outstanding.

Q. So it would be between two and three per cent?

A. Yes sir, it amounts practically to service and cost. The Pennsylvania Power Company has a contract with the service company based on 1½ per cent. of its gross revenue, electric revenue. The effort is made to have that percentage about cover the actual cost. Last year it was a little bit more than cost, but that was returned in the form of a dividend which I just mentioned.

Q. Is that dividend treated on your books, Mr. MacCalla, as an offset against the fee paid, or is it treated as non-operating income?

A. I think as non-operating income.

Q. In 1927 the People's Power Company was owned by the Pittsburgh, Butler and Harmony Railways, was it not?

A. I think so.

Q. And it carried its fixed capital, taking it from its report to the Public Service Commission, at \$196,097?

A. Yes, if that is in the report, that is undoubtedly correct.

Q. Now in 1928 this company was acquired by the Penn-Ohio Edison Company. What relation does that company bear to the Pennsylvania Power Company?

A. The Penn-Ohio Edison Company was an investment company which has been since merged with the Commonwealth and Southern of Delaware.

Q. At this time it was an investment company?

A. Yes sir.

Q. Who controlled it?

A. The Penn-Ohio Company was controlled by the stockholders.

Q. And who has the controlling interest in the stock?

A. I couldn't tell you that, sir.

Q. On this acquisition, the capital of the Peoples Power Company was listed as 197%, to \$591,236?

A. There was no write-up, as I recall it, in the present management and control. It came under our management in August, 1928.

Q. And this was as of December 31, 1928?

A. I think that was before we had anything to do with it.

Q. In all events you continued to carry the property at the written up figure in your subsequent reports for the Peoples Power Company?

A. Yes sir.

Q. Now, in 1930 the Public Service Commission approved the merger of the Pennsylvania Power Company and the Peoples Power Company, did it not?

A. Yes sir.

Q. At what figure was the fixed capital of the Peoples Power Company put on the books of the merged company?

A. The companies were merged on a par for par basis, dollar for dollar basis, there was no write-up.

Q. But on the books the Peoples would have been put in at the \$591,000 figure?

A. If that was the figure before, yes sir.

Q. Then the Harmony Electric Company was also merged into the Pennsylvania Power System, was it not?

A. Yes sir, at the same time, and the securities were added, there was no write-up, it was par for par basis.

Q. According to the 1927 report of the Harmony Electric Company, its fixed capital as of the end of the year was \$649,850?

A. I was not connected with the company at that time.

Q. Well, I am showing you its annual report?

A. I don't know anything about it. If they reported it, I assume it was correct.

Q. In the 1928 annual report of the same company, the fixed capital was increased practically \$2,000,000, to a total of \$2,620,189. Can you explain that increase?

A. I think as a matter of record, since that time there was a change made in that at the instance of the Commission.

Q. Have you any explanation to make of that increase on the books?

A. No sir, I haven't.

Q. Then in 1928 the Harmony was taken over by the Penn-Ohio Edison Company, was it?

A. Yes sir; its stock was acquired by the Penn-Ohio Edison.

Q. And in that year it bought certain property from the Penn-Ohio Edison Company?

A. I don't think so, sir.

Q. I show you the 1929 report, and see whether you can refresh your memory from that?

A. That was the property acquired, yes, from the Harmony Railway Company, which the Penn-Ohio negotiated. That covered certain rights of way, transmission lines and other properties, totaling \$1,660,000. That was reduced at the instance of the Commission, according to my recollection, about \$1,110,000.

Q. So it was reduced from \$1,660,000 to somewhere in the neighborhood of \$550,000, was it?

A. That is correct.

Q. According to their report, what was the figure of \$1,660,000 based on?

A. That was based on the value of the transmission lines, rights of way, the value of the property—

Q. As appraised by whom?

A. As appraised by Stevens & Wood.

Q. And Stevens & Wood were the companies that were later taken over into the Allied Engineers, Inc.?

A. Yes.

Q. What was this property carried at before the appraisal and sale, do you know?

A. I don't, no sir.

Q. But the effect of this, except as later changed by the Commission, was that the Harmony Company was required to buy property from its controlling company, the Penn-Ohio Edison, at a high price, and immediately wrote it on its books at the same price?

A. Well, that is not exactly the picture, Mr. Evans; the property included a power station which was depreciated and which was taken out.

Q. But that would not account for \$1,110,000, would it?

A. Approximately somewhere around that, yes sir.

BY MR. RICHARDS:

Q. Is that station Zelianople?

A. That was the old Harmony Power station.

Q. The Zelianople Station, which was the central plant of the old Harmony Company?

A. I think so. Yes, that plant was shut down when the Harmony Company negotiated a purchase of power more economically than it could generate it itself. There has been a great deal of misunderstanding on this question of write-ups. Of course, that does not affect rates or the rate base of the company. The consumers are not affected one way or the other by such valuations.

BY MR. EVANS:

Q. For what purpose then are they put on the books of the company?

A. They are put on as a rule to represent the value of the property.

Q. And why is the company interested in having them represent the reproduction value of the property as distinguished from the book cost?

A. Well, it doesn't make very much difference, as long as you have the proper reserve.

Q. And the only real difference it makes is either for rate making purposes or for the sale of securities, is that correct?

A. There is an effort made to represent the value of the property—

Q. Yes, but just answer that question, if you will. The only real purpose of it is really for rate making purposes or for the purpose of selling securities?

A. Well, it has nothing whatever to do with rates.

Q. Well, has it got anything to do with selling securities?

A. Well, it might.

BY MR. RHODES:

Q. Some of the power companies, utility companies, could not sell their securities unless they had these writeups to secure an equity, could they?

A. That is not the case in the Pennsylvania Power Company.

Q. Probably it may not apply to your company, but I think there are some companies to which it has applied, that if it were not for the writeups, there would not be any equities beyond the liabilities which they have entered into.

BY MR. RICHARDS:

Q. Was there a reduction in rates in the district formerly served by the Harmony Company following its being taken over by the Pennsylvania Power?

A. When that company took over the management there, we spent a great deal of money improving service, and we made a rate reduction, I think, averaging around 18%.

BY MR. RHODES:

Q. Don't these writeups have any other effect, in your reports for the Public Service Commission, they keep the proper ratio down between income and your book value?

A. I don't think so, Mr. Rhodes. I don't think the Commission pays any attention to them.

Q. Well, that would not be surprising.

A. The courts certainly have laid down the rules pretty clearly. I think the decision of the Federal Court in the recent case, that is the Wisconsin Case, sets up the basis; I think that is so important that I would like, for the information of the Committee and the public generally, to have that clear. The court said, "We reject entirely the old subject of capitalization, stock and bonds. We fail to see how it can have any pertinence. The utility is entitled to earn a reasonable per cent. of return upon the proper rate base. How many se-

curities are outstanding is of no importance. Cases may be conceived where the stock and bond history may have evidential value, but its bearing at the present will be remote."

MR. RHODES: Well, legally, that is probably a correct statement of the law.

BY MR. EVANS:

Q. Does not the rule as laid down by the Public Service Law of Pennsylvania and by the decisions of the court say that the Commission in fixing fair value on property shall take into account the outstanding stocks and bonds.

A. Well, the laws of other states require the Commission to approve of the sale—

Q. We are dealing with Pennsylvania.

A. In Pennsylvania I think it does.

MR. RHODES: That is probably a correct statement of the law in connection with the case that you cite in Wisconsin.

THE WITNESS: That is a Federal Court case.

MR. RHODES: In Wisconsin?

THE WITNESS: Yes.

MR. RHODES: That may not apply to Pennsylvania law.

THE WITNESS: Well, it is putting down common sense. I am not a lawyer, but it sounds to me to be pretty sound economics, and I think it is in the interests of the consumers as well as the company.

BY MR. RHODES:

Q. Does not this rate base reflected in the report that keep the ratio from coming down, in comparison with the book value and therefore your reports to the Public Service Commission do not reflect the excessive earnings?

A. I don't think there is anything much to that, Mr. Rhodes. The present practice of no par stock, I don't see where that enters into it.

Q. These write-ups are so prevalent in the utility industry, both electric companies and water companies, there must be some purpose back of it, and whether legal or financial, it is being done.

A. Well, I don't know, but I do know in the Pennsylvania Power Company I can see no object in doing it. The company has nothing to gain, it does not have any value for security sales.

Q. Probably you have never been in the position where you could utilize that method to any advantage?

A. We would like to have our books reflect the fair value of the property for the stockholders' own information.

Q. Don't you think that the books ought to reflect fair value of the property for rate making purposes, as well as the benefit of the stockholders?

A. I think ours do.

Q. You think yours do?

A. Yes.

Q. That would be a very admirable situation for an industry to be in, if the book value of their property showed the fair value for rate making purposes.

A. I confess I don't know so much about rate cases, I never had a rate case filed against my company.

MR. TURNER: The only difficulty with that Mr. Rhodes, is you would have to change your set up constantly, have constant appraisals. Of course, if you change the theory of the law that it might be different.

MR. RHODES: The president of the U. G. I. thinks that would be an admirable situation to be in.

MR. TURNER: I am only speaking from my own limited knowledge, and I don't see how you would be able to keep that value up, because you would have to have appraisals, all the time to keep it up.

MR. RHODES: Not if you utilize the investment theory.

MR. TURNER: Now, you are talking about something new.

MR. RHODES: That is nothing new.

MR. TURNER: It is new so far as our law is concerned.

MR. RHODES: That is what I think the witness had in mind when he said that the book value of his property reflects the fair value for rate making purposes.

BY MR. EVANS:

Q. Now, Mr. McCalla, turning to the Pennsylvania Power Company, I show your 1929 report to the Public Service Commission. According to this report the company had outstanding at the end of that year 56,500 shares of common stock without par value, and the cash consideration received for the stock was \$565,000, was it not?

A. The stated value was \$10 per share.

Q. But that is the value at which you carried it—your—

A. Yes, we have 59,100 of it at the present time.

Q. Now, net income shown on page 301 of this report was \$505,469, was it not?

A. Yes.

Q. Then you had to pay dividends on your preferred stock, of a total of approximately \$129,100?

A. The statement in the report is undoubtedly correct.

Q. So that you had left for common stock dividends and surplus, approximately \$376,000?

A. Is that what the report shows?

Q. Well, it is there.

A. This report states the correct details.

Q. Now, what rate of dividends did you actually pay on that common stock; what was the total amount of those dividends?

A. From the figures of the twelve months ending March 31, it ranged between 7 and 8% on the value of the property.

Q. Now, I am confining this to the common stock, and according to your 1928 report, Mr. McCalla, you paid dividends on your common stock amounting to \$395,000?

A. And we had how many shares that that report shows—

Q. And you had 56,500 shares of a stated value of \$565,000?

A. Well, we had 56,500 shares.

Q. So that you paid dividends during 1928 at the rate of 70% on the stated value of your common stock?

A. That is probably true. The Committee understands that that common stock is no par stock. You tear that up in two, and you would have twice that number of shares, but you don't have any more or any less property. Common stock is not a measure of the return, of course, of the property.

Q. Now, if we add to your 56,500 shares, or your \$565,000, your surplus, and your surplus is shown by your report on page 202 at \$1,083,500, you got a total surplus of \$1,648,508 approximately?

A. Not from that year's operation; that is total surplus.

Q. That is your common stock plus your surplus?

A. Yes.

Q. And the amount available, the net income after the payment of preferred stock dividends amounted to \$376,375, or approximately 28.8%?

A. Of course, we had bond interest on \$3,925,000 bonds.

Q. The bond interest is taken out before you arrive at your net income, is it not?

A. That is correct; yes sir.

Q. So, your company has not been suffering from any lack of revenue?

A. The company, earned as I say, for the twelve months ending March 31, between seven and eight per cent. on its property value.

Q. And now, what are your domestic rates in the territory of the Pennsylvania Power Company?

A. Our rates vary somewhat in form, but there is very little difference in practical effect.

In the New Castle territory we have a flat rate for residential service, lighting service of 5.7 per kilowatt hour. It is not a good form of rate. It is not what is known as a promotional rate. It does not induce business. It is a rate that we would really like to change to a rate of a more promotional form. We also have a rate in the residential service that gets down to as low as 1 cent for water heating. That rate was put into effect this year, and we expect to develop a great business on that rate.

Q. Where does that rate start?

A. That rate starts at 100 kilowatt hours.

Q. I mean it is a block rate; what is your highest bracket?

A. One cent and a quarter.

Q. What is your rate for the highest bracket?

A. One cent and a quarter.

Q. One cent and a quarter?

A. A cent and a half, pardon me.

Q. That is not a domestic lighting rate?

A. That is a rate for electric water heating.

Q. Yes; but what I am trying to get at it, what is your domestic lighting rate?

A. 5.7 cents flat.

Q. And that covers your territory, doesn't it?

A. That covers New Castle. In Sharon we have another form of rate which averages about the same; it is a little

different in form than that at New Castle. The average residential rate is around five cents

BY MR. RHODES:

Q. That is the top?

A. No; that is the average; the top is 5.7.

BY MR. EVANS:

Q. Is there a discount or penalty?

A. That is the net rate.

BY MR. RHODES:

Q. That would be five cents less five per cent.

A. That is right.

THE CHAIRMAN: Mr. Evans, may I suggest that Mr. Brown is here? I think he has more facts on rates perhaps than Mr. McCalla, because of the fact that he is dealing in this district, while Mr. McCalla has the Ohio district.

MR. EVANS: Yes.

BY MR. RHODES:

Q. Your company has been very successful financially in keeping your rural rates down to quite a remarkable degree?

A. I think every company wants a rate that will develop its business, but still enable them to make a profit.

Q. You don't have any eight or nine or ten cent rates?

A. As I say, in Sharon, we have a rate which starts at nine for an average of around fifteen kilowatt hours, and it gets down to four.

Q. Drops to four?

A. It is 8.6, I should say.

Q. And the next step is four?

A. Four, yes sir; but that will average about the same as the New Castle rate. It will average around 5.7.

BY MR. TURNER:

Q. Is there any particular reason for these low rates, that you have to suggest?

A. That happened to be the rate in Youngstown, and New Castle is close by; just across the state line, and they get the same rate. It is not a particularly good form of rate either for the company or the consumer as far as that goes.

Q. Why is such a wide spread between these rates in different parts of Pennsylvania? Of course, I realize that there are different conditions.

A. There are different conditions of course. There is usually a pretty good reason for a rate. The old theory of give us the volume, and we can give you the rate.

Q. And do you have a lot of power business out there?

A. We have a great deal of industrial power; yes sir.

BY MR. RHODES:

Q. What is your average rate per hour?

A. Our average rate per hour for power is about 18 mills for everything.

BY MR. TURNER:

Q. As I understand it, you operate in Ohio, and have had experience, therefore, with the Public Service Law out there, have you anything to say in comparison between the operation of the two; between Pennsylvania and Ohio?

A. I think your law in Pennsylvania is a better law than the Ohio law, better from the standpoint of all parties in interest.

Q. Have you anything in particular that you want to call our attention to?

A. Well, I don't know just what you mean.

Q. I mean specific things that you want to call our attention to, which makes it better.

A. Well, I think your legal procedure in Pennsylvania is superior to that of Ohio, generally.

BY THE CHAIRMAN:

Q. You mean we have better lawyers over here?

A. I was born and brought up in Delaware county, and I may be prejudiced.

MR. TURNER: Well, you ought to be, if you are from Delaware county. Let me ask you this: We have had a number of economists and so forth here who told us about Ohio, and the fact that you have a law permitting municipalities to go into the utility business which had been a factor in

keeping the rates down there. What would you say about that?

A. Oh, I don't think there is very much to that. We have in Ohio there the so-called home rule charters, and we have to negotiate with every council in the community where we serve. I don't think, however, that that cuts very much figure.

Q. Are the rates in Ohio, under comparable conditions lower than those in Pennsylvania?

A. I don't think so, sir. We have to negotiate with these communities. While it does take a little more time, it doesn't make very much difference.

Q. Put you into politics?

A. Well, the quasi-public service company, such as utilities are, they have to deal with political bodies; we have to meet them and we have to sell them our problems and our story, but after all, the same as in any other business, they are customers, and we try to have them for our friends.

Q. Are there any municipal plants in Ohio?

A. There are two that I know of in my territory—three, and two of them are only in the retail business.

BY MR. WALKER:

Q. How large is your territory?

A. Well, we have about one hundred and four thousand customers on both sides of the line.

Q. Do I understand you to say that because of the fact that municipalities can enter into competition with privately owned utilities, that that don't influence your rates out there?

A. The rates are under control there also by the Commission, but you have a double duty.

Q. And you do not think that that effects the rates at all?

A. No sir.

Q. The fact that a municipality you are serving could build a competing plant, if they thought your rates were too high, would not influence your rates?

A. Mr. Walker, a great many people have an entirely wrong idea. They think it is a monopolistic business. As a matter of fact, it is very highly competitive, and I say that advisedly; I have had thirty-five years experience in it. From a power standpoint, we have keenest kind of competition with our power customers, but many of whom are large and have ample means to go into the power business. If we can't compete with them, we can't get their business. Now, when it comes to the residential customers we are in the keenest kind of competition there is; we are in competition for a household dollar, and I want to make a damaging admission: We are a lot of pickers when it comes to selling electric service.

BY MR. TURNER:

Q. What do you mean by that?

A. We have in the Pennsylvania Power Company somewhere around 40,000 residential accounts. All we get out of them is less than \$35 a year, less than 10 cents a day for electric service in the home. Where can you get so much for a thin dime, as you can for your 10 cents for electric service in the home?

BY MR. WALKER:

Q. Can you answer me this. Do I understand from your statement that it is your opinion that the fact that the municipalities in Ohio can enter into competition by erecting municipal plants, that that does not affect your rates?

A. In Ohio, there is open season all the year around. I don't think it affects rates, no sir.

Q. You don't think that that influences your rates at all?

A. I think the people of this country are pretty well sold on the idea that competition is in the utility business, and not in the business of the consumer, and that the expenses sooner or later have to be written off in the long run. That has been the history in the past.

Q. Will you give me a yes or no answer to my question, is it your opinion that the fact that the municipalities in Ohio can enter into competition with a privately owned company, whether or not that influences rates in Ohio?

A. My answer to that is no.

BY MR. RHODES:

Q. Do you find any companies competing with your rate of 18 mills per kilowatt by putting in their own plant?

A. I would say no to that, Mr. Rhodes, except perhaps some of the steel companies which have large blast furnaces and have a lot of waste gas. No utility company can compete with a customer who has free fuel.

Q. But the average manufacturing plant cannot afford to put in their own plant and make power at 18 mills per kilowatt?

A. No sir.

BY MR. EVANS:

Q. Now, Mr. McCalla, let us state the fact. In Ohio, Cleveland had a municipal plant?

A. And still has one.

Q. And it used to charge a 3 cent rate?

A. I don't know but what it still does.

Q. And Cleveland Illuminating Company had to bring down its rates to meet the rates of the municipal plant. Did the Cleveland Illuminating Company bring down its rates to meet that competition?

A. They have reduced their rates, but if you will permit me to try to answer your question, I think the rates today are considerably above the municipal rate, which I think is still 3 cents.

Q. But the municipal rate is still lower than any other place in Ohio?

A. I think the Cleveland Illuminating Company rate is among the lowest in Ohio, but the reason is economic rather than political.

Q. Economic in the sense that there is competition?

A. No, if you will permit me, I will try to answer your question. Cleveland is a unique city insofar as industry is concerned. They have a wonderfully fertile field in which to do a power business. They have an abundance of water for condensing purposes in the lake, and also it is close to the coal fields.

Q. What are the rates in Ashtabula?

A. That is served by the Cleveland Illuminating Company, and I think the rates are the same.

Q. What are the rates in Detroit?

A. I cannot answer that offhand, that also is a very large company and they have a very large business and a very large volume of the industrial power.

Q. Mr. McCalla, in your experience in Ohio, have you ever had a situation where when the rates of the company became unsatisfactory in the community, the municipal authorities considered the advisability of installing a municipal plant?

A. I don't think that I have ever had that experience.

Q. You have never known of it existing in Ohio?

A. No sir. There has been no municipal plant gone in in the eight years that I have been in Ohio.

Q. I say you don't know of any case when the rates of the company became unsatisfactory, the municipality authorities considered the advisability of installing a municipal plant?

A. They have never put one in in the eight years I have been there.

Q. And the results of these negotiations has been a reduction in the rates in the privately-owned company?

A. In instances there have been reductions in rates.

Q. Do you know any place where reductions in rates have resulted from the negotiations?

A. There have been reductions in Ohio—

Q. And they have sometimes resulted from a threat of municipal competition?

A. That I don't know.

Q. They have sometimes ensued on the municipality threatening competition?

A. I don't know that either.

Q. What are these cases you speak of wherein the municipal authorities have considered a municipal plant?

A. Four years ago we had in Youngstown the expiration of a ten-year agreement with the city, and negotiations extending over a period of eight months ensued, and we put our cards on the table with the council.

Q. What had been your prior rates?

A. The same rates. And the rate ordinance was renewed. I think that negotiations started in April in the following December the council renewed that contract for another period of five years.

Q. That was the only case you know of where municipal threats in Ohio during all your experience there have ever constituted a regulation or the municipality has considered the erection of a municipal plant?

A. I don't think they have installed any in the territory served by my company, and I don't think that any municipi-

pality has very seriously considered the erection of a municipal plant.

Q. Didn't you about a year or more ago have negotiations in Ellwood City for the renewal of a contract with Ellwood City?

A. Yes sir.

Q. And did Ellwood City accept the terms which you first offered them?

A. Practically so, yes sir.

Q. Did they accept those terms?

A. They accepted those terms almost in toto for the present business.

Q. How about their extensions of business?

A. There was a slight reduction in the last block so as to induce the further development of the use of electric power in Ellwood City.

Q. What is the rate you charge in Ellwood City?

A. It is on the record.

(A gentleman sitting by says, "Mr. Monroe testified to it, and it is all on the record, and that is the only way that you can get it actually.")

BY MR. WALKER:

Q. Everybody in Youngstown is satisfied with your new contract?

A. I think so.

Q. As a matter of fact there has been a lot of fuss in Youngstown about your company, has there not?

A. That is a long story.

Q. Has there been a fuss over it?

A. There has been a petition started by a man who was until recently city traction commissioner, and he made demands on our company totalling about \$150,000 for services rendered by him, allegedly. Now, no such services—

BY MR. EVANS:

Q. What is that, a management fee?

A. No.

MR. RICHARDS: They don't call it that, Mr. Evans, in some quarters.

THE WITNESS: We wrote to him and we informed the city that we knew of no such obligations, and suggested if there were any, the courts were open to him to collect, and that if he thought that our statement was damaging to him, he also had recourse to the courts for proper remedy.

BY MR. WALKER:

Q. Is he the only fellow that is dissatisfied down there?

A. I would not be far off from saying yes to that.

Q. Well, you would be far off saying no?

A. Yes.

Q. He stands alone then?

A. Pretty much so, yes.

Q. Doesn't he have one or two companions, like Horatius at the bridge?

A. Well, in 170,000 people, it is pretty hard to have everybody satisfied. Are you satisfied with your taxes?

BY MR. RHODES:

Q. As a general proposition, how do the rates in Ohio compare with the rates throughout the State of Pennsylvania?

A. I don't know whether I could intelligently answer that question, Mr. Rhodes.

Q. Your comparison of rates between Ohio and Pennsylvania is limited to that territory which you serve in this Commonwealth?

A. Yes.

LOUIS B. ROUND sworn

BY MR. WALKER:

Q. Where do you live?

A. New Castle.

Q. What is your official position?

A. I am district manager of the New Castle district of the Pennsylvania Power Company.

Q. How long have you been connected with the Pennsylvania Power Company?

A. Since July 1, 1907.

Q. How long have you been district manager?

A. I have held the equivalent position since 1918.

Q. What experience have you had with the cost of rural electrification?

A. Oh, some considerable experience. Just how do you want me to develop that, Mr. Walker? Let us do it quickly.

Q. Would you mind telling us how much it costs on the average per mile for rural electrification, say, with four consumers to the mile?

A. I prefer to make this flat statement, that where there is the proper degree of cooperation coming from the customers who desire to be served, in districts that are sparsely settled, we can build a mile of line to serve those customers for \$1,000 or less.

BY MR. EVANS:

Q. Does that include transformers?

A. It includes everything.

BY MR. WALKER:

Q. What do you mean by the proper form of cooperation?

A. Well, let me just recite a little recital, will you? We first started out outside the city to serve these urban settlements, and it requires a right of way along the road, and for a number of years we have been going out, branching out from the towns, until we have actually now got to the dirt farmer. Now, it so happens that along these highways, where the dirt farmer lives, there is a rural telephone company, perhaps, or perhaps one of these transcontinental signal circuits. We can not overbuild for that thousand dollars a mile, but where those farmers really desire the service and are willing to let us go back sufficiently far in their field so that we can build that clear right of way and avoid tree trimming we can build that mile of line for a thousand dollars or less. If your farmer insists on your going along the fenced road, with the attendant tree trimming and anchor guys and things like that, you can not build for a thousand dollars a mile, but where he is willing to permit you something, where he is willing to assume some little inconvenience, presumed inconveniences, perhaps, then we get out in his fields and set the poles three hundred feet apart, back off the road, and we can go right through there just as fast as he wants us to go.

Q. And if you can do it over in your district, it can be done anywhere in Pennsylvania?

A. I don't see why not, for that particular kind of service. I am speaking now about the dirt farmer.

BY MR. EVANS:

Q. Have you considered at all, Mr. Round, the electrification of these rural areas in blocks, taking a whole block at a time and doing it?

A. I think that is an impossible thing, Mr. Evans, and I will tell you why I think so. I was originally a farmer. A farmer has got to be an individualist. The very nature of his existence makes him such. It is extremely difficult to get a group of farmers together and sell them one idea. They have got to think it over. We find in dealing with the groups, we like to make a group extension, but the hardest job we have is to get that self-interest squelched in favor of cooperative action; so that I think you can not take a whole area. We are satisfied to go pushing ahead, taking care of these groups as the demand develops, and I think it can be done just on the same basis as if it was an area proposition; in our area, at least. I would like to show you this map.

BY MR. RICHARDS:

Q. Do you have any figures on what percentage of the farms are now being served in Lawrence county, Mr. Round?

A. We are serving about 27 per cent. of the total dirt farmers in our area. Now, this represents the way the farmer is being supplied in Lawrence county.

BY MR. WALKER:

Q. That is at an average cost of a thousand dollars or less, is it?

A. No. These lines were not all built on the thousand dollars per mile basis. It is only just recently that we discovered that we can actually get down to that basis.

These orange lines represent lines that were built under the provisions of G. O. 27. The blue lines represent lines which were built prior to 1923, either wholly or in part by the company over rights of way, or on a refund basis. The green

represents farmers' lines that were built out to attempt to satisfy the demand for rural service.

In other words, we figure that if we build a line out this rural road ten miles to a little village, that the farmers then could get service on these side roads at a cost comparable to a private plant. Subsequent to these lines, General Order 27 came in and we operated under it, and then that was changed to G. O. 28; and that represents what we have done in one small county in Pennsylvania, to satisfy the demand for service.

BY MR. EVANS:

Q. Do you know what percentage of the total dirt farmers of the State are receiving service as compared with your 27 percent?

A. I do not, Mr. Evans. I have found that it takes all my time to keep these people happy.

Q. I think there has been evidence that there is only something like 12 per cent., taking the State as a whole.

A. Possibly that is so, but I don't believe there is a farmer who wants service who can not get service at a cost of three dollars a month or less.

Q. What rates for energy do you charge?

A. The same as in the city.

Q. And that is five and—

A. 5.7 net.

FATHER COX: I think that gives us an idea of what the relations between the public and a public utility should be.

THE WITNESS: That is a fixed block rate, Mr. Moore.

BY MR. EVANS:

Q. Could you leave that as an exhibit?

A. Yes.

BY MR. RHODES:

Q. You say the charge for hot water heating out there is 1.2 maximum?

A. 1.2 for the first hundred kilowatt hours, and one cent for all over. That is off-peak load.

MR. EVANS: We offer in evidence this map of Lawrence county, and will ask to have it marked as Exhibit No. 174.

MAP OF LAWRENCE COUNTY SHOWING ELECTRIC  
LINES PRODUCED AND MARKED EXHIBIT  
No. 174

MR. RHODES: Mr. Welkes, I have a letter here that I think covers a lot of things, that perhaps Mr. Round has not time to testify to, and I would like to have put into the record. If you find it useless, you can cross it out. I don't want you to read it into the record, it is merely a statement concerning the rates.

MR. EVANS: I have another exhibit that I would like to offer received from this witness. It is a job order analysis of the cost of construction rural lines divided up in detail, and I think it would be very helpful if Mr. Round is willing to put it in the record.

BY MR. EVANS:

Q. This was prepared by you, Mr. Round?

A. Under my direction. I would want to make a qualifying statement with regard to that. That job was built under the highest degree of co-operation from the farmers. We could not duplicate that job again at that price without the same degree of co-operation, but we could duplicate it with a reasonable co-operation for \$1,000 a mile.

Q. And the cost of that was \$808.00?

A. Yes.

BY MR. RICHARDS:

Q. In your experience as district manager how many complaints have been lodged with the Public Service Commission with reference to service or rates on your company?

A. You could count them on your ten fingers.

Q. In fourteen years?

A. Yes.

BY MR. TURNER:

Q. Have you ever had any rate cases?

A. No sir, my job is to keep away from them.

BY FATHER COX:

Q. We don't want to hold you late, but will you give us some idea of your idea of the relation between the public utility and the public, what it ought to be?

A. Well, the public utility cannot grow without the good will of its customers, and that is my particular job to keep everyone of those customers satisfied, or as many of them as I can possibly keep satisfied all the time. In dealing with the customer, I try to see the way he sees, and analyze his idea from his own viewpoint, and make my decisions accordingly, and if I cannot make a decision, I have got to refer it with what I think is the right thing to do, with justice and equity and fairness to the customer.

BY MR. TURNER:

Q. You serve New Castle?

A. Yes.

At 10:30 o'clock P. M. (E. S. T.) the Committee adjourned the hearing until tomorrow morning at 9:30 (E. S. T.)

COMMITTEE OF INVESTIGATION ON RESOLUTION  
No. 10

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Friday, May 1, 1931.

There were present.

Messrs. D. Glen Moore, Chairman  
Martin Memolo  
Louis W. Hagmaier  
Chester A. Rhodes  
Ellwood J. Turner  
H. J. Crawford  
Rev. James R. Cox  
Harold Evans, Esq.  
John M. Walker, Esq.

THE CHAIRMAN: Before the hearing resumes the Chair wishes to place this letter in the record. On April 15th Mr. Charles H. English, special counsel of the Pennsylvania Electric Association, and Col. A. M. Holding of West Chester appeared before this Committee and demanded that the Pennsylvania Electric Association be heard. They were informed that the Committee had an orderly program, that it would get through with its program as planned, and at the close full opportunity would be given to the Electric Association and the utilities to present their side of the case.

The letter received this morning from Mr. English reads:

## PENNSYLVANIA ELECTRIC ASSOCIATION

Eastern Geographic Division of N. E. L. A.

April 30, 1931.

Representative D. Glenn Moore,  
Chairman, House Investigating Committee,

Sir:

The Pennsylvania Electric Association received a telephonic communication today from your counsel that opportunity of hearing before your committee tomorrow would be accorded us.

It is presumed this invitation is intended as responsive to a request made by us some time ago, considerably prior to the filing of your preliminary report.

In that report definite conclusions were arrived at by your Committee regarding utility rates and regulatory principles and specific recommendations were made for the enactment of particular legislation then pending before but since passed by the body which created your Committee. Our request as stated therein was induced essentially by a desire to disclose the material errors of fact and fallacies of reasoning contained in the record as it existed before your conclusions had been reached and your recommendations decided upon.

It is not perceived how our attendance before you now could be of constructive worth and accordingly I advise you that the invitation for appearance before you tomorrow is respectfully declined.

Truly yours,  
(Signed) Chas. H. English,  
Special Counsel,  
Pennsylvania Electric Association.

CHE:MJ

MR. WALKER. Mr. Chairman, I think it would be germane to the issue, if we made a statement on the record, that I personally notified Mr. Millar, of the Pennsylvania Electric Association, on Monday evening that his association would be heard on Friday. This notification was given to Mr. Millar in the Penn-Harris Hotel.

THE CHAIRMAN: The usual weekly statement given out last week announces also that they would be called at this time, and there is no alibi.

E. R. KING sworn

MR. EVANS: I might call the attention of the Committee to the fact that in accordance with the desire of the Commit-

tee to hear from the responsible heads of the Electric Association in Pennsylvania, we invited among others, Mr. H. C. Hopson, vice president of the Associated Gas and Electric Company, and Mr. J. I. Mange, president of that company, to appear before the Committee. Mr. Mange is reported to be ill, and Mr. Hopson is too busy to attend, and suggests that we hear from Mr. King, the auditor of the Metropolitan Edison Company at Reading, and from Mr. W. R. Reiber, who is controller of the Pennsylvania Electric Company at Johnstown.

BY MR. EVANS:

Q. Mr. King, how long have you been connected with the Metropolitan Edison Company?

A. Since 1917.

Q. How long have you been auditor?

A. Since that time.

Q. Were the fixed capital assets of this company written up in 1925 as the result of its appraisal by Day and Zimmermann?

A. Yes, they were.

Q. In what amount?

A. I have not the figures exactly in my mind.

Q. Perhaps this will refresh your mind. (Showing witness report of company)

A. \$3,500,000 in round numbers.

Q. What was the book value of these fixed assets prior to the writeup?

A. Something over \$20,000,000.

Q. And they were written up to approximately 23% million dollars?

A. Yes.

Q. What was the purpose of this writeup on the books?

A. Well, to have the books of the company state as nearly as possible the value as determined by appraisers.

Q. Did the company have any financing in view at that time?

A. The company did financing at that time.

BY MR. TURNER:

Q. Does the Metropolitan belong to the Associated?

A. Yes, they belong to the Associated System.

BY MR. EVANS:

Q. I wonder, Mr. King, whether you can give us the financial set up of the Associated Gas and Electric System, so far as it affects the Pennsylvania companies. What is the capitalization of the Metropolitan Edison Company?

A. At the present time?

Q. Yes; take it at the present time.

A. I haven't those figures in my mind, Mr. Evans, you might have some reports here.

Q. This is the 1930 report (indicating).

A. At December 31st, 1930, there were outstanding ten thousand seven hundred eighty-six shares of seven dollar cumulative preferred stock.

Q. Of a stated value of what?

A. Stated value of \$1,078,600; one hundred and eighty-six thousand four hundred and eighty-six dollar cumulative stock with a stated value of \$18,646,200; 5,865 shares of five dollar cumulative preferred stock with a stated value of \$586,500; 360,780 shares of common stock with a stated value of \$13,511,700.

There were 7,525,000 one hundred dollar principal amount five per cent first mortgage gold bonds, series "C"; 22,568,000 principal amount of four and one-half per cent first refunding mortgage gold bonds series "D"; 1,560,000 principal amount of five per cent mortgage bonds of the Yorkhaven Water and Power Company; 144,000 principal of five per cent first mortgage gold bonds, of the Delaware Gas and Light Company.

Q. Which of the stocks have the voting power?

A. All of the stocks have voting power.

Q. The preferred stock has no voting power until there has been a default in the dividends, has it?

A. The preferred stocks have voting power in some instances.

Q. Take the unrestricted voting power?

A. That is vested in the common stock.

Q. Practically all of the common stock is held by whom?

A. By the Associated Gas and Electric Company or its interests.

Q. Is there any intermediate company between the Metropolitan Edison and the Associated Gas and Electric?

A. I couldn't answer that. I don't know.

Q. Are you familiar with the capitalization of the Associated Gas and Electric Company?

A. I am not.

Q. Then, you don't know what stock of that company has the voting power?

A. I do not. I am not familiar with the financial structure of the Associated Gas and Electric Company.

THE CHAIRMAN: Mr. Evans, may I ask a question?

MR. EVANS: Yes.

THE CHAIRMAN: The witnesses who are to appear before here, are they able to give that information or is there anyone who can speak with authority as an executive?

MR. EVANS: Mr. King will you answer that question?

THE WITNESS: There is no one here, Mr. Moore, that I know of that can give you the financial structure of the Associated Gas and Electric Company. I am sure I can't.

THE CHAIRMAN: The Committee wants to be absolutely fair, but we do not want to waste any time with anybody who cannot speak with authority on any issues that are vital to the matter, it appears to the Chairman.

MR. TURNER: Let me ask you this, does your schedule in asking these witnesses to appear give them any idea of what you want them to testify to?

MR. EVANS: We submitted to Mr. Hopson a very detailed questionnaire.

MR. TURNER: I have not seen any of your notices or communications, and, of course, I am not in a position to know, but I have just been wondering two or three times, when these people come in, whether they exactly know what they are going to be asked in the line of questions. I do not think, of course, you would want to disclose to them your full line of questions.

THE CHAIRMAN: Mr. Turner, these men have had every opportunity in the world. We have been absolutely fair to them.

MR. TURNER: That is another question, Mr. Moore.

MR. EVANS: In this particular instance I should be glad to get a copy of the notice I wrote to Mr. Hopson.

MR. TURNER: You do not need to do that. Your mere statement that such and such is so is ample for me at this moment.

MR. EVANS: It was written some weeks ago, and I would like to refresh my own memory, and I think also to call the situation to the attention of the Committee.

I may say in this regard that the New York Commission on the Revision of the Public Service Company Law, in its investigation into the capital structure of the Associated Gas and Electric Company and to give you some idea of it, I think it might be worthwhile to read from the report of that Commission, which is published as the New York Legislative Document, 1930, number 75, under the section headed: "Report of William J. Donovan, Counsel, page 64, as following:

"The most interesting illustration of the complex inter-corporate relations and transactions under present conditions is encountered in the Associated Gas and Electric Company group. I do not intend to characterize the attitude of the representative of that group, Mr. H. C. Hopson, Vice-President and Treasurer, who testified before the Commission. It is sufficient to say that he did not choose to co-operate as did the executives of other utility groups in the ascertainment of the facts bearing upon this investigation. From his testimony, however, and the data that he afterwards submitted, it appears that there are some 300 to 400 corporations in the Associated group. Thirteen of these are operating gas, electric, water and telephone companies in New York State. These are controlled by four holding companies which in turn are controlled by Associated Gas & Electric Company. Substantially all of the voting stock of the operating companies is owned by their respective holding companies, and substantially all of the stock of such holding companies is owned directly or indirectly by Associated Gas & Electric Company.

"According to the testimony out of the total of 6,109,297 shares of stock issued and/or to be issued May 31, 1929 (8,040,489 shares November 30, 1929) the only stock which possessed unrestricted voting rights is the so-called Class B stock which consisted of 300,000 shares. It appeared that all of this stock was held by Associated Securities Corporation, over 51 per cent of the stock of which was held by H. C. Hopson and J. L.

Mange so that these two men were able through their control of voting stock to dominate not only the holding and service companies, but every operating company in this system. By means of a series of contracts, it appears that during the year 1929 the operating companies of this system in New York State paid \$1,260,526.66 for management, construction and purchasing services. No details were made available as to how much of this sum represented cost to the service agencies or as to how much represented clear profit through them to the holding company. The statement of the working of these companies illustrates the need of subjecting such management contracts to the supervision of the Public Service Commission and the need of the Commission having access to the books of holding or managing companies so that the reasonableness of such contracts may be determined."

MR. TURNER: Mr. Evans, please don't misunderstand this question. What I want to ask is whether it is material to our investigation to get this financial structure in view of what has been read into the record.

MR. EVANS: I think it is very necessary in the arrangement and the structure of piling up of company on company. In this case my recollection is Mr. Mange and Mr. Hopson had an actual control of something like two per cent of stock, of the total outstanding stock of the Associated system, and with that control the entire system, lock, stock and barrel, and I think it is a matter of some importance in regulation as to whether that sort of, what you have termed "absentee landlordism" thing should be permitted with a very small minority holder really controlling the entire system.

MR. TURNER: Do you think we could legislatively control that, Mr. Evans? It would seem to me to be going rather far into the field of control. I think that we all understand each other and we all agree that there must be something by which you can get a regulation of these holding companies in so far as they enter into the control of these Pennsylvania corporations. I think you have now stated on the record the whole situation, and as they have not brought anything in to refute it in any way, they have not brought in any figures. I think we are perfectly justified in taking your statement of the situation as to the holdings of Mr. Hopson and Mr. Mange.

MR. EVANS: I think that some states in legislation now pending or perhaps passed are attempting to meet this situation. In one case I think there is an attempt made to meet it through requiring that there shall be full publicity in regard to the stockholders, their names and who they are, of operating utilities. There is also a suggestion I think that all directors of operating utilities shall be required to be residents of the State so there will be a group of people within the State who can definitely be held responsible for the operation of the utilities. These are just some of the possibilities.

MR. TURNER: I am glad to have that information.

MR. MOORE: Is it not to our advantage, even though we may be helpless in the matter, to get at these facts?

MR. TURNER: What I was getting at was whether it was essential to go further into that end of it. Or whether we could get all that we wanted from the statement Mr. Evans made in twenty lines which he has read into the record.

MR. RHODES: It seems to me some of these operating companies should appear here to answer some of these statements that have been put in the record. They have been severely criticized.

MR. TURNER: That is their fault if they are not here.

MR. MOORE: As I see it, this is a matter of giving publicity to the situation.

MR. RHODES: We have seen the position of most of these men of the operating companies. They appear to be disposed to be frank and they are apparently a very high class of individuals, but they do not have the information to give to this Committee which it wants.

MR. MEMOLO: Mr. Evans, do I understand you notified Mr. Hopson to be here?

MR. EVANS: That is the letter I referred to about which Mr. Turner asked.

MR. CRAWFORD: It looks to me as if where two per cent of the stockholders control the whole concern that it is a case of the tail wagging the dog.

MR. TURNER: That is something you often find, Mr. Crawford, especially in politics.

MR. RHODES: It seems to me that the people who have this information, that it would be of vital importance both from the utilities' standpoint and from the public's standpoint,

should be here, but they have refused to come here and reply. MR. MOORE: We had the same experience with the Hanover-McSherrytown case. We started with nothing and got nowhere.

MR. RHODES: I think the whole utilities situation would be materially benefited if there would be more frankness from the top to the bottom.

BY MR. EVANS:

Q. Mr. King, to whom are you responsible?

A. To the officers and directors of the Metropolitan Edison Company.

Q. To which one are you directly responsible?

A. To Mr. Banghart, Vice-President.

Q. Where is Mr. Banghart located?

A. Reading.

Q. Would he have this information we have requested?

A. Do you mean information with respect to the Associated Gas & Electric Company system?

Q. Yes.

A. I do not think he would.

Q. So far as you know, is there anyone in the State of Pennsylvania that has that information?

A. No, there is not. The Associated Gas & Electric Company is a New York corporation.

Q. Controlling the Metropolitan Edison Company and about one-third of the territory of the State of Pennsylvania with public utilities?

A. It holds the controlling interest in the common stock of the Metropolitan Edison Company. With respect to the other parts of Pennsylvania I am not aware.

Q. Can you state what companies in Pennsylvania the Associated Gas & Electric System controls?

A. What companies in Pennsylvania?

Q. What operating companies in Pennsylvania?

A. I can speak only for the group I am connected with, the Metropolitan Edison Company, the Northern Pennsylvania Power Company, and the Bangor Electric Company.

Q. That is the eastern group?

A. That is right.

Q. Now, Mr. King, the Metropolitan Edison Company in 1925 paid a common stock dividend of \$519,368, did it not?

A. That is right.

Q. And those dividends were charged to surplus, were they not?

A. Yes, sir.

Q. Would the company have been able to pay those dividends without creating a deficit in the surplus account unless the appraisal and write-up had been made in 1925?

A. I don't think the appraisal and write-up had anything whatever to do with it.

Q. Well, just answer the question, whether there would not have been a deficit in the surplus unless that had occurred?

A. No, there would not be a deficit.

Q. There would not have been a deficit in the surplus? Now, the surplus on January 1, 1925, amounted to \$916,089.78, did it not?

A. \$916,089.78.

Q. And the income balance transferred from the income statement amounted to \$738,197.47?

A. Yes.

Q. And there were donations from customers amounting to \$23,297.59?

A. That is right.

Q. And a profit on the sale of treasury securities of \$12.79?

A. That is right.

Q. And an excess of the par value over the book value of the Cumberland Valley Light and Power Company bonds of \$4.065?

A. Yes.

Q. What is the total of those items?

A. \$1,681,662.63.

Q. There were charged against that surplus additional reserve for renewals and replacements \$150,000?

A. That is right.

Q. And an adjustment of interest on loans, \$6,177.49?

A. That is right.

Q. A premium on bonds purchased for the sinking fund, \$777.27?

A. That is right.

Q. Unamortized discount and premium on eight per cent bonds retired, \$249,403.11?

A. That is right.

Q. Preferred stock sale expense, series C, \$13,187.17?

A. That is right.

Q. And premium and expense on preferred capital stock retired, \$1,711,280.79?

A. That is right.

Q. And the total of those items is what?

A. \$2,130,825.83.

Q. So there would then have been a deficit in surplus, disregarding the write-up, of \$449,163.20?

A. If you are going to use only part of the figures, that would be the result.

Q. Well, we are using all the figures, Mr. King, except your write-up, are we not?

A. You are using all of the figures except the write-up, but these charges here that are made to surplus certainly did not need to be made to surplus.

Q. Nonetheless, if those charges had not been made as they have been made, there would have been a deficit in the surplus account, if it had not been for the write-up?

A. They were made there only because the write-up had been made and surplus created to take care of these items, and the balance of the write-up was then transferred to stated capital for common stock. There is not any appearance of a deficit.

Q. What was the purpose of appropriating this balance of the write-up amounting to \$1,831,768.33 from surplus and transferring it to the stated value of the common stock?

A. I would like to have that question read, please.

(Question repeated by stenographer.)

A. I do not believe that I can give you the purpose. It was placed on the books and credited to the stated capital for common stock at the direction of the board of directors. I did not formulate the policy.

Q. Well, at all events, one of the results that was secured was to cut down the rate of dividend on the stated value of the common stock, was it not?

A. That would produce that mathematical result, but I doubt very much whether that was ever thought of.

Q. What companies were acquired by the Metropolitan Edison during 1926?

A. I am not positive of the year Mr. Evans, but there was this group of properties acquired about that time: Cumberland Valley Light and Power Company, York Haven Water and Power Company, Hanover Power Company, Gettysburg Electric Company, and, I believe, Metropolitan Power Company. I haven't the exact dates in mind.

Q. Did the Metropolitan Edison Company buy these companies direct, or did it buy them from a holding company, or through some other intermediary?

A. No, I believe all of these companies, the capital stock was purchased by the General Finance Corporation and subsequently the stock was purchased by the Metropolitan Edison Company from the General Finance Corporation, and then merged with the Metropolitan Edison Company for the consideration of the cancellation of stock and the cancellation of all the liabilities of those companies.

Q. Do you know whether the General Finance Company turned them over to the Metropolitan Edison Company at exactly the price it paid for them.

A. I believe that is stated in the contract between the Metropolitan Edison Company and the General Finance Corporation. I cannot be positive of that without refreshing my memory, and looking up the contracts but I know that constituted one of the properties that was purchased by the General Finance Corporation, and went into the Metropolitan Edison Company. In fact some of them they lost money on, or got no return on their investment while they held the stock of the company.

Q. But you don't know whether commissions or other profits were paid to the General Finance Company on the transaction?

A. I am sure they were not.

Q. You are sure?

A. Yes.

MR. TURNER: It would be rather helpful, it would seem to me in some of these cases, if you could give us when you go over this the place in the testimony, where the testimony was given by Mr. Colledge, or some of his boys, on these questions.

Now, I felt, I think it was yesterday, that there were two or three times, I think you were hovering over some of the testimony which I remembered, but the Colledge have been so many times on the stand it is hard to carry it in your head. I don't want to burden you with it, don't want you to go back and search for it, but I thought it might be helpful if you could make the record.

MR. EVANS: As a matter of fact I don't think this transaction has been brought before the Committee at all.

MR. TURNER: Yesterday, that part of the Panther Valley, that name stood out in my mind and it seems to me that they had some very fancy figures with reference to the Panther Valley. If we get this for a reference in one place, it would be very helpful in going back and getting the whole picture.

MR. EVANS: If you want to make a note of it, Mr. Turner, I think I can, in that particular case refer you to it.

MR. TURNER: Yes.

MR. EVANS: The Panther Valley testimony produced prior to yesterday appears in the testimony of Mr. Scott, page 1752 and thereabouts, and the testimony of Mr. Colledge, pages 1764 to 1769.

MR. TURNER: It is more important on Colledge and his men because the other men you more or less associate with what they have testified to very quickly, but to wade through the Colledge testimony and that of others, or I should say the Colledge boys, as I call them, would require considerable time.

MR. EVANS: I may say that I think Mr. Moyer has prepared a very complete index, which will be of great help on that.

BY MR. EVANS:

Q. In 1927, Mr. King, the Metropolitan Edison Company applied to the Public Service Commission for approval of the acquisition by which the controlling interests of the stocks of some eleven utility companies, did it?

A. Yes.

Q. And the Public Service Commission refused that application?

A. They refused it, yes, but an application was made for a re-hearing on the petition which was granted and subsequently the Commission approved it.

Q. We are going to bring that out, Mr. King. I read from the head note in his case, the Commission refused to approve the acquisition of the stock of a number of electric companies at a price several times its par value and materially in excess of its book value. This is application docket No. 16122 to 16132 inclusive, covered in volume 8 of Public Service Commission Reports, page 646. They also held, did they not, that a charge for the interest on the purchase price of the stock of these companies, which interest was to be paid to the General Finance Corporation was an unwarranted charge on the surplus of the company, of the Metropolitan Edison Company?

A. I believe that order refusing that petition did make such a statement.

Q. Now, as you stated, in 1928 another application was made and the merger was allowed?

A. As I recall it, Mr. Evans, there was another petition presented, there was a petition presented for a re-hearing of this same case, with the modification in the contract between the General Finance Corporation and the Metropolitan Edison Company respecting the interest that was in the original petition. That was one of the cases that I spoke of a little while ago that the General Finance did not receive what it actually paid, and cost it for the stocks of these companies.

Q. But the only change which was made was the elimination of that interest item.

A. That was the only change that was made in the contract between the Metropolitan Edison Company and the General Finance Corporation.

Q. And what other change was made which affected the situation so far as the Metropolitan Edison was concerned?

A. At the time of the hearing, or the re-hearing, I should say, the Commission asked to have an engineering conference on the appraisals that had been made of these properties. That was had, and as I recall it, there was something like \$78,000 deducted from the total valuation of the eleven companies, resulting from this conference.

Q. Who represented the Public Service Commission in that engineering conference?

A. Mr. Black.

Q. Did he allow anything for going concern value?

A. I don't remember; I cannot answer that. I don't recall the elements making up the valuation.

Q. Was this interest subsequently paid to the General Finance Corporation, amounting to \$150,000, or more?

A. Not to my knowledge, and I think I would know it if it had been.

Q. During the time that these properties were held by the General Finance Corporation, did it receive any dividends on their stocks?

A. It did not up until the time of the filing of this first petition and the first contract with the Metropolitan Edison Company, but I am not entirely clear as to whether they did not receive some dividends subsequent to that time. It was after they agreed to not make a charge to the Metropolitan Edison Company for interest. It runs in my mind that one of the companies did pay a small dividend. I may be wrong about that, but if they did pay a dividend it was not nearly as much as the interest would have been.

Q. The Associated Gas and Electric Company sold a great number of various issues and of stocks and bonds in Pennsylvania, has it not?

A. Purely from hearsay. I would say they have sold quite a number of securities in Pennsylvania; in fact, the employees of the Metropolitan Edison have solicited.

Q. The employees of the Metropolitan Edison have solicited?

A. Yes.

Q. And acted as salesmen for those securities?

A. Yes; you might say they did, for which the Associated Gas and Electric paid them a commission.

Q. Paid who a commission?

A. The employees.

Q. During the time that these employees were engaged in selling Associated Gas and Electric securities, were they also on the pay roll of the Metropolitan Edison Company?

A. They were on the pay roll, but the sale of securities is made very definite by the Associated, that it is not to interfere with their duties to the company by which they are employed. They did it in the evenings; they did it probably during lunch time; they did it outside of working hours.

Q. Were any expenses in connection with these sales, by employees charged up as an operating expense of the Metropolitan Edison?

A. No sir; the expenses of the employees in connection with the sale of Associated securities, in fact, there were not any expenses, so far as the Metropolitan Edison was concerned. The Associated does pay the employees a commission for selling.

Q. And, so that the only thing that the Metropolitan Edison might possibly have lost by that would have been if the employees had done so on the Metropolitan's time?

A. If they grabbed a little time, yes; but I don't think that they did, because that has been very definitely disallowed.

Q. In answer to one of my questions, addressed to Mr. Hopson, you have submitted a statement of the management and other fees paid by the Metropolitan Edison and other companies in the Eastern System during the years 1929 and 1930. What is the total amount of these fees paid by the Metropolitan Edison system in the year 1930?

A. It is in round figures \$284,000.

Q. Have you any information as to the cost of the service to the companies, to whom these fees were paid?

A. I have no information; not the slightest information as to the cost.

Q. To whom were these fees paid?

A. The management fee of \$150,000 was paid to W. S. Barstow and Company; the construction fee was paid to W. S. Barstow and Company, that amounts to \$130,000, in round figures; the purchasing fee of \$134,000 was paid to the Utility Purchasing and Supply Company.

Q. And the W. S. Barstow and Company and the Utility Purchasing and Supply Company are subsidiaries of the Associated Gas and Electric Company?

A. I understand so.

MR. EVANS: In order to get this data on the record in the quickest possible way, I think I will offer in evidence the data submitted by Mr. King regarding the Metropolitan Edison Company, Northern Pennsylvania Power Company, Sullivan County Electric Company, Bangor Electric Company, under

date of April 13, 1931, as exhibit one hundred and seventy-six of May 1,

#### PAPER IN QUESTION SO MARKED.

BY MR. EVANS:

Q. Now, the total management fees paid by the four companies in the Eastern Division of the Associated Gas and Electric System in Pennsylvania amounted to in the year 1929, to how much?

A. \$133,293.

Q. And in 1930?

A. \$149,349.

Q. The construction fees in 1929?

A. \$136,000 in round figures.

Q. And in 1930?

A. \$159,800.

Q. And the purchasing fees in 1929?

A. \$27,000.

Q. And in 1930?

A. \$36,800 in round figures.

Q. And these fees were all paid to the companies that you have already mentioned?

A. Yes sir.

Q. So that the total fees paid by these four companies in these two years amounted to \$642,368, roughly?

A. I am assuming that your calculations are correct; and if they are, that is right.

Q. On what basis does the Metropolitan Edison pay management fees?

A. On the basis of one per cent of its gross operating revenue, less inter-company items.

Q. And the same is true of the other operating companies?

A. The Northern Penna. Power Company pays 2½ per cent of the gross revenue.

Q. How about the construction fees?

A. The construction fee is on the basis of 7½ per cent of the cost of the construction.

Q. And is it the practice of the Metropolitan Edison Company to let its construction contracts on a competitive bidding?

A. No sir.

Q. They are awarded to the Barstow Company, are they?

A. They actually are not awarded at all to anyone. The Metropolitan Edison Company performs its own construction work, but it is supervised by the W. S. Barstow & Company.

Q. Now, Mr. King, when you are constructing a generating station, the 7½ per cent is calculated on the cost of the generator and all equipment purchased, is it not?

A. Yes sir.

Q. Is there also included the actual labor cost to the Metropolitan Edison Company?

A. Yes sir.

Q. And the Metropolitan Edison Company does all of its own construction work?

A. It does all of its construction work under the supervision of W. S. Barstow & Company.

Q. That is, it pays all of the bills, buys all of the equipment, and hires all of the labor?

A. Yes sir.

Q. Now for instance, in constructing a generating station, do they not contract for part of the work?

A. Oh yes. It is probable there is quite a bit of it let, different phases of the construction of the generating plant. For example, there might be a contract for some of the piping, there might be contracts for the brick work, and there might be contracts for the excavating.

Q. Are these contracts let on competitive bidding?

A. Yes sir.

Q. And they are let direct by the Metropolitan Edison Company?

A. That is right.

BY MR. TURNER:

Q. Do these fees go into operating costs?

A. Not the construction fees. The management fees do, yes. A part of the purchasing fees, the construction fees, go into capital account.

BY MR. HAGMAIER:

Q. The engineering company gets 7 per cent and the holding company gets 1 per cent?

MR. EVANS: I think on construction, as I understand Mr. King, the Barstow Company, gets 7½ per cent for general supervision of the construction work and engineering. Then there is a managing fee of one per cent paid to the Metropolitan Edison, and 2½ per cent paid to the Northern Pennsylvania Power Company.

Q. Who owns the Barstow Company?

A. The Associated Gas & Electric.

BY MR. MCMOLO:

Q. That is on the gross receipts?

A. That is the management fee.

BY MR. MOORE:

Q. Do they get that 7½ per cent on the equipment purchased?

A. Yes sir, on construction charges. I think I should modify that answer just a little bit. There is no fee paid on going property purchases and no fee paid on interest during construction included in capital account.

BY MR. RHODES:

Q. Where does the holding company have such superior knowledge in management over you fellows that have been in the operating game for so many years?

A. The managing company is composed of men who have been in the management of utilities many, many years. They have had very extended experiences.

Q. Most of their activities from my observation have been in the financial end and in building up these holding companies?

A. I am afraid your observations then have not been very wide. Mr. Rhodes. I have been connected more or less with companies of that type for the past, almost, twenty years, and I know that the management companies have in them men who have had very wide experiences in operation, and men who have had very wide experiences in construction in all parts of the world for example. For example, the chief engineer of W. S. Barstow & Company has constructed plants in practically all parts of the world. He has developed originally a great many factors of generating plants himself. He is what you might call the inventor of a great many parts of engineering plants. I am not an engineer and cannot speak technically of it, but I do know both the engineering company and the managing company have on their staffs men, and only men, that have had very wide and long experience in management and construction, and of course the smaller operating utility companies could not in any manner or form have that knowledge available to them if it were not for the companies of that sort.

MR. TURNER: If it was not for that, you would have to go out and hire them.

THE WITNESS: You could not go out and hire them; they would not be available to hire.

Q. Lots of these questions are only casual and occasional questions with the ordinary operating company?

A. They may be occasional, but that occasional time may be worth a tremendous lot of money and they could not afford to go out and hire this advice.

BY MR. HAGMAIER:

Q. If you have this Barstow Company, which is such a wonderful engineering company, where does the managing company step in, where do they come in?

A. Mr. Hagmaier, the distinguishing points between the management and the engineering company is that the managing companies operate properties after they are constructed, while the engineering company is the construction company, the company that develops the physical property.

BY MR. RHODES:

Q. Your construction company is just one unit of the holding company?

A. No, there are two.

Q. Your holding company owns your construction company?

A. Yes sir.

MR. HAGMAIER: It might all be done in the same office.

MR. TURNER: I think the question here is as to the amount paid.

THE WITNESS: I don't see that it makes any great difference because there is no duplication of payment. There may

be a criticism if someone wants to make it about having two companies, one to do the managing and the other to do the construction work.

BY MR. WALKER:

Q. Who determines the policies, the officials of the operating company or the officials of the management company?

A. The policy of the operating company is determined very greatly by the men actually on the properties operating the properties, but of course they avail themselves of the advice and assistance of the management company.

Q. And who has the final yes or no, the officials of the operating company or the officials of the management company?

A. The officials of the operating company, most assuredly.

Q. They have the authority to fly in the face of Providence, do they?

A. I beg your pardon?

Q. Do they have the authority to go contrary to the wishes and advice of the management company?

A. They certainly do, in the exercise of their official capacity.

BY MR. EVANS:

Q. Now, Mr. King, going back to the acquisition of these eleven companies in 1928, it is true, is it not, that prior to that acquisition there were appraisals made of most or all of these companies by Day & Zimmerman?

A. All, I think, but one or two.

Q. And as a result of those appraisals the fixed assets of these companies were written up on their books approximately a million dollars?

A. Yes; a little more than that, I think; but around there.

Q. Up to 1929 the Metropolitan Edison was controlled by the General Gas and Electric Corporation, was it not?

A. That is right.

Q. And the General Gas and Electric Corporation was a W. S. Barstow company and not associated in any way with the Associated Gas and Electric system?

A. That is correct.

Q. In 1929 the Associated Gas and Electric Company purchased a controlling interest in the General Gas and Electric Corporation, did it not, from Barstow?

A. It purchased W. S. Barstow, which carried with it control of the General Gas and Electric.

Q. Do you happen to know what stock of W. S. Barstow & Co. carries the voting privilege?

A. The information that I have—I can not give you this as an actual fact, but from the information I have there is, but very little other than common stock of W. S. Barstow outstanding.

Q. Are there not two classes of common stock, class A and class B?

A. I don't think so. I can not give you this in facts, because I haven't the knowledge.

Q. Are you familiar with the acquisition of W. S. Barstow & Co. by the Associated?

A. Only in a very general way.

Q. It is true, is it not, that after having acquired the control of W. S. Barstow & Co. Inc. the Associated purchased from the Gas Securities Corporation its holdings in the General Gas and Electric Corporation?

A. I know that only from newspaper accounts.

Q. Do you know, either from newspaper accounts or otherwise, that Gas Securities Corporation was a subsidiary of the United Gas Improvement Company?

A. That is common knowledge. I don't know it as a fact at all.

Q. But at the present time, as a result of these purchases, the Associated Gas and Electric has complete control of the stock of the General Gas and Electric Corporation?

A. I believe they had control before they made this purchase.

Q. Well, they now hold something like 98 per cent. of the voting stock, do they not?

A. I couldn't tell you, Mr. Evans. I don't know. I haven't the Associated accounts at all.

Q. Again, is there anyone in Pennsylvania that can give us that information?

A. Not that I know of. I don't know of any employee of the Associated Gas and Electric Co. residing in Pennsylvania.

I think, Mr. Evans, that most of this information that you are inquiring about regarding the Associated Gas and Electric Company is in pamphlets issued by the Associated Gas and Electric Company, and in manuals issued by the various financial services and things of that sort.

Q. That may be so, Mr. King. Now, during the years prior to the acquisition of this property by the Associated Gas interests, a considerable amount of stock of the Metropolitan Edison Company was sold to the General Gas and Electric Company, was it not? Was issued to them, I will say.

A. Yes. Most of it was common stock.

Q. Common stock, yes.

A. I think there was some preferred. They bought some preferred. But mostly common.

Q. And do you know approximately the price range at which these stocks were issued to the General Gas and Electric Corporation?

A. I don't recall those prices. I knew it at the time.

MR. EVANS: Well, perhaps we can refresh your memory. (Discussion off the record.)

(Question repeated by stenographer.)

MR. EVANS: We will say prior to December 1927.

A. In 1925 there were 8,572 shares of common stock issued at \$35 per share. Now, in all of these common stock issues that I will give you, it didn't all go to the General Gas and Electric Corporation, other holders of common stock were always given the right to subscribe at the price stated. Also in 1925 there were 8,998 shares issued at \$35 per share. Also in 1925 3,860 shares at \$35 per share.

Q. And in December, 1927, there were 28,000 shares issued at—

A. At \$50 per share.

Q. Do you know approximately how many shares of Metropolitan Edison Company stock was owned by General Gas and Electric Corporation of December 31, 1928?

A. I think about 90% of it, but I am not sure of the number of shares that were outstanding at that time. We can get it easily—at the end of 1928 there were 157,842 shares.

Q. So that the General Gas and Electric Corporation—

A. Owned approximately 90%.

Q. Or in round figures, 143,000 shares?

A. Probably a little bit less.

Q. You have testified in 1929 the Associated acquired control of Barstow and Company, and through it controlled General Gas and Electric Company?

A. That is right.

Q. At what price did the Metropolitan Edison sell in October, 1929, an issue of common stock to the new holding company, the Associated Gas and Electric Securities Company?

A. \$200 a share, is my recollection.

Q. How much of this was credited to stated capital and how much to surplus reserve?

A. \$60 a share to stated capital, common stock, and the balance to capital surplus.

Q. Can you explain how the value of these shares increased from \$55 in 1927 to \$200 a share in 1929?

A. I think that is quite an order, Mr. Evans, to explain why securities increased in value.

Q. Well, had the business of the Metropolitan Edison Company shown that much improvement between 1927 and 1929 to justify that change in price?

A. I think that is purely a matter of opinion of those who were purchasing the stock that the company offered.

BY MR. RHODES:

Q. Did the profits increase in proportion to the increased value of that stock?

A. No.

BY MR. EVANS:

Q. Does this indicate to you that the Associated in acquiring control of Barstow and Company allocated to the Metropolitan Edison a stock value of approximately \$200 a share?

A. I am afraid, Mr. Evans, I don't understand what you are trying to get at. No. That does not give me any such indication, Mr. Evans. I cannot see any relationship.

Q. Now, Mr. King, in purchasing control of Barstow and Company, one of the things that the Associated would be interested in, and which would determine the price you paid for Barstow and Company would be the value of the underlying stocks, would it not?

A. It certainly would.

Q. And would the Associated have been likely to have issued stock in October of 1929 at \$200 a share unless that had been approximately the price it had considered that stock was worth in acquiring Barstow and Company?

A. I cannot see how that could be matched at all?

Q. How much was the fixed capital of the Metropolitan Edison Company written up in 1930?

A. Approximately \$19,000,000.

Q. So now they have a writeup of 3½ million dollars in 1925, a writeup in the companies acquired in 1928 of \$1,000,000, and a writeup in 1930 of \$19,000,000 of the Metropolitan Edison, or approximately 23½ million dollars altogether?

MR. TURNER: Was the first 3 million and the second million in the same companies with the 11 million writeup?

THE WITNESS: I think that statement is probably correct with one exception.

A little over a million dollars, of the eleven companies represented the cost to the Metropolitan Edison Company. That was not the writeup by the Metropolitan Company.

Q. No; it was a writeup by the acquired companies before the Metropolitan Edison took them over.

A. That's right.

Q. Who made the appraisal of 1930, on which the \$19,000,000 was based?

A. E. J. Cheney.

Q. Is he in any way directly, or indirectly, connected with the Associated Gas and Electric Company or any of its subsidiaries?

A. Not to my knowledge.

Q. Our accountants have been informed by Mr. Morgal, Chief of the Bureau of Accounts and Statistics of the Public Service Commission, that they have no information whatever in regard to this appraisal. Do you know anything about the basis on which it was made?

A. I do not, Mr. Evans. I am not an engineer, and I probably would be wrong if I attempted to go through the appraisal and tell you what basis it was on.

Q. What was the book value of the fixed assets of the Metropolitan Edison Company before the \$19,000,000 write-up in 1930?

A. About \$66,000,000.

Q. So, they had written up from \$66,000,000 to approximately \$85,000,000.

A. That is right.

MR. TURNER: \$66,000,000 and \$23,000,000 cannot make \$85,000,000.

MR. EVANS: No; but this is the \$19,000,000.

MR. TURNER: Oh.

BY MR. EVANS:

Q. Have you any reason to think the Day and Zimmerman appraisal made in 1925, of the Metropolitan Edison Company and in 1927 and 1928 for the eleven acquired companies was not a correct and fair appraisal?

A. Mr. Evans, the appraisal that was made in 1925 by Day and Zimmerman didn't cover anything like nearly all the property which was covered by this latter appraisal, and I think the main factor that prompted the making of this appraisal at this time was that the Metropolitan Edison Company, as it is now constituted, is made up of probably, oh, twenty-five or thirty companies, some of which companies' properties, previous to the acquisition by Metropolitan had been appraised by this engineer, and that engineer and the other engineer. They had been on widely different basis. Some of them have included going concern value; some did not; some had not included cost of financing; some of them had not included the cost of working capital. It was a heterogeneous mass, and this appraisal was made in order to obtain an up-to-date inventory and appraisal of the property.

Q. And now, then, let us get at this: Didn't the appraisal of Day and Zimmerman in 1925 cover all the properties then owned by the Metropolitan Edison Company?

A. All the physical property, yes, then owned by the Metropolitan Edison Company.

Q. And in 1928 the Metropolitan Edison Company acquired some eleven other companies?

A. Yes; and in 1926—wasn't that the date?—they acquired a number of other companies previous to that time. Now, those properties were—

Q. Were they not appraised at the time they were taken over?

A. Yes; there were appraisals. I tell you that practically all of the properties were appraised at some time or other by various engineers.

Q. So that the books of the Metropolitan Edison Company in 1929 reflected appraisals of all this property made in 1925 or subsequent thereto.

A. No; that is not a correct statement, Mr. Evans.

Q. What property was not so covered?

A. One particular property was the Metropolitan Power Company, which constructed the power plant at Middletown near Harrisburg. Another was the Easton Gas Works property of Pennsylvania.

Q. Now, wait a moment, let us get at this: The Metropolitan Edison Power Company was never appraised?

A. That is right. It was not.

Q. And what was the cost of that company's property?

A. I haven't the figures in my mind, Mr. Evans.

Q. Well, roughly, you most know approximately.

A. I don't like to make a guess on that. I may be millions of dollars wrong.

Q. This company was formed in 1923, and that station was constructed at a period of high-post-war prices, was it not?

A. It was constructed around 1923 and 1924.

Q. And that was a period of high prices, as has been testified to here on numerous occasions?

A. Yes; that was a period of high prices, but I am not sure that this appraisal is at as high a price as it cost.

Q. What we are trying to find out is whether you got \$19,000,000 additional value in 1919 over the appraisals of your property made in 1925 to 1929, and the actual cost of the property going into the system since 1923?

A. Mr. Evans, I think that question is beyond my power to answer. I think, if you want to determine that fact, you will necessarily have to get the engineer who made the estimate or the appraisal.

BY MR. TURNER:

Q. Who was that engineer; Day and Zimmerman?

A. E. J. Cheney.

BY MR. EVANS:

Q. Where is he located?

A. 61 Broadway, New York City.

BY MR. RHODES:

Q. I wonder if they would appear if we requested them.

A. I can't speak for them, Mr. Rhodes, it is quite possible they would.

Q. These fellows who are beyond the jurisdiction have always seemed to be very reluctant so far to appear.

MR. TURNER: You can't blame them for that.

MR. RHODES: They have nothing to be apprehensive about.

THE WITNESS: I think Mr. Hopson would rather have liked to appear, but he is a very busy man.

MR. RHODES: And we would have been very delighted to see him. I think we would have gotten some information from him.

THE WITNESS: Mr. Hopson is a very busy man, he has had a lot of work thrown on his shoulders; I know that.

MR. RHODES: I think that is true, but I think these are matters we are vitally concerned about, and I think he ought to have some concern about them, even if he is busy, because it may happen that legislative matters may have a lasting effect and a wide effect, and I think it would be very becoming for him to co-operate on any information he may have, and he ought to have a lot of information by virtue of his commissions and experience.

MR. RHODES: Presumably there is no hope of that. I think it would be very valuable if they did.

THE WITNESS: Of course Mr. Rhodes I cannot instruct Mr. Hopson.

BY MR. RHODES:

Q. How much going capital was in that eighty-five million dollars of revaluation of your company?

A. I cannot answer that now, Mr. Rhodes. I could get the figures and submit them if you wish.

Q. I thought your statement probably showed how it was made up?

A. No, we don't have it broken down.

Q. Can you tell me, Mr. King, how much Associated Gas & Electric Company's stock was sold in your territory by your employees during the year 1929?

A. No, I cannot give you any figure at all. We no doubt have it in the Reading office, but I cannot even estimate it.

BY MR. TURNER:

Q. Is that stock sold to employees or the public?

A. Both.

BY MR. RHODES:

Q. Do you have any theory of your own relative to the value of write-ups?

A. I don't have any theory, Mr. Rhodes, but I cannot see any damage in write-ups. I cannot see any possible chance of damage unless as has been spoken of here since I have been sitting around the room, the companies would use the write-up for recapitalization, or would capitalize it. I think there would be some advantage then.

Q. We have had numerous instances here where write-ups were utilized for new issues of stocks?

A. I don't think that is proper.

Q. What other purpose would there be put to give a better appearance from the standpoint of your book value with your net income?

A. I think we could put that down to a very simple example. If you owned a property that you had bought at a bargain, or bought cheaply or bought during periods of very low prices, and you were asked to fix a financial statement, I think you would try to set your picture up to show what your picture was. I cannot see any virtue in making yourself look worth fifteen cents when you are probably worth thirty, and I cannot see any harm in making it look like thirty.

BY MR. TURNER:

Q. If you went into a bank to borrow some money and had a property that you paid \$5,000 for and you had been offered \$10,000, how would you set it down in your statement?

MR. RHODES: That is a different statement. I am trying to get back of all these write-ups.

THE WITNESS: I think that is an analogy.

BY MR. RHODES:

Q. Then we get down to this, that the purpose of these write-ups is for the sole idea of permitting the issuing of securities or the acquisition of loans?

A. No, I would not say that is the sole idea.

Q. That is Mr. Turner's idea. If you go into the bank you present your picture?

BY MR. TURNER:

Q. That might be your book record, might it not?

A. I don't think it is a correct assumption to say that properties are written up purely for financial reasons.

Q. That is one of the reasons?

A. I think the owners of the property, the directors and the officers of the property, have a perfect right to have the right kind of a picture before them and I don't think that books are correct that don't reflect the proper picture.

BY MR. RHODES:

Q. You think it is immaterial what your investment may be, it is what you think it is fairly worth?

A. It is a question of having it appraised by men of experience who are experts in their line.

Q. Do you think your company will have an appraisal in 1931 or 1932?

A. My personal thought is we will not have an appraisal in 1931, we may have.

Q. If you want a picture before you, why not take the other side of the picture, and not take the rosy side all the time?

A. We too often have to take the other side.

BY MR. EVANS:

Q. During this entire investigation we have not found a company that had an appraisal made when prices were going down; they are always made when prices are going up. If we are going to have the picture on one side of the story, why not have it on the other side?

A. The appraisal we are speaking of here now has just recently been completed.

BY MR. HAGMAIER:

Q. You stated that some of these properties were sold at top prices. In that case how could you advance them?

A. I don't know that they are in there at even the cost price. They may be in there at less than cost figure.

BY MR. RHODES:

Q. Some of the men before, I think one this week, said was no purpose behind write-ups, that they didn't mean anything, that they were needed for the purpose of issuing securities. This was an operating man and I wanted to get your side of the story provided you had a theory of your own.

A. I think Mr. Rhodes, I don't think you could call it a theory, the comments I have to make. In making these write-ups I don't have any theory regarding that.

Qu. There must be some motive of purpose back of that. It all means the same regardless of the term they use.

BY MR. HAGMAIER:

Q. They all do it but none of them can give any reason for doing it.

A. I would say that it is principally done to bring the picture up to date.

BY MR. EVANS:

Q. Are always up to date and never down to date.

A. I would not say that.

Q. Did you ever know of an appraisal having been made by which the books of any property you have been connected with have been written down.

A. Yes sir.

Q. Won't you be good enough to refer us to one.

A. The Fleetwood and Kutztown Electric Company acquired by the Metropolitan Edison Company in 1930. The appraisal of the property was actually less than it was on the books. York Haven Power and Water Company, the property account was reduced \$72,000,000.

Q. Are you now speaking of physical appraisal. Were these properties not written-up again in 1930.

A. They were not. Not anywheres near the valuation on the books.

Q. You seem to be getting some detailed knowledge of this 1930 appraisal now. How did you happen to know that the York Haven was not—

(Question read at request of witness).

Q. Are you speaking of physical appraisal? Were these properties not written-up again in 1930.

A. I want to correct that answer. I don't know whether they were or were not.

Q. Let us look at your 1929 report to the Public Service Commission. Yours show total fixed capital at the close of the year \$62,177,579.45, do you not.

A. That is right.

Q. And the reserve for renewals and replacements was how much?

A. \$5,298,688.93.

Q. So the net fixed capital assets were approximately 57 million dollars?

A. Approximately, yes.

Q. You made a capital stock tax report for the year 1929—are you familiar with that report?

A. In a general way, yes.

Q. This report has been introduced as exhibit No. 56. On page 2 of this report you give a general balance sheet in which you include as assets the book value of your fixed property at \$62,177,579.45, which is the same figure that is included in your report to the Public Service Commission?

A. That is right.

Q. You then, in the next column, show the actual value of these fixed assets to be only \$46,211,407.75?

A. That is right.

Q. Will you explain how you arrive at an actual value approximately 15 million dollars less than the book value and in 1930, through an appraisement, showed the actual value of your fixed capital as 19 million dollars greater than your book value? One is for tax purposes, is it not, and the other is for other purposes?

A. That is right.

Q. We will get first for tax purposes. How did you find that the actual value of your fixed property was 15 million dollars less than its book value?

A. Mr. Evans, taxes paid by an operating company, and by Metropolitan Edison Company, are an operating expense. It is chargeable against the customers, or it has the effect of making charges higher against the customers served by an operating company, and Metropolitan Edison Company does not feel, and it does not expect to pay, more than its share of the taxes. It is generally known, probably by this committee, and certainly generally known by all of the taxing authorities in the country, that values for tax purposes are not anything near at 100 per cent. We are only attempting to pay our just portion of the taxes, and that is all we expect to pay, and I think that we would be very much criticized and could be very much criticized by our customers if we paid more than that. If we put our figure in at 100 per cent and the other fellow put it in at 40 or 50 or 60 per cent, we would be penalizing the customers in the Metropolitan Edison territory, which we do not expect to do if we can help it.

Q. Now, Mr. King, both of these reports are sworn to. In 1929 the officials of your company have sworn for tax purposes that the actual value of their fixed assets is approximately 46 million dollars—

A. Mr. Evans, I can only say this, that it is a pure guess, and I don't know why in the world taxing authorities would put in one item of book value and another of actual value unless they expect it to be a guess. What do they expect to have put in there? What is expected to be put in here? I can not conceive of anything else except an appraisal for tax purposes.

Q. So, in your opinion, it is proper practice to appraise the identical property for tax purposes at 46 million dollars that you appraise for rate making and credit purposes at 80 some million dollars?

A. I consider that proper practice with respect to taxes; yes, sir.

MR. TURNER: Mr. Evans, I don't think either is justified, but the same condition exists in real estate, and I have been battling in the Legislature since 1929 to get a uniform assessment in our counties by getting county boards of assessors.

THE WITNESS: It exists in all manner of taxation.

MR. TURNER: I say I don't think either is justified. I believe that everything should be stated at 100 cents on the dollar, and then if you want to cut your tax afterwards to make the leeway, that ought to be done; but I think assessments ought to be at 100 cents. I don't think the corporations ought to put theirs in at 60 per cent or 40 per cent, nor that the individual who owns a home ought when he goes in to take an appeal from assessments, fix it at 60 per cent or 50 per cent or 40 per cent. That is one of the biggest evils we have in the State.

MR. HAGMAIER: But on the other hand he makes a statement that he thinks it is unjust to the consumers to pay that tax but on the other hand it is not unjust to the consumers to raise it double the amount—

MR. TURNER: I say I do not think there is any logic in the position, but I am just pointing out the fact that we have the same condition. You are members of the legislature; help put this county board of assessment bill through.

THE WITNESS: We certainly want to be on equality with the other companies in Pennsylvania, Mr. Turner. Now if the other companies in Pennsylvania pay a tax on what they may call their rate base, we would pay it too.

BY MR. HAGMAIER:

Q. Isn't it only just, if you are charging a man for a light on that basis, why should you not pay a tax on that basis?

A. Do you think the utilities should pay all the taxes in the state?

Q. They don't pay any of it. The man who buys the juice pays it.

A. All right. You would pay more for your current then if you had to pay the same rate of taxes on the rate base; wouldn't they?

Q. Yes, and if the rate bases were down where they ought to be, they wouldn't have to pay as much as they do, either.

MR. TURNER: It is just as much unjustified as the land owner who charges rental on a basis of a five thousand prop-

erty and for assessment for tax purposes has it assessed at \$2,500.

MR. EVANS: Well, Mr. Moore and members of the committee, I don't feel the impression ought to be gotten from Mr. King's testimony that this practice is universal throughout the electric industry, because, from the capital stock tax reports which we have received it is evident that some companies put in their book values, other companies, in order to reduce their taxes, put in lower values; and I don't think that Mr. King's statement, that everybody does it and therefore it is all right, ought to stand on the record unchallenged.

MR. TURNER: I don't think so either. I think if that is a fact, Mr. Evans, it ought to be put on the record.

THE CHAIRMAN: The chairman's recollection is that at least one company had two reports in which the two figures coincided exactly.

THE WITNESS: I believe that if the committee will take the pains, and which I suppose they have available to them, to examine the capital stock reports of the majority of the utility properties represented in Pennsylvania, you will find that my statement is justified.

BY MR. EVANS:

Q. Mr. King, we have some forty returns of the electric industry for 1929, so that we have a fair picture, I think, of that.

MR. EVANS: Has the Committee any question to ask Mr. King?

BY MR. RHODES:

Q. I think you said you had no way of determining what the actual value was except just by mere guess in making up your reports?

A. That is the basis of 90%, is a pure guess. Another thing that I might add, that in no case is a settlement for taxes made on these figures. I think that the governing factor in the settlement of taxes, while I cannot speak from authority, because I have not been in the position of settling these taxes, but I think the governing factor is earnings of the company, rather than any figure that is placed on the capital, on the property.

Q. The earnings of the company you think are the determining factor?

A. I think it has quite a lot of weight. It is supposed to be based on three items, the value of fixed property, the average selling price of stock during the year and the earnings over a period of five years.

Q. The value of earnings, as a matter of fact, are usually determined by what you have your property appraised at?

A. No. I think the rate of dividend was taken into consideration also.

Q. If that be true, Mr. King, from your connection with the industry, that the whole situation is more or less chaotic, your book values mean nothing when it comes to determining the value of your property, isn't that true?

A. Yes, I think that is true, Mr. Rhodes.

Q. And then your book values mean nothing when it comes to determining your base for taxation?

A. Not a great deal, Mr. Rhodes.

Q. Does not that just leave the whole thing up in the air? Now, I think that the industry certainly should be interested in getting down to fundamentals in these matters and see if there could not be some system devised, some legislation worked out, so as to get it working more equitably all the way round, instead of having this chaotic condition and this guesswork in all these different aspects. I am merely looking at the thing from the standpoint of doing something constructive rather than doing anything destructive.

A. Of course, it would certainly be an ideal situation if there could be something that was inflexible, something that would actually stand.

Q. You cannot have something inflexible, but you could have something that was more or less approximately flexible.

A. Our entire economic structure is just not that way. Our entire economic structure is constantly fluctuating. You cannot take one particular item and tie it down to a post and say, "All right, that is going to stay there." I don't see how you could do it. Now, it seems to me you have got to go along with the theories and the changes that travel with general economic conditions. If you attempt to tie valuation of public utilities down to one particular way of looking at them,

then it would be easy to operate, and it would be easier for the accountants, and probably be easier for the Public Service Commission, although it might inflict great damage on the public.

Q. It probably is not humanly possible to get any fixed fundamentals under the conditions under which we are laboring, because when it comes to this proposition that you spoke of a moment ago, the determination of the actual value, it is a matter of guess. When it comes to the determination of the fair value in a rate case, even the Commissioners admit that is a matter of pure judgment, which in itself is a matter of guess?

A. That judgment, I assume, Mr. Rhodes, is based on conditions as they exist at the time the judgment was formed. I don't see how you can form a judgment that would be all right forever, because everything else is changing, and I don't see why a single one of these factors would not change.

Q. I think that is probably true.

A. It is very hard to set a rule or plan that will work out indefinitely.

Q. The trouble with the whole situation, as I view it, is a matter of unrestrained judgment. There does not seem to be any guide to the judgment rendered in very many of these things, everybody uses any method they see fit, or gather together such factors as they desire, this and that factor that determines, rather than on a basis that may help them along in making a conclusion upon some logical basis.

A. Well, it is my understanding that there has been a guide post set up by the Supreme Court. Now, I think there will always be a divergence as to values in the opinion of individuals.

Q. The Chairman of the Public Service Commission of Massachusetts says that following the Supreme Court decision makes regulation ineffective. Now, there is a man that has been in the Commission in Massachusetts for more than ten years, and he deals with the situation every day, and he says from his practice and his experience that any Commission that endeavored to follow the reproduction cost new theory as set down by the United States Supreme Court just could not be done, and regulation would be ineffective if not impossible, under the rule.

A. Well, I presume, Mr. Rhodes, that that would come under this statement that I made, that you cannot make two people think alike, it just cannot be done.

Q. It just emphasizes the difference of opinion.

A. That is all there is to it. You cannot make them all think alike.

BY FATHER COX:

Q. Don't you think you ought to have some economic laws, as it is now pure judgment and inclination and all these other things enter into these determinations instead of anything fundamental?

A. Well, Father Cox, fundamental economic laws, it seems to me that we have got to ride along with economics as they exist at the time, and there can hardly be fundamental economic laws.

Q. Well, there ought to be some way of establishing, some idea of values instead of this pure judgment method, because after all it comes down to pure judgment.

MR. RHODES: That is all it means.

FATHER COX: That is all it means; it means nothing.

THE WITNESS: It has always existed, so far as I know, and I presume always will.

MR. TURNER: Under the Massachusetts theory it is not a matter of judgment, because the Commission has determined a value at which they allow issues of stock, and after that has been issued, it becomes the base value for rate making purposes on the books, and I am inclined to think that there is a proposition that is a little better gauge, it is a little more restricted gauge than we have under the present theory.

MR. RHODES: I think that is what Mr. Attwill said, that they didn't think this unrestrained judgment that is utilized in connection with the reproduction cost new theory was the proper method, that it ought to be done in a little more definite way.

THE WITNESS: Mr. Rhodes, I hope, and I don't believe that you have the feeling that the officers of these companies have intentionally lied.

MR. RHODES: I understand your point of view.

THE WITNESS: One figure presented in the tax report is a sworn figure from the books of the company, and I presume that you will find these identical. The other figure is supposed to be the actual cash value, and now, how in the world is anybody going to determine what that is and be able to swear to it?

MR. RHODES: Any individual can probably justify any figure that he puts out, because he can say it is his opinion.

THE WITNESS: That is the only way.

MR. RHODES: But it is not a good method; at least that is my opinion, that is not a good method to follow.

MR. HAGMAIER: Mr. Evans, haven't we had figures here where the revenue department put it up to ten million, and there weren't exceptions taken to it? I am almost sure they are marked on some of the exhibits we put in.

MR. TURNER: I think you are right.

MR. EVANS: Yes; I think that is correct.

THE WITNESS: I might add for your information, that my own personal feeling is that that column should not be in the tax return; then as a matter of fact the returns are to be filed for the year 1930 for the companies of which I have the supervision of the accounting there is not going to be anything put in that column. It is going to be stated that the fact of actual cash value is indeterminable.

MR. RHODES: Because it is very seldom that there would be any write-up in the actual cash value column beyond the book value. The average company is not going to write up the actual value beyond their book value.

THE WITNESS: No; I doubt if it ever is.

MR. RHODES: Therefore, it does not serve any good purpose.

THE WITNESS: It does not serve any good purpose, and it puts the people who are preparing those statements, in the eyes of some people in a bad light.

MR. HAGMAIER: I can't see the necessity of the column myself.

THE WITNESS: I cannot either. As a matter of fact, the columns of those companies that I represent will not contain any figures.

MR. RHODES: It is not fair to your company that the other public utilities utilize methods of taking the actual cash value and letting you take the book value. In other words, he is doing something that you are not.

THE WITNESS: We are leaving that column blank. It doesn't mean that we are going to pay taxes based on that other column.

MR. RHODES: Certainly; I realize that.

FATHER COX: I should say that we are all go-getters and that we are not go-givers, and we are trying to get all we can, unless somebody makes us pay it.

THE WITNESS: Father Cox, this is my anniversary of entering the utility business, May 13. I know that the operators of utilities are striving every day and in their private counsels it is always, what can we do to give better service? It is not a question of the public be damned. That has never been my experience with utilities. It is a question of saving money, and operating economically, pay our just proportion of taxes, but not more, and giving excellent service.

MR. RHODES: The public utility situation naturally has some abuses created in connection with its growth, and it takes a little to readjust and correct those conditions.

THE WITNESS: Of course, an industry that has grown as fast as the utility business, there probably have been abuses that have crept in here and there. There is probably not any doubt about that.

MR. RHODES: And probably the economic development has been much more rapid than the legal development.

THE WITNESS: It probably has.

FATHER COX: That is why we say we need economic laws.

BY MR. MEMOLO:

Q. On the question of these tax values, wouldn't it be more uniform if all the utility companies would agree, say, on their book values for taxing purposes, then it would all be uniform, wouldn't it? What percentage do you use there now?

A. I think ours—the statement of fixed capital there is about 2-3rds.

Q. That would be sixty-six and two-thirds per cent. of your book value, wouldn't it?

A. Yes.

Q. And now, as it stands now it is a sort of a hit and miss proposition. You turn in sixty-six and two-thirds per cent. of your taxables, sixty-six per cent. of your book values; is that it?

A. That's right.

Q. And so, wouldn't it work out more uniformly; it does not now work out uniformly, does it, that is, among all the utilities?

A. No, unfortunately, it does not. There, of course, could be more ways than one of doing that. I don't know whether the utilities could all get together and decide on that. There could be, I suppose, a law reducing the rates of taxes, and then absolutely requiring a stand-by on a tax on the full book value. I think it could be done. I think it could be done much easier, than trying to get all the utilities to decide among themselves.

Q. That would give you a sort of uniformity a basic figure to work upon?

A. Yes. As it stands now, it is probably one of the best negotiators.

BY MR. RHODES:

Q. It would only be fair to the utility that there should be some equitable and uniform method, so that everybody pays in proportion?

A. Yes.

BY FATHER COX:

Q. Very few private land owners or private owners do pay on actual values. We have an assessed valuation of our property, the difference between the assessed valuation and the real valuation, there should be decency?

A. There should be fairness.

Q. But on private property, nobody does pay the full tax on that property?

A. I think not.

Q. It is a generally accepted theory that you have the assessed valuation and the real valuation?

A. It exists all over the country, Father Cox, and I have been connected with utilities in a great many states, and I know that it exists in all taxing problems.

Q. And it ought to be fair?

A. It ought to be fair, yes sir; and that is what we try to get.

BY MR. RHODES:

Q. Taxation is the big problem, always has been, and probably always will be?

A. It probably will.

IN RE: ASSOCIATED GAS & ELECTRIC COMPANY

W. A. REIBER sworn

BY MR. EVANS:

Q. Mr. Reiber, you live at Johnstown, Pennsylvania?

A. Yes, sir.

Q. And you are controller of the Pennsylvania Electric Company?

A. Yes, sir.

Q. Who controls the Pennsylvania Electric Company?

A. The Associated Gas and Electric Company.

Q. What other companies in the western division of Pennsylvania does the Associated Gas and Electric control?

A. The Johnstown Fuel Supply Company, the Erie Lighting Company, the Pennelec Water Company, the Clarion Water Company, and the Clarion River Power Company. I believe that is all.

Q. Is the stock of the Pennsylvania Electric Company and of all these other companies owned directly by the Associated Gas and Electric Company?

A. No sir. It is owned by the Pennsylvania Electric Corporation, which is a Delaware Corporation.

Q. And it owns all of the voting stock of these five or six companies you have mentioned?

A. Yes, sir.

Q. Who owns the voting stock of the Philadelphia Electric Corporation?

A. I have been told directly and indirectly the Associated Gas and Electric Company.

Q. Are you a director of any of the Associated Electric companies?

A. You mean of the Pennsylvania companies?  
 Q. Any of the associated companies?  
 A. Yes, sir.  
 Q. Which one?  
 A. The Pennsylvania Electric Company. I think all of these I have mentioned, the Erie Lighting Company, the Clarion River Power Company, the Johnstown Fuel Supply Company, the Pennelec Water Company, and the Clarion Water Company.

Q. You are not a director of the Pennsylvania Electric Corporation?

A. No sir.

Q. What purpose does the Pennsylvania Electric Corporation fulfill?

A. Well, I don't know; it is commonly known as a subholding company.

Q. Does it issue securities to the public?

A. I don't think so.

Q. Do you know anything about its capital structure?

A. No sir.

Q. According to the information which you have furnished this Committee in response to a letter I wrote to Mr. Hopson, the companies in the western division paid management fees, construction fees and purchasing fees in the year 1929 amounting to, in round figures \$139,000 and in 1930 about \$398,000; to whom were these fees paid?

A. The management fees were paid to the J. G. White Management Corporation and to the Utility Management Corporation. The name of the J. C. White Corporation was changed to the Utility Management Corporation I think on November 1st, 1929. The construction services were paid to the Consumers Construction Company and to W. S. Barstow and Company. The purchasing fees were paid to the Utility Purchasing and Supply Corporation.

Q. All of these companies are subsidiaries of the Associated Gas and Electric Company, are they not?

A. Yes, sir.

Q. Do you have any knowledge as to the cost of service covered by these fees of the companies rendering them?

A. No sir.

Q. Do you know anything as to the profits which these management companies show?

A. No sir.

Q. Do you know of anyone in Pennsylvania who can give us that information?

A. No sir.

Q. Turning to the Penna. Electric Company, your 1928 report to the Public Service Commission shows a write-up of \$7381,813, does it not?

A. I presume that is about correct.

MR. EVANS: I think in order to complete the record I will offer in evidence the pamphlet furnished by Mr. Reiber in response to my request to Mr. Hopson for certain information as Exhibit No. 177, May 1st, 1931.

Exhibit No. 177, dated May 1, 1931, being certain data regarding companies operating in Western Pennsylvania—Pennsylvania Electric Company and affiliated companies as of December 31, 1930.

BY MR. EVANS:

Q. This Exhibit, Mr. Reiber, was prepared by you or under your direction?

A. Yes sir.

Q. Now Mr. Reiber, on whose appraisal was the write-up of approximately \$7,400,000 in 1928 made?

A. Mr. E. J. Cheney.

Q. Has he any connection of any sort with the Associated Gas & Electric Company?

A. Not that I know of.

Q. In 1929 according to your report for the year to the Public Service Commission there was a further write-up of \$8,671,594.36, was there not?

A. No sir. That is cumulative.

Q. How did you add the difference between the \$7,381,000 of 1928, and the \$8,671,000 in 1929?

A. Why, I think that came about by purchasing other companies.

Q. Which were written up. Now that gives you a fixed capital according to your 1929 report at the end of the year as of what amount?

A. \$52,159,694.

Q. Now, in your 1930 report to the Commission, you show that figure without any reference to any write-up, do you not?

A. Yes sir.

Q. What was the purpose of that?

A. Why, the Commission asked us to set it up this way, to keep it separate. And we found in making this 1930 report that the retirements had all gone up against this.

Q. All gone up against what?

A. All against the fixed capital according to the books, and this was never being reduced, so this was wrong.

Q. You mean to say that all of the write-up was absorbed by retirements?

A. No. Part.

Q. Then why do you include the part that remains in the 1930 report?

A. We didn't discover it until we started to make up the 1930 report. We found by continually keeping out of the book 1930 report. We found by continually keeping this figure and making retirements which were all taken out of the book cost, this would never be reduced.

Q. Why was it not possible to reduce your write-up proportionately to your book cost?

A. Well, I guess it is possible, but we didn't see the error until we went to make up the report. It is necessary to determine when the installation was made.

Q. At all events, the result of your 1930 report is that so far as it shows, there has never been any write-up?

A. Yes; that is not segregated on this balance sheet. Of course, there is an item over here, Mr. Evans, this capital surplus. Most of that is supposed to represent the write-up, and then there is another—the same difference in the reserve for renewals and replacements; that was not segregated.

Q. No one reading that report would ever get that impression, would they?

A. No, I don't think so.

Q. Aren't you a director of the Metropolitan Edison Company?

A. Yes.

Q. You have heard Mr. King's testimony in regard to a 19-million dollar write-up in 1930?

A. Yes.

Q. You were familiar with that?

A. No, I wasn't.

Q. You mean to say as a director of the Metropolitan Edison Company you did not know that that write-up was being made?

A. I heard about it, but I did not know what the exact amount was.

Q. What was the purpose of the board of directors in having that write-up?

A. I am not sure that it was passed upon by the board of directors. At least I was not at the meeting, to my knowledge, when it was done.

Q. You mean to say that the Cheney appraisal was made without permission of the board of directors?

A. No, I can't say that.

Q. Well, was it made with the approval of the board of directors?

A. I don't know. I was never at a meeting when this was discussed.

Q. Well, do you usually attend the meetings of the board of the Metropolitan Edison?

A. I have been at, I think, one or two in New York.

BY MR. RHODES:

Q. Where do they hold their meetings?

A. They held some in New York.

Q. Do you know how often they have them?

A. No, sir.

Q. They do not have any stated meetings of your board?

A. Not that I know of.

BY MR. MEMOLO:

Q. You don't have any meetings in Pennsylvania at all, do you?

A. Well, I have not been to any. I presume they have.

BY MR. CRAWFORD:

Q. Are notices mailed to you of the meetings?

A. I think I probably had.

BY MR. EVANS:

Q. Do I understand then that you are what is sometimes called a dummy director?

A. I guess that is it.

Q. Then are you not familiar at all with the acquisition of the General Gas and Electric Corporation by the Associated and the issuance of Metropolitan stock to the Associated?

A. No, sir.

Q. Well, as an accountant and as comptroller of the Western Division and a director of the Metropolitan Edison Company, I would like to call your attention to this fact, that Mr. King has testified that the General Gas & Electric Corporation held about 143,000 shares of stock of the Metropolitan Edison Company; that the control of the General Gas & Electric Company was acquired by the Associated in 1929; that in 1927 the Metropolitan Edison Company issued stock to the General Gas & Electric Corporation at \$55 a share; and that in 1929 it issued stock to the General Gas & Electric Company, then under the control of the Associated, at \$200 a share, or an increase of \$145 a share; and that this increase applied to the number of shares of the Metropolitan Edison held by the General Gas approximates 20 million dollars, as against the 19 million dollar write-up on the Cheney appraisal in 1930. Wasn't that appraisal really made in order to bring the value of the Metropolitan Edison stock up to the price at which it was issued, at \$200 a share?

A. I don't know.

Q. Well now, let us go back to the Pennsylvania Electric. In your 1930 report to the Commission, on page 203, you show capital stock balance at beginning of year \$4,675,000, balance at close of year \$21,500,000; net change during the year, \$16,825,000. Will you explain to me how that change came about?

A. That was an addition to the amount of the stated capital.

Q. Was any stock issued during the year?

A. No, sir.

Q. Where did you get your 16 million dollars from that you added to the stated capital?

A. This is in round figures. \$12,000,000 came from accounts payable to affiliated companies. That was to the Pennsylvania Electric Corporation, which had advanced money, and so forth.

Q. Why did you cancel that obligation?

A. I don't think the company had any money to pay it. The Pennsylvania Electric Corporation offered to cancel it and simply add it to the value of the stated capital.

Q. The Pennsylvania Electric Corporation had advanced this money to the Pennsylvania Electric Company?

A. That is right.

Q. And now cancelled that obligation and had the stated value of its stock written up a corresponding amount?

A. That is right. Then there was a million dollars from corporate surplus, and there was \$3,400,000 from capital surplus.

BY MR. RHODES:

Q. That merely resulted in the shifting of \$12,000,000 from one corporation to the other without any valuable consideration?

A. No; they just, instead of having it an open account, they added to the value of their—

Q. Instead of getting stock for it you merely wrote it up in your account?

A. Yes.

BY MR. TURNER:

Q. Did you get any stock for it?

A. No; there is 800,000 of no par, and they simply transferred it from the accounts payable to the stated value of the capital stock.

BY MR. RHODES:

Q. Yes, but this 12 million dollars which you shifted over to the other company, which was never repaid; you did not get anything for it, did you?

A. Oh, yes. They advanced the money.

MR. RHODES: I don't think I got it straight yet. Do you understand it, Mr. Evans?

MR. EVANS: As I understand it, Mr. Rhodes, the Pennsylvania Electric Company owed the Pennsylvania Electric Corporation, which held all its common stock, this \$12,000,000. The Pennsylvania Electric Company not being able to pay that obligation the Pennsylvania Electric Corporation can-

celled it and added that corresponding amount to the stated value of the capital stock which it held.

BY MR. EVANS:

Q. Is that correct, Mr. Reiber?

A. That is correct.

BY MR. WALKER:

Q. Are the books of your company kept in Pennsylvania?

A. Yes.

BY MR. EVANS:

Q. Was not this really what would be called donated surplus?

A. Yes, I think you would call it that way.

Q. Would it not be more proper to carry it as such rather than adding it to the stated value of the capital stock?

A. Well, it could be carried either way, but the directors thought that is where they would like to have it.

BY MR. WALKER:

Q. What board of directors determined that?

A. Pennsylvania Electric.

BY MR. MEMOLO:

Q. Is that the way it is carried on the books?

A. Yes.

Q. That is the understanding on the books?

A. Yes.

BY MR. CRAWFORD:

Q. What kind of entry did you make on the company's books?

A. I don't know.

BY MR. MEMOLO:

Q. Surely there must be some entry made on the other books, if you carried it as a charge and it was paid off.

A. I don't know, but as an accountant do you want me to tell you how I would make it.

Q. Don't you know how it was made?

A. No, I don't.

BY MR. EVANS:

Q. Mr. Reiber, during the year 1930, the accounts payable to affiliated companies of the Pennsylvania Electric Company was reduced by over \$50,000,000?

A. I suppose \$12,000,000 of it was the transaction you have just spoken of.

Q. What was the other \$38,000,000?

A. Well, I think there was one item of over \$22,000,000 of bonds that were sold to the Pennsylvania Electric Corporation, that was included.

Q. In other words, they took bonds in payment of their accounts payable?

A. In that part of it, yes, and I presume some of it was cash, or some other thing.

Q. What rate of interest does the Pennsylvania Electric Company pay on these amounts due affiliated companies?

A. 6%.

Q. How did the Pennsylvania Electric Company ever come to be indebted to affiliated companies at the beginning of 1930 in the amount of \$53,540,000 when its total fixed capital at the beginning of the year was \$32,160,000 in round numbers?

A. Well, that is an amount that had accumulated over a long period of time for cash advance, for construction; there was preferred stock paid for, bonds paid for, bond issues, and those are the principal items.

Q. You have no more detail information with regard to that accounts payable to affiliated companies?

A. Not here.

Q. Are you also controller of the Clarion River Power Company?

A. No sir.

Q. Are you familiar with its accounts?

A. No sir.

Q. Who is controller of that company?

A. I don't think I can tell you off hand.

Q. Is there in Pennsylvania anyone who is familiar with its accounts?

A. We have a man here from the New York office, who made an examination of these accounts, Mr. Flock, he could give you the information probably.

Q. How about the Erie Light Company; are you familiar with that?

A. Yes, I am controller of that.

Q. Now, in the year 1926 it wrote-up its fixed capital \$1,600,000 approximately, did it not?

A. Yes, I presume that is right.

Q. And this figure is shown in the 1926 report as unappropriated surplus, is it not?

A. Yes.

Q. Amounting to \$1,606,727.98?

A. Is this 1930?

Q. To 1926.

A. Oh, I see.

Q. That is correct?

A. That is correct. I am not sure that that was the exact amount of write-up though, Mr. Evans.

Q. What was the amount of the write-up?

A. Don't the report show it— isn't it shown in the next one— yes, that is right.

Q. On what basis was this write-up made?

A. That was an appraisal made by Mr. E. D. Dreyfus, an engineer from Pittsburgh.

Q. And what was the purpose of the write-up?

A. The purpose of that write-up was to have the books and accounts in accordance with the appraisal.

Q. Were securities of the Erie Light Company issued during that year?

A. I don't think so, they were retiring more than they were issuing.

Q. And now, then, in your 1928 report I understand your correct amount of this write-up is shown. What is that?

A. \$1,756,558.44.

Q. And what was the book value of the fixed capital before the write-up?

A. About \$8,800,000.

Q. So that the write-up was something over twenty-five per cent.

A. Twenty per cent, about; a little bit less.

Q. About twenty per cent. Have there been any write-downs on this property on your books?

A. No; excepting for retirements.

Q. Where could we get some more complete information in regard to these write-ups, with relation to the securities that have been issued by the companies? Have you got that information? What securities have been issued for instance by the Erie Lighting Company, during this period?

A. I can get that.

Q. When was this appraisal made?

A. I don't remember. It was made, I think at the time that the Pennsylvania Electric Company acquired the capital stock of the Erie Lighting.

Q. Has the Erie Lighting Company issued any securities since that time?

A. Yes; it issued some, and retired everything but the common stock. I think it increased the preference stock and then retired it.

H. C. FLECK sworn

BY MR. EVANS:

Q. Mr. Fleck, where do you live?

A. New York City.

Q. And what position do you hold in the Associated Gas and Electric System?

A. None.

Q. Why are you here?

A. I am an employe of H. C. Hopson and Company, and, as such, I made a study of the books and records of the Clarion River Power Company.

Q. What is H. C. Hopson and Company?

A. It is a company that does special work, makes a special study and investigates, accounting studies.

Q. Who controls that company?

A. I don't know exactly.

Q. The name does not suggest anything to you?

A. That is a company that, I suppose, Mr. Hopson is dominant in.

Q. It sounded so. Do you know whether H. P. Hopson and Company is the owner of the controlling interest of the Associated Gas and Electric Securities Company?

A. No; I do not.

Q. Have you ever seen a report on the books of the Clarion River Power Company, which was prepared jointly by the Federal Power Commission and the Pennsylvania Public Service Commission in 1925?

A. I don't recall having seen that report.

Q. In that report which is introduced in evidence here as Exhibit 89, it is stated that on February 28, 1922, the capital of the Clarion Power Company was increased from \$65,000 to \$20,065,000, which increase was classified by the company as follows:

Class "A" 8% Preferred stock \$15,000,000 of the par value of \$100 a share;

Participating stock, \$5,000,000; also a par value of \$100 a share;

Making a total of \$20,000,000; that is correct is it not?

A. As I recall it, that is correct as to authorized. I don't think that those were issued. The \$65,000 of common stock was outstanding, I believe at that time or put out about that time.

Q. What write-ups in the books of the company took place at this time?

A. I don't know what you mean by a write-up.

Q. Are you an accountant?

A. I claim to be.

Q. And you never heard of a write-up?

BY MR. RHODES:

Q. Did you ever hear of a write-down?

A. The same answer would go both ways.

BY MR. EVANS:

Q. You mean to say you don't know what a write-up is? The write-up of the fixed capital of a company on its books?

A. As I recall the books of the Clarion River Power, the fixed capital was not put on there until 1924.

Q. You mean to say the company had operated without any entries at all?

A. No, it was in 1922, the original entries were put on in 1922. I know of no write-ups.

Q. When was the company formed?

A. 1912.

Q. And you mean that for ten years it had no capital on its books at all?

A. The original stock was \$55,000, that was issued, part of it, in 1912, for some records and surveys, and until 1922 it had no property of any kind at all, at which time the Tiney dam was built and the first entries of any amount that went on the books was at the time of building that dam.

Q. Now, when did the Associated acquire control of the Clarion River Power?

A. The Associated acquired control sometime in 1925 at the time that they bought all of these Pennsylvania properties, the Public Service and others.

Q. Who had control of the Clarion River Power prior to that time?

A. I think it was in what was called the Walbridge group, H. D. Walbridge and Company, or one of his companies, had the control of it.

Q. Now, in 1925, when the Associated acquired the Clarion River, what stock had it outstanding?

A. It had the \$65,000 par value of common and \$4,453,000 par value of participating preferred stock.

Q. Is that all?

A. That is all of the stock that was out.

Q. Did it not also have \$2,647,000 of eight per cent, preferred?

A. I think at that time that was an eight per cent. income bond or income note.

Q. I show you the 1925 report to the Public Service Commission?

A. I would have to look it up to see. I think that eight per cent. stock was at that time an eight per cent. income note convertible.

Q. This report shows that on February 23, 1928, you issued that amount of eight per cent. preferred stock?

A. I think it was originally issued as bonds convertible into preferred stock.

Q. What bonds did you have outstanding?  
 A. 2,700,000 at that time.  
 Q. So there was a total of \$9,865,000 of stocks and bonds outstanding at that time?  
 A. That is right.  
 Q. You also had notes outstanding in that amount in 1925?  
 A. The report here shows \$1,300,000.  
 Q. You also owed at that time to affiliated companies \$1,301,795, did you not?  
 A. Yes sir.  
 Q. So the total, including notes and accounts payable, was approximately \$12,467,000?  
 A. There is a duplication in that somewhere.  
 Q. We are going on your reports to the Public Service Commission. Is that correct?  
 A. Yes sir.  
 Q. You also had accounts receivable \$1,389,664?  
 A. Yes sir.  
 Q. Which leaves approximately \$11,077,129 as your claim to fixed capital?  
 A. That is the total securities and notes outstanding.  
 Q. What actual investment was back of all this?  
 A. Let me tell that in my own way. I think I can tell you what happened.  
 Q. That is a pretty long story?  
 A. Now the property back of it was the hydro electric plant on the Clarion River at Piney and certain studies and investigations that were made of the entire Clarion River project.  
 Q. Now it is true, the Federal Power Commission proposes to eliminate approximately \$6,387,000 from this \$11,000,000 as an amount representing no property or labor?  
 A. I think that is substantially their decision or statement. It is not the Federal Power Commission; that is the report of one of the divisions of the Commission to the Commission.  
 Q. That is the accounting department?  
 A. Yes sir.  
 Q. Now, if that is done, a large part of your preferred stock will have no value back of it?  
 A. That is true.  
 Q. Has the Public Service Commission of Pennsylvania ever taken this matter up with the Clarion River as far as you know?  
 A. I could not say as to that.  
 Q. Are you familiar with the capital stock reports of this company?  
 A. No.  
 Q. Mr. Fleck, Mr. McCahill, counsel for the Clarion River Power Company, wants me to ask you what the Associated Gas & Electric Company has done in the way of paying off securities of the company?  
 A. They have called and retired first mortgage bonds in the amount of \$2,700,000.  
 Q. At what price?  
 A. I think that was 107½, was the call price on that.  
 Q. Well, did they not first buy in a great number of those bonds themselves?  
 A. I could not answer as to that.  
 Q. So you do not know what the Associated has actually paid for those bonds?  
 A. Money has been advanced to the Clarion River Company to call those in and pay them off at the call price.  
 Q. Yes, but the Associated acquired them, did they not?  
 A. I imagine that they acquired some of them.  
 Q. And at what price did they acquire them?  
 A. I couldn't tell you as to that.  
 Q. Who advanced the money to the Clarion River?  
 A. Have you got a 1930 report?  
 Q. We haven't got the 1930 report. I don't think it is filed.  
 A. It was one of the affiliated companies. I don't recall just which one.  
 Q. Well now, Mr. Fleck, isn't this actually what happened, that the Associated bought in these bonds as cheaply as they could, then advanced money to the Clarion River, and had the Clarion River redeem them at the redemption price?  
 A. My knowledge does not go that far. The money has been advanced to the Clarion River to redeem them. Now who they redeemed them from I don't know.  
 Q. That is rather an important part of the picture, isn't it?  
 A. I don't think so.  
 Q. All right. How about the preferred stock?

A. The 8 per cent. preferred stock has been retired.  
 Q. And here again, didn't the Associated buy in this stock from the people who had invested good money in it at far less than they had paid for it?  
 A. I have no knowledge as to that.  
 Q. Who advanced the money to the Clarion River to redeem this stock?  
 A. One of the affiliated companies.  
 Q. And this is exactly the same situation as the bonds?  
 A. That is right.  
 Q. And you are entirely ignorant about how much of this stock was held by the Associated system at the time that they were retired?  
 A. I don't know.  
 Q. All right. What is the rest of the story?  
 MR. McCAHILL: Do you know, Mr. Fleck, what the bonds and stock were sold for to the public, what was realized by the Clarion River Power Company when they sold them?  
 THE WITNESS: The Clarion River Power Company issued those bonds and stock in return for the completed plant. They themselves did not market any of these securities.

BY MR. EVANS:

Q. To whom did they issue them?  
 A. In the construction of this plant, they entered into two contracts, one with the H. D. Walbridge & Company for certain services and supervision, and other items, and another contract was the General Construction Corporation, for construction of the physical part of the dam. Both of those contracts were made on the basis of securities to be delivered. So that when this dam had been completed, the Clarion River issued its entire stock and bonds to these two corporations, in return for the plant, with possibly the exception of the original issue of the common and a small part of the participating preferred which was issued to a man by the name of Paul.  
 Q. These stocks and bonds were issued then, according to the company's claim, for labor done and property furnished?  
 A. Labor and property furnished.  
 Q. And that labor and property were valued at the face amount of the bonds and stock?  
 A. That was all that they could do. They issued the face amount of securities for the property, and the reports were made on the basis of face amount of securities.  
 Q. So, according to the books of the company, it received par for the stocks and bonds which it issued?  
 A. I think that is right.  
 MR. EVANS: Is there anything else you want to ask?  
 MR. McCAHILL: Whether or not he knows what the public paid for the bonds and preferred stock which got into their hands which has been retired.

BY MR. EVANS:

Q. You have not shown any familiarity with the acquisition of these stocks and bonds by the Associated. Are you familiar with the price at which Walbridge sold these bonds and stock to the public?  
 A. The report that you referred to of the Federal Power Commission—  
 Q. Do you accept that report as correct?  
 A. As to this statement, it is substantially, what information I could gather—  
 Q. Well, is your information based on that report?  
 A. Not altogether.  
 Q. Well, what is it based on?  
 A. It is practically hearsay, I guess. It is what I have been told from what has happened about the sale of these bonds.  
 Q. Well, I have no objection to it going in, only it seems to me that it is rather unfortunate for you to take it from the report of the accountants of the Federal Trade Commission, unless you are willing to accept that report.  
 A. I accept it as to these statements.  
 Q. All right, go ahead. I want to save time.  
 A. They said on page 12 of that report, it says H. D. Walbridge and Company Incorporated records submitted for examination indicated that the first mortgage bonds 25 year 6½ per cent par value \$2,700,000 were sold at \$89. Further on in the same paragraph they state, Exhibit F, compiled from the records of H. D. Walbridge and Company Incorporated, indicates an average sale price of \$31 for a hundred dollar par.  
 Q. Of what?

A. They are referring there to that participating preferred.

BY MR. RHODES:

Q. Do I understand that that was all redeemed at par, bonds and stock both?

A. The bonds and stock were redeemed, yes.

Q. Well, redeemed at what?

A. The bonds at the call price—

Q. What was that?

A. I think it is 107½.

Q. They were put out at 89?

A. Yes.

Q. Or 83?

A. 89.

Q. 89?

A. But H. D. Walbridge got them, and they varied, but the general information that we have is in the Federal Power Commission there were a lot of those bonds sold around \$89 to the public.

Q. And redeemed at par plus what?

A. Redeemed at call price, 107½.

Q. And the preferred stock was redeemed at what price?

A. That is at par.

Q. At \$100?

Y. Yes.

Q. And that was bought at \$31?

A. That was just a few sales that they had record of, \$31.

BY MR. TURNER:

Q. What was the par?

A. \$100 a share.

BY MR. EVANS:

Q. Will you, Mr. Fleck, furnish to this Committee a statement of the amount of these stocks and bonds held by the Associated Gas and Electric Company or its affiliated companies, at the time there were redeemed?

A. I would be willing to furnish anything I can.

Q. That appears, does it, on the books of the Clarion River Company?

A. I should imagine it would appear on the stockholders list at the time of the redemption.

MR. EVANS: I think it would be very interesting to have that information.

BY MR. McCAHILL:

Q. Does the record indicate that the Associated has any interest in the issuance of this stock at the time it was issued?

A. No sir.

Q. That was one of the subsidiary companies that came into the system upon the purchase of these properties in Pennsylvania, is that correct?

A. That is correct.

BY MR. EVANS:

Q. However, the Associated System has been able to buy in these stocks and bonds at a figure very much below par, and then have the Clarion River redeem them, in the case of the bonds at \$107, and the case of the stock at par, and the Associated has made a pretty good thing out of it, has it not?

A. I would not say so.

BY MR. McCAHILL:

Q. Where did it get the money from to redeem them?

A. It had to come from its own pockets.

MR. EVANS: I might call the attention of the Committee to the fact that the capital stock report of the Clarion River Power Company, which is in evidence as Exhibit No. 36, shows the book value of the assets of the Clarion River Power Company as of December 31, 1929, as \$11,453,067.09, and the estimated fair value at \$5,000,000.

BY MR. TURNER:

Q. What is the return to the Public Service Commission?

A. The Commission report shows the same book value.

MR. EVANS: Mr. McCahill is very anxious to have Mr. Reiber tell the Committee something about the Solar Electric Company, the Brookville situation.

MR. McCAHILL: Or I will make a statement.

MR. EVANS: Mr. McCahill would like to make a statement, if the Committee is willing.

D. I. McCAHILL sworn

THE WITNESS: I have been familiar with the proceedings both before the Commission and in the Courts of Appeal from the orders of the Commission relating to the acquisition of the Solar Electric Company into the Associated Gas and Electric System, which began about 1925 or 1926. The first proceeding before the Commission was an application by the Penn Public Service Corporation for authority to acquire the capital stock of the Solar Electric Company for the consideration of \$150,000. At the time this application was filed, the borough of Brookville also filed an application for a certificate of public convenience from the Commission to authorize it to acquire the plant and property of the Solar Electric Company through the right of eminent domain.

Both applications were heard together, and testimony was taken on both cases, and the cases, and the cases were consolidated so far as the hearing was concerned.

The Public Service Commission entered its order authorizing the borough of Brookville to acquire the property there or exercise the right of eminent domain, and at the same time issued a certificate refusing—or issued an order refusing the application of the Penn Public Service Corporation to acquire the corporation to acquire the property or the capital stock of this company.

The order refusing the application of the Penn Public Service Corporation naturally followed after they had reached a conclusion that the borough of Brookville should be allowed to exercise the right of eminent domain and acquire the plant and property through that exercise. Appeals were taken to the orders of the Commission in both cases, but the order of the Commission was confirmed in each case by the Superior Court. Independent proceedings were begun in Jefferson County to test the right of the borough to exercise the right of eminent domain and acquire the plant and property of this company. Those proceedings were carried to the Supreme Court of the State, and a decision was handed down by the Supreme Court, written by Judge Shaffer, in which the borough of Brookville was held not to have the right of eminent domain to acquire the plant and property of the Solar Electric Company.

In the meantime, or at or about that same time, the stock of the Solar Electric Company was acquired by W. W. Taylor, and his rights in the stock were afterwards assigned to the Pennsylvania Electric Association, application was filed on behalf of the Solar Electric Company to sell its property and franchise to the Pennsylvania Electric Company, application was filed on behalf of the Solar Electric Company to sell its property and franchise to the Pennsylvania Electric Company, formerly the Penn Public Service Corporation, the consideration being the assumption by Pennsylvania Electric Company of all of the debts and obligations of the Solar Electric Company.

This application was approved by the Commission, and a deed of conveyance was made by the Solar Electric Company to the Pennsylvania Electric Corporation. About the time this application was filed, an application was filed by some of the consumers of the Solar Electric Company in the borough of Brookville against the rates of the Solar Electric Company. Mr. Conrad in his brief stated that their rate case was filed solely for the benefits that could be derived from that rate case in opposing the sale of the property and franchise of the Solar Electric Company. We insisted a number of times that the rates case be set down for hearing, and the Commission notified him that it would be put down for a hearing, and that he must prosecute his rate case, which he refused and failed to do. As I recall it, in December of 1929 the Commission again asked him to proceed with his rate case, and he at that time said that he was unable to proceed with it, and that unless the Commission granted him a continuance he would have to have it dismissed.

The Commission did grant the continuance, and the rate case at the present is pending. An appeal was taken from the order of the Commission, which was handed down in the first part of 1930—I think in January—and Mr. Conrad appealed to the Superior Court, and afterwards made an application for continuance because he was unable and was not ready to proceed with his appeal. The case was at first continued by the Superior Court at its next session in Philadelphia and

afterwards was continued generally, and was placed on the argument list in Pittsburgh for April 10. Mr. Conrad filed a brief on the last day, he had for filing his brief a copy of which, I understand, is on file with this Committee—and the day before the case was called for argument, Mr. Conrad appeared before the Superior Court and asked permission to waive argument and submit the case on briefs. That was agreed to and the case is now in the Superior Court on the written briefs of counsel.

In the mean time the Pennsylvania Electric Company had constructed transmission lines to the borough limits so as to bring into the borough of Brookville the central station service.

At the time the case was before the Commission it was testified, and I think agreed to by substantially all the engineers, that the gas generating plant of the Solar Electric Company was old, obsolete and antiquated and was in grave danger of serious break down. As a matter of fact, it was testified that it was only kept alive by the expertness of a man who had been in the plant for many years. It had no efficiency.

After the stock had been acquired, the Pennsylvania Electric constructed its lines for the borough and the Solar Electric attempted to construct transmission lines and to construct a sub-station to make the connection. The construction of this line was contested by Mr. Conrad in every way that his ingenuity could devise. He had employes of the company arrested for digging post holes; one of them, I believe, has been sent to jail on account of it. I understand that Mr. Conrad himself—I didn't see it, but I understand he had either sat in the post hole or stood in the post hole to prevent them from setting the pole. An injunction was taken against them in the court of common pleas of Jefferson county, and the borough was perpetually enjoined from interfering with the construction of the transmission lines. The Central Station has been brought to the borough, the rates have been reduced all except the street lighting rates, because the borough of Brookville refused to allow them to install an up-to-date system. I understand they are continuing the old, antiquated street lighting system which was in effect since the company was first started.

And now, that is the story of the Solar Electric Company in the borough of Brookville.

BY MR. EVANS:

Q. After the Public Service Commission refused a certificate of public convenience to the Pennsylvania Electric Company to acquire control, a man by the name of Taylor acquired that stock, did he not?

A. I said that; yes.

Q. And the matter again came before the Public Service Commission and they said they couldn't stop an individual from acquiring stock, although they could stop the Pennsylvania Electric Service, as an operating utility, from doing that?

A. I think that's correct.

Q. Who furnished the money to Mr. Taylor with which to acquire control of this stock?

A. I presume the Associated Gas and Electric Company.

Q. In other words, that was a device to evade the order of the Public Service Commission?

A. No; the order of the Public Service Commission was, first, that the borough of Brookville be authorized to acquire the plants and property through the exercise of the right of eminent domain; and secondly, to refuse to permit the Pennsylvania Public Service Corporation, a Public Service Company of Pennsylvania, to acquire the stock for \$150,000, neither of which elements were present in the purchase of its capital stock by W. W. Taylor.

Q. The second decision of the Commission, however, is based on the fact that the stock having been acquired by an individual, it was beyond the jurisdiction of the Commission; was it not?

A. I think that is correct, I think that is the law.

Q. But you think it is perfectly proper for a utility, which has been refused permission to acquire the stock of another company, to furnish the money to an individual by which he acquires the stock of that company which the Public Service Commission cannot prevent?

A. Except that those facts are not the facts in this case. The Pennsylvania Public Service didn't furnish the money so far as I know, to W. W. Taylor to purchase it.

Q. Who do you think furnished it?

A. The Associated Gas and Electric Company, a non-operating company.

Q. Didn't the Associated Gas and Electric control the Penn Public Service?

A. It did.

Q. So, while you don't think it was proper for the Penn Public Service to advance the money, you think it was perfectly proper for the Associated Gas and Electric Company, which controlled the Pennsylvania Public Service, to advance the money?

A. Yes; and that is frequently done. A utility hasn't that right under the Pennsylvania Public Service law, but a holding company has the right to acquire a controlling interest in another public utility.

Q. Well that is probably where there is a defect in the regulation of public utilities in Pennsylvania?

A. Further, the Solar Electric Company then applied to the Public Service Commission for a certificate of public convenience to sell its property and franchises to the Penn Electric Company, and that approval was granted by the Public Service Commission, because in that second application there were presented two elements, which I think were the moving causes in the Commission's refusal of the same thing in the first application; namely, that it authorized the borough to acquire the property and franchises through the exercise of the right the property and franchises through the exercise of the right them to authorize the borough of Brookville to acquire the capital stock under those circumstances; second, they said that the price of \$150,000 for the capital stock was, in their opinion, at that time, too much. Neither of those two elements were present at the time the application was presented the second time, and the accounts of the Solar Electric Company were placed on the books of the Penn Public Service in identically form that they had been carried on the books of the Solar Electric. There was absolutely no write-up. The plant and property stood on the books in the same way as they stood on the Solar Electric.

BY MR. RHODES:

Q. Did Mr. Taylor own all of the stock of the Solar Electric?

A. Mr. Taylor did not at that time. The General Electric Corporation, a Delaware corporation, owned that stock at that time.

Q. Sold to them by Mr. Taylor?

A. Yes, I presume so.

MR. TURNER: As I recall this case, Mr. Taylor had made some complaint about the property being acquired as so much and then bought at a higher price?

THE WITNESS: There were none of those elements in this case at that time. The plant and property stand exactly where they did before.

BY MR. HAGMAIER:

Q. How much did they pay for it?

A. I don't know. It has been a long time—I have not seen the contract—it has been stated that they paid \$150,000 for the capital stock, but that is a matter of the Public Service Company and not of any companies in Pennsylvania.

BY MR. EVANS:

Q. It seems that it is the practice where prices, like that are paid sooner or later for that price to be reflected in the books of the operating company.

A. It can only be reflected in rates, through the determination of the rate base and the fair value of the property. If the Associated Gas and Electric Company wishes to take a loss or wait for a return in the future, that does not necessarily pass it on to the rate payer in Pennsylvania.

Q. At all events, I understand you to say that up to this time, that price has not been reflected on the books of the Solar Electric Company or on the books of the Penn Electric?

A. So far as I know, and I am speaking at the close of the transaction when the sale was made. I don't know a thing about Mr. Cheney's appraisal, but his appraisal would not have been determined by the fair value of the Solar Electric Company.

Q. Unless you know that Mr. Cheney did not appraise this property at \$150,000, isn't that just beating the devil around

the bush, and leave an insinuation which the Public Service Commission tried to escape?

A. I say if Mr. Cheney's appraisal is not based on the fair value of the physical property of the Solar Electric Company, that appraisal is too broad and I don't believe that is the case.

A. I don't think that Mr. Conrad had any idea at all of the price at which that capital stock had been purchased.

BY MR. HAGMAIER:

Q. Just that they had two different ways of doing the same thing?

A. I might add this further; that the service has been improved in the borough of Brookville and they could have a better service, a continuous and more adequate service if Mr. Conrad would permit them. The rates of the Pennsylvania Electric Company, which were considerably lower, or somewhat lower, than those of the Solar Electric Company have been put into effect in the borough of Brookville and as has been testified there has been a saving made to the consumer.

BY MR. HAGMAIER:

Q. They have never changed their street lighting system?

A. No, and Mr. Conrad won't let them. If he would let them they would give Brookville much more satisfactory street lighting than they now have.

Q. As I understand it, the rates in Brookville are the same as the rates over the rest of the territory served by the Pennsylvania Electric Company?

A. Yes sir, that is right. Their street lights are an antiquated and inadequate system, which Mr. Conrad has in the borough of Brookville. The company has offered to furnish him and the borough of Brookville with a modern lighting system which will give them more light for the same money. I have read Mr. Conrad's statement to the Committee, which probably you all have, as he insists on having it read at every hearing, and I thought that it was due the Committee that they should have these facts which I have before them.

MR. MOORE: The Committee will recess now until 1.30 P. M., Eastern Standard Time.

1.30 P. M., hearing resumed.

J. S. S. RICHARDSON sworn

MR. WALKER: Mr. Chairman, before Mr. Richardson starts his testimony, I would like to call the Chairman's attention to a letter which he directed to the Pennsylvania Electric Association under date of April 20, 1931. The letter reads as follows:

"Pennsylvania Electric Association, Harrisburg, Pa.

"Gentlemen: Will you kindly furnish the Committee with the following information:

"1. The names of all attorneys, solicitors, experts, and lobbyists employed by your Association, and its sub-committees and affiliated organizations from January 1, 1926, through April 15, 1931.

"2. The salaries paid to each of these individuals for the same period.

"3. The names of all attorneys, solicitors, experts and lobbyists employed by your member and constituent companies for the same years, together with their salaries.

"4. The statements of expenditures by your organization and committees affiliated with it, including all cash funds for the same years.

"5. (a) The advertising carried by your constituent companies for the same years, divided into institutional advertising and other, and the sums paid by each company. (b) Also the method of allocation of such expenditures in the annual reports of the companies to the Public Service Commission.

"6. All material relating to studies made by your Association and connected committees and companies of text-books used in the schools and colleges of Pennsylvania and also all material relating to special utility courses arranged in the interest of the companies.

"Sincerely yours, D. Glenn Moore, Chairman."

I just want to call the Committee's attention to the fact that in spite of the fact that the Pennsylvania Electric Association now refused to appear, this information has not been furnished to the Committee.

MR. EVANS: I might just supplement that, I think, by saying that last week Mr. A. B. Miller, managing director of

the Pennsylvania Electric Association, told me that it would take a considerable time to gather the information requested in paragraphs 3 and 5, which had to do with the attorneys and so forth of the constituent companies and the advertising of the constituent companies. I asked him not to delay furnishing the other information on that account, and he told me that the other information could be furnished very promptly.

MR. WALKER: And I also wish to call the chairman's attention to Mr. Miller's testimony on page 4010 and page 4026 of the record, in which he promised to furnish to Mr. Hagmaier a financial statement of the Pennsylvania Electric Association for the year 1929, I think it was,—that is the year you asked for, wasn't it?

MR. HAGMAIER: Yes.

MR. WALKER: And I have been informed by Mr. Hagmaier, that that has not been furnished.

BY MR. WALKER:

Q. Now, Major Richardson, the Committee and the public received an impression, rather erroneously perhaps, that last week, when you were suddenly called from Harrisburg, from the fact that there were four subpoena servers looking for you, it looked as if that had something to do with it. Would you please explain to the Committee why you were suddenly called from Harrisburg?

A. Well, as I remarked to you this morning, Mr. Walker, I intended to ask the privilege of explaining. I intended no discourtesy whatever to this Committee in not appearing. I think it was on the 20th or the 21st, the morning of the 21st, I received an invitation from Mr. Evans to come down here on the 23rd. I left New York on the afternoon of the 21st and arrived here that evening, with the full intention of presenting myself here on the 23rd. At luncheon on the 22nd, or just as I was finishing luncheon, I received the following telegram from my Washington office: "Matters here make it necessary you be here tomorrow morning, tonight if possible. A. C. Oliphant." That is one of my associates down there. My reason for going down there was rather urgent. I knew what he wanted, and my business there has nothing to do with what this Committee is endeavoring to ascertain; but there is no secret about what I went to Washington for, and if you desire, I shall tell you.

On my arrival in Washington, I promptly wrote Mr. Evans a note to the effect that I could not be here on that date. I had not at all replied to his letter of invitation. On the morning of the 24th I discovered from a copy of a Philadelphia newspaper in Washington that there seemed to be what I considered a grave misunderstanding as to my motive, and I promptly wired Mr. Evans then that I was prepared to appear here any time that was mutually convenient and suggested any time after Tuesday of this present week; and if you so desire, I will tell you what my business was in Washington.

BY MR. TURNER:

Q. Well, did you know on—was it Wednesday, the 22nd?

A. I knew on Wednesday that I was supposed to be here on the 23rd.

Q. Did you know anybody had a subpoena for you?

A. Oh, no, not at all; I never heard of the subpoenas. As I understand it, they were not issued, if any were issued, until after I left town. I left on the 3.15 train.

Q. 3.15 of what day?

A. On the 22nd.

Q. That was Wednesday?

A. Wednesday, and I wrote to Mr. Evans that evening from Washington.

Q. 3.15 afternoon or morning?

A. 3.15 in the afternoon, yes. I received a wire at 2 o'clock and ascertained I could get a train at 3.15, and I promptly took it. Having in meanwhile left Mr. Gadsden, the chairman of this Committee, who came down here especially to give me some papers which he desired I should present here, or offer.

BY MR. WALKER:

Q. Major Richardson would you just briefly tell the Committee why or what committee of the Pennsylvania Electric Association made this school text book survey?

A. So far as I know no committee of the Pennsylvania Electric Association ever made any school book survey. I never have had anything to do with the Pennsylvania Elec-

tric Association so I am not qualified to tell you anything about it.

Q. What committee that you were connected with made this school book survey?

A. The Pennsylvania Public Service Information Committee a committee made up of telephone companies both independent and the Bell system natural and artificial gas companies, electric light and power companies, street railway companies and water companies of this State.

Q. And a number of the members of this committee were also members of the Pennsylvania Electric Association?

A. Oh I assume so; the electric members were yes.

Q. And would you just briefly explain to this Committee how that survey was conducted?

A. If you want me to I can summarize. I have already done so in about 200 words here everything that we did so far as schools were concerned and then you can examine me as far as you choose on what I have given you. Is that satisfactory?

MR. TURNER: Yes let us have it.

THE WITNESS: Not one word of a controversial political or propaganda nature ever was given to the public schools by the Pennsylvania Public Service Information Committee.

On the other hand textbooks on economics and civics used in the public schools of the state contain public ownership propaganda and misinformation of a defamatory character relating to public utilities.

The Pennsylvania Committee never prepared and never attempted to introduce any textbooks into the school. The only publications offered to school superintendents by the Committee were four in number dealing respectively with the history of the telephone, the gas, the electric and the street railway businesses. The material in them was assembled by engineers from technical and statistical data collected from many sources. There is no propaganda in them. I offer them in evidence. They speak for themselves.

MR. WALKER: Yes, we are familiar with them.

THE WITNESS: In 1925 the Committee completed a survey of textbooks on economics and civics used in the public schools of Pennsylvania. In several instances, the survey showed the advocacy of public ownership of public utilities was supplemented by charges of a grave character against the management of utility corporations. The unfairness was manifest as no company or management was specified. The criticism offered was, by implication, directed at all public utilities.

Other statements in the textbooks were archaic and gave a misleading and untrue picture of affairs as they obtain today. Although these clearly improper books were found in the schools, the Pennsylvania Committee affirmatively decided it was not its function to attempt to bring about their elimination. This fact was clearly set forth in the minutes of an Executive Committee meeting.

Extracts from a few of these textbooks are hereto appended, and if you wish me to, I shall read extracts.

MR. WALKER: We have got the copy. I don't think it is necessary to read them.

THE WITNESS: I can give you, if you desire, a copy of the—it is the only copy, so far as I know, in existence, and I would like, if you desire it,—and I think in fairness, inasmuch as many assertions have been made as to the propaganda material contained in textbooks in the several meetings,—I think in all fairness this ought to be exhibited in evidence here, and I should like very much if I may ask to have this returned to me when you are through with it, because it is the only copy I have.

BY MR. WALKER:

Q. Major, this survey was introduced before the Federal Trade Commission as an exhibit, was it not?

A. I don't recall; perhaps it was. Yes, it is in the Federal Trade Record, yes. There are quotations from the books there to.

MR. WALKER: I offer in evidence these photostatic copies of the survey in evidence as Exhibit No. 178.

Photostatic copies of pages of exhibit of survey introduced in evidence before Federal Trade Commission, produced and Marked Exhibit No. 178.

BY MR. WALKER:

Q. Major Richardson, I show you a photostatic copy marked Exhibit No. 178 and ask you if that is a photostatic copy of the report of the survey which utilities made?

BY MR. TURNER:

Q. Does that appear in the Federal Trade Commission Report?

A. It does not look to be a copy.

MR. TURNER: If it cannot be identified, why do you not introduce the pages from the report?

BY MR. WALKER:

Q. This is the same right on through, isn't it?

A. I cannot compare it completely. If you assure me it is the same as this—

Q. I assure you that it is the same as that which appears in the Federal Trade Report.

A. That satisfies me.

Q. You may compare the pages?

A. I will take your word for it.

MR. TURNER: Is it possible to put the reference on the record, so that it may be referred to?

MR. WALKER: This is the column filed with the Senate November 12, 1929, listing Exhibits 718, to 1434.

MR. TURNER: What date was that filed?

MR. WALKER: November 12, 1929.

BY MR. WALKER:

Q. Major Richardson, these comments on different textbooks that are listed in the last few pages of this Exhibit 178, those are passages that the Committee believed were inimicable to the interests of the utilities, is that correct?

A. Yes. I don't know that there are any passages marked, but I should say this, that they are excerpts from this survey. I don't know how many of these textbooks were used in the schools in Pennsylvania, but some of them are not objectionable, so far as utilities are concerned, and others are exceedingly so.

Q. What was the purpose of including these extracts from these different textbooks?

A. This survey was very limited in printing and it was given to the members of our Committee to inform them of the kind of material that was being taught in the public schools of the State.

Q. Was that followed by any action on the part of your Committee or on the part of the members of the industry?

A. I cannot speak for the members of the industry, and all I can say is that affirmatively our Committee is on record as deciding that it was not their function to eliminate these books, to have them corrected.

Q. And you made no effort at all to have these books corrected?

A. Our committee made no such effort.

Q. Did you make any effort to have these books corrected otherwise?

A. I did one thing, or at least my assistant did, he talked, and I suppose I am talking second hand about this because I had no personal connection with this incident, he talked with the publishers, or a member of a publishing house which publishes one or two of these books, and told him about these objectionable paragraphs, or some of them, and he assured him that the next time that publishing house printed a textbook, he would let some utility expert look it over in advance of its being issued, to see whether or not it was objectionable, but whether or not that was done, I don't know. I certainly never saw one in advance of its being printed. I did see a textbook after it was printed by this company, and it was a very fair and good presentation of the situation.

Q. Do you recall the nature of your survey regarding the book on civics written by Prof. R. O. Hughes, of the Peabody High School?

A. I think that is one of the books written here—no I see here Mr. C. Hughes, and E. Hughes, I don't know of any R. O. Hughes.

THE CHAIRMAN: There is one that was written by him, a book on elementary civics.

THE WITNESS: The name of R. O. Hughes does not occur in this survey that I can find.

BY MR. WALKER:

Q. I will show you here in Exhibit 178, page 913 of this exhibit, the first two, Elementary Community Civics, R. O. Hughes, Peabody High School, Pittsburgh?

A. Yes, that is right, a typographical error here in the title, that is all.

Q. That is one of the books that you considered inimical to the interests of the industry?

A. Not whatsoever.

Q. Were any of the passages in that book considered by you inimical to the interests of the industry?

A. May I read the passages; I have not read them for some time.

Q. The first passage is there. (Indicating). You want to read it now?

A. If I may, to find out in my own opinion if I consider it objectionable.

(Witness read extract indicated by counsel).

THE WITNESS: I don't consider anything objectionable in the R. O. Hughes' book.

BY MR. WALKER:

Q. Will you explain to me then, Major, why there was an attempt made on the part of the industry, and I might say a successful attempt to remove Prof. Hughes book from the Pittsburgh schools?

A. I know of no such attempt. I don't recall any such attempt, and when you say by the industry, I don't know exactly what you mean.

Q. As a matter of fact, didn't you or your committee, or some of your associates, in conjunction with the electric industry in Pittsburgh, Pennsylvania, have Prof. Hughes' book removed from the Pennsylvania schools?

A. My committee, or the committee on which I was a director, did no such thing, and I personally did no such thing.

Q. And do you recall whether or not any influence was exerted by any of the electrical industries to have it removed from the Pittsburgh schools?

A. I know nothing of it.

Q. Are you aware of the fact that it was removed from the Pittsburgh schools?

A. I am not aware of that fact; no.

Q. In making up that survey, I show you here, Federal Exhibit Trade Commission Exhibit No. 93 which is a letter addressed to the Hon. James S. Benn, Public Service Commission of the Commonwealth of Pennsylvania, and ask you if you wrote Commissioner Benn that letter?

A. I did, yes sir.

THE CHAIRMAN: Mr. Walker, this carbon copy does not show by whom this letter was sent.

MR. WALKER: It is going to be identified in just a minute, sir.

Paper produced and marked Exhibit No. 179,

BY MR. WALKER:

Q. I show you this photostatic of a letter addressed to Commissioner Benn, which is marked Exhibit 179, and ask if you wrote Commissioner Benn that letter?

A. I did.

Q. I call your attention to the first paragraph of the letter, which reads as follows: "In conformity with the desire expressed by Mr. Fickenscher, I am enclosing you a list of the public relation and educational activities of the public service industries in the State of Pennsylvania during the past twelve months." Would you mind stating why you were communicating with Mr. Benn on this subject?

A. Yes, Mr. Fickenscher came to me and explained that Commissioner Benn was taking the place of Commissioner Lewis of the Interstate Commerce Commission at a forthcoming annual meeting of the National Association of Railway and Utility Commissioners to report on behalf of a Committee of which Mr. Lewis was chairman, on the so-called educational activities of public utilities throughout the country. Mr. Benn was a member of that Committee, and he was to take Mr. Lewis' place, Mr. Lewis being ill. Mr. Benn, so Mr. Fickenscher informed me, was not familiar with the education activities in Pennsylvania. Our Committee, so far as I know, never had any communication with Mr. Benn; I never had met him up to that time; and the only Commissioner with whom we had communication in regard to education was Commissioner Stewart, who prior to his appointment on the Commission by Governor Pinchot had been an educator, and was professor of economics, I understand, at Lehigh; and we sought the assistance of the Commission in providing a lecturer before a class of subordinate executives of utilities at the high school of the University of Pennsylvania on regulation, the regulation of utilities. The only qualified lecturer we felt, was a man engaged in the business of regulating pub-

lic utilities. So, we asked Chairman Ainey, I recall—we finally asked Judge Ainey, and he designated Dr. Stuart, and Dr. Stewart did lecture several times; however, I don't recall—and as I recall Mr. Fickenscher told me that Dr. Stewart suggested that Commissioner Benn get the information from me, and Mr. Fickenscher, as his messenger, asked that I prepare that report.

Q. On the second page of Exhibit 179, there is a page headed, "General Summary" educational and public relation activities of public utilities in Pennsylvania." Was that general summary attached to your letter to Commissioner Benn?

A. It was.

Q. I will read to you from the first paragraph on the second page; in the business of maintaining and working under contract with the educational institutions of this Commonwealth, the Public Service Commission co-operates with the general public service information committee?

A. Yes sir.

Q. Do you mean by that the Public Service Commission of the Commonwealth of Pennsylvania?

A. The Public Service Commission of the Commonwealth of Pennsylvania through Dr. Stewart was giving us that co-operation.

Q. And that is the co-operation you referred to?

A. That is the co-operation I referred to.

Q. This letter was written prior to the time that Dr. Stewart made these addresses for you, was it not?

A. I don't think so. It may have been. I don't know.

Q. And you say that the co-operation referred to in your letter was the co-operation in the way of the speaking activities of Dr. Stewart?

A. Yes.

Q. And I say to you that that letter was written prior to the time that Dr. Stewart made any speeches for you: was it not?

A. I don't recall that; no.

Q. Can you not give me any fixed dates?

A. No; I cannot give you any fixed dates, I am afraid. You see, I have been out of the work for quite a while, over four years.

Q. You mean out of this particular phase of the work?

A. I resigned from the Committee four years ago.

Q. And did the Public Service Commission of the Commonwealth give any other cooperation, aside from Dr. Stewart's speaking?

A. No.

Q. Are you positive about that?

A. Not that I can recall. It may have done so, but I don't recall it.

Q. I show you here Federal Trade Exhibit No. 119, which is a letter addressed to Mr. J. H. Chearer, and ask you if you are the author of this letter?

A. Yes sir. Can I read it? I wrote that letter—yes sir.

Q. May I call your attention to one paragraph of this letter?

"Of course, all of the business must needs be transacted with exceeding tact and diplomacy. Local conditions and prejudices will have to be taken into account when the educators are approached. Also, it may be well to note what appropriation the school superintendent may have at his disposal for the purchase of text books. It may well be that avenues of proper assistance in a small way will present themselves. It may be well worth a utility's while to help in that regard. Such aid, unfortunately, is subject to misinterpretation and would therefore have to be rendered in a manner well safeguarded from suspicion." What situation were you referring to that would have to be transacted with exceeding tact and diplomacy?

A. That is too long ago. That letter was written on July 7, 1925, and I don't recall what was meant by it. I was acting personally with Mr. Shearer when I wrote that letter, and I said the same thing to many others, that I considered those books highly objectionable and I thought, and I still think that every effort should be made by utilities to get those things cleaned up. You will probably note that in a later paragraph I suggested that the business was not our, but might be done by the association. Incidentally, that letter was written prior to the committee taking affirmative action.

Q. Do you mean, that was written prior to the time you made the survey?

A. No, it was written subsequent to the making of the survey, but prior to the time the Committee took the affirmative action in deciding it was not one of its functions to bring about the elimination of these books for the public schools.

Q. And you made that recommendation?

A. No, I suggested that perhaps to some of the associations.

Q. What associations?

A. They are all mentioned there, the utility associations.

Q. Now, why was it necessary to transact the business "with exceeding tact and diplomacy?"

A. That was just a suggestion. I think all such business should be conducted with tact and diplomacy.

Q. Would you mind telling me what you mean by the expression in this "that it may be well to note what appropriations the school directors may have at their disposal," and so on, ending with the suggestion that it might be possible for the utilities to assist local school authorities in the purchase of school books?

A. Well, that was my thought. I thought that in communities where the schools might be hard up, that in this way instead of their buying cheap books they might be able to get those which we knew to be good ones. There are several very good text books being used in the schools of Pennsylvania.

Q. By good textbooks, do you mean the one compiled by S. S. Weir? Is that the type of book you refer to?

A. It is not, and I do not think that that is a textbook.

BY MR. MOORE:

Q. Who is the author of these books?

A. There are several.

Q. The textbooks you were trying to introduce into the schools?

A. We were not trying to introduce any textbooks into the schools; the only things that we sent to the schools were these pamphlets.

Q. Who were the authors of those pamphlets?

A. Engineers employed by various utilities, and I respectfully submit copies of them to you.

BY MR. HAGMAIER:

Q. You say you were not trying to supply textbooks to the schools, but a little bit ago you said you were willing to help to buy the books. Would you not have something to say about what they would buy if you were helping to buy them?

A. I didn't say I would help to buy them. I was just suggesting to a member of our committee that it might be a good idea for the utilities to try to become active to try to eliminate these objectionable books. Not with the idea of supplementing them with any book prepared by us, but with other books already in use.

Q. Who would be the judge?

A. Why the school superintendents, I suppose.

Q. Would you help to pay for a book that you didn't know what was going to be bought?

A. I was only suggesting that to him as a member of our committee.

Q. These books that you had listed in the survey which you made, these would not be recommended by your committee, or by the association to the schools for purchase?

A. The objectionable ones?

Q. Yes?

A. I personally would not recommend them and our committee was on record as having decided that they would not recommend the elimination of anything.

BY MR. WALKER:

Q. Do I understand that all the books referred to in Exhibit Na. 178 here were objectionable books or had objectionable passages in them?

A. No sir.

Q. Do I understand that the books from which passages were quoted in Exhibit No. 178, that the passages were objectionable passages?

A. No, some of them were not and some of them were.

Q. What was the purpose of picking out the pages wherever they had reference to Public Utilities and quoting them whether they were objectionable or not?

A. I have outlined in his (indicating original copy of the report) you can see there are several passages here that I have red-penciled that are not objectionable.

Q. Major, it was up to the different members of the association who received this exhibit to make up their minds whether or not the passages were objectionable?

A. Certainly.

Q. And it was the thought of the committee passed on the various local committees of the industry to take this matter up with the school board?

A. That was not the thought of the committee at all; it was my personal thought.

Q. And you passed that on to the members of the electric association?

A. I did not. I passed it on to one or two public utility men whom I knew personally like Mr. Shearer.

Q. Do you know that he passed it on to the electric association?

A. I don't know that he did. My recollection is that I never discussed it with him.

Q. Did you ever have any correspondence with the school officials of Allegheny County in regard to this book by Professor Hughes?

A. I don't think so. I might have, but I don't recall it.

Q. I show you here a letter from the Pennsylvania Public Service Information committee dated Philadelphia, November 27, 1923, and addressed to Mr. George J. Beck, Superintendent of Public Instruction, Harrisburg, Pa.:

"Dear Sir: We have been asked about a textbook called 'Community Civics,' by R. O. Hughes of the Peabody Schools in Allegheny County. Can you tell us whether this book is used in Pennsylvania and whether placed on the approved list for schools in this State. Do you have any data at all concerning this book? Thanking you for any assistance you can give us, (signed) Director."

Q. Are you the author of that letter?

A. Yes sir I am. That was long before we made the survey.

Q. Did you write a letter to any of the school authorities in Allegheny County?

A. I don't recall, I may have.

Q. As a matter of fact, you did write to the Superintendent of Schools of the Pittsburgh district, and made some inquiries in regard to Professor Hughes' book?

A. If the record shows I did, then I did, I do not recall.

Q. In order to clear up some testimony already on our records, I show you here a letter, Federal Trade Commission's Exhibit No. 967, addressed to you and signed by Samuel S. Weir, and ask if you recall receiving such a letter?

A. If it is in the Federal Trade Commission record, I have already identified it.

Q. Do you recall receiving such a letter?

A. I do not as a matter of fact, but if I have already identified it, it is all right.

Q. Do you recall what action you or your committee took when that letter was received?

A. I do not recall, but my idea is, we didn't do anything about it.

Q. Also you wrote the publishers.

A. Maybe I did.

Q. You wrote to them and asked for a copy or a proof of the book so you could read it?

A. Maybe I did.

Q. Would you recall whether the severe language which was so objectionable to S. S. Weir was eliminated?

A. I don't recall anything about it, as a matter of fact. We didn't do anything about it in the matter of eliminating things as far as that is concerned. I personally don't object to flowery language.

Q. Even when it refers to Mr. Cooke?

A. No indeed. Mr. Cooke has written some excellent things.

Q. I show you the Federal Trade Commission Exhibit No. 1192, a letter addressed to you by Mr. A. W. Robertson, and your reply:

"Exhibit No. 1192."

Philadelphia Co.,  
Pittsburgh, Pa., January 22, 1925.

"Mr. J. S. S. Richardson,

"Director Pennsylvania Public Service Information Committee, Philadelphia, Pa.

"Dear Mr. Richardson: At the meeting today of the western Pennsylvania executive committee of the Pennsylvania Information Committee we discussed the resume of analysis made

by the Illinois Committee on Public Utility Information of the accredited textbooks used in the regular study courses of the Illinois public schools relative to their treatment of public-utility problems. We were astonished at some of the statements to be found in these text books no doubt the books in our own State are much the same.

"Mr. Shearer, of Altoona, advised us that the electric association had this matter in hand and was making an investigation of Pennsylvania textbooks and that he would send us a list of the books. Everyone was very much interested. It would seem that here is something that our committee might take a real interest in and see where we could help.

"The thought occurs to me that the reason why so many educators are more or less hostile to big business is in many cases due to the fact that they themselves are not successful in a business way. There ought to be some way in which educators could be better paid. It would certainly help to cure at least some of their mental bias.

"The same thought has come to me regard to ministers, who are generally unfairly critical of corporations, including public-service companies. However, this is going pretty far afield, but nevertheless I believe that leaders in our business life could well consider the advisability of giving some real attention to the economic welfare of educators and others who are largely responsible for training the minds of our children.

"As I write, the final thought comes to me in regard to the textbook matter—would it not be possible for some of our men to approach the large publishers of textbooks and produce some quick results in clearing up the situation?

"We were very sorry to miss you and hope to see you at the next meeting.

"Very truly yours,

A. W. Robertson"

January 24, 1925.

"Mr. A. W. Robertson,  
"Vice-President and General Attorney,  
"Philadelphia Co., Pittsburgh, Pa.

"My dear Mr. Robertson: Apparently I had overlooked informing you that for the past three months this bureau has been engaged in making an analysis of textbooks used in the schools of Pennsylvania. The survey is nearly three-quarters complete and should be finished very soon.

"We have encountered obstacles in this State which, I am informed, do not exist in other states. For instance, each district superintendent in Pennsylvania appears to have carte blanche in selecting such textbooks as he deems proper. Consequently we have had to cover much ground. The returns show that several unwholesome textbooks are being used.

"I was very glad to note your expressions relating to the underpayment of teachers. If the utility companies, in a discreet way, could foster a movement for adequate remuneration of teaching personnel in our public schools, I am convinced good results would come. The reason some of those superintendents approve the use of so-called government and municipal ownership propaganda in textbooks in the usual for indorsing such stuff. They are sour. Their outlook is distorted and their judgment warped through personal disappointment.

"That is true also of some denominational ministers, though not to the same extent.

"I regret my inability to attend your meeting and assure you I shall make strident efforts next month.

"Very truly yours."

Q. Are you the author of that letter?

A. It is my letter.

Q. May I ask what you refer to when you state here, "If utilities companies, in a discreet way, could foster a movement for adequate remuneration of teaching personnel in our public schools, I am convinced good results would come?"

A. Well, it is a good result to get a fellow more pay.

Q. Do you think that answers the question, Major?

A. I think so, yes sir.

Q. Why should the utility companies foster a movement to raise the salaries of school teachers?

A. To make them more—to give them a better viewpoint on life and not have them sore, because they are disappointed and broke all the time.

Q. Do you know that the salaries of school teachers were in Pennsylvania at that time?

A. I think I did, but I don't recall now what it was, but I know it was not enough pay by any means.

Q. Was it your inference to Mr. Robertson that this thing should be brought about by applying the activities of the public utilities through legislation?

A. I don't recall just how it should be done, but I thought some movement should be started by which school teachers would receive more pay.

Q. Did you have in mind the salaries of professors and instructors in colleges and universities?

A. At that time, no.

Q. You didn't know who set the salaries?

A. Not now I don't.

Q. You didn't know who set the salary?

A. Not now I don't.

Q. Did you have in mind at that time the salaries of professors at universities?

A. I didn't think of that.

Q. Were you informed of the salaries of professors in universities being raised?

A. I am in favor of raising everybody's salary.

Q. The only effect of that paragraph in that letter is just a big-hearted humanitarian spirit to raise teacher's salaries?

A. Not wholly. The school teachers at that time needed more pay.

BY MR. BOWERS:

Q. Did you have in mind teachers in high schools and public schools or the schools of liberal arts?

A. No, my thought referred to the public schools.

Q. Did you know at that time that there was a movement on foot and much agitation in the State to get a substantial increase in the teachers' salaries, based on the term of service?

A. I don't recall what the general situation was. That was written six or seven years ago, I think.

BY FATHER COX:

Q. Didn't you feel at the time when you were helping to get more salary for the school teachers, that possibly it would make them more kindly disposed toward utilities? Everybody has a selfish motive as a rule when they do these things?

A. Maybe so, Father, but I don't think that is was.

Q. Why this generousness in the salaries of school teachers, why not an interest in the salary of poor clergymen too?

A. I mentioned in there that some clergymen were not getting enough.

BY MR. HAGMAIER:

Q. What was your main objection to these books, the mere fact that they made some statement about the public ownership in some of these small localities who own their own power and light plants?

A. No sir, there were charges made in some of these books which applied to all public utility executives of a predisposition toward dishonesty and also leaving the implication that all sorts of trickery and bribery is engaged in, and by classing the public utilities with the liquor interests and other evils. That is set forth in so many words in one of these textbooks.

Q. You could not find them all in any one book?

A. No sir.

Q. Now, the main objection to the Hughes' Book?

A. The main objection to that was that they were teaching public ownership of the utilities by municipalities.

Q. I just read the paragraph in the Hughes' book here and I cannot see anything objectionable in it.

A. There was a letter sent there, was there not?

Q. Well, do you think it is a serious objection to have anything in a public school book about the public utilities being a monopoly, to a certain extent?

A. Not at all, but when the author of the text openly advocates public ownership on the ground that the private operators are dishonest, I think that is not quite a good thing to teach school children.

Q. No, I don't either. If I could read that in any of them—

A. If you care to glance through the marked copies—

Q. I would like to.

A. One or two of the paragraphs there I think you will find.

BY FATHER COX:

Q. Then, Major, your real idea was to get into the schools as far as possible and correct what you considered a wrong attitude on their part; you did have a motive other than just getting more salary for the teachers? Now you can say it; nobody care about that particularly. I mean is it the truth or not? You wanted to make them feel kindly towards you?

A. I personally wanted to get those objectionable paragraphs out of those text books.

Q. And you thought the way to win the approval of the teaching profession was to raise their salaries?

A. I meant what I said in that letter and no more.

Q. Of course we know when money talks everybody listens; if they got more money—

A. I stand by the paragraphs in the letter. I do not care to amplify my written statement. It is too long ago since I wrote it for me to amplify it at this date.

Q. All I mean is you did want their support?

A. Whose support?

Q. The school teachers.

A. I didn't want the school teachers' support no.

Q. They didn't have anything you wanted whatsoever? Now if you had been so good to me I would have felt kindly disposed toward you no question about it.

A. I would not question it, father.

Q. You need not hide things of that kind. I think that is probably one of the things brought out by this investigation. The things that have been done to influence public opinion, to give a right feeling towards the utilities, are so questionable sometimes, and some of the things that are done, that I think they are sort of following in the footsteps of the old brewery people and saloon keepers, that instead of being honest and above board in their efforts to win public approval, they took the underhanded method, and the result is prohibition. They kept spreading propaganda that they could not prohibit them, they could not do anything with them, could not regulate them. They not only regulated them, but they put them out of existence. Remember, I am not giving you any opinion on what I think about them, good or bad; but I think these utilities are working up towards the same thing, that unless they come out and be frank with the people. Major, I think, having been in the army with a lot of square shooters, you ought to come out and tell us. You have been telling us a lot of stuff here. Let's sort of get this thing right. Don't hedge.

A. I can not amplify a statement I made six or seven years ago very well. I don't recall those things.

BY MR. HAGMAIER:

Q. Well, you can give us your present idea and opinion then. Haven't all of you fellows together combined to put the kind of a book in the schools that was most beneficial to yourself? Now I will give it to you that way. Answer that?

A. Our idea is not to have anything in the schools that is beneficial to us. What we object to is the material that is being taught the children that is objectionable. We didn't seek anything beneficial. We want facts.

Q. All right, I will agree with you there. Then why not take the thing up with the local school directors? Why not come out to the head of the department in Harrisburg and put the cards on the table and say here are the things that are objectionable, don't you think it can be changed? The trouble is you seem to be kind of trying to get around the corner, you seem to find a very nice, economic, fine way of doing it to arouse suspicion. If a man has an honest case, he doesn't have to care about suspicion. Put it down on the table and say here is what we object to and it is wrong, and I think the right-thinking people would be with you.

A. I agree with you.

BY FATHER COX:

Q. This whole program, Major, was not carried very far, was it? That is, dropped just like that?

A. We dropped it as a committee; yes, sir; and so far as I know, nothing definite was done anywhere.

Q. The thing did not bear the light of day anyway, and consequently it was dropped, is that it?

A. I don't know why it was dropped. We decided our committee could do nothing as a committee and we dropped it.

BY MR. WALKER:

Q. Do you see any connection between the Federal Trade investigation and the dropping of this program Major?

A. This project was dropped by us several years before the Federal Trade Commission ever started its investigation.

Q. Do you recall when the Federal Trade Commission investigation started?

A. I certainly do: I have attended almost every hearing.

Q. Would you mind giving us the date?

A. The date is three years ago last March.

Q. Now would you mind giving us the date?

A. 1928, I think, March, 1928, it started.

Q. And am I to understand that this project was dropped two or three years prior to that.

A. This project was dropped when I was still a director of the Pennsylvania Public Service Information Committee, and it is more than four years since I resigned from that committee.

Q. Do you know whether or not it was dropped by the electric association?

A. I don't know anything about the electric association. I never had anything to do with it.

Q. Well, you reported this survey to them, did you not?

A. I did no such thing. I reported this survey to the principals of my committee.

BY MR. MEMOLO:

Q. Well, they were on your trail pretty well, Major, weren't they?

A. Who were on our trail?

Q. The Federal Trade Commission.

A. The Federal Trade Commission inquiry was begun under the terms of a resolution entered by Senator Walsh in the Senate, in the fall of 1927. Or was it 1928? 1927. This survey was made by us in 1925, two years before, two years before Senator Walsh entered his resolution.

Q. Yes, but as a result of the investigation being made two years before that, that is what caused Senator Walsh to introduce the resolution.

A. I don't think there is any connection between the two situations.

Q. Oh yes.

A. Your information is different from mine.

Q. If I remember distinctly, they had some talk of it in the papers a year or two before it, I think.

A. Of course, we took our information from records; not from reports in the newspapers.

Q. Well, I remember distinctly reading something in connection with this matter in 1927, if I am not mistaken.

A. 1927 was two years after—

Q. Before 1927.

A. 1925 is when we made this survey and dropped it the same year.

BY MR. WALKER:

Q. Do you recall to how many utility companies you sent a report of this survey?

A. I sent a report of the survey to our membership, and I think our membership was about 125, something like that—individuals, not companies,—individuals who were members.

Q. The individuals were all executives of companies, were they not?

A. Executives of telephone, gas, street railway, water and electric companies.

Q. And after you sent out your report, as far as you were concerned, the matter was dropped, is that it?

A. As far as my committee was concerned, yes.

Q. That is what I mean.

A. Yes.

Q. Did you as an individual have any active interest in this survey after that?

A. No active interest after the committee dropped it. Prior to the committee's dropping it, I invited the attention of some utility executives to the statements in those books which I considered very objectionable, and should have been removed, and still think so.

Q. And those are the passages you have marked and given to Mr. Hagmaier?

A. Exactly.

Q. Major, do you have any knowledge of the courses that were installed in universities and colleges either by your committee or by the Pennsylvania Electric Association?

A. I only have information relating to the courses established in colleges by our committee.

Q. And in what colleges did your committee establish courses?

A. The University of Pennsylvania and Temple University in Philadelphia, and we also cooperated with State College on a correspondence course for utility employes. Both the courses in the University and Temple University were for utility employes.

Q. Solely for utility employes?

A. Well, one or two others may have attended; but so far as I know the bulk of the student body were utility employes. They were night schools.

Q. And in this one at the University of Pennsylvania, do you recall the title of the course?

A. Well, I can give you the dope on it. The Regulation and Operation of Public Utilities. That was a course designed specifically for subordinate executives of utility companies, and the companies participating, as I recall, paid half the tuition fee.

A. There was a very small group, I think about 20.

Q. As a matter of fact they subsidized the course, did they not?

A. Subsidized the course by underwriting it to a deficit of \$250.

Q. And what Professor taught the course?

A. There were several.

Q. I mean at the University of Pennsylvania?

A. Well, there were several. Parker, Grayson and McIntosh.

Q. The utilities underwrote all these courses by paying the professors directly, or did they pay the university?

A. The utilities paid nobody, except by paying part of the tuition fees of the students, and as I say, underwrite a deficit not to exceed \$250 for the year. Now, my recollection is that one year it was 100 and some odd dollars, and the next year it was over \$250, but we were not obligated to pay more than \$250, and we never paid any professors.

Q. Who prepared this course that was taught at the University of Pennsylvania?

A. Those three professors.

Q. Those three professors?

A. Yes, I assume they did.

Q. Do you know whether or not they did?

A. I think I recall that they did, yes, I was not in close touch with it.

Q. It was the lecture course?

A. A lecture course and quiz.

Q. And this lecture course was submitted to be censored by the professor to certain officials of the utility companies were they not?

A. Not that I know; they may have been, but not through me.

Q. I didn't say through you, Major, I said they were?

A. They may have been.

Q. I asked you if they were?

A. I don't know that they were, my impression is that they were not.

Q. Would it surprise you to learn that they were?

A. No, it would not surprise me at all.

Q. I didn't think it would. Now, tell me about the course at Temple University?

A. That was a much larger affair, a greater number of students going there, there were a considerably greater number, two or three hundred, I think, and they were all employees of the gas and street railways, I don't think there were very many telephone employees, or electric light and power.

Q. And is that course handled in the same way?

A. Now, I don't know. I am not sure—here is the whole outlay of the thing. I will give you the whole thing. (Handing pamphlet to counsel).

Q. And are you familiar with the correspondence course that was instituted at State College?

A. I am not. I attended one meeting up there, but the man who was destined to carry on that course was an engineer, of the United Gas Improvement Company.

Q. Was it the United or Associated?

A. No, the United Gas Improvement Company of Philadelphia.

Q. Do you recall the name of the professor that was teaching that course up at State College?

A. No, that was one of those correspondence school things, most of the employees of the different utilities, and I think the teacher was Professor Miller, I am not sure. I don't know anything about the course, I never had anything to do with it really.

Q. It must be a good course from some things in here, (Indicating Federal Trade Commission Report) Major, because this is very interesting. And did you have any participation in, or did you have any knowledge of an attempt on the part of the Associated Gas and Electric Company to institute a course at the University of Pittsburgh?

A. Never heard of it.

Q. And do you happen to know whether or not the Associated Gas and Electric has subsidized a course at Penn State College?

A. I don't know.

Q. Then if it were done, you have no knowledge of those two courses whatsoever?

A. None whatever. My recollection is that no executive associated with the Associated Gas and Electric or any of its subsidiaries had anything to do with our Committee; had no membership on our Committee, that is my recollection.

Q. You mean the Associated Gas and Electric—

A. The Associated Gas and Electric or any of its subsidiaries.

Q. You say none of them?

A. None of those companies ever participated in our committee work.

Q. Just so I understand; you don't mean that there were no gas and electric companies.

A. No. No, but no executive of these companies.

Q. And do you recall the Giant Power hearings that were held in Harrisburg.

A. Yes.

Q. I believe you were there, and were very attentive at those hearings, were you not?

A. I attended some, not very many.

Q. At the time of these hearings whom did you represent?

A. My committee.

Q. Still this public policy committee or committee of public information?

A. Yes, I didn't take any active part in any of the hearings, I merely attended.

Q. Did you take any active part in any of the material that was produced for these hearings?

A. No.

Q. Were you interested in any way either directly or indirectly in what was said at these hearings, either for or against giant power?

A. Most certainly.

Q. And if there was anything said in favor of giant power that did not meet with your approval did you take any action in any way?

A. I was not in a position to take any action.

Q. Major, I show you here Federal Trade Exhibit No. 1201, which is a letter addressed to Mr. Theodore Grayson, and I will ask you if you will read that letter?

(Witness reading letter in Federal Trade Commission Report Marked Exhibit No. 1201.)

A. I wrote the letter.

MR. WALKER: For the information of the Chairman, I would like to read this letter into the record.

#### PENNSYLVANIA PUBLIC SERVICE INFORMATION COMMITTEE.

Philadelphia, April 11, 1935.

Mr. Theodore J. Grayson.

Attorney, New Jersey Water Service Co.

Stephen Girard Building, Philadelphia, Pa.

My dear Theodore:

BY MR. WALKER:

Q. Before we proceed any further, Major, is that also Professor Grayson of the University of Pennsylvania?

A. Yes.

Q. "At a hearing a few days ago before the manufacturers' committee of the house at Harrisburg, a somewhat unpleasant thing occurred which I believe you should know about."

BY MR. WALKER:

Q. And before we proceed any further, there was a committee meeting here in connection with the giant power project, was there not?

A. I believe so.

Q. "Mr. Gadsden suggested I advise you.

A young man named Ullman—I am not sure whether that is the correct spelling—appeared as an expert ostensibly in behalf of the farming interests of the State. He was heralded somewhat extravagantly as "Professor of engineering at the University of Pennsylvania." The university was used fluently by counsel to advertise the young man. Even if he had been a normal technician, such use of the university connection would have seemed extraordinary.

As it developed, the young man gave expression to sentiments which, to say the least, were radical. He wandered off into general channels and lauded "giant power" from its public-ownership angle. The electrical engineers present were nauseated by his zealous and quite inaccurate tirade.

If that is the kind of representative the University of Pennsylvania lets loose it will have a sad bearing on the fund campaign. Aside from that, the young man is not a healthy type to be preaching in any educational institution.

BY MR. WALKER:

Q. And you say you were the author of that letter?

A. I was.

Q. And you were present when that testimony was given?

A. I was.

Q. Who were the electric engineers present, who were thrown overboard by this zealous and quite inaccurate tirade?

A. I don't know that there was anybody thrown overboard.

Q. Well, nauseated then.

A. That is better. I don't recall the name, there were several of them, but I don't recall their names.

Q. Do you recall one of them, Major?

A. No; I don't.

Q. Do you recall whether or not these engineers, who were nauseated by this zealous and quite inaccurate tirade, represented utilities?

A. Oh, I assume some of them may have represented utilities.

Q. In compliance with your letter to Mr. Grayson, do you recall whether or not any action was taken on the part of the university to check up this tirade?

A. I don't recall. He may have replied to my letter. I don't know.

Q. In order to refresh your memory, I show you page 1951 of the Federal Trade exhibit book, under Exhibit 1201, a letter addressed to Mr. Grayson, a copy of which was sent to you, and ask you whether that is correct?

A. Yes; I recall those letters.

Q. Then, according to that letter, which was written by the dean of the University of Pennsylvania Scientific School, it would indicate that what was termed in your letter as a "zealous and quite inaccurate tirade" was not quite exactly subscribed to; is that right?

A. According to Dean Frazier's letter, that is correct.

Q. I will read a paragraph from that letter to you, Major:

"The Director had, first of all, a talk with the instructor in question for the purpose of ascertaining, in a general way, what transpired, and in addition conferred with Major Pike, president of the Engineers Club of Philadelphia, a former instructor in the mechanical engineering department, who was actually present during the entire testimony in question in Harrisburg. Major Pike emphatically states that there was nothing that in his judgment was in any way improper or improperly presented during the entire period and that that testimony was given in a manner which seemed to him to be entirely dignified."

A. That would be the attitude, I would assume, Major Pike would take, inasmuch as his remarks at the same meeting were quite akin to those expressed by Mr. Ullman.

Q. I understand from that that these engineers who were nauseated by this zealous and quite inaccurate tirade did not include Major Pike; is that right?

A. I don't recall who they were, but may be by the time that Major Pike started talking the engineers were overcome.

Q. In other words, you do not place very much credence in Major Pike, president of the Engineers Club of Philadelphia?

A. I do not.

BY THE CHAIRMAN:

Q. When two majors disagree, who is to decide?

A. He was an engineer. I was an infantryman.

BY FATHER COX:

Q. You watched the textbooks throughout the country, didn't you? Now, there is a report to our committee that a Mr. Jones of Kansas wrote to you and said that "Community Civics," a book which was being used in the schools of the country, was very inimical to the corporations and public utilities, and you took the matter up immediately? I think that was brought out in this investigation.

A. I may have done so; yes, sir.

Q. You had committees all over the country, watching that same thing?

A. No sir. Mr. Jones was a member of an educational committee in Kansas, which was similar to the committee which was functioning in Pennsylvania.

Q. But you worked hand in hand, and you believed that it was a very necessary propaganda to be sent out?

A. I don't consider it propaganda in the modern meaning of the term.

Q. I am putting it in a good way.

A. Well, it slipped from lexical grace during the war. Three centuries ago it was a highly respectable word. As you know, it was fashioned by the then head of the Roman Catholic Church when he formed the College of Propaganda. I think it was Urban II, if I recall.

Q. That is correct.

A. And its meaning meant a laudable institution for the schooling of missionary priests, but during the war the Germans adopted the word first and made it roll over and beg; and it burst forth to a blazoned crescendo to suiting the military exigencies of the hour. All of the combatants in time took it up; so, it has now become a sort of war wanton in lexicography, and today I think the accepted meaning of the word "propaganda" is a superstructure of misrepresentation whose foundation is a modicum of fact.

Q. You organized these committees all over the country for the purpose of the dissemination of information which would put the right idea into the minds of the pupils of our public schools?

A. We never functioned with the idea of putting anything into the minds of the pupils of our public schools.

Q. But you wanted the pupils to have the right information?

A. In the beginning the idea was purely an educational organization to give publicity to developments in the utility industry within each state where they might operate. And in time, when we discovered that objectionable paragraphs appeared in those text books, we surveyed the text books, and, as I say, in the State of Pennsylvania, as far as we went. Later we prepared the four booklets or pamphlets which I have submitted here, and I am quite convinced that if you go through them, you will find there is no propaganda in them; and these were the only thing we sent to the schools, those four text books.

BY FATHER COX:

Q. But you kept in close touch on all that—your liaison system was very good.

A. We had about the same relationship as exchange editors on newspapers have one with the other.

Q. That is good.

A. It is not always so good.

Q. But it is informative.

A. I think it is, yes.

Q. You knew what you were doing, that is the point we want to appreciate.

A. Oh, we knew what we were doing; yes.

Q. I am not criticizing you for that.

A. No, I don't think it is susceptible of criticism.

Q. We want to know whether you did that, that is what Mr. Walker is trying to develop. Why don't you tell him just that?

A. I think we had a very close relationship, the chairmen of the different committees, one with the other.

BY THE CHAIRMAN:

Q. A lot of these utility men that we asked about it were very shy on this thing.

A. Well, they probably were not informed, Mr. Moore. They probably said you better ask me.

MR. HAGMAIER: We had a lot of fellows and were inquiring about this last week, with the men connected with the different companies, men who should have known, and some of them didn't even recognize you.

FATHER COX: What is the use of talking about directors in these companies? In the company that was here this morning, they only had two men that controlled the common stock, and these two men could not speak and that was the end of it, and they certainly were dummy directors.

MR. WALKER: Major, I believe that little lecture on propaganda that you gave, I think you wrote that to one of your associates at one time, didn't you? I was just looking for that.

BY FATHER COX:

Q. What century is Pope Urban the Second.

A. I think the College of the Propaganda was established in 1627.

Q. What year was Pope Urban in the picture?

A. He was Urban the Second, and he was Pope at that time. I don't recall when he became pope. The first Urban was the Pope who inspired the Crusades, you may recall.

FATHER COX: I can see now why he is in charge of the information department.

BY MR. WALKER:

Q. Well now, Major, to revert to Father Cox's comment on your interlocking committees: practically every state in the union had a committee similar to yours, did it not?

A. No. I think there were 32 states that had committees.

Q. 32 out of the 48?

A. 32 out of the 48. But several of those states were lumped. For instance, all of the New England states had just one committee, and the Rocky Mountain states, I think, there were four states out there had one committee. And Louisiana and Mississippi had one committee. There wasn't any interlocking there. There was an intercommunication between directors, that was all.

Q. An association of ideas, an exchange of thought and ideas, was there not, between the committees?

A. Oh, yes; quite.

Q. For example, when Governor Pinchot made a tour through the west, speaking on power and power monopoly, there was a very close connection by communication between your committee and the committees in the western states visited by Governor Pinchot, wasn't there?

A. Oh, I suppose I got a lot of letters from those fellows; yes.

Q. As a matter of fact, you did get a lot of letters, didn't you?

A. Yes, I think I did.

Q. And you wrote a lot of letters, did you not?

A. I wouldn't be a bit surprised.

Q. In fact, through these committees in these other states your committee was enabled to keep in very close touch or contact with Governor Pinchot's tour?

A. Oh, we could do that through the newspapers.

Q. Do you suppose the newspaper comment would be correct, would it, now?

A. We were not interested in anything except generally what he said.

BY FATHER COX:

Q. Just a moment. The Major said he didn't depend much on newspapers; you always followed the record.

A. Well, I was talking then about facts. The Governor was not dealing in facts.

Q. Wasn't it a fact that he was going around? That is what we were talking about. He asked if you followed him around the country.

A. We didn't follow him. I got letters from directors of committees in states where the Governor discussed the power question.

BY MR. WALKER:

Q. You wrote and asked that these committees send you the copies of the speeches if possible, and the newspaper comments, if possible, did you not?

A. I don't recall that.

Q. And you also prepared a series of editorials for one of the Philadelphia papers, did you not?

A. I don't recall that.

Q. Now, Major, I don't know—being an old newspaper man, I figured that if you had prepared a series of editorials for the paper since you had left it, you would recall it.

A. I think I would if I had.

Q. In other words, to the best of your recollection you did not?

A. To the best of my recollection I did not.

Q. Do you recall submitting any editorials to any of the Philadelphia newspapers in regard to Governor Pinchot's western tour?

A. I may have done so. I don't recall.

Q. You did all in your power, that is you and your committee, personally and impersonally, to counteract Governor Pinchot's western tour, did you not?

A. Oh, I wouldn't say so.

Q. Well, what was the purpose of it then, Major?

A. Just wanted to keep track of him.

BY FATHER COX:

Q. He must have been saying some damaging things.

A. I wouldn't call them damaging, Father.

Q. Why pay so much attention to them?

A. They might have been misinterpreted.

Q. Did you try to correct that?

A. After all, when anybody is attacking you, you like to know about it.

Q. Attacking you effectively, too.

A. That is as you might consider it.

BY MR. WALKER:

Q. Well now, Major, would it refresh your mind any if I read some of these letters to you that you had from these people in the west?

A. Yes; but I am not denying that I had any communications with the people in the west.

Q. And I ask you once more if you, through the medium of these committees through the west, on the west coast, if you did not keep in very close contact with Governor Pinchot and his activities out there?

A. Oh, I don't recall that we kept very close touch. I think we got newspaper clippings from different places. That was all.

Q. May I read just one letter to you? It is from your Oregon Public Utilities Information Bureau. Portland, Oregon, July 27, 1925. Major J. S. S. Richardson, Director, Pennsylvania Public Service Information Committee, 1410 Widener Building, Philadelphia, Pa. My dear Sandy:—that was you, wasn't it?

A. I think so.

Q. You may be sure it was great fun to work with you in checking up on Governor Pinchot during his mad antics out here on the Pacific Coast. We were fortunate in having fine cooperation in all states where he delivered his talks. We also did our best to cooperate with the newspapers and got satisfactory results there. There is one phase of the situation which I am sure tended to discount the effect of his work, and that was that the Republican newspapers, together with some splendid support from Mark Sullivan, at Washington, clearly indicated what the political move was back of Pinchot's trip. You may say to your committee that if at any time we can do anything out here to help things along, we will be only too glad to do it; and furthermore, you do not owe me anything. I will get even with you the next time I come down your way. With kind regards, I am, Very sincerely yours, W. P. Strandborg.

Does that express the general sentiment of the letters that you received, Major?

A. No, I don't think I received any other such letters.

Q. Did you receive any letters at all from other secretaries out there?

A. I may have, but I think that was the only one of that sort I received. I don't think I received any others.

Q. Do you recall some editorials that were printed in the Portland and Oregon papers regarding his western trip?

A. I don't recall them distinctly. I think there were some. It is a long time ago. How long is it? About five or six years?

Q. May I read—does this fellow Strandborg—is he always as spontaneous as he was in this first letter?

A. He is a good writer, that fellow.

Q. This one letter, which is dated July 3, 1925, addressed to you from Mr. Strandborg, he says: "Enclosed is a clipping from this morning's Oregonian covering Governor Pinchot's speech at Spokane last night. I have a wire from Frank A. Leach, Jr., vice president of the P. G. and E. Company at San Francisco, saying that they will take care of the Pinchot matter there. I will advise you about Los Angeles as soon as I hear from Mr. Miller. Very sincerely yours, W. P. Strandborg."

Q. Would you say from that that you were covering him pretty thoroughly in California.

A. He was sending me editorials and clippings.

Q. At your request?

A. At my request.

Q. You covered him pretty thoroughly throughout the West?

A. To my recollection I got most of my news clippings, yes.

Q. Now, Major, this letter which you sent to Mr. Evans on April 22, 1931, that you were not in Washington when you signed that?

A. I could not have signed it otherwise.

Q. I just wanted to make sure.

A. I don't think that is a fair question to put it that way. I have told you I was there, do you doubt my word?

Q. I just want to make sure that you were in Washington.

A. I was in Washington, D. C. when I signed that letter.

Q. Do you still operate this office in Washington, D. C.?

A. At Washington, that goes out of business either as of yesterday or today; either May 1st, or April 30th.

Q. Do you know Clinton W. Gibbon?

A. I know him, he is on the Ledger staff, chief of the Public Ledger Bureau in Washington.

Q. Are you familiar with his article which appeared in the Public Ledger under date of April 24th, 1931?

A. No, I am not. I think I saw an article by him in the New York Evening Post, he also is correspondent of the New York Evening Post.

(Counsel handed clipping to witness)

THE WITNESS: It is the same article, but I don't think it is relevant to the present inquiry.

Q. He is not referring to your office there, is he? There are two separate offices, are there?

A. He is referring to our office, yes.

Q. That is what I am trying to understand. He is referring to your office in this article?

A. Yes.

Q. And you say that is not a correct representation of your office?

A. That certainly is not.

Q. And the policies and practices that he sets down there were not conducted by your office?

A. They were not. It is not my office, of course I am director of the department of information of that joint committee of national utility association, but the office is not mine personally, I am just one of the occupants of it.

Q. Whether it is your office or not, this does not represent a true picture of that office.

A. It does not represent a true picture of the office.

BY MR. HAGMAIER:

Q. Do you think it was good policy on the part of the public utilities to go into this question here as you propose to do?

A. Well, my opinion on the matter is not important.

Q. I think it is, I think you were the brains in back of it.

A. Well, that is very complimentary, but I don't think my opinion is important.

Q. Well, if you want to leave it that way all right, but all the rest of these men who were here, Shearer, and Millar, and all of the other fellows they seem to leave it all to you. They knew you, they saw you occasionally and they paid you a salary, and all that kind of stuff, but they didn't know anything about what you were doing, you were just kind of your own boss.

BY FATHER COX:

Q. How about sending out your information now, or what is your particular work in this bureau, if I may ask you?

A. There is nothing secret about it. My work at the present time is exclusively connected with the Federal Trade Commission investigation. I attend all the hearings and I sum-

marize each day the papers before the commission; the transcript as you perhaps realize is very voluminous, and it takes several days to get enough copies of the transcript to get to the different executives throughout the country, and I summarize the proceedings each evening, have the summary mimeographed and sent out to the executives the utility executives, those interested in the Federal Trade Commission inquiry, throughout the country.

BY THE CHAIRMAN:

Q. Living in Western Pennsylvania I am interested in the comments of Professor Hughes' book, and after critizing, for example his attitude, there are several paragraphs, and then there is a closing paragraph: "In some communities they have been managed dishonestly or unwisely, with bad results to their posterity. Oftentimes, though, the public has not understood the real difficulties of operation. Street railways in a hilly district, costs more to operate than in a level district. A fare which is reasonable in one place would therefore be unfair in another. We ought to be open to the truth in this matter, as in all others, and ask simply the square deal for our companies and ourselves." Now, what is there objectionable in that?

A. I testified that I considered nothing in Prof. Hughes' book objectionable.

THE CHAIRMAN: I did not catch that.

BY MR. WALKER:

Q. As a matter of fact the office has just been moved from Washington to New York?

A. No, we have an office in New York; that is our main office, and we just continued the Washington office.

Q. G. H. Q. has moved to New York?

A. G. H. Q. has always been in New York, I live in New York.

Q. Do you know anything about the expenditures made by your Committee?

A. The Pennsylvania Committee?

Q. Yes.

A. I don't recall, but I think it cost about \$25,000 a year for that work. That includes everything. There were several people in the bureau for them.

Q. Mr. John S. Wise, of the Pennsylvania Power and Light Company, testified last night that this money was raised by subscriptions and donations and from the electrical industries?

A. From the people in the electrical business and from people in the street railways, gas, water and telephone companies all five.

Q. You say these donations averaged about \$25,000 a year?

A. That is my recollection now.

Q. How was that money expended?

A. Some for publication. We got out a pamphlet issued once a week, which went to the newspapers. Not only to the newspapers; it went to the utility executives and to anybody who wanted to get on the mailing list. Several thousand every week. We had printing bills and salaries of people in the office, rents, which was not very expensive.

BY FATHER COX:

Q. What do you think of this Pennsylvania investigation? Major?

A. Is this on the record? I have no opinion to express. I have not followed it as a matter of fact. I have read some of the articles in the newspapers, but I have not followed it at all. I have not had the time. I have been entirely too busy, and then I don't live in the state anymore.

Q. You are interested in us?

A. I like Pennsylvania. I am still a member of the legion post of this state.

BY MR. WALKER:

Q. Are you familiar with the utility regulation in Pennsylvania?

A. No I am not. I have a vague notion about it, but I have never studied it.

Before I leave I would like to express my very deep appreciation for the courteous treatment I have received at the hands of the Committee.

THE CHAIRMAN: As from one newspaper man to another,

A. Yes sir.

STEPHEN ROUSHE. BUSH recalled.

BY MR. WALKER:

Q. Do you have a statement you wish to make on the record in regard to the rates of the Harrisburg Power and Light Company for the year 1930, which you furnished by former exhibit.

A. Yes sir. Yesterday Mr. Wise made some statements in regard to the rates which prevailed in Harrisburg which were incorrect, he was in error. I want to offer this calculation for 1930 showing that the calculation given to the Committee was 100% correct.

Q. What number of rooms was this calculated on?

A. Four active rooms is the basis, and in that connection I want to object to Mr. Wise's statement that six active rooms should be taken in Harrisburg. There should be that many in Harrisburg, but let me read the rooms that are not to be counted. They allow you three bed rooms, a cellar, attic, closet, coal shed, garret, hallway, outhouse, play house drawing room, parlor, toilet rooms, unfinished rooms and several others. When the thing is based on four counted rooms in Harrisburg, whether he was incorrect by saying that at that rate there could not be a ten cent charge per kilowatt, whether he was incorrect in regard to using fifteen kilowatts. The only other comment I wish to make is that he says that the P. P. & L. charges lower rates in Pike County. In his calculation he failed to take in the two boroughs. There are only two boroughs in the county. I feel that the figures I gave you originally were one hundred per cent. correct.

Q. When you refer to this sheet here, Harrisburg Light, Heat and Power rates for 1930, is that the name of the Company?

A. Yes sir that is the name that they filed under with the Commission.

Q. As you stated in your prior testimony these were 1930 rates filed with the Public Service Company, by the company?

A. Certainly, and they run all through the testimony.

The reason for that was that the study was begun in January before these changes were made.

MR. MOORE: This hearing now stands adjourned until Thursday, May 7, 1931 at nine o'clock A. M.

#### COMMITTEE OF INVESTIGATION ON RESOLUTION NO. 10.

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Thursday, May 7th, 1931.

There were present:

Messrs. D. Glenn Moore, Chairman,  
Martin Memolo,  
Chester A. Rhodes,  
Ellwood J. Turner,  
Morris L. Cooke,  
Harold Evans, Esq.,  
John M. Walker, Esq.

The meeting was called to order at 9.30 o'clock A. M., Eastern Standard Time, by Chairman Moore.

MR. WALKER: Mr. Chairman, on April 20, 1931, you addressed a letter to the Pennsylvania Electric Association of Harrisburg, calling their attention to some material which we desired to have them furnish to this committee. Last week I again called the committee's attention to the fact that this material had not been furnished the committee, and today I once more repeat that that material has not been furnished to this committee, and I suggest that Mr. Arch Millar be subpoenaed at once to come here and explain why they have held it up.

(Mr. Walker here again reads into the record the letter which has twice before been read in).

MR. TURNER: Mr. Chairman, I move that Mr. Walker be instructed to call up Mr. Millar on the phone and ask him to come over here and explain why he didn't get the material asked for.

MR. RHODES: Mr. Chairman, I second the motion.

The motion was agreed to.

(The committee so instructed Mr. Walker)

MR. EVANS: There are several matters that should be put in the record at this time. There is a letter from Mr. P. B. Sawyer, Chairman of the Board of the Pennsylvania Power and Light Company, which reads as follows:

PENNSYLVANIA POWER & LIGHT COMPANY  
Allentown, Pa.

May 2, 1931.

Harold Evans, Esq., Counsel,

Committee on Investigation of Public Service Commission  
and Public Utilities Companies,  
Room 601, South Office Building,  
Harrisburg, Pa.

Dear Sir:

In the course of my testimony before the House Committee investigating the Public Service Commission Law at Harrisburg on April 30, 1931, I was asked certain questions as to whether Phoenix Utility Company paid fees to Electric Bond and Share Company and specifically as to certain charges by Electric Bond and Share Company to Phoenix Utility Company on account of work for "Harrisburg," "Pennsylvania" and "United," as shown on Exhibit No. 12 at page 674 of the Federal Trade Commission Reports, volumes 23 and 24.

I stated in substance that I did not know but volunteered information as to my understanding or impressions of the situation. This testimony will be found beginning at page 4582 of the typewritten transcript of the record and concluding on page 4586.

I am informed by representatives of the Phoenix Company that the specific charges referred to against "Harrisburg," "Pennsylvania" and "United" companies, as shown on page 674, Exhibit No. 12 of the Federal Trade Commission Report, were for services performed by Electric Bond and Share Company Engineering Department for those companies and not construction fees; and that these charges were billed through the Phoenix Company merely as a matter of convenience.

The above answers the specific questions which you asked but I am also advised that the statements which I volunteered, particularly as to the accounting between the Phoenix Company and Electric Bond and Share Company were also incorrect. The facts are that Phoenix Utility Company is a completely owned subsidiary of Electric Bond and Share Company. Its headquarters, official, technical and administrative staff, is that of the Electric Bond and Share Company. The Phoenix 4% construction fee discussed elsewhere in the testimony is based upon the direct cost of construction, exclusive of such fee, and with other eliminations recited in the construction contract. The amount of this fee is paid over to Electric Bond and Share Company to compensate that Company for the use of its staff and quarters, and for other expenses of the Phoenix Company.

I also find that my statement on page 4582 of the transcript that "I am not an officer of the Phoenix" is not supported by the Phoenix's records, which show that my appointment as a vice president, made for convenience in 1917, is still in effect, although I had distinctly understood, several years ago, that it was to be discontinued. I know that I have not functioned in that capacity within my recent recollection. The Phoenix Company has eighteen or twenty vice presidents and has, therefore, been under no necessity of calling on me for even perfunctory acts.

I greatly regret having made these mistakes and I will appreciate your reading this letter into the record so that the errors will be corrected.

Thanking you for this courtesy, I am,

Very truly yours, (Signed) P. B. Sawyer,  
(Chairman of the Board).

MR. EVANS: I also wish to read into the record the correspondence between the Chairman of this Committee and the Chairman of the Public Service Commission since our last hearing.

May 4, 1931.

Hon. Wm. D. B. Ainey, Chairman,  
Public Service Commission,  
Harrisburg, Pa.

Dear Mr. Ainey:

At the hearing of the House Committee on Investigation of Public Service Commission and Public Utilities Companies under Resolution No. 10, we desire to make sure that every member of the Public Service Commission has an opportunity to lay before the Committee any facts pertinent to this investigation. We have already had the pleasure of hearing from you and Commissioners Benn, Brown and Young, as well as from your counsel and Chief of your Bureau of Engineering and

Accounts and Statistics. If the other members of the Commission desire to be heard or if those that have already appeared wish to present further facts, we shall be glad to try to accommodate them as far as possible.

As you have received a transcript of the testimony and Arthur B. Hull, as attorney for individual commissioners has attended many of our hearings, it is perhaps unnecessary for me to remind you that the record is comprehensive, comprising over 4900 pages of testimony and 179 exhibits. In addition to members and employees of your Commission we have heard from representatives of consumers and municipalities throughout the State. We have had rates and reports of various classes of utilities and certain decisions of your Commission analyzed by certified public accountants or engineers. We also have had before us the responsible heads of all but one of the larger electric systems operating in Pennsylvania. The Chairman of the Massachusetts Department of Public Utilities and other experts in the field of public utilities regulation have appeared and given us great assistance.

The Pennsylvania Electric Association on April 15th demanded a hearing to refute certain criticism directed at the electric industry, but when invited to present its evidence. Thursday, week of April 26th unfortunately declined to appear.

The Committee will be glad to hear any members of your Commission on Thursday, May 7th at 9.00 A. M. Standard Time. Will you be good enough to let me know tomorrow if any Commissioner will accept this invitation and if so, how long a time they will require.

Yours very sincerely,

(Signed) D. Glenn Moore, Chairman.

THE PUBLIC SERVICE COMMISSION  
of the  
COMMONWEALTH OF PENNSYLVANIA.

Harrisburg, May 5, 1931.

Hon. D. Glenn Moore, Chairman,  
House Committee on Investigation,  
Room 601, South Office Building,  
Harrisburg, Pennsylvania.

Dear Chairman Moore:

In reply to your letter of May 4, in reference to the meeting of the House Investigation Committee on Thursday, May 7, and the invitation to the Public Service Commission extended therein, I am directed by the Commission to advise you that a statement is being prepared for submission to the Committee.

This statement, in the opinion of the Commission, will cover the matters concerned in the record before the Committee bearing upon the functions and activities of the Commission. The statement will also, the Commission believes, obviate the necessity of developing by further oral testimony on the part of the Commission, any of the matters which have been brought to the attention of the Committee.

Sincerely yours,

(Signed) Wm. D. B. Ainey,  
Chairman.

May 5th, 1931.

Honorable William D. B. Ainey,  
Chairman, Public Service Commission  
1. Harrisburg, Pennsylvania.

My dear Mr. Chairman:

In reply to my letter of May 4th, you advise me that "a statement is being prepared for submission to the Committee.

"This statement, in the opinion of the Commission, will cover the matters concerned in the record before the Committee bearing upon the functions and activities of the Commission. The statement will also, the Commission believes, obviate the necessity of developing by further oral testimony on the part of the Commission, any of the matters which have been brought to the attention of the Committee."

In reply to this letter, I wish to recall to your memory that the Committee has not allowed any statement to be entered except by witnesses having knowledge of the facts, and submitting themselves to cross examination thereon. We expect to follow the same policy throughout the hearings and, herewith, call it to your attention.

Be satisfactory for any Commissioner to appear before subject to examination.

Sincerely yours,

(Signed) D. Glenn Moore,  
Chairman.

THE PUBLIC SERVICE COMMISSION  
of the  
COMMONWEALTH OF PENNSYLVANIA.

Harrisburg, May 5, 1931.

Hon. D. Glenn Moore, Chairman,  
House Utilities Investigating Committee,  
Room 601, South Office Building,  
Harrisburg, Pennsylvania.

Dear Chairman Moore:

In accordance with your letter of May 5, setting forth the policy of the House Investigating Committee as applied to the statement which the Public Service Commission proposed to submit to the Committee, I am directed by the Commission to inform you, that under the circumstances, the Commission will not request the Committee to alter its procedure.

Therefore the Commission will not submit the statement referred to in my letter of May 4, nor will it desire to present any further oral testimony.

Thanking the Committee, and yourself, as Chairman, for the courtesies extended, I am

Sincerely yours,

(Signed) Wm. D. B. Ainey,  
Chairman.

MR. TURNER: The only question I would raise is that none of us ever had a chance to pass on that question, at least I never had.

MR. EVANS: Mr. Turner, you may remember the policy at the beginning that statements of this sort were not to be put into the record and we have followed it entirely throughout the hearing.

MR. TURNER: We have had a lot of statements put on the record, of course somebody has been here with them.

MR. EVANS: They were always offered with somebody with them subject to cross examination.

MR. TURNER: I think it would have been fair to the committee to give us some opportunity to know just what it was. I read that in the paper, and that was the first that I ever knew a letter had been received and replied to.

MR. RHODES: I think wherever anybody has offered a statement into the record, they have been present and questioned.

MR. EVANS: You may remember, Mr. Turner, that the Public Service Commission before the Senate investigating committee offered a statement prepared by Mr. Arthur B. Hull as their attorney, and that was accepted by the Senate committee, but that has never been the policy of this committee on any of these matters, and the chairman was merely following out that policy.

MR. TURNER: I am raising the question with the Chairman here that we should have had an opportunity to go into it.

MR. COOKE: Mr. Evans, have you a copy of that statement Mr. Hull made before the Senate committee? I don't want to press it, but I think it would be well to have the last paragraph of that statement read into the record.

MR. TURNER: I don't think that is the issue, as to what happened before the Senate investigating committee. I think the committee should have had an opportunity to see the statements and see what it was, and then see whether we wanted anybody to come before the committee and testify.

MR. EVANS: All Mr. Moore did was to remind Chairman Ainey of the policy of this committee, and left him free to do what he cared to in regard to it.

Certain information has been requested from the Public Service Commission from time to time, some of which has been placed in the record and some of which has not. I think in order to complete the record we should offer the other items at this time.

EXHIBIT NO. 180—Statement of the Public Service Commission showing Rate Cases decided since January 1, 1926, in which the total allowable expenses were reduced.

EXHIBIT NO. 181—Statement of the Public Service Commission, showing list of Employees and Statement of Ex-

penditures Classified by Bureau, for the Five Year Period 1926 to 1930, Inclusive.

EXHIBIT NO. 182—Statement by the Public Service Commission, showing Classified List of Employees of the Commission with Salaries of Each Employee for the Five Year Period January 1, 1926 to December 31, 1930.

EXHIBIT NO. 183—Statement showing dates of argument sessions held by P. S. C. at which the Chairman was present.

EXHIBIT NO. 184—Statement showing dates of Executive Sessions held by P. S. C. at which the Chairman was present.

EXHIBIT NO. 185—Statement by Public Service Commission showing List of Members with Dates of Commencement and Expiration of Terms.

EXHIBIT NO. 186—Statement by the Public Service Commission showing Traveling Expense Accounts of Each Employee in Excess of \$500 Per Annum for Five Year Period January 1, 1926 to December 31, 1930.

MR. EVANS: I wish to read into the record the following letter from Chairman Ainey addressed to Mr. Moore under date of May 5, 1931; in further answer to the letter of March 4th:

THE PUBLIC SERVICE COMMISSION  
of the  
COMMONWEALTH OF PENNSYLVANIA  
Harrisburg, May 5, 1931.

Honorable D. Glenn Moore, Chairman,  
House Utilities Investigating Committee,  
Room 601, South Office Building,  
Harrisburg, Pennsylvania.

My dear Mr. Moore:

In further answer to your letter of March 4, I am submitting the information requested in paragraph 3 of that letter, as follows:

"Hearings in contested cases attended by each Commissioner, arranged under the name of each Commissioner chronologically, with name of case, dates, and place of hearing."

The list submitted comprises the hearings in all contested cases heard by any of the present Commissioners from January 1, 1926, to December 31, 1930. At the hearings on applications which were not protested, the evidence was sometimes voluminous, but such cases are not included. The compilation of this list required an examination of all records of proceedings heard during the five year period, totalling approximately 15,000 cases. The work has been checked as carefully as possible in the time available in an attempt to reduce errors and omissions to a minimum.

This list completes the information requested by your Committee, with the exception of that covered by paragraph 13 of said letter of March 4, as follows:

"A list of all cases heard by an Examiner in Philadelphia decided since January 1, 1927 against the recommendation of Commissioner J. S. Benn, or in which there was a dissenting opinion."

Cases heard by Examiner Wolfe are submitted on his recommendation, unless the filing of briefs or presentation of oral argument is requested, or some unusual feature develops. The recommendation is not made by Commissioner Benn, as was apparently your understanding from the request. A letter from Examiner Wolfe explaining the handling of cases heard by him is hereto attached.

Sincerely yours,

(Signed) Wm. D. B. Ainey,  
Chairman.

Enclosure.

MR. EVANS: There is a letter also accompanying that from Mr. Russell Wolfe, Philadelphia, the Examiner, which is offered in evidence as follows:

EXHIBIT NO. 187—Letter of Russell Wolfe, Examiner, 1921 Chestnut Street, Philadelphia, to Mr. W. Y. Blanning, Chief, Bureau of Public Convenience, Public Service Commission, Harrisburg, under date of May 4, 1931; setting out cases in which his recommendations were not followed by the Commission.

EXHIBIT NO. 188—Hearings in contested cases held by Chairman Ainey from January 1, 1926 to December 31, 1930, arranged chronologically; and the same information for all the other Commissioners.

MR. TURNER: Do I understand that all the information we have asked for from the Commission has been supplied by them?

MR. EVANS: My remembrance is that we asked for the cases in which the recommendations of the sitting Commissioner were not followed, and I think the Commission replied that to ascertain that would involve so much work they didn't think they could get it out in any reasonable time. Aside from that, I think all the information has been furnished.

MR. TURNER: I think it was testified that the sitting commissioner's recommendation was generally taken, is that right?

MR. EVANS: I am not sure if that was testified to or not.

MR. WALKER: Mr. Chairman, it is with mingled pleasure and regret that I report that Mr. Millar has been unexpectedly called out of town.

MR. EVANS: I also want to read into the record the following letter from J. S. Wise, Jr., president of the Pennsylvania Power & Light Company:

PENNSYLVANIA POWER & LIGHT COMPANY

Harrisburg, Pa., May 5, 1931

Mr. Harold Evans, Esq.,  
Counsel for House Investigating Committee,  
Commonwealth of Pennsylvania,  
Harrisburg, Pennsylvania.

Dear Mr. Evans:

In compliance with your request made at the time I testified before the House Committee on Thursday, April 30, 1931, and in pursuance with arrangements made with Mr. Walker 1, herewith, give you the rate applicable in Harrisburg on an eight room house, calculated under the rates in existence during 1930:

15 K.W.H.—9.46 cents  
40 K.W.H.—7.2 cents.  
80 K.W.H.—6.0 cents.

The above calculation does not give effect, of course, to rate reduction effective January 1, 1931.

Yours very truly,

(Signed) J. S. Wise, Jr.

MR. EVANS: The committee will remember Mr. Raushenbush last Friday explained the basis on which he made his calculations, on a four room house, and verified his calculations.

MR. TURNER: Did Mr. Raushenbush only give you the basis on which he worked out the Harrisburg rates which are the rates that Mr. Wise had used, or did he give you the basis for all of the rates that he worked out?

MR. EVANS: Mr. Raushenbush's figures are all based on rates here in Harrisburg, but he made his figures first on a four-room house, whereas Mr. Wise made his on a six room house, and if an eight room house had been taken instead of either a four or a six room house, the figures then would have been as set forth in Mr. Wise's letter of May 5th.

MR. TURNER: I should think there would be an exact way for these companies to say whether this rate is up or down.

MR. COOKE: You are not familiar with the myriad variations in rates. In New York City there are over two thousand rural rates, and I don't know what they are in Pennsylvania. Mr. Rhodes told me the basis on which he paid his bill some days ago and I never heard of that before. That is a brand new feature.

MR. RHODES: I pay three dollars and sixty cents and don't get anything for it at all. I am not even allowed the rate of 10 cents a kilowatt hour, but I pay this fixed amount and then pay for the amount of electricity I consume.

P. J. KEADY recalled.

BY MR. EVANS:

Q. Mr. Keady, did you prepare an exhibit summarizing write-ups of all these electric company groups covered by testimony already introduced in these hearings?

A. I have.

Q. It was prepared by you or under your direction?

A. It was.

MR. EVANS: Before proceeding further, I also wish to offer in evidence Exhibit No. 189, a statement prepared by the Public Service Commission and furnished in the Senate hearing, entitled, "Statement Showing Financial, Operating

and Statistical Data with Respect to Public Service Companies Subject to the Commission's Jurisdiction."

EXHIBIT No. 190 offered in evidence, being a summarizing of the write-ups of the electric company groups included in the testimony before the Committee.

BY MR. EVANS:

Q. I understand that this exhibit presents no new material but merely summarizes what is already in the record and has already been furnished to the Committee?

A. That is right.

Q. Are there any comments that you wish to make in regard to it, or any explanation?

A. I think the exhibit is self-explanatory, and wherever there is an explanation required, it is covered by the footnotes shown on the bottom of the exhibit.

BY MR. TURNER:

Q. Mr. Keady, these write-ups, this question has been in my mind, you took these from the reports to the Commission, as I recall it, didn't you?

A. Yes sir.

Q. You didn't find anything in these reports that showed the basis on which these write-ups were made, did you?

A. No, the report would not show it; in some cases there were references made to the appraisals.

Q. Therefore it is fair to assume that most of or all of these write-ups came purely from the question of some appraisal of valuation made by the company itself, is that true?

A. I think so, Mr. Turner.

Q. Now in Mr. Sawyer's testimony on this Pennsylvania Power & Light the other day I rather gathered that these write-ups were more or less involved in the problem of merging and amalgamating all these companies into the Pennsylvania Power & Light. Do you know anything about that?

A. I think in the case of the Pennsylvania Power & Light, this amount represents just as you said, the write-up of the fixed capital assets of the underlying companies which were merged over and above what they were shown in the individual reports that were previously submitted to the Public Service Commission.

Q. The previous report would show book value, would it not?

A. I don't know what the bases were, you might have had write-ups in those for all I know.

Q. What were the fixed capital assets as shown by the last report of the individual companies before they were merged with the Pennsylvania Power & Light Company?

A. There is nothing to show what these figures were as shown by the write-ups. I think Mr. Dietrich could give you some further information on that, inasmuch as it was he who worked on the Pennsylvania Power & Light case. That is my understanding of how this write-up arises. In the Metropolitan Edison Company there was about nineteen million dollars for write-up in the 1930 report. The report to the Commission did not have anything on it other than the fact that there was a mention made in the report that an appraisal was made by E. J. Chaney. I don't know whether they did anything on this appraisal or what the basis of it was, but they didn't have anything in it as to how it was done.

BY MR. RHODES:

Q. Would not these reports show if there was any additional capital invested or other capital placed in there to represent these write-ups? Your balance sheet would certainly show the additions?

A. You don't have the total there; all you have is the balance at the first of the year and the balance at the end of the year. Of course, the merged company report shows you that they were brought over at a much higher figure.

Q. The additional stock issues could be reflected or additional bond issues would be reflected in the balance sheet; could they not?

A. Yes.

MR. TURNER: Mr. Evans, what is the purpose of this exhibit? What does it do?

MR. EVANS: Mr. Turner, it merely draws together in condensed form the information already before the Committee and calls attention to the fact that the extent of these write-ups is very great. Now, the significance of that may be a matter of argument one way or the other.

MR. TURNER: I understand, of course, that it would show the extent of the write-up, but where does the public interest come in?

MR. EVANS: I think the public interest comes in in two ways; in the first place, as you know, the public service company law requires the Commission in fixing rates to take into account all outstanding stocks and bonds and securities of the companies. Therefore, an artificial inflation of the amount of those outstanding securities has a very direct effect in that way upon rates. Furthermore, it has an indirect effect on rates, because when these securities are outstanding in the hands of the public, and the Commission may be and frequently is, confronted with the alternative of either fixing rates high enough to furnish a return on those securities, or else fixing rates which on the basis of the value of the company's are correct, but will not furnish enough to pay the interest on their securities, and that is a very difficult position for the Commission to be in.

Looking at the other side, from the standpoint of the investor, the significance of these write-ups is the fact that investors put their good money into these companies on the faith of these appraisals, and if these appraisals do not truly reflect the values of the properties, then the investors, as has been stated, are left holding the bag; that's all.

MR. TURNER: Of course, that last question involves two things. In the first place, it would go to the responsibility of the Public Service Commission in security issues, which we won't debate at the moment; it is a long question; but it seems to me that the second thing is this: That it has to determine that the value is not there; that is, if the value is in the property, and the law being that the utility is entitled to a fair return upon the value of its property, then the public is not harmed, and it does get something for its money. Now, that is a question I do not see how you can determine under a survey of this kind. It might show that there is a need to inquire into it; it might show that there are conditions which would bear scrutiny, but I do not see how you can determine it is affected until you determine that the value is not in back of it.

MR. EVANS: I think you are correct, that you cannot come to a final determination. I think, however, it is true that if these companies have a full and complete disclosure in disposing of their securities, of the book value of their property without the write-ups, then the investing public would be dealing with a situation with their eyes open, but that is not the practice, and, therefore, these write-ups, I think, are an important factor to be taken into consideration.

MR. TURNER: I think there is a second thing we might know, if we could. I think we ought to know whether these write-ups have affected the rates in any instances in the past. I mean this, you cannot perhaps determine wholly whether they have been affected, but you can determine this, whether or not these write-ups have had any bearing on the matter.

MR. COOKE: That has all been before our Committee.

MR. TURNER: It has been Mr. Cooke, and I think we could pick it out if we were to chase all through this testimony.

MR. EVANS: Mr. Turner, I don't think you would have to go any further than the Scranton testimony.

MR. TURNER: That is true.

MR. RHODES: Is it not true that after every one of these write-ups, securities have been issued and put into the hands of the public, and that those securities issued could only have been put out with these write-ups?

MR. TURNER: Mr. Rhodes, that seems to be rather broad to say in all cases.

MR. RHODES: I did not mean to say in all cases, but that it did happen in many cases, and therefore that is an indication why the issue of securities should be more rigidly controlled.

(Discussion off the record.)

BY MR. EVANS:

Q. Have you something else to say?

A. I was going to say in connection with one of Mr. Turner's questions there in regard to the write-ups of this Metropolitan-Edison, you will recall when their representatives were here, that they said that all of these properties were appraised from time to time as they were taken in, and after all these appraisals were made prior to this particular write-up, all the property of the company was on the book at appraised

values. Then, in 1930, they come along and have another write-up, which wrote-up the books 19 million more.

MR. TURNER: If you will recall, the man on the stand, Mr. ———, I have forgotten his name, but he was the first man for that company—

MR. EVANS: King, I think, from Reading.

MR. TURNER: He said that the appraisals of the individual companies that had been made did not include all of the appraisals that went into this in 1900 and—whatever it was, 1929 or the 1930 rates.

THE WITNESS: I think there were one or two minor companies that he cited. All the others had appraisals in, because I went over the whole setup, and the biggest part of the property was appraised by Day & Zimmerman, and this write-up in 1930—in 1930 the prices started to drop—they still have a further increase of 19 million.

BY MR. RHODES:

Q. In other words, they appraised it individually and put it into the Metropolitan and then wrote it up collectively; is that correct?

(No answer.)

BY MR. COOKE:

Q. When did Day & Zimmerman appraise it?

A. In 1925. In 1925 they purchased the Metropolitan-Edison properties as they stood at that time. Generally speaking, the other factors effecting valuation have been going down since that time, so they must have used a somewhat different yardstick in getting the \$19,000,000 five years later?

A. Yes, I wanted to find out what the basis of this new appraisal was, but the Public Service Commission didn't have anything on it.

MR. EVANS: Mr. Turner, do you want to ask Mr. Dietrich any questions in regard to the Pennsylvania Power?

MR. TURNER: Do you want to develop that question? It seems to me it was left rather hanging in the air when Mr. Sawyer was here, and I was not quite satisfied in my mind, and you will remember that I asked you afterwards if you had something to develop.

MR. EVANS: He is here. Do you care to hear him?

A. Yes.

W. M. DIETRICH recalled

(In re: Pennsylvania Power & Light Co.)

BY MR. TURNER:

Q. In the Pennsylvania Power & Light, as I recall the testimony, all of these write-ups appeared in certain transactions with the individual companies in being merged and amalgamated into the Pennsylvania Power & Light, is that right?

A. That is right. This increase, as Mr. Keady stated, is the increase over the original book value, which was carried on the books of the Pennsylvania Power & Light at that time.

Now, it has been developed and hinted that during the testimony, that these original companies were owned by the Lehigh Power Securities Corporation, were owned directly or indirectly, and the Lehigh Power Securities Corporation owns the Pennsylvania Power and Light, or rather controls it through the majority of the stock. The Lehigh Power Securities Corporation sold all these companies to the Pennsylvania Power & Light through the Mentz agreements. Now, any profit that was made—any inter-company profit is buried in the books of the Lehigh Power Securities Corporation, and we cannot tell whether Lehigh paid this price for these companies; the price that they turned them over to the Pennsylvania Power and Light for.

Q. I agree with that. You have not been able to check it. The only thing we have on that, as I recall the testimony of both Mr. Wise and Mr. Sawyer was that these companies were taken over and what they paid?

A. I did not recall that the Lehigh Power Securities Corporation owned all of these companies. Some of them were owned by the Pennsylvania Power & Light, and some of them were owned by the Lehigh, which in turn had a controlling interest in the Pennsylvania Power and Light. Along this line, I might say I am preparing at the present time the 1928 and 1930 mergers, a detailed statement of it, and I expect to put it in either today or tomorrow.

Q. I think that would be a difficult thing, because Mr. Sawyer's testimony, as I recall it, was that this practically was nothing more than a legal device to get these companies worked into one head.

A. And at the time I developed the P. P. & L. case, you wanted to know whether there were not some schedules, and I was hurried too much at the time, and I couldn't prepare them, but we have them now and expect to submit them today or tomorrow.

Q. That will give us some further information?

A. Yes; it will show how I got all my figures.

Q. I do not question your figures. The only thing, after the testimony of the other day, whether it is merely a legal device to get all these companies merged, therefore, it did not make much difference whether it was on the books or whether that was true or not.

A. You may remember that Mr. Sawyer testified that these write-ups were supported by appraisals made by Theodore Stebbins in New York City.

Q. Yes, I recall he said Stebbins.

BY MR. COOKE:

Q. What properties did Stebbins value; these 35?

A. Yes.

Q. That is, he valued them individually at the time the Lehigh Power Securities or somebody else bought them.

Q. That is, he valued them individually at the time the Lehigh Power Securities or somebody else bought them.

A. He made no detailed appraisal. In the testimony that was developed he appraised them collectively, but when the Carlisle Gas and Water—the attorney for the Carlisle Gas and Water Company, they wanted to know the price they set on Carlisle company and he couldn't because he didn't have it. They were all priced collectively.

MR. COOKE: Mr. Evans, can I ask you, as a member of the Committee, to have prepared for me a list of the valuing engineers and valuing agents—a statement as to the properties they valued. I would like to have it.

MR. EVANS: I can do that.

#### WRITE-UPS OF WATER COMPANIES

W. W. COLLEDGE recalled

BY MR. EVANS:

Q. At a prior hearing you referred to certain corrections which you wished to make in the transcript of your testimony. Now, have you prepared a statement of those corrects?

A. Yes sir.

MR. EVANS: I suggest that these be submitted to the stenographer to note in the record.

THE WITNESS: This is a correction of my testimony on pages 632 to 683, and it is submitted in statement form, and if necessary I can have it typed and put additional copies in.

MR. TURNER: If you have the statement of the corrections appear in this part of the transcript, it would be possible to go back and correct them.

MR. EVANS: It would, Mr. Turner.

MR. TURNER: I don't think we need another exhibit.

A copy of the corrections in question follows:

Page 632, line "of" should be "from".

Line 16, "risk" should be "it".

Lines 18 to 22 should read: "Those percentages mean that forty-two of the companies show earnings above 7%; eleven of the fifty-three show earnings less than 7% on books figures; two of the eleven show deficits and of the other forty-two, three show earnings between seven and—"

Page 683, line 2—"1,098,577.17" should be "\$1,098,577.13."

BY MR. EVANS:

Q. Have you prepared a summary exhibit showing the write-ups in the water companies that have been testified to in these hearings?

A. Yes; certain groups.

Q. And this was prepared by you or under your direction?

A. Yes sir.

MR. EVANS: I offer this in evidence as Exhibit No. 191.

Paper in question entitled, Water company Write-ups during 1927, 1928 and 1929 in certain groups, produced and marked Exhibit No. 191.

BY MR. EVANS:

Q. If I understand this exhibit correctly, it shows the total write-ups during 1927, 1928 and 1929 in these five groups of water companies, amounting to approximately \$30,000,000?

A. Yes sir.

Q. Are there any additional companies which you have not included in this exhibit, which you wish to add now?

A. Yes; I would like to add to the North American Water Works Corporation group the Hanover and McSherrystown Water Company, a write-up in the 1927 column of \$241,755.68. That then should be extended over to the "total" column as \$241,755.68.

Then, the Gettysburg Water Company—

BY MR. TURNER:

Q. The same group?

A. The same group, under the 1927 column, \$193,117.16. That should also be extended to the "total" column as \$193,117.16. That makes the total of the 1927 column \$4,684,255.85. The '28 and '29 columns remain the same, and the "total" column is increased to \$30,421,865.48.

MR. COOKE: Mr. Evans, have we any record as to which of these companies was in financial difficulties. That is, I recall one or two of them as being in the hands of a receiver.

MR. L.V. B.S.: That was the North American Water Works Corporation.

THE WITNESS: I wouldn't say for sure that the American Water Works Corporation was in the hands of a receiver, but the Keystone Water Works, which is the immediate holding company of these companies under the North American Water Works Corporation, is in the hands of a receiver.

BY MR. COOKE:

Q. Now, have we any information about any of the others?

A. No; I have not. Of course, the United States Steel Corporation is not.

MR. EVANS: Are there any questions the members of the Committee want to ask Mr. Colledge in regard to this exhibit?

BY MR. TURNER:

Q. Mr. Colledge, the same thing applies to this as it does the other exhibits of electric rates? There is nothing to show whether these write-ups had any relation to the value or not.

A. They were all made, I presume, on the basis of appraisals made either immediately prior to or immediately after the purchase by the holding companies. In the case of the Williamsport Water Company, that write-up was based on an appraisal made in connection with a rate case in the year 1925 by Morris Knowles, Incorporated, of Pittsburgh, and then was brought up to date by adding additions at cost.

Q. As I remember it, it was the rate case plus additions at cost?

A. That was so stated in the report of the company submitted for the year 1927.

Q. The same thing is true of the Chester Water Company there; as I recall the testimony, it was that the water company and the city got together and agreed upon an appraisal.

MR. COOKE: The difference in that case was that Morris Knowles, Incorporated, represented the consumers in Chester.

MR. TURNER: Represented the city.

THE WITNESS: They were on the other side of the fence in that case.

MR. COOKE: There was no trouble in reaching an agreement?

MR. TURNER: No; but there is a write-up of \$1,114,000.

THE WITNESS: There is another thing I would like to add to this, that all of the information which was obtained from the write-up of the company was available to the Commission in case they wanted to make an investigation on their own motion.

MR. TURNER: Yes; I think we all understand that, that nobody ever investigated these question.

(IN RE: QUAKER CITY CAB CO.)

MR. EVANS: If the Committee please, Mr. Barker, president of the Bankers Trust Company, has arrived, and I do not want to keep him waiting any longer than is necessary.

In order that the Committee may understand the transactions leading up to Mr. Barker's testimony, it has been developed in the Senate hearing. I might make a statement which will enable the Committee, I think, to follow its practice of not duplicating what the Senate has done.

The matter about which Mr. Barker has been invited to testify, is in connection with two checks drawn by A. M. Greenfield and Company—Albert M. Greenfield and Company, I should say—on the Bankers Trust Company of Philadelphia. One is dated January 6, 1928, to the order of "Cash" for \$250,000, and perforated with the bank stamp, "Paid 1-6-28." The other a check of Albert M. Greenfield and Company, dated January 11, 1928, on the Bankers Trust Company of Philadelphia, to the order of "Cash" for \$486,000; perforated with the bank stamp "Paid 1-11-28."

These checks were given by Albert M. Greenfield and Company, according to the testimony developed before the Senate Committee and the findings of the Court of Common Pleas No. 1, in the case of Will B. Hadley et al and the City of Philadelphia v. The Philadelphia Rapid Transit Company, as of September Term, 1929, No. 2827, under the following circumstances:

The Quaker City Cab Company, a cab company operating in the city of Philadelphia, went into bankruptcy. Its assets, including the taxicabs, were offered by the trustee in bankruptcy to the Philadelphia Rapid Transit Company or to Mr. Thomas E. Mitten, the president of Mitten management for

\$350,000, and the offer was refused. Subsequently a man by the name of Sawyer from Boston purchased the personal property of the bankrupt from the trustee for \$75,000. He also purchased the cabs which were then held by a financing corporation, for \$262,500, or a total of \$337,500 for all of the property, and Sawyer, who was financed by Thomas E. Mitten or Mitten management formed a corporation known as Quaker City Cabs, Incorporated. Albert M. Greenfield and Company represented Sawyer in purchasing the cabs from the trustee in bankruptcy and from the financing company, and also represented Quaker City Cabs, Incorporated in the sale of its capital stock to the Philadelphia Rapid Transit Company. This sale was made under the following circumstances:

On January 6, 1928, which is the date of the first of these two checks, Albert M. Greenfield and Company entered into a written contract with the Philadelphia Rapid Transit Company by which Greenfield sold to the P. R. T. the stock of Quaker City Cabs, Incorporated and the stock of three bus lines operating in or about Philadelphia for \$1,825,000, conditioned upon the Public Service Commission's approval of the contract. The consideration of \$1,825,000 was then paid to A. M. Greenfield and Company, but the transaction was not approved at that time by the Public Service Commission. On April 22, 1929, a new contract was made between A. M. Greenfield and Company and the Philadelphia Rapid Transit Company covering only the stock of Quaker City Cabs, Incorporated, and not contingent upon the approval of the Public Service Commission. The consideration for this sale—for the Quaker City Cab, Inc., alone was \$1,360,000. That contract has not been approved by the Public Service Commission, and the Senate inquiry failed to develop who now actually hold the stock of the Quaker City Cabs, Inc., but it was developed that the cabs have been operated continuously by the Philadelphia Rapid Transit Company or by Mitten Management.

Before the Senate Committee, Mr. A. M. Greenfield testified that the two checks in question had been delivered to Thomas E. Mitten or Sawyer, but it was not developed as to how the checks were paid or to whom. Under date of April 8th, 1931, William A. Grey, Esq., counsel for the Senate Investigating Committee, addressed a letter to Honorable William H. Earnest, Chairman of the Senate Investigating Committee at Harrisburg, Pa., referring to this matter as follows, in part:

"Yesterday, Thomas Hart, Esquire, and I called at the office of Albert M. Greenfield, and there he exhibited to us two checks, one for \$250,000 and the other for \$486,000, being the two checks referred to in the testimony which he gave before the Senate Investigating Committee last week as representing part of the distribution of the \$1,825,000 paid by him by the Philadelphia Rapid Transit Company for the purchase of Quaker City Cabs, Inc., and the bus lines included in the contract made between Greenfield and the Philadelphia Rapid Transit Company on January 6th, 1928.

The check for \$250,000, was dated January 6th, 1928; drawn to the order of cash, contained no endorsements, and was perforated indicating that the bank paid it on that date.

The check for \$486,000, was dated January 11th, 1928; drawn to the order of cash; contained no endorsements, and was perforated indicating that the bank paid it on the same day.

Mr. Greenfield informed Mr. Hart and me that upon inquiry he found that these checks were not paid by either New York draft, cashier's check or clearing house due bill; that they were paid in cash; that he could not ascertain to whom they were paid; but could only reiterate his statement, given on the witness stand, that they were delivered to Mr. Mitten or Mr. Sawyer.

"I enclose herewith exact typewritten copies of these checks.

"Mr. Hart arranged to communicate this information to you by telephone yesterday, but I felt that I should make a written report to you.

"I do not know what view the Committee will take of this matter, but I deem it important to determine who received this money. This is especially true if the circumstances under which the Quaker City Cabs and the bus lines were operated by the Philadelphia Rapid Transit Company, without the consent of the Public Service Commission, are to be fully investigated.

"I would respectfully suggest that the various officials and tellers of the banks be subpoenaed and the books of the bank, with relation to this transaction, be produced for the purpose of determining whether they will reveal any information pertinent to the matter."

The Senate Investigating Committee did not comply with Mr. Gray's suggestion, and we have asked Mr. Barker and Mr. Robert N. Wilson, treasurer of Albert M. Greenfield & Company, who signed the checks, to come here this morning and throw what light they can upon the transaction. I will first call Mr. Wilson to produce the checks, and I identify them.

ROBERT M. WILSON sworn

BY MR. EVANS:

Q. Where do you live, Mr. Wilson?

A. Narberth, outside of Philadelphia.

Q. You are the treasurer of the Albert M. Greenfield & Company?

A. I am secretary and assistant treasurer.

Q. Were you in January, 1928, the treasurer of Albert M. Greenfield & Company?

A. No sir, I was secretary and assistant treasurer.

Q. On January 6, 1928, did you sign on behalf of that company a check to the order of cash \$250,000?

A. Yes sir.

Q. Do you have that check with you?

A. Yes sir.

Q. And did you on January 11, 1928, sign a similar check for \$486,000?

A. Yes sir.

Q. And you have that check with you?

A. Yes sir.

Q. Will you be good enough to produce those checks for the committee?

A. (Witness hands two checks to counsel.)

Q. Mr. Wilson, at whose direction did you draw these checks?

A. Either Mr. Greenfield or Mr. Rosenbaum.

Q. Were you familiar in any way with the transactions to which they pertain?

A. I was not.

Q. In other words, you acted merely in a clerical capacity in signing the checks as far as these checks were concerned.

A. Yes.

Q. Were you in any way familiar with the contract dated January 6, 1928, between Albert M. Greenfield & Company, and Philadelphia Rapid Transit Company covering the sale of stock of the Quaker City Cab Company and certain bus companies?

A. I was not, no sir.

MR. EVANS: In view of the fact that these are original records of Albert M. Greenfield & Company, I would suggest to the committee that copies of them be made and placed in the record as exhibits without requiring the original checks to be held here.

BY MR. TURNER:

Q. Were these checks both drawn on the same date?

MR. EVANS: No, one was drawn on January 6th and the other on January 11, 1928.

MR. TURNER: I wondered if there was a settlement of any kind at that time in the office.

BY MR. COOKE:

Q. Mr. Wilson, in transactions with which you are a part in your line of work, is it a frequent occurrence to draw checks the size of these to cash?

A. Oh yes.

Q. It is a matter of every day occurrence?

A. I don't know about it being every day, but we frequently make checks to cash.

BY MR. EVANS:

Q. Mr. Wilson, will you try to recollect any settlement in which you have made a check for an amount anywhere near \$486,000 in which a check has been drawn to the order of cash by your company?

A. You see, Mr. Evans, we probably issue quite a number of thousands of checks a month, covering several millions of dollars. In view of the fact that this transaction is several years—

BY MR. RHODES:

Q. Do you think it is good business to draw checks to cash?

A. It depends on the nature of the transaction.

Q. What could be the purpose of drawing any check to cash, let alone one in an amount of a quarter million dollars?

A. Well, in real estate deals, some people don't wish to take checks.

Q. Are the transactions of such a nature that people don't want to disclose their identity in connection with them?

A. There are some transactions in which they request cash.

Q. Is it not a good business practice to have checks drawn to somebody and have them endorse, and in that way you will have a receipt in your office for them?

A. It depends entirely on the transaction.

Q. Is it customary for your firm to draw checks for a quarter of a million dollars without any record to show who cashed them?

A. I don't know whether it is the custom or not, but it is done.

Q. Why was it done in this case?

A. I don't know.

Q. Do you consider that a good business practice to draw checks like this without having the purpose on the check?

A. I don't know whether it is a good business practice or not, but we have to follow the desires of our clients. If you are a client of ours and you come in and ask for cash and we are representing you, and you demand cash, we have to give it to you.

MR. TURNER: Was this fully paid out of the funds of Albert M. Greenfield and Company or was it somebody else's money?

A. This check was drawn by us.

BY MR. EVANS:

Q. These checks were drawn in a transaction involving the sale by Albert M. Greenfield & Company of certain property to the Philadelphia Rapid Transit Company?

A. Yes.

Q. Do I understand you to mean that you drew them at the request of Mr. Greenfield?

A. No, I drew them either at the request of Mr. Greenfield or Mr. Rosenbaum.

Q. You explained to Mr. Rhodes that sometimes your clients request payments in cash. Was the Philadelphia Rapid Transit Company a client of yours in this case?

A. I know very little about this transaction. I didn't see the contract. I simply know I was requested to draw these checks when they were drawn, and I drew them.

Q. To whom did you deliver these checks?

A. They were sent into Mr. Greenfield's office.

Q. Where is that with relation to your office?

A. His office is on the Walnut street end of our building. The secretary's office comes next, and my office comes next.

Q. All in the same suite?

A. Yes sir.

Q. You say you got your instructions either from Mr. Greenfield or Mr. Rosenbaum?

A. Yes sir.

Q. You don't remember which one of these gentlemen gave you the directions?

A. No sir.

Q. You remember drawing these checks, don't you?

A. I don't remember that, I signed them.

Q. You remember signing them?

A. Yes sir.

Q. You remember the request and the directions given you?

A. No sir, I do not.

Q. Now, do you remember signing these checks to the order of cash, dated more than three years ago; if you did, you would also remember drawing checks for a similar amount drawn to cash, would you not?

A. I assume I would; I might or I might not. As I explained before, I sign several thousand checks a month, and it is impossible for me to remember all of them.

BY MR. RHODES:

Q. Do you run your business on a cash basis and draw all of your checks to cash?

A. No sir, we do not.

BY MR. EVANS:

Q. Now, Mr. Wilson, will you rack your brains and tell me any case within the past three years in which you have drawn

checks in any similar amount to this to the order of cash. You remember signing these checks to the order of cash. Now, since these checks were signed, I want you to try to think of other cases you can remember of checks of this size that were drawn to cash?

A. All that I can tell you is that it is not uncommon for us to draw checks to cash, but as to amounts and dates, I cannot tell you.

Q. Why do you remember drawing these if you draw other similar checks to cash?

A. I remember signing these checks.

Q. You didn't say that?

A. I recognize my signature; I don't know that I could recollect the month, the hour and the day that I signed these particular checks. I spend a part of my time each day signing checks.

Q. What I am trying to get at is this, you do not, as I understand it, in the regular course of business of signing checks for \$486,000 to the order of cash. The fact that this is drawn for that much makes you remember signing that check?

A. No sir, it doesn't.

Q. Do you want this Committee to understand you don't remember signing this check? Do you remember signing it or don't you remember signing it?

A. No sir, I don't remember signing this particular check.

Q. Then you want to correct your testimony and say that you don't remember signing them, when a few moments ago you said you did remember signing them?

A. I misunderstood your question.

Q. You say you sent this in to Mr. Greenfield's office. How do you happen to remember that?

A. That was the regular procedure.

Q. So you don't remember whether they were sent to his office or not?

A. I presume they were sent to his office.

Q. But you don't know that any more than you know about signing the checks?

A. All I can say is that I presume they went in there.

BY MR. MOORE:

Q. You said a moment ago you remembered sending them in. Now do you remember sending them in or don't you?

A. On different transactions our firm handles, it is customary to send the checks in to them.

Q. Your testimony gave me the definite understanding that you remembered this transaction; now it looks as though you were trying to get out from under it?

BY MR. COOKE:

Q. We all had the same impression that Mr. Moore, and feel that you are now changing your testimony. Is that right or not?

A. Mr. Cooke, as I tried to explain before, we issue thousands of checks a month.

Q. Are you or are you not now changing your testimony? We all understood your testimony in the same way?

A. All I can say is that I cannot remember all the details relating to these particular checks or any of the others amounting to tens of thousands.

Q. You are saying you cannot remember in detail now?

A. I have not understood—

Q. What do you remember?

A. I have told Mr. Evans—

Q. We cannot tell what you mean because you keep changing it? Do you remember any detail in regard to these checks?

A. I remember as I can recollect I was called on the phone, either by Mr. Greenfield or Mr. Rosenbaum, to make out these checks to cash and as is customary we made them out and I presume they were sent in there to Mr. Greenfield or Mr. Rosenbaum's office, which is the customary, every-day method of handling dozens and hundreds of transactions which we handle.

BY MR. EVANS:

Q. Now you say you remember the telephone instructions either from Mr. Greenfield or Mr. Rosenbaum?

A. I didn't say that.

Q. You said you remember having signed them on Mr. Rosenbaum's or Mr. Greenfield's request to sign these checks?

A. What I am trying to explain is the customary method.

Q. (Reading the previous answer). "I remember as I can recollect I was called on the telephone either by Mr. Greenfield or Mr. Rosenbaum to make out these checks to cash, and as is customary we made them out and I presume they were sent in there to either Mr. Greenfield or Mr. Rosenbaum's office, which is the customary every-day method of handling dozens and hundred of transactions which we handle."

You notice you said you remembered and you presumed that they were sent to Mr. Greenfield's office. Do you want to say that and say your presumed you were telephoned to?

A. That was the customary way of handling these transactions.

Q. You say you remembered the fact, now. Was that true or was it not true when you said you recollect being called on the telephone by Mr. Greenfield or Mr. Rosenbaum and told to prepare and sign these checks; is that true or not?

A. What I intended to say was that that was the customary way of handling these transactions.

BY MR. MOORE:

Q. You were asked specifically with reference to these two checks and you stated that you remembered being called and directed to prepare these checks?

A. What I am trying to convey to you gentlemen is, that there are a large number of transactions every day, and as I have explained before, a great deal of my time is taken up in having checks issued and signed.

BY MR. COOKE:

Q. There is not much difficulty in finding out what you are trying to convey to this Committee.

You don't want to try to convey to the Committee that it is the ordinary, common, daily routine course of business for checks of \$250,000 and \$480,000 to be drawn to the order of cash, do you?

A. We have drawn a lot of checks just as large or larger, and we have drawn a lot of checks to cash.

(Question read.)

A. It is not an everyday occurrence, no sir.

Q. You remember any other instance where a check for \$480,000 has within the last three years been drawn by you to the order of cash?

A. I don't recall any.

Q. Do you recall any case where a check for \$250,000 has been drawn in the last three years to the order of cash?

A. I don't charge my memory with every check that is drawn.

Q. Do you remember it?

A. I do not recall it.

Q. Mr. Wilson, there is a blank line on this check, that is for the purpose of inserting the object for which the check is drawn, is it not?

A. Yes sir.

Q. Is it the custom of your business to fill that out or not?

A. Sometimes it is filled out and other times it is not.

Q. Who determines whether it is to be filled out?

A. If the officer who requests the check to be drawn would give us any information, we will put it on.

Q. Who gives the bookkeeper the account to which checks are to be charged which do not have that on?

A. I usually have that information when the check is drawn, or secure it subsequently.

Q. Then at the time these checks were drawn, you knew the account to which these were to be charged?

A. I don't recall that.

Q. You have not determined it here?

A. No sir.

Q. Was that omission made at the direction of Mr. Greenfield or Mr. Rosenbaum?

A. No, if I have the information when the check is drawn, we put it on, and if we don't have the information, we don't put it in, and it is not done at anybody's direction.

Q. In this instances did Mr. Rosenbaum or Mr. Greenfield give you the account to which it should be charged to?

A. That is the regular procedure, that would be the procedure we would follow.

Q. Do you remember whether that was the case?

A. As I explained before, Mr. Evans, I don't remember the details surrounding the drawing of these checks, Mr. Evans, and that is one of the details.

Q. You do not remember whether or not Mr. Greenfield gave you any directions for that?

A. I do not, no sir.

Q. How did the bookkeeper get any instructions as to the account to which these checks were to be charged?

A. I presume they ascertained from Mr. Greenfield or Mr. Rosenbaum who the checks were to be charged to, and they charged it to that account.

BY MR. RHODES:

Q. Do you have any stubs for these checks?

A. There are stubs in the checkbook.

Q. Were these checks taken out of the checkbook?

A. Yes sir.

Q. What is disclosed on the stub of the check as to account they were charged to?

A. When this question was raised in the Senate, we turned over all our records to Mr. Greenfield together with these checks.

Q. Did you make an entry on the stub of the check?

A. No sir.

Q. Who did?

A. One of the clerks.

Q. Is there any notation there as to the account they are to be charged to?

A. I didn't look at the stub.

Q. You never looked at it?

A. No sir.

Q. As assistant treasurer don't you know for whose account checks are being issued?

A. We often do.

Q. How do you keep track of whether the checks are cashed by the proper party, or whether they are lost and the proceeds go to somebody to whom they should not go; can you answer that?

A. When checks are drawn to cash, they are sent to various officers in the department, and the officers to whom they are sent are responsible for the disbursement.

Q. Your office has no way of knowing whether they were cashed by the proper and responsible party or not, have you?

A. No sir.

Q. You don't know whether the party entitled to them get the proceeds or not?

A. No sir.

Q. Is that the way you run your business in Philadelphia?

A. Cash transactions I handle that way.

Q. Do you mean that no one of your company would know?

A. That is for the officer.

Q. You are an officer of the company?

A. I am an accounting officer, but I am speaking about the officer who makes the transaction.

Q. Have you nothing in your records to show to whom these checks should have gone and the proceeds been paid to?

A. No sir.

BY MR. EVANS:

Q. Do you mean your company takes no receipts for cash payments made by it?

A. The officer who handles the transaction takes his own receipt.

Q. Then in the regular course of business Mr. Greenfield will have receipts for these checks from the party to whom he delivered them?

A. I don't know whether he has or not.

Q. You say the officer handling the transactions takes receipts?

A. He takes his own receipt if he feels it is necessary.

Q. This is company money and not Mr. Greenfield's?

A. He was president for the company.

Q. You are paying out three-quarters of a million dollars in cash and do you mean to say your company conducts its business in that way and takes no receipts for it? Is that the policy and practice of your company?

A. It depends on the individual deal handled by each officer.

Q. In other words, do you know of any case where a transaction of this size, or anything like this size, was handled without taking a receipt for the funds dispersed?

A. Yes, we don't get receipts for money on all our transactions.

Q. Cash transactions?

A. Yes, I would say they are all on cash transactions.

BY MR. RHODES:

Q. Do you have the kind of transactions that you cannot keep records on them?

A. Sure we keep records.

Q. You don't have any records on this case?

A. I was not asked to bring any.

BY MR. EVANS:

Q. Have you any records on this case?

A. All the records I had were turned over to Mr. Greenfield at the time of the Senate investigating committee.

Q. What did they consist of?

A. The ledger account, and the cancelled checks.

Q. In whose name was the ledger account?

A. I believe in Mr. Greenfield's name, although I didn't see these for several months.

BY MR. COOKE:

Q. You have the stubs?

A. Yes sir.

BY MR. RHODES:

Q. By ledger account in Mr. Greenfield's name, you mean this three-quarter million dollars was charged to Mr. Greenfield individually?

A. As I recollect, these checks were charged to the ledger account in Mr. Greenfield's name.

BY MR. COOKE:

Q. How would you describe the voucher for these transactions?

A. There are no vouchers, we don't operate on the voucher system.

Q. What piece of paper would anybody coming in to audit your accounts have to check against this ledger account, and would an auditor pass that check?

A. He could go to the other officer who signed it and get an explanation by him.

Q. Have you ever seen a check like that that was not endorsed, a check of that size, I mean?

A. I don't know about the size, but I have seen lots of checks made to cash and not endorsed.

Q. Is that the banking practice in Philadelphia, to pay checks without endorsement?

A. I don't know about the practice in Philadelphia, but in Atlantic City where I was in a bank for several years, if a depositor brought in a check, they would get the money without endorsing it.

BY MR. RHODES:

Q. A teller in a bank would not make a payment of cash on a check drawn to cash without endorsement unless he absolutely knew the individual to whom he was making the payment?

A. I would think so.

Q. So in this instance they would not have cashed that check unless they absolutely knew to whom they were paying the money?

A. They should know to whom they were paying the cash to.

Q. Do you as assistant treasurer of this company happen to know who paid in the money to this company against which these checks are charged, and how was that credited?

A. I presume to Mr. Greenfield's account.

Q. And these checks were charged against his individual account?

A. Yes sir.

Q. Don't the books show by whom the money was paid in?

A. I do not have the records here.

Q. You ought to remember the details of a transaction of this size?

A. If you gentlemen knew how many millions and tons of millions of transactions we have handled in the last few years ———

Q. Did you conduct them all like you handled this?

A. We conduct them in the way we think is proper as far as the clients are concerned.

Q. You say you will do anything your client desires to keep his identity from being disclosed?

A. The accounts are run in accordance with the information we get from the officers handling the transaction.

Q. And the desire of your client?

A. Our clients have to be considered.

Q. It is not a matter of business ethics it is a matter of the desire of clients?

A. We get our instructions from the officers handling the particular transaction.

Q. Do you mean to say you are passing the buck entirely in these transactions to Mr. Greenfield?

A. Mr. Greenfield and Mr. Rosenbaum are the men who are more familiar with these transactions than I am.

Q. Are they entirely familiar with it, and you have no knowledge of it?

A. I have no knowledge of it.

Q. You say you have no knowledge of these transactions except that you attached your name to two checks?

A. That is it.

Q. And Mr. Greenfield and Mr. Rosenbaum know the details?

A. Either Mr. Greenfield or Mr. Rosenbaum.

Q. What did he know about it?

A. I don't know.

Q. You said he did?

A. I presume he did because he countersigned the check.

Q. What records do you have in your office to show you were the payee of these checks?

A. There is no payee on this check, it is payable to cash.

Q. Someone was supposed to get the money?

A. I suppose someone did.

Q. Suppose that the party came in and asked for the \$250,000?

A. I would refer them to Mr. Greenfield or to Mr. Rosenbaum.

Q. What records do you have to show that that was paid?

A. None.

BY MR. RHODES:

Q. In other words, this is an individual transaction between Mr. Greenfield and somebody else and Mr. Rosenbaum?

BY MR. COOKE:

Q. Is Mr. Greenfield the sole owner of Albert M. Greenfield & Company?

A. At that time he held about eighty per cent. of the interest. In the new company he owns a little over fifty per cent.

BY MR. WALKER:

Q. Do you have any records in your office showing who collected the funds and the distribution of the funds?

A. I don't understand what you mean.

Q. The treasury department is charged up with the bank account?

A. I don't understand what you mean.

Q. The treasury department of Albert M. Greenfield and Company is charged up with a bank account?

A. They have the responsibility of the bank account.

Q. When you issue a check and make an expenditure, you make certain entries in your debit and credit?

A. When we issue a check we don't make both, we account either to the debit or the credit under certain transactions.

BY MR. EVANS:

I think in view of the testimony of this witness, the only thing for the Committee to do is to issue a subpoena to Mr. Rosenbaum to produce the records which this witness has failed to bring with him and which he believes may throw some light on the transaction.

(Discussion among members of the Committee off the record).

BY MR. EVANS:

Q. What records, Mr. Wilson, were kept of these transactions other than the stub of the check on the ledger account? Did you keep any journal entry at all?

A. No.

BY MR. RHODES:

Q. You have a check book showing the money paid into your firm?

A. Yes sir.

Q. Your check book will show by whom payments are made?

A. Yes sir.

Q. We will ask you, Mr. Wilson, to produce at a hearing of this committee, to be fixed, the records pertaining to this transaction, including the check book stub, cash sheet and ledger sheet.

MR. RHODES: And let us have also the deposit records.

SAMUEL H. BARKER affirmed

BY MR. EVANS:

Q. Mr. Barker, you are president of the Bankers Trust Company?

A. I was.

Q. You held that office in January, 1928?

A. That is correct.

Q. How long prior to that time did you hold the office?

A. Since the company was organized and began business in the beginning of 1927.

Q. To what date did you hold that office?

A. Until the date of the closing of the institution on December 22d, last.

Q. You are familiar with the banking practices in Philadelphia, are you not?

A. More or less, I hope.

Q. And prior to your connection with the Bankers Trust Company, what had been your experience along banking lines?

A. I had been in newspaper work for exactly 21 years, and 17 years of that time I was financial editor of the North American, and I resigned from the North American and have been in financial business for myself for about two years before the Bankers Trust Company was organized.

Q. Was it the practice of the Bankers Trust Company to cash checks of \$250,000 and more drawn to the order of cash without requiring any endorsement?

A. That would depend altogether upon the circumstances. Whenever a check was presented and it was a good check, and by that I mean that the balance was there to cover the check, and the teller knew the presenter of the check, the check would be cashed in the ordinary course of business.

Q. Were your tellers authorized without specific directions to cash checks of these sums without endorsement?

A. Our tellers were authorized to conduct the business in the way which would facilitate it in every way eventually. (Last question read.)

A. Our tellers would have cashed any check presented unless there was some question in their minds about it, and then it would be referred to some officer of the bank.

Q. Mr. Barker, what amount of cash did the Bankers Trust Company maintain at its principal office for the payment of checks?

A. The Bankers Trust Company did a great big business, and we commonly had from three to four million dollars on hand.

Q. In your vaults?

A. Yes sir.

Q. And if that cash was available you would pay a million out in cash if the check might have been presented without any question?

A. Certainly.

Q. Was that the usual banking practice in Philadelphia common, to maintain such large balances of cash in the vaults?

A. Certainly. Every bank, of course, has cash on hand to pay over-the-counter. You will perhaps understand it better if I tell you this, that the Bankers Trust Company had a turnover of deposits and checks in and out, of over \$2,000,000 a day. Perhaps we would take in a million and a half and have to pay out in checks through the clearing house approximately an equal amount during the day.

Q. That was including your branch offices?

A. Yes sir.

Q. How many branch offices did you have?

A. We had 20 offices until December 22d.

Q. And how much of its business was turned back to those offices?

A. The main office did the larger proportion of the business.

Q. How much would that amount to?

A. From the main office all the main transactions would take place, all the exchanges would come over to the main office. The local offices would take care of the deposits made

there and checks to be paid over the counter. In this way all of the offices would come through the one exchange.

Q. At your main office what was your average of checks and deposits by depositors daily?

A. I would only have to give you a guess. That is, as to what it was, but we handled in the bank anywhere from 20,000 items to 30,000 a day.

Q. Can you give us the total transactions in the branches, that was made up of individual offices?

A. Correct.

Q. Arriving at that total are you not familiar with the details of each one of them at the main office?

A. No sir, not exactly.

Q. Approximately?

A. As I explained, the main office cleared for the whole bank, and consequently the number of items which passed through the teller's cage in the main office were larger in proportion for the reason that the amounts that came in from the clearing house and presented there at the central point for collection, consequently the business in the main office was much greater in proportion.

Q. What amount of cash was paid over the counter daily at the main office?

A. Anywhere from 500 to 800 thousand dollars.

Q. So that at that office you had cash that you kept on hand?

A. We always kept plenty of cash on hand. Assuming that there would be \$4,000,000 cash on hand, the bulk of it would be in the main office.

Q. Do I understand you that no special arrangements would be made of any sort for cashing a check for \$486,000 to the order of cash?

A. Not necessarily.

Q. Would it or would it not?

A. It would depend altogether on whether the drawer of the check advised the bank that such character of check was going to be drawn. Obviously the depositor told us he was going to draw a million dollars in cash at a certain time, we would have the cash available. Very often if a depositor was going to withdraw a million dollars, he would probably advise the bank he was going to draw out a million dollars.

Q. What would be the purpose of that?

A. Just a matter of normal courtesy.

Q. Were any special arrangements made, as far as you are aware, by the Bankers Trust Company for the cashing of either of these two checks?

A. Not that I know of.

Q. Were you informed, as far as you know, or was any officer of the bank informed that these checks had been drawn?

A. My information concerning all this came from the newspapers. I had no knowledge of this matter at all until I read it in the newspapers, which I do in my daily course. I started as a newspaperman, and I naturally follow the newspapers and read the testimony as it was brought out, and that was my first information as to the matter.

Q. Then you did not have any knowledge yourself of this transaction prior to the time you read it in the newspapers?

A. During the last couple months, none whatever.

Q. Who, besides yourself, in the Bankers Trust Company might be likely to have information in regard to the transactions of this sort?

A. Let me answer that question so you can be fully informed. The Bankers Trust Company was a pretty large bank, and it necessarily had a large organization. Now, my plan and my efforts in conducting the Bankers Trust Company was to develop that organization so that it would be fully efficient and capable of conducting the business of the bank, and that meant that each officer and employee all the way down the line where responsibility was placed for their particular work. A teller had a certain responsibility and the officer over him had responsibility to see that the teller did his work properly, but nothing in the routine such as this would not come to me, only in the event there was some special reason for it, for we had a most capable organization of men and women to handle the business we were doing. The best evidence that it was handled carefully and conscientiously, and people knew what we were doing in a business way, in that with this multitude of transactions, which I think might run into millions of transactions, there was never an action, nor any depositor that ever made any question as to the payment of any check which had been drawn on the Banker

Trust Company, and there never was a claim that had to be carried to the insurance companies.

Q. I am informed, by responsible banking facilities in Philadelphia, that matters of this sort are not handled in Philadelphia as matters of routine. That I understand you to say is not true of the Bankers Trust Company?

A. I would say that they probably misunderstood your question if they say that a matter of \$250,000 would not be handled without referring it to higher officials.

Q. I have been informed by a gentleman that on one occasion he had a check for \$5000 drawn to the order of cash which he presented to a bank, and after having been identified, was advised that payment would be made within a half hour in order that the funds can be brought up from a central bank, and that banking institution is larger than the Bankers Trust Company?

A. It sure was. And if there would be any time that the Pennsylvania Trust Company could not pay you \$25,000 on one minute's notice, I would be very much surprised.

Q. Who was treasurer of the Bankers Trust Company at that time?

A. I think it was Raymond Scott.

Q. Can you give us the names of the assistant treasurers at that time?

A. I can name some of them.

Q. Name all you can?

A. This was in January, 1928: Mr. Edward Ristine was a vice president at that time; George W. Brown, Jr., was a vice president.

Q. I am particularly interested in the officials at the main office of the Bankers Trust Company?

A. At the main office at that time, Mr. Scott was there. I am not sure whether Mr. Ristine was at the main office at that time or not.

Q. What other vice presidents were at the main office?

A. I question whether there were any other vice presidents at that time at the main office.

Q. What assistant treasurers were at the main office?

A. We were running with very few people at that time. I question whether there were very many more than I named to you, at that time in the main office.

Q. So if any special arrangements were made or any notice given by Albert M. Greenfield & Company for the drawing of this check it would, in your opinion, very probably be given to either Scott or one of the vice presidents you have named?

A. I should think so.

Q. What records of the Bankers Trust Company would be kept in regard to transactions of this sort, cashing checks without endorsement?

A. A check, whether for five dollars or five hundred dollars being presented to the teller, if the account is good for the amount of the check, would naturally be paid, and the check would be debited to the account and at the end of the month the check would be returned with a statement.

BY MR. RHODES:

Q. Do you mean to say it would be paid to someone who was not known?

A. I mean, presented in the proper shape.

Q. In other words, when the check for \$250,000 was presented to the teller, the individual presenting it must have been well known to the bank?

A. He must have been known to the teller or it would not have been paid.

Q. The same is true as to the check for \$486,000?

A. Yes sir; and any check of that size or any other size would not be cashed by any teller unless he knew that the check itself was good and unless he knew the man he was paying it to.

Q. Would the teller cash the check unless he received authority from the superior officer?

A. Yes sir.

Q. And it is true that these two checks were cashed by tellers of your bank?

A. Yes sir.

BY MR. EVANS:

Q. Can you give the names of the tellers?

A. No sir.

Q. Who could give it?

A. All the records are in the hands of the private banking company.

Q. Would Mr. Scott have any of these facts?

A. He is not with us at this time. I think now he is president of a bank at West Chester, I think the Chester County Trust Company, if I am correct.

BY MR. MOORE:

Q. In some banks it is necessary for the teller cashing the checks to stamp them in order to identify the teller cashing it?

A. I don't think we ever did that.

Q. Don't bankers usually do that?

A. Not necessarily.

Q. I happen to be connected with a trust company and I don't think any teller in our bank would ever cash it without stamping it. Do you think it is good banking for transactions of this kind to be put through the bank?

A. I think it is perfectly all right.

Q. Is it not unusual?

A. It may be unusual, but it is proper.

Q. Can you remember any other transaction where there was no identification of the payee?

A. I think there was in this case.

Q. Do you think it is well for tellers in a bank to cash checks of a quarter million dollars without referring it to someone in charge?

A. I think very likely that they did refer this.

Q. Did you give your tellers authority to cash checks as large as this is, you think they had the authority to do it if they desired?

A. Yes sir, but with any reasonable man, he would want to be certain.

Q. But they had the authority?

A. Every teller must have authority to meet a situation that comes to his window and if he is in doubt, he naturally goes to his next higher officer.

Q. Do you think that any teller in good banking circles should have authority to pay out half a million dollars on a check drawn to the order of cash?

A. I think it would depend on the circumstances of the case.

Q. Isn't it unusual where a man would present a check for \$486,000 and have the money handed out to him, is that not unusual?

A. Yes sir, it is unusual.

MR. COOKE: In regard to this matter of endorsement, I don't recall ever getting a check back from a bank I had business with without an endorsement, in my life.

The WITNESS: It is very usual for checks drawn to cash to be paid without endorsement. I think it is unusual to have them endorsed, especially when the check is presented by the maker or by the agent of the maker.

BY MR. EVANS:

Q. You say, assuming that the check is presented by the maker or agent of the maker, then you assumed in this case, that these checks were presented by Albert M. Greenfield and Company or an agent of Albert M. Greenfield and Company?

A. The checks, undoubtedly, must have been presented by some one who was well known to the bank as being entitled to receive that money.

Q. But, Mr. Barker, you just stated that it was not unusual in banking practice to cash checks drawn to the order of "Cash" without endorsement when presented by the maker or agent of the maker?

A. That is true.

Q. From that do you infer that these checks were presented by the maker or the agent of the maker?

A. Of course, I don't know how these checks were presented.

Q. I asked you whether you infer that?

A. The teller or the officer in charge of the bank, to whom the matter was probably referred, undoubtedly must have known that the money was being paid in the proper kind of way to satisfy the maker or the agent, or it would not have been paid.

Q. If any member of this Committee, who was not known to the tellers at the Bankers Trust Company in January, 1928, had walked in with a check for \$250,000 it is your opinion that the teller would merely on his identification of that individual have paid the check without any further question?

A. No; I don't believe he would.

Q. Why not?

A. Because in that event he would have wanted to have a receipt in the way of an endorsement of the check to show that the check had been paid to him.

Q. Why would he have wanted it, from any member of this Committee, and not wanted it from the person who cashed these checks?

A. Because a member of this Committee, holding a check to cash, would be an outside person so far as the bank was concerned, and therefore the bank would want to know why he presented the check.

BY MR. RHODES:

Q. And, therefore, an insider must have cashed these checks?

A. I would say that either somebody representing Albert M. Greenfield & Company, either cashed these checks or advised the bank that they were satisfied, and in having the checks cashed.

BY THE CHAIRMAN:

Q. That is something that is referred to in newspaper parlance as an inside job?

A. I wouldn't say that, Mr. Moore, because, after all, Albert M. Greenfield had the money themselves; I don't say they had it; but supposing they had that balance, and if they wanted it, they had a right to draw it.

Q. It has been my experience in Pennsylvania that you can't get a check cashed without an endorsement on it.

A. Well, they do it differently in Philadelphia, then. I have issued many checks on my signature which have been cashed without any endorsement.

BY MR. EVANS:

Q. On what banks?

A. The Pennsylvania, the Fidelity-Philadelphia Trust Company, the Philadelphia National, the Girard National, before it went into the Philadelphia.

Q. In large amounts?

A. I never had the good fortune to have as much as \$200,000, in my bank account.

Q. You might have \$1,000. Do you remember cashing a check for \$1,000?

A. Oh, much more than that.

Q. You did?

A. Oh, sure.

BY MR. RHODES:

Q. There is no reason why there should be any secrecy in this transaction from the standpoint of your bank?

A. None whatever. Our bank's interest was solely that he be a depositor, that the depositor was a good depositor, a man who carried a large sum of money with us.

Q. How many tellers did you have?

A. We probably had four or five tellers in the main office.

Q. When these items went into the teller's cage unless the teller stamped these items with his initials how can you tell when making up your balance for the day whether an error might not have occurred?

A. Because these checks are all passed back and a statement made of what each teller pays out.

Q. Is it not true that when an item comes into the teller's cage he stamps his initial on that particular item.

A. Sometimes he does, sometimes he doesn't.

Q. And when it gets into the bookkeeping department you can check back that item?

A. Each of these tellers was responsible for his own individual window settlements.

Q. But isn't it true that in most of these cases that the tellers stamp these items with their initials when they have them?

A. Sometimes they do, sometimes they don't.

Q. But isn't that true of most of the banks?

A. No; I wouldn't say it was. Some of the banks; yes. Others, no.

Q. By having the item stamped it gives you a check upon the individual teller who handled that particular transaction?

A. For instance, I know that at the present time the Fidelity doesn't make any such marks on its checks.

Q. I think most bankers would fire a teller who cashed a check for a quarter of a million without putting his initials

on that check when he cashed it; at least I know I would, and I know in my bank they would do it for even a \$250.

(No answer.)

BY MR. EVANS:

Q. Getting back to the tellers, you say there were four or five in the main office. Do you remember the names of any people who were tellers in the main office?

A. I guess I would. A man by the name of Marsh was a teller.

Q. What were his initials?

A. I am afraid I can't remember his first name at this time.

BY MR. RHODES:

Q. Can't you get a list of the tellers of the bank on those particular days when these checks were cashed, so that we may know the names of the tellers and the cashiers?

A. I can't because I am not in charge of the matter. The department has all the information.

Q. I know, but can't you get the information in some way or other?

A. No, the records are in the hands of the Banking Department.

BY MR. EVANS:

Q. Who, beside Mr. Marsh were tellers?

A. I don't remember.

Q. You certainly remember the name of one teller?

A. I may be wrong, but I think he was a teller in the main office at that time. I may be wrong.

Q. Do you know at all where he is located at this time?

A. Yes; he is employed by the State at our 60th and Market street office.

BY MR. RHODES:

Q. If I understood it correctly, these checks were cashed at your main office?

A. I think so.

BY MR. EVANS:

Q. Mr. Barker, was Thomas E. Mitten, a depositor of the Bankers Trust Company, in January, 1928?

A. No.

Q. Therefore, if these checks had been presented by Thomas E. Mitten, or an agent of Thomas E. Mitten, they would not have been cashed for him without his endorsement?

A. I would think not.

Q. You think not?

(No answer.)

BY MR. COOKE:

Q. Why don't you say that emphatically? You say that none of us could get it without endorsement? Why do you think he couldn't?

A. Well, I would say it emphatically, I would say not unless he was accompanied by somebody representing the drawer of the check.

Q. In other words, the drawer in that case would be getting it?

(No answer.)

BY MR. EVANS:

Q. Was Mitten management a depositor in your bank at this time.

A. No; it never was.

Q. Was the Philadelphia Rapid Transit Company a depositor in your bank at this time?

A. At that time; no.

Q. Was anybody by the name of Sawyer a depositor in your bank at this time?

A. Sawyer? No. I have an idea that either before or after, the Quaker City Cab Company was a depositor.

Q. But, if as Mr. Greenfield stated in his testimony before the Senate Committee that these two checks were delivered either to Thomas E. Mitten or to Mr. Sawyer of Boston, they would not have been cashed by the Bankers Trust Company for either one of those individuals without an endorsement?

A. I would say, no.

Q. Where is Edwin Ristine now located, if you know?

A. He lives over in Merchantville, New Jersey. He is out of work at present.

Q. Where is Mr. George W. Brown located?  
 A. He is with the company, in the employ of the State.  
 Q. At their main office?  
 A. Yes; George W. Brown, Jr.  
 Q. You understand that the interest of the Committee is directed solely to ascertaining who obtained the cash proceeds of these two checks?  
 A. So I understand.  
 Q. Have you any further information which might throw any light on that question whatever?  
 A. Not that I know of Mr. Evans.

BY MR. COOKE:

Q. You said you did not?  
 A. No; none.

BY MR. EVANS:

Q. Have you any suggestions as to anyone else connected with the Bankers Trust Company who might be able to throw any light on that situation, excepting those you have named?  
 A. No; I have none. I tried to explain to you briefly the method in which the bank was run, the responsibility of each person in the transaction. Now, in the organization at that time, there may have been other employees, and they would be the persons that passed upon any particular question that might arise in connection with these particular checks. They would have come to my office, as they undoubtedly would have, if any one thought they were wrong, and desired information.  
 Q. And Mr. Scott is the officer who in your opinion would be most liable to have the information?  
 A. Probably he would.

BY MR. COOKE:

Q. Would it be necessary for Mr. Greenfield, as chairman of the board to be a depositor?  
 A. Chairman of the Board of what, Mr. Cooke?  
 Q. Wasn't he chairman of the board of the Bankers Trust Company?  
 A. He was not. He was a director.

BY MR. RHODES:

Q. Was that the only connection he had with the bank, just a director?  
 A. Well, a director and depositor.

BY MR. COOKE:

Q. What I mean is, would it not be necessary for Mr. Greenfield as a director—  
 A. No more than to say than any other director; no; certainly not.

Q. I meant the fact that he was a depositor, is a depositor sufficient to meet this check, if he had been the identifier, that is all that would have been necessary?

A. Yes; certainly if he was.  
 Q. Was W. S. Sawyer, ever a depositor in your bank?  
 A. Never.

Q. Or one of his companies, either individually or corporate?

A. Not that I recall. I am quite sure not.

BY MR. EVANS:

Q. Can you suggest to the Committee how Mr. Greenfield ascertained that these checks were paid in cash and not by draft or other negotiable instruments?

A. I think that is perfectly plain. He looked at his own checks or the checks of his firm which were returned to him in due course, and he had them in his possession.

Q. Suppose a draft of the Bankers Trust Company had been issued in place of these checks, he would not know that that had been done.

A. I don't see how he would know it.

BY MR. RHODES:

Q. Do you know whether that was done or not?  
 A. No.

Q. As a matter of fact, you don't know whether it was paid out in actual cash—cash over the counter—

A. It might have been paid in the form of a due bill. They were evidently paid in a way which was satisfactory to the maker.

Q. But the records of the bank, however, would disclose the method of payment?

A. If there was a treasurer's check issued or due bill issued, of course, the records of the bank would disclose it.

Q. And if it were paid in cash?

A. They might or might not, no, if they were presented over the counter, if one check was issued against another, or if they came in in the regular course through the clearing?

Q. What do you mean through the clearing?

A. I mean, that if they had been deposited in some other bank, then they would have come in in the ordinary clearing the next day.

Q. If they were deposited in another bank, they would have that bank's endorsement on them?

A. I never seen the checks. I would say yes if the checks were paid other than in cash; if they were paid by a check issued in the Philadelphia National, the Pennsylvania Company, or the Real Estate at that time—I guess the Land Title and Trust Company.

Q. On the other hand, if they were paid in cash on these respective dates wouldn't the account show the payment by virtue of their being cash payments?

A. Of course, the cash is all in one total at the end of the day. You do not have the checks.

Q. In other words, the total shows the cash received from deposits?

A. It would be rather difficult, because you might start in the morning with \$4,000,000, and receive \$600,000 or \$800,000 in the course of the day, and then at the end of the day you would have \$4,800,000, or whatever it might be, and it would be difficult to trace what you did with the particular cash during the day's transactions.

BY MR. EVANS:

Q. You have discussed this matter within the past week or ten days with Mr. Greenfield, have you not?

A. No; I have not.

Q. Have you not talked to Mr. Greenfield in any way about this situation?

A. Only in this way, I went down to the hospital to see him the other day, and he said, "You might be subpoenaed in this case," and I said, "If so, I will be glad to respond to any subpoena that was issued."

Q. Did he or Mr. Rosenbaum inform you that they were anxious to identify the name of the agent or the officer at the bank who had paid these checks?

A. No.

BY MR. RHODES:

Q. You said that Mr. Greenfield was only a director. Nevertheless, he was the dominant factor in your institution?

A. I wouldn't say that. He was a very active factor in the organization, and he was a very aggressive and active man, and was very honest.

Q. One of the most dominant then?

A. He was very aggressive.

Q. And influential?

A. What do you mean by "influential?"

Q. In determining the policy of the bank?

A. Among a half dozen, yes.

Q. Was he influential in the creation of your institution?

A. He and I discussed that for two years before it was done.

Q. By that I understand that he was instrumental in the creation of the Bankers Trust Company?

A. Undoubtedly.

Q. And likewise, the Bankers Security Corporation?

A. The Bankers Security Corporation was my idea.

Q. And not Mr. Greenfield's?

A. No; it took me 18 months to sell him that idea.

Q. I was rather under the impression that it was Mr. Greenfield's idea?

A. No, it was not.

BY MR. WALKER:

Q. Are you the Samuel Barker who on March 3, 1926, received a fee of \$1,250 from the Public Policy Committee of the Pennsylvania Electric Association?

A. I don't remember.

Q. Did you ever do any work for the Pennsylvania Electric Association?

A. I don't remember the name of the association; I acted in an advisory capacity for some people. What was the year you say there?

Q. 1926?

A. 1926—possibly.

Q. As a matter of fact, that was paid to you for your services in connection with the Giant Power Project, was it not?

A. I suppose so.

BY MR. COOKE:

Q. What do you mean by "some people"?

A. I mean I don't remember the name of the association.

Q. Who were the people?

A. The contact I had was with no association. The contact I had was with one or two individuals.

BY THE CHAIRMAN:

Q. Was Walter Johnson one of them?

A. Not Walter Johnson.

BY MR. EVANS:

Q. Who were they?

A. I think the association was with Wise.

BY MR. RHODES:

Q. With whom?

(No answer.)

BY MR. EVANS:

Q. John S. Wise, Jr., the Pennsylvania Power and Light?

A. Yes; the Pennsylvania Power and Light.

BY MR. COOKE:

Q. Who was at that time president of the Pennsylvania Electric Association? What was the character of the services you rendered to Wise?

A. Well, I made some studies for them.

Q. You appeared as a witness?

A. I appeared as a witness.

Q. Was that principally what you did?

A. That was the—all that character of work.

BY MR. RHODES:

Q. Were you in the newspaper business at that time?

A. What is the date?

BY MR. WALKER:

Q. March 1, 1926.

A. No; I was not.

Q. When did you leave newspaper work?

A. January 21st, of that year.

Q. And these services, were they performed in 1926 or 1925?

A. I think 1926.

Q. When did you make that speech on the Giant Power Project?

A. I really don't remember.

Q. As a matter of fact that was in 1925, was it not?

A. I don't remember what the date was. If you have the dates there—

Q. I have the date when you received the money.

A. What date was that?

Q. The date was March 3, 1926, Samuel Barker, fee for services, \$1,250.

A. I guess that's right, if you have it there.

MR. COOKE: It was a good speech all right.

THE WITNESS: You were there, were you?

MR. COOKE: I read it.

BY MR. WALKER:

Q. You were opposing the Giant Power project, were you not?

A. I was, because I believed it was a bad project.

Q. Oh, I don't doubt your sincerity, Mr. Barker.

A. If I had to do it over again, I would make the same speech, and maybe I could make it better.

Q. For \$1,250?

A. Oh, no; I don't make speeches for the money.

BY MR. EVANS:

Q. Mr. William A. Gray, in a letter addressed to the Senate Investigating Committee, under date of April 8, 1931, in con-

nection with this transaction, states: "Mr. Greenfield informed Mr. Hart and me that upon inquiry he found that these checks were not paid by either New York draft, cashier's check or clearing house due bill." From your knowledge of the affairs of the Bankers Trust Company, can you suggest to this Committee of whom Mr. Greenfield would have made that inquiry.

A. All the affairs of the Bankers Trust Company at that time were in the hands of the Banking Department.

Q. From that, do I understand that there is no one other than the Banking Department, who you think could have given Mr. Greenfield that information?

A. I wouldn't say that.

Q. Who could have given it to him; if you know?

A. How could I tell you out of an organization—the State has at the present time, ninety people employed.

Q. I mean outside of the State?

A. I can't give you the information now. Why should I want to guess as to who it was then?

Q. We are only anxious to find all the channels of information?

A. I would be very glad to help you all I could, Mr. Evans, but I don't want to send you off in false leads.

Q. If you were making an inquiry as to whether these checks were paid in cash or by New York draft, or a cashier's check, or clearing house due bill, from whom would you make such an inquiry?

A. At the present time?

Q. Yes.

A. At the present time I would say, Dr. Gordon.

Q. And there is no one now or formerly connected with the Bankers Trust Company that you think would have that information?

A. I would question whether they would have it without looking into the records.

Q. And you still are sure that you have not discussed this matter in any way with Mr. A. M. Greenfield, or with the Mr. Rosenbaum, and told by them that you might be subpoenaed as a witness here?

A. I told you how it was brought up with Mr. Greenfield. I went down to see him at the hospital, and he said, "Sam, you probably read in the newspaper, you might be subpoenaed to give testimony in Harrisburg." And I said, "I have seen it, and, of course, if the Committee wants me there, I will be glad to go."

Q. And that was the extent of your conversation as far as the matter was concerned?

A. Yes; that is all.

Q. And you had no conversation with Mr. Rosenbaum?

A. Yes; I had a conversation with Mr. Rosenbaum, as you know, either yesterday or the day before.

Q. What was the substance of that conversation?

A. Mr. Rosenbaum told me yesterday that he had a subpoena for me, which he would serve upon me, if necessary, and if I would come to Harrisburg without a subpoena, which, of course, I would be glad to do; he wouldn't serve me with a subpoena, as I said to you yesterday, of course, I was very glad to come to Harrisburg today. I hoped that it might be postponed until tomorrow, because I had a very important conference in New York, today, but you said that the Committee might not meet tomorrow, and, of course, I came.

Q. That was the extent of your conversation with Mr. Rosenbaum in regard to this transaction?

A. Yes sir.

BY MR. MEMOLO:

Q. This matter here has all the earmarks of being a rather unusual transaction, has it not; as you view it now?

A. I think it has.

BY MR. RHODES:

Q. It seems peculiar to me that in A. M. Greenfield & Company the subordinates know nothing about the transaction, that the matter is left entirely to the head of the company, while so far as the banking end of it is concerned nobody in the bank knows anything about it, it is a matter for subordinates. In other words, it is reversed. I have always tried to build up an organization which would function from the top to the bottom, and my observation has been that unless you impose a certain amount of responsibility upon the men and women in an organization, they soon become machines and useless. Now, I wanted to develop active officers in our bank, and they were getting them very quick.

Q. But the same theory didn't seem to apply to Greenfield & Company from the disclosures?

A. I am not familiar with the methods pursued by Greenfield & Company.

Q. It puts the Committee in the position where they would have to go to the head of the company in one case and the subordinates in another.

A. I am giving you, however, the way the Bankers Trust Company was run.

Q. I am not questioning your theory?

A. I think the theory was a wise one, producing a real organization.

BY MR. WALKER:

Q. What was the name of your banking company?

A. Etna.

Q. Was the Etna the bonding company at the time the checks were drawn?

A. I think so.

Q. Now, was it or was it not?

A. I am not sure, but I think so. That is one of those details that was left to the other officers.

Q. Would the records of the Etna Company—

A. We had no special bond. As to the details, that was left, if I recall it, to Mr. Scott and to Mr. Ristine to work out. The records of the bonding company would have a list of the names of the employees at the time these checks were cashed?

A. I think not necessarily. Probably not. I may be wrong about it, but I question whether it does, because the personnel is changing all the time. We had a blanket bond covering everything that we wanted to be protected against.

BY MR. COOKE:

Q. You don't have to specify the names?

A. I think not. I may be wrong about that, but I think not.

Q. I think you are right in that; you don't have to specify the names?

A. I think so.

BY MR. EVANS:

Q. You stated from the facts you knew of this situation that these checks were presented at the main office of the Bankers Trust Company. What led you to that conclusion?

A. I was just assuming they were presented there, because the account was in the main office. That is, I am quite sure if they had them presented in another office, they would undoubtedly have raised some question in the man's mind as to them, and evidently the main office of the bank—I wrote—

Q. Your branch offices wouldn't have funds to cash these checks any way?

A. Many of the officers would not, of course.

Q. Would none of them have?

A. Oh, yes, some of them would.

Q. Would you have \$500,000 in cash?

A. Yes, our Chestnut street office would have more than that.

Q. In cashing a check at one of your branches, it would have been a matter that would have to be referred to your main office, would it not?

A. It undoubtedly would have been.

Q. So, if we would have to confine our investigation to those connected with the main office of the Bankers Trust Company, where will be able to get the information?

A. I think that the main office can get all the information that the company has available, and I am sure the company would be glad to do it; that is to say, I am sure it would, if we were running the bank. I am not saying that at this time, because it is run by Dr. Gordon.

THE CHAIRMAN: The Chairman and the other members of the Committee yesterday attended a hearing of the Senate Judiciary Committee on the three bills that are now before the Senate. At the conclusion of that hearing a statement was entered in the record, which, it seems, puts the Chairman in a false light. I have already submitted this statement to the Committee, which I think covers the situation. I ask that it be put in the record without reading it, because all the members of the Committee have read it.

At a hearing held yesterday by the Senate Judiciary General Committee on House Bills 1630, 1631 and 1632 a member

of that Committee saw fit publicly to charge that this Committee has heard only one side of the case and has refused to give the utilities a fair chance to present their case. The Senator has not attended the hearings of this Committee and his charges are utterly without foundation. He has been grossly misinformed.

This Committee has proceeded in an orderly manner to get the real facts in regard to the regulation of utilities in Pennsylvania. It has heard every witness who has asked to be heard. It has invited all members of the Public Service Commission to appear. Four of them, including the Chairman, have accepted. The heads of all of the large electric systems operating in Pennsylvania have been invited and the heads of all but one system have accepted. The Pennsylvania Electric Association on April 15th demanded a hearing, and arrangements were at once made to hear its representatives at the earliest practicable date during the week of April 28th. The Committee was ready to give them all the time they desired but at the last minute the Association reversed its stand and refused to appear.

In supporting his allegation the Senator pointed to the fact that seven of the technical staff of the Committee who have appeared as witnesses have been paid from the Executive Budget. He neglected to state that the reason for this was the Senate's refusal to acquiesce in the appropriation of \$25,000 passed by the House to defray the expense of the investigation. The Senate's refusal of funds would have prevented any adequate investigation had we not been able to arrange to have the necessary expenses paid from the Executive Budget. The public will draw their own conclusion as to the reasons for the Senate's action.

The Senator further endeavored to support his allegation by stating that the testimony of these seven witnesses of this Committee covered 856 pages of the record but neglected to state that the testimony of the utilities' witness covered 1,356 pages and the testimony of members and employees of the Commission 1,009 pages.

Testimony of the utilities and the Commission occupy 48% of the entire record.

Complaints from boroughs and citizens covered 1,005 pages or 28% of the entire record.

Furthermore, the evidence presented by the Committee's technical staff consists almost exclusively of data taken from the Public Service Commission's own records. The sworn reports of the utilities to the Commission were tabulated and the valuation methods used by the Commission as shown by its own records in certain cases were for the first time brought to light. Both the utilities and the Commission have had daily transcripts of the testimony and have evidently checked it thoroughly. Any errors could readily have been shown. The failure to point out any material mistakes in the testimony of the Committee's technical staff is the best possible tribute to their accuracy. It matters not who paid these experts. The salient fact is that their testimony stands unimpeached. The Senator's attempt to discredit them will deceive no one but himself.

(Adjourned to meet at the call of the Chair.)

#### COMMITTEE ON INVESTIGATION OF RESOLUTION No. 10

Pursuant to adjournment the Committee reconvened in the House Caucus Room on Thursday, May 14, 1931, at 11.30 A. M. There were present:

Messrs. D. Glenn Moore, Chairman  
Martin Memolo  
Chester A. Rhodes  
Ellwood J. Turner  
Morris L. Cooke  
Harold Evans, Esq.  
John M. Walker, Esq.

WILLIAM R. SMITH sworn

BY MR. EVANS:

Q. At the last hearing Mr. Wilson, assistant treasurer of Albert M. Greenfield & Company, produced and identified two checks of that company, one dated January 6, 1928, for \$250,000, to the order of cash, and the other dated January 11, 1928, for \$486,000 to the order of cash.

I offer the photostatic copy of the check of January 6, 1928, in evidence of Exhibit No. 192.

I offer the photostatic copy of the check dated January 11, 1928, as Exhibit No. 193.

Q. Mr. Smith, you are the Deputy Secretary of Banking?

A. Yes sir, I am the deputy in charge of the Bankers Trust Company of Philadelphia.

Q. You have produced here today certain records of the Bankers Trust Company pertaining to the cashing of the two checks which have just been introduced in evidence?

A. Yes sir. I assume that you are referring to the two checks, the one of January 6, 1928, and the other January 11, 1928.

Q. That is correct?

A. I have the original check, No. 1133 dated January 6, 1928, for \$250,000 issued by the Bankers Trust Company on the Philadelphia Girard National Bank. Also, I have a charge or credit slip dated January 6, 1928, for check No. 1133 on the Philadelphia Girard National Bank for \$250,000, with the initials on, "S. H. B." Also check No. 1143 dated January 11, 1928, for \$486,000, drawn by the Bankers Trust Company on the Philadelphia Girard National Bank, also the credit slip or requisition slip, dated January 11, 1928, for check No. 1143 on the Philadelphia Girard National Bank for \$186,000. That is the requisition slip for that check.

Q. What are the initials on the last credit slip?

A. I cannot make them out very well; someone else may be able to do so.

BY MR. TURNER:

Q. What do you mean by the original check?

A. The original check on the bank.

Q. This is the Bankers Trust Company check on the Philadelphia Girard National Bank for cash?

A. Yes, in other words, they had a bank book and acted as a clearing house.

BY MR. RHODES:

Q. And the dates of the checks correspond with the dates of the Albert M. Greenfield & Company checks?

A. Yes sir.

BY MR. MOORE:

Q. What are the initials on this check?

A. On the one is, "S. H. B." I also have here the initial record card of Albert M. Greenfield & Company which shows the data running from December 15, 1927, to January 26, 1928.

MR. EVANS: I offer in evidence the photostatic copy of the check on the Bankers Trust Company numbered 1133 and dated January 6, 1928, for \$250,000, as exhibit No. 194.

Q. That is a correct photostatic copy of that check, Mr. Smith?

A. Yes sir.

MR. EVANS: I offer in evidence as exhibit No. 195 the photostatic copy the credit slip corresponding to this check.

Q. That is a correct photostatic copy of the credit slip, Mr. Smith?

A. That is correct.

MR. EVANS: I offer as exhibit No. 196 a photostatic copy of the check of the Bankers Trust Company on the Philadelphia Girard National Bank, No. 1143, dated January 11, 1928, for \$486,000.

Q. That is a correct photostatic copy of that check, Mr. Smith?

A. That is correct.

MR. EVANS: I offer the photostatic copy of the corresponding pink credit slip as exhibit No. 197.

Q. Mr. Smith, that is a correct copy of that credit slip?

A. Yes sir.

MR. EVANS: I offer as exhibit No. 198 the photostatic copy of the Bankers Trust Company individual check and ledger card produced by Mr. Smith.

Q. That is a correct photostatic copy of that record, Mr. Smith?

A. Yes sir, with the exception of that red line across the top which the photographer says would not be possible to photostat.

BY MR. RHODES:

Q. Why did the Bankers Trust Company draw these checks?

A. I would rather prefer, I have only been there since December; I think Mr. Scott can answer that better.

Q. If the Bankers Trust Company has a demand for more money than they had in their vault, they would draw a check on the Philadelphia Girard National Bank for cash to pay that check, would they not?

A. That is correct.

E. RAYMOND SCOTT sworn.

BY MR. EVANS:

Q. Mr. Scott, where do you live?

A. 510 North Walnut Street, West Chester, Pennsylvania.

Q. You are the Vice-President of the Chester County Trust Company?

A. I am.

Q. You were treasurer of the Bankers Trust Company in Philadelphia in January, 1928?

A. I was treasurer and vice-president and secretary of the board and secretary of the executive committee.

Q. It has been brought out in the evidence before the Committee that on January 6, 1928, a check of Albert M. Greenfield & Company to the order of cash for \$250,000 dated January 6, 1928, was cashed by the Bankers Trust Company. Will you tell me what arrangements were made, as far as you can remember, by Albert M. Greenfield & Company, with the Bankers Trust Company, for the cashing of that check?

A. I really have no recollection of the transaction at all, Mr. Evans.

Q. In order to refresh your memory, Mr. Scott, I show you a photostatic copy of a check of the Bankers Trust Company drawn on the Philadelphia Girard National Bank, No. 1133, dated January 6, 1928, for \$250,000 and which has been introduced here as Exhibit No. 194, and the corresponding credit slip which was introduced here as Exhibit No. 195. In whose handwriting is the credit slip?

A. Mr. F. M. Marsh, Jr.

Q. Who was the head teller of the Bankers Trust Company?

A. Mr. Marsh was.

Q. What was the custom of the bank at that time when checks of large amounts as this were to be cashed?

A. It would depend on the amount of reserve cash in the vaults of the bank and whether or not the cash in the vaults of the Bankers Trust Company was sufficient to meet the demands.

Q. Judging from the papers now before you, was there at that time sufficient cash in the vaults of the Bankers Trust Company to cash these checks, or was it necessary to obtain the cash from another institution?

A. Judging from these papers, we obtained the cash from another institution.

Q. Will you correct me if I am wrong in regard to the banking practice in such cases. As I understand it, the makers of the check in this case, Albert M. Greenfield & Company, would make arrangements with some officer of the Bankers Trust Company for the cashing of such checks, and that officer would then draw a bank check on the Philadelphia Girard National Bank to get the cash and would direct Mr. Marsh to make out a credit memorandum corresponding to the check so drawn. Is that substantially the practice?

A. The normal practice would be, for a large check, to make arrangements to have the cash paid over and what would happen would be this: That officer would say to the teller, "So and So is going to draw so much money," and the head teller would say, "We may have," or "We may not have the money on hand." In any event, with a withdrawal like that we would have to replenish the reserves in our vaults under any circumstances. That is simply a matter of mechanics, whether we had the cash in the vaults or whether we had to draw on the other bank to furnish the cash for the transaction.

Q. If a check was to be cashed in thousand dollar bills, you would not carry normally two hundred and fifty thousand dollar bills in your vaults and you would have to send out for them?

A. I think that would be true, normally.

Q. In this particular instance of the \$250,000 check, which officer of the Bankers Trust Company initialed the credit slip and which officer signed the check on the Philadelphia Girard National Bank?

A. Mr. Samuel H. Barker initialed the credit slip, and Mr. S. H. Barker signed the draft along with Mr. Ristine, the Vice-President.

Q. Now having refreshed your memory from these records, can you give us any further information in regard to this check and to whom the cash was paid?

A. No I cannot. I cannot remember the circumstances surrounding this transaction sufficiently to come here and say that I do remember.

Q. Now Mr. Scott, turning to the transaction of January 11th, you have before you the check of Albert M. Greenfield & Company for \$486,000 to the order of cash, being Exhibit No. 193. I also show you the check of the Bankers Trust Company on the Philadelphia Girard National Bank for \$486,000 dated January 11, 1928, which is Exhibit No. 196, and the corresponding credit memorandum which is Exhibit No. 197. In this instance was not this check cashed at your direction? In other words—

A. I presume that is what happened. I presume I was called and asked to make provisions for the withdrawal of \$486,000.

Q. And who of the Albert M. Greenfield & Company made the arrangement with you for the cashing of this check, so far as you remember?

A. I do not remember. It might have been one of several persons up there.

Q. Who might it have been?

A. Well, it might have been Mr. Wilson, it might have been—probably Mr. Rosenbaum, because he rarely called me on matters. But other people called us. You must remember that the Albert M. Greenfield account with the Bankers Trust Company was a very large and active account. I think probably your records which have been produced here this morning indicate that.

Q. Mr. Scott, it has been testified before this Committee that the cashing of checks drawn to the order of Cash in as large sums as this, was out of the normal in banking practice, and does that fact not make this stand out in your memory as an unusual transaction?

A. It has not.

Q. You have no remembrance of any sort of either of these transactions?

A. No. I see these papers here. I mean they naturally indicate that the transaction went through.

Q. In the case of the \$486,000 check, you actually signed the check of the Bankers Trust Company on the Philadelphia Girard, through which the cash was obtained, did you not?

A. That is correct.

Q. And you also signed the pink credit slip corresponding to this check?

A. That is correct.

Q. And then you have no remembrance of the transaction at all, even though it was an unusual one?

A. Well, I would not say it was such an unusual one. The Bankers Trust Company, remember, was a very large company. It would not be anything out of the ordinary for me to sign a check for twice this sum or three times this sum. I mean in the ordinary course of business, every day, at least one or two of those checks were put through. I don't mean in connection with the Greenfield Account, but with all sorts of transactions going through the bank.

Q. Now, Mr. Scott, I call your attention to the fact that this was a check of A. M. Greenfield & Company drawn to the order of cash and cashed at the Bankers Trust Company without endorsement. Do you mean to say to this Committee that that was a usual transaction for the Bankers Trust Company?

A. Well, it was a usual transaction for the Bankers Trust Company to cash a check drawn by the maker for the maker.

Q. Now, if you will answer my question, was it a usual transaction for the Bankers Trust Company to cash checks drawn in the amounts such as \$486,000, without endorsement?

A. I don't quite follow you, Mr. Evans.

(Question repeated by the stenographer.)

THE WITNESS: I don't think that the amount would make so much difference, it would be a matter of practice, what your practice was with respect to cashing checks drawn to the order of Cash.

BY MR. EVANS:

Q. Now, we will take it up in two parts. Was it the usual thing for the Bankers Trust Company to cash checks as large as \$486,000? Was that a normal, everyday occurrence with the Bankers Trust Company?

A. Oh, no, that would not occur every day.

Q. How many times in your remembrance do you remember checks of that size being cashed at the Bankers Trust Company?

A. That I couldn't recall.

Q. You do not recall any other transactions, do you?

A. Well, I can recall others—I don't mean specific transactions—I can recall the practice, but not the specific instances.

Q. Well, in other words, you don't—

A. Remember, Mr. Evans, this thing is nothing but banking detail. I mean it is not anything that has anything to do with the policy of running the bank. It is the mechanics of banking.

Q. Mr. Scott, everyone that I have talked to about the transaction, and Mr. Barker himself, testified that this was an unusual transaction. Now, do you want to give this Committee the impression that it was not an unusual transaction?

A. Well, I think that depends on your viewpoint.

Q. Well, I ask you, do you consider it an unusual transaction?

A. It is a very large transaction, yes.

Q. And one out of the ordinary?

A. Probably so.

Q. Yet, in spite of that fact, you have no remembrance of any sort in connection with it?

A. I am sorry, but I do not. I told you that. I am under oath here. I have taken an oath here, and I do not propose to come and say something—if I remembered it, I would tell you frankly that I remember it. But I really do not remember it.

BY MR. RHODES:

Q. Who in your institution would know something about it?

A. Why, the head teller would probably be the party—not probably—he would have been the party who handled all the details. You see, what would happen, the telephone message would come in to me, and I would simply, quickly, say to him, "Get ready for this, or that, or the other thing," whatever the case may be, and then dismiss it from my mind. There was no purpose in charging my mind with it.

Q. Was it the practice of your bank to have cash transactions checked by the teller cashing the check?

A. I should expect in this case, if it went through the head teller, it would probably go through as a special item, and go through his reconciliation sheet.

Q. It would be specially marked and identified to show by what teller the item was taken care of?

A. I don't think it would be in that particular case.

Q. Was it not the practice in your bank to have the teller stamp these items that went through him?

A. If that would go through the average teller, every teller had a stamp and number.

Q. So that the items could be identified?

A. Yes.

Q. There is no identifying mark, and therefore that would indicate that the head teller handled the transaction?

A. Yes.

Q. Who was the head teller?

A. F. Maynard Marsh.

BY MR. EVANS:

Q. Now, Mr. Scott, as a matter of fact, this \$486,000 check was cashed in your presence, was it not, by the payment of \$486,000 large sized gold certificates for \$1,000 each, which were not new certificates, but had been in circulation. Now, don't you remember that?

A. I do not. I never saw the money.

Q. You never saw the money?

A. It would not be necessary for me to see the money.

MR. EVANS: Well, I think we will ask you to withdraw from the stand, and recall you a little later, if you will.

F. MAYNARD MARSH, Jr. sworn

BY MR. EVANS:

Q. Where do you live?

A. I live at 4346 Pine Street, Philadelphia.

Q. You were head teller of the Bankers Trust Company in January, 1928, were you not?

A. I was.

Q. How long had you been a teller at the Bankers Trust?

A. Well, I have been connected, I guess, with the bank going on eight years.

Q. How long have you been head teller?

A. Why, I don't remember the exact number of years, I would say several years.

Q. You have heard Mr. Scott's testimony, that from his examination of the records in this case, which are here in evidence, he is of the opinion that you, as head teller, would be the person who would be familiar with the transaction, taking up first the \$486,000 transaction, will you state what your remembrance of that transaction is?

A. Well, the \$486,000 represents money that was ordered from the correspondent Philadelphia Girard National Bank, for money that was to be delivered to Albert M. Greenfield & Company.

Q. Yes, and Mr. Scott directed you, did he not, to draw that check on the Philadelphia Girard National Bank, did he not?

A. Yes, the directions came from Mr. Scott.

Q. Have you made out the pink credit slip to correspond with that check, and that was o.k'd by Mr. Scott?

A. That is right.

Q. Were you present when this money was actually paid over to the representative of Albert M. Greenfield & Company?

A. Yes.

Q. To whom was it paid over?

A. Paid to Mr. Wilson.

Q. He was the assistant treasurer of Albert M. Greenfield & Company, was he not? His name appears on the check?

A. Yes.

MR. RHODES: Was that the gentleman that was on the stand here last week?

MR. EVANS: Yes.

BY MR. EVANS:

Q. And where was that payment made?

A. It was made in the bank, in my department.

Q. Over the counter, or was it made in the office of one of the officers?

A. No; it was made over the counter.

Q. Over the counter?

A. Yes.

Q. And do you remember that payment was made in 486 thousand dollar bills?

A. I couldn't swear to it; I don't remember.

Q. You remember it was in large denominations, do you not?

A. Yes, they were larger denominations.

Q. And with regard to the \$250,000 check; from whom did your directions come to draw the check on the Philadelphia Girard in that instance?

A. In both instances the instructions came from Mr. Scott.

Q. From Mr. Scott?

A. Yes.

Q. But in that case the credit memorandum is initialed, I think, by Mr. Barker, is it not?

A. Well, that happened because Mr. Scott was not present at that time, and the voucher had to be signed, and of course, I explained that matter to Mr. Barker, and he o.k'd it for that reason.

Q. And in large transactions of this sort, where large sums of money are to be needed to cash checks, it is the practice, is it not, of the drawer of the check to make arrangements with the bank in advance, so that they will have the funds?

A. It is customary, yes.

Q. And that was done in this case by Albert M. Greenfield & Company?

A. Yes.

Q. To whom was the cash covering the \$250,000 check paid?

A. You mean to whom was the cash delivered?

Q. Yes.

A. In the same instance, to Mr. Wilson.

Q. To Mr. Wilson?

Q. And he was the person who had signed the check of Albert M. Greenfield & Company?

A. Yes, that is his signature.

Q. And that also was paid over the counter in the Bankers Trust Company?

A. Yes sir.

BY MR. RHODES:

Q. By "over the counter," you mean through the teller's cage?

A. No; I mean it was given by me to Mr. Wilson.

Q. In your office or the cage?

A. In my cage.

Q. Not in your office?

A. No. My cage is my office.

BY MR. EVANS:

Q. Was anybody besides yourself and Mr. Wilson present when this cash was paid over to him?

A. No one else was present.

Q. And in both instances the payment was made in notes of large denominations?

A. They were large; what they consisted of, I don't know.

Q. And you do not remember any particular instructions that were given to the Philadelphia Girard National Bank as to denominations that were desired?

A. No, I don't remember.

Q. And you would have no record of that?

A. I would have no record of that.

BY MR. COOKE:

Q. How is that information passed to the bank, when you ask them to send the money up in a certain form, what form does that instruction slip take?

A. You mean the order that I gave the Philadelphia National for the money?

Q. Yes.

A. I would call them over the phone, and either they would deliver it to me or we would send our guard for it.

Q. But you would tell them over the phone, for instance, that you wanted 486 thousand dollar bills?

A. If that was the case.

Q. There would be no written record?

A. No.

BY MR. RHODES:

Q. These two checks have no teller's stamp on them?

A. Well, through the head teller's cage there wasn't an identification in that case.

Q. Wherever you took care of the transaction as head teller, you didn't stamp them?

A. No, because I know my writing, and it was not designated that way.

Q. I am speaking of the two Greenfield checks.

A. Yes.

Q. They had no identification marks on them, because they were handled by you as head teller?

A. Yes.

Q. If they had been handled by any other teller, they would have had an identification stamp on them?

A. They would have had an identification stamp, yes.

Q. It was the practice in your bank to have all the tellers stamp items of that sort with their initials, is that correct?

A. With their numbers.

BY MR. EVANS:

Q. Now, Mr. Marsh, in regard to cashing checks of this size without endorsement, what is the banking practice, so far as you are familiar with it?

A. Well, as I understand it, a cash check is considered a bearer instrument, and may be negotiated upon delivery without bearing an indorsement. That is, where the party is known to you at the time of cashing the check.

Q. But it is good banking practice, is it not, where the check is presented by anyone other than the maker, to require an endorsement?

A. Require an endorsement, yes.

Q. And that is usually done?

A. It is always done.

Q. In this case the check was drawn by Albert M. Greenfield and Company and signed by Mr. Robert M. Wilson, if I can read his name correctly?

A. That is correct.

Q. As assistant treasurer, and because his signature appeared on the check, you paid the cash to him without requiring his individual endorsement on it?

A. That's right.

Q. Now, I show you the Bankers Trust Company deposit ledger card of Albert M. Greenfield and Company, which has been introduced as Exhibit No. 198, and call your attention to an item charged against that account on August 26, 1928,

of \$250,000. That would be this transaction, would it not, so far as—

A. That is right.

Q. In the same way, on January 11, there appears a charge against this account of \$486,000, and that would be the entry cover the check of January 11th of that amount, would it not?

A. That's right.

BY MR. COOKE:

Q. Was there anybody with Mr. Wilson?

A. No one when I gave the cash to him.

Q. I have never seen 480 thousand dollar bills. How big does it bulk?

A. Well, it could not be a very large package. It could be carried.

Q. Was it something you could put in your inside pocket?

A. It could be wrapped in paper or some thing like that.

I don't believe it could be put in one's pocket.

Q. You don't recall what disposition Mr. Wilson made of it?

A. To by best recollection it was wrapped.

Q. Do you recall that it was wrapped?

A. That is my best recollection. I don't think he could get it in his pocket.

Q. But he was not going to hand it to somebody outside, in the alleyway out there?

A. No; I didn't see anyone with him at all.

BY MR. RHODES:

Q. You had no other official of the bank present when you handed the money over to Mr. Wilson?

A. No one was present at the time.

Q. Is that rather hazardous, to hand over \$486,000 without some witness being present when you deliver it to the individual?

Q. Why it is no more than an ordinary transaction, to cash a check when it is presented and payment is demanded.

Q. The amount is not ordinary though?

A. No, but I mean the principle is the same.

BY MR. EVANS:

Q. As a matter of fact, Mr. Wilson was also a director of the Bankers Trust Company, was he not?

A. The Bank and Trust Company of West Philadelphia. The Bank and Trust Company of West Philadelphia merged with the Bankers Trust Company.

Q. Had they merged prior to the time, Mr. Marsh?

A. Oh, yes.

Q. And was Mr. Wilson a director of the Bankers Trust Company at that time.

A. I really don't remember that offhand.

BY MR. COOKE:

Q. Did Mr. Wilson frequently take cash in large amounts?

A. Well, I have waited on Mr. Wilson several times, but as far as the number of times and the amounts, it would be hard for me to recall.

BY MR. RHODES:

Q. Was that the practice of the Greenfield Company, to have large checks cashed and the money taken out in this manner?

A. Yes, I would say so, because it was done through our other departments, and there was no reason why we should make any further demand of them.

Q. I mean, was it done more frequently with the Greenfield Company than any other depositors you had?

A. I would not say that, because we had many customers. They were not all of the same amount.

Q. Do you think that this is rather a prevalent practice in Philadelphia, to have checks cashed in large amounts, to have money taken out in that manner, instead of putting it through the banks in the usual form?

A. Why, I wouldn't think so, where it was a large account.

Q. So that seems to be characteristic of business in Philadelphia, to do things on a cash basis?

A. Well, I should think if a depositor has an account and wishes to do business in that manner, that would be up to him.

Q. That is perfectly all right, but I am asking about the prevalent practice down there, whether it is a common and

ordinary practice to carry money out of banks in such quantities, in order to have cash for delivery?

A. Well, I couldn't answer that, except that I have done that.

Q. What is that?

A. I don't know what the practice in Philadelphia is.

Q. I mean, has this thing happened frequently in your experience with the banks?

A. Well, I don't remember many transactions, but as I say, I would not remember that.

BY MR. MEMOLO:

Q. Do you remember any other besides this individual one in that amount, a transaction of this kind?

A. Well, I would say we had other depositors that the pay-rolls amounted to a fair figure, and they were withdrawn in the same manner.

BY MR. COOKE:

Q. But they would not be in notes of such large denominations, would they?

A. The would hardly be in that size.

Q. Would transactions of this kind—in what transactions of this kind were bills of large denominations involved, do you remember?

A. I don't remember offhand.

Q. Just for my own personal satisfaction, what are your sensations when you handle \$480,000 in cash. I mean, is it something gives you satisfaction or dread, or what?

MR. RHODES: In other words, did you get a thrill out of it?

THE WITNESS: Well, I couldn't say that it gave me a thrill. I was very glad to see that it was handed to the proper party and it was off my hands.

MR. RHODES: I should think you would.

BY MR. EVANS:

Q. Now, if this money was delivered in a package to Mr. Wilson, was that the form in which it came from the Philadelphia Girard National?

A. Well, of course, I verified it before handing it to Mr. Wilson.

Q. Yes, and do you remember in what form it did come from the Philadelphia Girard National?

A. I don't remember that.

Q. You don't remember counting it out?

A. Oh, I remember verifying when I received it from the Philadelphia National, because I do that with all cash that I receive.

Q. But you still cannot recollect whether it was actually 486 thousand dollar bills or not?

A. I don't remember that.

Q. Do you remember whether there were any thousand dollar bills in it?

A. That I couldn't say.

Q. Do you remember how much of a package it was when you handed it over to Mr. Wilson?

A. Well, I don't remember how large the package might be. I know this, that he could not get it into his side pockets, and my best recollection is that it was wrapped in paper when it was taken out; but the exact size, I wouldn't know, I don't remember.

Q. Did you know whether they were the old style notes or the smaller new style notes?

A. I don't remember that.

Q. Then you don't remember at all the size of the package which would indicate how many bills were in it? That is what I am trying to get at.

A. No, I don't remember. I don't remember the size of the package.

BY MR. COOKE:

Q. You said you recall that there were bills of large denomination. How do you recall that?

A. Well, I know that they were large denominations but whether it was fifties, hundreds, or one thousands, I don't remember. I know it was not a one dollar note or a five dollar note.

Q. It seems to me it is funny thing that a transaction of that kind, which you said did not give you a thrill, but which

gave you some sensations, that you would not recall what the man did with it, whether he put it in his side pocket or put it in a bag. What is your best recollection on that?

A. My best recollection is, as I say, that what it consisted of I don't know. Of course I placed the order, it is true; but it has been some time ago, and naturally, when the transaction was completed, why it immediately went out of my mind.

BY MR. EVANS:

Q. If this were in hundred dollar bills, it would have been a very large package, would it not? It would have been four thousand eight hundred and sixty bills?

A. It would have been, I should think, if they were one hundred dollar bills.

Q. And you know it was not a package that large don't you?

A. I don't remember of its being all in one hundred dollar bills.

Q. And you say that Mr. Wilson put the package in his pocket?

A. No.

Q. I thought you said in his side pocket?

A. No, I said it could not be gotten in his side pocket.

Q. I thought you said it could not be gotten in his vest pocket?

A. No, it could not be.

Q. Do you mean to say he just carried the package off in his hand?

A. Yes.

BY MR. RHODES:

Q. He didn't even have a black bag for it, eh?

A. I don't remember if he did.

ALBERT M. GREENFIELD sworn

BY MR. EVANS:

Q. You live in Germantown, Philadelphia, do you not?

A. I do.

Q. And you are president of Albert M. Greenfield and Company?

A. I was, I am not now. I am chairman of Albert M. Greenfield and Company.

Q. In 1927 and 1928, you were president of Albert M. Greenfield and Company, were you not?

A. I was.

Q. And you owned approximately eighty per cent. of the stock of the company as it existed at that time?

A. Of the then Albert M. Greenfield and Company, I owned something between seventy and eighty per cent. I don't recall the exact amount.

Q. This Committee has not had the benefit of any direct statement in regard to the transactions which led up to the cashing of these two checks, and in order to get the picture before them, I wanted to run very briefly over that with you. In 1927, the Quaker Cab Company was in bankruptcy, was it not?

A. Yes sir, in 1927.

Q. And you, then representing the Trustee in Bankruptcy sold the assets of the concern to Frank Sawyer of Boston for \$75,000?

A. Well, the exact amount I can't tell you, but I sold it in 1927, representing the Trustee in Bankruptcy to Frank Sawyer. I have testified to the amount, I think, before the Senate Committee. If you have that testimony, that will show you. I then had that memorandum, I do not have it now.

Q. I think I have the Trustee in Bankruptcy's account here, which will probably be as good as evidence. I show you the account of the Trustee in Bankruptcy, showing a sale of the business in the amount of \$75,000. That is correct, is it not, according to your remembrance?

A. I think it is correct, yes.

Q. And a commission paid to you in the amount of \$3,750, or five per centum of the purchase price?

A. I would say that is correct.

Q. Now, you also sold, for Hare and Chase, and the Royal Indemnity Company, taxicabs which were operated by that company under lease, did you not?

A. I did. That is, the Albert M. Greenfield and Company did.

Q. I am referring to Albert M. Greenfield and Company. And the purchase price there, as set forth in the report of the Public Service Commission, was \$262,500; that is correct, is it?

A. If that is set forth, it is probably correct.

Q. As far as you remember, that is correct, is it not?

A. Yes.

Q. So that the total consideration paid by Mr. Sawyer for the assets of the old Quaker City Cab Company, including its cabs, was the sum of these two figures or \$337,500. Mr. Sawyer then formed a new company called Quaker City Cabs Incorporated, did he not?

A. He did.

Q. And you sold the stock of that company, 5,000 shares, to the Philadelphia Rapid Transit Company?

A. I did.

Q. That sale was originally included in a contract between Albert M. Greenfield & Company, and Philadelphia Rapid Transit Company covering not only this stock, but also the stock of three bus companies for a consideration of \$1,825,000. That is correct, is it not?

A. You will have to repeat that.

(Question repeated by the stenographer).

THE WITNESS: You ask me whether we made that sale to the P. R. T.?

BY MR. EVANS:

Q. To the P. R. T., Albert M. Greenfield & Company?

A. We did.

Q. And there was a contract covering that sale dated January 6, 1928, which has been referred to, I think, in that equity case, and also before the Senate?

A. That is correct.

Q. This sale was subject to the approval of the Public Service Commission, was it not?

A. It was.

Q. And the consideration of \$1,825,000 was paid over as of the date of the contract to Albert M. Greenfield & Company?

A. It was.

Q. Subsequently, at the request of the Philadelphia Rapid Transit Company, a new contract was entered into on April 22, 1929, eliminating the bus companies and covering only the stock of Quaker City Cabs Incorporated?

A. Under what date did you say?

Q. April, 1929?

A. That is correct. April 22, 1929.

Q. And the consideration for this stock was there stated to be \$1,360,000?

A. That is correct.

BY MR. EVANS:

Q. This contract was not subject to the approval of the Public Service Commission but was an absolute contract?

A. That is correct. This contract is not subject to the approval of the Public Service Commission.

Q. Now, when did you first learn, Mr. Greenfield, that Frank Sawyer was acting as the agent of Mr. Mitten or Mitten Management, when did you first learn that?

A. I never did learn that.

Q. Did you not, during the course of the transaction, find that Mitten Management or Mr. Mitten was financing Mr. Sawyer?

A. Yes sir, I did.

Q. When was that?

A. Well, Mr. Sawyer was introduced to us sometime in 1927 by somebody connected with Mitten Management. That is when we offered him the Quaker City Cab Company. The next time I recall, and it is four years ago or pretty nearly that much, of seeing Mr. Sawyer, was when he came to meet me in New York so that I could go down with him and see the officials of the Royal Indemnity Company and see what they would accept for the cabs. I recall taking him down and some Englishman, whose name I do not remember, but who came here because of the trouble the Royal Indemnity Company had with Hare & Chase, I don't remember his name, he was the head of the Royal Indemnity Company of Great Britain which owns the Royal Indemnity Company of America, and following that I negotiated a deal with Sawyer or through Sawyer. And the funds that Sawyer brought with which to pay for the cabs as well as the franchise of the receiver as well as other moneys, he deposited on account of this transac-

tion, these funds he delivered to us and they were Mitten Management funds. Of course they may not have come direct from Mitten Management, but in any case they were checks of Mitten Management so that it was apparent, and I have so testified before, that Mitten Management financed Sawyer in the purchase of this company. I don't know whether I have answered your question or not.

Q. I think you have. It fixes the date, which is the point I was interested in. Now will you state to the Committee how and to whom the \$1,825,000 paid by the Philadelphia Rapid Transit Company in January, 1928, was disbursed?

A. Our records indicate that we received this money on January 26th, and that we had prior to January 6th, 1928, paid out for the acquisition of the bus company the sum of \$520,228.26, and that we had also received prior to that, \$500,000 which is in here, a cash item in our books, and there are lead pencil marks alongside of it. This is our original book of entry. It would indicate that that \$500,000 had come to us from Mitten Management. This looks like "M.M." So I would believe that the \$500,000 came from Mitten Management against which we had advanced \$520,000. In fact, we had advanced some of this \$520,000 to acquire these bus companies before we received the \$500,000, and that item, all but about \$20,000, is—these items really are washed by this \$500,000 that I believe came from Mitten Management. Subsequent to that, on January 6th, our records indicate that we received a cash payment of \$1,825,000. That is undoubtedly, from what has gone before, a check from P. R. T. I say that because it corresponds with the contract price. Our records further indicate that on January 6th we received a cash item of \$91,250. Then there is a wash item of \$394,840.62. In other words, we received that amount and we paid it out. It is one of our own checks. We were going to buy some property and not having succeeded, and not having used the check which was drawn on one side and it was redibursed and was a wash item and was of no significance. We used all of this money, according to our records and to my recollection, to pay ourselves the \$20,000 that was overdrawn. We drew a check to Mitten Management for \$972,325.64. We have this contra item of \$394,840.62 which washed out the money that came in, and that is just a cash transfer and doesn't mean anything. We drew a check for \$250,000 on January 6th and on January 11th, one for \$486,000. Then there is credited to me personally \$37,923.59, which was my portion or some part of this that I had either advanced before or was a portion of what I would get out of the commission which was to be approximately about \$180,000.

BY MR. RHODES:

Q. You mean that the commission of A. M. Greenfield & Company would be \$180,000?

A. Yes sir, ten per cent, which is the usual commission in transactions of this kind. So there is left there in the account the sum of \$149,772.51, which together with the \$37,923.59, makes approximately that commission item. In other words, the account is about exhausted, with a credit to us of approximately the commission that we are entitled to have for the deal. And that cleans the entire account up and here is the book of original entry.

BY MR. EVANS:

Q. So that as I understand it, Mr. Greenfield, all of the \$1,825,000, with the exception of \$2,228.26, representing the difference between the \$500,000 which you received for the busses and the amount which you paid for the busses and your commission, was paid out either in check or in cash to Mr. Mitten or to Mitten Management?

A. Well, of course, as to the checks that are drawn to Mitten Management, as this record indicates, there is no question that checks to the order of cash are what you are interested in. I have had a good deal of time to study this matter over, and to think it over, having been ill for about four weeks, and have had an opportunity to talk it over with Mr. Wilson whom I had come to see me, and I also tried to reach Mr. Sawyer because I felt and I thought that he was present on one occasion when the money was paid over. I didn't succeed in reaching him. However, reconstructing the memory of a transaction that is three and a half years old, and referring to these records, my best recollection is that both the \$250,000 and the \$486,000 were paid by me to Mr. Mitten on those dates in my office.

Q. In cash?

A. In cash. They were turned over by me to him in cash.  
Q. Now when you refer to Mr. Mitten, you refer to Mr. T. E. Mitten, who is no longer living?

A. That is right.

Q. Have you any recollection, Mr. Greenfield, as to the form the cash took, whether it was large denomination bills or what form it was in?

A. No, because in point of fact, I didn't see the money, the actual money. I have tried to think about this and have been searching my memory. I recall this, that he came in after these contracts were sent over for signature and the check for \$1,825,000 came in and was turned over to Mr. Wilson and deposited. He came in one day—this was after negotiating the deal, or a day or two before—and he asked for \$250,000. It seems to me that Sawyer was with him. I am not certain about this; but I called Mr. Wilson up, I think, on the intercommunicating phone that we have in our office on which we issue instructions to various people, and asked him to draw a check as Mr. Mitten wanted it. I believe he asked for it in cash or rather to be drawn to cash, and Mr. Wilson brought that check in. I did not sign the check and Mr. Mitten I believe asked for cash and I asked Wilson to get the cash. That is not entirely clear to me but that is what I have gathered from all of this and from the time I have had to think about it and from my discussions with Mr. Wilson since he was up here. I believe that some little while elapsed and then I believe that Wilson brought the cash in and put it on my desk and I turned it over to Mr. Mitten. I never looked at it, and I don't know whether it was in large or small bills. I believe that they were in an envelope or in a package and he took them that way. I could not tell you whether they were large or small or the number of them, or anything about them excepting that he got them I feel certain because that is how he asked for the checks, I remember distinctly, to be payable to the order of cash.

Q. Is it your remembrance that Mr. Mitten remained in your office while the Bankers Trust Company got the money from the Philadelphia Girard National Bank?

A. I think he, and possibly Sawyer, stayed there for some time. This is a sort of settlement. Whether Sawyer was there when I turned the money over to him actually I don't recall, but if I should testify to my best recollection, I should say he was.

Q. Was anyone else present?

A. No, except Wilson brought this money in to me and I turned it over. I visualize his sitting there at my desk.

Q. Did you take any receipt from Mr. Mitten for that?

A. No sir, at that time I would not have taken a receipt from Mr. Mitten for millions. He was financing the organization that represented the Quaker City Cabs. Sawyer was the president and operator, subject to Mr. Mitten's wishes as his financial backer, and asked him how he wanted the money and the check, and we drew it the way he wanted it. It didn't seem unusual then because of the request. It seems unusual now, but he asked for it that way, and as Sawyer and he apparently were the owners or at least we knew Sawyer as the owner and Mr. Mitten as having financed Sawyer and having introduced him to us, we naturally paid it out as requested.

Q. Now, what is your remembrance in regard to the \$486,000 check?

A. Now I will go back to a little before that time. I think he stopped at my house to take me down town a day or two before he got the \$486,000, and he asked me for the \$486,000, and I hurriedly calculated in my mind and I said to him, if you get \$486,000 out of the proceeds of this sale, we will be short of our commission or compensation which we are to receive. He said that he would make that good, and I said to him, "Then all right"; and I said to him, "Whenever you want the \$486,000, come in; when do you want it?" I don't remember the exact language but he on the 11th our records indicate, came in and I again phoned Wilson on that intercommunicating phone; I recall that distinctly, and Wilson brought the check in and I told him, Mr. Mitten wanted the cash, or Mr. Mitten may have said that to him himself, I don't remember exactly. Whether Sawyer was there that day or not I don't know; the first day I really feel he was, without being absolutely certain, and he may have been there the second time. He was in and out of our office a good deal, he came to the office frequently. Mr. Wilson brought the cash up. Some time had elapsed when he brought it up and I never counted the

money, as I would not. I didn't even sign checks, hundreds of millions of dollars' worth of checks would go out annually, and it would not surprise me that there were several millions of dollars of clearances in our office in one day in large transactions, so that I am not interested much, as large as they are, with each comparative detail. I am interested in completing the transactions. Mr. Wilson brought that money up to my office and I in turn shoved it over to Mr. Mitten, that is my best recollection. I have talked this matter over with Mr. Wilson and have asked him to look up the records to see what has happened here, and he got it and a check for \$486,000 was the proceeds of everything that there was in the account except what we would be entitled to receive as a commission.

Q. Now, Mr. Greenfield, did Mr. Mitten count the money when you handed it over to him?

A. No sir, he didn't. I am pretty sure of that. And if you knew Mr. Mitten, you would know he was that type of man, I think you know he would not be counting money.

BY MR. RHODES:

Q. You said the Philadelphia Rapid Transit furnished the \$1,825,000?

A. Yes sir.

Q. And who was on the other end?

A. The Quaker City Cab Company of which Sawyer was the head.

Q. Did that include Mr. Mitten?

A. The relationship between Mr. Mitten and Sawyer I don't know, except that Mr. Mitten or Mitten Management, or both, financed Sawyer.

Q. What I was wondering was why Mr. Mitten was entitled to the three-quarter million dollars in cash?

A. He financed them. He put all the money up; we got our money from him. As far as our records show, everything was in Sawyer's name, the stock and the money we paid for the stock to finance the acquisitions of the company and the conduct of it came from Mr. Mitten or Mitten Management.

Q. Everything was in Sawyer's name and Mr. Mitten was the financial backer of Sawyer?

A. That is correct.

Q. You said a while ago that \$500,000 was paid to you in the first instance. Was that in addition?

A. Yes, that came from Mr. Mitten, that covered the acquisition of the cab companies and of course the \$500,000 and the other moneys that were advanced were all advanced by Mr. Mitten or by Mitten Management, and all of this money was utilized for the acquisition of the cab companies and not for the bus company.

Q. The \$1,825,000 was for that?

A. That covered the purchase of the cab company and the three bus companies.

Q. Then there is \$2,325,000 involved in this transaction?

A. No. I would say that the only thing involved is the \$1,825,000 because the \$500,000 is included in the \$1,825,000.

Q. That is what I wanted to get at. With these withdrawals from the bank, it appears on the face of it as though there was a total value of \$2,311,000, but the actual amount involved is only \$1,825,000. You say that Mitten Management put in the \$500,000, and you reimbursed Mitten Management by check of how much?

A. We first spent \$520,000, then they reimbursed us by giving us a check for \$500,000, and we were then in the red for \$20,000, then we credited this to balance the red and reimbursed ourselves on this side, and the next item is that we drew a check for Mitten Management for \$972,000.

Q. What does the excess above the \$500,000 represent?

A. I think that represents additional sums advanced to us in the acquisition of the Quaker City. I think \$472,000 is the money we expended for Sawyer's account while the figures first mentioned were \$307,000, I believe there were other items. I recall one item of \$50,000 that Sawyer was obliged to put as security to the Public Service Commission before they would allow him to run. This is all a matter of memory; I am giving you my best recollection. Whether there were any advances direct to Sawyer from Mitten Management I cannot tell. Then we paid out these two items, one of \$250,000 and the other \$486,000. My best recollection would indicate to me, after three and one-half years, but having had a good bit of time to think about it lately and to search the records.

Q. You don't know whether that represents any profit on the money advanced to him?

A. Really, I cannot tell. My knowledge of it would not indicate, others would; I mean that the Management books would indicate whether it was a profit or advance. They would have the records. Our records are pretty complete. But we do not have the record of that, although we have accounted for every dollar we have taken in and paid out.

Q. Now, Mr. Greenfield, was the \$912,000 that you received on January 10th from the Philadelphia Rapid Transit Company?

A. I could not tell you. When I told Mr. Mitten that we would be short in our accounts if we gave him \$486,000, he said he would make that good. I never knew until I came up before the Senate Committee frankly, how he made it good. Now, whether he made it good from the Philadelphia Rapid Transit Company or from some other way, I don't know. I never saw any check and I never looked up this account to know if he had made it good. I assumed that he had, because I believed that whatever he said he would do. Now, as I figure out the Compensation of Albert M. Greenfield and Company consisted of two items, first \$37,923.59 and second \$149,772.51, unless some part of that \$37,923.59 was spent, and I believe it was. I have not been able to trace it, but it is close to what would be our regular compensation which would be about \$82,000, and we know that these two items made the commission or compensation that we were entitled to as I figure it. I think it makes our compensation, although we may have been paid \$5,000 over. I would have to search my personal records, which are not as good as my firm records. I doubt if we were overpaid. I judge that something was spent in connection with this matter of counsel fees.

Q. You testified that the \$972,000 check was drawn to Mitten Management, according to the memoranda made here?

A. Yes.

Q. Is it your remembrance that the cash totaling \$736,000 was turned over to Mr. Mitten as president of Mitten Management, or as an individual?

A. The technical part I don't know. I don't know how he received it. My best recollection is that he got it. I am pretty certain that he received the money. What he did with it, whether he reimbursed himself or Mitten Management, I cannot tell you, I have not the least record that would indicate that.

Q. I suppose you also do not know whether it was Mr. Mitten individually or Mitten Management who was financing Sawyer?

A. I think I know, it was Mitten Management, because I recall the first check Sawyer brought to us was a Mitten Management check. I am not certain, but I believe it was a Mitten Management check, so I would say that Mitten Management was financing Sawyer.

Q. So that normally you would pay over the proceeds of the sale either to Sawyer or to Mitten Management?

A. Yes; and of course Mitten Management, as far as Albert M. Greenfield was concerned, was T. E. Mitten.

Q. In regard to the receipt of this \$1,825,000 from the Philadelphia Rapid Transit Company, have you any recollection, Mr. Greenfield, as to how that is?

A. I have no recollection; I don't even recall seeing the check. I believe it was sent over with this first agreement of January 6, 1928. He took part in the negotiations himself in acquiring these properties from Sawyer, the Quaker City Cabs of which Sawyer was the head, and the Philadelphia Rapid Transit, and fixed the price. They drew the contract over there. They sent the contract over and I signed it. I believe the check came along with it. If it did, as I believe it did, it was merely turned in for deposit and as a fact our books will show we received it. Here is the record.

Q. The think I am interested in is, where you banked it?

A. I think I can tell you that. You asked for these records and we brought them here. We banked it at the Mitten Bank, and it was a check on the Mitten Bank, and here is the deposit book which will show you it was their bank. You will see many large amounts that we deposited both before and after that in that bank which would indicate that the size did not mean much to us. In those days we cleared many, many millions weekly. In 1929 I made one deal that amounted to \$33,000,000. So you can well imagine that whether it is an item of \$1,825,000 or \$825,000 would not make much difference to me.

Q. You banked the funds received from the Philadelphia Rapid Transit in the Mitten Bank and you drew out the funds which you deposited there and disbursed some funds through the Bankers Trust Company, and evidently made some transfers?

A. Yes, we made transfers. I have some here. The funds were distributed in many of the different banks as we usually do. We had very large balances in those days as this record will indicate to you. We carried millions in the banks of Philadelphia at that time, which of course was not ours.

BY MR. RHODES:

Q. Suppose Mitten Management at this time said that these checks belonged to it, how would you ever show that you had paid them to anybody?

A. I would have had difficulty in showing it, excepting if I could get a hold of Sawyer who I feel was present when Mr. Mitten received it, or Mr. Wilson should remember.

Q. Was he present?

A. He brought the money in. I had Wilson down to the hospital to see me. I really tried to get at the bottom of the thing and see where we were and how we could recall what transpired, and I turned this matter over in my mind and I am certain that I gave the money to Mr. Mitten. Wilson brought it in while Mr. Mitten was sitting there. Mr. Mitten came over often, and I really believe that Sawyer was there when he got the money. They have never raised a question to the effect that this money belonged to Mitten Management and that they didn't get it, and if they hadn't got it they would have long ago raised a question. Not having raised a question in four years I really feel that there is no question in their minds that they really received the money.

Q. From the standpoint of protecting your own company it would have been better to have had receipts showing who received this cash?

A. I agree it would have been better.

BY MR. EVANS:

Q. Mr. Greenfield, the agreements of January 6th, 1928, and of April 29, 1929, were between the Philadelphia Rapid Transit Company and Albert M. Greenfield and Company, were they not?

A. No sir, they were between Albert M. Greenfield and the Philadelphia Rapid Transit Company.

Q. Between the Philadelphia Rapid Transit Company and you as an individual?

A. Yes sir, they prepared that. I was pretty busy in those days and I signed the contract without regard to whether it was signed by myself as an individual or as representing the corporation, and I carried out the transaction as I had negotiated it. It was really a corporation matter. I mean that the compensation or the commissions that were earned in negotiating the transactions would belong to the corporation.

Q. Did you or the corporation actually own the stock of the Quaker City Cabs at that time?

A. No, we had it, we had it, that is, we had the stock in our possession. Sawyer delivered it to us for the sale and we transferred it to the Philadelphia Rapid Transit Company and here is the receipt for it, and we searched three weeks to find it because we had to go through our entire filing vault. This was a transaction under the old corporation and not under the present one, and all of the records have been filed away, received from A. M. Greenfield and Company, one thousand shares of Philadelphia Rapid Transit Stock, four hundred and ten share of Montgomery stock, two hundred shares Doylestown and Easton stock, four hundred shares Cab stock, all above duly endorsed to be transferred.

Q. Whose signature is that?

A. I could not tell you who that is. That is not written on our stationery. When we sent them the stock and they paid us the \$1,825,000, we took the receipt for all these securities, and someone there who is a vice president signed the receipt.

Q. This is dated January 6, 1928, so that they gave you a receipt for the stock, although you didn't require any receipt from Mr. Mitten when you turned the money over to him?

A. I don't know now whether I required a receipt. I don't know. We searched for a receipt and I am not sure that we won't be able to find it. I don't recall getting a receipt because of the manner in which he came and got the money, but I would not be surprised to find that we had gotten a receipt,

we may not have. If this had been done by someone else in the company other than myself I think we would have had a receipt. I was a little different when it came to dealing with Mr. Mitten in the matter of receipts. I trusted him entirely. When he said something, you could depend on it that that was the thing he did.

BY MR. RHODES:

Q. Was he cranky about giving receipts?

A. I don't know. He was a very forcible individual whose business friendship we valued. We represented him personally and we represented Mitten Management and the Mitten Bank and the Mitten Business Corporation and all those enterprises, including the National Railways of Buffalo. We did a great deal of business with all of these concerns and there was never a question raised as to whether he was to get the money or who it was to be paid to; there was mutual trust. Possibly we have a receipt, but I have not been able to find it so far. I have only been back from the hospital a day and I came here today against the doctor's orders. I am not through looking for the receipt. I didn't want Mr. Evans to think that I was trying to dodge his request to come here. At any rate, I have not to date been able to locate it.

Q. One other thing I want to ask you. When the final agreement was made in 1929, it was amended after the acquisition of the bus company's stock and the consideration was changed from \$1,825,000 to \$1,360,000, which would indicate that the bus companies were taken over at a valuation of \$460,000?

A. I have a pretty clear recollection of that. In these transactions we were the agents for the Quaker City Cabs Incorporated, and Sawyer and Mitten were not so much interested. We sold them to the Philadelphia Rapid Transit Company. In the original contract with the Philadelphia Rapid Transit Company they had a right to make a demand on us for the money back if the Commission didn't approve this purchase by them. We were the agents for the Quaker City Cabs Company and we had a right to get our property back. They came along and wanted to make a new contract in April of 1929. I think it was Mr. Joyce, if I am not mistaken, who came in and presented this new contract, and I said to him, what is the purpose of this new contract, and he said that it was because of the sale of the Quaker City Cabs.

We want to reduce the purchase price to \$1,360,000. I am only now—I mean I would not recall the amount except by looking at the contract. And I said to him—I examined the old contract, you see, sent for it, and I said "What about the Commission's approval? Did you get the Commission's approval?" and he said, "no, not yet," or, at least I think he said he had not gotten it at that time. I don't remember whether he said it was decided or not. I am not entirely clear about it. "Well," I said, "if you want me to give you a new contract, I don't want any more conditional contracts," I could have sold Quaker Cabs several times for more money than you paid for it." In point of fact, I had an offer from Checker of New York of several hundred thousand more for it, and Mitten knew that when we negotiated the deal, and latterly, even after the contract was changed, we had people interested who were willing to buy Quaker Cabs. But he always had an idea of forming a monopoly of the taxicab business in Philadelphia, because he felt that was how he could give better service. You know how he used to talk about it. I can visualize it now. That is how he can give the best results, when he would not be wasting money because of competition. He would not still have the Quaker Cab.

I said I won't be bound. Now, if you want a new contract, you have got to make it without any conditions, and whilst, in point of fact I learned legally it didn't make any difference, the change, that a public service corporation could not make a contract that was not subject to the approval of the Public Service Commission; nevertheless I thought that we would make a contract unconditionally, and they sent this new contract over, which was unconditional, and which I signed, and they said they turned over the bus companies to the Pennsylvania Railroad.

BY MR. EVANS:

Q. Did they say at what price they had turned them over?

A. No, they just fixed this themselves, and whether they got the difference or more or less, I really couldn't tell you, because they made that negotiation themselves with the

Pennsylvania Railroad. Their records, of course, must indicate what they received for them. Mine would not.

BY MR. RHODES:

Q. Well, the Pennsylvania Railroad now owns the bus companies, doesn't it?

A. I couldn't tell you whether they own them now.

Q. Well, delivery was made by you?

A. Not by me, no. You see, I had delivered all of these to P. R. T. under the original sale, and then they came along and they sold them off to the Pennsylvania Railroad and wanted a new contract for Quaker City alone.

Q. You made delivery yourself, so that you have no knowledge of the transaction between the P. R. T. and the Pennsylvania Railroad?

A. Not the slightest, or what the price was, or whether they have actually gotten them or whether they own them or not, I don't know.

Q. I say, you did not participate in that particular phase of the transaction?

A. I didn't negotiate that, no.

BY MR. EVANS:

Q. Now, Mr. Greenfield, who actually owned the stocks of the three bus companies at the time you made this contract? Did you own them?

A. No. I owned nothing, I had no interest in this, excepting for Albert M. Greenfield and Company as agents for the Quaker City and these owners.

Q. As a matter of fact, didn't Mitten Management own the three bus companies?

A. I have no knowledge of that, but I would not be surprised if they did, you see.

Q. You made this contract to sell the stocks of the three bus companies?

A. Yes.

Q. You did not own the stock yourself, so you must have known for whom you were acting as agent?

A. Well, Mitten Management sent these stocks to us, and they were in various names, and we drew various checks for them in various names. Now, who actually owned them, I couldn't tell you. They could. Whether Mitten Management owned these bus companies and these men were merely acting for Mitten Management, I don't know. We drew the checks as directed by Mitten.

Q. But in all events Mitten Management put up the \$500,000 with which you acquired stock of the three companies?

A. Right you are, and I think that check—there is no indication except this lead pencil mark, I was asked by Mr. Gray in the Senate Investigation who gave me this \$500,000. I couldn't tell him, and we tried to work out who this was, and he thought it might be P. R. T., and I said it didn't look like it was P. R. T., and it is not, of course, and since then I looked at it again and again, and I see that there are two M's there, and hence it is Mitten Management's \$500,000.

BY MR. RHODES:

Q. These checks, you say, were drawn at the direction of Mitten Management, were they, to the various individuals?

A. Yes. We receive our instructions—well, when you say Mitten Management—Mr. Mitten—I don't know whether he was acting for Mitten Management or for his own account or for these people. I haven't any actual knowledge as to whom he was acting for.

Q. In other words, all of your instructions came from Mr. Mitten?

A. Yes; we merely negotiated these transactions in accordance with his instructions. Of course, in the case of Quaker City, Sawyer too sat in and instructed us to make the deal, and in fact, if I am not mistaken—I am not sure about this—Sawyer had some interest in one of these companies too, because, if I am not mistaken, one of these checks went to Sawyer, actually to him.

Q. And it may have been, so far as you know, that Mitten Management was selling these companies to P. R. T.?

A. It may have been.

Q. Or, Mr. Mitten may have been selling these companies to P. R. T.?

A. He may have been. Of course, we were instructed to draw these checks for \$520,000 in the acquisition but all they sent over was \$500,000. Now, the amount they sold them for,

I cannot tell, but the record would indicate that they made a loss on them in the sale to the Pennsylvania Railroad. According to Mr. Evan's figures they made a loss. How much of that loss was made up by these cash items, I cannot say.

Q. In other words, you don't know who made the profit on these transactions, whether it was Mitten Management or Mr. Mitten personally?

A. It really does not look to me as if there was a profit. It looks the other way.

Q. In \$1,855,000?

A. Well, am I supposed to express an opinion?

MR. EVANS: You may do whatever Mr. Rhodes wants.

MR. RHODES: There is no harm in having your opinion.

THE WITNESS: I think whatever money Mitten got, my judgment is that he used it in the furtherance of his property, and in support of it, and in the object that he wanted to attain.

BY MR. EVANS:

Q. You mean for political purposes?

A. I couldn't tell, right or wrong—I mean I have no knowledge right or wrong—in his ideals, if you call them that—he was not a man who cared much about money, and that is evidenced by the condition of his estate, and the fact that he often said he did not want any money. He used these monies and these properties, I don't believe, for any other purpose but to further their interests.

BY MR. RHODES:

Q. Well, when you say furthering their interests, do you mean improving the properties physically, or taking care of political necessities?

A. I would say improving the properties and buying things, the wisdom of which now seems to me to be questionable, I mean when you buy bus companies for 520 and sell them for 420, your judgement may not be so good. Of course, things may have changed too, you know, it was not two years before we were in a state of depression.

Q. Wasn't the price of Quaker Cabs out of all proportion to its actual value?

A. It depends upon two things—no, not to its actual value. It would appear to its actual cost, not to its actual value. It would appear on its face that it was out of proportion to its cost.

Q. In other words, Sawyer made a good purchase?

A. Yes, he made more than a good purchase, unless in the operation by Sawyer for the number of months that he did operate it, he had spent more money in equipment and lost in operation, which must come in the acquisition of a corporation of that kind, when it is down at the heel like that was when he bought it—it was receivership, it was down at the heel. But this very same company I offered three million dollars for to the people in Indianapolis who owned it a year before it went into receivership.

Q. Well, Sawyer, didn't have any money himself, did he? He was financed by Mitten Management, wasn't he, or Mitten?

A. Well, I don't know whether he had any money, but in this transaction he was financed by Mitten Management or Mitten; but Sawyer is a man of some means and some responsibility.

Q. Do you know whether or not he was financed by the original purchase by Mr. Mitten or Mitten Management?

A. The original purchase would indicate it was financed by Mr. Mitten or Mitten Management, yes.

Q. In the final analysis, you don't know what Mr. Mitten did with this \$750,000 in cash which he received from you, do you?

A. No, I don't.

Q. You were drawing your conclusions from what you know of Mr. Mitten?

A. I mean I am expressing opinions, I am not testifying now to facts.

Q. You have no actual knowledge of the disposition of that money?

A. I have no actual knowledge, but having known Mitten, I wouldn't know, I have seen him do things so often that looked as if they were not wise, that he thought were in support of his property. He felt as he then expressed it, about the P. R. T., as if this was his child. He felt more about it as if it was a part of his body, than just a corporation or business proposition, and whether rightly or wrongly, he fought for it

along certain lines, and he did many things, that some of us may not think now, in the light of subsequent events were wise. But he must have thought so or he would not have done it.

BY MR. EVANS:

Q. Well, Mr. Greenfield, it is true, that the Philadelphia Rapid Transit Company, or Mr. Mitten, could have purchased this property from the Trustee in Bankruptcy and from the Royal Indemnity for something like \$400,000, or less?

A. Yes. If Sawyer bought it for that there is no reason why they could not have.

MR. EVANS: I might call the Committee's attention to the fact that, according to the reports here of the Quaker City Cab Company, Incorporated, to the Public Service Commission for the period 1927, after its incorporation, the company showed a deficit of net income of \$42,346.11.

MR. RHODES: That is in operation?

MR. EVANS: That is in operation. For the next year, for the year 1928, it showed a deficit of \$87,913.59. For the year 1929, it showed a deficit of \$82,298.83.

MR. RHODES: That is the reason it went into bankruptcy—into the hands of a receiver, wasn't it?

MR. EVANS: For the year 1930, it showed a deficit of \$241,226.53.

BY MR. EVANS:

Q. Mr. Greenfield, you have no knowledge, I expect as to who now owns the stock of Quaker City Cab, Incorporated, do you?

A. Well, my only knowledge is this: this contract I turned it over to P. R. T., to whom I sold it.

BY MR. RHODES:

Q. You have no knowledge beyond your records?

A. No. Well, I have this knowledge that apparently they still own it—

Q. Who?

A. P. R. T., because they were ordered by common pleas court number one in Philadelphia to divest themselves of it, in this recent decision. That is the adjudication. I mean to that extent I have the knowledge that you would have, having read the decision; but I haven't any personal knowledge.

THE CHAIRMAN: The Committee will recess for one-half hour.

#### AFTER RECESS

ROBERT M. WILSON recalled

BY MR. EVANS:

Q. You testified before the Committee last week in regard to the two checks for \$250,000 and \$486,000. Have you heard the testimony of Mr. Greenfield this morning?

A. Yes.

Q. To the effect that you were present when the proceeds of these checks were turned over to Mr. Mitten, that you brought the money up from the bank, and the testimony of Mr. Marsh, that you were the person in A. M. Greenfield's organization to whom you paid the cash proceeds of these checks?

A. I heard Mr. Greenfield's testimony. I didn't hear Mr. Marsh's.

Q. It is correct, is it not, that you went to the Bankers Trust Company and got the cash for these two checks and brought it up to Mr. Greenfield's office?

A. Yes.

Q. You testified last week that you had no knowledge of this situation other than drawing the check. Do you want to correct that testimony?

A. Yes, I do, Mr. Evans. When I was called up here last week, I was not told that I had to come up until the evening before, Wednesday evening. I was told that I simply was to come up and identify the signatures on the checks. I didn't know that I was going to be cross examined or questioned about this transaction or about these checks at all, and the consequence is I didn't look up the records, I didn't discuss the matter with anyone, and I didn't make any effort to refresh my memory on the situation at all. I testified last week that we draw a great many checks, and to allow you

and the Committee to understand how difficult it was to recollect any particular transaction without having given it some study and thought and some investigation, I made up a schedule of our disbursements during the past five years, and I find that we have drawn, and I have found that I have signed \$173,606,000 worth of checks, covering 246,461 items. So you gentlemen, Mr. Evans and you gentlemen, I think I can realize and appreciate if anyone asks a question without previous preparation of one or two particular items out of this number, it is rather difficult to remember the circumstances connected with it.

Q. Now, you were unable to recollect last week any other transactions where a check of this amount had been cashed, and you know at the time that you were asked to testify here that you were going to be asked with respect to those two checks, did you?

A. The only thing I was told, Mr. Evans, was that I had to identify the signatures on the checks.

Q. Well, you remember now that it had been called to your attention, quite clearly, going down to the Bankers Trust Company, making the arrangements for having these checks cashed, with Mr. Scott, and getting the money from Mr. Marsh, and taking it up to Mr. Greenfield, don't you?

A. I do remember it. In fact, when I got back to Philadelphia, I got back to the office between 5 and 6 o'clock, last Thursday evening. The testimony was already in the paper. Two of my boys came in and talked to me about this thing, and one of them said to me, "Mr. Wilson, I think you did cash those checks," and the other boy said, "Well, no, Mr. Wilson, I don't think you did," and they discussed the matter pro and con for several minutes as to whether I did or did not cash these checks.

Q. Well now, the checks were paid to you in notes of large denominations, were they not?

A. As I recollect it, Mr. Evans, this money was in a package or envelope when I got it from the Bankers Trust.

BY MR. RHODES:

Q. Didn't you count it before you took it out of the bank?

A. No, I didn't, Mr. Rhodes.

BY MR. EVANS:

Q. You mean that you took a package that contained \$486,000 and never checked it over and knew whether it contained that or whether it contained \$400,000?

A. I don't recall counting it, no sir.

Q. Is that your practice in cashing checks?

A. We had a great deal of confidence in the Bankers Trust, and we assumed that if we asked for a certain amount of money and we gave them a check for it, they gave us the proper amount.

Q. And how large a package did this make?

A. I don't remember the exact size, Mr. Evans.

Q. Did you carry it up to the office in your hand or did you have a bag? How did you carry it?

A. As I recollect it, I carried it in my hand.

Q. A package of \$486,000?

A. Yes sir.

Q. But you have no remembrance as to the size of the package?

A. Well, as I recall it, it was in a legal envelope or a package the size of a legal envelope, and as I recall it, it was quite thick, just how thick I don't remember.

Q. Three or four inches thick?

A. No, I would say maybe an inch thick or a couple of inches thick.

Q. That was the \$486,000 transaction?

A. Yes.

Q. What do you remember about the \$250,000 transaction?

A. Well, the same procedure took place. I got it from the Bankers Trust Company and brought it up to Mr. Greenfield's office.

Q. From whom did you get the cash at the Bankers Trust Company?

A. I don't really recall, Mr. Evans. Either one of the officers or one of the tellers.

Q. Don't you remember which?

A. No, I don't.

Q. With whom did you make the arrangements to have the cash on hand to take care of these checks?

A. I presume I called up one of the officers and asked him to secure it for me.

Q. You called up Mr. Scott, didn't you?

A. Mr. Scott is the man I usually dealt with down there.

Q. Who was present when you obtained the cash for the check other than the teller or the officer?

A. I don't recall that, Mr. Evans.

Q. You testified in answer to a question of mine that no journal entries of these records were made on the books of Albert M. Greenfield and Company. Was that correct.

A. You mean last week?

Q. Yes.

A. Someone asked me how these cash transactions—if these cash transactions were handled by journal entry, and I said no, they were handled by cash book entry.

Q. Well, in the ledger sheet which Mr. Greenfield used this morning, there is reference to a folio for each of the items. Isn't there, a journal book entry?

A. You may call it a journal book entry, but we call it a cash book.

Q. You call it a cash book?

A. Yes.

Q. So that when you answered my question stating that you did not keep any journal entry at all you meant that you kept a cash book, but did not keep a journal?

A. That is what they are—I mean there is a difference in accounting practice and procedure.

Q. That's all.

A. A. MITTEN sworn

BY MR. EVANS:

Q. Dr. Mitten where do you live?

A. I live in Philadelphia.

Q. You are president of Mitten Management, Incorporated, are you not?

A. Yes.

Q. How long have you been an officer of Mitten Management, Incorporated?

A. I became a Mitten Management director in 1921. I was an officer of Mitten Management—I became vice president in 1924.

Q. And you held that office until your father's death in 1928?

A. In 1929.

Q. And succeeded him as president in the fall of 1929?

A. Yes.

Q. Testimony has been introduced before this Committee by Mr. A. M. Greenfield and others in regard to the purchase by the Philadelphia Rapid Transit Company of the capital stock of the Quaker City Cab, Incorporated. Were you familiar with that transaction?

A. I was not.

Q. Mr. Greenfield has testified that the purchase of the assets of the old Quaker City Cab Company by Frank Sawyer of Boston was financed by Mitten Management, Incorporated, in 1927. As vice-president of Mitten Management, Incorporated, did you know that fact?

A. I did not. I was vice-president in charge of Welfare and Labor Relations of that organization. Mitten Management, Incorporated, Mr. Evans, was my father, and he had surrounded himself with those who were in effect specialists in different lines of endeavor. My particular specialty, and that with which I had to do entirely in those early years, was the welfare and labor relations, the relationship between the management and the men. I had no knowledge of financial transactions of any sort.

Q. Who were the officers of Mitten Management, Incorporated, in 1927 and 1928?

A. I would have to refresh my memory to give you that without any omissions. My memory is, however, that my father was president and there were five vice-presidents. I was vice-president in charge of industrial relations, as it was called. Mr. Queeney was vice-president in charge of operations. Mr. Myers, was vice-president in charge of finance and accounting. Mr. Joyce was vice-president in charge of law, and my memory is that Mr. Shaw was vice-president in charge of public relations. I recall no other vice-presidents at that time.

Q. And Mr. Myers, as vice-president in charge of accounting, would be the vice-president who would have had knowledge of this transaction, primarily, would he?

A. If anyone aside from my father had knowledge of the transaction, Mr. Myers would probably be that man. My father was a lone wolf, Mr. Evans, as you remember.

Q. Mr. Greenfield has testified that in January, 1928, Albert M. Greenfield and Company paid over certain funds representing the proceeds of the sale of Quaker City Cabs, Incorporated, to the Philadelphia Rapid Transit Company. On January 6th, there was a payment of \$972,325.64 to Mitten Management?

A. Yes sir.

Q. Have you been able to find any record as to what disposition was made of that fund by Mitten Management?

A. I find that sum—you asked me to bring the books of the company for 1928 and 1929?

Q. That is correct.

A. I took the liberty of adding the figures for 1927 of the transactions between T. E. Mitten and or Mitten Management with Albert M. Greenfield and or Albert M. Greenfield and Company for the years 1927 and 1928. There was no transactions between these two parties except minor real estate transactions, except in the years 1927 and 1928. I find on January 6, 1928, there was a payment made by Albert M. Greenfield and Company, a deposit was made for \$972,325.64, which repaid advances made to A. M. Greenfield, one of \$500,000, and the other of \$472,325.64. That was made on a Franklin Trust Company check, the deposit slip which is here. It also carries the repayment of \$250,000 advance, which is there. This is a certified duplicate copy of the bank deposit slip.

BY MR. COOKE:

Q. That is a Mitten Management deposit slip?

A. Yes. Now, the item of \$472,325.64 represents the reimbursement for two advances made in 1927, one for \$175,000 and the other for \$297,325.64.

Q. Then, according to your records, it was not true as testified by Mr. Greenfield that all but \$500,000 of this \$972,325.64 represented the proceeds of sale of the Quaker City Cabs to P. R. T.?

A. I cannot answer that question, Mr. Evans. I don't know. I can only tell you what the books reveal.

Q. Do the books not reveal, Dr. Mitten, the purpose for which the \$500,000 and the \$472,325.64 were advanced by Mitten Management to Albert M. Greenfield and Company?

A. They did not. They are merely labelled advances. I have those books where when you choose to look at them, Mr. Evans.

Q. All right; I would like to see those entries if you have them available.

(Witness produces books.)

A. The two headings are listed, one, Albert M. Greenfield, and the other Albert M. Greenfield and Company. A. M. G. and Company. They are here as charges; here is the balance, and these are the credits.

MR. EVANS: I want now to read into the record from the Mitten Management, Incorporated, ledger, sheet headed, "Mitten Management, Inc.," time loans, A. M. Greenfield. This is divided into date, item and charges balance, 1927, February, \$300,000 balance nil. Credits, \$300,000. February, 1927.

September, \$485,000, under charges; balance, \$485,000. Credit blank. Date September.

November, item blank again. Charges \$154,000.75. Balance, \$639,265.75. Credits blank. Item blank.

MR. COOKE: Are there no dates of the month on those?

MR. EVANS: No days. December, item blank. Charges, \$500,000. Balance, \$1,139,265.75. Credits blank. Item blank.

1928, January, item blank. Charges blank. Balance nil. Credits, \$1,139,265.75. January, 1928.

On the next page, under the heading A. M. G. and Co., date, July, 1927, item blank. Charges, \$281,949.07. Balance, \$281,949.07. Credits blank. Item blank. July.

August, item blank. Charges, \$15,000. Balance, \$296,949.07. Credits blank. Item blank. August.

September, item blank. \$376.57 under charges. Balance, \$297,325.64. Credits blank. Item blank. September.

January, 1928, item blank. Charges blank. Balance nil. Credits, \$297,325.64. Item blank. 1928, January.

BY MR. EVANS:

Q. Dr. Mitten, this is not a book of original entry. Did you bring with you the books of original entry from which this ledger was posted.

A. I did.

MR. COOKE: Mr. Evans, what is the relation between the first date in these entries and the date of the first cash payment? Do those antedate that cash payment?

MR. EVANS: Yes. These entries run down to and include January, 1928, and there are no entries subsequent to that time, so, the only correspondence that I can see between these entries and those Mr. Greenfield gave us, would be in the January, 1928, entries.

MR. COOKE: In other words, these are advances from Mitten, Incorporated, to Greenfield and Company quite prior to the checks that have been before us?

MR. EVANS: Yes.

MR. COOKE: And there is nothing there to show that those were other than time loans?

MR. EVANS: Nothing in this letter.

THE WITNESS: Here is the day book. Those are the vouchers upon which the advances were made.

BY MR. EVANS:

Q. Dr. Mitten, will you just read into the record the dates and amounts of these various vouchers to the order of A. M. Greenfield?

A. There is a voucher dated February 3rd to A. M. Greenfield for \$300,000.

BY MR. TURNER:

Q. What year is that?

A. February, 1927.

BY MR. EVANS:

Q. Voucher 319?

A. Voucher 319. There is a voucher No. 692 to Albert M. Greenfield and Company for \$330,000.

BY MR. RHODES:

Q. Do those vouchers disclose the purpose?

A. They say for advance, that is all that is on the retained copy of that record.

BY MR. EVANS:

Q. The first one had nothing at all?

A. The first one had nothing. The third voucher, No. 698, to Albert M. Greenfield and Company, dated September 12, 1927, for \$100,000, for advance, it is noted.

Voucher No. 881, dated December 30, 1927, Albert M. Greenfield, personal, \$500,000. It is noted on the retained copy that that is for advance.

BY MR. RHODES:

Q. Do I understand that is for advances to Greenfield or for the repayment of advances made by Greenfield to your company?

A. No. A voucher is made out to him advancing to him a sum of money. On July 1st, 1927, Voucher No. 560 to Albert M. Greenfield & Company, \$212,500. It is marked on the reclaimed copy, an advance.

July 21, 1927, A. M. Greenfield & Company, \$16,875, Voucher No. 596. It is marked Commission 5% on \$337,500.

BY MR. EVANS:

Q. That was the price paid by Sawyer for the assets and cabs of the old Quaker City Cab Company?

MR. RHODES: That was bought in bankruptcy, wasn't it?

MR. EVANS: Part of it, the good will and certain physical property was bought from the trustee in bankruptcy for \$75,000. The taxicabs themselves were bought from the financing company and insurance company for \$262,500.

MR. RHODES: And this represents both items, is that correct?

MR. EVANS: This apparently represents a commission on the total of those two items. It also appearing from the trustee's account in bankruptcy that he had paid Greenfield a commission on the \$75,000 which he had received from the sale.

THE WITNESS: July 29, 1927, Voucher No. 614, Albert M. Greenfield & Company, \$50,000. The copy says advanced.

BY MR. EVANS:

Q. Marked under distribution expense?

A. Voucher No. 621, made on August 1st, 1927. A. M. Greenfield & Company, \$15,000, marked for advance.

MR. COOKE: Mr. Evans, those first two vouchers therefor, I think, \$300,000 each in the Spring of 1927, is that right?

MR. EVANS: One was for \$300,000, and the other for \$330,000.

MR. COOKE: Both early in the spring of—

MR. EVANS: No; the first February 3, 1927, was \$300,000, and September 7, 1927, was \$330,000.

MR. COOKE: But you have \$300,000 in the spring of that year. Have you any theory, Dr. Mitten, as to why that advance was made?

THE WITNESS: I have not, sir.

BY MR. COOKE:

Q. Mr. Greenfield this morning said that your father made expenditures sometimes to advance his own interests. Now, in this case apparently if there was any advancing done, it was done from T. E. Mitten to A. M. Greenfield, rather than from A. M. Greenfield to T. E. Mitten?

A. I find no record on the books of advances by A. M. Greenfield to T. E. Mitten. I know nothing of those advances. I find no record of them.

Q. But these are advances from T. E. Mitten to A. M. Greenfield at a time when you have no record of any obligation having been created?

A. I have none. I have no knowledge and no record. It was not from T. E. Mitten; it was from Mitten Management. It was not a personal transaction, sir.

Q. You would not have known it if there was any relationship between that transaction and the primary election that was going on in the spring?

A. I know nothing of it, sir, at all; no.

MR. COOKE: That was the mayoralty primary election, held that spring.

MR. TURNER: No, not in 1927, Mr. Cooke.

MR. COOKE: Am I not right?

MR. TURNER: No, the primaries are in September in the odd years.

MR. COOKE: Then the second payment would be at a time right before the primary election, because it came along in September. Perhaps this was the pre-primary.

BY MR. RHODES:

Q. Doctor, as we understand it, you don't know of any reason for those advances?

A. I do not.

Q. You have no way of ascertaining?

A. I have no way. The only man who could answer that question would be my father. I can only tell you what his records and the records of the corporation show. That I am here to do as far as I can, sir.

BY MR. EVANS:

Q. Dr. Mitten, have you prepared a detailed statement of this ledger loan account of A. M. Greenfield and of A. M. Greenfield & Company?

A. I have.

Q. I show you such a statement and ask you whether that was prepared under your direction from the books of Mitten Management, Incorporated?

A. Yes.

MR. EVANS: I think this will help to clarify the record if we offer this in evidence as exhibit 199.

THE WITNESS: May I say, that this record is the record which builds up the figure which I have shown as the first figure that appears—\$1,139,365.75 is developed here, where there is \$1,439,000, where there is a \$100,000 credit, which reduces that to \$1,139,000, going into the following year. The \$300,000 credit across the way, you see, the \$300,000 in both cases. So that the first item which you find on the ledger, which is \$1,139,265.75 is made up as shown on this exhibit 199, which you have just mentioned.

BY MR. EVANS:

Q. I will ask you, Dr. Mitten, have you prepared a statement showing the loan account of the Mitten Management with A. M. Greenfield and with A. M. Greenfield and Company as of December 31, 1927, and subsequent transactions?

A. I have, showing all advances and all the payments so that the amounts of advances are balanced by the payments.

Q. And this statement was prepared under your direction?

A. Yes sir.

MR. EVANS: I offer this in evidence as exhibit number 200.

BY MR. EVANS:

Q. Now, Dr. Mitten, do I understand from your testimony that the \$250,000 in cash received by your father from Mr. Greenfield on January 6th, 1928, was deposited to the account of Mitten Management, Incorporated, in the Mitten Bank as of that date?

A. May I answer that question this way.

MR. TURNER: Mr. Evans, did I understand you to say that you understood Dr. Mitten to say that?

MR. EVANS: He has introduced this exhibit, this deposit slip, which shows the entry.

THE WITNESS: I introduced the deposit slip which showed on January 6th there was a deposit by Mitten Management Incorporated of a check on the Franklin Trust Company for \$972,325.64. There is an additional item which is listed under checks on the bank deposit, which shows \$250,000. This, however, does not state upon which bank or what bank that check was drawn. But my inquiry to the controller of Mitten Bank in which this deposit was made, he investigates and finds that the teller who accepted this deposit had in this possession \$250,000 in cash. Therefore I assume that that is a cash item and not a check.

BY MR. EVANS:

Q. Now, Mr. Greenfield further testified that on January 7, 1928, in his office, he paid to your father \$486,000 in cash. I so far have not found any reference to that item on the exhibits, and I do not think you have covered it in your testimony?

A. I find no evidence of that, Mr. Evans. I can find no record on Mitten Management's records, in Mitten Management's account nor in the accounts of my father's estate, which show any retreat of any \$400,000, what is the amount?

MR. EVANS: \$486,000.

THE WITNESS: Of \$486,000 on any date from any one.

BY MR. EVANS:

Q. Do the records of Mitten Management, Incorporated show to whom the \$250,000 deposit on January 6th was disbursed?

A. I do not know.

Q. There is not on the books of Mitten Management anything to whom that money went?

A. There is not. It was deposited to the account of Mitten Management.

Q. And to what account was that credited?

A. You will find on your number two hundred, sir, that T. E. Mitten advanced \$150,000, under December 31, 1927. You will find in January, 1928, marked advances 1-27-28 \$100,000. I find no items excepting those two which could balance that \$50,000 item.

Q. Taking up Exhibit 200, the first item under loan account as of December 31, 1927, A. M. Greenfield advanced \$1,139,265.75, represents, as you have stated, the balance carried over from 1927?

A. As shown on your Exhibit 199. That is all I can reconstruct, sir.

Q. Then the following items represent advances by Mitten Management, Incorporated, to the persons or firms designated; is that correct?

A. That is true, except in the case of the item marked "Hilltop Land Company," that was an account that passed through Mitten Management and was held in Mitten Management for a time, for three or four months, but was repaid by an advance—as a repayment of an advance from A. M. G. so marked in the ledger.

Q. So that in addition to the \$1,139,265.00 advanced to A. M. Greenfield, there was also an advance as of December 31, 1927, to A. M. Greenfield and Company of \$297,325.64, which is also shown on Exhibit 199?

A. Yes sir.

Q. And there was an advance to T. E. Mitten of \$150,000?

A. Yes sir.

Q. In January, 1928, there was a further advance to T. E. Mitten of \$100,000?

A. Yes.

Q. And is there anything on that statement to show the payment of those advances?

A. The last half of that statement shows the repayment of those advances.

Q. I see no statement of a repayment by T. E. Mitten of any advance.

A. I don't see a statement. I don't find that. I find the repayment of advances \$250,000, marked repayment of advances. It is blank in front of it, it follows on that date, and it is return of advance, \$250,000. I can only reconstruct that since that item of \$250,000 balances the two advances made to T. E. Mitten, I can only—since it is set up so on the ledger, with the return of that \$250,000.

Q. Then it might be that this was the \$250,000 and which Mr. Greenfield paid over to Mr. Mitten and which Mr. Mitten in turn paid over to Mitten Management?

A. It might be.

Q. All on January 6, 1928?

A. Yes sir.

Q. And that, so far as you can reconstruct it, was deposited in the Mitten Bank to the credit of Mitten Management on January 6, 1928?

A. Yes sir.

Q. And I understood you said that your search of the records of Mitten Management and your father's records, failed to disclose any entry of the \$486,000, alleged to have been paid to your father on January 11th by Mr. Greenfield?

A. That is correct. They fail to show any entry which would designate or signify that \$486,000 had been received by him or Mitten Management.

A. I can find nothing of that sort. I have the records of my father's estate and his personal records with me, Mr. Evans, as you requested.

Q. Did your father keep books individually?

A. Yes sir.

Q. What do his own individual books show in regard to the \$250,000?

A. They show nothing.

Q. What do they show in regard to the advance of \$150,000 and \$100,000 for Mitten Management, Incorporated?

A. They show nothing. They do not enter his records, either in or out.

Q. And there is no reference to either of these items in his income tax return, I suppose?

A. There is not. I have those income tax statements with me. I find nothing in the inventory of the estate which would indicate anything of the transactions.

Q. According to the testimony of Mr. Greenfield, Mitten Management, Incorporated, or T. E. Mitten realized a profit from the sale of Quaker City Cabs, Inc., to the Philadelphia Rapid Transit Company of somewhere in the neighborhood of 800 or 900 thousand dollars. Is there any reference that you have been able to find of any such item in the income tax return of either Mitten Management, Incorporated or of your father?

A. No, neither in the income tax returns or in the books.

Q. Do you know Mr. Frank Sawyer?

A. I have met Mr. Frank Sawyer once and only once.

Q. When was that?

A. I don't recall the date. I was introduced to Mr. Sawyer on Broad street.

Q. Do you remember what year?

A. During the time that he was operating the Quaker City Cab Company.

Q. And before Quaker City Cabs were acquired by either the P. R. T. or by Mitten Management?

A. Yes. It was about the time that he started operating the cabs, because I recall he was introduced to me as the new operator of Quaker City Cabs.

Q. Dr. Mitten, where did your father keep his bank account in 1928 besides in the Mitten Bank?

A. I know of no other bank account that he had except in Mitten Banks. He had a small bank account in the Chemical Bank in New York, I think it was, or Chase Bank, I can't remember, but he had a small bank account in New York, the balance of which ran around, at the time of his death, about \$20,000, with which he paid his incidental expenses when he was in New York.

Q. So that the records of these transactions, so far as the banking of the funds is concerned, would all be with the Mitten Bank?

A. Yes.

Q. And you have no knowledge of any sort as to whom the \$486,000 would have been passed on, if it was not repaid by your father and so received by him?

A. I know nothing about \$486,000. I have never heard of it.

Q. As nearly as I can see the transaction, Dr. Mitten, the \$250,000 probably went to your father from A. M. Greenfield and Company and was paid by your father to Mitten Management in repayment of advances, and deposited on January 6th in the Mitten Bank, but there is no trace of the \$486,000. Is that a fair summary of the situation?

A. I think that is a fair summary, sir, to the best of my ability, that \$250,000 there was cash. It was paid from somebody and came into the accounts of Mitten Management and cancelled advances made. The accounts as between T. E. Mitten and Mitten Management and A. M. Greenfield and Company, both of them balance perfectly. There is no outstanding obligation from Greenfield to Mitten or Mitten to Greenfield. Every advance that was made is accounted for.

BY MR. RHODES:

Q. Those payments by Greenfield in 1928, I presume were by checks of \$385,000 and the \$100,000 on the 24th and 27th of January?

A. Those are on this deposit slip represented by checks on the Bankers Trust Company. There is a further one on January 27th for \$100,000.

Q. Those are all check items and not cash?

A. Those are check items, sir. The only cash item is this one. The others are all labeled.

MR. EVANS: In order that the record may be complete, I think we should put in evidence the original account of Albert M. Greenfield and Company, from which Mr. Greenfield testified this morning, and of which Mr. Walker made a copy, so that will be a part of the record. That can be typed and put in as Exhibit 201.

MR. RHODES: When does the Greenfield Ledger account start?

MR. EVANS: It starts on December 30, 1927, and shows the payments made by A. M. Greenfield and Company on that day and the succeeding day to acquire the three taxicab companies, in the amount of \$520,228.26. It shows the receipt on December 31, 1927, of the sum of \$500,000, which corresponds with the entry on Exhibit No. 199 of an advance to A. M. Greenfield of \$500,000 on September 30, 1927.

BY MR. EVANS:

Q. Dr. Mitten, what do the letters V. O. 881 in that entry mean?

A. That is the voucher number.

MR. EVANS: There is then, according to the Greenfield Ledger a debit balance, or a balance in red of \$20,228.26, as at the close of 1927. The ledger begins with that balance in 1928, and shows the payment of \$972,325.64, which was deposited by Mitten management in the Mitten Bank on January 6, 1928, but which, according to Dr. Mitten, as I understand it, was not in any way part of the purchase price of Quaker City Cabs, Incorporated, but was the repayment of advances.

THE WITNESS: That is what the books show, Mr. Evans. I can only testify to what they show. I know nothing about this.

MR. EVANS: Both ledgers balance, but they do not seem to quite agree in their explanation as to what the items cover.

MR. RHODES: Well, that \$972,325.64 on Greenfield's books indicate a payment by A. M. Greenfield and Company, does it not?

MR. EVANS: Yes

MR. RHODES: On the Mitten Management books it indicates a payment on January 6th of A. M. Greenfield for repayment of the advances individually.

MR. EVANS: Yes; those two items on the Mitten Management books are not definitely stated to be repayment of advances, are they Dr. Mitten?

MR. RHODES: Well, it just says payment, it does not say for what — it they are credited to A. M. Greenfield individually and not A. M. Greenfield and Company.

THE WITNESS: Those are marked in the cash book, sir. A. M. Greenfield and Company return of advances \$500,000. Ditto. \$472,000. The total of which is the nine.

MR. RHODES: \$972,325.64?

THE WITNESS: Yes.

MR. RHODES: Well, I notice you have individually and here you have company.

THE WITNESS: As I stated, Mr. Evans, this is an absolute copy of the account. This is the cash book. In making these entries, I did not try to make them, I copied them just as they were.

BY MR. EVANS:

Q. Well, now, Dr. Mitten, does it not appear to be true from these entries, that the item of \$472,325.64 credited to A. M. Greenfield, as the return of an advance was made up of the advance to the Hill Top Land Company of \$175,000 and an advance to A. M. Greenfield and Company of \$297,325.64?

A. Yes; if you would like the deposits, sir, I brought those certified copies there, and they are therefore duplicates, and they are available as records if you wish them.

MR. EVANS: I think, in order to make the record complete, I will offer in evidence the duplicate deposit slips certified by the assistant treasurer of the Mitten Management Bank and Trust Company, covering deposits by Mitten Management, Incorporated, one dated January 6th, 1928, as exhibit two hundred and two; one dated January 24th, 1928, as exhibit number two hundred and three; and one dated January 27th, 1928, as exhibit number two hundred and four.

BY MR. EVANS:

Q. I notice, Dr. Mitten, that the deposits of January 24th, and 27th, are all composed of checks on the Bankers Trust Company?

A. Yes sir.

Q. Do you have any information as to whose checks those were?

A. I do not.

Q. Your father did not have an account with the Bankers Trust Company, did he?

A. He did not, not to my knowledge.

Q. I call your attention to the transcript of the ledger account of Albert M. Greenfield and Company with the Bankers Trust Company, introduced as Exhibit 198, in which there is charged to that account two checks of January, 25th, 1928, one of \$392,966.68, and one of \$159,085.66, which corresponds exactly with the deposits on January 24th of Mitten Management, Incorporated in exhibit two hundred and three. Does that indicate to you that these were checks of Albert M. Greenfield and Company?

A. It does.

Q. Do you have any knowledge at all of any other transaction between Mitten Management and Albert M. Greenfield and Company in January, 1928, which might be covered by these checks?

A. I have no knowledge of any other transaction.

BY MR. RHODES:

Q. What is the Hill Top Land Company deal?

A. Hill Top Land Company was the company that owned our real estate. It was my father, he owned one hundred per cent. of the company, and in order that the company might be a company and not a personal matter, he had his farm up in Pike County incorporated as Sunny Land, Incorporated and he owned all of that stock. It is in his estate. The farm on which he lived is called now, Dunroamin Farms, and that Dunroamin Farms is owned by a holding company called the Hill Top Land Company.

BY THE CHAIRMAN:

Q. Doctor, on that \$250,000 repayment of advances on February 6th, I notice that on those deposit slips, all the other items were checks.

A. The other was one check.

Q. Have you any theory as to why that should be cash? It seems to me to be a cumbersome way of doing it.

A. I have no theory, Mr. Moore, and no knowledge. I come here with all the records I have, —

Q. Yes, I understand, you have been very frank.

A. —and I am trying to give you to the best of my knowledge everything there is there. I don't know anything about it, sir.

Q. It just aroused my curiosity, and I thought maybe it aroused yours, and I thought maybe you had some theory.

A. I have no theory, sir.

MR. EVANS: Dr. Mitten, would you produce your modest deposit records of January, 1928?

(The witness complies).

MR. EVANS: Note for the record that Dr. Mitten produces the statement of Mitten Management Bank and Trust Com-

pany for January, 1928, and the same shows a deposit of \$25,000 on January 4th, 1928, and after that no deposit of more than \$5,000.

FRANK B. ELLIS sworn

BY MR. EVANS:

Q. Where do you live, Mr. Ellis?

A. Philadelphia.

Q. You are the secretary of the Quaker City Cab Company. Incorporated, are you not?

A. Yes sir.

Q. And you have produced the stock ledger here this afternoon?

A. I have the stock record here.

Q. Mr. Ellis, this stock record shows the issuance of four thousand, five hundred shares of the capital stock of Quaker City Cabs, Incorporated to Frank Sawyer on July 16th, 1927; one share to C. William Sawyer, and four hundred and ninety shares to Frank Sawyer; three shares to C. William Sawyer; also the issuance of one share to C. William Sawyer, cancelled October 12, 1927; and five shares to George F. Palmer, since cancelled; making a total of five thousand shares of the capital stock of the company. It also shows the issuance of one share transferred from C. William Sawyer to W. W. Pestae on October 12, 1927, and the transfer of five shares from George S. Palmer to C. H. Fenstermacher on July 16, 1928, and the transfer of one share to C. H. Fenstermacher from W. W. Pestae on December 18, 1930, so that at the present time Mr. Frank Sawyer and Mr. C. William Sawyer, and C. H. Fenstermacher, are the stockholders of the Quaker City Cabs Incorporated?

A. That is correct.

BY MR. RHODES:

Q. How many shares are there outstanding?

A. Five thousand.

Q. What is the par value of them?

A. One hundred dollars per share.

BY MR. EVANS:

Q. Mr. Ellis, who holds the certificates representing the Sawyer stock?

A. They are in my custody.

Q. And who is the actual owner of these shares at the present time?

A. The Philadelphia Rapid Transit Company.

BY MR. RHODES:

Q. In other words, you hold them for the Philadelphia Rapid Transit Company?

A. Yes sir.

Q. How many shares is that?

A. Five thousand shares altogether.

Q. I thought you referred to Sawyer's stock?

A. I hold them all as Secretary of the Philadelphia Rapid Transit Company.

BY MR. EVANS:

Q. And it is the beneficial owner of that stock?

A. Yes sir.

Q. In spite of the fact that the Public Service Commission refused last December to approve the sale of that stock to the Philadelphia Rapid Transit Company at the price of \$1,360,000?

A. I hold them, I don't know anything about that.

BY MR. RHODES:

Q. Since what date have you held these five thousand shares for the Phila. Rapid Transit Company?

A. I could not say the exact date, but I think it was sometime in 1928.

Q. In January, 1928?

A. Very likely, but I won't say positively.

Q. And you have held five thousand shares for the Philadelphia Rapid Transit Company since that time?

A. Yes sir.

BY MR. EVANS:

Q. Mr. Ellis, when you have a meeting of the stockholders of the Quaker City Cabs Incorporated, do you have to get a power of attorney from the Messrs. Sawyer every time?

A. Yes sir.

BY MR. RHODES:

Q. The certificates are all endorsed in blank, are they?

A. Yes sir.

Q. Who are the officers of the Quaker City Cab Company?

A. Mr. R. F. Tyson, Mr. William Campbell, Mr. M. P. Brown is Vice President, Mr. G. W. Davis is Treasurer, and myself a secretary.

BY MR. EVANS:

Q. Who are the directors?

A. The directors are Mr. Tyson, Mr. Campbell, Mr. Brown, W. J. Mack and myself.

BY MR. RHODES:

Q. How can they be directors without having a share of stock?

A. It is not necessary in Pennsylvania for directors to have a share of stock.

Q. This is a Pennsylvania corporation?

A. Yes sir.

Q. You take the position that it is not necessary in Pennsylvania for a director to own any stock?

A. That is what I understand.

BY MR. EVANS:

Q. Mr. Ellis, according to your annual for 1930, the directors for the term expiring February 11, 1931, were Mr. Tyson, Mr. Campbell, Mr. Graves, Mr. Ellis, and W. W. Festae?

A. That is correct. They were the officers I gave. They were elected in February, 1931.

Q. Let me ask you this; you are also secretary, are you not, of the Philadelphia Rapid Transit Company?

A. I am, sir.

Q. Is there any agreement by which the Phila. Rapid Transit Company holds this stock in any way for any other person or corporation?

A. Not to my knowledge.

MR. EVANS: The reason I asked that question was because a witness before the Senate Committee said he understood it was held by the Pennsylvania Railroad Company.

THE WITNESS: I know of no such thing.

BY MR. RHODES:

Q. Does the Phila. Rapid Transit carry this stock on its books as an asset?

A. I do not know, Mr. Rhodes; I have no knowledge of the financial transactions.

Q. I understand this 5,000 shares only apply to the Quaker City Cabs?

A. They are all of the Quaker City Cabs Incorporated stock.

Q. What about these bus lines, does the Philadelphia Rapid Transit own those?

A. The Montgomery bus line was sold to the Pennsylvania Railroad, and the Suburban Bus Line was also sold to the Pennsylvania Railroad, and the Doylestown & Easton bus line, I don't remember anything about the Doylestown and Easton bus line. I know there is such a company, but I don't know what became of them.

Q. They are not owned by the Phila. Rapid Transit?

A. No sir

BY MR. WALKER:

I have here a number of complaints that have been received from different communities which I desire to have noted in the record as follows:

E. H. Kauffman, of Joanna, Pennsylvania, complaining of the rates charged by the Associated Gas & Electric Company.

H. C. Mays, complaining that the Greenwood Water situation has not been improved since the time they appeared before the House investigating committee.

Borough Council of Mercer Borough, complaining against the charges by the Mercer Water Company, and also the Mercer Light, Gas and Fuel Company, and the Pennsylvania Power Company.

Supervisors of Snowden Township, complaining against excessive rates and services of the South Pittsburgh Water Company

The borough solicitor of Scottdale, complaining against the Citizens Water Company of that borough in the form of a brief.

Fred. J. Thompson, Clearfield, Pennsylvania, complaining against the rural electrification in his district.

Kane Borough. A resolution by borough council complaining against the excess charges of the Atlantic Gas & Electric Corporation.

Kane Borough. A further resolution complaining against the excess charges of the Kane Spring Water Company.

Allied Board of Trade of Pittsburgh, complaining against the Pittsburgh Motor Coach Company's excess rates.

James F. Haere, Chairman Transportation Committee, Overbrook Civic Association, complaining against the services and the charges of the Rapid Transit Bus Line.

Charles Keefe, of Bala, Pennsylvania, complaining against the excess charges of the Philadelphia Suburban Water Company.

F. R. Moyer, of Renfrew, complaining against the service of Butler Short Line.

Eddy McCloskey, complaining against the water company and other utilities of the city of Johnstown.

Harry W. Taylor, Philadelphia, complaining against the strangle hold which the Phila. Rapid Transit Company has on the citizens.

John E. Zimmerman, President of United Gas Improvement Company, taking exception to the testimony of S. Davis Wilson.

MR. EVANS: When Mr. John E. Zimmerman, President of the United Gas Improvement Company, and Mr. W. H. Taylor, President of the Philadelphia Electric Company, were on the stand, they were asked to furnish certain data, some of which has already been introduced into the records. Supplementing this, I offer in evidence the following letters:

EXHIBIT No. 205, being a letter from John E. Zimmerman, President of United Gas Improvement Company, dated April 17, 1931, in regard to the rates of dividends on the common stock of the Philadelphia Electric Company.

EXHIBIT No. 206, being a letter from Mr. W. H. Taylor, President of the Phila. Electric Company, dated April 17, 1931, in regard to the returns from penalties and collection costs to the Philadelphia Electric Company.

Letter from W. H. Taylor, President of Philadelphia Electric Co., dated April 17, 1931, produced and marked Exhibit No. 207.

Letter from W. H. Taylor, in regard to amount expended by Philadelphia Electric Company for fixed capital, produced and marked Exhibit No. 208.

Letter from W. H. Taylor, in regard to amount of fees paid by the Philadelphia Electric Company to the United Engineers and Constructors, produced and marked Exhibit No. 209.

Letter from W. H. Taylor, in regard to fees paid by Philadelphia Electric Company to John E. Windrum, produced and marked Exhibit No. 210.

W. M. DIETRICH recalled

BY MR. EVANS:

Q. Have you prepared a summary of the financing of the mergers and consolidations of the properties of the Pennsylvania Power and Light Company, giving the details as covered by your previous testimony?

A. I have, yes sir.

Q. This is a paper consisting of seven sheets?

A. Yes sir.

Statement headed "Summary of Pennsylvania Power and Light Company mergers and consolidation in the years 1928 to 1930, produced and marked Exhibit No. 211.

Q. Is there any comment you want to make on that?

A. Only to the extent that there may be some slight changes between this exhibit and the figures presented in my former testimony, and I wish this exhibit to supercede the figures given in the former testimony.

Q. You did find some corrections which you wish to make in your former testimony and incorporate it in this exhibit?

A. Yes sir.

Q. Have you some more exhibits here?

A. Yes sir.

Q. Have you prepared an exhibit consisting of seven pages headed, "Earning of actual investment on common stock, 1930?"

A. I have.

Q. This exhibit shows the earnings of the electric companies of Pennsylvania on their common stock?

A. On the electric stock. The common stock is for 1930. The first calculation is on the stated value of the common stock and the second calculation is on the stated value of the common stock plus their surplus. And column 5 does not include the surplus.

Q. And the following column does include the surplus?

A. That is right.

Statement, "Actual investment in common stock—1930," produced and marked Exhibit No. 212.

BY MR. EVANS:

Q. You prepared a similar exhibit of seven sheets constituting all the water companies in Pennsylvania?

A. Yes sir.

Q. And that has been prepared on the same basis has it not?

A. Yes sir.

Statement of actual investment on common stock of Class A and B water companies—1930, produced and marked Exhibit No. 213.

BY MR. EVANS:

Q. Are there any other exhibits, Mr. Dietrich, which you have to offer?

A. That is all.

Q. Are there any comments on these which you wish to make?

A. No. I think you will find them self explanatory, unless someone wants to ask some questions about them.

W. W. COLLEDGE recalled

BY MR. EVANS:

Q. Have you prepared an exhibit showing the earnings of the electric companies A and B, for the year 1930, as taken from the 1930 reports of these companies to the Public Service Commission?

A. Yes sir.

EXHIBIT No. 214 offered in evidence, being the earnings of electric companies (A and B), 1930.

Q. Have you any comments you wish to make on this exhibit?

A. No. I think the columns as headed up are self-explanatory in the first and second sheets. Now on this third sheet you will find explanatory notes which refer to certain guide letters set opposite certain sets of figures on sheets 1 and 2. Also, at the top of page 3 is shown the total fixed capital depreciated, including write-ups of all of the different companies of \$1,048,339,443. I have eliminated the cents in all cases, and what was a seven per cent. return on that. Then we have taken the adjusted gross income and determined the excess over seven per cent. return by deducting the adjusted gross income from the seven per cent. returns so calculated, and then we have capitalized the excess at seven per cent., and then rated on excess of the fixed capital depreciated, and that has also been done as to the total fixed capital depreciated excluding the write-ups, giving us a figure of \$936,274,926.

BY MR. RHODES:

Q. According to your figures, the capitalized excess is 32.73 per cent., including the write-ups?

A. Yes sir.

Q. And it is 48.62 per cent. exclusive?

A. Yes sir. Then on the third page you will also note that we have made a note in regard to the Pennsylvania Power & Light Company, that the report for the year 1930 had not been received at May 13, 1931, and that the net write-up as shown in the 1929 return was \$1,263,005, so that we were unable to obtain any statistics on that property.

MR. EVANS: When Mr. Monroe, borough manager of Ellwood City, was on the stand, he had with him a paper showing information in regard to the municipal light department of that city, and the committee requested that it be put into exhibit form as a matter of convenience.

EXHIBIT No. 215 offered, being information regarding the municipal light department, Ellwood City.

The Public Service Commission was requested by the committee to submit a statement of all cases where management fees were paid to holding or affiliated companies and have

been included in the operating expenses, and the action, if any, taken by the Commission in regard thereto.

EXHIBIT No. 216, being letter from Chairman Ainey dated April 14th, 1931, in connection with the above paragraph.

EXHIBIT No. 217, being statement furnished by Public Service Commission showing all cases in which a dissenting opinion had been filed.

EXHIBIT No. 218, being a statement from Public Service Commission showing the rate cases where the respondent was permitted to amortize the rate case expenses.

When Mr. H. L. Mitchell, President of the West Penn Power Company, was on the stand, he asked to furnish additional information in regard to the reduction in residential rates made by the West Penn Power Company from 1925 to 1930 inclusive.

EXHIBIT No. 219 is additional information furnished by Mr. H. L. Mitchell of the West Penn Power Company.

EXHIBIT No. 220 is additional information from Mr. H. L. Mitchell in regard to the acquisition of the Center Electric Company in 1930 by the West Penn Power Company, being a letter dated May 12, 1931.

EXHIBIT No. 221 is a copy of the minutes of the Electric Rate Committee furnished by the Public Service Commission.

EXHIBIT No. 222 is information furnished by the Public Service Commission in the form of a compilation made with respect to certain companies for the year 1927 which is presumed to answer certain information which Commissioner Young was requested to furnish and which does not seem to cover this information but is offered for what it is worth.

I desire to call the attention of the Committee to the fact that in connection with the Scranton-Spring Brook Water Company case it appeared that the Federal Water Service Corporation paid Field-Glore & Company a fee of \$500,000 in connection with the acquisition of the Scranton Gas & Water Company. In accordance with the directions of the Committee I wrote Field-Glore & Company on April 13th asking them for a statement of the services rendered by them to this company. I think by mistake I referred to the Scranton-Spring Brook Water Supply Company instead of to the Scranton Gas & Water Company. Garrett A. Brownback a member of the firm of Field-Glore & Company replied under date of April 18th, 1931, stating that this firm received no commission whatsoever in connection with the sale referring to the sale of the Spring Brook Water Supply Company. He says: "If you refer to the commission it received for the sale of the Scranton Gas & Water Company please advise. There is no information this firm has that is not available to you." In reply to that letter of April 20th there was addressed to Field-Glore & Company a letter advising that it was the Scranton Gas & Water Company we were interested in and that we should like to have complete information as to the services rendered for this company and the places at which rendered and the individual expenditures of the members of the firm and others who rendered services in connection with this sale. No reply has been received to this letter and on May 7th I wired Mr. Brownback: "Please furnish me immediately information requested" but I have had no reply to that communication. This concern I think has no resident partner in Pennsylvania, although it has an office here.

The Committee may remember that when Mr. Sawyer, chairman of the Board of the Lehigh Power Securities Company, was on the stand, he was asked whether they would be willing to have the accountants of the Committee examine the books of that company, particularly in connection with the acquisition of various companies on behalf of the Pennsylvania Power & Light Company, and Mr. Sawyer, as I remember, said he would recommend that it be done, although he had no authority to pass on it definitely. No further information has been received in regard to that.

MR. WALKER: We wish to have noted on the record receipt of a letter from the Pennsylvania Electric Association dated May 12, 1931.

EXHIBIT No. 223 is offered, being a letter from the Pennsylvania Electric Association, signed by Mr. A. B. Millar as Managing Director.

EXHIBIT No. 224 is offered, being a balance sheet of the Pennsylvania Electric Association for the year 1926.

Balance sheet of Pennsylvania Electric Association for the year 1927, produced and marked Exhibit No. 225.

Balance sheet of Pennsylvania Electric Association, 1928, produced and marked Exhibit No. 226.

Balance sheet of Pennsylvania Electric Association, 1929, produced and marked Exhibit No. 227.

Balance sheet of Pennsylvania Electric Association, 1930, produced and marked Exhibit No. 228.

Balance sheet of Pennsylvania Electric Association, for period from Jan. 1, to April 15, 1931, produced and marked Exhibit No. 229.

Special account of Pennsylvania Electric Association, produced and marked Exhibit No. 230.

Report of Educational Committee of the Pennsylvania Electric Association, produced and marked Exhibit No. 231.

Excerpt from report of Industrial Relations Committee for years, 1925, 1926, produced and marked Exhibit No. 232.

Report of Pennsylvania Electric Association of co-operation of Education Committee, 1927, produced and marked Exhibit No. 233.

Receipt is also acknowledged on the record of pamphlets and advertising material as requested by Mr. Morris L. Cooke from the Pennsylvania Electric Association.

THE CHAIRMAN: This hearing will now stand adjourned, subject to the call of the Chairman.

#### REMARKS OF SENATOR SORDONI ON THE REPORT OF THE COMMITTEE OF CONFERENCE ON HOUSE BILL NO. 1922

Mr. President and Gentlemen of the Senate:

I realize that what I have to say will not in any way change the result of this conference Committee on the Congressional Apportionment, but I wish to draw the attention of the members of the Senate to the following inequalities of the division. First, the total number of people in Pennsylvania at the last census was nine million, six hundred and thirty-one thousand, three hundred and fifty, represented by thirty-four Congressmen under the new reapportionment, the average district having approximately two hundred eighty thousand people, the smallest district less than two hundred thousand and Luzerne County, the largest district, with a total of four hundred forty-four thousand. Why the conference Committee came to this conclusion is beyond me. According to the population, Luzerne County should have two Congressmen, not one, and any reapportionment without taking that into consideration is, in my opinion, unjust, unwarranted and uncalled-for.

Gentlemen. We talk about the harmony prevailing in this Senate. We apparently have harmony when we blindly follow the few who have set themselves up as leaders and apparently intimidate enough members so that these so-called leaders get everything they want and care nothing for the opinion and rights of others. We are supposed to be representing the people of this State who are naturally very much interested in the representation they have, not only in the State Government but in the National Government, and why we have not been consulted on a matter of such grave importance as this to the people we represent, is more than I can say.

These so-called leaders should use better business judgment in performing their duties and not bring in legislation as important to the people of Pennsylvania as this Congressional Apportionment is, and expect us to swallow it hook, line and sinker without having an opportunity to study the same. This matter should have been brought before the Senate and the House of Representatives months ago and not brought before us at the last hour of the last day of the session. Luzerne County is not getting what it is justly entitled to in this matter and I vigorously protest and object to the report and shall vote "No" upon it. The people of Luzerne County pay their proportion of taxes and are entitled to representation in proportion to their population.

Do not misunderstand me, in connection with my criticism of the method in which this matter was handled. The criticism is not in any way directed against Senator McClure or the members of the Conference Committee. It is directed against these so-called leaders who decide the policy of this Legislature and procrastinate to the point of almost criminal negligence.
